At the same time there was at the foresayd mines vpon some occasion a citizen of Mexico called Antonio de Espejo, a rich man, and of great courage and industry, and very zealous in the seruice of king Philip his souereine, and was bozne in Cordoua. Who vnderstanding the desire of the foresayd friers, and the importance of the action, offered himselfe to go on that voyage, and also to spend part of his substance, and to aduenture his life therein; conditionally that licence might be granted him to the same purpose from some person sufficiently authorized by his Maiestie. Which licence at the sayd friers procurement was granted vnto him by the gouernour Juan de Ontiueros the kings Alcalde mayor or chiefe Justice in the towne called Las quatro Cieneegas situate within the iurisdiction of Nueva Biscaya seuentie leagues from the sayd mines of Santa Barbara; authorizing him both to take in hand the sayd voyage, and also to assemble such people and souldiers as he could, which might accompany and ayde him in the performance of this his Christian intent.

The sayd Antonio de Espejo was so earnest in this matter, that in very few dayes he had gathered a company of souldiers, and made prouision of things necessary for his voyage, spending therein a good part of his substance. And he departed with his whole company from the valley of S. Bartholomew the tenth of Nouember 1582; taking with him (for whatsoeuer should happen) 115 horses and mules, with great store of weapons, munition, and victuals, and some Indians to serue him in his iourney.

Directing his course toward the North, after two dayes iourney he met with great store of the foresayd Indians called Conchos, which dwell in villages or hamlets of cottages couered with straw. Who, so soone as they vnderstood of his approach, hauing newes thereof long before, came forth to receiue him with shewes of great ioy. The food of this people and of all the rest of that prouince, which is great, are conies, hares, and deere which they kill, of all which they haue great abundance. Also they haue great store of Maiz or Indian wheat, gourds, and melons very good and plentiful: and there are many riuers full of excellent fish of diuers sorts. They goe almost naked, and the weapons that they vse are bowes & arrowes, and liue vnder the gouernment and lordship of Caciques like those of Mexico: they found no idols among them, neither could they vnderstand that they worshipped any thing; whereupon they easily consented that the Spaniards

nyards should set by crosses, and were very well content therewith, after they were informed by our friers of the signification thereof, which was done by the interpreters that they caried with them; by whose meanes they vnderstood of other towne, whither the sayd Conchos did conduct them, and bare them company aboue foure & twenty leagues, all which way was inhabited with people of their owne nation: and at all places where they came they were peaceably receiued by aduice that was sent by the Caciques from one towne to another.

Having passed the foure and twenty leagues aforesayd, they came vnto another nation of Indians called Passaguates, who liue after the maner of the fozesayd Conchos their borderers, and did vnto them as the others had done, conducting them fozward other foure dayes iourney, with aduice of the Caciques, as before. The Spanyards found in this iourney many mines of siluer, which according to the iudgement of skilfull men, were very plentifull and rich in metall.

A dayes iourney from thence they met with another nation called Tobosos, who so soone as they beheld the countenance of our people fledde vnto the mountaines, leauing their towne and houses desolate. Afterward wee vnderstood that certaine peeres past there came vnto that place certaine souldiers to seeke mines, who caried away captiue certaine of the people of the countrey, which caused the rest of them to be so they and fearefull. The captaine sent messengers to call them backe againe, assuring them that they should not sustaine any harme, and handled the matter so discreetly, that many of them returned, whom he made much of, and gaue them gifts, vsing them kindly, and declaring vnto them by the interpreter, that their comming was not to hurt any man: whereupon they were all quieted, and were content they should set by crosses, and declare the mystery of the same, making shew that they were highly pleased therewith. For prooofe whereof they accompanied them on their voyage, as their neighbours had done, vntill they had brought them to a countrey inhabited by another nation, which was distant from theirs some 12 leagues. They vse bowes and arrowes and go naked.

The nation vnto which the sayd Tobosos conducted them, is called Iumanos, whom the Spanyards by another name call Patrabueyes: their prouince is very great, containing many towne and great store of people: their houses are flat-roofed, and built of lime and stone, and the streets of their towne are placed in good order. All the men and women haue their faces, armes and legges taced and pounced: they are a people of great stature, and of better gouernment, then the rest which they had seene in their former iournes; and are well prouided of victuals, and furnished with plenty of wilde beasts, fowles and fishes, by reason of mighty riuers which come from the North, whereof one is as great as Guadalquivir, which falleth into the North sea or bay of Mexico. Here are also many lakes of salt water, which at a certaine time of the yere waxeth hard, and becommeth very good salt. They are a warlike people, and soone made shew thereof: for the first night that our people incamped there, with their arrowes they slew five horses, and wounded five other very sore, nor would not haue left one of them aliue, if they had not bene defended by our guard. Having done this mischief, they abandoned the towne, and withdrew themselves to a mountaine which was hard by, whither our captaine went betimes in the morning, taking with him five souldiers well armed, and an interpreter called Peter an Indian of their owne nation, and with good persuations appeased them, causing them to descend to their towne and houses, and persuading them to giue aduice vnto their neighbours, that they were men that would hurt no body, neither came they thither to take away their goods: which he obtained easily by his wisdom, and by giuing vnto the Caciques certaine bracelets of glasse beads, with hats and other trifles, which he caried with him for the same purpose: so by this meanes, and by the good intertainment which they gaue them, many of them accompanied our Spanyards for certaine dayes, alwayes traouelling along the banke of the great riuer abouesayd; along the which there were many towne of the Indians of this nation, which continued for the space of twelue dayes trauel, all which time the Caciques hauing receiued aduice from one to another, came forth to intertaine our people without their bowes and arrowes, and brought them plenty of victuals, with other presents and gifts, especially hides and chamoil-skins very well dyessed, so that those of Flanders do nothing exceed them. These people are all clothed, and seemed to haue some light of our holy faith; for they made signes of God, looking vp towards heauen, and call him in their language Apalito, and acknowledge him for their Lord, from whose bountifull hand and mercy they confesse that they haue receiued their life and being, and these worldly goods. Many of them with their wiues and children came vnto the frier (which the captaine and souldiers brought with them) that hee might crosse and blisse them. Who demanding of them, from whom they had receiued that knowledge of God, they answered, from three Christians, & one Negro which passed that way, and remained certaine dayes among them, who by the signes which they made, were

Aluaro Nunnez, Cabeça de Vaca, and Dorantes, and Castillo Maldonado, and a Negro; all which escaped of the company which Pamphilo de Narvaez landed in Florida; who after they had bene many dayes captiues and slaues, escaped and came to these towne, by whom God shewed many miracles, and healed onely by the touching of their hands many sicke persons, by reason wherof they became very famous in all that countrey. All this prouince remained in great peace and security; in token wherof, they accompanied and serued our men certaine dayes, trauelling along by the great riuer aforesayd.

Within few dayes after they came vnto another great prouince of Indians, from whence they came forth to receiue them, vpon the newes which they had heard of their neighbors, and brought them many very curious things made of feathers of diuers colours, and many mantles of cotton straked with blew and white, like those that are brought from China, to barter & trucke them for other things. All of them both men, women and childzen were clad in chamois skinnies very good and wel dressed. Our people could neuer vnderstand what nation they were for lacke of an interpreter: howbeit they dealt with them by signes; and hauing shewed vnto them certaine stones of rich metall, and inquired whether there were any such in their countrey: they answered by the same signes, that fise dayes iourney Westward from thence there was great quantity therof, and that they would conduct them thither, and shew it vnto them; as afterward they performed their promise, & bare them company 22 leagues, which was all inhabited by people of the same nation.

Next vnto the fozesayd prouince they came vnto another further by the great riuer aforesayd, being much more populous then the former, of whom they were well receiued, and welcomed with many presents, especially of fish, whereof they haue exceeding great store, by reason of certaine great lakes not far from thence, wherein they are bred in the fozesayd plenty. They stayed among these people three dayes; all which time both day and night they made before them many dances, according to their fashion, with signification of speciall ioy. They could not learne the name of this nation for want of an interpreter, yet they vnderstood that it extended very farre, and was very great. Among these people they found an Indian of the fozesayd nation of the Conchos, who told them, and shewed them by signes, that fiftene dayes iourney from thence toward the West there was a very broad lake, and nere vnto it very great towne, and in them houses of three or foure stories high, and that the people were well apparellled, and the countrey full of victuals and prouision. This Concho offered himselfe to conduct our men thither, whereat our company reioyced, but left off the enterpryse, onely to accomplish their intent for which they undertooke the voyage, which was to go Northward to giue ayd vnto the two friers aforesayd. The chiefe and principall thing that they noted in this prouince was, that it was of very good temperature, and a very rich soile, and had great store of wilde beasts, and wilde-fowle, and abundance of rich metals, and other excellent things, and very profitable.

From this prouince they folowed their iourney for the space of fiftene dayes without meeting any people all that while, passing thorow great woods and groues of pine trees bearing such fruit as those of Castile: at the end whereof, hauing trauelled, to their iudgement, foure score leagues, they came vnto a small hamlet or village of fewe people, in whose pooze cottages couered with straw they found many deeres-skinnes as well dressed as those of Flanders, with great store of excellent white salt. They gaue our men good entertainment for the space of two dayes while they remained there, after which they bare them company about twelue leagues, vnto certaine great towne, alwayes trauelling by the riuer called Rio del Norte abouesayd, till such time as they came vnto the countrey called by them New Mexico. Here all along the shore of the sayd riuer grew mighty woods of poplar being in some places foure leagues broad, and great store of walnut trees, and vines like those of Castilia.

Hauing trauelled two dayes thorow the said woods of Poplar and Walnut trees, they came to ten towne situate on both sides of the sayd riuer, besides others which they might see further out of the way, wherein there seemed to be great store of people, and those which they saw were aboue ten thousand persons. In this prouince they receiued them very courteously, and brought them to their towne, whereas they gaue them great plenty of victuals and hennes of the countrey, with many other things, and that with great good will. Here they found houses of foure stories high, very well built, with gallant lodgings, and in most of them were Stoores for the Winter season. Their garments were of Cotton and of deere-skinnes, and the attire both of the men and women is after the maner of the Indians of the kingdome of Mexico. But the strangest thing of all was to see both men and women weare shooes and boots with good soles of neats leather, a thing which they neuer sawe in any other part of the Indies. The women keepe their haire well combed and dressed, wearing nothing els vpon their heads. In all these towne they had

had Caciques which gouerned their people like the Caciques of Mexico, with Sergeants to execute their commandements, who goe thorow the towne proclaiming with a loud voice the pleasure of the Caciques, commanding the same to be put in execution. In this prouince our men found many idols which they worshipped, and particularly they had in euery house an Azatoz for the diuell, whereinto they ordinarily carry him meat: and another thing they found, that as it is an vse among the Christians to erect crosses vpon the high wayes, so haue this people certaine high chapels, in which they lay the diuell vnto take his ease, and to recreate himselfe as he trauellet from one towne to another; which chapels are maruellously well trimmed and painted. In all their arable grounds, whereof they haue great plenty, they erect on the one side a little cottage or shed standing vpon foure studdes, vnder which the labourers doe eat, and passe away the heat of the day, for they are a people much giuen to labour, and doe continually occupy themselves therein. This countrey is full of mountaines and Forrests of Pine trees. The weapons that they vse are strong bowes and arrowes headed with flints, which will pierce thorow a coat of mail, and macanas which are clubs of halfe a yarde long, so beset with sharpe flints, that they are sufficient to cleaue a man asunder in the midst: they vse also a kinde of targets made of raw hides.

These high mountaines are a cause of the coldnes of the countrey.

Hauiing remained foure dayes in this prouince, not farre off they came to another called The prouince of Tiguas containing Arteene towne, in one whereof, called Poala, they understood that the inhabitants had slaine the two fathers aforesayd, to wit, frier Francis Lopez, and frier Augustus Ruyz, whom they went to seeke, together with the three Indian boyes, and the mestico. So soone as the people of this towne and their neighbours saw our men there, their owne consciences accusing them, and fearing that our men came to punish them, and to be auenged of the death of the fozesaid fathers, they durst not abide their coming, but leauing their houses desolate they fled to the mountaines next adioyning, from whence they could neuer cause them to descend, although our men attempted the same by diuers deuises and entisements. They found in the towne and houses good store of victuals, with infinite number of hennes in the countrey, and many sorts of metals, whereof some seemed to be very good. They could not perfectly understand what numbers of people this prouince might containe, by reason they were fled into the mountaines, as I haue sayd before.

The prouince of Tiguas. Poala.

Very rich and good metall.

Hauiing found those to be slaine which they went to seeke, they entred into consultation, whether they should returne to Nueva Biscaya, from whence they came, or should proceed further in their iourney; whereabout there were diuers opinions: howbeit, vnderstanding there, that toward the West or East parts of that prouince, and very far distant from thence, there were great and rich towne: and finding themselves so far on the way, the sayd captaine Antonio de Espejo with the consent of the fozesaid frier called frier Bernardine Beltran, and the greater part of his souldiers and companions determined to proceed on the discouery, till such time as they did see to what end it would come; to the end they might giue certaine and perfect knowledge thereof to his Maiesty, as eye-witnesses of the same. And so with one accord they determined, that while the army lay still there, the captaine and two more of his company should prosecute their desire, which they did accordingly. And within two dayes iourney they came vnto another prouince, where they found eleuen towne, and much people in them, which in their iudgement were about fozty thousand persons. The countrey was very fertile and plentifull, whose confines bordered vpon the territories of Cibola, where there are great store of kine, with whole hides and with cotton they apparell themselves, imitating in the forme of their gouernment their next neighbours. In this place are signes of very rich mines, some quantity of the metals whereof they found in the houses of the Indians; which Indians haue and doe worship idols. They receiued our men peaceably, and gaue them victuals. Hauiing seene thus much, and the disposition of the countrey, they returned to the campe, from whence they departed, to informe their companions of the things aboue mentioned.

This diueth toward Virginia.

Another prouince.

Being returned to the campe they had intelligence of another prouince called Los Quires, which stood six leagues higher vpon the riuer called Rio del Norte. And in their iourney thitherward, being arriued within a league of the place, there came forth very many Indians to receiue them in peace, requesting them to beare them company to their towne: which they did, and were marvellous well intertained and cherished. In this prouince they found five towne only, wherein were great store of people, and those which they saw were about 14000 soules, who worship idols as their neighbours do. In one of these towne they found a pie in a cage after the maner of Castile, and certaine shadowes or canopies like vnto those which are brought from China, wherein were painted the Sunne, the Moone, and many Starres. Where hauing taken the height of the pole-starre, they found themselves to be in 37 degrees and $\frac{1}{2}$ of Northerly latitude.

Quires borders vpon Rio del Norte.

Another mighty
prouince
Westward of
Cibola 28
leagues, called
Mohotze.

They departed out of this prouince, and keeping still the same NORTHERLY course, foure-
teene leagues from thence they found another prouince called The Cunames, where they saw o-
ther five townes, the greatest whereof was called Cia, being so large, that it contained eight mar-
ket-places, the houses whereof being plaistered and painted with diuers colours, were better then
any which they had seene in the prouinces before mentioned: the people which they heere saw,
they esteemed to be aboue twenty thousand persons. They presented to our men many curious
mantles, and victuals excellently well dressed; so that our men deemed this nation to be more cu-
rious, and of greater ciuility, and better gouernment, then any other that hitherto they had
seene. They shewed them rich metals, and the mountaines also not farre off whereout they dig-
ged them. Heere our people heard of another prouince standing toward the North-west, where-
vnto they purposed to goe.

Having trauelled about five leagues, they came to the sayd prouince, the people whereof were
called Ameies, wherein were seven very great townes, containing, to their iudgement, aboue thir-
ty thousand soules. They reported that one of the seven townes was very great and faire, which
our men would not go to see, both because it stood behinde a mountaine, and also for feare of some
misshap, if in case they should be separated one from another. This people are like vnto their
neighbours of the former prouince, being as well prouided of all necessaries as they, and of as
good gouernment.

About fiftene leagues from this prouince, traueilling alwayes toward the West, they found a
great towne called Acoma, containing aboue five thousand persons, and situate vpon an high
rocke which was aboue fifty paces hie, hauing no other entrance but by a ladder or paire of staires
hewen into the same rocke, whereat our people marvelled not a little: all the water of this towne
was kept in cisternes. The chiefe men of this towne came peaceably to visit the Spaniards,
brynging them many mantles, and chamois- skinner excellently dressed, and great plenty of victu-
als. Their towne-fields are two leagues from thence, and they fetch water out of a small riuer
nere thereunto, to water the same, on the banks whereof they saw many great banks of Roses
like those of Castile. Here are many mountaines that beare shewes of mettals, but they went not
to see them, because the Indians dwelling vpon them are many in number, and very warlike.
Our men remained in this place three dayes, vpon one of the which the inhabitants made before
them a very solemne dance, comming forth in the same with gallant apparell, vsing very witty
sports, wherewith our men were exceedingly delighted.

Twenty foure leagues from hence toward the West, they came to a certaine prouince called
by the inhabitants themselves Zuni, & by the Spaniards Cibola, containing great numbers of
Indians; in which prouince Francisco Vazquez de Coronado had bene, and had erected many
crosses and other tokens of Christianity, which remained as yet standing. Heere also they found
three Indian Christians which had remained there euer since the said iourney, whose names were
Andrew de Culiacan, Gaspar de Mexico, and Antonio de Guadajajara, who had almost forgot-
ten their owne language, but could speake that countrey speech very well; howbeit after some
small conference with our men, they easily vnderstood one another. By these three Indians they
were informed, that threescore dayes iourney from this place there was a very mighty lake, vpon
the bankes whereof stood many great and good townes, and that the inhabitants of the same had
plenty of golde, an euident argument wherof was their wearing of golden bracelets & earrings:
and also that after the sayd Francis Vasquez de Coronado had perfect intelligence thereof, hee
departed out of this prouince of Cibola to goe thither, and that hauing proceeded twelue dayes
iourney, he began to want water; and thereupon determined to returne, as he did indeed, with in-
tention to make a second voyage thither at his better opportunity; which after ward he perfozm-
ed not, being preuented of his determined iourney by death.

Upon the newes of these riches the sayd Captaine Antony de Espeio was desirous to go thi-
ther; and though some of his companions were of his opinion, yet the greater part and the frier
were of the contrary, saying that it was now high time to returne home vnto New Biscay from
whence they came, to giue account of that which they had seene: which the sayd greater part
within few dayes put in execution, leauing the captaine with nine companions onely that willing-
ly followed him: who after hee had fully certified himselfe of the riches abovesayd, and of the
great quantity of excellent mettals that were about that lake, departed out of this prouince of Ci-
bola with his companions; and traueilling directly toward the West, after hee had passed 28
leagues, he found another very great prouince, which by estimation contained aboue 50000 soules:
the inhabitants whereof allone as they vnderstood of their approach, sent them word, vpon paine
of death to come no neerer to their townes: whereto the captaine answered, that their coming
was

was in no wise to hurt them, as they should well perceiue, and therefore requested them not to molest him in his intended voyage, and withall gaue to the messenger a reward of such things as they brought with them: who thereupon made so good report of our people, and so appeased the troubled minds of the Indians, that they granted them free accesse vnto their towne, and so they went thither with 15. Indians their friends of the prouince of Cibola aforesaid, and the three Mexican Indians before mentioned. When they were come within a league of the first towne, there came forth to meete them about 2000. Indians laden with victuals, whom the Captaine rewarded with some things of small value, which they made great account of, and esteemed more precious then gold. As they approached neere vnto the towne which was named Zaguato, a great multitude of Indians came forth to meete them, and among the rest their Caciques, with so great demonstration of ioy and gladnes, that they cast much meale of Maiz vpon the ground for the horses to tread vpon: with this triumph they entered the towne, where they were very well lodged and much made of, which the Captaine did in part requite, giuing to the chiefeest among them hats, and beads of glasse, with many such trifles, which he caried with him for the like purpose. The said Caciques presently gaue notice to the whole prouince of the arriual of these new guests, whom they reported to bee a courteous people, and such as offered them no harme: which was occasion sufficient to make them all come laden with presents vnto our people, and to intreat them to goe and make merry with them in their townes; which they peelded vnto, though alwayes with great foresight what might follow. Whereupon the Captaine vsed a certaine policie, making the Caciques beleue, that forasmuch as his horses were very fierce (for they had told the Indians that they would kill them) therefore it was necessary to make a Fort of lime and stone to inclose them, for the auoyding of such inconueniences as otherwise might happen vnto the Indians by them. This tale was so stedfastly beleued by the Caciques, that in five houres they assembled such store of people together, that with incredible celeritie they built the said Fort which our men required.

Moreouer, when the Captaine saide that he would depart, they brought vnto him a present of 40000. maniles of cotton, both white and of other colours, and great store of hand-towels, with tassels at the corners, with diuers other things, and among the rest rich metals, which seemed to holde much siluer. Among these Indians they learned very much concerning The great Lake aforesaid, whose report agreed wholly with the relation of the former, as touching the riches and great abundance of gold about that lake.

The Captaine reposing great confidence in this people & in their good disposition toward him determined after certaine dayes, to leaue there five of his companions with the rest of his Indian friends, that they might returne with his cariages to the prouince of Zuni, while himselfe with the foure other which remained should ride in post to discouer certaine very rich Mines, whereof he had perfect information. And putting this his purpose in execution he departed with his guides, and hauing traueiled due-west 45. leagues he came vnto the said Mines, and tooke out of the same with his owne hands exceeding rich metals holding great quantitie of siluer: and the mines which were of a very broad vein were in a mountaine whereon they might easily ascend, by reason of an open way that led vp to the same. Neere vnto these mines were certaine townes of Indians dwelling vpon the mountaines, who shewed them friendship, & came forth to receiue them with crosses on their heads, and other tokens of peace. Hereabout they found two riuers of a reasonable bignesse, vpon the banks whereof grew many vines bearing excellent grapes, and great groues of walnut-trees, and much flaxe like that of Castile: and they shewed our men by signes, that behinde those mountaines there was a riuer about 8. leagues broad, but they could not learne how neere it was; howbeit the Indians made demonstration that it ran towards the North Sea, and that vpon both sides thereof stood many townes of so great bignesse, that in comparison thereof those where in they dwelt were but small hamlets.

After he had receiued all this information, the said Captaine returned toward the prouince of Zuni, whither he had sent his said companions: and being arriued there in safety, hauing traueiled vpon a very good way, he found in the same place his 5. companions, & the said father Frier Bernardin Beltran, with the souldiers which were determined to returne, as is aforesaid, but vpon certaine occasions were not as yet departed: whom the inhabitants had most friendly intreated, & furnished with all things necessary in abundance, as afterward like wise they vsed the Captaine, and those that came with him, comming forth to meete them with shew of great ioy, and giuing them great store of victuals to serue them in their iourney homewards, and requesting them to returne againe with speed, and to bring many Castilians with them (for so they call the Spaniards) to whom they promised food sufficient. For the better performance whereof they sowed that yere more graine and other fruits, then they had done at any time before.

Guadiana.

At this present the Frier and souldiers aforesaid resolved themselves in their former determination, & agreed to returne unto the prouince from whence they came with intention before mentioned, to seek the two Friers that were slaine, to whom also Gregorio Hernandez who had bene Standard-bearer in the iourney, ioynded himselfe. Who being departed, the Captaine accompanied onely with 8. souldiers, determined to prosecute his former attempt, & to passe by higher the saide riuer called Rio del Norte, which he did accordingly. And hauing traueiled about 60. leagues toward the prouince of the Quires aforesaid, 12 leagues fro thence toward the Orient or East they found a prouince of Indians called Hubates, who receiued them peaceably, and gaue them great store of victuals, informing them also of very rich Mines which they found, whereout they got glittering & good metal, and therewith returned to the towne from whence they came. This prouince contained by their estimation 25000. persons all very well appareled in coloured mantles of cotton, and Chamois-skins very well dressed. They haue many mountaines full of Pines and Cedars, and the houses of their townes are of 4. and 5. stories high. Here they had notice of another prouince distant about one dayes iourney fro thence inhabited by certaine Indians called Tamos, and containing about 40000. soules: whither being come the inhabitants would neither giue them any victuals, nor admit them into their townes: for which cause, and in regard of the danger wherein they were, and because some of the souldiers were not well at ease, and for that they were so fewe (as we haue said) they determined to depart thence, and to returne toward the land of the Christians, which they put in execution in the beginning of July 1583, being guided by an Indian that went with them, who led them another way then they went forth by, downe a riuer, which they called Rio de las vacas; that is to say, The riuer of open, in respect of the great multitudes of open or kine that fed upon the bankes thereof, by the which they traueiled for the space of 120. leagues, still meeting with store of the said cattell. From hence they went forward to the riuer of Conchos by which they entered, and thence to the valley of S. Bartholomew, from whence they first entered into their discouerie. Upon their coming thither they found that the said Frier Bernardin Beltran and his company were safely arrived at the said towne many dayes before, & were gone from thence to the towne of Guadiana. In this towne the aforesaid captaine Antony de Espeio made most certaine relation of all that is aforesaid, which relation presently hee sent unto the Conde of Corunna Vizroy of Nueva Espanna, who sent the same to his Maiestie, & to the Lords of his royal counsel of the Indies, to the end they might take such order as they thought best, which they haue already performed with great care and circumspection.

Almighty God vouchsafe his assistance in this busines, that such numbers of soules redeemed by his blood may not vterly perish, of whose good capacitie, wherein they exceed those of Mexico and Peru (as we be giuen to vnderstand by those that haue delt with them) we may boldly presume that they will easily embrace the Gospel, and abandon such idolatrie as now the most of them doe liue in: which Almighty God graunt for his honour and glory, and for the increas of the holy Catholique faith.

A letter of Bartholomew Cano from Mexico the 30. of May 1590. to Francis Hernandes of Simil, concerning the speedy building of two strong Forts in S. Iohn de Villua, and in Vera Cruz, as also touching a notable new and rich discouery of Cibola or New Mexico 400. leagues Northwest of Mexico.

IT may please you Sir, to be aduertised that I haue receiued your letters, whereby I vnderstand that our ship with the treasure is safely arrived, God be praised thereto. The frigate arrived here in safetie which brought the letters of Advice from the King to the Viceroy. She arrived in S. Iohn de Villua the 29. of May, & departed from S. Lucar in Spaine the 6. of April. By which his Maiestie writeth unto the Viceroy, what time the Fleete shall depart from hence, and what course they shall take, not as they had wont for to do; by reason that there are great store of men of war abroad at the sea, which meane to encounter with the Fleete. I pray God sende them well to Spaine: for here wee were troubled very sore with men of warre on this coast. His Maiestie hath sent expresse comendement unto the Marques of Villa Manrique his cosen, Viceroy of Noua Hispania, that immediately upon sight of his letters he shal command to be builded in S. Iohn de Villua, & in Vera Cruz two strong Forts for the defence of these countries, of his Maiesties charges: And that there shalbe garisons in both the Forts for the defence of the ships which ride there, and for the strength of the countrey.

There are departed out of Mexico and other townes hereabout by the commaundement of the Viceroy 500. souldiers Spaniards, vnder the conduct of Rodorigo del Rio the gouernour of Nueva Bis-

rique Viceroy
of Noua His-
pania.

ua Biscaya which are gone to win a great City called Cibola, which is 400. leagues beyond Mexico to the North-west, and standeth vp in the maine land. It is by report a very great citie, as bigge as Mexico, and a very rich countrey both of golde Mines and siluer Mines: and the King of the countrey is a mighty King, and he will not become subiect to his Maestie. There were certaine Spaniards sent to that king from the Viceroy in an ambassage; It is thought that they are slaine, for we can here no newes of them.

The other newes that I can certifie you of at this instant is, that there is a Judge of the city of Guadalajara called don Nunno de villa Inscensia lately married. Also the kings Attourney of Guadalajara married his daughter of 8. yerres old with a boy of 12. yerres old. But the Viceroy saith that he hath a warrant from his Maestie, that if any Judge whatsoeuer dwelling in that kingdome of Guadalajara should marry any sonne in that iurisdiction, that then the said Viceroy is to depriue him of his office. And therfore he went about to depriue the Judge & the kings Attourney of their offices. Whereupon the people of that prouince would not thereunto consent, nor suffer them to be dismissed of their offices, nor to be arrested, nor caried prisoners to Mexico. When the viceroy had intelligence thereof, & that the Countrey did resist his commandement, and would not suffer them to be apprehended, he sent certaine Captaines with souldiers to goe and apprehend the Judge, the kings Attourney, and as many as did take their parts. So the citizens of Guadalajara withstood the viceroyes forces, & put themselves in defence; and are vp in armes against the viceroy: yet they do not rebel against the king, but say: God saue king Philip, and wil submit themselves to his Maestie, but not to the viceroy. So that all the kingdome of Guadalajara is vp in armes, and are all in a mutinie against vs of Mexico. I beseech Almighty God to remedy it, and that it may be qualified in time: or else all Noua Spania wil be utterly spoiled. I write this thing, because it is publicquely known in all places. And thus I rest, from Mexico the 30. of May 1590.

Bartholomew Cano.

THE FIRST AND SECOND DISCOVERY of the gulfes of *California*, and of the Sea-coast on the North-west or back side of *America*, lying to the West of *New Mexico*, *Cibola* and *Quinira*, together with *Sir Francis Drakes* landing and taking possession vpon *Noua Albion* in the behalfe of the Crowne of *England*, and the notable voyage of *Francis Gaule*; Wherein amongst many other memorable matters is set downe the huge bredth of the Ocean sea from *China* and *Iapan* to the North-west parts of *America*, in the 38. and 40. degrees.

A relation of the discouery, which in the Name of God the Fleete of the right noble *Fernando Cortez* Marques of the *Vally*, made with three ships; The one called *Santa Agueda* of 120. tunnes, the other the *Trinitie* of 35. tunnes, and the thirde *S. Thomas* of the burthen of 20. tunnes. Of which Fleete was Capitaine the right worshipfull knight *Francis de Vlloa* borne in the Citie of *Merida*. Taken out of the third volume of the voyages gathered by *M. Iohn Baptista Ramusio*.

Chap. I.

Francis Vlloa a capitaine of *Cortez*, departeth with a Fleet from the port of *Acapulco*, and goeth to discouer ynknewen lands, he passeth by the coast of *Sacatula* and *Motin*, and by tempest runneth to the riuer of *Gujahal*, fro whence he crosseth ouer to the hauen of *Santa Cruz*, along the coast whereof he discouereth 3. smal Ilands, and within two dayes and an halfe returning to the maine land he discouereth the riuer called *Rio de san Pedro y san Pablo*, and not far distant from thence two other riuers as big or greater then that of *Guadalquivir* which runneth by *Seuil*, together with their head-springs.

We embarked our selues in the hauen of *Acapulco* on the 8. of July in the yeere of our Lord 1539, calling vpon almighty God to guide vs with his holy hand vnto such places where he might be serued, and his holy faith aduanced. And we sailed from the said port by the coast of *Sacatula* and *Motin*, which is sweete and pleasant through the abundance of trees that grow thereon, and riuers which passe through those countreys, for the which wee often thanked God the creatour of them. So sailing along we came to the hauen of *S. Iago* in the prouince of *Colima*: but before we arriued there, the maine mast of our ship called *Santa Agueda* was broken by a stoyne of winde

500. Spaniards sent to conquer the great citie of Cibola which is 400. leagues from Mexico North west ward.

that tooke vs, so as the ship was forced to saile without her mast until we arrived in the said haven. From the port of Acapulco to this haven of Colima wee were sayling the space of 20. dayes. Here wee stayed to mende our mast and to take in certaine victuals, water, and wood, the space of 27. dayes. And wee departed from the saide haven the 23. of August, and sayling by the Isles of Xalisco the 27. or 28. of the saide moneth wee were taken with an extreame tempest wherein wee thought we should haue perished, and being tossed and weather-beaten, wee ranne as farre as the riuer of Guajual in the Province of Culiacan. In this storme wee lost the pinnelle called Sant Thomas, and because wee had lost her wee crossed ouer to the port of Santa Cruz in California: for while wee were so beaten in the former tempest, the pilot of the Barke signified vnto vs, that he perceiued she beganne to leake, and that already she had receiued in much water, insomuch that she beganne to founder; whereupon, to helpe her neede, and that wee might meete together in a knowne haven, if by chance the tempest should separate vs, as it did indeed, we willed him to repaire to the haven of Santa Cruz, where we meant to repaire his harmes and our owne. Wherefore being all arrived in this place of Santa Cruz, wee stayed there five dayes and tooke in water, wherein we heard no newes of our Barke which we had lost: Whereupon the Captaine resolved to follow on our voyage; wherefore we set saile the 12. of September, and as wee sailed wee saw along the coast of the saide haven 3. Islands, whereof the Captaine made no great accompt, thinking there coulde be no great good found in any of them. These Islands seemed not to be great; wherefore he commanded the Masters and pilotes to proceed on their voyage, and not to leese time without any profit. So sailing ouer the gulf of California, in two dayes and an halfe we came to the riuer of S. Peter and S. Paul, finding before we entred into the same a small Island in the mouth of the Riuer, being 4. or 5. miles distant from the maine. On both sides of this Riuer wee beheld goodly and pleasant great plaines full of many Greene and beautifull trees, and farther within the land we beheld certaine exceeding high mountaines full of woods very pleasant to beholde. From this Riuer wee sailed still along the coast the space of 15. leagues, in which course wee found two other Rivers in our iudgement as great or greater then Guadalquivir the Riuer of Siuilia in Spaine. All the coast by these Rivers is plaine as the other which we had passed, with many woods: likewise within the lande appeared great mountaines covered with woods very beautifull to beholde, and beneath in the plaine appeared certaine lakes of water. From these Rivers we sailed 18. leagues, and found very pleasant plaines, and certaine great lakes whose mouthes opened into the Sea: here our Captaine thought good thoroughly to discouer what those lakes were, and to search whether there were any good haven for his ships to ride in, or to harbour themselves, if any tempest should arise; and so hee commaunded a boat to be hoised out into the Sea, with a Master and five or six men to view them, and to sound the depth, and bottom of them: who went thither, and found the coast very holde, and the mouthes of the lakes; whereupon they made no accompt of them, onely because the shoze was so shallow, for otherwise the land was very pleasant. Here at euening we saw on the shoze 10. or 12. Indians and fires. The aforesaide two Rivers are two leagues distant the one from the other, little more or lesse, and are great, as I haue saide, and being in the last of them we went vp to the ship-top, and saw many lakes, and one among the rest exceeding great, and wee supposed that they had their springs out of this great lake, as other Rivers also haue from other lakes, for wee sawe the course of them severally each by themselves, hauing goodly woods growing all along their bankes. The currents of these Rivers might be discerned three leagues within the Sea: and at the mouthes of them were many small stakes set by for markes: the shoze here is plaine and sandie, and the countrey very pleasant.

Chap. 2.

Sailing along the coast from the two aforesaid great Rivers, they discouer three mouthes of lakes and a goodly Countrey, they come vnto *Cabo Roxo*, and take possession of those countreys for the Emperours Maiesty. A discourse of the faire hauens that are on those coastes, and of very many Islands which they saw, before they came to the Cape called *Capo de las Plaias*.

The coast runneth
North-ward.

This day wee sailed along the coast the space of 16. leagues, and in the midst of this voyage there is a Bay very faire of 4. or 5. leagues, hauing certaine bankes or fences in it, in beholding whereof we tooke great pleasure. The night following we roade in 20. fadome water. The next day we followed our voyage toward the North, and hauing sailed 3. or 4. leagues we saw 3. mouthes of lakes which entered into the land, where they became like standing pooles. Wee roade a league distance from these mouthes in 6. fadome water, to see what they were, and sent our boat with certaine men, to see if there were any entry for our ships: for halfe a league from shoze we had not

not past one or two fadome water. Here our men saw 7. or 8. Indians, and found sundry sorts of greene herbes somewhat differing from those of Nueva Espanna. The Countrey is plaine, but farre within land they saw great and small hils extending themselves a great way, and being very faire and pleasant to behold. The day following we proceeded on our voyage sayling alwayes in sight of the plaine coast toward the North-west, in 10. or 15. fadome water. And having sailed 6. good leagues we found a Bay on the coast within the land of about 5. leagues ouer, from whence the coast trended North-west, and this bay we sailed about 16. leagues. All this coast is plaine, and not so pleasant as that which we had passed: here are certaine small hilles, but not so high as those which we had found before. Thus we sailed all night North-west, and until the next day at noone, at which time we fell with a headland of white sand, where by the height which we tooke that day we found our selues to be in the latitude of 27. degrees and $\frac{3}{4}$. This cape we called *Capo Roxo*. All the coast is plaine and faire and cleane sand, and we saw within land some few trees not very great, with certaine mountaines & woods 3. or 4. leagues distant from the said cape: and here likewise appeared a mouth of a riuer, which (as far as we could discerne) made certaine lakes by which in the land: fro the mouth whereof for the space of a league into the sea it seemed to be very sholde, because the sea did breake very much. Here we saw within the land 3. or 4. riuers. In this sort we sailed on our voyage to the Northward, & because we had not good weather we roade that night in a great haven lying in our way, where on the shore wee saw certaine plaines, and by within the land certaine hilles not very high: and continuing our course toward the North about 3. leagues from this haven, we found an Island of about one league in circuite lying before the mouth of the said haven. And sailing forward we found an haven which hath two mouthes into the Sea, into which we entered by the Northmost mouth, which hath 10. or 12. fadome water, & so decreaseeth till it come to 5. fadome, where we anchored in a poole which the Sea maketh, which is a strange thing to behold, for there are so many entrances & mouthes of streames and hauens, that we were all astonied at the sight thereof; and these hauens are so excellently framed by nature, as the like are not to be seene in the world, wherein we found great store of fish. Here wee anchored, and the Captaine went on shore, and tooke possession, using all such ceremonies as therunto belong. Here also wee found certaine weares to catch fish made by the Indians, and certaine small cottages, wherein were diuers pieces of earthen pots as finely made as those in Spaine. Here by commande-ment of the Captaine a Crosse was erected vpon an hill, and it was set up by Francis Preciado. In this place we saw the Countrey full of fresh and greene grasse, howbeit differing from that of New Spaine, and by within the Countrey wee saw many great and very greene mountaines. This Countrey seemed very goodly and delightfome to all of vs, in regard of the greenesse and beautie thereof, and we iudged it to be very populous within the land. From this haven we departed and kept our way toward the North-west with good weather, and began to finde hard by the sea-shore exceeding high mountaines spotted with white, and in them we saw many fowles which had their nestes in certaine holes of those rocks, and sailed 10. leagues until night, all which night we were becalmed. The next day we followed our course North-west with good weather: and from that day forward we began to see on the Westerne shore (whereon the foresaid haven of S. Cruz standeth) certaine Islands or high lands, whereat we reioyced not a little. And so sayling forward we met with an Island about two leagues in bignesse, and on the East shore hauing still the maine land and Islands in sight, we sailed 15. leagues until the euening, alwayes finding hard by the sea-coast exceeding high mountaines bare of trees, the land appearing still more plainly vnto vs on the Westerne shore. Whereupon wee began to be of diuers opinions, some thinking that this coast of Santa Cruz was a firme land, and that it ioyned with the continent of Nueva Espanna, others thought the contrary, and that they were nothing else but Islands, which were to the Westward. And in this sort we proceeded forward, hauing the land on both sides of vs, so farre, that we all began to wonder at it. This day we sailed some 15. leagues, and called this Cape *Capo de las Plaias*.

Chap. 3.

Of the Streight which they discovered on the coast of *Capo de las Plaias*, and of the pleasant Countrey which they found before they came to the rockes called *Los diamantes*. Of the wonderfull whitenesse of that Sea, and of the ebbing and flowing thereof; and of the multitude of Islands and lands, which extend themselves Northward from the haven of *Santa Cruz*.

The day following we sailed until night with so good weather, that we ran about 20. leagues. All this coast along the shore is full of little hilles without grasse or trees: and that night we anchored

to the north of the
headland of white sand

anchored in 20 fadome water. The next day we followed our voyage beginning to saile before breake of day Northward, and we came into the midst of a Streight of mouth which was 12 leagues broad from one land to the other, which Streight had two Islands in the midst thereof being 4 leagues distant the one from the other: and here we discerned the countrey to be plaine, and certaine mountaines, & it seemed that a certaine gut of water like a brooke ran through the plaine. This streight (as far as we could perceiue) was very deep, for we could finde no botome; and here we saw the land stretching afarre off from the one shoze to the other, and on the Westerne shoze of the haven of S. Cruz, the land was moze high with very bare mountaines. The day following we passed on our way toward the North, and sailed some 15 leagues, and in the midst of our way we found a circuit of bay of 6 leagues into the land with many cooues or creeks, and the next day following continuing our course we sailed some 10 leagues, and the coast in this dayes journey was all of high mountaines naked and bare without any tree. It is very deepe hard by the shoze, and that night we were constrained to stay by reason of the contrary winde. The next morning before breake of day we sailed still along the coast to the North west until evening, and ranne about some 15 leagues. All along this shoze wee sawe very goodly mountaines within the land, and many plaines and downes with some few trees, & the sea shoze was all sandy. In the midst of this dayes course we found certaine small rockes in the sea 4 leagues distant from the maine, where the said land maketh a great point into the sea, and here we stayed the rest of the night, where we had a very great shower of raine. The day following we proceeded on our voyage, and sailed untill night by a compasse or turning, some 8 or 9 leagues, and saw within land a few mountaines hauing no trees vpon them, but the Sunne shining alwayes very cleare, as farre as wee could descry they were very great, on the Westerne shoze of the haven of Santa Cruz. Here we stayed all night because we found very shallow water and sawe the sea very white, and in a maner like to chalke, so that we all beganne to marueile thereat. The day following wee went forward againe along the coast North westward, and sailed eight leagues, and saw another land which stretched North west, and was full of high mountaines. And still continuing this course we searched very diligently to see if there were any passage through betweene both the landes, for right forward wee sawe no land. And thus sayling wee alwayes found more shallow water, and the Sea thicke, blacke, and very murdrie, and came at length into five fadome water; and seeing this, wee determined to passe ouer to the land which wee had seene on the other side, and here likewise wee found as little depth and lesse, whereupon we rode all night in five fadome water, and wee perceiued the Sea to runne with so great a rage into the land, that it was a thing much to be maruelled at, and with the like fury it returned backe againe with the ebbe; during which time wee found 11 fadome water, and the flood and ebbe continued from fire to fire houres.

The day following the Captaine and Pilote went vnto the shippes top, and sawe all the lande full of sand in a great round compasse, and ioyning it selfe with the other shoze, and it was so low, that whereas wee were a league from the same wee could not well discern it, and it seemed that there was an inlet of the mouthes of certaine lakes, whereby the Sea went in and out. There were diuers opinions amongst vs, and some thought that that current entered into those lakes, and also that some great River there might be the cause thereof. And when we could perceiue no passage through, nor could discern the countrey to be inhabited the Captaine accompanied with certaine of vs went to take possession thereof. The same day with the ebbe of the Sea wee fell downe from the other coast from the side of Nueva Espanna, though alwayes we had in sight the firme land on the one side of vs, and the other Islands on our left hande, on the side of the port of Santa Cruz situate on the Westerne shoze: for on that side there are so many Islands and landes, so farre as we could descry, that it was greatly to be wondered at: for from the said haven of Santa Cruz, and from the coast of Culiacan we had alwayes in a maner land on both sides of vs, and that so great a countrey, that I suppose if it should so continue further inwarde, there is countrey ynough for many peeres to conquer. This day wee had the winde contrary, and cast anchor vntill the flood increased, which was in the afternoone, and then wee set saile likewise with contrary winde vntill midnight, and then cast anchor.

The next day wee departed, Chap. 10. our course along the coast South west, vntill midnight with little winde, and wee sawe within the land high mountaines with some openings, and wee made way some three leagues, and all the next night wee were becalmed, and the next day we continued our course but a little while, for we sailed not about five leagues, and all the night were becalmed, and sawe the lande full of bare and high mountaines, and on our left hande wee descried a plaine countrey, and saw in the night certaine fires.

Chap. 4.

They land vpon an Island to discover the same, and there they see many fires, which issue out of certaine mountaines, and many Seale-fishes. Here they take an Indian, and can not vnderstand his language. Running along they discover another Island, and take possession therof for the Emperours Maiestie, and a great haven in the firme land, which they call *Ancon de Sant Andres*, or *The haven of S. Andrew*.

The next day following our course we saw a great haven with an Island in the sea, within a crosse-bow shoote of the firme land, and in this Island and on the firme land were seene many smokes by the iudgement of all the company; wherefore the captaine thought good that wee should goe on land to know the certainty of these smokes and fires, himselfe taking ten or twelve of vs with a boate in his company: and going on shore in the Island, we found that the smokes proceeded out of certaine mountaines and breaches of burned earth, whereout ascended into the aire certaine cinders and ashes which mounted vp to the middle region of the aire, in such great quantitie, that we could not esteeme lesse then twenty lodes of wood to bee burned for the causing of euery of those smokes, whereat wee were all not a little amazed.

In this Island were such abundance of Seales, as it was wonderfull. Here we stayed that day, and killed a great number of these Seals, with whom we had some trouble: for they were so many, and ayded one another so well, that it was strange to behold; for it fell out, that while we were occupied in killing some of them with stauces, they assembled twentie or thirty together, and lifting themselves by assailed vs with their feete in a squadron, and ouerthrew two or three of our company on the ground: whereupon letting goe those which they had in their hands, they and the others escaped vs and went into the sea, howbeit wee killed good store of them, which were so fatte as it was wonderfull: and when we opened some of them to haue their liuers, we found certaine small blacke stones in their bodie, whereat wee much marueiled. The next day wee rode at anker here for lacke of good weather to sayle withall: whereupon the Captaine determined to goe on shore with nine or ten in his company, to see whether there were any people there, or any signe of people that had bene there, and they found on the maine land seuen or eight Indians like to Chichimecas, which were gone a fishing, and had a raft of canes; who so soone as they espied vs ranne away and betooke themselves to flight, but being pursued by vs, in the end we tooke one of them, whose language was so strange that wee could by no meanes vnderstand him; his clothing was nothing at all, for he was stark naked. These people caried their water in bottels made of beasts skins, they fished with hookes of bone, and wee found good store of their fishes, whereof we tooke three or foure dozen.

The Indian which we had taken seeing himselfe in our hands did nothing but weepe, but the Captaine called him, and made much of him, giuing him certaine beades, with a hat and certaine hookes of ours, and then let him goe. And it seemed that after hee was returned to his companions, he declared vnto them how we had done him no harme at all, shewing them the things which we had giuen him: whereupon they also determined to come vnto vs to our boate, but because it was now night, and that our shippes were farre from vs, we forced not to stay for them, especially because it was a bad place and a dangerous. This countrey hath on the sea-coast high and bare mountaines with certaine grasse in some places like vnto our broomes, or like vnto woods of rosemary.

The next day wee sayled neere to the coast on the same side, with very scarce winde, and in a manner calme, and ranne not aboue five leagues, and all the night following we lay becalmed, and we saw on the shore five or six fires. The land is high with very high mountaines without grasse, hauing certaine caues in them: the next day also, and part of the night following we were becalmed: and the morow after we followed our course along the sayd coast, and passed betweene a great Island full of exceeding high mountaines, and the maine land; where we saw a very great haven in the firme land in which wee ankered to see what it was, and being come to an anker, the Captaine and some of vs went on land the same day to see if there were any people and fresh water, and wee found certaine small cottages couered with drie grasse, with certaine little stauces layd ouerthwart, and we went a little way into the countrey which was very barren, by certaine small and streight paches, and found a little pond or pit, but drie and without water; and here the Captaine tooke possession for the Marques of the valley in the name of his Maiestie, and after this we returned to our ship, and that night we sawe foure or five fires on the land. The next day the Captaine determined, because hee had seene these fires, to goe on shore, and so with our

two boates we went fifteene or twenty of vs vnto certaine crooked strands two leagues from the place where our ships rode, and where we had seene the fires, and we found two Indians of exceeding huge stature, so that they caused vs greatly to wonder; they caried their bowes and arrowes in their hands, and as soone as they saw vs leap on shore they ran away, and we followed them vnto their dwellings and lodgings, which were certaine cottages and bowers couered with boughs, and there we found great and small steps of many people, but they had no kind of victuals but onely cuttle-fishes which wee found there. The countrey toward the sea side seemed but barren, for we saw neither trees nor greene grasse there, yet were there certaine smal patches not well beaten, and along the sea-coast we saw many tracts of dogges, hares, and conies, and in certaine small Islands neere vnto the maine we saw Seale-fishes. This haue is called Ancon de Sant Andres.

Andres.

Chap. 5.

They discover a mountainous Island very great, and neere vnto it certaine other Islands with a goodly greene and pleasant countrey. They haue sight of certaine Indians in Canoes of canes, whose language sounded like the Flemish tongue, with whome they could not haue any traffique.

A great Island

The next day we proceeded on our voyage, sayling betweene the maine and an Island, which we suppose to be in circuit about a hundred or eighty leagues, sayling sometimes within one, and sometimes within two leagues of the maine. The soile of this Island is of certaine mountaines not very steepe with caues in them, and as farre as wee could descrie by the coast, there appeared no signe of any plaine countrey. Here from this day forward wee began to bee afraid, considering that we were to returne to the port of Santa Cruz; for it was supposed, that all along this mighty gulfe from the entrance in at Culiacan vntil the returning backe vnto the said haue, was all firme land, and also because wee had the firme land alwayes on our right hand and it goeth round circle-wise vnto the sayd haue; but many thought and hoped that we should finde some mouth or out-let, whereby wee might passe through vnto the other coast. What our successe was we will declare in the relation following.

They returne
from the boats
tome of the gulf
of California.

The next day being Thursday wee sayled with scant winde, for it was almost calme, and passed beyond that great Island, hauing firme land alwayes on our right hand, and coasting (as I sayd) very neere vnto it. The next day likewise we sayled with little winde, it being in a manner calme, and passed neere vnto the shore by certaine round baies, and certaine pointes which the land made, which was pleasant to behold being somewhat greene, and there seemed to be some creeke there. This Friday at night wee sayled altogether with a fresh gale, and at breake of day wee were betweene the maine land, and an Island on our left hand, which was somewhat big, as farre as we could discerne. There was a great bay in the firme land, and before it was a point which stretched farre into the sea. The firme land seemed to bee much fresher and pleasanter then those lands which we had passed, hauing many bankes and hills of indifferent height, and beautifull to behold.

Another Island

The countrey (as farre as wee could discerne) was so pleasant and delightfull, that wee all desired to goe on shore, and to search vp into it two or three dayes iourney, to see whether it were inhabited or not. Wee saw within the land of that bay two fires. The night following being Saturday we sailed continually with a prosperous and fresh gale, and the wind was so great that we drew our bonet to our maine sayle, and sayled so till the morning.

A great Island

On Sunday the twelfth of October we found our selues altogether inclosed with land, on the right hand with the maine, which compassed vs before and behind, and on the left hand with an Island of a league and a halfe; and betwene the maine and the Island in the midst of the sea there lay a small Islet, and also betwene the sayd maine and the Island there were two mouthes, through which there appeared a passage whereby afterwar we passed through. This maine was much more fresh and greene then the other which wee had passed, and had certaine plaines and pointes of mountaines of pleasant view, and full of greene grasse. Here all this night we saw two or three villages which were very great, and at breake of day we saw a Canoe or boate made of canes, which came from the land out of a creeke, and wee stood still vntill it came neere vnto vs in the ship, and they began to speake in their language which no man vnderstood, whose pronunciation was like to the Flemings, and being called they returned with great haste vnto the shore, and we were very sorry because our boate had not followed them.

Here happened vnto vs a very strange thing, which was, that as this Indian returned to the shore

thore in certaine of these creekes where a number of his fellow Indians were, as wee viewed that part, we sawe five Canoas issue forth, which came toward vs: whereupon wee stayed to see what they would doe. In the meane while our Admirall came by vnto vs, which was neere the thore, for he also had scene them, and so being come together we cast anchor, expecting what those Canoas would doe. In the meane while our Generall commanded vs to make ready our boate, and to furnish the same with oares and men, to trie if we could by any meanes take some of them, that we might come to some knowledge of them, and that wee might giue them some of our trifles, and specially of our hookes and beads to winne their friendship. The Indians with their five Canoas approched within one or two stones cast of vs, and then began to speake very loude vnto vs in a very strange language, alwayes standing vpon their guard to retire themselves with speede. When our Captaine saw this, and that they would not come neere vs, but rather retired, he commanded sixe mariners to goe into the boate from the sterne of the ship, and himselfe also went with them with all possible haste toward the Indians. The Indians returned to the thore with so great celeritie, that they seemed to stie in those little Canoas of canes. Neuertheless our men vsed such diligence that one of the Canoas was boorded & taken; but the Indian in the Canoa seeing himselfe now taken leapt into the water, and our men followed with their boat to take him, but seeing himselfe within their reach, he ducked with his head vnder their boate, and so deceiued them, and then rose by againe, and with their oares and with stauers they gaue him certaine blowes, to amaze him, but nothing would serue them; for as they were about to lay handes vpon him hee still diued vnder water, and with his hands and feete got neere to the thore: and as he rose by aboue the water, hee called to his felowes which stood on the thore to behold, crying Belen with a loud voyce, and so they pursued him, and strooke him sometimes being very neere the thore, and he alwayes went calling the rest of his fellowes to come and helpe him, whereupon within a thort while after three other Canoas came forth to succour him, being full of Indians with bowes and arrowes in their handes, crying with a loude voyce, that wee should come on thore: these Indians were of great stature and saluage, fat also and well set, and of a browne colour. Our Captaine perceiuing this, least they should wound any of our people with their arrowes, returned backe, and commanded vs immediately to set sayle, and so forthwith wee departed.

This day the wind skanted, and we returned to anchor in the foresayd place, and our Admirall rode from the firme land toward the Island, and wee which were in the ship called *The Trinitie* lay neere vnto the maine, and before break of day wee departed with a fresh gale. And before we disembouqued out of that chanell we saw certaine grasse very high and greene vpon the maine: whereupon a mariner, and the Pilot went by into the top, and saw the mouth of a riuer which ranne throug that greene countrey into the sea. But because our Admirall was vnder all her sayles farre from vs, we could not tell them of this riuer, where wee would haue taken water, whereof we had some neede, and because it was a very good haue to goe on thore to take it, and therefore without watering we followed our course. On munday we departed from this haue which is like vnto a lake, for on all sides we were compassed with land, hauing the continent before, behinde vs, and on our right side, and the Island on our left side, and we passed forth at those mouthes beforementioned, which shewed an out-let into the open sea. Thus wee sayled along still viewing the situation of the countrey, reioycing all of vs at the sight thereof, for it alwayes pleased vs more and more, still appearing more greene and pleasant, and the grasse which wee found neere vnto the thore was fresh and delectable, but not very high, being (to all our iudgements) not past a spanne long. Likewise the hilles which wee saw, which were many, and many downes made a very pleasant prospect, especially because we iudged, that there were many valleys and dales betweene them.

Port Belen a
very good
haue.

Chap. 6.

They discouera a very great bay with foure small Islands in it, whereas they take possession. As they sayle along and discover diuers Islands they come at length to the port of *Santa Cruz*, where not being able to get any knowledge of those Indians, although they lay in waite for them at a place called *The well of Grijalua*, they departed thence. They haue a perillous and long tempest, which ceased, after they had scene a light on their shrowdes.

Our comming out of these openings we began to finde a Bay with a very great haue, a great haue enuironed with diuers small hilles hauing vpon them greene woods and pleasant to behold.

In this bay and strait were two small Islands neere unto the shore, one of the which was like unto a table about halfe a league in bignes, and the other was a round hill almost as big as the former. These Islands serued vs onely to content our sight, for we passed by them without staying, hauing but a slacke wind on Sunday morning: all which day we followed our course with the foresayd slacke winde, and within a while after it became flat contrary, so that we were constrained to anker at the sayd point of the sayd hauen; and on Tuesday at bzeake of day we set sayle, but made but little away all the day, because the winde continued contrary, although but very weake. The night following wee were becalmed a little beyond the point of this hauen; but about midnight wee began to haue a fresh gale, and on Wednesday in the morning wee were seven leagues distant from that point. This countrey shewed (as it was indeede) more plaine then the rest, with certaine small wooby hills, and within the other point which was before described, the situation seemed to be more pleasant and delighsome then the rest which we had passed. And at the vitermost end of the point were two small Islets. The sayd Wednesday about nine of the clocke the winde blew a good gale, and we sayled by euening between seven and eight leagues, and came ouer against a land not very high, where wee saw certaine creekes or bzeaches not very ragged, into cuery of which a riuer seemed to fall, because the soyle was very greene, and had certaine trees growing on it farre bigger then those which we had found before. Here the Captaine with five or six men went on shore, and taking possession passed by one of those riuers, and found the footing of many Indians byon the land. On the bankes of that riuer they saw many fruitful trees, as cherry-trees and little apple-trees, and other white trees: they found also in the wood three or foure beasts called Adibes, which are a kind of dogs. The same night wee set sayle with the winde off the land, which blew so freshly, that it made vs to strike our foresayle; and on the sixteenth of October at nine of the clocke we came neere unto a point of certaine high mountaines, on which day being Thursday we made little way, because the winde ceased, but it rose againe in the night, whereupon by the bzeake of day on Friday wee came before the sayd point being six or seven leagues off. The land seemed to be very mountainous with certaine sharpe points not greatly clad with grasse, but somewhat bare. On our left hand wee saw two Islands, the one of a league and a halfe, the other not so much, and it seemed that we dyem neere to the port of Santa Cruz, whereat we were loy, because we were alwaies in good hope to find some out-let into the maine Ocean in some place of that land, and that the same port was the same out-let, and also that by the sayd coast we might returne to the foresayd hauen of Santa Cruz, and that we had committed a great error, because we had not certainly sought out the secret, whether that were a Streit or a riuer, which wee had left behind vs vnsearched at the bottom of this great sea or gulfe.

20 bay with 4
or 5 Islands.

cap. 5.

They arrive at
the hauen of
Santa Cruz.

All Friday and the night following we sayled with a scant winde, and on Saturday at bzeake of day we were betweene two points of land which make a bay, wherein we saw before and behinde foure or five great and small Islands. The land was very mountainous, part wherof was couered with grasse, and part was voide. Within the land appeared more mountaines and hills, and in this place we were come neere unto the hauen of Santa Cruz, which is all firme land, except it be diuided in the very nooke by some streite or great riuer which parteth it from the maine, which because we had not thoroughly discovered, all of vs that were employed in this voyage were not a little grieved. And this maine land stretcheth so farre in length, that I cannot well expresse it: for from the hauen of Acapulco, which standeth in senenteene degrees and twenty minutes of latitude, wee had alwayes the coast of the firme land on our right hand, untill we came to the great current of the white & red sea; and here (as I haue said) we knew not the secret of this current, whether it were caused by a riuer or by a streit: and so supposing that the coast which wee had on our right hand was closed by without passage, wee returned backe againe, alwayes descending Southward by our degrees, untill wee returned unto the sayd hauen of Santa Cruz, finding still along the coast a goodly and pleasant countrey, and still seeing fires made by the Indians, and Canoas made of Canes. We determined to take in fresh water at the hauen of Santa Cruz, to runne along the outward Westerne coast, and to see what it was, if it pleased God. Here we rested our selues, and eat of the plummes and fruits called Pichaias: and wee entered into the port of Santa Cruz on Sunday the 18 of October and stayed there eight daies to take in wood and water resting our selues all that while, that our men might strengthen and refresh themselves. Our captaine determined to diuide amongst vs certain garments of cassata, with clokes and saies, and a piece of cassata, and likewise ordained, that wee should goe on land to catch a couple of Indians, that they might talke with our interpreter, and that we might come to the knowledge of their language. Whereupon thirteene of vs went out of our ship by night, and lay

lay in ambush in a place which is called The well of Grijalua, where we stayed untill noone betwene certaine secret wapes, and could neuer see or descrie any one Indian: wherefore wee returned to our ships, with two mastine-dogs which we caried with vs to catch the Indians with moze ease: and in our returne we found two Indians hidden in certaine thickets, which were come thither to spie what wee did: but because wee and our dogs were weary, and thought not on them, these Indians issued out of the thickets, and fled away, and wee ranne after them, and our dogges saw them not: wherefore by reason of the thicknes of the wilde thistles, and of the thornes and byars, and because we were weary, we could neuer ouertake them: they left behinde them certaine staues so finely wrought that they were very beautifull to behold, considering how cunningly they were made with a handle and a corde to sling them.

The Spaniards vse manerly to take the Indians.

and in this manner they take the Indians.

Read more of these staues cap. 10.

The nine and twentieth of October being Wednesday, we set sayle out of this haven of Santa Cruz with litle winde, and in sayling downe the chanel our shippe called the Trinitie came on ground vpon certaine sholdes: this was at noone at a low water, and with all the remedy that we could vse wee could not draw her off, whereupon wee were constrained to vnderprop her, and to stay the next tide: and when the tide began to increas we vled all diligence to draw her off, and could not by any meanes, whereat all the company and the Captaine were not a little grieved; for wee thought wee should haue lost her there, although wee ceased not with all our might to labour with both our boates, and with our cable and capstern. In the ende it pleased God about midnight at a full sea with the great force which wee vled to recouer her, that wee drew her off the sand, for which we gaue God most hearty thanks, and rode at anker all the rest of the night, wayting for day-light for feare of falling into any further danger or mishap. When day was come, wee set forward with a fresh gale, and proceeded on our voyage, directing our prowes to the maine sea, to see whether it would please God to let vs discouer the secret of this point. But whether it pleased not his great goodnesse, or whether it were for our sinnes, wee spent eight dayes from this port, before we could double the poynt, by reason of contrary winds, and great raine, and lightning and darkenesse euery night: also the windes grew so raging and tempestuous, that they made vs all to quake, and to pray continually vnto God to ayde vs. And hereupon wee made our cables and ankers ready, and the chiefe Pilot commanded vs with all speede to cast anker, and in this sort we passed our troubles: and whereas wee rode in no securitie, he caused vs forthwith to weigh our ankers, and to goe whither the wind should driue vs. And in this sort wee spent those eight dayes, turning backe by night the same way that wee had gone by day, and sometimes making good in the night that which we had lost in the day, not without great desire of all the company to haue a winde which might set vs forward on our voyage, being afflicted with the miseries which wee indured by reason of the thunders, lightnings, and raine, wherewith we were wet from toppe to toe, by reason of the toyle which we had in weighing and casting of our ankers, as neede required.

And on one of these nights, which was very darke and tempestuous with winde and raine, because we thought we should haue perished, being very neere the shore, we prayed vnto God that he would vouchsafe to ayde and saue vs, without calling our sinnes to remembrance. And straightway wee saw vpon the shrowdes of the Trinitie as it were a candle, which of it selfe shined, and gaue a light, whereat all the company greatly reioyced, in such sort that wee ceased not to giue thanks vnto God. Whereupon we assured our selues, that of his mercie hee would guide and saue vs, and would not suffer vs to perish, as indeede it fell out; for the next day wee had good weather, and all the mariners sayd, that it was the light of Saint Elmo which appeared on the shrowdes, and they saluted it with their songs and prayers. These stormes tooke vs betwene the Isles of Saint Iago and Saint Philip, and the Isle called Isla de perlas lying ouer against the point of California supposed to be firme land.

Chap. 7.

Sayling on their way they discouer a pleasant Countrey, and in their iudgement greatly inhabited, and finde the Sea-coast very deepe. They went to discouer or viewe the Isle offerles. And by a current one of their ships is separated from the other, and with great ioy after three dayes they had sight again of her, and following their voyage they discouer certaine great, greene, and pleasant plaines.

WE began to sayle along the coast the seventh or eight of Nouember, the land all wapes shewing very greene with grasse pleasant to behold, and certaine plaines neere the shore,

Nouember.

From hence
forward they

A current.

and up within the countrey many pleasant hills replenished with wood, and certaine valleys, so that wee were delighted aboue measure, and wondered at the greatnes and goodly hiew of the countrey: & every night we saw fires, which shewed that the countrey is greatly inhabited. Thus we proceeded on our voyage untill the tenth of the sayd moneth of Nouember, hauing alwayes the coast of the maine Ocean on our right hand, and the farther we sailed, wee alwayes found the countrey more delightfome and pleasant, as well in beholding the greennes therof, as also in that it shewed certaine plaines and deepe valleys, through which riuers did fall downe into the land, within certaine mountaines, and hills full of great woods which were not very high, and appeared within the countrey. Here we were 54 leagues distant from California little more or lesse, alwayes toward the Southwest, seeing in the night three or foure fires, whereby it appeareth that the countrey is inhabited, and full of people, for the greatnes of the countrey argueth no lesse: and we supposed that there must needs bee great townes inhabited within the land, although in this poynt we were of diuers opinions. The sea is so deepe on all this coast that we could scarce find ground in 54 fadomes. On the greatest part of the coast there are hills of very white sand, and it seemeth to be a dangerous coast, because of the great and swift tides which goe there, for the sand sheweth so much for the space of ten or twelue leagues, for so the Pilots affirmed. This day being Saturday the winde increased, and wee had sight of the Isle of pearles, which on this side of the gulfe appeareth with a deepe valley all couered ouer with trees, and sheweth much fairer then on the other side, and wee entred into the Port of Santa Cruz. From the ninth of Nouember to the fifteenth we sayled not aboue tenne leagues, because we had contrary winds, and great showres: and besides this we had another mischance which did not a little grieue vs: for wee lost company of the ship called The Trinitie, and could neuer see her for the space of three dayes, whereupon wee suspected that shee was returned home vnto New Spaine, or that she was seuered from our company; wherefore we were grieved out of measure to see our selues so left alone, and the Captaine of all others was most sad, though he ceased not to encourage vs to proceede on our voyage, saying that notwithstanding all this wee ought not to leaue off this enterpise which we had begunne, and that though we were left alone we should deserue the greater commendation and credite: whereupon wee all answered him, that wee would not haue him thinke that any of vs would euer be discouraged, but that we would follow him vntill hee should thinke it reasonable that we should not proceede any further in the enterpise, and that we were in danger of perishing, and that vntill then wee would bee at his commandement: but withall we perswaded him that after he had scene any great difficulty to proceede any further, he should doe well to returne backe to make relation of our successe to the R. H. lord the Marques de valle. Whereupon he made an Oration vnto vs, wherein he told vs, that he could not beleene, much lesse could imagine, wherefore the shippe called the Trinitie should returne into Newe Spaine, nor why she should willingly depart from vs, and goe vnto any other place, and that he thought by all reason, that some current had caried her out of our sight, and that through contrary weather and tempests she could not fetch vs by, and that notwithstanding all that which we had done in the voyage, he had an instruction, that if by chance we were separated one from the other, wee were to take this course to meete againe together, namely to returne backe eight or tenne leagues to seeke one another, beyond certaine head-lands which lay out into the sea, and that therefore we should doe well to returne to seeke her by. This sentence pleased vs all, and so returning to seeke her, we espied her two leagues distant from vs, comming toward vs with a fresh gale of winde, whereat we greatly reioyced.

Thus being come together we ankered for that day, because the weather seemed very contrary, and the Captaine chid them for their negligence in sayling, because they had in such sort lost our company; and they excused themselves, that they could doe no lesse, because a current had caried them away aboue three leagues, whereby they could neuer reach vnto vs. The next day being the sixteenth of Nouember wee set forward, but sayled very little, for the North and North west winds were against vs. Here we discovered certaine plaines, in my iudgement very great and Greene, and right before vs we could not discerne any mountaines or woods, whereat wee marvelled to see so great a countrey. And wee met an Indian in a Canoa on the shore whereon the sea did breake, who stayed to beholde vs a great while, and oftentimes hee lifted vp himselfe to view vs the better, & then returned backe along the coast: we vsed all diligence to see whether he would come out further from the shore, to giue him chace, and to trie whether we could catch him, but he very cunningly viewed vs without comming neere vnto vs, and returned to the shore with his Canoa. Here we saw in the euening but one fire, and wist not whether it were done by the cunning of the Indians, because they would not haue vs know that there were people there,

that it was so indeede. From the said 16 day of Nouember vntill the 24 of the same moneth we could not proceede on our way about 12 or 15 leagues: and looking into our Sea-chart, we found our selues distant from the Kaguges of the port of Santa Cruz about 70 leagues. Now on the 24 day being munday very early in the morning we beganne to take very good view of that Countrey, and all along the coast we saw many faire plaines with certaine furrowes made in the midst like vnto halfe plaines, the said plaine still appearing by into the Countrey, with pleasant champions, because the grasse which grew there was very beautifull, short, and greene, and good pasture for cattell. Howbeit because we rode so farre off, we could not perfectly iudge what kind of grasse it was, but it shewed very short and greene, and without thornes. These plaines on the right hand made a bay into a valley which seemed to be a piece of a mountaine: the rest shewed to be al plaines without any thistles or weedes, but full of grasse good for cattel very greene and faire, as I haue said.

They are 70 leagues from the port of Santa Cruz.

Chap. 8.

One of their ships by tempest was separated from the other, and afterward meeting with her confort she reporteth that the land stretcheth to the West by the mouth of the great lake. The Pilots are of diuers iudgements touching the state of this coast inhabited by *Chichimecas*. They enter into an haueu to take in fresh water, and are suddenly assailed by two squadrons of Indians. They defend themselves valiantly, and the Captaine with some of his souldiers are grievously wounded.

The 26 of this moneth being Wednesday at night the North windooke vs, which still increased more and more so greatly that it put vs to much trouble, for it continued two dayes, in which the Sea was alwayes boisterous; and this night againe we lost the Trinity being beaten with the North winde aforesaid (and we had sight of her on munday the 24) wherewith we were all of vs greatly agrieved, both Captaines, Souldiers and Mariners, because we saw we were left alone, and our ship call Santa Agueda wherein we were, was but badly conditioned, and this grieved vs more then the trouble which we had with the boisterousnesse of the Sea, imagining that if we should leese the Trinity, or if any mishap should fall vnto vs, we should not be able to follow our voyage according to our Captaines and our owne desire. This said 24 day being munday we saw a Countrey with high mountaines toward the North west, and it seemed that the land stretched on still forward, whereat we exceedingly reioyced, because we iudged that the lande grew alwayes broader and broader, and that wee should meete with some speciall good thing. Whereupon we desired that it would please God to send vs good weather for our voyage, which hitherto we found alwayes contrary, so that in 26 dayes we sayled not about 70 leagues, and that with much trouble, sometimes riding at anker and sometimes sayling, and seeking the remedies and benefite of the shore to auoide perils. In this Countrey which we discouered the 26 day we alwayes saw (as I haue said) along the shore, and within the land, goodly plaines without any tree, in the midst wherof was a lake or gathering together of the Sea-water, which (to our iudgement) was about 12 leagues in compasse, and the sea-coast reached to the mountaines before mentioned. And this day we saw our ship called the Trinitie, which rode 2 leagues distant from vs, which so soone as she saw vs, set saile, and we came together and reioyced greatly. They brought vs great quantity of gray fishes, and of another kinde: for at the point of those mountaines they found a fishing which was very wonderfull, for they suffered themselves to be taken by hand: and they were so great that euery one had much adoe to finde roome to lay his fish in. They found also on the said point a fountaine of fresh water which descended from those hilles, and they told vs that at the same place they had found a narrow passage, whereby the Sea entered into the said lake. They comforted vs much with the report of these things, and in telling vs that the lande trended to the West; for the chiefe Pilot thought, and the other Pilot was of the same opinion, that we should finde a good Countrey. This night we set saile to goe to that point to take in fresh water which we wanted, and to see this lake, and to put some men on shore: and after midnight the winde came vpon vs so forcibly at the North that we could not stay there: whereupon wee were constrained to put further into the Sea, and returned the same way backe againe vnto the shore with much adoe, and came to an anker a great way short of the place from whence we were diuen: and there we rode vntill Thursday at noone with this bitter North winde, and on Friday about noone, when we most thought it would haue ceased, it beganne to increase againe, which grieved vs not a little seeing the weather so contrary, hoping alwayes that it would cease, and that some winde would blow from the shore, whereby we might recouer the point of land to take in fresh

Land running towards the North west.

Note.

A wonderfull fishing place like Newfoundland.

fresh water, and to search whether there were any people about that lake. Here we lay from the 26 of the saide moneth till the 29, driving vp and downe the Sea, winding in by little and little untill we had gotten vnder the shelter of those mountaines: which being obtayned wee rode the sayd 29 of the moneth halfe a league from those wooddy mountaines, which we had seene in the Sea. We stayed in this place at our ease all the Sunday, and Iuan Castilio, the chiefe Pilot went that day in the boate on shoze with seuen in his company, and they landed neere the Sea, and on a certaine low ground they found foure or five Indians Chichimecas of great stature, and went toward them, who fled away like Deere that had beene chased. After this the Pilot went a little way along the Sea-shoze, and then returned to his boate, and by that time he was entered thereinto, he saw about fiftene Indians of great stature also, with their bowes and arrowes which called vnto him with a loude and strong voice, making signes with their bowes; but the Pilot made no account of their gesture, but rather returned to the shippes, and declared what had passed betweene him and the Indians. The same day the Captaine commaunded that our calke should be made readie against the next morning to take in water, for in both the shippes there were about five and twentie buttes emptie. The first of December, and the second day in the morning the Captaine went with both the barkes on shoze with some dozen souldiers, and the greatest part of the Mariners which laboured in filling of water, leaving in the shippes as many as were needefull, and as soone as wee were come on shoze at the watering place the Captaine caused the buttes to be taken out, to the ende they might be filled with water, and while they returned to fetch the barrels and hogsheds of the shippe, the Captaine walked a turne or two vpon the shoze for the space of one or two crossebow shoots, and afterwarde we went vp to certaine of those mountaines, to view the disposition of the countrey, and in trueth we found it in that place very bad to our iudgement, for it was very ragged, full of woods and caues, and so stonie, that we had much adoe to goe. Being come vnto the top we found certaine small hilles full of woods, and clifles that were not so craggie, although very troublesome to climbe vp; and while we looked from these little hilles, we could not discern any more mountaines, but rather iudged that from that place forward there were great plaines. The Captaine would not suffer vs to goe any further, because in those places we had seene certaine Indians which seemed to be spies, and warning vs thereof he commaunded vs to retire vnto the shoze, where we were to take in water, and to dispatch our businesse quickly, and appointed vs to make certaine pits, that our butts might more easily be filled with water. And setting our Guardes or Centinels, we beganne to fill water. In the meane while the Captaine tooke certaine souldiers, and went to the top of an high hill, from whence he descried a great part of the Sea, and a lake which is within the land: for the Sea entereth in the space of a league, and there is a good fishing place round about: and the lake was so great, that it seemed vnto vs to be very neere 30 leagues in compasse, for we could not discern the end thereof. Then we came downe with no lesse trouble then wee had mounted vp vnto the hill, by reason of the sterpenesse of the place, and some tumbled downe with no small laughter of the rest. And being come somewhat late to our watering place (for it was then past noone) we set our selues to dinner, alwayes appointing some of our company in Centinell, vntill we were called to dinner, and when some were called two others were appointed in their roomes. And about two of the clocke after dinner, the Captaine and the rest suspecting no danger of assault of Indians, both because the place seemed not to be fit for it, as also for that we had set our Centinels at the passages; two squadrons of Indians came vpon vs very secretly and couertly, for one came by the great balley through which the water ranne which we tooke, and the other came by a part of that great hill which we had ascended to see the lake, and all of them came so couertly, that our Centinels could neither see nor heare them; and wee had not perceiued them, if a souldier by chance lifting vp his eyes had not sayde, Arme, Arme, my maisters, for many Indians come vpon vs. When we heard this the Captaine leapt vp in a great rage, because the guards were changed out of their place: and with his sword and target, being followed by a souldier, whose name was Haro, and afterward by the rest, he and the said souldier went toward a little gate of certaine stones, whither the rest of vs were to follow him: for if the Indians had gotten that place from vs, we should haue incurred great danger, and the greatest part of vs had like to haue beene slaine, and none could haue escaped but such as by chance could haue leapt into the boates, and the tide went so high, that none could be saued but such as were most excellent swimmers. But at length the Captaine bestirred himselfe very nimbly, vsing all celeritie that was possible. Therefore when he and Haro had wonne the gate, the rest of the souldiers gate vp after them, and the Captaine and Haro turned themselves to the Indians and made head against them, and the Indians assailed them with such numbers of stones, arrowes,

dians with
stones, arrowes
and slanes.

arrows, & iauelins (which was a very strange thing) that they brake in pieces the target which the Captaine had on his arme, and besides that wounded him with an arrow in the bending of his knee, and though the wound was not great, yet was it very painefull vnto him. While they thus stood to withstand their assault, they strooke Haro which was on the other side so forcibly with a stone, that they threw him flat vpon the ground: and by and by another stone lighted vpon him which shiuered his Target, and they hit the Captaine with another arrow, and shot him quite through one of his eares. Another arrow came and strooke a souldier called Grauiello Marques in the legge, of which he felt great paine and went halting. In the meane space Francis Preciado, and certaine other souldiers came vp and ioynded himselfe with the rest on the left hand of the Captaine, saying vnto him, Sir, withdrawe your selfe, for you be wounded, but be you not dismayed, for they are but Indians and cannot hurt vs. In this wise we beganne to rush in among them vpon the side of a rocke alwayes gapning ground of them, which greatly incouraged our mindes, and when we beganne to inforce them to retire, we wanne a small wooddy hill, where we sheltered our selues, whereas before they shot vpon vs from aloft, for they were on the higher ground vnder couert in safetie, & then by no meanes we could offend them, but by running forcibly vpon them with our catges on our armes, and our swords in our hands. On the other side, to approach and seeke to ouertake them was a vaine thing, seeing they were as swift as wilde goates. By this time Haro was gotten vp on foot, and hauing clapt a woollen cloth vpon his head, which had bled extremely, he ioynded himselfe vnto vs, of whom we receiued no small aide. In the meane space the Indians fortified themselves on the cragge of a rocke, from whence they did not a little molest vs, & we likewise fortified our selues vpon an hillocke, whereby we descended into their Fort, and there was a small valley betweene them & vs, which was not very deepe from the vpper part. There we were 6 souldiers & two Negroes with the Captaine, & all of vs were of opinion that it was not good to passe that place, least the Indians being many might destroy vs all, for the rest of our souldiers which were beneath at the foote of the hill, making head against the other squadron of the Indians, kept them from hurting those which tooke in water on the strand and from breaking the butts of water, and being but few, we concluded to stay here, and so we stood still fortifying our selues as well as we could, especially considering that we had no succour on any side; for Berecillo our Mastiue-dogge which should haue aided vs was grievously wounded with 3 arrows, so that by no meanes we could get him from vs: this mastiue was wounded in the first assault when the Indians came vpon vs, who behaued himselfe very well, & greatly aided vs; for he set vpon them, and put 8 or 10 of them out of array, & made them run away, leauing many arrows behind them: but at length (as I haue said) he was so wounded, that by no meanes we could get him to goe from vs to set any more vpon the Indians, & the other two mastiues did vs more harme then good: for when they went against them, they shot at them with their bowes, and we receiued hurt and trouble in defending them. The Captaines legge when he waxed cold was so swolne, that we lapped it vp in a woollen cloth, and he halted much of it: and while the Indians thus stood still, one part of them beganne to dance, sing, and shout, and then they began all to lade themselves with stones, and to put their arrows into their bowes, and to come downe toward vs verie resolutely to assault vs, and with great out-cries they beganne to sling stones and to shoot their arrows. Then Francis Preciado turned him to the Captaine and said: Sir, these Indians know or thinke, that we be affeard of them, & in truech it is a great fault to giue them this incouragement, it were better for vs resolutely to set vpon them with these dogs, & to assault them on this hill, that they may know vs to be no dastards, for they be but Indians and dare not stande vs; and if we can get their Fort vpon the hill, God will giue vs victory in all the rest. The Captaine answered, that he liked well of the motion, and that it was best so to doe; although for any further pursuit vpon the hill, he thought we were to take another course. By and by Francis Preciado getting his target on his arme, and his sword in his hand, ranne vnto the other side of the valley, which on that part was not very steepe, crying S. Iago, vpon them my masters, and after him leapt Haro, Tereca, Spinosa, and a Crossebow-man called Montanno, and after them followed the Captaine, though very lame, with a Negro and a souldier which accompanied him, incouraging and comforting them, willing them not to feare. Thus we drave them to the place where they had fortified themselves, and from whence they descended, and we tooke another hill ouer against them within a darts cast of them. And hauing breathed our selues a little, the Captaine came vnto vs, and said, Go too my masters, vpon them before they strengthen themselves on this hill, for now we see plainly that they be affeard of vs, seeing we chase the continually from their Forts: & suddenly 3 or 4 of vs went toward them well couered with targets, vnto the foot of their Fort where they were assembled, and the rest of our company followed vs: the Indians beganne

The Spaniards be mastered in their warres against the Indians. Reade more hereof cap. 12.

beganne to make head against vs, and to sling many stones vpon vs, and shoot many arrowes, and we with our swordes in our hands rushed vpon them in such sort, that they seeing how furiously we set vpon them, abandoned the fort, and ranne downe the hill as swift as Deere, and fled vnto another hill ouer against vs, where the other Squadron of the Indians stood, of whom they were rescued, and they began to talke among themselves, but in a low voyce, and ioyned together 6 and 6 and 8 & 8 in a company, and made a fire and warmed themselves, and we stood quietly beholding what they did.

Chap. 9.

After the skirmish the Captaine being wounded, and the rest of the souldiers seeing the Indians depart, returned vnto their ships. The next day taking in fresh water at the saide place he sent mariners to sound the mouth of the lake. Departing thence they came to the port called *Baya de San Abad*, and indured a dangerous storme at sea. And afterward comming neere the shore to take fresh water in the saide haven, they see certaine peaceable Indians.

By this time it was late and the night appoched, and the Indians seeing this, within a short while after determined to get them packing, and ech of them of the greatest part tooke fire-brandes in their hands, & got them away into craggy places. When the Captaine saw this he commanded vs to returne aboard our boats, it being now darke night, thanking vs all for the good service we had done him. And being not able to stand vpon his legges, he leaned with his arme vpon Francis Preciado; and thus we returned to our boats, where with much adoe we got aboard, by reason of the great tide and roughnesse of the sea, so that our boats were filled with euery waue. Thus very weary, wet, & some wounded (as is aforesaid) each man returned vnto his ship, where our beds which we found, and our refreshing, & the cheere we had at supper did not greatly comfort vs in regard of our former trauels. We passed that night in this sort, and the next day being Tuesday the Captaine found himselfe greatly payned with his wounds, & chiefly with that on his leg, because it was greatly swolne with his going vpon it. We lacked 12 butts to fill with water, and the barreles in both the ships, and the Captaine would haue gone out to cause them to be filled, but we would not suffer him, and therefore we left off the businesse for that day. But he appointed that the crossebowes shoulde be made readie, and two speciall good harquebuzes, & the next day being Wednesday very early, he commanded Iuan Castilio chiefe Pilot to goe out with both the boates and with all the souldiers and mariners that he could make, hauing the day before commanded the Trinitie to go as neere the shore as she might, & to make ready some of her ordinance, that if the Indians shoulde shew themselves, they might affright them, & doe them as much hurt as they could. Wherefore on the Wednesday al we that were souldiers, sauing the wounded persons, went on shore with certaine mariners in the best order that we could, and tooke the first hill, where we had fortified our selues, standing all vpon our guard vntill the water was filled, and vntill we were called, during which time not one Indian shewed himselfe. Thus we went aboard when we thought good our selues, at least without any suspicion of the Indians, although the tide of the Sea went so high y^t it put vs to great trouble, for oftentimes with great waues it beat into our boats. This was on the Wednesday the 3 of December. And to auoide losse of time the Captaine commanded Iuan Castilio the chiefe Pilot to take a boat and certaine mariners as he shoulde thinke good, and to view the mouth of the lake to see whether the entrance were deepe enough for to harbour the ships. He taking the boat of the Admirall with 8 mariners, and ours of the Trinitie, went and sounded the mouth, & on the shallowest place of the barre without they found 3 fadomes depth, and farther in 4, & by higher 5, alwayes increasing vnto 10 or 12 fadomes, when they were come into the two points of the saide lake, which was a league broad from one point to the other, and all their sounding was exceeding good ground. Then they went ouer to the southeast point, & there they saw a great boat or raft which they indentured to take to carrie vnto their ships. In y^e meane while they espied certaine cottages, which the Pilot determined to goe and see, and being come neere they saw 3 other raftes with 3 Indians on them distant from the cottages one or two crossebowes shot, and he leapt on land with 4 or 5 mariners in his companie: and while they behelde those cottages, they saw many Indians descending downe a small hill in warlikemanner with their bowes and arrowes, whereupon they determined to retire to their boats, and to returne to their ships, and they were not gone from the sea-shore scarce a stones cast, but the Indians were come vpon them to shoot at them with their arrowes, and because they were vnarmed, they would not fight with them, hauing gone on shore for no other purpose, but to sound the mouth and entrance of that lake. On Thursday the 4 of December we set saile with a fresh gale of winde, and sayled some 8 or 10 leagues, and came vnto certaine mouthes or inlets which seemed to all of vs

as speciall good
hauen.

as though they had beene Ilands, and we entered into one of them, and came into an haven which we called Baya del Abad all inclosed and compassed with land, being one of the fairest ha- uens that hath beene seene: and about the same, especially on both sides the lande was greene and goodly to behold; we discryed certaine riuers on that part which seemed greene, & therefore we returned backe, going out at that mouth wherby we came in, alwayes hauing contrary wind: yet the Pilots vsed their best indouour to make way: and we saw before vs certaine wooddy hils, and beyond them certaine plaines; this we saw from the Friday the 5 of the said moneth, vntill the Tuesday, which was the ninth. As we drew neere to these woods they seemed very pleasant, and there were goodly and large hilles and beyond them towards the sea were certaine plaines, and through all the countrey we saw these woods. From the day before, which was the Con- ception of our Lady, we saw many great smokes, whereat we much marvelled, being of diuerse opinions among our selues, whether those smokes were made by the inhabitants of the countrey or no. Duer against these woods there fell euery night such a dew, that euery morning when we rose, the decke of the ship was so wet, that vntill the sunne was of a good height, we alwayes made the decke durtie with going vpon it. We rode ouer against these woods from the Tuesday morning when we set saile, vntill Thursday about midnight, when a cruell Northwest winde tooke vs, which, whither we would or no, enforced vs to way our anker; and it was so great, that the ship Santa Agueda began to returne backe, vntill her cable broke, and the ship hulled, and sud- denly with a great gust the trinket and the mizen were rent asunder, the Northwest winde still growing more and more: within a short while after the maine saile was rent with a mighty flau of winde, so that we were enforced, both souldiers, captaine, and all of vs, to doe our best indouor to mend our sailes; and the Trinitie was giuen to do the like, for the going round vpon her anker, when she came a-head of it, her cable broke, so that there we lost two ankers, each ship one. We went backe to seeke Baya del Abad, for we were within 20 leagues of the same, and this day we came within foure leagues of it, and being not able to reach it by reason of contrary windes, we rode vnder the lee of certaine mountaines and hilles which were bare, and almost void of grasse, neere vnto a strand full of sandie hilles. Neere vnto this road wee found a fishing-place vnder a point of land, where hauing let downe our lead to see what ground was there, a fish caught it in his mouth, and began to draw it, and he which held the sounding-lead crying and shewing his fel- lowes that it was caught, that they might helpe him, as soone as he had got it aboue the water, tooke the fish, and loosed the cord of the sounding-lead, and threw it againe into the sea, to see whe- ther there were any good depth, and it was caught againe, whereupon he began to cry for helpe, and all of vs made a shout for ioy; thus drawing the fish the rope of the sounding-lead being very great was crackt, but at length we caught the fish which was very faire. Here we stayed from Friday when we arriued there, vntill the Sunday, when as it seemed good to our Captaine, that we should repaire to the watering place, from whence we were some fixe leagues distant, to take in 12 buttes of water, which wee had drunke and spent, because he knew not whither we should from thenceforth finde any water, or no; and though we should finde water, it was doubt- full whither we should be able to take it by reason of the great tide that goeth vpon that coast. We drew neere to that place on Sunday at night, when as we sawe certaine fires of the In- dians. And on Tuesday morning our Generall commaunded that the Trinitie should come as neere our ship & to the shoze as it could, that if we had neede, they might helpe vs with their great ordinance: and hauing made 3 or 4 houlds to draw neere the shoze, there came 4 or 5 Indians to the sea-side; who stood and beheld while we put out our boat and anker, marking also how our bwoy floated vpon the water; and when our boat returned to the ship, two of them leapt into the sea, and swamme vnto the bwoy, and beheld it a great while; then they tooke a cane of an arrow, and eyed to the sayd bwoy a very faire and shining sea-oyster of pearles, and then returned to the shoze, neere to the watering-place.

Chap. 10.

They giue vnto the Indians many trifles which stand vpon the shore to see them, and seeke to parley with them by their interpreter, which was a *Chichimeco*, who could not vnder- stand their language. They go to take fresh water. Francis Preciado spendeth the time with them with many signes, and trucking and being afraid of their great multitude, re- tireth himselfe wisely with his companions, returning with safety to the ships.

When the Captaine and we beheld this, we iudged these Indians to be peaceable people; whereupon the Captaine tooke the boat with 4 or 5 mariners carrying with him certain beades

beades to truck, and went to speake with them. In the meane while he commanded the Indian interpreter our Chichimeco, to be called out of the Admirall that he should parley with them. And the Captaine came vnto the boy, and laid certaine things vpon it for exchange, & made signes vnto the Sauages to come and take them; and an Indian made signes vnto our men with his hands, his armes, and head, that they vnderstood them not, but signified that they should go aside. Whereupon the Captaine departed a smal distance from that place with his boat. And they made signes againe that he should get him further; whereupon we departing a great way off, the saide Indians leapt into the water, came vnto the boy, and tooke those beades, and returned backe againe to land, and then came vnto the other three, and all of them viewing our things, they gaue a bowe and certaine arrowes to an Indian, and sent him away, running with all haste on the shore, and made signes vnto vs that they had sent word vnto their lord what things we had giuen them, and that he would come thither. Within a while after the said Indian returned, running as he did before, and beganne to make signes vnto vs, that his Lord was comming. And while we stayed here, we saw on the shore ten or twelue Indians assemble themselves, which came vnto the other Indians, and by and by we saw another company of 12 or 15 more appeare, who assembled themselves all together. And againe they began to make signes vnto vs, to come forthwith to our boates, and shewed vs many Dyffers of pearles on the top of certaine canes, making signes that they would giue them vs. When we beheld this, the Captaine commanded vs to make ready our boate, and went aboard it with the said mariners, and rowed to a certaine stone in forme of a rocke, which lay in the sea neere vnto the shore. And hither came first 2 or 3 Indians, and layd downe one of those Dyffers, and a garland made of Parats feathers, or Sparrowes feathers painted red; they layd downe also certaine plumes of white feathers, and others of blew colour. In the meane while we sawe continually Indians assemble to the shore by tenne and tenne, and so by little and little they came in Squadrons; and one of them alioone as hee sawe the boat beganne to leape forward and backward with so great nimblenesse, that doubtlesse he seemed to all of vs a man of great agilitie, and we tooke no small pleasure while we beheld him fetching those gambols: but the rest of the Indians which stood at the mouth of the fresh water ranne toward him, and cryed vnto him, forbidding him to vse those gestures, because we were come thither in peaceable sort, and by this meanes he came with the rest to the watering place, where by little and little in this manner there assembled aboue a hundred of them all in order, with certaine stauies with cordes to sling them, and with their bowes and arrowes, and they were all painted. In the meane while our Chichimeco-interpreter bozne in the Ile of California, was come vnto vs, and the Captaine againe commanded a mariner to strippe himselfe, and to swimme and laye vpon the said rocke certaine belles, and more beades, and when he had layd them there, the Indians made signes that he should goe away; and so they came thither and tooke them, and our men drew neere with their boat. The Captaine commanded the Indian our Chichimeco to speake vnto them, but they could not vnderstand him, so that we assuredly beleue, that they vnderstand not the language of the Ile of California. This day being Tuesday untill night the Indians stayed at this watering place, taking some of our beades, and giuing vnto vs their feathers and other things, and when it was very late they departed. The morrow following being Wednesday very early the Captaine commanded that our buttes should be made ready, that before breake of day, and before the Indians should take the hill, which stood ouer the watering place, we might be landed in good order: which was put in execution: for we went on shore with as many as could goe, sauing those that had charge to take in the water, and such as were to stay on ship-board, which in all were about fourteene or fiftene persons, in as good order as we could deuise: for we were foure crossebowes, two harquebuziers, and eight or nine targets, and the most part of vs carryed very good slings, and euery one eigheteene riuer-stones, which weapon the Captaine inuented, because the Indians at the first had handled vs very shrewdly with the multitude of stones which they slung at vs: we had nothing to defende vs sauing our targets, and to seeke to winne the fortres from whence they indamaged vs; he therefore thought with these slings, that we might offend them, and we likewise thought well of his opinion, for making tryall of them, we thre w very well with them, and much farther then we thought we could haue done: for the slings being made of hempe, we slung very farre with them. Nowe being come to the watering place the sayd Wednesday by breake of day we tooke the fort of the fountaine, which were certaine craggies or rockes hanging ouer the same, betweene which there was an opening or deepe valley through which this water runneth, which is no great quantitie, but a little brooke not past a fadome broad. So standing all in order, other foure or fise Indians came thither, who as soone as they sawe vs to be come on shore, and to haue gotten the toppes of the

the watering place, they retired vnto a small hill on the other side, for the valley was betweene them and vs: neither stayed they long before they beganne to assemble themselves as they had done the day before by 10 and 10, and 15 and 15, ranging themselves on this high hill, where they made signes vnto vs. And Francis Preciado craued license of the Generall to parley with these Indians, and to giue them some trifles; wherewith he was contented, charging him not to come too neere them, nor to goe into any place where they might hurt him. Whereupon Francis went vnto a plaine place, vnder the hill where the Indians stood, and to put them out of feare he layd downe his sword and target, hauing onely a dagger hanging downe at his girdle, and in a skarfe which he carried at his necke, certaine beades to exchange with them, combs, fishinghooks and comfits. And he began to goe vpon the hill, and to shew them diuerse of his marchandise. The Indians as soone as he had layd those things on the ground, and gone somewhat aside, came downe from the hill and tooke them, and carried them vp, for it seemed that their Lord was among them, to whom they carried those trifles. Then they came downe againe, and layd to giue vnto him in the said place, an oyster of pearles, and two feathers like haukes feathers, making signes to Preciado that he should come and take them; which he did, and againe layde there a string of belles, and a great fishhook, and certaine beades; and they taking the same, layd there againe another oyster of pearle, and certaine feathers: and he layd downe other beades, two fishhookes, and moze comfits, and the Indians came to take them vp, and approached much neerer vnto him, then at other times, and so neere that a man might haue touched them with a pike, and then they began to talke together: and 7 or 8 moze came downe, vnto whom Francis Preciado made signes, that they should come downe no lower, and they incontinently layd their bowes and arrowes on the ground, and hauing layd them downe came somewhat lower, and there with signes, together with them which came first, they began to parle with him, and required mariners breeches & apparell of him, and about all things a red hat pleased them highly, which the said Francis ware on his head, and they prayed him to reach it vnto them, or to lay it in the place; and after this certaine of them made signes vnto him to knowe whether he would haue a harlot, signifying with their fingers those villanies and dishonest actions, and among the rest they set before him an Indian of great stature dyed wholly with black, with certaine shels of the mother of pearle at his necke, and on his head, and speaking by signes to Francis Preciado touching the foresaid act of fornication, thrusting their finger through a hole, they said vnto him, that if hee would haue a woman, they would bring him one; and he answered, that he liked well of it, and that therfore they should bring him one. In the meane space on the other side where the Generall stood with his company, another squadron of Indians shewed themselves, whereupon the Generall and his company made a stirre, and put themselves in battell array: whereupon Francis Preciado was inforced to come downe from them, to ioyne with the Generall & his company: and here the Indians which came last began to make signes that we should lay downe something to truck, and that they would giue vs some of their shels of mother of pearle, which they brought vpon certaine small sticks, and herewithall they came very neere vnto vs, wherewith we were not well content. And Francis Preciado said vnto the Captaine, that if it pleased him, hee would cause all the Indians to come together and to stay vpon that high hill; and he answered, that it was best to draw them all together, for by this time our men had taken in all their water, and stayed for the boat: whereupon Francis taking a crowne of beades went toward the valley, through which the water ran toward the Indians, and made signes vnto them to call the rest, and to come all together, because hee would goe to the olde place, to lay things on the ground for exchange, as at the first; and they answered that he should doe so, and that they had called the others, and that they would doe, as he would haue them, and so they did, for they caused them to come vnto them, which they did, and Francis likewise went alone towards them, in which meane space the Generall commanded his people to get into the boat. Francis comming vnto the place beganne to lay downe his marchandise of traffique, and afterwards made signes vnto them to stay there, because hee would goe to the ships to bring them other things, and so he returned to the place where the Captaine was, and found them all got into the boates, sauing the Generall and thre or foure others, and the Generall made as though he had giuen other trifles to Preciado to carry vnto the Indians; and when he was gone a little from him, he called him backe againe, and all this while the Indians stood still, and being come vnto him, wee went faire and softly to our boates, and got into them at our ease, without any thronging, and thence we came aboord our ship.

The Indians seeing vs thus gone aboord came downe to the strand where the brooke of water was, and called vnto vs to come footth with our boates, and to come on shore, and to bring our beades, and that they would giue vs of their mother of pearles: but we being now set at dinner

Truck & traffique with the Indians for mother of pearle, and other things.

made

made no account of them: whereupon they beganne to shoot arrowes at the ship, and although they fell neere vs, yet they did not reach vs. In the meane season certaine mariners went out in the boat, to wep the anker, whereupon the Indians seeing them comming towards them, & bringing them nothing, they beganne in scoyne to shew them their buttockes, making signes that they should kisse their bums: and these seemed to be those that came last. The Generall seeing this, commanded a musket to be once or twice shot off, and that they should take their iust ayme. They seeing these shot to be made readie, some of them rose and went to shoot their arrowes at our mariners, which were gone to weigh the ankers, then the Generall commanded the great ordinance speedily to be shot off, whereupon three or foure bullets were discharged, and we perceiued that we had slaine one of them, for we assuredly saw him lye dead vpon the shoze; and I thinke some of the rest were wounded. They hearing this noise, and seeing him dead ranne away as fast as euer they could, some along the shoze, and some through the ballies, dragging the dead Indian with them; after which time none of them appeared, saue ten or twelue, which peeped by with their heads among those rocks; whereupon another piece of ordinance was discharged aloft against the place where they were, after which time we neuer saw any more of them.

Chap. 11.

At the point of the Trinitie they spend three dayes in fishing, and in other pastime: after which setting sayle they discover pleasant countries, and mountaines voide of grasse, and an Iland afterward called *Isla de los Cedros*, or the Ile of Cedars, neere which they suffer sharpe colde and raine, and to saue themselves they returne thither,

Immediatly we set saile to ioyne with the ship *Santa Agueda*, which was about halfe a league in the high sea from vs, and this was on the Wednesday the seuenteenth of December. Being come together because the windes were contrary, we drew neere to a headland, which wee called *Punta de la Trinidad*, and here wee stayed fishing, and solacing our selues two or three dayes, although we had alwayes great store of raine. Afterward we beganne to sayle very slowly, and at night we rode ouer against those mountaines where we had left our ankers, and vpon knowledge of the place we receiued great contentment seeing we had sailed some five and thirtie leagues from the place where we had taken in water: neither was it any maruell that wee so reioyced, because that the feare which we had of contrary windes caused vs to be so well appayd of the way which we had made. The day of the holy Natinitie of our Lord, which was on the Thursday the five and twentieth of the said moneth, God of his mercy beganne to shewe vs fauour in giuing vs a fresh winde almost in the poope, which carried vs beyond those mountaines, for the space of tenne or twelue leagues, finding the coast alwayes plaine: and two leagues within the land, which we coasted along, and betweene these mountaines, there was a great space of plaine ground, which we might easily discern with our eyes, although others were of another opinion. We beganne from Christmas day to saile slowly with certaine small land-windes, and sayled from morning to night about seven or eight leagues, which wee esteemed no small matter, alwayes praying to God to continue this his fauour toward vs, and thanking him for his holy Natinitie, and all the dayes of this feast the Frier sayd masse in the Admirall, and the father Frier Raimund preached vnto vs, which gaue vs no small comfort, by encouraging vs in the seruice of God.

On Saturday at night being the 27 of the said moneth we ankored neere vnto a point which seemed to be plaine land all along the shoze, and within the countrey were high mountaines with certaine woods, which woods and mountaines ranne ouerthwart the countrey, and continued along with certaine small hilles sharpe on the toppe, and certaine little ballies are betweene those mountaines. And in truth to me which with diligent eyes beheld the same both in length and in the breadth thereof, it could not chuse but be a good countrey, and to haue great matters in it, as well touching the inhabiting thereof by the Indians, as in golde and siluer; for there was great likelihood that there is store thereof. This night we saw a fire farre within the land towards those mountaines, which made vs thinke that the countrey was thoroughly inhabited. The next day being Sunday and Innocents day, the 28 of the said moneth, at breake of day we set sayle, and by nine or ten of the clocke had sayled three or foure leagues, where we met with a point which stretched toward the West, the pleasant situation whereof delighted vs much.

From the eight and twentieth of December we ranne our course vntill Thursday being the 31 of January 1540 yeares day of the yeere 1540, and we ran some 40 leagues, passing by certaine inlets and bayes, foure leagues and certaine high mountains couered with grasse in colour like rosemary: but toward the sea-side

Great appearance of gold and silver.

very

very bare and burned, and toward the top were certaine craggies somewhat of a red colour, and beyond these appeared certaine white mountaines, and so all the countrey shewed vnto a point which appeared beyond those burnt white and red mountaines which haue neither any grasse nor tree vpon them, whereat we marvelled not a little. This Newyears day we sawe neere the maine two small Islands, and reioyced greatly to see them; for we stood in great feare, that contrary windes would vniue vs as farre backe in one day, as we had sayled in tenne, which if they had taken vs, we could not haue withstood them. We ranne from the first of January vntill Sunday which were five dayes, and the land alwayes stretched Northwest from the mountaines aforesaid.

Two small
Isles neere
the maine.

And on the Sunday we saw a farre off a-head of vs a high land somewhat seuered from the maine shoze, and all of vs beganne to dispute whether it were the land which trended toward the Northwest, for that way the Pilots hoped to discover a better countrey: and the said Sunday the first of Januarie we came to this high land beforesaid, and it was two Islands the one a small one and the other a great one: we coasted these two Islands some fixe leagues, which were greene, and had on the toppe of them many high slender trees; and the great Island was twentie leagues in compasse. We coasted it 6 leagues in length without seeing or discovering any other things, but we saw befoze vs high land which stretched eight or tenne leagues Northward, where we rode on Sunday at night. From Thursday being Newyears day vntill the next Sunday we sayled about 35 leagues. And in this course we felt great cold, which grieved vs much, especially being assailed by two or three windie showers, which pinched vs much with colde. We rode ouer against this land two or three nights, hauing it neere vnto vs, alwayes keeping watch by equall houres, one while mariners, and another souldiers, all the night long with great vigilancie.

Isla de los Cedros mentioned
in the 13 chap.

The land trendeth here
Northwest
35 leagues.

On Tuesday being Twelue day we came within two or three leagues of this land, which we had descryed the day befoze, seeming to vs very pleasant for it shewed greene with greene trees of an ordinary bignesse, and we saw many ballies, out of which certaine small mists arose, which continued in them for a long time, whereupon we gathered, that they rose out of certaine riuers. The same morning, to our great comfort we saw great smokes, though we were about foure leagues distant from them, and the Captaine made no great reckoning to approach neere vnto them, nor to seeke nor serch what the matter was, and perchance because he was not then in the Santa Agueda, but was aboard the Trinitie, as his maner was to come and stay there two or three dayes, as well to passe the time, as to giue order for things that were needefull. In this countrey the winter and rains seemed to be like that of Castile. We rode at night two or three leagues distance from shoze, and toward euenting we saw five or six fires, whereat we all reioyced, but did not maruell thereat, because the situation of that countrey shewed to be habitable, being faire, pleasant, and all greene, and likewise because the Island which we had left behind vs being (as I haue said) twenty leagues in circuit, made shewe that it was well peopled. On the Wednesday we were 3 or 4 leagues at sea from the land, and began to see two fires moze, & therefore we assured our selues that the countrey was very well inhabited; and the farther we sayled, we alwayes found it moze ciuill. And for the space of fifty leagues befoze we came hither we alwayes found swimming on the sea certaine stores of weedes of a ships length, and of the bredth of two ships, being round and full of gourds, and vnder these weedes were many fishes, and on some of them were store of fowles like vnto white sea-meawes. We supposed that these floating weedes did grow vpon some rocke vnder the water. We were now in 30 degrees of Northerly latitude. We sailed from the 7 of January vntill the 9 still with contrary windes; and on Fryday about noone there rose a North and Northeasterly winde, which forced vs to retorne vnder the shelter of that Island which we left behind vs, from whence we had sayled about twentie leagues. And that Friday at night somewhat late wee had sayled backe about twelue leagues of the same, and because it was night wee stayed in the sea, where we and our shippes were not a little troubled, so that all that night none of vs slept a winke, but watched euery one. The next morning betimes being Saturday we proceeded on our voyage, and gave vnder the shelter of the said Island, riding in thirtie fadome water: and on that side where we ankored, we found high and closed mountaines, with heapes of a certaine earth which was all ashes and burned, and in other places scorched and as blacke as coales, and like the rust of yron, and in other places whitish, and here and there small blacke hills, whereat we marvelled exceedingly, considering that when we passed by, it seemed vnto vs an habitable countrey full of trees, and now we saw not a sticke growing on this side.

floating weedes
100 50 leagues.

Thirtie degrees of Northerly latitude

Twentie leagues beyond the Isle of Cedars.

All of vs supposed that on the other side toward the firme lande the trees grewe which we sawe, although (as I haue sayde) wee sayled foure or five leagues distant from the same.

We stayed here under the shelter of these mountaines Saturday, Sunday, and Monday, alwayes hauing the Northren winde so strong, that we thinke if it had caught vs in the sea, we should haue bene cast away.

Chap. 12.

They enuiron and land vpon the Iland of Cedars, to discouer the same, and to seeke water and wood. They are assailed of the Indians, and many of them wounded with stones: but at length getting the vpper hand, they goe to their cottages, and ranging farther vp into the Iland they find diuerse things which the Indians in their flight had left behind them.

On Friday the 13 of January the Captaine commanded vs to hoise out our boates, and to goe on shore, which was done accordingly, and we did row along the shore for the space of a good halfe league and entered into a valley: for (as I said) all this country was full of high and bare hills, of such qualitie as I mentioned before: and in this and other small valleys we found some water which was blackish, and not farre from thence certaine cottages made of shrubs like unto broume; like wise we found the footings of Indians both small and great, whereat we much marvelled that in so rough and wilde a countrey (as farre as we could discerne) there should be people. Here we stayed all day, making foure or five pits to take in water which we wanted, which though it were bad, and in small quantitie we refused not; and so the euening being come, we returned to our boates, and so came vnto our ships which rode a good league from the shore. The next day being Wednesday the fourteenth of the said moneth our Generall commanded vs to set saile, and we sailed about the said Iland on the same side which we coasted when we came from Nueva Espanna: for when we arriued on the coast we saw five or six fires; wherefore he desired to see and learne whether it were inhabited; and at the farthest ende of this inlet or bay where we rode there came out before vs a Canoa, wherein were foure Indians which came rowing with certaine small oares, and came very neere vs to see what we were: whereupon we tolde our Generall, that it were best to send some of vs out with our boates to take these Indians or some one of them to giue them something that they might thinke vs to be good people: but hee would not consent thereto, because he minded not to stay, hauing then a pretty gale of winde, whereby he might saile about this Iland, hoping that afterward we might finde and take some others to speake with them, and giue them what we would to carry on shore; and as we sailed neere the land, we saw a great hill full of goodly trees of the bignesse of the trees and Cypresses of Castile. We found in this Iland the footing of wilde beasts and conies, and saw a peece of pinetree-wood, whereof we gathered, that there was store of them in that countrey. Thus sayling neere vnto the shore, we sawe another Canoa comming toward vs with other foure Indians, but it came not very neere vs, and as we looked forward, we sawe toward a point which was very neere before vs, three other Canoas, one at the head of the point among certaine flattes, and the other two more into the sea, that they might descry vs without comming ouer neere vs. Likewise betweene certaine hills which were neere the point, there appeared here three and there foure of them, and afterward we saw a small troope of some twentie of them together, so that all of vs reioyced greatly to behold them. On this side the land shewed greene with pieces of plaine ground which was neere the sea, and likewise all those coasts of hills shewed greene, and were couered with many trees, although they grew not very thicke together. Here at euening we rode neere the shore hard vpon the said point, to see if we could speake with those Indians, and likewise to see if we could get fresh water, which now we wanted, and still as soone as we were come to an anker, we saw the Indians shew themselves on land neere vnto their lodgings, comming likewise to descry vs in a Canoa, by sixe and seuen at a time, whereat we marvelled, because we neuer thought that one of those Canoas would hold so many men. In this wise we stayed looking still what would be the successe, and in the place where we rode we were two small leagues distant from the shore, where we found these Indians in their Canoas: whereupon wee marvelled not a little to see so great an alteration in so small a distance of countrey, as well because we still discouered pleasant land with trees (whereas on the other side of the ile there were none) as also because it was so well peopled with Indians, which had so many Canoas made of wood, as we might discerne, and not raftes or Ballas, for so they call those floats which are made all flat with canes.

26 Ballas is a flat
raft made of
canes.

The next day being Thursday the fifteenth of the said moneth about breake of day foure or five Indians shewed themselves at the head of that point, who as soone as they had spied vs retired behind the point, and hid themselves among the bushes vpon certaine small hills that were there,

there, from whence they issued forth, and covered all the greene hills and mountaines, which were along that coast; whertupon we gathered that they had their dwellings there, in regard of the commoditie of the water and the defence against ill weather, and the benefite of fishing. At sun-rising we saw the Indians appeare in greater companies, going up vnto the hills in small troopes, and from thence they stood and beheld vs. Immediately we saw five or six Canoas come out into the sea a good distance from vs, and those which were in them stood often on their tip-toes, to view and descry vs the better. On the other side we stirred not at all for all these their gestures, but stood still riding at anchor; and the Generall seemed not to be very willing to take any of them, but this day in the morning very early commanded the Masters mate to conueigh him to our other shippe called The Trinicie. Things passed in this sort, when about ten of the clocke we saw three Canoas lanch farre into the sea to fish very neere vnto vs, whereat we tooke great pleasure. At 12 of the clocke the Generall returned from the Trinicie and commanded the boat & men to be made readie, as well souldiers as mariners; and that we should goe on shoze to see if we could get any wood and water, and catch one of those Indians to vnderstand their language if it were possible; and so all the men that were readie went into the Admirals boate, and went toward the Trinicie which by this time with the other ship had a small gale of winde, wherewith they entered farther within the point, and we discouered the lodgings and houses of the Indians, & saw neere the waters side those five or six Canoas which at the first came out to view vs, drawn on shoze, and ouer against this place the ships cast anchor in 30 and 35 fadome water, and we were very neere the land; whereat we marvelled much to find so great depth of water so neere the shoze. Being gone aboard our botes, we made toward the shoze ouer against a village of the Indians, who as soone as they saw vs about to come on land, left an hill whereman they stood to behold what we did, & came downe to the shoze, where we were prepared to come on land: but before they came against vs they caused their women and children to fly into the mountaines with their goods, & then came directly towards vs, threatening vs with certaine great stauces which they carried in their handes some 3 yardes long and thicker then a mans wrist: but perceiuing that for all this we ceased not to come neere the sea shoze to come on land, they began to charge vs with stones and to sling cruelly at vs, and they hit 4 or 5 men, among whom they smote the Generall with two stones. In the meane while the other boate landed a little beneath, whereupon when they saw that they were forced to diuide themselves to keepe the rest of our company from comming on land, they began to be discouraged, and did not assaile the Generals boate so fiercely, who began to cause his people to goe on shoze with no small trouble; for albeit he was neere the land, yet as soone as they leapt out of the boate they sunke downe, because they could finde no fast footing; and thus swimming or otherwise as they could, first a souldier called Spinosa got on land, and next to him the General, and then some of the rest, and began to make head against the Indians, and they came hastily with those stauces in their handes, for other kinds of weapons we saw none, sauing bowes and arrowes of pine-tree. After a short combat they brake in pieces the targets of the Generall, and of Spinosa. In the meane while those of the other boate were gotten on land, but not without much difficultie, by reason of the multitude of stones which continually rained downe vpon them, and they strooke Terazzo on the head a very shrowd blow, and had it not bene for our targets, many of vs had bene wounded, and in great distresse; although our enemies were but few in number. In this maner all our company came on shoze with swimming and with great difficultie, and if they had not holpen one another, some of them had bene drowned. Thus we landed, and within a while after those of the other boate were come on land, the Indians betooke themselves to flight, taking their way toward the mountaines, whether they had sent their women, children and goods: on the other side we pursued them, & one of those Indians which came to assaile the Generals boat, was slaine vpon the strand, & two or three others were wounded, and some said more. While we pursued them in this maner our mastiue dogge Berecillo ouertooke one of them not farre from vs (who because we were so wet could not run very fast) and pulled him downe, hauing bitten him cruelly, and doubtlesse he had held him till we had come, vnlesse it had happened that another of his companions had not followed that Indian which the dogge had pulled downe, who with a staffe which he had in his handes gaue the dogge a cruell blow on the backe, and without any staying drew his fellow along like a Deere, and Berecillo was faine to leaue him for paine, neither had he scarce taken the dogge off on him, but the Indian got up, and fled so hastily toward the mountaine, that within a short while hee ouertooke his fellowe which had saued him from the pawes of the dogge, who (as it appeared) betooke him lustily to his heeles, and thus they came vnto their fellowes which descended not downe to the shoze being about some twentie, and they were in all about fiftie or sixtie.

were

After we had breathed our selues a while, we viewed their houses where they stood, which were certaine cottages couered with shrubs like brome and rosemary, with certaine stakes pight in the ground; and the Generall willed vs to march all together without disperling of our selues, a little way by those mountaines, to see if there were any water and wood, because we stood in great neede of them both. And while we marched forward, we saw in certaine little vallies the goods which the women had left there behind them in their flight: for the Indians as soone as they saw vs pursue them ouertooke the women, and for feare charged them to flie away with their children leauing their stuffe in this place. We went vnto this booty, and found good store of fresh-fish, and dried fish, and certaine bags containing about 28 pound weight full of dried fish ground to powder, and many seal-skins, the most part dyed with a faire white graine vpon them, and others very badly dyed. There were also their instruments, to fish withall, as hookes made of the prickles of certaine shrubs and trees. Here we tooke the said skins without leauing any one in the place, and then we returned to the sea, because it was now night, or at least very late, and found our botes waiting for vs.

Chap. 13.

A description of the Canoes of the Indians of the Ile of Cedars, and how coasting the same to find fresh water they found some, and desiring to take thereof they went on shore, and were diuersly molested with the weapons of the Indians. They christen an old Indian, and returne vnto their ships.

The Canoes which they had were certaine thicke trunks of Cedars, some of them of the thickeesse of two men, and three sadome long, being not made hollow at all, but being laid a-long, and fastened together, they shoue them into the sea, neither were they plained to any purpose, for we found no kind of edge-toole, sauing that there were certaine sharp stones, which we found vpon certaine rockes that were very keene, wherewith we supposed that they did cut & flea those seales. And neere the shore we found certaine water, wherewith we filled certaine bottles made of the skins of those seales, containing ech of them about a great pail of water. The next day our Generall commanded vs so set sail, whereupon sailing with a fresh gale about 2 leagues from the shore of this Island, trending about the same to see the end thereof, and also to appoche neere the firme land, to informe our selues of the state thereof, because we had seene 5 or 6 fires, we compassed the same about: for by this meanes we performed 2 or 3 good actions, namely, we returned to our right course, and searched whether any riuer fell out of the coast of the firme land, or whether there were any trees there, or whether any shore of Indians did shew themselves or no.

In this maner proceeding on our way all the Friday being the 16 of January at euening, and seeking to double the point of the Island, so fierce and contrary a northerly winde encountered vs, that it draue vs backe that night ouer against the lodgings and habitations of the Indians, and here we stayed all Saturday, what time we lost the Trinitie againe, but on Sunday night being the 18 we saw her againe, and beganne to proceede on our way to compass that Island, if it pleased God to send vs good weather.

Isla de los Ce-
dros, or The
Ile of Cedars
in 28 deg. and
a quarter.

On Sunday, Monday, and Tuesday (which was the twentieth of the said moneth of January) wee sailed with scarse and contrary windes, and at length came to the cape of the point of the Island, which we called Isla de los Cedros or the Ile of Cedars, because that on the tops of the mountaines therein, there growes a wood of these Cedars being very tall, as the nature of them is to be. This day the Trinitie descried a village or towne of the Indians, and found water: for on Sunday night we had newly lost her, and had no sight of her vntill Tuesday, whenas we found her riding neere the shore, not farre from those cottages of the Indians. And as soone as we had descried her, we made toward her, and before we could reach her, we espied three Canoes of Indians which came hard aboord the said ship called The Trinitie, so that they touched almost the side of the ship, and gaue them of their fish, and our people on the other side gaue them certaine trifles in exchange, and after they had spoken with them, the Indians went backe to the shore, and at the same instant we came by vnto the Admirall and rode by them, and they all saluted vs, saying that the Indians were neere them, and telling what had passed betweene them, whereat the Generall and we receiued great contentment. They told vs mozeouer, that they had found fresh water, whereby they increased our great ioy, because we stood in much neede thereof, for at the other place of the Indians we could get but a little.

These mighty
deepe and high
weedes are de-
scribed in the
end of this
treasurie.

While we thus rode at anchor, we saw a Canoa with 3 Indians put out into the sea from their cottages, and they went vnto a fishing place, among certaine great and high weedes, which grow in this sea among certaine rockes, the greatest part of which weedes groweth in 15 or 20 sa-
dome

some depth; and with great celeritie they caught seven or eight fishes, and returned with them unto the Trinity, and gave them unto them, and they in recompense gave the Indians certaine trifles. After this the Indians stayed at the sterne of the ship, viewing the same about three houres space, and taking the oares of our boat they tryed how they could rowe with them, whereat they tooke great pleasure; and we which were in the Admirall stirred not a whit all this while, to give them the more assurance, that they should not flee away, but should see, that we ment to doe them no harme, & that we were good people. As soone as we were come to anker, & beheld all that had passed betweene the Indians and those of the Trinity, after the Indians were gone to the shore in their Canoas made of the bodies of trees, the General commanded the boat which was without to be brought unto him: and when it was come, he, and Francis Preciado, and two others went inco it, and so we went aboard the Trinity. The Indians seeing people comming out of the other ship into the Trinity, sent two Canoas unto the sterne of the ship, and brought vs a bottle of water, and we gave unto them certain beads, and continued talking with them a little while; but evening approaching the aire grew somewhat cold, The Indians returned on shore to their lodgings, and the General and we to our ship. The next day being Wednesday in the morning, the General commanded certaine of vs to take the bote and goe ashore, to see if we could find any brooke or well of fresh water in the houses of the Indians, because he thought it vnpossible for them to dwell there without any water to drinke. The father frier Raimund likewise went out in our company, because the day before seeing the Indians came to the sterne of the shippe and parlying with vs, he thought he might haue spoken a little with them, with the like familiarity. In like sort many mariners and souldiers went out in the boat of the Trinity, and going altogether with their weapons toward the shore, somewhat about the lodgings of the Indians, very early in the morning they watched the boats, and perceiued that wee would come on land, whereupon they sent away their women & children with certaine of them, who caried their goods vp into certaine exceeding steepe mountaines and hilles, and 5 or 6 of them came toward vs, which were excellently well made, and of a good stature. Two of them had bowes and arrowes, and other two 2 bassonadoes much thicker then the wrist of a mans hand, and other two with 2 long stauies like iauelins with very sharpe pointes, and approached very neere vs being now come on shore. And beginning by signes very fiercely to braue vs, they came so neere vs, that almost they strooke with one of those stauies one of our souldiers called Garcia a man of good parentage, but the General commanded him to with-draw himselfe, and not to hurt any of them. In the meane season the General and frier Raimund stept forth, the frier lapping a garment about his arme, because they had taken vp stones in their hands, fearing that they would do them some mischief. Then began both of them to speake vnto them by signes & words, to be quiet, signifying, that they ment them no harme, but only were come to take water; and the frier shewed them a drinking-cup, but nothing would serue to make them leaue that bragging, and flinging of stones: and the General continuing still in a mind not to hurt them, commanded his men gently to come neere vnto them, and that by signes they should all shew them, that they meant in no wise to hurt them, but that we were come on land onely to take water. On the other side refusing utterly to take knowledge of these things they still insulted more and more: whereupon Francis Preciado counsellled the General to giue him leaue to kill one of them, because all the rest would flee away, wherby at our ease we might take water: but he replied that he would not haue it so, but willed them to looze the two massines Bercillo and Achillo: wherefore the dogs were let loose, and as soone as they saw them, they vanished immediately, betaking them to their heeles, and running vp those clifles like goates. Also others which came from the mountaine to succour them, betooke themselves to flight. The dogs ouertooke two of them, and bit them a litle, and we running after, laid hold on them, and they seemed as fierce as wild & untamed beasts, for 3 or 4 of vs held either of them, to cherish & pacifie them, and to seeke to giue them some thing: but we auailed not, for they bit vs by the hands, and stooped downe to take vp stones for to strike vs with them. We led them a while in this maner, & came vnto their lodgings, where the Generall gaue a charge, that no man should touch any thing of theirs, commanding Francis Preciado to see that this order were obserued, in not taking any thing frō them, although in very deed there was little or nothing there, because the women and Indians which were fled had caried al away. Here we found an old man in a caue so extremely aged as it was wonderful, which could neither see nor go, because he was so lame and crooked. The father frier Raimund sayd, it were good (seeing he was so aged) to make him a Christian; whereupon we christened him. The captaine gaue the Indians which we had taken two paire of eare-rings, and certaine counterfeit diamonds, and making much of them, suffered them to depart at their pleasure, and in this sort faire and softly they returned to the rest of their fellows in the mountaine. We tooke the matter of

The great hle
of massines in
pursuit of the
Indians.

that village which was but a small quantity, and then the Generall commanded vs. to returne to our ship, because we had eaten nothing as yet, and after our repast we sayled towards a bay which lay beyond that village, where we saw a very great valley, and those of the Trinitie sayd, that they had seene there good store of water, and sufficient for vs; wherefore wee ankered neere vnto that valley. And the Generall went on shore with both the boates, and the men that went on land in the morning with the two fathers frier Raimund, and frier Antony: and passing by that valley a crosse bow-shot, we found a very small brooke of water, which neuertheles supplied our necessity for we filled two butts thereof that evening, leauing our vessels to take it with on shore vntill the next morning; and we reioyced not a little that we had found this water, for it was fresh, and the water which we had taken by before was somewhat brackish, and did vs great hurt both in our bodies and in our taste.

Chap. 14.

They take possession of the Isle of Cedars for the Emperours Maiestie, and departing from thence they are greatly tossed with a tempest of the sea, and returne to the Island, as to a safe harbour.

The next day being the two and twentieth of January very early the General commanded vs to go on shore, and that we should haue our dinner brought vs, and should take in the rest of our water, which we did, and filled 17 butts without seeing any Indian at all. The next day going out to fill 8 or 9 vessels which were not yet filled, a great winde at North-west tooke vs, whereupon they made signes to vs from the ships, that with all haste wee should come on board againe, for the wind grew still higher, and higher, and the Masters were affraid that our cables would break, thus we were in the open sea. Therefore being come aboard againe not without great trouble, we returned backe ouer against the village of the Indians, * where we had slaine the Indian, and because the wind grew more calme about midnight, the Pilots did not cast anker, but hulled vnder the shelter of this Island, which (as I haue said) is called The Isle of Cedars, and is one of the 3 Isles of S. Stephan, the greatest & chiefest of them, where the General tooke possession. While we hulled here, about midnight, the next Friday being the 23 of the moneth, without our expectation we had a fresh gale of wind from the Southeast, which was very fauourable for our voyage, & the longer it continued, the more it increased: so that betweene that night and the next day being Saturday the 24 of the said moneth we sailed 18 great leagues. While wee were thus on our way, the wind grew so contrary and so tempestuous, that to our great grieve we were constrained to coast about with our ships, and returned twenty leagues backe againe, taking for our succour the second time, the point of the lodgings of the Indians, where the foresayd Indian was slaine, and here we stayed Sunday, Tuesday, and Wednesday, during which time the North-west and the North wind blew continually, whereupon we determined not to stirre from thence vntill we saw good weather, and well settled for our voyage: for in this climate these winds doe raigne so greatly, that we feared they would stay vs longer there then we would; and we were so weary of staying, that euery day seemed a moneth vnto vs. Under this shelter we rode Thursday, Friday, and Saturday vntill noone, which was the last of January in the yeere 1540. About noone the wind began to blow softly at South-west, whereupon the General told the Pilots, that we should doe well to put ouer to the maine land, where with some wind off the shore we might by the grace of God saile somewhat farther. Thus we hoisted our sailes, and sailed vntill euening three or foure leagues, for the wind scanted, and wee remained becalmed. The night being come there arose a contrary winde, and we were inforced of necessity to retire the third time to the same shelter of the Isle of Cedars, where we stayed from the first of February vntill Shrouesunday, in the which meane time we tooke in two butts of water which we had spent. During the space of these eight dayes we sought to make sayle two or three times, but as we went out a little beyond the point of this Isle, we found the wind so boystrous and contrary, and the sea so growen, that of force we were constrained to returne vnder the succour of the Island, and often times wee were in great feare that we should not be able to get in thither againe. During this time that we could not proceed on our iourney, we imployed our selues in catching a few fishes for the Lent. From Shrouesunday being the 8 of February, on which day we set sayle, we sayled with a very scant wind, or rather a calme, vntill Shrouetuesday, on which we came within kenne of the firme land, from whence we were put backe these twenty leagues (for in these two dayes and a halfe wee sayled some 20 small leagues) and we lay in sight of the sayd poynt of the firme land. And on the Tuesday we were becalmed, waiting till God of his mercy would helpe vs with a prosperous wind to proceed on our voyage.

On

On Shrouesunday at night, to make good cheere withall wee had so great winde and raine, that there was nothing in our ships which was not wet, and a very colde ayre. On Alwednesday at sun-rising we strooke saile neere a point which we fel somewhat short withall in a great bay running into this firme land: and this is the place where we sawe five or six fires, and at the rising of the sunne being so neere the shore that we might well descrie and vie we it at our pleasure we sawe it to bee very pleasant, for wee descried as farre as wee could discerne with our eyes, faire valleys, and small hilles, with greene shrubs very pleasant to behold, although there grew no trees there. The situation shewed their length and breadth. This day was little winde, it being in a manner calmes, to our no small grieve: and the father frier Raimund sayd vs a drie masse, and gaue vs ashes, preaching vnto vs according to the time and state wherein we were: with which sermon we were greatly comforted. After noonetide we had contrary wind, which still was our enemy in all our iourney, at the least from the point of the port of Santa Cruz. Here we were constrained to anker in five fadome water, and after wee rode at anker wee began to viewe the countrey, and tooke delight in beholding how goodly and pleasant it was, and neere vnto the sea wee iudged that wee sawe a valley of white ground. At euening so great a tempest came vpon vs of winde and raine, that it was so fearefull and dangerous a thing that a greater cannot bee expressed; for it had like to haue driuen vs vpon the shore, and the chiefe Pilot cast out another great anker into the sea, yet all would not serue, for both these ankers could not stay the ship. Whereupon all of vs cryed to God for mercy, attending to see how he would dispose of vs; who of his great goodnesse, while we were in this danger, vouchsafed a little to steeke the tempest, and with great speede the chiefe Pilot commanded the mariners to turne the capsten, and the Generall commanded and prayed all the souldiers to helpe to turne the capsten, which they were nothing slow to performe: and thus we beganne to weigh our ankers, and in weighing of one which was farre greater then the other, the sea was so boisterous, that it forced the capsten in such sorte, that the men which were at it could not rule the same, and it strooke a Negro of the Generalls such a blowe, that it cast him downe along vpon the decke, and did the like vnto another mariner and one of the barres strooke our fire-furnace so violently, that it cast it ouer-board into the sea. Yet for all these troubles wee weighed our ankers, and set sayle, and albeit we had great tempests at sea, yet made wee no account thereof in respect of the ioy which we conceiued to see our selues freed of the perill of being cast on that shore with our ships, especially seeing it fell out at midnight, at which time no man could haue escaped, but by a meere myracle from God.

The point of
Santa Cruz is
therwise called
Punta de Balenas

Wee sayled by and downe the sea all Thursday, and vntill Friday in the morning being the fourteenthy day of February, and the waues of the sea continually came raking ouer our deckes. At length, on Saturday morning at breake of day we could finde no remedy against the contrary windes, notwithstanding the Generall was very obstinate to haue vs keepe out at sea, although it were very tempestuous, least we should be driuen to put backe againe, but no diligence nor remedie preuailed: for the windes were so boisterous and so contrary, that they could not be wofle, and the sea went still higher, and swelled more and more, and that in such sorte, that we greatly feared wee should all perish. Whereupon the Pilot thought it our best course to returne to the Isle of Cedars, whither wee had repaired three or foure times before by reason of the selfe same contrary windes, for wee tooke this Island for our father and mother, although we receiued no other benefite thereby saue this onely, namely, to repaire thither in these necessities, and to furnish our selues with water, and with some small quantitie of fish.

Being therefore arrived at this Island, and riding vnder the shelter thereof, the contrary windes did alwayes blow very strongly, and here we tooke water which we drunke, and wood for our fuel, and greatly desired, that the windes would bee more fauourable for proceeding on our iourney. And though we rode vnder the shelter of the Isle, yet felt wee the great fury of those windes, and the rage of the sea, and our ships neuer ceased rolling.

At breake of day the twentieth of February wee found the cable of our Admirall cracked, whereupon, to our great grieve, we were constrained to set sayle, to fall downe lower the space of a league, and the Trinicie came and rode in our company.

Chap. 15.

They goe on land in the isle of Cedars, and take diuers wilde beasts, and refresh and solace themselves. They are strangely tossed with the Northwest winde, and seeking often to depart they are forced, for the auoiding of many mischiefes, to repaire thither againe for harbour.

The two and twentieth of February being the second Sunday in Lent, the General went on shore with the greatest part of his people and the friers, neere vnto a valley which they saue before them. And hearing masse on land, certaine souldiers and mariners, with certaine dogges which we had in our company went into the said valley, and we met with certaine deere, whereof we tooke a female, which was little, but fat, whose haire was liker the haire of a wild goat then of a deere, and we found her not to be a perfect deere, for she had foure dugs like vnto a cowe full of milke, which made vs much to marueile. And after we had slayed off her skinne, the flesh seemed moze like the flesh of a goat, then of a deere. We killed likewise a gray conie, in shape like vnto those of Nueva Espanna, and another as blacke as heben-wood. In the cottages at the shelter above, where we brake our cable, we found many pine-nuts opened, which (in mine opinion) the Indians had gathered together to eate the kernels of them. On Sunday the 23 of the said moneth, we rode at anchor, taking our pleasure and pastime with fishing. And the Northwest winde began to blow, which wared so great a litle before midnight, as it was wonderfull: so that although we were vnder the shelter of the Island, and greatly defended from that wind, yet for all that it was so furious, and the sea became so raging and boisterous, that it greatly shook our ships, and we were in great feare of breaking our cables, whereof (to say the trueth) we had very much neede: for hauing spent longer time in this voyage then we looked for, wee had broken two, and lost two of our best anchors. This furious winde continued untill the next day being Tuesday the 24 when as we went on shore with the friers, who sayd vs masse, recommending our selues to God, beseeching him to vouchsafe to succour and help vs with some good weather that we might proceede on our voyage, to the aduancement of his seruice. And still the winds were so high and outrageous, that the deuill seemed to be loosed in the aire. Whereupon the Pilots caused all the masts to be let downe, least they should be shaken with the wind, and tooke off all the shrouds, and likewise caused the cabbens in the sterne to be taken away, that the winds might haue moze free passage, for the safetie of the ships; per for al this they ceased not to be in great trouble. On Tuesday the second of March, about midnight or somewhat after, riding vnder the Island in this distresse, there came a gust of Northwest winde, which made the cable of the Admirall to slip, and the Trinitie brake her cable, and had bene cast away, if God of his mercy had not prouided for vs, together with the diligence which the Pilots vled, in hoisting the sailes of the trinkets and mizzen, wherewith they put to sea, and rode by another anchor vntill day, when the men of both the ships went with their boats to seeke the anchor vntill noone, which at length they found and recovered, not without great paines & diligence which they vled in dragging for it, for they were till noone in seeking the same, and had much adoe to recover it. After this we set vp our shroudes, and all things necessary to saile, for to proceede on our voyage, if it pleased God, and not to stay alwayes in that place, as lost and forlorne. Thus on the Wednesday two or three houres after dinner wee set saile, with a scarce winde at Southeast, which was fauourable for our course and very scant; and our Pilots & all the rest of vs were in no smal feare, that it would not continue long. We began therfore to set forward, although we seemed to see before our eyes, that at the end of the Island we should meete with contrary winde at North and Northwest. This day about euening when our ships had discouered the point of this Isle of Cedars, wee began to perceiue those contrary windes, and the sea to goe so loftily, that it was terrible to behold. And the farther we went, the moze the winds increased, so that they put vs to great distresse, sayling alwayes with the sheates of our mainesails and trinket warily in our hands, and with great diligence we loosed the ties of all the sailes, to saue them the better, that the wind might not charge them too vehemently. For all this the mariners thought it best to returne backe, and that by no means we should runne farre into the sea, because we were in extreame danger. Whereupon wee followed their counsell, turning backe almost to the place from whence we departed, whereat we were al not a litle grieved, because we could not prosecute our voyage, and began to want many things for the furniture of our ships. The 8 of March being Sunday about noone the Generall commanded vs to set saile, for a small gale of winde blew from the West, which was the wind whereof we had most need, to follow our voyage, whereat wee were all glad for the great desire which we had to depart out of that place. Therefore we began to set saile, & to passe toward the point of the Island, and to shape
our

our course toward the coast of the firme land, to view the situation thereof. And as we passed the Island, and were betwixt it and the maine, the North-west being a contrary wind began to blow, which increased so by degrees, that we were constrained to let fall the bonets of our sailes, to save them, striking them very low. And the Trinitie seeing this bad weather returned forthwith unto the place from whence we departed, and the Admiral cast about all night in the sea, untill the morning; and the chiefe Pilot considering that by no means we could proceed farther without danger, if we should continue at sea any longer, resolved that wee should retire our selves againe to that shelter, where we rode at anchor untill Thursday. And on Friday about noone we set saile againe with a scarce wind, & in coming forth unto the point of the Island, we met againe with contrary wind at North-west: whereupon running all night with the firme land, on Saturday in the morning being S. Lazarus day and the 13 of march, we came in sight thereof, in viewing of the which we all rejoyced, and we souldiers would very willingly have gone on shore. This night fel great store of raine like the raine in Castilia, and we were all well wet in the morning, & we tooke great pleasure in beholding the situation of that firme land, because it was greene, and because we had discovered a pleasant valley and plaines of good largenes, which seemed to bee enuironed with a garland of mountains. At length for feare of misfortunes, seeing the sea so high, we durst not stay here or approach neere the land, & because we had great want of cables and ankers, we were againe constrained to put to sea; and being in the same, and finding the said contrary windes, the Pilots iudged that we had none other remedie, but againe to retire our selves to our wonted shelter. And thus we returned, but somewhat about the old place. On Sunday we rode here to the great grief of all the company, considering what troubles we indured, & could not get forward; so that this was such a contrariety, as none could be more intollerable. This day being come to an anchor wee had a mighty gale of wind at North-west, which was our aduersary and capital enemy, and when day was shut in, it still grew greater and greater, so that the ships rouled much. And after midnight, toward break of day, the Trinitie brake her two cables, which held the two ankers which she had, and seeing her selfe thus forlorne, she turned by and downe in the sea untill day, and came & rode neere vs, by one anker which shee had left. This day all of vs went to seeke these lost ankers, and for all the diligence which wee used, wee could find but one of them. We rode at anchor all day untill night, when the Trinitie againe brake a cable, which certaine rocks had cut asunder: whereupon the General commanded that she should ride no longer at anchor, but that shee should turne by and downe, as she had done before in sight of vs, which she did all day long, and at night she came to an anchor ouer against a fresh water somewhat lower, and wee went and rode hard by her. On Palme-sunday we went on shore with the fathers, which read the passion vnto vs and said masse, and we went in procession with branches in our hands. And so being comforted, because we had receiued that holy Sacrament, we returned to our ships.

Chap. 16.

Returning to the Isle of Cedars weather-beaten, and with their ships in euil case, they conclude, that the ship called *Santa Agueda* or *Santa Agatha* should returne vnto *Nueva Espanna*. Of the multitude of whales which they found about the point of *California*: with the description of a weede, which groweth among the Islands of those seas.

HERE we continued untill the Wednesday before Easter being the foure and twentieth of March, on which day wee consulted together, that because the ships were ill conditioned, and wanted necessary furniture to proceede any further, it were best for vs to returne backe to New Spaine, as also because our clothes were consumed: but the Generall seemed not willing to returne, but to proceed on his voyage: and in fine it was resolved, that seeing both the ships could not proceede forward, as well because they had lost their necessary furnitures, as also that the *Santa Agatha* had neede of calking, because she receiued much water, and was the worst furnished of the twaine, that shee should returne backe to aduertize the Marques of our successe in this voyage, and what hindered our proceeding, and in what case wee stood, and howe wee were bereft of our necessary furniture. And because the Trinitie was the swifter ship, and better appointed then the other, it was concluded, that it should be prouided in the best maner that might be, & that the General should proceed on his iourney in her with such company as he should make choise of, and that the rest should returne at their good leisure. Wherefore vpon this determination we went vnder a point of this Island, because it was a fit place to carene the ship: & in recovering the same we spent Wednesday, Thursday, and Friday till noone, and yet for all that wee could not wel double it, untill Easter day about noone. Here we ankered very neere the shore, and in a valley we found very excellent fresh water, wherof we made no smal account, & here stayed all the Easter-holidays, to set our selves about the furnishing by of the Trinitie: and after the worke was

The firme land
very green and
pleasant with
goodly valleys
and plaines.

was taken in hand by the two Masters which were very sufficient talkers (one of which was Iuan Castiliano chiefe Pilot, and the other Peruccio de Bermes) they finished the same so well in five dayes, as it was wonderfull; for no man could perceine how any droppe of water could enter into any of the leames. Afterward they mended the other ship from Saturday till Sunday, during which time all those were thynen that had not confessed, and receiued the communion, and it was resolved by charge of the confessoys, that all those seale-skins which they had taken from the Indians should bee restored againe; and the Generall gaue charge to Francis Preciado to restore them all, charging him on his conscience so to doe. Thus they gathered them together, and delivered them into the hands of the fathers, to bee kept untill they returned to the place, where they were to restore them. After this manner on Sunday before noone we tooke our leaues of the Generall Francis Villosa, and of the people that stayed with him, who at our departure shed no small number of teares, and we chose for our captaine in the Santa Agueda master Iuan Castiliano the chiefe pilot, as well of the ship, as of vs all, and set saile the same day being the fift of April, hauing our boat tied at our sterne, till we came ouer against the cottages, whence wee had taken the seale-skins. From the cuntry of the Christians and the port of Colima we were now distant some three hundred leagues, which is the first port where wee were determined to touch at. And hauing sailed a league from the Trinitie the captaine Iuan Castiliano commanded vs to salute them with three peeces of great Ordnance, and he answered vs with other three, and after ward we answered one another with two shot apiece.

The first of April.

We sailed on Sunday & Tuesday til noon with contrary wind in sight of the Island, and at noone we had a fresh gale in the poupe, which brought vs ouer against the cottages of the Indians where we tooke away those seal-skins; & there certain souldiers & mariners with the father frier Antony de Melo leapt on shore with the boat, carrying the skins with them, & flung them into the sayd cottages out of which they were taken, and so returned to their ship. This day the weather calmed, whereupon we were driuen to cast anchor, fearing that we should shortly be distressed for want of victuals, if we should stay there any long time; but God which is the true helper provided better for vs then we deserued or imagined; for as we rode here, after midnight the wind changed following before ten of the clocke wee had a fauourable gale of winde from the Southeast, which put vs into the sea; whither being driuen, wee had the wind at North west so good and constant, that in five dayes it brought vs to the rape of the point of the port of Santa Cruz: for which so great blessing of God we gaue vnto him infinite thanks. And here we began to allow our selues a greater proportion of victuals then wee had done before, for wee had eaten very sparingly for feare lest our victuals would faile vs. Before we came to this point of the haven of Santa Cruz by five or seuen leagues we saw on shore between certaine valleys diuers great smokes. And hauing passed the point of this port, our captaine thought it good to lanch forth into the maine Ocean: yet although we ran a swift course, about 500 whales came athwart of vs in 2 or 3 skulles within one houres space, which were so huge, as it was wonderfull, and some of them came so neere vnto the ship, that they swam vnder the same from one side to another, whereupon we were in great feare, lest they should doe vs some hurt, but they could not because the ship had a prosperous and good winde, and made much way, whereby it could receiue no harme, although they touched and strooke the same.

Read more of these weeds cap. 13.

Among these Islands are such abundance of those weeds, that if at any time wee were informed to sayle ouer them they hindred the course of our ships. They growe fourteene or fifteene fadome deepe vnder the water, their tops reaching foure or five fadome aboue the water. They are of the colour of yellow ware, & their stalke groweth great proportionably. This weede is much more beautifull then it is set forth, and no maruell, for the naturall painter and creator thereof is most excellent.

Sant Iago de Buena esperanza in 19 degrees.

This relation was taken out of that which Francis Preciado brought with him. After this ship the Santa Agueda departed from the Generall Villosa, and returned backe the 5 of April, she arrived in the port of Sant Iago de Buena esperanza the 18 of the said moneth, and after she had stayed there foure or five dayes, she departed for Acapulco: howbeit until this present seuenteenth of May in the yeere 1540, I haue heard no tidings nor newes of her.

Cabo del Enganno in 30 degrees & a halfe

Moreouer after the departure of the Santa Agueda for Nueva Espanna, the General Francis Villosa in the ship called the Trinitie proceeding on his discovery coasted the land untill he came to a point called Cabo del Enganno standing in thirty degrees and a halfe of Northerly latitude, and then returned backe to Newspaine, because he found the winds very contrary, and his victuals failed him.

The

my J.
The relation of the nauigation and discouery which Captaine
Fernando Alarchon made by the order of the right honourable Lord Don
Antonio de Mendoça Vizeroy of New Spaine, dated in Colima, an hauen of New Spaine.

Chap. I.

Fernando Alarchon after he had suffered a storme, arriued with his Fleete at the hauen of
Saint Iago, and from thence at the hauen of Aguaiaual: he was in great perill in seeking
to discouer a Bay, and getting out of the same he discouered a riuer on the coast with a
great current, entring into the same, and coasting along he discried a great many of In-
dians with their weapons: with signes hee hath traffique with them, and fearing some
great danger returneth to his ships,

M Sunday the ninth of May in the yeere 1540. I set saile with two ships, the
one called Saint Peter being Admirall, and the other Saint Catherine, and wee
set forward meaning to goe to the hauen of Saint Iago of good hope: but before
we arriued there wee had a terrible storme, wherewith they which were in the
ship called Saint Catherine, being more afraid then was neede, cast ouer boord
nine pieces of Ordnance, two anchors and one cable, and many other things as
needfull for the enterprise wherein we went, as the shippe it selfe. Assoone as we were arriued at
the hauen of Saint Iago I repaired my losse which I had receiued, prouided my selfe of things
necessary, and tooke aboard my people which looked for my comming, and directed my course to-
ward the hauen of Aguaiaual. And being there arriued I vnderstood that the Generall Francis
Vazquez de Coronado was departed with all his people: wherupon taking the ship called
Saint Gabriel which carried victuals for the armie I led her with mee to put in execution your
Lordships order. Afterward I followed my course along the coast without departing from the
same, to see if I could find any token, or any Indian which could giue me knowledge of him: and
in sailing so neere the shore I discouered other very good hauens, for the ships wherof Captaine
Francis de Vllua was Generall for the Marquesse de Valle neither sawe nor found them. And
when we were come to the flats and shoals from whence the foresaid fleete returned, it seemed
as well to me as to the rest, that we had the firme land before vs, and that those shoals were so pe-
rilous and fearefull, that it was a thing to be considered whether with our skiffes we could enter
in among them: and the Pilotes and the rest of the company would haue had vs done as Cap-
taine Vllua did, and haue returned backe againe. But because your Lordship commanded mee,
that I should bring you the secret of that gulfe, I resolved, that although I had knowen I should
haue lost the shippes, I would not haue ceased for any thing to haue seene the head thereof: and
therefore I commanded Nicolas Zamorano Pilote maior, and Dominico del Castillo that eche
of them should take a boate, and their lead in their hands, and runne in among those shoals, to see
if they could find out the chanell whereby the shippes might enter in: to whom it seemed that the
ships might saile by higher (although with great trauell and danger) and in this sort I and he be-
gan to follow our way which they had taken, and within a short while after wee found our selues
fast on the sands with all our three ships, in such sort that one could not helpe another, neither could
the boates succour vs, because the current was so great that it was impossible for one of vs to
come vnto another: wherupon we were in such great leopordie that the decke of the Admirall
was oftentimes vnder water, and if a great surge of the sea had not come & driuen our ship right
vp, and gaue her leaue as it were to breathe a while, we had there bin drowned: and likewise the o-
ther two shippes found themselves in very great hazard, yet because they were lesser and drew
lesse water, their danger was not so great as ours. Nowe it pleased God vpon the returne of
the flood that the shippes came on shore, and so wee went forward. And although the company
would haue returned backe, yet for all this I determined to goe forward, and to pursue our at-
tempted voyage: and we passed forward with much adoe, turning our stemmes now this way,
now that way, to seeke to find the chanel. And it pleased God that after this sort we came to the
very bottome of the Bay: where wee found a very mightie riuer, which ranne with so great fury
of a streame, that we could hardly saile against it. In this sort I determined as well as I could to
go by this riuer, and with two boates, leaving the third with the ships, and twenty men, my selfe
being in one of them with Roderigo Maldonado treasurer of this fleet, and Gaspar de Castilleia
comptroller, and with certaine small pieces of artillerie, I began to saile by the riuer, and charged

all my company, that none of them should stirre nor vse any signe, but he whom I appoynted, although wee found Indians. The same day, which was Thursday the five and twentieth of August, following our boyage with drawing the boats with hammers we went about some 6 leagues: and the next day which was Friday by the breake of day thus following our way upward, I saw certaine Indians which went toward certaine cottages neere unto the water, who alioone as they saw vs, ten or twelue of them rose vp furiously, and crying with a loud voyce, other of their companions came running together to the number of 50 which with all haste carried out of their cottages such things as they had, and layd them vnder certaine shrubs and many of them came running toward that part whether wee approached, making great signes vnto vs that we should goe backe againe, vnto great threatnings against vs, one while running on this side and an other while on that side. I seeing them in such a rage, caused our boates to lanch from the shoze into the middes of the river, that the Indians might be out of feare, and I rode at anker, and set my people in as good order as I could, charging them that no man should speake, nor make any signe nor motion, nor stirre out of his place, nor should not be offended for any thing that the Indians did, nor should shewe no token of warre: And by this meanes the Indians came euery foote neere the riuers side to see vs: and I gate by little and little toward them where the river seemed to be deepest. In this meane space there were aboute two hundred and fiftie Indians assembled together with bowes and arrowes, and with certaine banners in warrelike sort in such manner as those of New Spayne doe vse: and perceiuing that I drewe toward the shoze, they came with great cries toward vs with bowes and arrowes put into them, and with their banners displayed. And I went vnto the stemme of my boate with the interpreter which I carried with me, whom I commanded to speake vnto them, and when he spake, they neither vnderstood him, nor he them, although because they sawe him to be after their fashion, they stayed themselves: and seeing this I drewe neerer the shoze, and they with great cries came to keepe mee from the shoze of the river, making signes that I should not come any farther, putting stakes in my way betweene the water and the land: and the more I lingered, the more people still flocked together. Which when I had considered I beganne to make them signes of peace, and taking my sword and target, I cast them downe in the boate and set my feete vpon them, giuing them to vnderstand with this and other tokens that I desired not to haue warre with them, and that they should doe the like. Also I tooke a banner and cast it downe, and I caused my company that were with mee to sit downe likewise, and taking the wares of exchange which I carried with mee, I called them to giue them some of them: yet for all this none of them stirred to take any of them, but rather flocked together, and beganne to make a great murmuring among themselves: and suddenly one came out from among them with a staffe wherein certayne shelles were set, and entered into the water to giue them vnto mee, and I tooke them, and made signes vnto him that hee should come neere me, which when he had done, I embraced him, and gaue him in recompence certaine beades and other things, and he returning with them vnto his fellowes, began to looke vpon them, and to parley together, and within a while after many of them came toward me, to whom I made signes to lay downe their banners, and to leaue their weapons: which they did incontinently, then I made signes that they should lay them altogether, and should goe aside from them, which like wise they did: and they caused those Indians which newly came thither to leaue them, and to lay them together with the rest. After this I called them vnto me, and to all them which came I gaue some smal trifle, vnto them gently, and by this time they were so many that came thronging about mee, that I thought I could not stay any longer in safety among them, and I made signes vnto them that they should withdraw themselves, and that they should stand al vpon the side of an hill which was there betweene a plaine & the river, and that they should not presse to me aboue ten at a time. And immediately the most ancient among them called vnto them with a loud voyce, willing them to do so: and some ten or twelue of them came where I was: whereupon seeing my selfe in some securitie, I determined to goe on land the more to put them out of feare: and for my more securitie, I made signes vnto them, to sit downe on the ground which they did: but when they saw that ten or twelue of my companions came a shoze after me, they began to be angry, and I made signes vnto them that we should be friends, and that they should not feare, & here withal they were pacified, and late downe as they did before, and I went vnto them, & embraced them, giuing them certain trifles, commanding mine interpreter to speake vnto them, for I greatly desired to vnderstand their maner of speech, and the cry which they made at mee. And that I might knowe what maner of foode they had, I made a signe vnto them, that wee would gladly eate, and they brought mee certaine cakes of Maiz, and alsoe of Miziqui, and they made signes vnto mee that they desired to see an harguebule shotte off, which I caused

to be discharged, and they were all wonderfully afraid, except two or three olde men among them which were not mooued at all, but rather cried out vpon the rest, because they were astrayd: and through the speech of one of these olde men, they began to rise vp from the ground, and to lay hold on their weapons: whom when I sought to appease, I would haue giuen him a silken girdle of diuers colours, and hee in a great rage bite his necher lippe cruelly, and gaue mee a thumpe with his elbowe on the the brest, and turned in a great furie to speake vnto his company. After that I saw them aduance their banners, I determined to returne my selfe gendy to my boates, and with a small gale of wind I set sayle, whereby wee might breake the current which was very great, although my company were not well pleased to goe any farther. In the meane space the Indians came following vs along the shore of the riuer, making signes that I should come on land, and that they would giue mee food to eate, some of them sucking their fingers, and others entered into the water with certaine cakes of Paiz to giue me them in my boate.

Chap. 2.

Of the habite, armour and stature of the Indians. A relation of many others with whom he had by signes traffique, victuals and many courtesies.

In this sort we went vp two leagues, and I arrived neere a cliffe of an hill, whereupon was an harbour made newly, where they made signes vnto me, crying that I should goe thither, shewing me the same with their handes, and telling mee that there was meate to eate. But I would not goe thither, seeing the place was apt for some ambush; but followed on my voyage, within a while after issued out from thence aboue a thousand armed men with their bowes and arrowes, and after that many women and children shewed themselves, toward whom I would not goe, but because the Sunne was almost set, I rode in the midst of the riuer. These Indians came decked after sundry fashions, some came with a painting that couered their face all ouer, some had their faces halfe couered, but all besmouched with cole, and every one as it liked him best. Others carried visards before them of the same colour which had the shape of faces. They wear on their heads a piece of a Deeres skinn two spannes broad set after the manner of a helmet, and vpon it certaine small sticks with some sortes of feathers. Their weapons were bowes and arrowes of hard wood, and two or three sortes of maces of wood hardened in the fire. This is a mightie people, well featured, and without any grossenesse. They haue holes bored in their nostrils whereat certaine pendants hang: and others weare shelles, and their eares are full of holes, whereon they hang bones and shelles. All of them both great and small weare a girdle about their waste made of diuers colours, and in the middle is fastened a round bunch of feathers, which hangeth downe behind like a tayle. Likewise on the brarme of their armes they weare a streit string, which they wind so often about that it becommeth as broad as ones hand. They weare certaine pieces of Deeres bones fastened to their armes, whereby they strike off the sweate, and at the other certaine small pipes of canes. They carry also certaine little long bagges about an hand broad tyed to their left arme, which serue them also in stead of brasers for their bowes, full of the powder of a certaine herbe, whereof they make a certaine beuerage. They haue their bodies crated with coles, their haire cut before, and behind it hangs downe to their waist. The women goe naked, and weare a great wreath of feathers behind them, and before painted and glued together, and their haire like the men. There were among these Indians three or foure men in womens apparell. Nowe the next day being Saturday very early I went forward on my way by the riuer, setting on shore two men for eache boate to drawe them with the rope, and about breaking forth of the Sunne, wee heard a mightie crie of Indians on both sides of the riuer with their weapons, but without any banner. I thought good to attend their comming, as well to see what they would haue, as also to try whether our interpreter could vnderstand them. When they came ouer against vs they leapt into the riuer on both sides with their bowes and arrowes, and when they spake, our interpreter vnderstoode them not: whereupon I beganne to make a signe vnto them that they should lay away their weapons, as the other had done. Some did as I willed them, and some did not, and those which did, I willed to come neere me and gaue them some things which we had to crucke withall, which when the others perceiued, that they might likewise haue their part, they layd away their weapons likewise. I iudging my selfe to be in securitie leaped on shore with them, and stood in the the midst of them, who vnderstanding that I came not to fight with them, began to giue some of those shels and beades, and some brought me certaine skinnnes well dyed, and others Paiz and a roll of the same naughtily grinded, so that none of them came vnto me that brought mee not something, and before they

of the river.

gaue it me going a little way from mee they began to cry out amayne, and made a signe with their bodies and armes, and after ward they approached to giue me that which they brought. And now that the Sunne beganne to set I put off from the shore, and rode in the middlest of the river. The next morning before breake of day on both sides of the river wee heard greater cries and of more Indians, which leaped into the river to swimme, and they came to bring mee certaine gourdes full of Maiz, and of those beethes which I spake of before. I shewed vnto them Wheate and Beanes, and other seedes, to see whether they had any of those kindes: but they shewed mee that they had no knowledge of them, and wondered at all of them, and by signes I came to vnderstand that the thing which they most esteemed and reuerenced was the Sunne: and I signified vnto them that I came from the Sunne. Whereat they marueiled, and then they began to beholde me from the toppe to the toe, and shewed me more fauour then they did before: and when I asked them for food, they brought me such abundance that I was enforced twise to call for the boates to put it into them, and from that time forward of all the things which they brought me they flang by into the ayre one part vnto the Sunne, and after ward turned towards me to giue mee the other part: and so I was alwayes better serued and esteemed of them as well in drawing of the boats by the river, as also in giuing me food to eat: and they shewed me so great loue, that when I stayed they would haue carried vs in their armes vnto their houses: and in no kind of thing they would breake my commandement: and for my suretie, I willed them not to carry any weapons in my sight: and they were so carefull to doe so, that if any man came newly thither with them, suddenly they would goe and meete him to cause him to lay them downe farre from mee: and I shewed them that I tooke great pleasure in their so doing: and to some of the chiefe of them I gaue certaine little napkins and other trifles; for if I should haue giuen somewhat to euery one of them in particular, all the small wares in New Spayne would not haue sufficed. Sometimes it fell out (such was the great loue and good wil which they shewed me) that if any Indians came thither by chance with their weapons, and if any one being warned to leaue them behind him, if by negligence, or because he vnderstood them not at the first warning, he had not layd them away, they would runne vnto him, and take them from him by force, and would breake them in pieces in my presence. Afterward they tooke the rope so louingly, and with striding one with another for it, that we had no need to pray them to doe it. Wherefore if we had not had this helpe, the current of the river being exceeding great, and our men that drew the rope being not well acquainted with that occupation, it would haue bene impossible for vs to haue gotten by the river so against the streame. When I perceived that they vnderstood mee in all things, and that I likewise vnderstood them, I thought good to cry by some way or other to make a good entrance to find some good issue to obtaine my desire: And I caused certaine crosses to be made of certaine small sticks and paper, and among others when I gaue any thing I gaue them these as things of most price and killed them, making signes vnto them that they should honour them and make great account of them, and that they should weare them at their necks: giuing them to vnderstand that this signe was from heauen, and they tooke them and kissed them, and lifted them by aloft, and seemed greatly to reioyce thereat when they did so, and sometime I tooke them into my boate, shewing them great good will, and sometime I gaue them of those trifles which I caried with me. And at length the matter grew to such issue, that I had not paper and stickes ynough to make crosses. In this maner that day I was very well accompanied, vntill that when night approached I sought to lanch out into the river, and went to ride in the middlest of the streame, and they came to aske leaue of me to depart, saying that they would returne the next day with victuals to visite me, and so by little and little they departed, so that there stayed not aboue fiftie which made fires ouer against vs, and stayed there al night calling vs, and before the day was perfectly broken, they leapt into the water and swamme vnto vs asking for the rope, and we gaue it them with a good will, thanking God for the good prouision which hee gaue vs to go by the river: for the Indians were so many, that if they had gone about to let our passage, although we had bene many more then wee were, they might haue done it.

Chap. 3.

One of the Indians vnderstanding the language of the interpreter, asketh many questions of the originall of the Spaniards, he telleth him that their Capraine is the child of the Sunne, and that he was sent of the Sunne vnto them, and they would haue receiued him for their king. They take this Indian into their boat, and of him they haue many informations of that countrey.

In this maner we sailed vntill Tuesday at night, going as we were wont, causing mine interpreter to speak vnto the people to see if peradventure any of them could vnderstand him, I perceived that

that one answered him, whereupon I caused the boates to be stayed, and called him, which hee understood, charging mine interpreter that hee should not speake nor answer him any thing else, but onely that which I said vnto him: and I saw as I stood still that that Indian began to speake to the people with great furie: whereupon all of them beganne to drawe together, and mine interpreter understood, that he which came to the boate sayd vnto them, that he desired to knowe what nation we were, and whence wee came, and whither we came out of the water, or out of the earth, or from heauen: And at this speech an infinite number of people came together, which maruailed to see mee speake: and this Indian turned on this side and on that side to speake vnto them in another language which mine interpreter understood not. Whereas he asked me what we were, I answered that we were Christians, and that we came from farre to see them: and answering to the question, who had sent me, I said, I was sent by the Sunne, pointing vnto him by signes as at the first, because they should not take mee in a lye. He beganne againe to aske mee, how the Sunne had sent me, seeing hee went aloft in the skie and neuer stood still, and seeing these many peeres neither he nor their olde men had euer seene such as we were, of whome they euer had any kind of knowledge, and that the Sunne till that houre had neuer sent any other. I answered him that it was true that the Sunne made his course aloft in the skie, and did neuer stand still, yet neuertheless that they might well perceiue that at his going downe and rising in the morning hee came neere vnto the earth, where his dwelling was, and that they euer sawe him come out of one place, and that hee had made mee in that land and countrey from whence hee came, like as hee had made many others which hee sent into other partes, and that now hee had sent me to visite and view the same riuer, and the people that dwelt neere the same, that I should speake vnto them, and shoulde ioyne with them in friendship, and shoulde giue them things which they had not, and that I should charge them that they should not make warre one against another. Whereunto he answered, that I should tell him the cause why the Sunne had not sent mee no sooner to pacifie the warres which had continued a long time among them, wherein many had bene slaine. I tolde him the cause hereof was, because at that time I was but a child. Then he asked the interpreter whether wee tooke him with vs perforce hauing taken him in the war, or whether he came with vs of his own accord. He answered him that he was with vs of his owne accord, and was very wel appaid of our company. He returned to enquire, why we brought none saue him onely that understood vs, and wherefore wee understood not all other men, seeing we were the children of the Sunne: he answered, that the Sunne also had begotten him, and giuen him a language to understand him, and me, and others: that the Sunne knew well that they dwelt there, but that because he had many other busineses, and because I was but yong hee sent me no sooner. And he turning vnto me sayd suddenly: Comest thou therefore hither to see our Lord, and that wee should serue thee? I supposing that I should not please him if I should haue said yea, answered him, not to be their Lord, but rather to be their brother, and to giue them such things as I had. He asked me, whether the Sunne had begotten me as he had begotten others, and whether I was his kinsman or his sonne: I answered him that I was his sonne. He proceeded to aske me whether the rest that were with me were also the children of the Sunne, I answered him no, but that they were borne all with me in one countrey, where I was brought vp. Then he cryed out with a loud voyce and sayd, seeing thou doest vs so much good, and wilt not haue vs to make warre, and art the child of the Sunne, wee will all receiue thee for our Lord, and alwayes serue thee, therefore wee pray thee that thou wilt not depart hence nor leaue vs: and suddenly hee turned to the people, and beganne to tell them, that I was the child of the Sunne, and that therefore they should all chuse me for their Lord. Those Indians hearing this, were astonished beyond measure, and came neerer still more and more to behold me. That Indian also asked mee other questions, which to auoyd tediousnesse I doe not recite: and in this wise we passed the day, and seeing the night appoach, I began by all meanes I could deuise to get this fellow into our boat with vs: and he refusing to goe with vs, the interpreter told him that wee would put him on the other side of the riuer, and vpon this condition hee entred into our boate, and there I made very much of him, and gaue him the best entertainment I could, putting him alwayes in securitie, and when I iudged him to be out of all suspicion, I thought it good to aske him somewhat of that countrey. And among the first things that I asked him this was one, whether hee had euer seene any men like vs, or had heard any report of them. Hee answered mee no, saying that hee had sometime hearde of olde men, that very farre from that Countrey there were other white men, and with bearded like vs, and that hee knewe nothing else. I asked him also whether hee knewe a place called Ceuola, and a Riuer called Tocon-teac, and hee answered mee no. Whereupon perceiuing that hee coulde not giue mee any

Actes of

white men.

The Sunne
worshipped as
God.

knowledge of Francis Vazquez noz of his company, I determined to aske him other things of that countrey, and of their maner of life: and beganne to enquire of him, whether they helpe that there was one God, creator of heauen and earth, or that they worshipped any other Idol. And hee answered mee no: but that they esteemed and reuerenced the Sunne aboue all other things, because it warmed them and made their croppes to growe: and that of all things which they did eate, they cast a litle vp into the ayre vnto him. I asked him next whether they had any Lorde, and hee sayde no: but that they knewe well that there was a great Lorde, but they knewe not well which way hee dwelt. And I tolde him that hee was in heauen, and that hee was called Iesus Christ, and I went no farther in diuinitie with him. I asked him whether they had any warre, and for what occasion. Hee answered that they had warre, and that very great, and vpon exceeding small occasions: for when they had no cause to make warre, they assembled together, and some of them sayd, let vs goe to make warre in such a place, and then all of them set forward with their weapons. I asked them who commanded the armie: he answered the eldest and most valiant, and that when they sayd they should proceede no farther, that suddenly they retired from the warre. I prayed him to tell me what they did with those men which they killed in battell: he answered me that they tooke out the hearts of some of them, and eat them, and others they burned; and he added, that if it had not bene for my comming, they should haue bin now at warre: and because I commanded them that they should not war, and that they should cease from armes, therefore as long as I should not command them to take armes, they would not begin to wage warre against others, & they said among themselves, that seeing I was come vnto them, they had giuen ouer their intention of making warre, & that they had a good mind to liue in peace. We complained of certaine people which dwelt behind in a mountaine which made great war vpon them, and slew many of them: I answered him, that from henceforward they should not need to feare any more, because I had commanded them to be quiet, & if they would not obey my commandement, I would chasten them and kill them. He enquired of me how I could kill them seeing we were so few, and they so many in number. And because it was now late, and that I saw that by this time he was weary to stay any longer with me, I let him goe out of my boat, and therewith I dismissed him very well content.

Chap. 4.

Of *Naguachato* and other chiefe men of those Indians they receiue great store of victuals, they cause them to set vp a crosse in their countreys, and hee teacheth them to worship it. They haue newes of many people, of their diuers languages, and customes in matrimony, how they punish adultery, of their opinions concerning the dead, and of the sicknesses which they are subiect vnto.

The next day betimes in the morning came the chiefe man among them called *Naguachato*, and wished me to come on land because he had great store of victuals to giue me. And because I saw my selfe in securitie I did so without doubting; and incontinently an olde man came with rols of that *Maiz*, and certaine litle gourds, and calling me with a loud voyce and vying many gestures with his body and armes, came neere vnto me, and causing me to turne me vnto that people, and hee himselfe also turning vnto them sayd vnto them, *Sagueyca*, and all the people answered with a great voyce, *Hu*, and hee offred to the Sunne a litle of euery thing that he had there, and like wise a litle more vnto me (although afterward he gaue me all the rest) and did the like to all that were with me: & calling out mine interpreter, by meanes of him I gaue them thanks, telling them that because my boats were litle I had not brought many things to giue them in exchange, but that I would come againe another time and bring them, and that if they would go with me in my boates vnto my ships which I had beneath at the riuers mouth, I would giue them many things. They answered that they would do so, being very glad in countenance. Here by the helpe of mine interpreter I sought to instruct them what the signe of the crosse meant, and willed them to bring me a peice of timber, wherof I caused a great crosse to be made, and commanded al those that were with mee that when it was made they should worship it, and beseech the Lord to grante his grace that that so great a people might come to the knowledge of his holy Catholike faith: and this done I tolde them by mine interpreter that I left them that signe, in token that I tooke them for my brethren, and that they should keepe it for me carefully vntill I returned, and that euery morning at the Sunne rising they should kneele before it. And they tooke it incontinently, & without suffering it to touch the ground they carried it to set it vp in the middle of their houses, where all of them might beholde it; and I willed them alwayes to worshippinge it because it would preserve them from euill. They asked me how deep they should set it in the ground, & I shewed them.

Great

Great store of people followed the same, and they that stayed behinde inquired of mee, how they should ioyne their hands, and how they should kneele to worship the same; and they seemed to haue great desire to learne it. This done, I tooke that chiefe man of the Countrey, and going to our boates with him, I followed my iourney by the Riuer, and all the company on both sides of the shoare accompanied me with great good will, and serued me in drawing of our boates, and in hal-ling vs off the sands, whereupon we often fel: for in many places we found the riuer so shoald, that we had no water for our boates. As wee thus went on our way, some of the Indians which I had left behinde me, came after vs to pray mee that I would thoroughly instruct them, how they should ioyne their hands in the worshipping of the crosse: others shewed me whether they were well set in such & such sort, so that they would not let me be quiet. Neere vnto the other side of the riuer was greater store of people, which called vnto me very often, that I would receiue the victuals which they had brought me. And because I perceiued that one enuied the other, because I would not leaue them discontented, I did so. And here came before me another old man like vnto the former with the like ceremonies & offerings: and I sought to learne something of him as I had done of the other. This man said likewise to the rest of the people, This is our lord. Now you see how long ago our ancestors told vs, that there were bearded & white people in the world, and we laugh- ed them to scorn. I which am old and the rest which are here, haue neuer seene any such people as these. And if you wil not beleue me, behold these people which be in this riuer: let vs giue them therefore meate, seeing they giue vs of their victuals: let vs willingly serue this lord, which with- eth vs so well, and forbiddeth vs to make warre, and imbrace all of vs: and they haue mouth, handes and eyes as we haue, and speake as we doe. I gaue these likewise another crosse as I had done to the others beneath, and said vnto them the selfe same words; which they listened vnto with a better will, & vsed greater diligence to learne that which I said. Afterward as I passed farther by the riuer, I found another people, whom mine interpreter vnderstood not a whit: wherefore I shewed them by signes the selfesame ceremonies of worshipping the crosse, which I had taught the rest. And that principal old man which I tooke with me, told me that farther by the riuer I should find people which would vnderstand mine interpreter: and being now late, some of those men cal- led me to giue me victuals, and did in all poynts as the others had done, dauncing and playing to shew me pleasure. I desired to know what people liued on the banks of this riuer: and I vnder- stood by this man that it was inhabited by 23 languages, and these were bordering vpon the riuer, besides others not farre off, and that there were besides these 23 languages, other people also which hee knewe not, about the riuer. I asked him whether euery people were liuing in one towne together: and he answered me, No: but that they had many houses standing scattered in the fieldes, and that euery people had their Countrey seuerall and distinguished, and that in euery habitation there were great store of people. He shewed me a towne which was in a mountaine, and told me that there was there great store of people of bad conditions, which made continual warre vpon them: which being without a gouernour, and dwelling in that desert place, where small store of Haiz groweth, came downe into the playne to buy it in trucke of Deeres skinnes, wherewith they were appareled with long garments, which they did cutte with razors, and sewed with nee- dles made of Deeres bones: and that they had great houses of stone. I asked them whether there were any there of that Countrey; and I found one woman which wore a garment like a lit- tle Mantle, which clad her from the waste downe to the ground, of a Deeres skin well dyed. Then I asked him whether the people which dwelt on the riuers side, dwelt alwayes there, or els sometime went to dwell in some other place: he answered mee, that in the summer season they a- boade there, and sowed there; and after they had gathered in their croppe they went their way, and dwelt in other houses which they had at the foote of the mountaine farre from the riuer. And hee shewed me by signes that the houses were of wood compassed with earth without, and I vnder- stood that they made a round house, wherein the men and women liued all together. I asked him whether their women were common or no: he tolde me no, and that hee which was married, was to haue but one wife only. I desired to know what order they kept in marrying: and he tolde me, that if any man had a daughter to marry, he went where the people kept, and said, I haue a daughter to marry: is there any man here that wil haue her? And if there were any that would haue her, he an- swered that he would haue her: and so the marriage was made. And that the father of him which would haue her, brought some thing to giue the yong woman; and from that houre forward the marriage was taken to be finished, and that they sang & danced: and that when night came, the pa- rents tooke them, and left them together in a place where no body might see them. And I learned that brethren, and sisters, and kindfolks married not together: and that maybes before they were married conuersed not with men, nor talked not with them, but kept at home at their houses and

in their possessions, and wrought: and that if by chance any one had company with men before she were married, her husband forsooke her, and went away into other Countreyes: and that those women which fell into this fault, were accounted naughty packs. And that if after they were married, any man were taken in adultery with another woman, they put him to death: and that no man might have more then one wife, but very secretly. They tolde mee that they burned those which dyed; and such as remayned widowes, stayed halfe a yeere, or a whole yeere before they married. I desired to know what they thought of such as were dead. Wee tolde me that they went to another world, but that they had neither punishment nor glory. The greatest sicknesse that this people dye of, is vomiting of blood by the mouth: and they haue Physicians which cure them with charmes and blowing which they make. The apparell of these people were like the former: they carried their pipes with them to perfume themselves, like as the people of New Spaine vse Tabacco. I inquired whether they had any gouernour, and found that they had none, but that euery family had their seuerall gouernour. These people haue besides their Spitz certaine gourds, and another cozne like unto Hill: they haue grindestones & earthen pots, wherein they boyle those gourds, and fish of the river, which are very good. My interpreter could goe no farther then this place: for he said that those which we should find farther on our way, were their enemies, and therefore I sent him backe very well contented. Not long after I espied many Indians to come crying with a loude voice, and running after me. I stayed to know what they would haue; and they told me that they had set vp the crosse which I had giuen them, in the midst of their dwellings as I had appointed, but that I was to wite, that when the river did ouerflow, it was wont to reach to that place, therefore they prayed mee to giue them leaue to remoue it, and to set it in another place where the river could not come at it, nor carry it away: which I granted them.

Chap. 5.

Of an Indian of that countrey they haue relation of the state of *Cenola*, and of the conditions and customes of these people, and of their gouernour: and likewise of the countreys not farre distant from thence, whereof one was called *Quicoma*, and the other *Coama*: of the people of *Quicoma*, and of the other Indians not farre distant they receiue courtesie.

Thus sayling, I came where were many Indians, and another interpreter, which I caused to come with me in my boat. And because it was cold, & my people were wet, I leapt on shore, and commanded a fire to be made, and as we stood thus warming our selues, an Indian came and brooke me on the arme, pointing with his finger to a wood, out of which I saw two companies of men come wth their weapons, & he told me that they came to set vpon vs: & because I meant not to fall out with any of them, I retired my company into our boats, & the Indians which were with me swam into the water, and saued themselves on the other side of the river. In the meane season I inquired of that Indian which I had with me, what people they were that came out of y^e wood: and he told me that they were their enemies, and therefore these others at their approach without saying any word leapt into the water: and did so, because they meant to turne backe againe, being without weapons, because they brought none with them, because they vnderstood my wil & pleasure, that they should cary none. I inquired the same things of this interpreter which I had done of the other of the things of that countrey, because I vnderstood that among some people one man vsed to haue many wiues, and among others but one. Now I vnderstood by him, that he had bin at *Cenola*, and that it was a moneths journey from his country, and that from that place by a path that went along that river a man might easily trauel thither in xl. daies, and that the occasion that moued him to goe thither, was only to see *Cenola*, because it was a great thing, & had very hie houses of stone of 3. or 4. lofts, and windowes on ech side: that the houses were compassed about with a wall containing the height of a man & an halfe, and that aloft & beneath they were inhabited with people, and that they vsed the same weapons, that others vsed, which we had seene, that is to say, bowes & arrowes, maces, stauies & bucklers: and that they had one gouernor, & that they were apparellled with mantles, and with ox-hides, & that their mantles had a painting about them, and that their gouernour ware a long shirt very fine girded vnto him, and ouer the same diuers mantles: and that the women were very long garments, and that they were white, and went all couered: and that euery day many Indians wayted at the gate of their gouernor to serue him, & that they did weare many Azure or blew stones, which were digged out of a rocke of stone, and that they had but one wife, with whom they were married, and that when their gouernors died, all the goods that they had were buried with them. And likewise all the while they eate, many of their men waite at their table to court them, and see them eate, and that they eate with napkins, and that they haue bathes. On thursday mo-
ning

ning at break of day the Indians came with the like cry to the banke of the riuer, and with greater desire to serue vs, bringing me meat to eat, and making me the like good cheere, which the others had done vnto me, hauing vnderstood what I was: & I gaue them crosses, with the self same order which I did vnto the former. And going farther by the riuer, I came to a country where I found better gouernment: for the inhabitants are wholly obedient vnto one only. But returning againe to conferre with mine interpreter touching the dwellings of those of Ceuola, he tolde me, that the lord of that country had a dog like that which I caried with me. Afterward when I called for dinner, this interpreter saw certaine dishes caried in the first and later seruice, whereupon he tolde me that the lord of Ceuola had also such as those were, but that they were greene, and that none other had of them sauing their gouernour, and that they were 4. which he had gotten together with that dogge, and other things, of a blacke man which had a beard, but that he knew not from what quarter he came thither, and that the king caused him afterward to be killed, as he heard say. I asked him whether he knew of any towne that was neere vnto that place: he tolde me that aboute the riuer he knew some, & that among the rest there was a lord of a towne called Quicoma, and another of a towne called Coama: and that they had great store of people vnder them. And after he had giuen me this information, he craued leaue of me to returne vnto his companions. From hence I began againe to set saile, and within a dayes sapling I found a towne dispeopled: where as soone as I was entred, by chance there arriued there 500. Indians with their bowes & arrowes, and with them was that principall Indian called Naguachato, which I had left behind, and brought with them certaine conies & yucas: and after I had friendly interteined them all, departing from them, I gaue them license to returne to their houses. As I passed further by the desert, I came to certain corages, out of which much people came toward me with an old man before them, crying in a language which mine interpreter wel vnderstood, and he said vnto those men: Brethren, you see here that lord; let vs giue him such as we haue, seeing he dooth vs pleasure, and hath passed through so many discourteous people, to come to visit vs. And hauing thus said, he offered to the Sunne, and then to me in like sort as the rest had done. These had certaine great bags & well made of the skins of fishes called Sea-bremies. And I vnderstood that this was a towne belonging vnto the lord of Quicoma, which people came thither onely to gather the fruit of their haruest in summer, and among them I found one which vnderstood mine interpreter very well: whereupon very easily I gaue them the like instruction of the crosse which I had giuen to others behind. These people had cotton, but they were not very carefull to vse the same: because there was none among them that knew the arte of weauing, & to make apparel thereof. They asked me how they should set by their crosse when they were come to their dwelling which was in the mountaine, and whether it were best to make an house about it, that it might not be wet, & whether they should hang any thing vpon the armes therof. I said no; & that it sufficed to set it in a place where it might be seene of all men, vntill I returned: and lest peraduenture any men of warre should come that way, they offered mee more men to goe with me, saying that they were naughtey men which I should finde aboute; but I would haue none: neuerthelesse 20. of them went with me, which when I drew neere vnto those which were their enemies, they warned mee thereof: and I found their centinels set vpon their garde on their borders. On Saturday morning I found a great squadron of people sitting vnder an exceeding great arbour, & another part of them without: and when I saw that they rose not vp, I passed along on my voyage: when they beheld this, an old man rose vp which said vnto me, Sir, why doe you not receiue victuals to eate of vs, seeing you haue taken food of others? I answered, that I tooke nothing but that which was giuen me, & that I went to none but to such as requested me. Here without any stay they brought me victuals, saying vnto me, that because I entred not into their houses, and stayed all day and all night in the riuer, and because I was the sonne of the Sunne, all men were to receiue me for their lord. I made them signes to sit down, and called that old man which mine interpreter vnderstood, and asked him whose that countrey was, and whether the lord thereof were there, he said, yea: and I called him to me; and when he was come, I embraced him, shewing him great loue: & when I saw that all of them tooke great pleasure at the friendly interteinement which I gaue him, I put a shire vpon him, and gaue him other trifles, and willed mine interpreter to vse the like speeches to that lord which he had done to the rest; and that done, I gaue him a crosse, which he receiued with a very good wil, as the others did: and this lord went a great way with me, vntill I was called vnto from the other side of the riuer, where the former old man stood with much people: to whom I gaue another crosse, vsing the like speech to them which I had vnto the rest, to wit, how they should vse it. Then following my way, I mette with another great company of people, with whom came that very same olde man whom mine interpreter vnderstood; and when I saw their lord which he shewed vnto me, I prayed him to come with me into my

my boat, which he did very willingly, and so I went still by the river, and the olde man came and shewed me who were the chiefe lords: and I spake vnto them alwayes with great courtesie, & all of them shewed that they reioiced much thereat, & spake very wel of my coming thither. At night I withdrew my selfe into the midst of the river, & asked him many things concerning that country: and I found him as willing & wel disposed to shew them me, as I was desirous to know them. I asked him of Ceuola: and he told me he had bin there, and that it was a goodly thing, & that the lord thereof was very wel obeyed: and that there were other lords thereabout, with whom he was at continual warre. I asked him whether they had silver & gold, and he beholding certain bells, said they had metal of their colour. I inquired whether they made it there, and he answered me no, but that they brought it from a certain mountaine, where an old woman dwelt. I demanded whether he had any knowledge of a river called Torontecac, he answered me no, but of another exceeding mighty river, wherein there were such huge Crocodiles, that of their hides they made bucklers, and that they worshipped the Sunne neither more nor lesse then those which I had passed: and when they offer vnto him the fruits of the earth, they say: Receive hereof, for thou hast created them, and that they loued him much, because he warmed them; and that when he brake not forth, they were acolde. Wherein reasoning with him, he began somewhat to complaine, saying vnto me, I know not wherefore the Sunne bleth these termes with vs, because he giueth vs not clothes, nor people to spin nor to weaue them, nor other things which he giueth to many other, and he complained that those of that country would not suffer them to come there, and would not giue them of their cozne. I told him that I would remedie this, whereat he remayned very well satisfied.

Chap. 6.

They are aduertised by the Indians, wherefore the lorde of Ceuola killed the Negro, which went with Frier Marco, and of many other things: And of an old woman called *Ghatzaca*, which liueth in a lake and eateth no food. The description of a beast, of the skinn whereof they make targets. The suspicion that they conceiue of them, that they are of those Christians which were scene at Ceuola, and how they cunningly saue themselves.

The next day which was Sunday before breake of day, began their cry as they were wont: and this was the cry of 2. or 3. sorts of people, which had lye all night neere the riuers side, waiting for me: and they tooke Maiz & other cozne in their mouth, and sprinkled me therewith, saying that that was the fashion which they vsed when they sacrificed vnto the Sunne: afterward they gaue me of their victuals to eat, and among other things, they gaue me many white peason. I gaue them a crosse as I had done to the rest: and in the meane season that old man tolde them great matters of my doing, and poynted me out with his finger, saying, this is the lord, the sonne of the Sunne: and they made me to combe my beard, & to set mine apparell handsomely which I ware vpon my backe. And so great was the confidence that they had in me, that all of them tolde me what things had passed, & did passe among them, & what good or bad mind they bare one toward another. I asked them wherefore they imparted vnto me all their secrets, and that old man answered mee: Thou art our lord, & we ought to hide nothing from our lord. After these things, following on our way, I began againe to inquire of him the state of Ceuola, & whether he knewe that those of this country had ever scene people like vnto vs: he answered me no, sauing one Negro which ware about his legs & armes certain things which do ring. Your lordship is to cal to mind how this Negro which went with frier Marco was wont to weare bells, & feathers on his armes & legs, & that he caried plates of diuers colours, and that it was not much aboute a yeere agoe since he came into those parts. I demanded vpon what occasion he was killed; and he answered me, That the lord of Ceuola inquired of him whether he had other brethren: he answered that he had an infinite number, and that they had great store of weapons with them, and that they were not very farre from thence. Which when he had heard, many of the chiefe men consulted together, and resolved to kill him, that he might not giue newes vnto these his brethren, where they dwelt, & that for this cause they slew him, and cut him into many pieces, which were diuided among all those chiefe lords, that they might know assuredly that he was dead; and also that he had a dogge like mine, which he like wife killed a great while after. I asked him whether they of Ceuola had any enemies, and he said they had. And he reckoned vnto me 14. or 15. lords which had warre with them: and that they had mantles, and bowes like those aboute mentioned: howbeit he told me that I should find going by the river a people that had no warre neither with their neighbors, nor with any other. He told me that they had 3. or 4. sorts of trees bearing most excellent fruite to eat: and that in a certaine lake dwelt an olde woman, which was much honoured and worshipped of them: and that shee re-

mayned

mayned in a litle house which was there, and that she neuer did eate any thing: and that there they made things which did sound, and that many mantles, feathers and Haiz were giuen vnto her. I asked what her name was, and he tolde me that she was called Guatuzaca, and that thereabout were many lordes which in their life & death, vled the like orders which they of Ceuola did, which had their dwelling in the summer with painted mantles, and in the winter dwelt in houses of wood of 2. or 3. lofts hie: and that he had seene all these things, sauing the old woman. And when againe I began to aske him moze questions, he would not answere me, saying that he was wearie of me: and many of those Indians comming about me, they said among themselues: Let vs marke him well, that we may knowe him when he commeth backe againe. The Monday following, the riuer was beset with people like to them, and I began to request the old man to tell me what people were in that countrey, which tolde me he thought I would soone forget them: and here he reckoned vnto me a great number of lordes, and people at the least 200. And discoursing with him of their armour, he said that some of them had certaine very large targets of lether, aboue two fingers thicke. I asked him of what beasts skinne they made them: and he described vnto me a very great beast, like vnto an Ore, but longer by a great handfull, with broad feete, the legs as bigge as the thigh of a man, and the head seuen handfuls long, the forehead of thre spannes, and the eyes bigger then ones fist, and the hornes of the length of a mans leg, out of which grew sharpe popnts, an handfull long, the forefeete and hinderfeete aboue seuen handfuls bigge, with a wretched tayle, but very great: and holding vnto his armes aboue his head, he said the beast was higher then that. After this hee gaue mee information of another olde woman which dwelt toward the sea side. I spent this day in giuing crosses to those people as I had done vnto the former. This old man that was with me leapt on those, & fell in conference with another which that day had often called him; and here both of them vled many gestures in their speech, mouing their armes, and poynting at me. Therefore I sent mine interpreter out, willing him to drawe neere vnto them, and listen what they said; and within a while I called him, and asked him whereof they talked, and he said, that he which made those gestures said vnto the other, that in Ceuola there were others like vnto vs with beards, and that they said they were Christians, and that both of them said that we were all of one company, and that it were a good beede to kill vs, that those others might haue no knowledge of vs, lest they might come to doe them harme: and that the old man had answered him, this is the sonne of the Sunne, & our lord, he doth vs good, and wil not enter into our houses, although we request him thereunto: he wil take away nothing of ours, he wil meddle with none of our women, and that to be short, he had spoken many other things in my commendation and fauour: and for all this the other stedfastly affirmed that we were all one, and that the old man said, Let vs goe vnto him, and aske him whether he be a Christian as the other be, or els the sonne of the Sunne: and the old man came vnto me, and said: In the countrey of Ceuola whereof you spake vnto me doe other men like vnto you d well. Then I began to make as though I wondered, and answered him, that it was impossible; and they assured me that it was true, and that two men had seene them which came from thence, which reported that they had things which did shoote fire, and swords as we had. I asked them whether they had seene them with their owne eyes: and they answered no; but that certaine of their companions had seene them. Then he asked mee whether I were the sonne of the Sunne, I answered him yea. They said that those Christians of Ceuola said so likewise. And I answered them that it might well be. Then they asked mee if those Christians of Ceuola came to ioyne themselues with me, whether I would ioyne with them: and I answered them, that they needed not to feare any whit at all, for if they were the sonnes of the Sunne as they said, they must needs be my brethren, and would ble towards all men the like loue and courtesie which I vled: whereupon hereat they seemed to be somewhat satisfied.

Chap. 7.

It is tolde him that they are ten dayes iourney distant from Ceuola, and that there be Christians there, which make warre against the lords of that countrey. Of the Sodomie which those Indians vse with foure yong men, appoynted for that seruice, which weare womens apparel. Seeing they could not send newes of their being there to them of Ceuola, they went backe againe downe the riuer to their ships.

Then I prayed them to tel me how many dayes that kingdom of Ceuola, which they spake of, was distant from that riuer: and that man answered, that there was the space of tenne dayes iourney without habitation, and that he made none accompt of the rest of the way, because there were people to be found. Upon this aduertisement I was desirous to certifie Captaine Francis Vazquez of my being there, and imparted my mind with my souldiers, among whom I found

none

none that was willing to goe thither, although I offered them many rewards in your lordships name, onely one Negro slaue though with an euil wil offered himselfe vnto me to go thither: but I looked for the comming of those two Indians which they told me of, and herewithall we went on our way vpon the riuer against the streame in such sort as we had done before. Here that olde man shewed me as a strange thing a sonne of his clad in womans apparel, exercising their office: I asked him how many there were of these among them, and he told me there were foure; & that when any of them died, there was a search made of all the women with child which were in the country, and that the first sonne which was borne of them, was appoynted to doe that duetie belonging vnto women, and that the women clad him in their apparell, saying, that seeing he was to doe that which belonged to them, he should weare their apparel: these yong men may not haue carnall copulation with any woman: but all the yong men of the countrey which are to marrie, may company with them. These men receiue no kind of reward for this incestuous act of the people of that countrey, because they haue libertie to take whatsoeuer they find in any house for their food. I saw likewise certaine women which liued dishonestly among men: and I asked the old man whether they were married, who answered me noe, but they were common women, which liued apart from the married women. I came at length after these discourses to pray them to send for those Indians, which they said had bin at Ceuola, & they told me that they were eight dayes iourney distant from that place, but that notwithstanding there was one among them which was their companion and which had spoken with them, as he met them on the way, when they went to see the kingdomes of Ceuola, and that they told him that he were not best to goe any farther, for he should find there a fierce nation like vs, and of the same qualities and making, which had fought much with the people of Ceuola, because they had killed a Negro of their company, saying, *Wherefore haue yee killed him: what did he to you: did he take any bread from you, or do you any other wrong: and such like speech.* And they said moreouer, that these people were called Christians, which dwelt in a great house, & that many of them had oxen like those of Ceuola, and other litle blacke beasts with wooll and hornes, & that some of them had beasts which they rode vpon, which ran very swiftly; & that one day before their departure, from sunne rising vntill sunne setting these Christians were all day in comming thither, & all of them lodged in that place where others had lodged, & that these two met with two Christians, which asked them whence they were, & whether they had fields sown with corne; and they told them that they dwelt in a farre country, and that they had corne, and that then they gaue each of them a litle cap, and they gaue them another to cary to their other companions, which they promised to do, & departed quickly. When I vnderstood this, I spoke againe with my company, to see if any one of them would go thither, but I found them vnwilling as at the first, and they said against me greater inconueniences. Then I called the old man to see if he would giue me any people to goe with me, & victuals to trauele through that wilderness, but he said before me many inconueniences & dangers, which I might incur in that voyage, shewing me the danger that there was in passing by a lord of Cumana, which threatened to make warre vpon them, because his people had entred into the others countrey to take a stagge, and that I should not therefore depart thence without seeing him punished. And when I replied that in any wise I must needs goe to Ceuola, he willed me to surcease from that purpose, for they looked that that lord without al doubt would come to annoy them, & that therefore they could not leaue their countrey naked to goe with me, and that it would be better, that I would make an end of that warre betwene them, and that then I might haue their company to Ceuola. And vpon this point we grew to such variance, that we began to grow into choler, and in a rage he would haue gone out of the boat, but I stayed him, and with gentle speeches began to pacifie him, seeing that it imported mee much to haue him my friend: but for all my courtesies which I shewed him, I could not alter him from his mind, wherein he stil remained obstinate. In this meane while I sent a man away vnto my ships to giue them knowledge of the iourney that I had determined to make. After this I prayed the old man that he would fetch him backe againe, because I had determined, that seeing I saw no meanes to be able to go to Ceuola, & because I would stay no longer among those people, because they should not discouer me, and likewise because I meant in person to visit my ships, with determination to returne againe by the riuer, carying with me other companions, & leaue there some which I had sicke, and telling the olde man and the rest that I would returne, and leauing them satisfied the best I could (although they alwayes said that I went away for feare) I returned downe the riuer: and that way which I had gone against the streame vpon the riuer in 15. dayes and an halfe, I made in my returne in 2. dayes and an halfe, because the streame was great and very swift. In this wise going downe the riuer, much people came to the banks, saying, Sir, wherefore doe you leaue vs: what discourtesie hath bin done vnto you: did you not say that you would remaine continually with vs.

and

and be out Lord: And turne backe againe: if any man aboue the riuer hath done you any wrong we will goe with our weapons with you and kill him; and such like words ful of loue and kindnes.

Chap. 8.

When they came to their shippes the Captaine named that coast *La Campaña de la Cruz*, and builded a Chapel vnto our Lady, and called the riuer *El Rio de Buena Guia*, and returned vp the same againe: when he came to *Quicon* and *Coama* the Lords of those places vsed him very courteously.

Vpon mine arriual at my ships I found all my people in health, although very beaue for my long stay, and because the current had fretted sower of their cables, and that they had lost two ankers which were recovered. After we had brought our ships together, I caused them to bring the into a good harbour, & to giue the carena to the shippe called Sanct Peter, & to mend all things that were needfull. And here assembling all my company together, I opened vnto them what knowledge I had receiued of Francis Vasquez; and how it might be that in those sixteene dayes space which I was in sayling vp the riuer he might peraduenture haue some knowledge of me, and that I was minded to returne by the riuer once againe to try if I could finde any meanes to ioyne my selfe with him: and although some spake against my determination, I caused al my boates to bee made ready, because the ships had no need of them. I caused one of them to be filled with wares of exchange, with corne and other seedes, with hennies & cockes of Castile, and departed by the riuer, leauing order that in that prouince called *Campaña de la Cruz* they should build an Oratorie or Chapell, and called it the Chappell of our Lady de la Buena Guia, and that they should call this riuer *Rio de Buena Guia* because that is your Lordships Deuise: I carried with me Nicolas Zamorano Pilote mayor, to take the height of the pole. And I departed on tuesday the fourteenth of September, & on wednesday I came vnto the first dwellings of the first Indians, which came running to hinder my passage, supposing that we had bene other people, for we caried with vs a fife, & a drummer, and I was clad in other apparell then I went in before, when they saw me first of all: and when they knew me they stayed, though I could not grow vnto perfect friendship with them, whereupon I gaue them some of those seedes which I brought with mee; teaching them how they should sow them: and after I had sayled 3 leagues, my first interpretour came euē to my boat to seeke me with great ioy, of whom I demanded wherefore he had left me, he tolde me that certaine companions of his had led him away. I made him good countenance and better intertainment, because he should beare me companie againe, considering howe much it did importe me to haue him with me. He excused himselfe because he stayed there to bring mee certaine feathers of Parrats, which he gaue me. I asked him what people these were, and whether they had any Lord: he answered me, yea; and named thre or foure vnto me, of foure or 25 names of people which he knew and that they had houses painted within, and that they had trafficke with those of Ceuola, and that in two moones hee came into the countrey. He told me mozeouer many other names of Lords, and other people, which I haue written downe in a booke of mine, which I will bring my selfe vnto your Lordship. But I thought good to deliuer this brieue relation to Augustine Guerriero in this haue of Colima, that he might send it ouerland to your Lordshippe, to whom I haue many other things to imparte.

But to returne to my iourney, I arriued at Quicama, where the Indians came forth with great ioy and gladnes to receiue me, aduertizing me that their Lord waited for my comming; to whom when I was come I found that he had with him five or sixe thousand men without weapons, from whom he went aparte with some two hundred onely, all which brought victuals with them, and so he came towards me, going before the rest with great authoritie, and before him and on each side of him were certaine which made the people stande aside, making him way to passe. Hee ware a garment close before and behind and open on both sides, fastened with buttous, brought with white and blacke checker worke, it was very soft and well made, being of the skimes of certaine delicate fishes called Sea breams. Asdoone as he was come to the waters side his seruants tooke him up in their arnes, and brought him into my boate, where I embraced him and receiued him with great ioy, shewing vnto him much kindnesse: vpon which intertainment his people standing by and beholding the same seemed not a litle to reioyce. This Lord turning himselfe to his people willed them to consider my courtesie, and that he being of his owne accord come vnto me with a strange people, they might see how good a man I was, and with how great loue I had entertained him, and that therefore they should take me for their Lord, and that all of them should become

my seruants, and doe whatsoeuer I would command them. There I caused him to sit downe, and to eat certaine conserues of sugar which I had brought with mee, and willed the interpreter to thanke him in my name for the fauour which he had done me in vouchsafing to come to see mee, recommending vnto him the worshipping of the crosse, and all such other things as I had recommended to the rest of the Indians; namely that they should liue in peace, and should leaue off warres, and should continue alwayes good friendes together: he answered, that of long time they had continued in warres with their neighbours, but that from thence forthward he would command his people that they should giue food to all strangers that passed through his kingdome, and that they should doe them no kinde of wrong, and that if any nation should come to invade him, he said he would tell them howe I had commanded that they should liue in peace, and if they refused the same, he would defend himselfe, and promised me, that he would neuer goe to seeke warre, if others came not to invade him. Then I gaue him certaine trifles, as well of the seedes which I brought, as of the hens of Castile, wherewith he was not a litle pleased. And at my departure I carped certaine of his people with me, to make friendship betweene them and those other people which dwelt aboute the Riuer: and here the interpreter came vnto me, to craue leaue to returne home; and I gaue him certaine gifts wherewith he departed greatly satisfied.

Coama.

The next day I came to Coama, and many of them knew me not, seeing me clad in other apparel, but the old man which was there as soone as he knew me leapt into the water, saying vnto me; Sir, lo here is the man which you left with me, which came forth very ioyfull & pleasant declaring vnto me the great courtesies which that people had shewed him, saying that they had strouen together who should haue him to his house, and that it was incredible to thinke what care they had at the rising of the Sunne to hold vp their hands and kneele before the Crosse. I gaue them of my seedes, and thanked them hartily for the good entertainment which they had shewed my man, and they besought me that I would leaue him with them, which I granted them vntill my return, and he stayed among them very willingly. Thus I went forward by the Riuer, taking that olde man in my companie, which told mee, that two Indians came from Cumana to enquire for the Christians, & that he had answered them that he knew none such, but that he knew one which was the sonne of the Sunne, and that they had perswaded him to ioyne with them to kill mee and my companions. I wished him to lend me two Indians, and I would send word by them, that I would come vnto them, and was desirous of their friendship, but if that they on the contrary would haue warre, I would make such a warre with them, that should displeale them. And so I passed through all that people, and some came and asked me, why I had not giuen them Crosse as well as the rest, and so I gaue them some.

Cumana.

Treason of
the sauaiges.

Chap. 9.

They goe on land, and see the people worship the Crosse which they had giuen them. The Captaine causeth an Indian to make a draught of the countrey: hee sendeth a Crosse to the Lord of Cumana, and going down the Riuer with the streame, he arriueh at his ships. Of the error of the Pilots of Cortez as touching the situation of this Coast.

The next day I went on land to see certaine cottages, and I found many women and children holding vp their hands and kneeling before a Crosse which I had giuen them. When I came thither I did the like my self; and conferring with the old man, he began to informe me of as many people and Prouinces as he knew. And when euening was come I called the old man to come and lodge with mee in my boate; hee answered that hee would not goe with mee because I would wearie him with asking him questions of so many matters: I told him that I would request him nothing else but that he would set me downe in a charte as much as he knew concerning that Riuer, and what maner of people those were which dwelt vpon the banckes thereof on both sides: which he did willingly. And then he requested me that I would describe my countrey vnto him, as he had done his vnto me. And for to content him, I caused a draught of certaine things to be made for him. The next day I entered betweene certaine very high mountaines, through which this Riuer passeth with a straight chanel, and the boats went vp against the streame very hardly for want of men to draw the same. Here certaine Indians came and told me, that in the same place, there were certaine people of Cumana, and among the rest an enchanter, who enquired which way we would passe; & they telling him that we meant to passe by the Riuer, he set certaine canes on both sides thereof, through which wee passed, without receiuing any kinde of damage which they intended against vs. Thus going forward I came vnto the house of the olde man which was in my company, and here I caused a very high Crosse to be set vp, wherupon I engraue certaine letters to signifie that I was come thither: and this I did, that if by chance any of the people of the

An Enchanter.

the generall Vasquez de Coronado should come thither, they might haue knowledge of my being there. At length seeing I could not attaine to the knowledge of that which I sought for, I determined to returne backe vnto my ships. And being ready to depart there arrived two Indians, which by meanes of the interpreters of the old man, told me that they were sent to me, and that they were of Cumana, and that their Lord could not come himselfe, because he was farre from that place, but desired me to signifie vnto him what my pleasure was. I told them, that I wished that he would alwayes embrace peace, and that I was comming to see that countrey, but being inforced to returne backe downe the Riuer I could not now doe it, but that hereafter I would returne, and that in the meane season they should giue that Crosse vnto their Lord, which they promised me to do, and they went directly to cary him that Crosse with certaine feathers which were on the same. Of these I sought to vnderstand what people dwelt upward vpon the bankes of the Riuer, which gaue me knowledge of many people, and told me that the Riuer went farre more by into the land then I had yet seene, but that they knew not the head thereof, because it was very far into the countrey, and that many other Riuers fell into the same.

This Riuer
ran much farther
then he
had travelled.

Having learned thus much the next day morning I returned downe the Riuer, and the day following I came where I had left my Spaniard, with whom I spake, and told him that all things had gone well with me, and that at this time and the former I had gone about 30 leagues into the countrey. The Indians of that place inquired of me what the cause was of my departure, and whē I would returne; to whom I answered, that I would returne shortly. Thus sayling downe the streame, a woman leapt into the water crying vnto vs to stay for her, and shee came into our boate, and crept vnder a bench, from whence we could not make her to come out: I vnderstood that shee did this, because her husband had taken vnto him another wife, by whom hee had children, saying that he ment not to dwell any longer with him, seeing he had taken another wife. Thus shee and another Indian came with me of their owne accord, and so I came into my ships, and making them ready we proceeded home on our voyage, coasting and oftentimes going on land, and entering a great way into the countrey, to see if I could learne any newes of Captaine Francis Vasquez and his companie; of whom I could haue no other knowledge, but such as I learned in the aforesaid Riuer. I bring with me many actes of taking possession of all that Coast. And by the situation of the Riuer and the height which I tooke, I finde that that which the Passers and Pilots of the Parquelle tooke is false, & that they were deceiued by 2 degrees, and I haue sayled beyond them about 4 degrees. I sayled by the Riuer 85 leagues, where I saw and learned all the particulars before mentioned, and many other things; whereof when it shall please God to giue mee leaue to kisse your Lordships hands, I will deliuer you the full and perfect relation. I thinke my selfe to haue had very good fortune, in that I found Don Luis de Castilia, and Augustine Chenero in the port of Colima: for the Galiot of the Adelantado came vpon mee, which was there with the rest of his fleet, and commanded me to strike sayle, which seeming a strange thing vnto me, and not vnderstanding in what state things were in Nueua Espanna, I went about to defend my selfe, and not to doe it. In the meane while came Don Luis de Castilia in a boate and conferred with mee, and I lay at anchor on the other side of the haven where the saide fleete rood, and I gaue vnto him this relation (and to auoyd striffe I determined to sayle away by night) which relation I carped about me briefely written; for I alwayes had a purpose to send the same, as soone as I should touch vpon Nueua Espanna, to aduertize your Lordship of my proceedings.

He sayled 85
leagues by the
Riuer.

The port of
Colima.

An extract of a Spanish letter written from Pueblo de los Angeles in Nueua Espanna in October 1597, touching the discouerie of the rich Isles of California, being distant eight dayes sayling from the maine.

WE haue seene a letter written the eight of October 1597, out of a towne called Pueblo de los Angeles situate eightene leagues frō Mexico, making mention of the Islands of California situate two or three hundred leagues frō the maine land of Nueua Espanna, in Mar del Sur: as that thither haue bene sent before that time some people to conquer them: which with losse of some twentie men were forced backe. After that they had wel visited and found those Islands or countreys to be very rich of gold and silver mynes, and of very fayre Orientall pearles, which were caught in good quantitie vpon one fathome and an halfe passing in beautie the pearles of the Island Margarita: the report thereof caused the Vice-roy of Mexico to send a citizen of Mexico with two hundred men to conquer the same. Theretn also was affirmed that within eight dayes they could sayle thither from the mayne.

The course which Sir Francis Drake held from the haven of Guatulco in the South sea on the backe side of Nueva España, to the North-west of California as far as fourtie three degrees: and his returne back along the said Coast to thirtie eight degrees: where finding a faire and goodly haven, he landed, and staying there many weekes, and discovering many excellent things in the countrey and great shewe of rich minerall matter, and being offered the dominion of the countrey by the Lord of the same, hee tooke possession thereof in the behalfe of her Maiestie, and named it *Nova Albion*.

We kept our course from the Isle of Cano (which lyeth in eight degrees of Northerly latitude, and within two leagues of the maine of Nicaragua, where wee calked and trimmed our ship) along the Coast of Nueva España, untill we came to the Haven and Towne of Guatulco, which (as we were informed) had but seuentene Spaniards dwelling in it, and we found it to stand in fiftene degrees and fiftie minutes.

As soon as we were entred this Haven we landed, and went presently to the towne, and to the Towne house, where we found a Judge sitting in iudgement, he being associate with three other officers, upon three Negroes that had conspired the burning of the Towne: both which Judges, and prisoners we tooke, and brought them a shippeboord, and caused the chiefe Judge to write his letter to the Towne, to command all the Townesmen to avoid, that we might safely water there. Which being done, and they departed, wee ransacked the Towne, and in one house we found a pot of the quantitie of a bushell full of royals of plate, which we brought to our ship.

And here one Thomas Moone one of our companie, took a Spanish gentleman as he was flying out of the Towne, and searching him, he found a chaine of Gold about him, and other iewels, which we tooke and so let him goe.

The Portugall
Pilote set on
land.

At this place our Generall among other Spaniards, set ashore his Portugall Pilote, which he tooke at the Island of Cape Verde, out of a ship of Saint Marie port of Portugall, and hauing set them a shoore, we departed thence.

Our General at this place and time thinking himselfe both in respect of his priuate iniuries received from the Spaniards, as also of their contempts and indignities offered to our Countrey and Prince in generall, sufficiently satisfied, and reuenged: and supposing that her Maiestie at his returne would rest contented with this seruice, purposed to continue no longer upon the Spanish coastes, but began to consider and to consult of the best way for his Countrey.

We thought it not good to returne by the Streights, for two speciall causes: the one, least the Spaniards should there waite, and attend for him in great number and strength, whose handes he being left but one ship, could not possibly escape. The other cause was the dangerous situation of the mouth of the Streights of the South side, with continuall stormes raining and blustering, as he found by experience, besides the shoals and sands upon the coast, wherefore he thought it not a good course to aduenture that way: he resolved therefore to auoide these hazards, to goe forward to the Islands of the Malucos, and thence to saile the course of the Portugales by the Cape of Bona Sperança.

Upon this resolution, he began to thinke of his best way for the Malucos, and finding himselfe, where hee now was, becalmed, hee sawe that of necessitie hee must bee enforced to take a Spanish course, namely to saile somewhat Northerly to get a winde. Wee therefore set saile, and sayled 800 leagues at the least for a good winde, and thus much we sayled from the 16 of Aprill after our olde stile till the third of June.

Sir Francis
Drake sayled
on the backe
side of America
to 43 degrees
of Northerly
latitude.
38 degrees.

The fift day of June being in fortie three degrees towardes the pole Arcticke, being speedily come out of the extreame heate, wee found the ayre so colde, that our men being pinched with the same, complayned of the extremitie thereof, and the further we went, the more the colde increased upon vs, whereupon we thought it best for that time to seeke land, and did so, finding it not mountainous, but low plaine land, & we drew backe againe without landing, til we came within thirtie eight degrees towardes the line. In which height it pleased God to send vs into a faire and good Bay, with a good winde to enter the same.

In this Bay wee ankered the seuententh of June, and the people of the Countrey, hauing their houses close by the waters side, shewed themselves vnto vs, and sent a present to our Generall.

When they came vnto vs, they greatly wondred at the things which we brought, but our Generall (according to his naturall and accustomed humanitie) courteously intreated them, and liberally

rally bestowed on them necessarie things to couer their nakednesse, whereupon they supposed vs to be gods, and would not be perswaded to the contrary: the presentes which they sent vnto our Generall were feathers, and calcs of net worke.

Their houses are digged round about with earth, and haue from the vttermost byminnes of the circle cliffs of wood set vpon them, ioyning close together at the toppe like a spire steeple, which by reason of that closenesse are very warme.

Their bed is the ground with rushes strawed on it, and lying about the house, they haue the fire in the midst. The men goe naked, the women take bulrushes and kembe them after the manner of hempe, and thereof make their loose garments, which being knitt about their middles, hang downe about their hippes, hauing also about their shoulders a skinne of Deere, with the haire vpon it. These women are very obedient and seruiceable to their husbands.

After they were departed from vs, they came and visited vs the second time, and brought with them feathers and bags of Tabacco for presents: And when they came to the toppe of the hill (at the bottome whereof wee had pitched our tents) they stayed themselves, where one appointed for speaker, weaired himselfe with making a long oration, which done, they left their bowes vpon the hill and came downe with their presents.

In the meane time the women remaining on the hill, tormented themselves lamentably, tearing their flesh from their cheekes, whereby we perceiued that they were about a sacrifice. In the meane time our Generall, with his companie, went to prayer, and to reading of the Scriptures, at which exercise they were attentiu and seemed greatly to be affected with it: but when they were come vnto vs they restored againe vnto vs those things which before we had bestowed vpon them.

The newes of our being there being spread through the countrey, the people that inhabited round about came downe, and amongst them the king himselfe, a man of a goodly stature, and comely personage, with many other tall and warlike men: before whose comming were sent two Ambassadors to our Generall, to signifie that their king was comming, in doing of which message, their speech was continued about halfe an houre. This ended, they by signes requested our Generall to send something by their hand to their king, as a token that his comming might bee in peace: wherein our Generall hauing satisfied them, they returned with glad tidings to their king, who marched to vs with a princely Haile, the people crying continually after their manner, and as they drew neere vnto vs, so did they strue to behaue themselves in their actions with comeliness.

In the fore front was a man of a goodly personage, who bare the scepter, or mace before the king, whereupon hanged two crownes, a lesse and a bigger, with three chaines of a merueilous length: the crownes were made of knitt work wrought artificially with feathers of diuers colours: the chaines were made of a bony substance, and few be the persons among them that are admitted to weare them: and of that number also the persons are stinted, as some ten, some twelue, &c. Next vnto him which bare the scepter, was the king himselfe, with his Garde about his person, clad with Conie skinnies, and other skinnies: after them followed the naked common sort of people, euery one hauing his face painted, some with white, some with blacke, and other colours, and hauing in their hands one thing or other for a present, not so much as their children, but they also brought their presents.

In the meane time, our Generall gathered his men together, and marched within his fenced place, making against their approaching, a very warlike shewe. They being trooped together in their order, and a general salutation being made, there was presently a generall silence. Then he that bare the scepter before the king, being informed by another, whome they assigned to that office, with a manly and loftie voice, proclaimed that which the other spake to him in secret, continuing halfe an houre: which ended, and a generall Amen as it were giuen, the king with the whole number of men, and women (the children excepted) came downe without any weapon, who descending to the foote of the hill, set themselves in order.

In comming towards our bulwarks and tents, the scepter bearer began a song, obseruing his measures in a dance, and that with a statelie countenance, whom the king with his Garde, and euery degree of persons following, did in like manner sing and dance, sauing onely the women which daunced and kept silence. The General permitted them to enter within our bulwark, where they continued their song and daunce a reasonable time. When they had satisfied themselves, they made signes to our Generall to sit downe, to whom the king, and diuers others made seuerall orations, or rather supplication, that he would take their prouince and kingdom into his hand, and become their king, making signes that they would resigne vnto him their right and title of the wholeland, and become his subiects. In which to perswade vs the better, the king and the rest,

A description
of the people
and Countrey
of Nova Albion.

These are like
chaines of
Humoy in Cana-
da and Hoche-
lage.

The king re-
sented his
crown and
kingdome to
Sir Francis
Drake.
Great riches
in Noua Albion.

with one consent and with great reuerence, ioyfully singing a song, did set the crowne vpon his head, enriched his necke with all their chaines, and offered vnto him many other things, honouring him by the name of Hioh, adding thereunto as it seemed a signe of triumph: which thing our Generall thought not meete to reiect, because hee knewe not what honour and profite it might bee to our countrey. Wherefore in the name, and to the vse of her Maiestie, he tooke the scepter, crowne and dignitie of the said Countrey in his hands, wishing that the riches & treasure thereof might so conveniently be transported to the enriching of her kingdome at home, as it aboundeth in the same.

The common sort of the people leaving the king and his Guarde with our Generall, scattered themselves together with their sacrifices among our people, taking a diligent viewe of euery person, and such as pleased their fancie, (which were the yongest) they inclosing them about of their sacrifices vnto them with lamentable weeping, scratching, and tearing the flesh from their faces with their nayles, whereof issued abundance of blood. But wee vsed signes to them of disliking this, and stayed their hands from force, and directed them vppwardes to the liuing God, whome onely they ought to worshippe. They shewed vnto vs their wounds, and craued helpe of them at our handes, whereupon wee gaue them lotions, plaisters, and ointments agreeing to the state of their griefes, beseeching God to cure their defeates. Euery thirde day they brought their sacrifices vnto vs, vntill they vnderstoode our meaning, that we had no pleasure in them: yet they could not be long absent from vs, but daily frequented our company to the houre of our departure, which departure seemed so grievous vnto them, that their ioy was turned into sorow. They intreated vs, that being absent wee would remember them, and by flesh provided a sacrifice, which we misliked.

Great herds
of Deere.

Our necessarie businesse being ended, our Generall with his companie trauelled by into the Countrey to their villages, where we found herds of Deere by a thousand in a companie, being most large and fat of body.

Abundance of
strange conies.

We found the whole countrey to bee a warren of a strange kinde of Conies, their bodies in bignes as be the Barbary Conies, their heads as the heads of ours, the feet of a Mant, and the taile of a Rat being of great length: vnder her chinne on either side a bagge, into the which shee gathereth her meate when she hath filled her belly abroad. The people ate their bodies, and make great account of their skimes, for their Kings coate was made of them.

Noua Albion.

Our Generall called this countrey, Noua Albion, and that for two causes: the one in respect of the white bankes and clifles, which ly towarde the sea: and the other, because it might haue some affinitie with our Countrey in name, which sometime was so called.

Gold and sil-
uer in the
earth of Noua
Albion.

There is no part of earth here to bee taken vp, wherein there is not some speciall likelihood of gold or silver.

At our departure hence our Generall set by a monument of our being there; as also of her Maiesties right and title to the same, namely a plate nailed vpon a faire gr at poste whereupon was engrauen her Maiesties name, the day and yeere of our arriuall there, with the tree giuing vp of the Prouince and people into her Maiesties hands, together with her highnes picture and armes, in a peece of fixe pence of current English money vnder the plate, where vnder was also written the name of our Generall.

It seemeth that the Spaniards hitherto had neuer bene in this part of the countrey, neither did euer discover the land by many degrees to the Southwards of this place.

The true and perfect description of a voyage performed and done by Francisco de Gualle a Spanish Captaine and Pilot, for the Vice-roy of New Spaine, from the Haven of Acapulco in New Spaine, to the Islands of the Luçones or Philippinas, vnto the Haven of Manilla, & from thence to the Haven of Macao in China, and from Macao backe againe to Acapulco, accomplished in the yeere of our Lord, 1584.

Chap. 1.

The tenth of March in the yeere of our Lorde 1582 wee set sayle out of the Haven of Acapulco, lying in the countrey of New Spaine, directing our course towarde the Islands of the Luçones, or Philippinas West Southwest, running in that maner for the space of twentie five leagues, till wee came vnder sixteene degrees, that so wee might shunne the calmes by sayling close by the Shoare. From thence forward we held our course West for the space of 30 leagues, & being there, we ran West, and West & by South, for the space of 180 leagues, to the Island called

Ma

Illa del Enganno, which is the furthest Iland lying in the South parts of y^e Ilands called De los Ladrones, that is, The Ilands of rouers, or Ilas de las Velas, under 13. degrees and 1/2. in latitude Septentrionall, and 164. degrees in longitude Orientall, vpon the fixed Peridionall line, which lyeth right with the Iland of Tercera. From thence we helde our course Westward for the space of 280. leagues, till we came to the point called El capo de Espirito Santo, that is, The point of the holy Ghost, lying in the Iland Tandaya, the first Iland of those that are called Philippinas, Luçones, or Manillas, which is a countrey with fewe hills, with some mines of brimstone in the middle thereof. From the point aforesayde, wee sailed West for the space of eightene leagues to the point of entrie of the channell, which runneth in betweene that Iland and the Iland of Luçon. This point of entrie lieth scarce vnder 12. degrees. All the coast that stretcheth from the entrie of the chanel to the point of El capo del Spirito Santo, is not very faire.

Eight leagues from the sayde point lyeth a haven of indifferent greatnesse, called Baya de Lobos, that is, The Bay of woolues, hauing a small Iland in the mouth thereof: and within the channell about halfe a league from the ende of the sayd Iland lyeth an Iland or cliffe, & when you passe by the point in the middle of the channell, then you haue five and twentie fathom deepe, with browne sand: there we found so great a streame running Westward, that it made the water to cast a skum as if it had beene a sande, whereby it put vs in feare, but casting out our lead, wee found five and twentie fathom deepe.

From the aforesayd entrie of the channell North, and North and by East about tenne leagues, lyeth the Iland of Caranduanes, about a league distant from the lande of Luçon, on the furthest point Eastward, and from the same entrie of the channell towards the West and Southwest, lyeth the Iland Capuli about sixe leagues from thence, stretching Westsouthwest, and Eastnortheast, being five leagues long, and foure leagues broad: and as wee pass by it, it lay Northward from vs vnder twelue degrees and 3/4. and somewhat high lande. Foure leagues from the aforesayd Iland of Capuli Northwestward lie the three Ilands of the haucn of Bollon in the Iland of Luçones, stretching North and South about foure leagues, distant from the firme lande halfe a league, whereof the furthest Southward lieth vnder thirteene degrees: In this channell it is twentie fathom deepe, with white sand, and a great streame, running Southeast: we passed through the middle of the channell. From this channell wee helde our course Southwest, and Southwest and by West, for the space of twentie leagues, vntill wee came to the West ende of the Iland of Tycao, which reacheth East and West thirteene leagues. This point of hooke lyeth vnder 12. degrees and 3/4. In the middle betweene this Iland and the Iland Capuli there lie three Ilands called the Faranias, and we ranne in the same course on the Northside of all the Ilands, at the depth of of 22. fathom with white sand.

From the aforesayd West point of the Iland Tycao to the point of Buryas it is East and West to sayle about the length of a league or a league and an halfe: we put into that channell, holding our course South, and South and by West about three leagues, vntill we were out of the channell at sixteene fathom deepe, with halfe white and reddish sande in the channell, and at the mouth thereof, whereof the middle lyeth vnder 12. degrees and 3/4. and there the streames runne Northward.

The Iland of Buryas stretcheth Northwest and Southeast, and is lowe lande, whereof the Northwest point is about three leagues from the coast of Luçon, but you cannot passe betweene them with any shippe, but with small foists and barkes of the countrey. This shallowe channell lieth vnder twelue degrees: and running thorow the aforesaid channell betweene the Ilands Tycao and Buryas, as I sayd before, we sayled Southward about two leagues from the Iland of Masbate, which stretcheth East and West 8. leagues long, being in breadth 4. leagues, and lyeth vnder 12. degrees and 1/2. in the middle thereof, and is somewhat high land.

From the sayd channell betweene Tycao and Buryas, wee helde our course Westnorthwest for thirteene leagues, leauing the Iland Masbate on the Southside, and the Iland Buryas on the North side: at the ende of thirteene leagues wee came by an Iland called Banton, which is in forme like a hat, vnder twelue degrees and 3/4. when we had sayl'd the aforesayd thirteene leagues and eight leagues more, on the South side wee left the Iland called Rebniam, which stretcheth Northwest, and Northwest and by North, and Southeast, and Southeast and by South, for the space of eight leagues, being high and crooked lande, whereof the North point lyeth vnder twelue degrees and 3/4. and there you finde 35. fathom deepe, with white sand.

From the aforesayd Iland of Banton Southward nine leagues, there beginne and followe three Ilandes, one of them being called Bantonilla, which is a small Iland in forme of a sugar loaf: the second Crymara, being somewhat great in length, reaching East and West about two leagues: the third Itaa, or the Ile of Goates, hauing certaine houels. By all these Ilands aforesayd

The Ile of Masbate.

aforesayd you may passe with all sortes of shippes, whereof the foremost lyeth Southward vnder twelue degrees and $\frac{1}{2}$. From the Iland of Banconsilla, or small Banton, wee helde our course North-west for the space of foure leagues, to the chanell betweene the Ilands called de Vereies, and the Iland Marinduque, the Vereies lying on the South side vnder twelue degrees and $\frac{3}{4}$, (which are two small Ilands like two Frigats) and the Iland Marinduque on the North side vnder twelue degrees, and $\frac{1}{2}$. which is a great Iland, stretching West north-west, and East south-east, hauing in length 12. & in bredth 7. leagues. On the North side with the Iland Luçon it maketh a long and small chanell, running somewhat crooked, which is altogether full of shallowes and sandes, whereby no shippes can passe through it. The furthest point Westward of the same Iland lyeth vnder thirteene degrees and $\frac{1}{2}$. It is high lande, on the East side hauing the forme of a mine of brimstone or fierie hill, and on the West side the land runneth downeward at the point thereof being round like a loafe of bread: in the chanell betweene it and the Vereies, there are 18. fathom deepe with small blacke sand.

From the aforesayd chanell of Vereies and Marinduque, wee helde our course Westnorth-west twelue leagues to the lande of Mindora, to the point or hooke called Dumaryn, lying full vnder thirteene degrees: Five leagues forward from the sayde chanell on the South side wee left an Iland called Isla del maestro del Campo, that is, The Iland of the Colonell, lying vnder twelue degrees and $\frac{1}{2}$. which is a small and flat Iland: In this course we had 45. fathom deepe, with white sand.

By this point or end of the Iland Marinduque beginneth the Iland of Myndoro, which hath in length East and West five and twentie leagues, and in bredth twelue leagues, wherof the furthest point Southward lyeth vnder thirteene degrees, and the furthest point Northward vnder thirteene degrees and $\frac{1}{2}$. and the furthest point Westward vnder thirteene degrees. This Iland with the Iland of Luçon maketh a chanell of five leagues broad, and tenor twelue fathom deepe with muddie ground of diuers colours, with white sande. Five leagues forward from Marinduque lyeth the riuer of the towne of Anagacu, which is so shallowe, that no shippes may enter into it. From thence two leagues further lie the Ilands called Bacco, which are three Ilands lying in a triangle, two of them being distant from the land about three hundred cubites, and between them and the land you may passe with small shippes: And from the lande to the other Iland, are about two hundred cubites, where it is altogether shallowes and sandes, so that where the shippes may passe outward about 150. cubites from the lande, you leaue both the Ilands on the South side, running betweene the third Iland and the riuer called Rio del Bacco, some what more from the middle of the chanell towarde the Iland, which is about a league distant from the other: the chanell is tenne fathom deepe, with mud and shelles vpon the ground: the riuer of Bacco is so shallowe, that no ships may enter into it. From this Iland with the same course two leagues forward, you passe by the point called El Capo de Refaleo, where wee cast out our lead, and found that a man may passe close by the lande, and there you shall finde great strong streames: and halfe a league forward with the same course, lyeth the towne of Mindoro, which hath a good haven for shippes of three hundred tunnes. Three leagues Northward from the same haven lyeth the Iland called Casaa, stretching East and West, being hilly ground.

From the sayde towne of Myndoro, wee helde our course Westnorth-west eight leagues, till wee came to the point or hooke of the sandes called Tulen, lying vpon the Iland of Luçon, which sande or banke reacheth into the Sea halfe a league from the coast: you must keepe about an hundred cubites from it, where you finde eight fathom water, muddie and shellie ground: you runne along by those sandes North, and North and by West for the space of two leagues, till you come to the riuer called Rio de Anasebo: all the rest of the coast called De los Limbones to the mouth or entrie of the Bay called Manilla, (which are foure leagues) is sayled with the same course. The Limbones (which are Ilands so called) are high in forme like a paire of Organs, with good hauens for small shippes, running along by the Limbones: and two leagues beyond them on the South side, wee leaue the Ilands of Fortan, and foure Ilands more, but the three Ilands of Lubao, which are very low, lie vnder 13. degrees and $\frac{1}{2}$. and the Limbones lie in the mouth or entrie of the Bay of Manilla vnder 14. degrees and $\frac{1}{2}$.

From thence we ranne North-west for the space of five leagues to the haven of Cabite, keeping along by the land lying on the West side, where it is shallowe, and is called Los Baixos del Rio de Cannas, The shallowes of the riuer of Reedes: all along this Bay in the same course, there is from ten to foure fathom deepe.

Being by the point or hooke of Cabite, then wee kept but an hundred paces from it, running Southwest, southsouth-west, and South, untill wee discovered the whole mouth or entrie of the Bay

The Bay of
Manilla in 14.
degrees and
one quarter.

Bay, where we might anker at foure fathom about two hundred cubites from the lande, and then the towne of Manilla was two leagues Northward from vs.

Chap.2.

The course and voyage of the aforesayd *Francisco Gualle* out of the haven or roade of *Manilla*, to the haven of *Macao* in *China*, with all the courses and situations of the places.

Sailing out of the haven of *Cabite*, lying in the Bay of *Manilla*, wee helde our course Westward for the space of eightene leagues, to the point called *El Cabo de Samballes*: and when wee were eight leagues in our way, wee left the two Ilands *Maribillas* on the South side, and sailed about a league from them: the point of *Samballes* aforesayde lyeth under foureteene degrees, and $\frac{1}{2}$. being low land, at the end of the same coast of *Luçon*, on the West side.

From the hooke or point aforesayde, wee ranne North, and North and by West, for the space of five and twentie leagues (about a league from the coast of *Luçon*) to the point called *Cabo de Bullinao*: all this coast and Cape is high and hilly ground, which Cape lyeth under sixteene degrees and $\frac{1}{2}$. From this Cape de *Bullinao* we helde our course North, and North and by East, for 45. leagues to the point called *El Cabo de Bojador*, which is the furthest lande Northward from the Iland *Luçon* lying under 19. degrees.

The Cape de *Bullinao* being past the lande maketh a great creeke or bough, and from this creeke the coast runneth North to the point of *Bojador*, being a land full of cliftes and rockes that reach into the Sea, and the land of the hooke or point is high and hilly ground.

From the point of *Bojador*, wee helde our course Westnorthwest an hundred and twentie leagues, untill we came to the Iland called *A Ilha Branca*, or the white Iland, lying in the beginning of the coast and Bay of the riuer *Canton* under two and twentie degrees, hauing foure and twentie fathom browne muddie ground.

From the Iland *Ilha Branca*, wee helde the aforesayde course of Westnorthwest, for the space of sixteene leagues, to the Iland of *Macao* lying in the mouth of the riuer of *Canton*, and it maketh the riuer to haue two mouthes or entries, and it is a small Iland about three leagues great.

Chap.3.

The Nauigation or course of the aforesayd *Francisco Gualle* out of the haven of *Macao* to *Newe Spaine*, with the situation and stretchings of the same, with other notable and memorable things concerning the same voyage.

When we had prepared our selues, and had taken our leaues of our friends in *Macao*, we set saile vpon the foure and twentieth of *July*, holding our course Southeast, & Southeast and by East, being in the wane of the Moone: for when the Moone increaseth, it is hard holding the course betweene the Ilands, because as then the water and streames run very strong to the Northwest; wee traualled through many narrowe channells by night, hauing the depth of eight or ten fathom, with soft muddie ground, untill wee were about the Iland *Ilha Branca*, yet we saw it not, but by the height we knew that we were past it.

Being beyond it, we ranne Eastsoutheast an hundred and fiftie leagues, to get about the sands called *Os Baixos dos Pescadores*, and the beginning of the Ilands *Lequeos* on the East side, which Ilands are called *As Ilhas fermosas*, that is to say, The faire Ilands. This I vnderstoode by a *Chinar* called *Sanry* of *Chinchon*, and hee sayde that they lie under one and twentie degrees and $\frac{1}{2}$. there it is thirtie fathom deepe: and although wee sawe them not, notwithstanding by the height and depth of the water we knew we were past them.

Being past *As Ilhas fermosas*, or the faire Ilands, wee helde our course East, and East and by North, for two hundred and fiftie leagues, untill we were past the length of the Ilands *Lequeos*, saying about fiftie leagues from them: the said *Chinar* tolde me, that those Ilands called *Lequeos* are very many, and that they haue many and very good hauens, and that the people and inhabitants thereof haue their faces and bodies painted like the *Byfayas* of the Ilands of *Luçon* or *Philippinas* and are apparelled like the *Byfayas*, and that there also are mines of gold: Hee sayd likewise that they did often come with small shippes and barkes laden with *Bucks* and *Harts-hides*, and with golde in graines or very small peeces, to traffique with them of the coast of *China*, which hee assured mee to bee most true, saying that hee had bene nine times in the small Ilands, bringing of the same wares with him to *China*: which I beleueed to bee true, for that afterwarde

Ilha Branca.

As Ilhas fermosas.

Lequeos.

mines of gold

I enquired thereof in Macao, and vpon the coast of China, and found that hee sayde true. The furthest or uttermost of these Islands stretching Northwarde and Eastwarde, lie vnder nine and twentie degrees.

Firando.

Being past these Islands, then you come to the Islands of Iapon, whereof the first lying West and South, is the Island of Firando, where the Portugals vse to traffique: they are in length altogether an hundred and thirtie leagues, and the furthest Eastward lieth vnder two and thirtie degrees: we ranne still East, and East and by North, untill we were past the sayd hundred and thirtie leagues.

Other Islands Eastward of Iapon.

All this information I had of the aforesayd Chinars, as also that there I should see some mines of brimstone or fierie hills, being seuentie leagues beyond them, and thirtie leagues further I should finde foure Islands lying together, which I likewise found, as hee had tolde mee: And that being in Iapon, he sayd hee had there seene certaine men of a very small stature, with great rolles of linnen cloth about their heads, that brought golde in small pieces, and some white Cangas of cotton, (which are pieces of cotton-linnen so called by the Chinars) as also salte-fish like the Spanish Atun, or Tunney, which hee sayde came out of other Landes Eastward from Iapon: and by the tokens and markes which hee shewed mee, I guessed whereabout those Islands should bee, and found them not farre from whence he sayd they lay. Hee sayd likewise that all the Islands of Iapon haue good hauens and chanelles, being a Countrey full of Rice, Coyne, Fish, and flesh, and that they are an indifferent and reasonable people to traffique with, and that there they haue much siluer.

Iapon 900. leagues distant from the coast of America in 37. degrees and an halfe.

Running thus East, and East and by North about three hundred leagues from Iapon, wee found a very hollowe water, with the streame running out of the North and Northwest, with a full and very broad Sea, without any hinderance or trouble in the way that wee past: and what winde soeuer blew, the Sea continued all in one sort, with the same hollow water and streame, untill wee had passed seuen hundred leagues. About two hundred leagues from the coast and land of newe Spaine wee beganne to lose the sayd hollow Sea and streame: whereby I most assuredly thinke and beleue, that there you shall finde a channell or straight passage, betweene the firme lande of newe Spaine, and the Countreys of Asia and Tartaria. Likewise all this way from the aforesayd seuen hundred leagues, we found a great number of Whale-fishes and other fishes called by the Spaniards Atuns or Tunnies, whereof many are found on the coast of Gibraltar in Spaine, as also Albacoras and Bonitos, which are all fishes, which commonly keepe in chanelles, straights, and running waters, there to disperse their seede when they breede: which maketh mee more assuredly beleue, that thereabouts is a channell or straight to passe through.

Seuen and thirtie deg. and an halfe. Read Francis Villosa chap. 16.

Being by the same course vpon the coast of newe Spaine, vnder seuen and thirtie degrees and $\frac{1}{2}$, wee passed by a very high and faire lande with many trees, wholly without snowe, and foure leagues from the lande, you finde thereabouts many drifts of rootes, leaues of trees, reeds, and other leaues like figge leaues, the like whereof wee found in great abundance in the countrey of Iapon, which they eate: and some of those that wee found, I caused to bee sodden with flesh, and being sodden, they eate like Coleworts: there likewise wee found great store of Seales: whereby it is to bee presumed and certainly to bee beleued, that there are many riuers, bayes, and hauens along by those coastes to the hauens of Acapulco.

Cabo de San Lucas in 22. deg.

From thence wee ranne Southeast, Southeast and by South, and Southeast and by East, as wee found the winde, to the point called El Cabo de San Lucas, which is the beginning of the lande of California, on the Northwest side, lying vnder two and twentie degrees, being five hundred leagues distant from Cape Mendocino.

Hauens lately found out.

In this way of the aforesayd five hundred leagues along by the coast, are many Islands: and although they bee but small, yet without doubt there are in them some good hauens, as also in the firme land, where you haue these hauens following, now lately found out, as that of the Ile of Saint Augustine, lying vnder thirtie degrees and $\frac{1}{2}$, and the Island called Isla de Cedros, scarce vnder eight & twenty deg. and $\frac{1}{2}$, and the Island lying beneath Saint Martyn, vnder three and twentie degrees and $\frac{1}{2}$. All this coast and countrey, as I thinke, is inhabited, and sheweth to be a very good countrey: for there by night wee sawe fire, and by day smoke, which is a most sure token that they are inhabited.

From the point or hooke of Saint Lucas, to the Southeast side of California, wee helde our course Eastsoutheast, for the space of 80. leagues, to the point called El cabo de las corrientes, that is, the Cape of the streames lying vnder 19. degrees and $\frac{1}{2}$. And running this course, Northward about a league from vs wee sawe three Islands called Las tres Marias, (that is to say, The three Marias) running the same course. About foure leagues from the other Islands, there are other Islands,

lands reaching about two or three leagues: All this way from the mouth or gulf of California a-
forefayd, for the space of the sayd fourescore leagues, there are great streames that run Westward.

From the point of Cape de las Corrientes, wee ranne Southeast, and sometimes Southeast
and by East, for the space of an hundred and thirtie leagues to the haven of Acapulco. In this
way of an hundred and thirtie leagues, being twentie leagues on the way, we had the haven of Na-
tiuidad, that is, of the birth of the Virgin Mary: and other eight leagues further, the haven of
Saint Iago, or Saint Iames: and sixe leagues further, the sea Strand called La Playa de Colima,
that is, the Strand of Colima. All this coast from California to the haue of Acapulco is inha-
bited by people that haue peace and traffique with the Spaniards, and are of condition and quali-
ties like the people of the other places of new Spaine. Acapulco.

The conclusion of the Author of this last voyage.

At this description and nauigation haue I my selfe scene, prooued, and well noted in my boy-
age made & ended in the yeere of our Lord 1584, from great China out of the haue and ri-
uer of Canton, as I will more at large set it downe vnto your honour, with the longitudes and la-
titudes therof, as God shall permit mee time and leysure, whom I beseech to send you long and
happie dayes.

And the same was truly translated out of Spanish into lowe Dutch verbatim out of the Ori-
ginall copie, (wich was sent vnto the Viceroy of the Portugall Indies) by Iohn Huyghen Van
Linschoten,

**DIVERS VOYAGES MADE BY ENGLISH-
men to the famous Citie of Mexico, and to all or most part of the
other principall prouinces, cities, townes and places throughout the great and
large kingdom of New Spaine, euen as farre as Nicaragua and Panama, & thence to Peru:
together with a description of the Spaniards forme of gouernment there: and sundry
pleasant relations of the maners and customes of the natural inhabitants, and of
the manifold rich commodities & strange rarities found in those partes of
the continent: & other matters most worthy the obseruation.**

**The voyage of Robert Tomson Marchant, into Noua Hispania in
the yeere 1555. with diuers obseruations concerning the state of the
Country: And certaine accidents touching himselfe.**

Rober Tomson boꝛne in the towne of Andouer in Hamphire began his
trauaile out of England in An. 1553. in the moneth of March: who departing
out of the citie of Bristoll in a good ship called The barkeyong, in companie
of other Marchants of the sayde citie, within 8. dayes after arrived at Lis-
bone in Portugall, where the sayd Robert Tomson remained 15. dayes, at
the end of which he shipped himselfe for Spaine in the sayd shippe, and within
4. dayes arrived in the bay of Cadiz in Andalusia, which is vnder the king-
dom of Spaine, & from thence went by to the citie of Siuil by land, which is 20. leagues, and there
hee repaired to one Iohn Fields house an English Marchant, who had dwelt in the said city of Siuil
18. or 20. yeres married with wife and children: In whose house the said Tomson remained by the
space of one whole yeere or thereabout, for two causes: The one to learne the Castilian tongue,
the other to see the orders of the countrey, and the customes of the people. At the end of which time
hauing scene the fleetes of shippes come out of the Indies to that citie, with such great quantitie of
gold & silver, pearles, precious stones, sugar, hides, ginger, and diuers other rich commodities, he
did determine with himselfe to seeke meanes and opportunitie to passe ouer to see that rich coun-
trei from whence such great quantitie of rich commodities came. And it fell out that within short
time after, the sayd Iohn Field (where the sayd Tomson was lodged) did determine to passe ouer
into the West Indies, himselfe, with his wife, children, and familie, and at the request of the sayde
Tomson, he purchased a licence of the King to passe into the Indies, for himselfe, his wife and chil-
dren, and among them also for the sayde Tomson to passe with them: so that presently they made
preparation of victuall and other necessarie prouision for the voyage. But the shippes which were
prepared to perfourme the voyage being all ready to depart, vpon certaine considerations by the
kings commandement were stayed and arrested till further should bee knowen of the Kings plea-
sure. Whereupon the said Iohn Field, with Robert Tomson departed out of Siuil and came down
to

to S. Lucar 15. leagues off, and seeing the stay made vpon the ships of the said fleet, & being not assured when they would depart, determined to ship themselves for the Isles of the Canaries, which are 250. leagues from S. Lucar, and there to stay till the said fleet should come thither: for that is continually their port to make stay at 6. or 8. daies, to take in fresh water, bread, flesh, & other necessaries.

So that in the moneth of February in An. 1555. the sayde Robert Tomson with the said Iohn Field and his companie, shipped themselves out of the towne of S. Lucar in a caruel of the citie of Cadiz, and within 6. dayes they arrived at the port of the Grand Canaria, where at our comming the ships that rode in the said port began to cry out of all measure with loud voyces, in so much that the castle which stood fast by began to shoot at vs, and shot 6. or 7. shot at vs, and strooke downe our maine masse, before we could hoise out our boat to goe on land, to know what the cause of the shooting was, seeing that we were Spanish ships, and were comming into his countrey. So that being on lande, and complaining of the wrong and damage done vnto vs; they answered, that they had thought we had bene French rouers, that had come into the said port to do some harme to the ships that were there. For that 8. dayes past there went out of the said port a caruell much like vnto ours, laden wit sugers and other marchandise for Spaine and on the other side of the point of the sayd Island, met with a Frenchman of warre, who tooke the said caruell, & vnladed out of her into the said French ship both men & goods. And being demanded of the said Spaniards what other ships remained in the port whence they came, they answered that there remained diuers other ships, & one laden with sugers (as they were) & ready to depart for Spaine: vpon the which newes the Frenchmen put 30. tall men of their ship well appointed into the said caruel which they had taken, and sent her backe againe to the said port from whence she had departed the day before. And somewhat late towards the euening came into the port, not shewing past 3. or 4. men, and so came to an anchor hard by the other ships that were in the said port, and being secne by the castle and by the said ships, they made no reconing of her, because they knew her, & thinking that she had found contrary winde at the sea, or had forgot something behinde them, they had returned backe againe for the same, and so made no account of her, but let her alone riding quietly among the other ships in the said port: So that about midnight the said caruel with the Frenchmen in her went aboard the other ship that lay hard by laden with sugers, and droue the Spaniards that were in her vnder hatches, & presently let slip her cables and ankers, and set saile & carried her cleane away, and after this sort deceived them: And they thinking or fearing that we were the like, did shoote at vs as they did. This being past, the next day after our arriual in the sayd port, wee did vnbearke our selues and went on lande vnto the citie or head towne of the great Canaria, where we remained 18. or 20. dayes: and there found certaine Englishmen marchants seruants of one Anthony Hickman and Edward Castelin, marchants of the citie of London that lay there in traffique, of whom wee receiued great courtesie and much good cheere. After the which 20. dayes being past, in the which we had secne the countrey, the people, and the disposition thereof, wee departed from thence, and passed to the next Ile of the Canaries 18. leagues off, called Teneriffe, and being come on land, went vnto the citie called La Laguna, where we remained 7. moneths, attending the comming of the whole fleete, which in the ende came, and there hauing taken that which they had neede of, wee shipped our selues in a ship of Cadiz, being one of the saide fleete, which was belonging to an Englishman married in the citie of Cadiz in Spaine, whose name was Iohn Sweeting, and there came in the sayd ship for captain also an Englishman married in Cadiz, and sonne in law to the sayde Iohn Sweeting, whose name was Leonard Chilton: there came also in the said ship another Englishman which had bene a marchant of the citie of Exeter, one of 50. yeeres or thereabout, whose name was Ralph Sarre. So that wee departed from the sayd Islands in the moneth of October the foresayd yeere, 8. ships in our companie, and so directed our course towards the bay of Mexico, and by the way towards the Island of S. Domingo, otherwise called Hispaniola. So that within 32. dayes after we departed from the Isles of Canaries wee arrived with our ship at the port of S. Domingo, and went in ouer the baire where our ship knocked her keele at her entrie: and there our ship rid before the towne, where wee went on land, & refreshed our selues 16. dayes, where we found no bread made of wheat, but biscuit brought out of Spaine, and out of the bay of Mexico: for the countrey it selfe doeth yeelde no kinde of bread to make graine withall. But the bread they make there, is certaine cakes made of rootes called Cassavi, which is something substantiall, but it hath but an vnauoie taste in the eating thereof. Flesh of beefe and mutton they haue great store: for there are men that haue 10000. head of cattell, of oxen, bulles and kine, which they doe keepe onely for the hides: for the quantitie of flesh is so great, that they are not able to spend the hundredth part. Hogs flesh is there good store, very sweete and sauorie, and so holtsome, that they giue it to sick folkes to eat in stead of hennes and capons, although they haue good store of poultrie of that sort, as also of Guinycocks & Guinyhens.

English factors in the Grand Canaria.

Iohn Sweeting Englishman married in Cadiz, sendeth a ship of his owne into the West Indies vnder the conduct of his sonne in lawe Leonard Chilton. Ralph Sarre,

At the time of our being there, the citie of S. Domingo was not of about 500. households of Spaniards, but of the Indians dwelling in the suburbs there were more. The country is most part of the yere very hot, & very full of a kind of flies or gnats with long bills, which do prick & molest the people very much in the night when they are asleepe, in picking their faces and hands, and other parts of their bodies that lie vncovered, & make them to sweel wonderfully. Also there is another kind of small worme which creepeth into the soles of mens feet & especially of the black Moores and children which vse to go barefoot, & maketh their feet to grow as big as a mans head, & doth so ake that it would make one run mad. They haue no remedy for the same, but to open the flesh sometimes 3. or 4. inches & so dig them out. The countrey yeeldeth great store of suger, hides of oxen, bulls and kine, ginger, Cana fistula & Salsa perillia: mines of silver & gold there are none, but in some riuers here is found some smal quantitie of gold. The principal coine that they do traffique withal in that place, is blacke money made of copper & brasse: and this they say they do vse not for that they lacke money of gold and silver to trade withall out of the other parts of India, but because if they should haue good money, the marchants that deale with them in trade, would carry away their gold and silver, and let the countrey commodities lie still. And thus much for S. Domingo. So we were comming from the ples of Canaries to S. Domingo, & there staying vntil the moneth of December, which was 3. moneths. About the beginning of January we departed thence towards the bay of Mexico & new Spaine, toward which we set our course, and so sailed 24. dayes till we came within 15. leagues of S. Iohn de Vllua, which was the port of Mexico of our right discharge: And being so neere our said port, there rose a storme of Northerly windes, which came off from Terra Florida, which caused vs to cast about into the sea againe, for feare least that night we should be cast vpon the shoare before day did breake, and so put our selues in danger of casting away: the winde and sea grew so foule and strong, that within two houres after the storme began, eight ships that were together were so dispersed, that we could not see one another. One of the ships of our company being of the burthen of 500. tun called the hulke of Carion, would not cast about to sea as we did, but went that night with the land, thinking in the morning to purchase the port of S. Iohn de Vllua, but missing the port went with the shoare and was cast away. There were drowned of that ship 75. persons, men, women and children, and 64. were saued that could swim, and had meanes to saue themselves: among those that perished in that ship, was a gentleman who had bene present the yere before in S. Domingo, his wife and 4. daughters with the rest of his seruants & household. We with the other 7. ships cast about into the sea, the storme during 10. dayes with great might, boisterous winds, fogs & raine: our ship being old and weake was so tossed, that she opened at the sterne a fadome vnder water, and the best remedy we had was to stop it with beds and pilobiers, and for feare of sinking we threw and lightned into the sea all the goods we had or could come by: but that would not serue. Then we cut our maine mast and threw all our Ordnance into the sea sauing one peece, which early in a morning when wee thought wee should haue sunke, we shot off, and as pleased God there was one of the ships of our company neere vnto vs, which we saw not by meanes of the great fogge, which hearing the sound of the peece, & vnderstanding some of the company to be in great extremitie, began to make towards vs, and when they came within hearing of vs, we desired them for the loue of God to helpe to saue vs, for that we were all like to perish. They willed vs to hoise our foresaile as much as we could & make towards them, for they would do their best to saue vs, and so we did: And we had no sooner hoised our foresaile, but there came a gale of winde & a peece of a sea, strooke in the foresaile, and caried saile & masse all ouer boord, so that then we thought there was no hope of life. And then we began to embrace one another, euery man his friend, euery wife her husband, and the children their fathers and mothers, committing our soules to Almighty God, thinking neuer to escape aliue: yet it pleased God in the time of most need when all hope was past, to aide vs with his helping hand, and caused the winde a little to cease, so that within two houres after, the other ship was able to come aboord vs, & tooke into her with her boat man, woman and child, naked without hose or shoe vpon many of our feete. I do remember that the last person that came out of the ship into the boat, was a woman blacke Moor, who leaping out of the ship into the boat with a pong sucking child in her armes, leapt too short and fell into the sea, and was a good while vnder the water before the boat could come to rescue her, and with the spreading of her clothes rose aboue water againe, and was caught by the coat & pulled into the boate hauing still her child vnder her arme, both of them halfe drowned, and yet her naturall loue towards her child would not let her let the child goe. And when she came aboord the boate she helde her child so fast vnder her arme still, that two men were scant able to get it out. So we departed out of our ship & left it in the sea: it was worth foure hundred thousand ducats, ship & goods when we left it. And within thre dayes after we arriued at our port of S. Iohn de Vllua in New Spaine. I do re-

member that in the great and boisterous storme of this foule weather, in the night, there came vpon the coppe of our maine yarde and maine masse, a certaine little light, much like vnto the light of a little candle, which the Spaniards called the Cuerpo santo, and saide it was S. Elmo, whom they take to bee the aduocate of Sailers. At the which light the Spaniards fell downe vpon their knees and worshipped it, praying God and S. Elmo to cease the torment, and saue them from the perill that they were in, with promising him that at their comming on land, they would repaire vnto his Chappell, and there cause Masses to be saide, and other ceremonies to be done. The friers cast reliques into the sea, to cause the sea to be still, and likewise said Gospels, with other crossings and ceremonies vpon the sea to make the storme to cease: which (as they said) did much good to weaken the furie of the storme. But I could not perceiue it, nor gaue no credite to it, till it pleased God to send vs the remedie & deliuered vs from the rage of the same, His Name be praised therfore. This light continued aboord our ship about three houres, flying from masse to masse, & from top to top: and sometime it would be in two or three places at once. I informed my selfe of learned men afterward what that light should be, and they said, that it was but a congelation of the winde and vapours of the Sea congealed with the extremitie of the weather, which flying in the winde, many times doeth chance to hit on the masts and throwes of the ships that are at sea in foule weather. And in trueth I do take it to be so: for that I haue seene the like in other ships at sea, and in sundry ships at once. By this men may see how the Papists are giuen to beleue and worship such vaine things and toys, as God, to whom all honour doth appertaine, and in their neede and necessities do let to call vpon the liuing God, who is the giuer of all good things.

His arrivall at
Vera Cruz,

Florida 300:
leagues from
San Iuan de
Villua.

The 16. of April in Anno 1556. we arrived at the port of S. Iohn de Villua in new Spaine, very naked and distressed of apparell, and all other things, by meanes of the losse of our foresaid ship and goods, and from thence we went to the new Towne called Vera Cruz, five leagues from the said port of S. Iohn de Villua, marching still by the sea side, where wee found lying vpon the sands great quantitie of mightie great trees with rootes and all, some of them of foure, five, and sixe cart load by our estimation, which, as the people tolde vs, were in the great stormy weather, which we indured at sea, rooted out of the ground in Terra Florida, which is three hundred leagues ouer by Sea, and brought thither. So we came to the saide Towne of Vera Cruz, where wee remained a moneth: and there the said Iohn Field chanced to meete with an olde friend of his acquaintance in Spaine, called Gonçalo Ruiz de Cordoua, a very rich man of the saide Towne of Vera Cruz: who hearing of his comming thither with his wife and family, and of his misfortune by Sea, came vnto him and receiued him and all his household into his house, and kept vs there a whole moneth, making vs very good cheere, and giuing vs good intertainment, and also gaue vs that were in all eight persons of the said Iohn Fields house, double apparell new out of the shop of very good cloth, coates, cloakes, hose, shirts, smocks, gownes for the women, hose, shoes, and al other necessary apparel, and for our way by to the Citie of Mexico, horses, molles and men, and money in our purses for the expences by the way, which by our accompt might amount vnto the summe of 400. Crownes. And after wee were entred two dayes iourney into the Countrey, I the saide Robert Tomson fell so sicke of an ague, that the next day I was not able to sit on my horse, but was faine to be caried vpon Indians backs, from thence to Mexico. And when wee came within halfe a dayes iourney of the Citie of Mexico, the saide Iohn Field also fell sicke, and within three dayes after we arrived at the said Citie, hee died: And presently sickened one of his children, and two more of his household people, and within eight dayes died. So that within tenne dayes after we arrived at the Citie of Mexico, of eight persons that were of vs of the saide company, there remained but foure aliue, and I the said Tomson was at the point of death of the sicknes that I got vpon the way, which continued with mee the space of sixe moneths. At the ende of which time it pleased Almighty God to restore me my health againe, although weake and greatly disabled. And being some thing strong, I procured to seeke meanes to liue, and to seeke a way how to profite my selfe in the Countrey, seeing it had pleased God to sende vs thither in safetie. Then by friendship of one Thomas Blake a Scottishman horne, who had dwelt and had bene married in the said Citie about twentie yeeres before I came to the saide Citie, I was preferred to the seruice of a gentleman a Spaniard dwelling there, a man of great wealth, and one of the first conquerours of the said Citie, whose name was Gonçalo Cerezo, with whom I dwelt twelue moneths and a halfe. At the ende of which I was maliciously accused by the Holy house for matters of Religion, and so apprehended and caried to prison, where I lay close prisoner seven moneths, without speaking to any creature, but to the Jailor that kept the said prison, when he brought me my meat and drinke. In the meane time was brought into the saide prison one Augustin Boacio an Italian of Genoua also for matters of Religion, who was taken at Sacatecas 80. leagues to the North.

Mexico.

Northwest of the Citie of Mexico : At the ende of the said seven moneths, we were both caried to the high Church of Mexico, to doe open penance vpon an high scaffold, made before the high Altar, vpon a Sunday, in the presence of a very great number of people, who were at the least fise or sixe thousand. For there were that came one hundred mile off, to see the saide Auto (as they call it) for that there were neuer none before, that had done the like in the saide Countrey, nor could not tell what Lutheranes were, nor what it meant : for they neuer heard of any such thing before. We were brought into the Church, euery one with a S. Benito vpon his backe, which is halfe a yard of yallow cloth, with a hole to put in a mans head in the middelt, and cast ouer a mans head: both flaps hang one before, and another behinde, and in the middelt of euery flap, a S. Andrewes crosse, made of red cloth, sowed on vpon the same, and that is called S. Benito. The common people before they sawe the penitents come into the Church, were giuen to vnderstand that wee were heretiques, infidels, and people that did despise God, and his workes, and that wee had bene more like deuils then men, and thought wee had had the fauour of some monstres, or heathen people. And when they saw vs come into the Church in our players coates, the women and children beganne to cry out, and made such a noise, that it was strange to see and heare, saying, that they neuer sawe goodlier men in all their liues, and that it was not possible that there could be in vs so much euill as was reported of vs, and that we were more like Angels among men, then such persons of such euill Religion as by the Priestes and friers wee were reported to be, and that it was great pite that wee should bee so used for so small an offence. So that being brought into the saide high Church, and set vpon the scaffold which was made before the high Altar, in the presence of all the people, vntill high Masse was done, and the sermon made by a frier, concerning our matter, they did put vs in all the disgrace they could, to cause the people not to take so much compassion vpon vs, for that wee were heretiques, & people that were seduced of the deuill, & had forsaken the faith of the Catholique Church of Rome, with diuers other reprochfull wordes, which were too long to recite in this place. High Masse and Sermon being done, our offences, as they called them, were recited, euery man what he had said and done, and presently was the sentence pronounced against vs. That was, that the said Augustine Boacio was condemned to weare his S. Benito all the dayes of his life, and put into perpetuall prison, where hee should fulfill the same, and all his goods confiscated and lost. And I the saide Tomson to weare the S. Benito for three yeeres, and then to be set at libertie. And for the accomplishing of this sentence or condemnation, we must be presently sent downe from Mexico, to Vera Cruz, and from thence to S. Iohn de Villua, and there to be shipped for Spaine, which was 65. leagues by land, with strait commandement, that vpon paine of 1000. duckets, the Masters euery one should looke traitly vnto vs, and carry vs to Spaine, and deliuer vs vnto the Inquisitors of the Holy house of Siuill, that they should put vs in the places, where we should fulfill our penances that the Archbishop of Mexico had entophned vnto vs, by his sentence there giuen. For performance of the which, we were sent downe from Mexico, to the Sea side, which was 65. leagues, with fetters vpon our feete, and there deliuered to the Masters of the ships, to be caried for Spaine, as before is said. And it was so, that the Italian, fearing that if he had presented himselfe in Spaine before the Inquisitors, that they would haue burned him, to preuent that danger, when wee were coming homeward, and were arrived at the yland of Terçera, one of the yles of the Agores, the first night that we came into the said port to an anchor, about midnight he found the meanes to get him naked out of the ship into the sea, & swam naked ashore, and so presently got him to the further side of the plaunt, where hee found a little Caruel ready to depart for Portugal, in the which he came to Lisbon, and passed into France, and so into England, where hee ended his life in the Citie of London. And I for my part kept still aboard the ship, and came into Spaine, and was deliuered to the Inquisitors of the Holy house of Siuill, where they kept me in close prison, till I had fulfilled the three yeeres of my penance. Which time being expired, I was freely put out of prison, and set at libertie: and being in the Citie of Siuill a cather of one Hugh Typton, an English marchant of great doing, by the space of one yeere, it fortuned that there came out of the Citie of Mexico, a Spaniard, called Iohn de la Barrera, that had bene long time in the Indies, and had got great summes of golde and siluer, and with one onely daughter, shipped himselfe for to come for Spaine, and by the way charnted to die, and gaue all that hee had vnto his onely daughter, whose name was Marie de la Barrera; and being arrived at the Citie of Siuill, it was my chance to marry with her. The marriage was worth to mee 2500. pounds in barres of golde and siluer, besides iewels of great price. This I thought good to speake of, to shew the goodnes of God to all them that put their trust in him, that I being brought out of the Indies, in such great misery and infamy to the world, should be provided at Gods hand in one moment, of more then in all my life before I could attaine vnto by my owne labour.

After we departed from Mexico, our S. Benitoes were set vp in the high Church of the said Citie, with our names written in the same, according to their vse and custome, which is and will be a monument and a remembrance of vs, as long as the Romish Church doth raigne in that country. The same haue bene seene since by one Iohn Chilton, and diuers others of our nation, which were left in that countrey long since, by Sir Iohn Hawkins. And because it shalbe knowne wherefore it was that I was so punished by the Clergies hande, as before is mentioned, I will in brieue words declare the same.

It is so, that being in Mexico at the table, among many principall people at dinner, they began to inquire of me being an Englishman, whether it were true, that in England they had ouerthrowen all their Churches and houses of Religion, and that all the images of the Saines of heauen that were in them were throwen downe, broken, and burned, and in some places high wayes stoned with them, and whether the English nation denied their obedience to the Pope of Rome, as they had bene certified out of Spaine by their friends. To whom I made answer, that it was so, that in deed they had in England put downe all the Religious houses of friers and monks that were in England, and the images that were in their Churches and other places were taken away, and bled there no more: for that (as they say) the making of them, and putting of them where they were adored, was cleane contrary to the expresse comendement of Almighty God, Thou shalt not make to thy selfe any grauen image, &c. and that for that cause they thought it not lawfull that they should stand in the Church, which is the house of adoration. One that was at the declaring of these words, who was my master Gonsalo Cerefo, answered and said, if it were against the comendement of God, to haue images in the Churches, that then he had spent a great deale of money in vaine, for that two yeres past he had made in the monastery of Santo Domingo, in the said citie of Mexico, an image of our Lady of pure siluer & golde, with pearles and precious stones, which cost him 7000. and odder pesos, and euery peso is 4, 8, 8, d. of our money: which indeed was true, for that I haue seene it many times my selfe where it stands. At the table was another gentleman, who presuming to defend the cause more then any other that was there, saide, that they knew well y-nough that they were made but of stockes and stones, and that to them was no worship giuen, but that there was a certaine veneration due vnto them after they were set vp in the Church, and that they were set there to a good intent: the one, for that they were books for the simple people, to make them vnderstand the glory of the saints that were in heauen, & a shap of them to put vs in remembrance to cal vpon them, to be our intercessors vnto God for vs, for that we are such miserable sinners, that we are not worthy to appeare before God, & that vsing deuotion to saines in heauen, they may obtaine at Gods hands the sooner, the thing that we demand of him. As for example, said he, imagin that a subiect hath offended his king vpon the earth in any kind of respect, is it for the party to go boldly to the king in person, & to demand pardon for his offences? No, saith he, the presumption were too great, & possibly he might be repulsed, and haue a great rebuke for his labour. Better it is for such a person to seek some priuate man neere the king in his Court, and make him acquainted with his matter, & let him be a mediator to his Maiesty for him, & for the matter he hath to do with him, and so might he the better come to his purpose, and obtaine the thing which he doeth demand: euen so saith he, it is with God and his saines in heauen: for we are wretched sinners, and not worthy to appeare nor present our selues before the Maiesty of God, to demand of him the thing that we haue need of: therefore thou hast need to be deuout, and haue deuotion to the mother of God, and the saines of heauen, to be intercessors to God for thee, and so mayest thou the better obtaine of God the thing that thou dost demand. To this I answered, & said, sir, as touching the comparison you made of the intercessors to the king, how necessary they were, I would but aske you this question. Set the case that this king you speak of, if he be so merciful, as when he knoweth that one, or any of his subiects hath offended him, he send for him to his owne towne, or to his owne house, or palace, & say vnto him, come hither, I know that thou hast offended many lawes, if thou dost know thereof, and dost repent thee of the same, with full intent to offend no more, I will forgive thy trespassse, and remember it no more: said I, if this be done by the kings owne person, what then hath this man need to go seeke friendship at any of the kings priuat seruants hands, but go to the principal, seeing that he is readier to forgive thee, then thou art to demand forgiveness at his hands? Euen so is it with our gracious God, who calleth and crieth out vnto vs throughout all the world, by the mouth of his Prophets, Apostles, and by his owne mouth, saying, Come vnto me al ye that labour and are ouer laden, and I wil refresh you: besides 1000. other offers and proffers which hee doth make vnto vs in his holy Scriptures. What then haue we need of the saines helpe that are in heauen, whereas the Lord himselfe doth so freely offer himselfe vnto vs? At which sayings, many of the hearers were astonished, and said, that by that reason, I would giue to vnderstand, that the

inuocation

inuocation of Saints was to be disanulled, and by the Lawes of God not commanded. I answered, that they were not my words, but the words of God himselfe: looke into the Scriptures your selfe, and you shall so finde it. The talke was perceiued to be prejudiciall to the Romish doctrine, and therefore it was commanded to be no more entreated of, and all remained vntought vpon, had it not bene for a villanous Portugal that was in the company, who said, Basta ser Ingles para saber todo esto y mas: who the next day, without imparting any thing to any body, went to the Bishop of Mexico, and his Pouiloz, and said, that in a place where he had bene the day before, was an Englishman, who had said, that there was no need of Saints in the Church, nor of any inuocation of Saints, vpon whose denomination I was apprehended for the same words here rehearsed, and none other thing, and thereupon was vled, as before is writtten.

Now to speake somewhat of the description of the countrey, you shall vnderstand, that the port of S. Iohn de Villua is a very little Island low by the water side, the broadest or longest part thereof not aboute a bow shoote ouer, and standeth within two furlongs of the firme land. In my time there was but one house, and a little Chappel to say Masse in, in all the Island: the side to the land wards is made by mans handes, with free-stone and grauel, and is 4. fadome deepe downe right, wherfore the great ships that come in there do ride so neere the shoare of the Island, that you may come and goe aland vpon their beake noses. They vse to put great chaines of yron in at their halsters, and an ancker to the landward, and all little ynough to moze well their shippes for feare of the Northerly winds, which come off the coast of Florida, that sometimes haue caried ships, & houses, and all away to the shoare. The king was wont to haue 20. great mightie Negroes, who did serue for nothing else, but onely to repaire the said Island, where the foule weather doeth hurt it. The Countrey all thereabout is very plaine ground, & a mile from the sea side a great wilbernes, with great quantitie of red Deere in the same, so that when the mariners of the ships are disposed, they go vpon into the wilbernes, and do kil of the same, and bring them aboord to eat, for their recreation.

Sant Iuan de Villua.

From this port to the next towne, which is called Vera Cruz, are 5. leagues almost by the Sea side, till you come within one league of the place, and then you turne vpon towards the land, into a wood, till you come to a litle riuer hard by the said townes side, which sometimes of the yere is dry without water. The towne of Vera Cruz in my time, had not past 300. households, and serued but for the folke of the ships, to buy and bring their goods aland, and deliuer it to their owners, as also the owners and their factors to receiue their goods of the Masters of the ships. This towne standeth also in a very plaine on the one side the riuer, and the other side is enuironed with much lande blowne from the sea side with the tempest of weather, many times comming vpon that coast. This towne also is subiect to great sicknes, and in my time many of the Mariners & officers of the ships did die with those diseases, there accustomed, & especially those that were not vled to the countrey, nor knew the danger thereof, but would commonly go in the Sunne in the heat of the day, & did eat fruit of the countrey with much disorder, and especially gaue themselves to womens company at their first comming: whereupon they were cast into a burning ague, of the which few escaped.

The way and distance from San Iuan de Villua to Vera Cruz, is fife leagues.

Halfe a dayes journey from Vera Cruz, towards Mexico, is a lodging of fife or sixe houses, called the Rinconado, which is a place, where is a great pinnacle made of lime and stone, fast by a riuer side, where the Indians were wont to doe their sacrifices vnto their gods, and it is plaine and low ground betwixt that and Vera Cruz, and also subiect to sicknes: but afterward halfe a dayes journey that you do begin to enter into the high land, you shall find as faire, good, and sweet countrey, as any in the world, and the farther you go, the goodlier and sweeter the countrey is, till you come to Pueblo de los Angeles, which may be some 43 leagues from Vera Cruz, which was in my time a towne of 600. households, or thereabout, standing in a goodly soile. Betweene Vera Cruz and that you shall come through many townes of the Indians, and villages, and many goodly fieldes of meadow grounds, Riueres of fresh waters, forrests, and great woods, very pleasant to behold. From Pueblo de los Angeles, to Mexico, is 20. leagues of very faire way and countrey, as before is declared. Mexico was a Citie in my time, of not aboute 1500. households of Spaniards inhabiting there, but of Indian people in the suburbs of the said city, dwelt aboute 300000. as it was thought, and many more. This City of Mexico is 65. leagues from the North sea, and 75. leagues from the South sea, so that it standeth in the midst of the maine land, betwixt the one sea and the other. It is situated in the midst of a lake of standing water, and enuironed round about with the same, fauing in many places, going out of the Citie, are many broad wayes through the said lake or water. This lake and Citie is enuironed also with great mountaines round about, which are in compasse aboute thirtie leagues, and the saide Citie and lake of standing water, doeth stand in a great plaine in the midst of it. This lake of standing water doeth proceed from the shedding of the raine, that falleth vpon the saide mountaines, and so gather themselves together in this place.

berry.

Indico.

All the whole proportion of this Citie doeth stand in a very plaine ground, and in the midst of the said Citie is a square place of a good bow shoote ouer from side to side: and in the midst of the said place is the high Church, very faire and well builded all throught, at that time not halfe finished, and round about the said place, are many faire houses built: on the one side, are the houses where Mutezuma the great king of Mexico that was, dwelt, and now there lye alwayes the viceroyes that the King of Spaine sendeth thither euery three peeres. And in my time there was for viceroy a gentleman of Castil, called Don Luis de Velasco. And on the other side of the said place, ouer against the same, is the Bishops house, very faire built, and many other houses of goodly building. And hard by the same, are also other very faire houses, built by the Marques de Valle, otherwise called Hernando Cortes, who was hee that first conquered the said Citie and Countrey, who after the said conquest which hee made with great labour and trauaile of his person, and danger of his life, and being growen great in the Countrey, the King of Spaine sent for him, saying that he had some particular matters to impart vnto him. And when he came home, he could not bee suffered to returne backe againe, as the King before had promised him. With the which, for sorrow that he tooke, he died; and this he had for the reward of his good seruice.

The said Citie of Mexico hath the streetes made very broad, and right, that a man being in the high place, at the one ende of the street, may see at the least a good mile forward, and in all the one part of the streets of the North part of their Citie, there runneth a pretie lake of very cleare water, that euery man may put into his house as much as he will, without the cost of any thing, but of the letting in. Also there is a great caue or ditch of water, that commeth through the Citie, euene vnto the high place, where come euery morning at the break of the day twentie or thirtie Canoas, or troughes of the Indians, which bring in them all maner of prouision for the citie, which is made, and groweth in the Countrey, which is a very good commoditie for the inhabitants of that place. And as for victuals in the said Citie, of beefe, mutton, and hennes, capons, quails, Guiny-cotkes, and such like, all are very good cheape: To say, the whole quarter of an ore, as much as a slaue can carry away from the Butchers, for five Tomynes, that is, five Royals of plate, which is iust two shillings and six pence, and a fat sheepe at the Butchers for three Royals, which is 18. pence and no more. Bread is as good cheape as in Spaine, and all other kinde of fruites, as apples, pearres, pomegranats, and quinces, at a reasonable rate. The Citie goeth wonderfully forward in building of frieries and Nunneries, and Chappels, and is like in time to come, to be the most populous Citie in the world, as it may be supposed. The weather is there alwayes very temperate, the day differeth but one houre of length all the yere long. The fields and the woods are alwayes greene. The woods full of popinayes, and many other kinde of birdes, that make such an harmonie of singing, and crying, that any man will reioyce to heare it. In the fields are such odoriferous smells of flowers and hearbs, that it giueth great content to the senses. About the Citie of Mexico two, three, or foure leagues off, are diuers townes of Indians, some of 4000, or 6000, households, which doe stand in such a goodly soyle, that if Christians had the inhabitation thereof, it would be put to a farther benefite. In my time were dwelling and aliue in Mexico, many ancient men that were of the conquerours at the first conquest with Hernando Cortes: for then it was about 36. peeres agoe, that the said Countrey was conquered.

About Mexico there are diuers Mines of siluer, and also in other places there about, but the principall Mines that are in all New Spaine are in Sacatecas, 80. leagues from Mexico, and the Mines of S. Martin, thirtie leagues, both to the North westward of Mexico, where is great store of gold and siluer. Also there is a place called the Miseca, fiftie leagues to the North west, which doth yeeld great store of very good silke, and Cochinilla. Wine and oyle there is none growing in the Countrey, but what commeth out of Spaine. Also there are many goodly fruits in that Countrey, whereof we haue none such, as Plantanos, Guyaues, Sapotes, Tunas, and in the wilbernes great store of blacke cherries, and other wholsome fruites. The Cochinilla is not a worme, or a flye, as some say it is, but a berrie that groweth vpon certaine bushes in the wilde field, which is gathered in time of the yeere, when it is ripe. Also the Indico that doeth come from thence to die blew, is a certaine hearbe that groweth in the wilde fieldes, and is gathered at one time of the yeere, and burnt, and of the ashes thereof, with other confections put thereunto, the said Indico is made. Balme, Salsa perilla, Cana fistula, sugar, ore hides, and many other good and seruiceable things the Countrey doeth yeeld, which are yeerely brought into Spaine, and there solde and distributed to many nations.

ROBERT TOMSON.

A voyage

A voyage made by M. Roger Bodenham to S. Iohn de Vllua in the bay of Mexico, in the yeere 1564.

In Roger Bodenham hauing a long time liued in the city of Siuil in Spaine, being there married, and by occasion thereof vsing trade and traffique to the parts of Barbary, grew at length to great losse and hindzance by that new trade begun by me in the city of Fez: whereupon being returned into Spaine, I began to call my wits about mee, and to consider with my selfe by what meanes I might recouer and renew my state: and in conclusion, by the ayde of my friends, I procured a ship called The Barke Fox, pertaining to London, of the burden of eight or nine score tunnes; and with the same I made a voyage to the West India, hauing obtained good fauour with the Spanish merchants, by reason of my long abode, and marriage in the countrey. My voyage was in the company of the Generall Don Pedro Melendes for Noua Hispania: who being himselfe appointed Generall for Terra Firma and Peru, made his sonne Generall for New Spaine, although Pedro Melendes himselfe was the principall man and director in both fleets. We all departed from Cadiz together the last day of May in the yere 1564: and I with my ship being vnder the conduct of the sonne of Don Pedro aforesayd, arriued with him in Noua Hispania, where immediatly I tooke order for the discharge of my merchandise at the port of Vera Cruz, otherwise called Villa Rica, to be transported thence to the city of Mexico, which is sixty and odde leagues distant from the sayd port of Villa Rica. In the way are many good townes, as namely, Pueblo de los Angeles, and another called Tlaxcalan. The city of Mexico hath three great causeyes to bring men to it, compassed with a lake, so that it needeth no walles, being so defended by the water. It is a city plentifull of all necessary things, hauing many faire houses, churches, and monasteries. I hauing continued in the countrey the space of nine moneths, returned againe for Spaine with the Spanish fleet, and deliuered the merchandise and siluer which I had in the ship into the Contratacion house, and there receiued my freight, which amounted outwards and homewards to the value of 13000 ducats and more. I obserued many things in the time of my abode in Noua Hispania, as well touching the commodities of the countrey as the maners of the people both Spanyards and Indians: but because the Spanish histories are full of those obseruations, I omit them, and referre the readers to the same: onely this I say, that the commodity of Cochinilla groweth in greatest abundance about the towne of Pueblo de los Angeles, and is not there woorth above forty pence the pound.

20 new trade begun in the city of Fez by Roger Bodenham.

The place where Cochinilla groweth, and the price thereof.

A notable discourse of M. Iohn Chilton, touching the people, maners, mines, cities, riches, forces, and other memorable things of New Spaine, and other prouinces in the West Indies, seene and noted by himselfe in the time of his trauels, continued in those parts, the space of seuentene or eightene yeeres.

In the yeere of our Lord 1561, in the moneth of Iuly, I Iohn Chilton went out of this city of London into Spaine, where I remained for the space of seuen yeeres, & from thence I sailed into Noua Hispania, and so trauelled there, and by the South Sea, vnto Peru, the space of seuentene or eightene yeeres: and after that time expired, I returned into Spaine, and so in the yere 1586 in the moneth of Iuly, I arriued at the aforesayd city of London; where perusing the notes which I had taken in the time of my trauell in those yeeres, I haue set downe as followeth.

In the yeere 1568, in the moneth of March, being desirous to see the world, I embarked my selfe in the bay of Cadiz in Andalusia, in a shippe bound for the Isles of the Canaries, where she tooke in her lading, & set forth from thence for the voyage, in the moneth of Iune, the same yere. Within a moneth after, we fell with the Isle of S. Domingo, and from thence directly to Noua Hispania, and came into the port of S. Iohn de Vllua, which is a litle Island standing in the sea, about two miles from the land, where the king mainteineth about 50 souldiers, and captaines, that keepe the forts, and about 150 negroes, who all the yeere long are occupied in carping of stones for building, & other vses, and to helpe to make fast the ships that come in there, with their cables. There are built two bulwarkes at each end of a wall, that standeth likewise in the sayde Island, where the shippes vse to ride, made fast to the sayd wall with their cables, so neere, that a man may leape ashore. From this port I iourneyed by land to a towne called Vera Cruz, standing by a

riuers side, where all the factours of the Spanish merchants dwell, which receiue the goods of such ships as come thither, and also lade the same with such treasure and merchandize as they returne backe into Spaine. They are in number about foure hundred, who onely remaine there, during the time that the Spanish fleet dischargeth, and is laden againe, which is from the end of August to the beginning of April following. And then for the vnwholesomnesse of the place they depart thence fixeene leagues further by within the countrey, to a towne called Xalapa, a very healthfull soile. There is neuer any woman deliuered of childe in this port of Vera Cruz: for so soone as they perceiue themselves conceiued with childe, they get them into the countrey, to auoid the perill of the infected aire, although they vse euery morning to drine thow the towne about two thousand head of cattell, to take away the ill vapours of the earth. From Xalapa seuen leagues I came to another place, named Perota, wherein are certaine houses builded of straw, called by the name of ventas, the inhabitants whereof are Spaniards, who accustome to harbour such traouellers as are occasioned to iourney that way by into the land. It standeth in a great wood of Pine and Cedar trees, the soile being very colde, by reason of store of snow which lieth on the mountaines there all the yere long. There are in that place an infinite number of deere, of bignesse like unto great mules, hauing also homes of great length. From Perota nine leagues, I came to the Fuentes of Ozumba, which fuentes are springs of water issuing out of certaine rocks into the midst of the high wayes, where likewise are certaine ranges, and houses, for the vses before mentioned. Eight leagues off from this place I came to the city of the Angels, so called by that name of the Spaniards, which inhabit there to the number of a thousand, besides a great number of Indians. This city standeth in very plaine fields, hauing neere adioyning to it many sumptuous cities, as namely the city of Tlaxcalla, a city of two hundred thousand Indians, tributaries to the king, although he exacteth no other tribute of them then a handfull of wheat a piece, which amounteth to thirteene thousand hanneses yeerely, as hath appeared by the kings books of account. And the reason why he contenteth himselfe with this tribute, onely for them, is, because they were the occasion that he tooke the city of Mexico, with whom the Tlaxcallians had warre at the same time when the Spaniards came into the countrey. The gouernour of this city is a Spaniard, called among them The Alcalde mayor, who administred chiefest causes of iustice both unto the Christians and Indians, referring smaller and lighter vices, as drunkennesse and such like, to the iudgement and discretion of such of the Indians as are chosen euery yere to rule amongst them, called by the name of Alcaldes. These Indians from foureteene yeres olde bywards, pay unto the king for their yerely tribute one ounce of siluer, and an hannege of maiz, which is valued among them commonly at twelue reals of plate. The widowes among them pay halfe of this. The Indians both of this city, and of the rest, lying about Mexico, goe clothed with mantles of linnen cloth made of cotton wooll, painted thowout with works of diuers and fine colours. It is distant from the city of the Angels foure leagues to the Northward, & foureteene from Mexico. There is another city a league from it, called Chetula, consisting of more then sixty thousand Indians, tributaries, and there dwell not about twelue Spaniards there. From it, about two leagues, there is another, called Acazingo, of about fifty thousand Indians, and about eight or twelue Spaniards, which standeth at the foot of the Vulcan of Mexico, on the East side. There are besides these, three other great cities, the one named Tepiaca, a very famous city, Waxazingo, and Tichamachalcho: all these in times past belonged to the kingdome of Tlaxcalla: and from these cities they bring most of their Cochinilla into Spaine. The distance from the city of the Angels, to the city of Mexico is twenty leagues. This city of Mexico is the city of greatest fame in all the Indies, hauing goodly and costly houses in it, builded all of lime and stone, and seuen streets in length, and seuen in breadth, with riuers running thow euery second street, by which they bring their prouision in canoas. It is situated at the foot of certaine hilles, which containe in compasse by estimation about twenty leagues, compassing the sayd city on the one side, and a lake which is foureteene leagues about on the other side. Upon which lake there are built many notable and sumptuous cities, as the city of Tescuco, where the Spaniards built five frigats, at that time when they conquered Mexico, and where also Fernando Cortes made his abode five or six moneths in curing of the sicknesse of his people, which they had taken at their comming into the countrey. There dwell in this city about sixty thousand Indians, which pay tribute to the king. In this city the sayd Fernando built the finest church that euer was built in the Indies, the name whereof is S. Peters.

After I had continued two yeres in this city, being desirous to see further the countreys, I imploied that which I had, and tooke my voyage towards the prouinces of California, in the which was discovered a certaine countrey, by a Biscaine, whose name was Diego de Guiana, and

and called it after the name of his countrey, New Biscay, where I solde my merchandise for exchange of silver, for there were there certaine rich mines discovered by the aforesayd Biskaine. Going from Mexico I directed my voyage somewhat toward the Southwest, to certaine mines, called Tamascaltepec, and so travelled forward the space of twenty dayes thorow desert places uninhabited, till I came to the valley of S. Bartholomew, which ioyneth to the province of New Biscay. In all these places the Indians for the most part go naked, and are wilde people. Their common armour is bowes and arrowes: they vse to eate up such Christians as they come by. From hence departing, I came to another province named Xalisco, and from thence to the port of Nauidad, which is 120 leagues from Mexico, in which port arrive alwayes in the moneth of April, all the ships that come out of the South sea from China, and the Philippinas, and there they lay their merchandise ashore. The most part whereof is mantles made of Cotton wooll, Ware, and fine platters gilded, made of earth, and much golde.

The next Summer following, being in the yeere 1570 (which was the first yeere that the Popes Bulls were brought into the Indies) I undertooke another voyage to wards the province of Sonsonate, which is in the kingdome of Guatimala, whither I caried diuers merchandize of Spaine, all by land on mules backs. The way thitherward from Mexico is to the city of the Angels, and from thence to another city of Christians 80 leagues off, called Guaxaca, in which there dwell about 50 Spaniards, and many Indians. All the Indians of this province pay their tribute in mantles of Cotton wooll, and Cochinilla, whereof there groweth abundance thorowout this countrey. Neere to this place there lieth a port in the South sea, called Aguatulco, in the which there dwell not about three or foure Spaniards, with certaine Negroes, which the king mainteineth there: in which place Sir Francis Drake arrived in the yeere 1579, in the moneth of April, where I lost with his being there about a thousand buckets, which he tooke away, with much other goods of other merchants of Mexico from one Francisco Gomes Rangifa, factor there for all the Spanish merchants that then traded in the South sea: for from this port they vse to imbarke all their goods that goe for Peru, and to the kingdome of Honduras. From Guaxaca I came to a towne named Nixapa, which standeth upon certaine very high hilles in the province of Sapotecas, wherein inhabit about the number of twenty Spaniards, by the King of Spaines commandement, to keepe that country in peace; for the Indians are very rebellious: and for this purpose hee bestoweth on them the townes & cities that be within that province. From hence I went to a city called Tecoaantepec, which is the farthest towne to the Eastward in all Noua Hispania, which sometime did belong to the Marques de Valle, and because it is a very fit port, standing in the South sea, the king of Spaine, upon a rebellion made by the sayd Marques against him, tooke it from him, and doth now possesse it as his owne. Neere in the yeere 1572 I saw a piece of ordinance of brasse, called a Demy culuerin, which came out of a ship called the Iesus of Lubec, which captaine Hawkins left in S. Iohn de Vllua, being in fight with the Spaniards in the yeere 1568; which piece they afterwards caried 100 leagues by land ouer mighty mountaines to the sayd city, to be embarked there for the Philippinas. Leaving Tecoaantepec, I went still along by the South sea about 150 leagues in the desolate province of Soconusco, in which province there groweth cacao, which the Christians carry from thence into Noua Hispania, for that it will not grow in any colde countrey. The Indians of this countrey pay the king their tribute in cacao, giuing him foure hundred cargas, and euery carga is 24000 almonds; which carga is woorth in Mexico thirty pieces of reals of plate. They are men of great riches, and withall very proud: and in all this province thorowout, there dwell not twenty Christians. I travelled thorow another province called Suchetepec; and thence to the province of Guasacapan: in both which provinces are very few people, the biggest towne therein hauing not about two hundred Indians. The chiefeest merchandise there, is cacao. Hence I went to the city of Guatimala, which is the chiefe city of all this kingdome: in this city doe inhabit about 80 Spaniards: and here the king hath his gouernors, & counsell, to whom all the people of the kingdome repaire for iustice. This city standeth from the coast of the South sea 14 leagues within the land, and is very rich, by reason of the golde that they fetch out of the coast of Veragua. From this city to the Eastward 60 leagues lieth the province Sonsonate, where I solde the merchandize I caried out of Noua Hispania. The chiefeest city of this province is called S. Saluador, which lieth 7 leagues from the coast of the South sea, and hath a port lying by the sea coast, called Acaxutla, where the ships arrive with the merchandize they bring from Noua Hispania; and from thence Iade backe againe the cacao: there dwell heere to the number of threescore Spaniards. From Sonsonate I travelled to Nicoia, which is in the kingdome of Nicaragua, in which port the king buildeth all the shipping that trauell out of the Indies to the Malicos. I went forward from thence

thence to Costa rica, where the Indians both men and women go all naked, and the land lieth be-
tweene Panama, and the kingdome of Guatimala: and for that the Indians there live as warri-
ers, I durst not passe by land, so that here in a towne called S. Salvador I bestowed that which I
caried in annile (which is a kinde of thing to die blew withall) which I caried with me to the
port of Cauillos, lying in the kingdome of Honduras, which port is a mighty huge gulfe, and at
the comming in on the one side of it there lieth a towne of little force without ordinance of any o-
ther strength, hauing in it houses of straw: at which towne the Spanyards vse yeerely in the mo-
neth of August to unlade foure ships which come out of Spaine laden with rich merchandise, and
receiue in heere againe their lading of a kinde of merchandise called Annile and Cochinilla (al-
though it be not of such value as that of Noua Hispania) and silver of the mines of Tomaangua,
and golde of Nicaragua, and hides, and Salsa perilla, the best in all the Indies: all which merchan-
dize they retorne, and depart from thence alwayes in the moneth of April following, taking their
course by the Island of Iamaica, in which Island there dwell on the West side of it certeine Spa-
nyards of no great number. From this place they go to the cape of S. Anthony, which is the ve-
termost part of the Westward of the Island of Cuba, and from thence to Hauana lying hard by,
which is the chiefest port that the king of Spaine hath in all the countreys of the Indies, and of
greatest importance: for all the ships, both from Peru, Honduras, Porto rico, S. Domingo, Ia-
maica, and all other places in his Indies, arrive there in their retorne to Spaine, for that in this
port they take in victuals and water, and the most part of their lading: here they meet from all the
foresayd places alwayes in the beginning of May by the kings commandement: at the entrance
of this port it is so narrow, that there can scarce come in two ships together, although it be aboue
fye sadome deepe in the narrowest place of it. In the North side of the comming in there stand-
eth a tower, in which there watcheth every day a man to descrie the sailes of ships which hee can
see on the sea; and as many as he discouereth, so many banners he setteth upon the tower, that the
people of the towne (which standeth within the port about a mile from the tower) may under-
stand thereof. Under this tower there lieth a sandy shoze, where men may easily go aland; and by
the tower there runneth a hill along by the waters side, which easily with small floze of ordinance
subdueth the towne and port. The port within is so large that there may easily ride a thousand
saile of ships without anker or cable, for no winde is able to hurt them. There inhabit within the
towne of Hauana about three hundred Spanyards, and about threescore souldiers, which the king
mainteineth there for the keeping of a certeine castle which hee hath of late erected, which hath
planted in it about twelue pieces of small ordinance, and is compassed round with a small ditch,
whereof at their pleasure they may let in the sea. About two leagues from Hauana there lieth
another towne called Wanabacoa, in which there is dwelling about an hundred Indians, and
from this place 60 leagues there lieth another towne named Bahama, situate on the North side of
the Island. The chiefest city of this Island of Cuba (which is aboue 200 leagues in length) is
also called Sant lago de Cuba, where dwelleth a bishop & about two hundred Spanyards; which
towne standeth on the South side of the Island about 100 leagues from Hauana. All the trade
of this Island is cattell, which they kill onely for the hides that are brought thence into Spaine;
for which end the Spanyards maineine there many negroes to kil their cattell, and foster a great
number of hogs, which being killed, and cut into small pieces, they dry in the Sun, and so make
it poulison for the ships which come for Spaine.

Hauing remained in this Island two moneths, I tooke shipping in a frigate, and went ouer to
Nombre de Dios, and from thence by land to Panama, which standeth vpon the South sea.
From Nombre de Dios to Panama is 17 leagues distance: from which towne there runneth a
riuer which is called the riuer of Chagre, which runneth with in 5 leagues of Panama, to a place
called Cruzes, thozow which riuer they carry their goods, and disimbarke them at the sayd Cru-
zes, and from thence they are conueyed on mules backs to Panama by land; where they againe
imbarke them in certeine small shippes in the South sea for all the coast of Peru. In one of these
ships I went to Porosfi, and from thence by land to Cusco, and from thence to Paica.

Here I remained the space of seuen moneths, and then returned into the kingdome of Guati-
mala, and arrived in the prouince of Nicolia, and Nicaragua. From Nicaragua I travelled by
land to a prouince called Nicamula (which lieth toward the North sea in certaine high moun-
taines) for that I could not passe thozow the kingdome of Guatimala at that time for waters,
where with all the Low countreys of the prouince of Soconusco, lying by the South sea, are
drowned with the raine that falleth aboue in the mountaines, enduring alwayes from April to
September: which season for that cause they call their Winter. From this prouince I came
into another called De Vera Paz, in which the chiefest city is also called after that name, where
there

there dwelleth a bishop and about forty Spaniards. Among the mountaines of this countrey toward the North sea, there is a prouince called La Cádona, where are Indian men of war which the king can not subdue, for that they haue townes and forts in a great lake of water aboue in the sayd mountaines: the most part of them goe naked, and some weare mantles of cotton wooll. Distance from this about 80 leagues, I came into another prouince called the prouince of Chiapa, wherein the chiefest city is called Sacaelan, where there dwelleth a bishop and about an hundred Spaniards. In this countrey there is great store of Cotton wooll, wherof the Indians make fine linnen cloth, which the Christians buy and cary into Noua Hispania. The people of this prouince pay their tribute to the king all in Cotton wooll and Feathers. Foureteene leagues from this city there is another called Chiapa, where are the finest gemmets in all the Indies, which are caried hence to Mexico, 300 leagues from it. From this city I travelled still thorow hilles and mountaines, till I came to the end of this prouince, to a hill called Ecatepec, which in English signifieth The hill of winde: for that they say, it is the highest hill that euer was discovered: for from the top of it may be discovered both the North and the South seas; and it is in height supposed to be nine leagues. They which trauell ouer it, lie alwayes at the foot of it ouer night, and begin their iourney about midnight, to trauell to the top of it before the Sunne rise the next day, because the winde bloweth with such force after wards, that it is impossible for any man to goe up: from the foot of this hill to Tecoahteppec, the first towne of Noua Hispania, are about fiftene leagues. And so from hence I iourneyed to Mexico.

By and by after I came to Mexico (which was in the yere 1572) in the company of another Spaniard, which was my companion in this iourney, we went together toward the prouince of Panuco, which lieth vpon the coast of the North sea, and within three dayes iourney we entered a city called Mestilan, where there dwelt twelue Spaniards: the Indian inhabitants there were about thirty thousand. This city standeth vpon certaine hie mountaines, which are very thicke planted with townes very holesome and fruitfull, hauing plentifull fountaines of water running thorow them. The high wayes of these hilles are all set with fruits, and trees of diuers kindes, and most pleasant. In euery towne as we passed thorow, the Indians presented vs with victuals. Within twenty leagues of this place there is another city called Clanchinoltepec, belonging to a gentleman, where there inhabit about fourty thousand Indians; and there are among them eight or nine friers of the Order of Saint Augustine, who haue there a Monastery. Within three dayes after we departed from this place, and came to a city called Guaxutla, where there is another Monastery of friers of the same Order: there dwell in this towne about twelue Spaniards. From this place for wards beginneth a prouince called Gualtecan, which is all plaine grounds without any hilles. The first towne we came vnto is called Tancuyabo, in which there dwell many Indians, high of stature, hauing all their bodies painted with blew, and weare their haire long downe to their knees, tied as women vse to doe with their haire-laces. When they goe out of their doozes, they cary with them their bowes and arrowes, being very great archers, going for the most part naked. In those countreys they take neither golde nor silver for exchange of any thing, but onely Salt, which they greatly esteeme, and vse it for a principall medicine for certaine woymes which breed in their lips and in their gummes. After nine dayes trauell from this place, we came to a towne called Tampice, which is a port towne vpon the sea, wherein there dwell, I thinke, forty Christians, of which number whilst wee abode there, the Indians killed foureteene, as they were gathering of Salt, which is all the trade that they haue in this place: it standeth vpon the entrie of the riuer of Panuco, which is a mighty great riuer; and were it not for a land that lieth at the mouth of it, ships of five hundred tunne might goe by into it about three score leagues. From hence we went to Panuco, foureteene leagues from Tampice, which in times past had bene a goodly city, where the king of Spaine had his gouernour: but by reason that the Indians there destroyed the Christians, it lieth in a maner waste, containing in it not a boue tenne Christians with a priest. In this towne I fell sicke, where I lay one and forty dayes, hauing no other sustenance then fruit and water, which water I sent for about sixe leagues off within the countrey. Here I remained till my companion came to me, which had departed from me another way, retaining in my company onely a slaue, which I brought with me from Mexico. And the last day in Easter weeke my companion came to me, finding me in a very weake state, by reason of the vnholesomenesse of the place. Notwithstanding my weakenesse, I being set on an horse, and an Indian behinde mee to holde mee, wee went forward on our voyage all that day till night. The next day in the morning we passed ouer the riuer in a canoa; and being on the other side, I went my selfe before alone: and by reason there met many wayes traied by the wilde beasts, I lost my way, and so travelled thorow a great wood about two leagues: and at length

fell into the hands of certaine wilde Indians, which were there in certaine cottages made of straw; who seeing me, came out to the number of twenty of them, with their bowes and arrowes, and spake vnto mee in their language, which I vnderstood not: and so I made signes vnto them to helpe mee from my horse; which they did by commandement of their lord, which was there with them; and lighted downe. They caried me vnder one of their cottages, and layed me vpon a mat on the ground: and perceiuing that I could not vnderstand them, they brought vnto mee a little Indian wench of Mexico, of fifteene or sixteene yeeres of age, whom they commanded to aske me in her language from whence I came, and for what intent I was come among them: for (sayth she) doest thou not know Christian, how that these people will kill and eat thee? To whom I answered, let them doe with me what they will; heere now I am. Shee replied, saying, thou mayest thanke God thou art leane; for they feare thou hast the pocks: otherwise they would eat thee. So I presented to the king a little wine which I had with me in a bottle; which he esteemed aboue any treasure: for for wine they will sell their wiues and children. Afterwards the wench asked me what I would haue, and whether I would eat any thing. I answered that I desired a little water to drinke, for that the countrey is very hote: and shee brought me a great Venice glasse, gilded, full of water. And maruelling at the glasse, I demanded how they came by it. Shee tolde me that the Casique brought it from Shallapa, a great towne distant 30 leagues from this place on the hilles, whereas dwelt certeine Christians, and certeine friers of the Order of S. Augustine, which this Casique with his people on a night slew; and burning the friers monastery; among other things reserued this glasse: and from thence also brought me. Hauing now bene conuersant with them about three or foure houres, they bid her aske me if I would goe my way. I answered her, that I desired nothing els. So the Casique caused two of his Indians to leade me forward in my way; going before me with their bowes and arrowes, naked, the space of three leagues, till they brought me into an high way: and then making a signe vnto me, they signified that in short time I should come to a towne where Christians inhabited, which was called S. Iago de los valles, standing in plaine fields, walled about with a mud wall: the number of the Christians that dwelt therein, were not aboue foure or five and twenty, vnto which the king of Spaine giueth Indians and townes, to keepe the countreys subiect vnto him. Heere the Christians haue their mighty mules, which they carry for all the parts of the Indies, and into Peru, for that all their merchandize are caried by this meane by land. In this towne aforesayd, I found my company which I had lost before, who made no other account of me but that I had bene slaine: and the Christians there likewise maruelled to heare that I came from those kinde of Indians a-live, which was a thing neuer seene nor heard of before: for they take a great pride in killing a Christian, and to weare any part of him where he hath any haire growing, hanging it about their necks, and so are accounted for valiant men. In this towne I remained eightene dayes, till I recovered my health, and in the meane space there came one Don Francisco de Pago, whom the viceroy Don Henrico Manriques had sent for captaine generall, to open and discover a certeine way from the sea side to the mines of Sacatecas, which were from this place 160 leagues, for to transport their merchandize by that way, leauing the way by Mexico, which is seuen or eight weeks trauell. So this captaine tooke me and my company, with the rest of his souldiers, to the number of forty, which he had brought with him, and five hundred Indians, which we tooke out of two townes in this prouince called Tanchipa, and Tamaclipa, all good archers, and naked men, and went thence to the riuer de las Palmas, which is of great bignesse, parting the kingdome of Noua Hispania and Florida: and going still along by this riuer the space of three dayes, seeking passage to passe over; and finding none, we were at length inforced to cut timber to make a balsa or raft, which when we had made, we sate on it, the Indians swimming in the water, and thrusting it before them to the other side. Within thirty dayes after, traueilling thorow woods, hilles, and mountaines, we came to the mines of Sacatecas, which are the richest mines in all the Indies, and from thence they fetch most silver: at which mines there dwelt aboue three hundred Christians: and there our captaine gaue vs leaue to depart. So we came to the balley of S. Michael toward Mexico; and from thence to Pueblo nuevo; and from that place to the prouince of Mechucan, after which name the chiefeest city of that place is called, where there dwelles a bishop, and aboue an hundred Spaniards in it: it aboundeth with all kind of Spanish fruits, and hath woods full of nut trees, and wild vines. Heere are many mines of copper, and great store of cattell. It lieth 60 leagues from Mexico, whither we came within foure dayes after. The Indians of this countrey are very mighty and big men.

Afterwards I returned another way to the prouince of Sonsonate by Vera cruz, and so to Rio Aluarado, and from thence to the prouince of Campeche, which lieth on the South side of the bay of

Shallapa.

of Mexico: the chiefe towne of this prouince is called Merida, in which is a bishop and almost 100 Spaniards. The Indians of this prouince pay all their tribute in mantles of cotton wooll and cacao. There is no port in all this prouince for a ship of 100 tun to ride in, but onely in the riuer of Tabasco, by which riuer this city of Merida standeth. The chiefest merchandize which they lade there in small frigats, is a certeine wood called campeche, (where with they vse to die) as also hides and annile. By this there lieth the prouince of Iucatan, nere the Honduras by the North sea coast, where there is also another bishop, and a towne likewise named Iucatan, where there dwell a few Spaniards. They haue no force at all in all this coast to defend themselves withall, saue only that the land is low, and there is no port to receiue any shipping, vnlesse they be frigats, which cary from thence to the port of S. Iohn de Vllua, ware, cacao, hony, and also mantles of cotton wooll, whereof they make there great store, and of which kind of merchandize there is great trade thence to Mexico: of the same also they pay their tribute to the king.

The king hath tribute brought him yerely out of the Indies into Spaine betweene nine and ten millions of gold and siluer: for he receiueth of euery Indian which is subiect vnto him (excepting those which do belong to the Incommenderos, which are the children of those Spaniards, who first conquered the land, to whom the king gaue and granted the gouernment of the cities and townes subdued for three liues) twelue reals of plate, and a hannege of maiz, which is a wheat of the countrey, (five of them making a quarter of English measure) and of euery widow woman he hath five reals, & halfe a hannege of maiz. And so if any Indian haue twenty children in his house, he payeth for euery one of them, being aboue fiftene yeres old, after that rate. This Wheat being duely brought to the gouernour of euery prouince and city, is sold in Mexico by the kings gouernours there euery yeere; so that the money receiued for it, is put into the kings Treasure there, and so is yerely caried from thence into Spaine. Of the Spaniards which are owners of the mines of gold and siluer, he receiueth the fift part of it, which he calleth his quintas, which being taken out of the heape, there is his armes set on it; for otherwise it may not be brought out of the land into Spaine, vnder paine of death. The marke of siluer, which is eight ounces, when it cometh out of the mines, not hauing the kings seale vpon it, is woorth three and forty reals of plate, and so it is current: and when they will bring it for Spaine, they cary it to the kings Treasure house, where his seale is set vpon it; and so it is raised in value thereby to the scope and foure reals of plate: and so the king hath for his custome of euery marke of plate one and twentie reals.

From the yere of 1570, which was the yeere that the Popes bulls came into the Indies, as is afore mentioned, he hath receiued both of the Indians which are tributaries vnto him, and also of all others belonging to the Incommenderos, of euery one being aboue twelue yeeres of age, foure reals of euery bull. Also they cary other pardons with them into the Indies, for such as be dead, although an hundred yeres before the Spaniards came into the countrey: which pardons the friers in their preachings perswaded the poore Indians to take, telling them that with giuing foure reals of plate for a Masse, they would deliuer their soules out of purgatory. Of the Christians likewise dwelling there he hath fourteene reals for euery bull: and there be certeine bulls brought thither for the Christians besides the former, which serue for pardoning all such faults wherein they haue trespassed either against the king, by keeping backe his customes, or one against another by any other iniury; for euery hundred crownes whereof a mans conscience doth accuse him that he hath deceiued the king or any other, he must giue ten for a bull, and so after that rate for euery hundred which he hath any way stolen, and so is pardoned the fault. The reuenue of his bulls after this maner peeldeth vnto his treasury yerely aboue threemillions of gold, as I haue bene credibly informed, although of late both the Spaniards and Indians do refuse to take the bulls; for that they perceiue he doth make a yerely custome of it: onely ech Indian taketh one pardon for all his householde, (whereas in former time euery Indian vled to take one for euery person in his house) and teareth the same into small pieces, and giueth to euery one of his householde a little piece, saying thus, they need now no more, seeing in that which they bought the yeere before they had aboue ten thousand yeres pardon. These pieces they sticke vp in the wall of the houses where they lie. Both the Christians & Indians are weary with these infinite taxes and customes, which of late he hath imposed vpon them, more then in the yeeres before: so as the people of both sorts did rebell twise in the time that I was among them, and would haue set vp another king of themselves: for which cause the king hath commanded vpon paine of death, that they should not plant either wine or oile there, but should alwayes stand in need of them to be brought out of Spaine, although there would more grow there in foure yeeres, then there groweth in Spaine in twenty, it is so fertile a countrey.

The greatnesse of the king of Spaines tribute out of the West India.

The quintas

The marke of siluer is 64 reals of plate.

The reuenue of the kings bulls and pardons came yerely to thys millions.

Rebellions in Nova Hispania by too great exactions.

The reasons
which moue
the kings of
Spaine to forbid
foyer traffike
in the West In-
dies.

And the king to keepe the countrey alwayes in subiection, and to his owne vse, hath streightly provided by lawe, vpon paine of death, and losse of goods, that none of these countreys should traffique with any other nation, although the people themselues doe much now desire to trade with any other then with them, and would vndoubtedly doe, if they feared not the perill ensuing thereupon.

Maguis,

About Mexico, and other places in Noua Hispania, there groweth a certeine plant called magueis, which yeeldeth wine, vineger, honny, and blacke sugar, and of the leaues of it dried they make hempe, ropes, shooes which they vse, and tiles for their houses: and at the ende of euery leafe there groweth a sharpe point like an awle, where with they vse to boze or pearce thozow any thing.

Thus to make an end, I haue heere set downe the summe of all the chiefest things that I haue obserued and noted in my seuateene yeres trauell in those parts.

A relation of the commodities of Noua Hispania, and the maners of the inhabitants, written by Henry Hawks merchant, which liued five yeeres in the sayd countrey, and drew the same at the request of M. Richard Hakluyt Esquire of Eton in the county of Hereford, 1572.

S. Iohn de Vllua,

Saint Iohn de Vllua is an Island not high aboue the water, where as now the Spanyards vpon S. Iohn Hawkins being there, are in making a strong fort. In this place all the ships that come out of Spaine with goods for these parts, do vnlade: for they haue none other port so good as this is. The comming into this place hath three chanelles, and the best of all is the Northmost, which goeth by the maine land: and on euery side of the chanelles there are many small rocks as big as a small barrell: they wil make men stand in doubt of them, but there is no feare of them. There is another Island there by, called The Island of sacrifices, where as the Spanyards did in times past vnlade their goods: and for that, they say, there are vpon it spirits or deuils, it is not frequented as it hath bene. In these places the North wind hath so great dominion, that oftentimes it destroyeth many ships and barks. This place is giuen to great sicknesse. These Islands stand in 18 degrees and a halfe, and about the same is great plenty of fish.

Spirits.

Vera Cruz,

Five leagues from S. Iohn de Vllua is a faire riuer: it lieth North west from the port, and goeth to a little towne of the Spanyards called Vera Cruz, and with small vessels or barks, which they call frigats, they carpy all their merchandize which cometh out of Spaine, to the said towne: and in like maner bring all the gold, siluer, cochinita, hides, and all other things that the shippes carpy into Spaine vnto them. And the goods being in Vera Cruz, they carpy them to Mexico, and to Pueblo de los Angeles, Sacatecas, and Saint Martin, and diuers other places so farre within the countrey, that some of them are 700 miles off, and some moze, and some lesse, all vpon horses, mules, and in waines drawen with oxen, and in carres drawen with mules.

In this towne of Vera Cruz within these twenty yeres, when women were brought to bed, the children new borne incontinently died; which is not so now in these dayes, God be thanked.

Musquito.

This towne is inclined to many kinde of diseases, by reason of the great heat, and a certeine gnat or flie which they call a musquito, which biteth both men and women in their sleepe; and as soone as they are bitten, incontinently the flesh swelleth as though they had bene bitten with some venomous woyme. And this musquito or gnat doth most follow such as are newly come into the countrey. Many there are that die of this annoyance.

Popinians.

Ponkeys.

This towne is situated vpon the riuer aforesayd, and compassed with woods of diuers maners and sorts, and many fruits, as oranges and limons, guaiues, and diuers others, and birds in them, popinians both small and great, and some of them as big as a rauens, and their taitles as long as the taitle of a fozant. There are also many other kinde of birds of purple colour, and small monkeys, maruellous proper.

Wheat thwile
in a pere.

This hote or sicke countrey continueth five and forty miles towards the city of Mexico; and the five and forty miles being passed, then there is a temperate countrey, and full of tillage: but they water all their cozne with riuers which they turne in vpon it. And they gather their Wheat thwile a pere. And if they should not water the ground where as their cozne is sown, the country is so hote it would burne all.

Tlaxcalla a free
city.

Before you come to Mexico, there is a great towne called Tlaxcalla, which hath in it about 16000 households. All the inhabitants thereof are free by the kings of Spaine: for these were the occasion that Mexico was woonne in so short time, and with so little losse of men. Where-
foze

fore they are all gentlemen, and pay no tribute to the king. In this towne is all the cochinitla growing.

Mexico is a great city; it hath more then fifty thousand households, whereof there are not past five or six thousand houses of Spaniards: all the other are the people of the countrey, which live vnder the Spaniards lawes. There are in this city stately buildings, and many monasteries of friers and nunnnes, which the Spaniards haue made. And the building of the Indians is somewhat beautifull outwardly, and within full of small chambers, with very small windowes, which is not so comly as the building of the Spaniards. This city standeth in the midst of a great lake, and the water goeth thorow all or the most part of the streets, and there come small boats, which they call canoas, and in them they bring all things necessary, as wood, and coales, and grasse for their horses, stones and lime to build, and come.

This city is subiect to many earthquakes, which oftentimes cast downe houses, and kill people. This city is very well provided of water to drinke, and with all maner of victuals, as fruits, flesh and fish, bread, hennes and capons, Guiny cocks and hennes, and all other fowle. There are in this city every weeke three Faires or Markets, which are frequented with many people, aswell Spaniards as the people of the countrey. There are in these Faires or Markets all maner of things that may be inuented, to sell, and in especiall, things of the countrey. The one of these Faires is vpon the Monday, which is called S. Hypolitos faire, and S. James his faire is vpon the Thursday, and vpon Saturday is S. Johns faire. In this city is alwayes the kings gouernour or viceroy, and there are kept the Termes and Parliaments. And although there be other places of iustice, yet this is aboue all: so that all men may appeale vnto this place, and may not appeale from this city, but onely into Spaine before the king: and it must be for a certeine summe: and if it be vnder that summe, then there is no appellacion from them. Many riuers fall into this lake which the city standeth in: but there was neuer any place found whither it goeth out.

The Indians know a way to drowne the city, and within these thre yeeres they would haue practised the same: but they which should haue bene the doers of it were hanged: and euer since the city hath bene well watched both day and night, for feare least at some time they might be deceiued: for the Indians loue not the Spaniards. Round about the towne there are very many gardens and orchards of the fruits of the countrey, maruellous faire, where the people haue great recreation. The men of this city are marvellous vicious; and in like maner the women are dishonest of their bodie, more then they are in other cities or townes in this countrey.

There are neere about this city of Mexico many riuers and standing waters, which haue in them a monstrous kinde of fish, which is marvellous rauening, and a great deuourer of men and cattell. He is wont to sleepe vpon the dyke land many times, and if there come in the meane time any man or beast and wake or disquiet him, he speedeth well if he get from him. He is like vnto a serpent, sauing that he doth not slie, neither hath he wings.

There is West out of Mexico a port to wne which is on the South sea, called Puerto de Acapulco, where as there are shippes which they haue ordinarily for the nauigation of China, which they haue newly found. This port is threescore leagues from Mexico.

There is another port to wne which is called Culiacan, on the South sea, which lieth West and by North out of Mexico, and is 200 leagues from the same: and there the Spaniards made two shippes to goe seeke the streight or gulf, which, as they say, is betweene the Newfoundland and Groenland; and they call it the Englishmens streight: which as yet was neuer fully found. They say, that streight lieth not farre from the maine land of China, which the Spaniards account to be marvellous rich.

Toward the North from Mexico there are great store of silver mines. There is greater quantitie of silver found in these mines toward the North, then there is in any other parts: and as the most men of experience sayde alwayes, they finde the richer mines the more Northerly. These mines are commonly vpon great hilles and stony ground, marvellous hard to be laboured and wrought.

Out of some of the mines the Indians finde a certeine kinde of earth of diuers colours, where with they paint themselves in times of their dances, and other pastimes which they vse.

In this countrey of Noua Hispania there are also mines of golde, although the golde be commonly found in riuers, or very neere vnto riuers. And now in these dayes there is not so much golde found as there hath bene heretofore.

There are many great riuers, and great store of fish in them, not like vnto our kindes of fish. And there are marvellous great woods, and as faire trees as may be seene, of diuers sorts, and especially firre trees, that may mast any shippe that goeth vpon the sea, oaks and pineapples, and

another tree which they call Mesquiquez : it beareth a fruit like vnto a peascod, marvellous sweet, which the wilde people gather, and keepe it all the yere, and eat it in stead of bread.

Seuen cities
by witchcraft
not found of
the seekers.

The Spanyards haue notice of seuen cities which old men of the Indians shew them should lie towards the Northwest from Mexico. They haue vsed and vse dayly much diligence in seeking of them, but they cannot find any one of them. They say that the witchcraft of the Indians is such, that when they come by these towne they cast a mist vpon them, so that they cannot see them.

Pedro Morales &
Nicolas Burgig-
non write the
like of Copalla.

They haue vnderstanding of another city which they call Copalla : and in like maner, at my beeing in the countrey, they haue vsed much labour and diligence in the seeking of it : they haue found the lake on which it should stand, and a canoa, the head whereof was wrought with copper curiously, and could not finde nor see any man nor the towne, which to their vnderstanding should stand on the same water, or very neere the same.

The strange
open of Cibola.

There is a great number of beasts or kine in the countrey of Cibola, which were neuer brought thither by the Spanyards, but breed naturally in the countrey. They are like vnto our oxen, sauing that they haue long haire like a lion, and short hornes, and they haue vpon their shoulders a bunch like a camell, which is higher then the rest of their body. They are marvellous wild and swift in running. They call them the beasts or kine of Cibola.

Cibola abandoned.

This Cibola is a city which the Spanyards found now of late, without any people in the same, goodly buildings, faire chimneys, windowes made of stone & timber excellently wrought, faire welles with wheelles to draw their water, and a place where they had buried their dead people, with many faire stones vpon the graues. And the captaine would not suffer his souldiers to breake vp any part of these graues, saying, he would come another time to do it.

A great river
near Cibola.

They asked certeine people which they met, whether the people of this city were gone : and they made answer, they were gone downe a riuer, which was there by, very great, and there had builded a city which was more for their commodity.

as was
said
before

This captaine lacking things necessary for himselfe and his men, was faine to returne backe againe, without finding any treasure according to his expectation : neither found they but fewe people, although they found beaten wayes, which had bene much haunted and frequented. The captaine at his coming backe againe, had a great chcke of the gouernour, because he had not gone forwarde, and seene the end of that riuer.

Water con-
gealed to salt.

They haue in the countrey, farre from the sea side, standing waters, which are salt : and in the moneths of April and May the water of them congealeth into salt, which salt is all taken for the kings vse and profit.

Dogs of India
described.

Their dogs are all crooked backt, as many as are of the countrey breed, and cannot run fast : their faces are like the face of a pig or an hog, with sharpe noses.

Cacao a fruit
currant as
money.

In certeine prouinces which are called Guatimala, & Soconusco, there is growing great store of cacao, which is a berry like vnto an almond : it is the best merchandize that is in all the Indies. The Indians make drinke of it, and in like maner meat to eat. It goeth currantly for money in any market or faire, and may buy any flesh, fish, bread or cheese, or other things.

Fruits.

There are many kinde of fruits of the countrey, which are very good, as plantans, sapotes, guiaues, pinas, aluacatas, tunas, mamios, limons, oranges, walnuts very small and hard, with little meat in them, grapes which the Spanyards brought into the countrey, and also wilde grapes, which are of the countrey, and are very small, quinses, peaches, figs, and but few apples, and very small, and no peares : but there are melons and calabacas or gourds.

There is much hony, both of bees and also of a kind of tree which they call magueiz. This hony of magueiz is not so sweet as the other hony is, but it is better to be eaten only with bread, then the other is ; and the tree serueth for many things, as the leaues make threed to sewe any kinde of bags, and are good to couer and thatch houses, and for diuers other things.

Hot springs.

They haue in diuers places of the countrey many hote springs of water : as aboue all other, I haue seene one in the prouince of Mechuacon. In a platine field without any mountaine, there is a spring which hath much water, & it is so hot, that if a whole quarter of beefe be cast into it, within on halfe houre it will be as well sodden as it will be ouer a fire in halfe a day. I haue seene halfe a sheepe cast in, and immediatly it hath bene sodden, and I haue eaten part of it.

Hares and
conies.
Sea fish.

There are many hares, and some conies. There are no partridges, but abundance of quails.

They haue great store of fish in the South sea, and many oysters, and very great. The people do open the oysters, and take out the meat of them, and dry it as they do any other kinde of fish, and keepe them all the yere : and when the times serue, they send them abroad into the countrey to sell, as all other fish. They haue no salmon, nor trout, nor pike, nor carpe, tench, nor pike in all the countrey.

There

There are in the countrey mightie high mountaines, and hilles, and snow vpon them: they commonly burne; and twise euery day they cast out much smoke and ashes at certeine open places, which are in the tops of them.

Burning
mountaines.

There is among the wilde people much manna. I haue gathered of the same, and haue eaten it, and it is good: for the Apothecaries send their seruants at certeine times, to gather of the same for purgations, and other vses.

Manna.

There are in the mountaines many wilde hogs, which all men may kill, and lions and tygres; which tygres do much harme to men that trauell in the wilderness.

Wilde hogs,
lions, and ty-
gres.

In this countrey, not long since, there were two pooze men that found a maruellous rich mine; and when these men went to make a register of the same (according to the law and custome) before the kings officers, they thought this mine not meet for such men as they were: and violently tooke the sayd mine for the king; and gaue no part thereof vnto the two pooze men. And with- in certaine dayes the kings officers resorted thither to labor in the mine, & they found two great mightie hilles were come together; so they found no place to worke in. And in the time while I was among them, which was fife yeeres, there was a pooze shepheard, who keeping his sheepe, happened to finde a well of quicke-siluer; and he went in like maner to manifest the same, as the custome and maner is; the kings officers dealt in like order as they did with the two pooze men that found the rich mine, taking it quicke from the shepheard: but when they went to fetch home the quicke-siluer, or part thereof, they could neuer finde it againe. So these things haue bene declared vnto the king, who hath giuen commandement, that nothing being found in the fields, as mines, and such like, shall be taken away from any man. And many other things haue bene done in this countrey, which men might count for great maruels.

Mines disco-
uered, not
found againe.

The authour
fife yeeres in
Nueua Espanna.

There is great abundance of sugar here, & they make diuers conserues, & very good, and send them into Peru, where as they sell them maruellous well, because they make none in those parts.

Sugar & con-
serues.

The people of the countrey are of a good stature, tawny coloured, broad faced, flat nosed, and giuen much to drinke both wine of Spaine and also a certeine kind of wine which they make with hony of Magueiz, and roots, and other things which they vse to put into the same. They call the same wine Pulco. They are soone drunke, and giuen to much beaflinesse, and void of all goodnesse. In their drunkennesse they vse and commit Sodomy; and with their mothers and daughters they haue their pleasures and pastimes. Whereupon they are defended from the drinking of wines, vpon paines of money, as well he that selleth the wines as the Indian that drinke the same. And if this commandement were not, all the wine in Spaine and in France were not sufficient for the West Indies onely.

Description of
the Indians
person and
maners.

They are of much simplicity, and great cowards; voide of all valour, and are great witches. They vse diuers times to talke with the diuell, to whom they do certeine sacrifices and oblations: many times they haue bene taken with the same, and I haue seene them most cruelly punished for that offence.

The people of
Nueua Espanna
great cow-
ards.

The people are giuen to learne all maner of occupations and sciences, which for the most part they learned since the comming of the Spanyards: I say all maner of arts. They are very artificiall in making of images with feathers, or the proportion or figure of any man, in all kind of maner as he is. The finenesse and excellency of this is woonderfull, that a barbarous people as they are, should giue themselves to so fine an arte as this is. They are goldsmiths, blacksmiths, and coppersmiths, carpenters, masons, shoemakers, tailors, sadlers, imbroderers, and of all other kind of sciences: and they will do worke so good cheape, that pooze yong men that goe out of Spaine to get their liuing, are not set on worke: which is the occasion there are many idle people in the countrey. For the Indian will liue all the weeke with lesse then one groat; which the Spanyard cannot do, nor any man els.

They say, that they came of the linage of an olde man which came thither in a boat of wood, which they call a canoa. But they cannot tell whether it were before the flood or after, neither can they giue any reason of the flood, nor fro whence they came. And when the Spanyards came first among them, they did certeine sacrifice to an image made in stone, of their owne inuention. The stone was set vpon a great hill, which they made of bricks of earth: they call it their Cowa. And certeine dayes in the yere they did sacrifice, certeine olde men, and yong children; and onely beleued in the Sunne and the Doone, saying, that from them they had all things that were need- ful for them. They haue in these parts great store of cotton wooll, with which they make a maner of linnen cloth, which the Indians wear, both men and women, and it serueth for shirts & smocks, and all other kind of garments, which they wear vpon their bodies: and the Spanyards vse it to all such purposes, especially such as cannot buy other. And if it were not for this kind of cloth, all

The Indians

came.

The Sun and
Doone hono-
red.
Store of cotton.

The wilde
Indians.

maner of cloth that goeth out of Spaine, I say linnen cloth, would be solde out of all measure.

The wilde people go naked, without any thing vpon them. The women weare the skinn of a deere before their priuities, and nothing els vpon all their bodies. They haue no care for any thing, but onely from day to day for that which they haue need to eat. They are big men, and likewise the women. They shoot in bowes which they make of a cherry tree, and their arrowes are of cane, with a sharpe flint stone in the end of the same; they will pierce any coat of maile: and they kill deere, and cranes, and wilde geese, ducks and other fowle, and wormes, and snakes, and diuers other vermin, which they eat. They liue very long: for I haue seene men that haue bene an hundred yerres of age. They haue but very little haire in their face, nor on their bodies.

Friers in re-
uerence.

The Indians haue the friers in great reuerence: the occasion is, that by them and by their meanes they are free and out of bondage; which was so ordeined by Charles the emperoz: which is the occasion that now there is not so much gold and siluer comming into Europe as there was while the Indians were slaues. For when they were in bondage they could not chuse but doe their taske euery day, and bring their masters so much metall out of their mines: but now they must be well payed, and much intreated to haue them worke. So it hath bene, and is a great hinderance to the owners of the mines, and to the kings quinto or custome.

Copper mines

There are many mines of copper in great quantity, whereof they spend in the countrey as much as serueth their turnes. There is some golde in it, but not so much as will pay the costs of the fining. The quantity of it is such, and the mines are so farre from the sea, that it will not be worth the fraight to cary it into Spaine. On the other side, the kings officers will giue no licence to make ordinance thereof; whereupon the mines lie vnlaboured, and of no valuation.

The pompe of
owners of
mines.

There is much lead in the countrey; so that with it they couer churches, and other religious houses: wherefore they shall not need any of our lead, as they haue had need thereof in times past. The pompe and liberalitie of the owners of the mines is maruellous to beholde: the apparell both of them and of their wiues is moze to be compared to the apparell of noble persons then otherwise. If their wiues goe out of their houses, as vnto the church, or any other place, they goe out with great maiesty, and with as many men and maids as though she were the wife of some noble man. I will assure you, I haue seene a miners wife goe to the church with an hundred men, and twenty gentlewomen and maids. They keepe open house: who will, may come to eat their meat. They call men with a bell to come to dinner and supper. They are princes in keeping of their houses, and bountifull in all maner of things.

Things neces-
sary to mines
of siluer and
golde.

A good owner of mines must haue at the least an hundred slaues to cary and to stampe his metals; he must haue many mules, and men to keepe the mines; he must haue milles to stampe his metals; he must haue many waines and oren to bring home wood to fine the oare; he must haue much quicke-siluer, and a marvellous quantity of salt-brine for the metals; and he must be at many other charges. And as for this charge of quicke-siluer, it is a new inuention, which they finde moze profitable then to fine their oare with lead. Howbeit the same is very costly: for there is neuer a hundred of quick-siluer but costeth at the least threescore pounds sterling. And the mines fall dayly in decay, and of lesse value: and the occasion is, the few Indians that men haue to labour their mines.

The plenty of
cattell.

There is in New Spaine a marvellous increase of cattell, which dayly do increase, and they are of a greater growth then ours are. You may haue a great steere that hath an hundred weight of tallow in his belly for sixteene shillings; and some one man hath 20000 head of cattell of his owne. They sell the hides vnto the merchants, who lade into Spaine as many as may be well spared. They spend many in the countrey in shooes and boots, and in the mines: and as the countrey is great, so is the increase of the cattell woonderfull. In the Island of Santo Domingo they commonly kill the beasts for their hides and tallow; and the fowles eat the carkeises: and so they do in Cuba and Porto Rico, whereas there is much sugar, and cana fistula, which dayly they send into Spaine. They haue great increase of sheepe in like maner, and dayly do intend to increase them. They haue much wooll, and as good as the wooll of Spaine. They make cloth as much as serueth the countrey, for the common people, and send much cloth into Peru. I haue seene cloth made in the city of Mexico, which hath bene solde for tenne pezos a vare, which is almost foure pounds English, and the vare is lesse then our pard. They haue woad growing in the countrey, and alum, and bzasil, and diuers other things to die withall, so that they make all colours. In Peru they make no cloth: but hereafter our cloth will be kittle set by in these parts, vntill it be some fine cloth. The woolls are commonly foure shillings euery roue, which is five & twenty pounds: and in some places of the countrey that are farre from the places where as they make cloth, it is woorth nothing, and doth serue but onely to make beds for men to lie on.

Sheepe.
Wooll.
Cloth.

Woad.
Alum.
Bzasil.

They

They make hats, as many as doe serue the Countrey, very fine and good, and sell them better cheape, then they can be brought out of Spaine, and in like maner send them into Peru.

Many people are set on worke both in the one and in the other: they spin their wooll as we doe, and in steed of oyle, they haue hogs grease: they twill not their threed so much as wee doe, neither worke so fine a threed. They make no kerlies, but they make much cloth, which is course, and sell it for lesse then 12. pence the bare. It is called Sayall.

They haue much silke, and make all maner of sorts thereof, as Tassataes, Sattins, Veluets of all colours, and they are as good as the silkes of Spaine, sauing that the colours are not so perfect: but the blackes are better then the blackes that come out of Spaine.

They haue many hoxles, and mares, and mules, which the Spaniards brought thither. They haue as good Jennets, as any are in Spaine, and better cheape then they bee in Spaine. And with their mules they cary all their goods from place to place.

There is raine vsually in this Countrey, from the moneth of May, to the midst of October, euery day, which time they call their winter, by reason of the said waters. And if it were not for the waters which fall in these hot seasons, their Maiz, which is the greatest part of their sustenance, would be destroyed. This Maiz is the greatest maintenance which the Indian hath, and also all the common people of the Spaniards. And their hoxles and mules which labour, cannot be without the same. This graine is substantiall, and increaseth much blood. If the Spaniards should bee without it, they coulde not labour their Mines: for all their seruants eate none other bread, but onely of this Maiz, and it is made in cakes, as they make oaten cakes, in some places of England.

The Indians pay tribute, being of the age of 20. yeeres, 4. shillings of money, and an hangee of Maiz, which is worth 4. shillings more vnto the King euery yeere. This is payd in all Noua Hispania, of as many as be of the age of 20. yeeres, sauing the Citie of Tlascalla, which was made free, because the citizens thereof were the occasion that Cortes tooke Mexico in so little a time. And although at the first they were freed from payment of tribute, yet the Spaniards now begin to vsurpe vpon them, and make them to till a great field of Maiz, at their owne costes euery yeere for the King, which is as beneficial vnto him, and as great cost vnto them, as though they paid their tribute, as the others doe.

The ships which goe out of Spaine with goods for Peru, goe to Nombre de dios, and there discharge the said goods: and from thence they be caried ouer the necke of a land, vnto a port towne in the South sea, called Panama, which is 17. leagues distant from Nombre de dios. And there they doe ship their goods againe, and so from thence goe to Peru. They are in going thither three moneths, and they come backe againe in 20. dayes. They haue selome foule weather, and fewe ships are lost in the South sea. Foure yeeres past, to wit 1568. there was a ship made out of Peru, to seek Salomons Islands, and they came somewhat to the South of the Equinoctial, & found an Island with many blacke people, in such number that the Spaniards durst not go on land among them. And because they had bene long vpon the voyage, their people were very weake, and so went not on land, to know what commoditie was vpon it. And for want of victuals, they arriued in Noua Hispania, in a port called Puerto de Nauidad, and thence returned backe againe vnto Peru, whereas they were euill entreated, because they had not knowen more of the same Island.

They haue in this port of Nauidad ordinarily their ships, which goe to the Islands of China, which are certaine Islands which they haue found within these 7. yerres. They haue brought from thence gold, and much Cinamom, and dihes of earth, and cups of the same, so fine, that euery man that may haue a peece of them, will giue the weight of siluer for it. There was a Hariner that brought a pearle as big as a doves egge from thence, & a stone, for which the Viceroy would haue giuen 3000. duckets. Many things they bring from thence, most excellent. There are many of these plands, and the Spaniards haue not many of them as yet: *for the Portugals disturbe them much, and combate with them euery day, saying, it is part of their conquest, and to the maine land they cannot come at any hand. There are goodly people in them, and they are great Hariners, richly apparellled in cloth of gold, and siluer, and silke of all sorts, and goe apparellled after the maner of the Turkes. This report make such as come from thence. The men of the maine land haue certaine trafique with some of these planders, and come thither in a kind of ships, which they haue with one saile, and bring of such marchandize as they haue need of. And of these things there haue bene brought into New Spaine both cloth of gold and siluer, and diuers maners of silks, and works of gold and siluer, marueilous to be seene. So by their saying, there is not such a countrey in the whole world. The maine land is from the plands 190. leagues: and the plands are not farre from the Malucos Northwards. And the people of those plands, which the Spaniards haue, say, that if they would bring their wiues and children, that then they should haue among them what they would

would haue. So there goe women dayly, and the king payeth all the charges of the married men and their wiues, that go to those ylands. And there is no doubt, but the trade will be marueilous rich in time to come. It was my fortune to be in company with one Diego Guieres, who was the first Pilot that euer went to that Countrey of the Philippinas. Hee maketh report of many strange things in that Countrey, as well riches, as other, and saith, if there bee any Paradise vpon earth, it is in that countrey: and addeth, that sitting vnder a tree, you shall haue such sweet smells, with such great content and pleasure, that you shall remember nothing, neither wife, nor children, nor haue any kinde of appetite to eate or drinke, the odoriferous smells will be so sweete. This man hath good liuings in Noua Hispania, notwithstanding hee will returne thither, with his wife and children, and as for treasure there is abundance, as he maketh mention. In this countrey of Noua Hispania there are many buckes and does, but they haue not so long hornes as they haue here in England. The Spaniards kill them with hand-guns, and with grayhounds, and the Indians kill them with their bowes and arrowes, and with the skins they make chamoyce, such as we in England make doublets and hose of, as good as the skins that are dyed in Flanders, & likewise they make marueilous good Spanish leather of them. There is a bird which is like vnto a Rauen, but he hath some of his feathers white: there is such abundance of them, that they eate all the corrupt and dead flesh which is in the countrey. Otherwise the abundance of carren is so much, that it would make a marueilous corrupt aire in all the Countrey, and be so noisome, that no man could abide it. Therefore it is commanded, there shall none of them be killed. These birds are alwayes about Cities, and townes, where there is much flesh killed.

Wrongs done
to the Indi-
ans punished.

Justice & cause
of euillie.

The Indians are much fauoured by the Iustices of the Countrey, and they call them their orphans. And if any Spaniard should happen to doe any of them harme, or to wrong him in taking any thing from him, as many times they doe, or to strike any of them, being in any towne, whereas iustice is, they are as well punished for the same, as if they had done it one Spaniard to another. When a Spaniard is farre from Mexico, or any place of iustice, thinking to doe with the poore Indian what he list, considering he is so farre from any place of remedy, he maketh the Indian do what he commaundeth him, and if he will not doe it, hee beatech and misleadeth him, according to his owne appetite. The Indian holdeth his peace, vntill hee finde an opportunitie, and then taketh a neighbour with him, and goeth to Mexico, although it be 20. leagues off, and maketh his complaint. This his complaint is immediatly heard, & although it be a knight, or a right good gentleman, he is forthwith sent for, and punished both by his goods, and also his person is imprisoned, at the pleasure of the Iustice. This is the occasion that the Indians are so tame and ciuill, as they are: and if they should not haue this fauour, the Spaniards would soone dispatch all the Indians, or the Indians would kill them. But they may call them dogs, and vse other euill words, as much as they will, and the Indian must needs put it by, and goe his way.

The poore Indians wil go euery day two or thre leagues to a faire or market with a childe vpon their necks, with as much fruit or rootes, or some kinde of ware, as cotton wooll, or cadis of all colours, as shall be not past worth a pennie: and they wil mainteine themselves vpon the same. For they liue with a marueilous small matter.

They are in such pouertie, that if you neede to ride into the Countrey, you shall haue an Indian to goe with you all the day with your bed vpon his backe, for one royall of plate: and this you shall haue from one towne to another. Here you are to vnderstand, that all men that trauelle by the way, are alwayes wont to carry their beds with them. They are great cheeues, and wil steale all that they may, and you shall haue no recompence at their hands.

The apparel
of the Indi-
ans.

The garments of the women, are in this maner. The uppermost part is made almost like to a womans smocke, sauing that it is as broad aboue as beneath, and hath no sleeves, but holes on eche side one to put out their armes. It is made of linnen cloth made of cotton wooll, and filled full of flowers, of red cadis and blew, and other colours. This garment commeth downe to the knees, and then they haue another cloth made after the same maner, and that goeth rounde about their waste, and reacheth to their shooes, and ouer this a white fine sheet vpon their heads, which goeth downe halfe the legges. Their haire is made by round with an haire lace about their head. And the men haue a small paire of breeches of the same cotton wooll, and their shirts which hang ouer their breeches, and a broad girdle about their middles, and a sheete with flowers vpon their backs, and with a knot vpon one shoulder, & an hat vpon their heads, and a paire of shooes. And this is all their apparell, although it be a Casique, which they vse in all the Countrey.

The houses of
the Indians.

The wals of the houses of the Indians, are but plaine, but the stones are layd so close, that you shall not well perceiue the ioynts betweene one stone and another, they are so finely cut: and by the meanes that the stones are so workmanly done, and finely ioyned together, there is some beautie in

in their wals. They are marueilous small and light, as Pumie stones. They make their doozes very little, so that there can go in but one man at a time. Their windowes, and roomes within their houses are small, and one roome they haue reserved for their friends, when they come to talke one with another, and that is alwayes faire matted, and kept marueilous cleane, and hanged full of images, and their chaires standing there to sit in. They eate their meate vpon the ground, and sleepe on the ground vpon a mat, without any bed, both the gentlemen, and other.

The Indians strike their fire with one sticke in another, as well the tame people, as the wilde. For they know not how to doe it with an yron, and a stone.

In Noua Hispania, euery 10. or 12. leagues they haue a contrary speech, sauing onely about Mexico: so there is a number of speeches in the Countrey.

Mutezuma which was the last King of this Countrey, was one of the richest princes which haue bene seene in our time, or long befoze. He had all kinde of beasts which were then in the countrey, and all maner of birds, and fishes, and all maner of wormes, which creepe vpon the earth, and all trees, and flowers, and herbes, all fashioned in siluer and gold, which was the greatest part of all his treasure, and in these things had he great ioy, as the old Indians report. And vnto this day, they say that the treasure of Mutezuma is hidden, and that the Spaniards haue it not. This King would giue none of his people freedome, nor forgiue any of them that should pay him tribute, though he were neuer so poore. For if it had bene told him that one of his tributaries was poore, & that he was not able to pay his tribute according to the custome, then he would haue him bound to bring at such times as tributes should be payd, a quill full of Lice, saying, hee would haue none free, but himselfe. He had as many wiues or concubines, as hee would haue, and such as liked him. Alwayes whensoever he went out of his Court to passe the time, he was borne vpon 4. of his noble mens shoulders set vpon a table, some say, of golde, and very richly dressed with feathers of diuers and many colours and flowers. He washed all his body euery day, were it neuer so cold. And vnto this day so do all the Indians, and especially the women.

The Spaniards keepe the Indians in great subiectiō. They may haue in their houses no sword nor dagger, nor knife with any point, nor may weare vpon them any maner of armes, neither may they ride vpon any horse nor mules, in any saddle nor bzidle, neither may they drinke wine, which they take for the greatest paine of all. They haue attempted diuers times to make insurrections, but they haue bene ouerthrowen immediatly by their owne great and beastly cowardlinesse.

There remaine some among the wild people, that vnto this day eate one another. I haue seene the bones of a Spaniard that haue bene as cleane burnished, as though it had bene done by men that had no other occupation. And many times people are caried away by them, but they neuer come againe, whether they be men or women.

They haue in the Seaylands of red salt in great abundance, whereas they lade it from place to place about the Sea coast: and they spend very much salt with salting their hides, and fish: and in their Pinies they occupie great quantitie. They haue much Alumie, and as good as any that is in all the Leuant, so that they neede none of that commoditie. They haue also of their owne growing much Cana fistula, & much Salsa Perilla, which is marueilous good for many kind of diseases.

There are in Florida many Jarrefalcons, and many other kinde of hawkes, which the gentlemen of Noua Hispania send for euery yere. The Spaniards haue two forts there, chiefly to keepe out the Frenchmen from planting there.

A discourse written by one Miles Philips Englishman, one of the company put on shoare Northward of Panuco, in the West Indies by M. Iohn Hawkins 1568. conteining many special things of that countrey and of the Spanish gouernment, but specially of their cruelties vsed to our Englishmen, and amongst the rest to himselfe for the space of 15. or 16. yeres together, vntil by good and happy meanes he was deliuered fro their bloody hands, and returned into his owne Countrey. An. 1582.

Chap. I.

Wherein is shewed the day and time of our departure from the coast of England, with the number and names of the ships, their Captaines and Masters, and of our trafique and dealing vpon the coast of Africa.

Vpon munday the second of October 1567. the weather being reasonable faire, our Generall M. Iohn Hawkins, hauing commanded all his Captaines and Masters to be in a readinesse to make saile with him, hee himselfe being imbarked in the Iesus, whereof was appointed for Master Robert Barrer, hoised saile, and departed from Plimouth vpon his intended voyage for the parts of Africa, and America,

This fleet consisted of 6 ships. 1. The Iesus.

2. The Mynion, America, being accompanied with five other saile of ships, as namely the Mynion, wherein went for Captaine M. Iohn Hampton, and Iohn Garret Haster. The William and Iohn, wherein was Captaine Thomas Bolton, and James Raunce Haster. The Iudith, in whom was Captaine M. Francis Drake after ward knight, and the Angel, whose Haster, as also the Captaine and Haster of the Swallow I now remember not. And so sayling in company together vpon our voyage vntill the tenth of the same moneth, an extreeme storme then tooke vs nere vnto Cape Finister, which dured for the space of foure dayes, and so separated our ships, that wee had lost one another, and our Generall finding the Iesus to bee but in ill case, was in minde to giue ouer the voyage, and to returne home. Howbeit the eleuenth of the same moneth the Seas waxing calme, and the winde comming faire, hee altered his purpose, and held on the former entended voyage: And so comming to the pland of Gomera being one of the plands of the Canaries, where according to an order before appointed, we met with all our ships which were before dispersed; wee then tooke in fresh water and departed from thence the fourth of Nouember, and holding on our course, vpon the eighteenth day of the same moneth wee came to an anchor vpon the coast of Africa, at Cape Verde in twelue sadome water; and here our Generall landed certaine of our men, to the number of 160. or thereabout, seeking to take some Negros. And they going vp into the Countrey for the space of sixe miles, were encountred with a great number of the Negros: who with their inuenomed arrowes did hurt a great number of our men, so that they were inforced to retire to the ships, in which conflict they recouered but a fewe Negros, and of these our men which were hurt with their enuenomed arrowes, there died to the number of seuen or eight in very strange maner, with their mouths shut, so that wee were forced to put stickes and other things into their mouths to keepe them open, and so afterward passing the time vpon the coast of Guinea, vntill the twelfth of January, wee obtained by that time the number of 150. Negros. And being ready to depart from the Sea coast, there was a Negro sent as an Ambassadour to our Generall, from a King of the Negros, which was oppressed with other Kings his bordering neighbours, desiring our Generall to graunt him succour and ayde against those his enemies, which our Generall granted vnto, and went himselfe in person a lande, with the number of two hundred of our men or thereabouts, and the said King which had requested our ayde, did ioyne his force with ours, so that thereby our Generall assaulted, and set fire vpon a Towne of the said King his enemies, in which there was at the least the number of eight or ten thousand Negros, and they perceiuing that they were not able to make any resistance fought by flight to saue themselves, in which their flight there were taken prisoners to the number of eight or nine hundred, which our Generall ought to haue had for his share: howbeit the Negro King which requested our ayde, falsifying his word and promise, secretly in the night conueyed himselfe away with as many prisoners as he had in his custodie: but our Generall notwithstanding finding himselfe to haue now very neere the number of 500. Negros thought it best without longer abode to depart with them, and such marchandize as hee had from the coast of Africa, towards the West Indies, and therefore commanded with all diligence to take in fresh water and fewel, and so with speed to prepare to depart. Howbeit before we departed from thence, in a storme that wee had, wee lost one of our ships, namely the William and Iohn, of which ship and of her people, we heard no tidings during the time of our voyage.

Chap. 2.

Wherein is shewed the day and time of our departure from the coast of Africa, with the day and time of our arriual in the West Indies, also of our trade, and trafique there, and also of the great crueltie that the Spaniards vsed towards vs, by the Vice-roy his direction, and appointment, falsifying his faith and promise giuen, and seeking to haue intrapped vs.

ALl things being made in a readinesse, at our Generall his appointment, vpon the thirde day of February 1568. wee departed from the coast of Africa, hauing the weather somewhat tempestuous, which made our passage the more hard; and sayling so for the space of 52. dayes, vpon the 27. of March 1568. we came in sight of an pland called Dominica, vpon the coast of America in the West Indies, situated in 14. degrees of latitude, and 322. of longitude: from thence our Generall coasted from place to place, euer making trafique with the Spaniards and Indians as hee might, which was somewhat hardly obtained, for that the King had straightly charged all his gouernours in those parts not to trade with any: yet notwithstanding, during the moneths of April and May, our Generall had reasonable trade and trafique, and courteous entertainment in sundry places, as at Margarita, Coracao, and else where, till we came to Cape de la vela, and Rio de Hacha, (a place from whence all the pearles doe come:) the gouernour there would not by any means

meanes permit vs to haue any trade or trafique, nor yet suffer vs to take in fresh water: by meanes whereof our Generall for the auoyding of famine and thirst about the beginning of Iune, was enforced to land two hundred of our men, and so by maine force and strength to obtaine that which by no faire meanes hee could procure: And so recouering the Towne with the losse of two of our men, there was a secret and peaceable trade admitted, and the Spaniards came in by night, and bought of our Negroes to the number of 200, and bywards, and of our other marchandize also. From thence we departed for Carthagena, where the Gouvernour was so straight, that wee could not obtaine any trafique there, and so for that our trade was neere finished, our Generall thought it best to depart from thence the rather for the auoyding of certaine dangerous stormes called the Huricanos, which accustomed to begin there about that time of the yere, & so the 24. of Iuly 1568. we departed from thence directing our course North: and leauing the yland of Cuba vpon our right hand, to the Eastward of vs, and so sayling toward Florida, vpon the 12. of August an extreme tempest aroose, which dured for the space of 8. dayes, in which our ships were most dangerously tossed and beaten hither, & thither, so that we were in continuall feare to be drowned by reason of the Gallownes of the coast, and in the end we were constrained to flee for succour to the port of S. Iohn de Villua, or Vera Cruz, situated in 19. degrees of latitude, and in 279. degrees of longitude, which is the port that serueth for the Citie of Mexico: in our seeking to recouer this port our Generall met by the way three small ships that caried passengers, which hee tooke with him, and so the sixteenth of September 1568. wee entered the saide port of S. Iohn de Villua. The Spaniards there supposing vs to haue bene the King of Spaines Fleet, the chiefe officers of the Countrey thereabouts came presently aboard our Generall, where perceiving themselves to haue made an vnwise aduventure, they were in great feare to haue bene taken and stayed: howbeit our Generall did vse them all very courteously. In the said port there were twelue ships which by report had in them in treasure to the value of two hundred thousand pound, all which being in our Generall his power and at his deuotion, he did freely set at libertie, as also the passengers which he had before stayed, not taking from any of them all the value of one groat: onely hee stayed two men of credite and accompt, the one named Don Laurenzo de Alua, and the other Don Pedro de Riueria, and presently our Generall sent to the Viceroy to Mexico which was threescore leagues off, certifying him of our arriual there by force of weather, desiring that forasmuch as our Queene his Soueraigne, was the king of Spaine his louing sister and friend, that therefore hee would, considering our necessities and wants, furnish vs with victuals for our Fraute, and quietly suffer vs to repaire and amend our ships. And furthermore that at the arriual of the Spanish Fleet which was there dayly expected and looked for, to the ende that there might no quarrell arise betweene them, and our Generall and his company for the breach of amitie, he humbly requested of his excellencie, that there might in this behalfe some special order be taken. This message was sent away the 16. of September 1568. it being the very day of our arriual there.

The next morning being the seuenteenth of the same moneth, wee descried 13. saile of great shippes: and after that our Generall vnderstood, that it was the king of Spaines Fleet then looked for, he presently sent to aduertise the Generall hereof, of our being in the said port, and giuing him further to vnderstand, that before he should enter there into that harbour, it was requisite that there should passe betweene the two Generals some orders and conditions to bee obserued on either part, for the better contriuing of peace betweene them and theirs, according to our Generals request made vnto the Viceroy. And at this instant our Generall was in a great perplexitie of minde, considering with himselfe that if hee should keepe out that Fleet from entering into the port, a thing which hee was very well able to doe with the helpe of God, then should that Fleet be in danger of present shipwacke and losse of all their substance, which amounted vnto the value of one million and eight hundred thousand pounds. Again he saw that if he suffered them to enter, hee was assured that they would practise by all maner of meanes to betray him and his, and on the other side the haue was so little, that the other Fleet entering, the shippes were to ride one hard aboard of another. Also hee saw that if their Fleet should perish by his keeping of them out, as of necessity they must if he should haue done so, then stood hee in great feare of the Queene our Soueraignes displeasure in so waighthe a cause: therefore did he choole the least euill, which was to suffer them to enter vnder assurance, and so to stand vpon his guard, and to defend himselfe and his from their treasons which we were well assured they would practise, and so the messenger being returned from Don Martin de Henriques, the new Viceroy, who came in the same Fleet, and had sufficient authoritie to command in all cases both by Sea and by lande in this prouince of Mexico or new Spaine, did certifie our Generall, that for the better maintenance of amitie betweene the king of Spaine and our Soueraigne, all our requests should bee both fauourably granted.

Iohn Hawkins
his relation.

granted, and faithfully performed: signifying further that he heard and understood of the honest and friendly dealing of our Generall, toward the king of Spaines subiects in all places where he had bene, as also in the said port: so that to bee by these our requests were articulated, and set downe in writing. Viz.

4. Articles concluded by on, betwixt the English & the Spaniards: although the treacherous Spaniards kept none of them.

1 The first was that wee might haue victuals for our money, and license to sell as much wares, as might suffice to furnish our wants.

2 The second, that we might be suffered peaceably to repaire our ships.

3 The thirde that the pland might bee in our possession during the time of our abode there. In which pland our Generall for the better safetie of him and his, had already planted and placed certaine Ordnance which were eleuen pieces of brasse, therefore he required that the same might so continue, and that no Spaniard should come to lande in the saide pland, hauing or wearing any kinde of weapon about him.

4 The fourth and the last, that for the better and more sure performance and maintenance of peace, and of all the conditions, there might twelue gentlemen of credite bee deliuered of either part as hostages.

These conditions were concluded and agreed vpon in writing by the Viceroy and signed with his hand, and sealed with his seale, and 10 hostages vpon either part were receiued. And further it was concluded that the two Generalls should meet, and giue faith ech to other for the performance of the premises. At which being done, the same was proclaimed by the sound of a trumpet, & commandement was giuen that none of either part should violate or breake the peace vpon paine of death: thus at the ende of thre dayes all was concluded, and the Fleet entered the port, the ships saluting one another as the maner of the Sea doth require: the morrow after being friday we laboured on all sides in placing the English ships by themselves, & the Spanish ships by themselves, the Captaines and inferiour persons of either part, offering, and shewing great courtesie one to another, and promising great amitie vpon all sides. Howbeit as the sequel shewed, the Spaniards meant nothing lesse vpon their parts. For the Viceroy and gouernour thereabout had secretly at land assembled to the number of 1000, chosen men, and wel appointed, meaning the next Thursday being the 24. of September at dinner time to assault vs, and set vpon vs on all sides. But before I go any further, I thinke it not amisse briefly to describe the maner of the pland as it then was, and the force and strength, that it is now of. For the Spaniards since the time of our Generalls being there, for the better fortifying of the same place, haue vpon the same pland built a faire Castle, and bulwarke very well fortified: this port was then at our being there, a little pland of stones, not past thre foote aboue water in the highest place, and not past a bow-shotte ouer any way at the most, and it standeth from the maine land, two bowshottes or more: and there is not in all this coast any other place for ships safely to arriue at: also the North windes in this coast are of great violence and force, and vnlesse the shippes bee safely moored in, with their anchors fastened in this pland, there is no remedie, but present destruction and shipwracke. All this our generall wisely foreseeing, did provide that he would haue the said pland in his custody, or els the Spaniards might at their pleasure, haue but cut our cables, and so with the first Northwinde that blew we had had our pasport, for our ships had gone a shoore. But to returne to the matter.

The time approaching that their treason must be put in practice, the same Thursday morning, some appearance thereof began to shewe it selfe, as shifting of weapons from shippe to shippe, and planting, and bending their Ordnance against our men that warded vpon the lande, with great repaire of people: which apparant shewes of breach of the Viceroyes faith caused our Generall to sende one to the Viceroy, to enquire of him what was meant thereby, which presently sent and gaue order, that the Ordnance aforesayde, and other things of suspicion should bee remooued, returning answer to our Generall in the faith of a Viceroy, that hee would bee our defence, and safetie from all villanous treacherie: this was vpon Thursday in the morning. Our Generall not being therewith satisfied, seeing they had secretly conueyed a great number of men aboord a great hulke or ship of theirs of fire hundred tunne, which shippe rode hard by the Mynion, hee sent againe to the Viceroy Robert Barret the Master of the Iesus, a man that could speake the Spanish tongue very well, and required that those men might bee vnshippt againe, which were in that great hulke. The Viceroy then perceiuing that their treason was thoroughly espied, stayed our Master, and sounded the Trumpet, and gaue order that his people should vpon all sides charge vpon our men, which warded on shoore, and else where, which strooke such a male, and sudden feare among vs, that many gaue place, and sought to recouer our shippes for the safetie of themselves. The Spaniards which secretly were hid in ambush at lande were quickly conueyed ouer to the pland in their long boates, and so comming to the pland, they slew all our men that

A faire castle and bulwarke builded vpon the pland of San Iuan de Villua.

The value of a Spaniard's vice-roy his faith.

The villanous treacherie of the Spaniards and their crueltye.

that they could meete with, without mercy. The Minion which had somewhat before prepared her selfe to auoyd the danger, haled away and abode the first vntill of the 300 men that were in the great hulke: then they sought to fall aboord the Iesus, where was a cruel fight, and many of our men slaine: but yet our men defended themselves, and kept them out: so the Iesus also got loose, and ioyning with the Minion, the fight wared hote vpon all sides: but they hauing woon and got our ordnance on shore, did greatly annoy vs. In this fight there were two great shippes of the Spaniards sunke, and one burnt, so that with their shippes they were not able to harne vs, but from the shore they beat vs cruelly with our owne ordnance, in such sort that the Iesus was very sore spoiled: and suddenly the Spaniards hauing fired two great ships of their owne, they came directly against vs, which bred among our men a marvellous feare. Howbeit the Minion which had made her sayles ready, shifted for her selfe, without consent of the Generall, Captaine or Master, so that very hardly our Generall could be receiued into the Minion: the most of our men that were in the Iesus shifted for themselves, and followed the Minion in the boat, and those which that small boat was not able to receiue, were most cruelly slaine by the Spaniards. Of our ships none escaped sauing the Minion and the Iudith: and all such of our men as were not in them were enforced to abide the tyrannous cruelty of the Spaniards. For it is a certaine trueth, that whereas they had taken certaine of our men ashore, they tooke and hung them up by the armes vpon high postes vntill the blood burst out of their fingers ends: of which men so used, there is one Copstow, and certaine others yet aliue, who by the mercifull prouidence of the almighty, were long since arrived here at home in England, carrying still about with them (and shal to their graues) the marks and tokens of those their inhumane and more then barbarous cruell dealings.

Chap. 3.

Wherein is shewed, how that after we were escaped from the Spaniards, wee were like to perish with famine at the Sea, and how our Generall, for the auoiding thereof was constrained to put halfe of his men on land, and what miseries wee after that sustained amongst the Sauage people, and how againe we fell into the hands of the Spaniards.

After that the Viceroy, Don Martin Henriques, had thus contrary to his faith and promise, most cruelly dealt with our Generall master Hawkins, at S. Iohn de Vllua, where most of his men were by the Spaniards slaine and drowned, and all his ships sunke and burned, sauing the Minion, and the Iudith, which was a small barke of fiftie tunne, wherein was then Captaine master Francis Drake aforesayd: the same night the said barke lost vs, we being in great necessity, and enforced to remooue with the Minion two bow-shoote from the Spanish fleete, where we ankered all that night: and the next morning wee weyed anker, and recouered an Island a mile from the Spaniards, where a storme tooke vs with a North winde, in which we were greatly distressed, hauing but two cables and two ankers left: for in the conflict before we had lost three cables and two ankers. The next morning after, the storme being ceased and the weather faire, we weyed, and set sayle, being many men in number, and but small store of victuals to suffice vs for any long time: by meanes whereof we were in despaire and feare that we should perish through famine, so that some were in minde to peeble themselves to the mercy of the Spaniards, other some to the Sauages or Infidels, and wandring thus certaine daies in these unknownen seas, hunger constrained vs to eate hides, cats and dogs, mice, rats, parrats and munkies: to be short, our hunger was so great, that wee thought it sauourie and sweete whatsoever wee could get to eate.

And on the eight of October wee came to land againe, in the bottome of the bay of Mexico, where we hoped to haue found some inhabitantes, that wee might haue had some reliefe of victuals, and a place where to repaire our ship, which was so greatly bruiſed, that we were scarce able with our weary armes to keepe forth the water: being thus oppressed with famine on the one side, and danger of drowning on the other, not knowing whereto find reliefe, wee began to be in wonderfull despaire, and we were of many mindes, amongst whom there were a great many that did desire our Generall to set them on land, making their choise rather to submit themselves to the mercie of the Sauages or Infidels, then longer to hazard themselves at sea, where they very well sawe, that if they should remaine together, if they perished not by drowning, yet hunger would enforce them in the ende to eate one another: to which request our Generall did very willingly agree, considering with himselfe that it was necessary for him to lessen his number, both for the safetie of himselfe & the rest: and therupon being resolved to set halfe his people ashore that he had then left aliue, it was a world to see how suddenly mens minds were altered: for they which a

little before desired to be set on land, were now of another minde, and requested rather to stay: by meanes whereof our Generall was inforced, for the more concentration of all mens minds, and to take away all occasions of offence, to take this order: If first he made choice of such persons of seruice and account, as were needfull to stay, and that being done, of those which were willing to goe he appointed such as he thought might be best spared, and presently appointed that by the boat they should bee set on shore, our Generall promising vs that the next yeere he would either come himselfe, or else send to fetch vs home. Here againe it would haue caused any stony heart to haue relented to heare the pitifull moone that many did make, and howe loth they were to depart: the weather was then somewhat stormy and tempestuous, and therefore we were to passe with great danger, yet notwithstanding there was no remedy, but we that were appointed to goe away, must of necessitie doe so. Wherefore those that went in the first boat were safely set on shore, but of them which went in the second boate, of which number I my selfe was one, the seas wrought so high, that we could not attaine to the shore, and therefore we were constrained through the cruell dealing of Iohn Hampton captaine of the Minion, and Iohn Sanders boate swaine of the Iesus, and Thomas Pollard his mate, to leape out of the boate into the maine sea, hauing more then a mile to shore, and so to shift for our selues, and either to sinke or swimme. And of those that so were (as it were) throwen out, and compelled to leape into the sea, there were two drowned, which were of captaine Blands men.

They were put
on land 25
leagues north-
ward of Panuco
the 8 of Octo-
ber 1568.

In the euenting of the same day, it being Sunday the eight of October, 1568, when we were all come to shore, we found fresh water, whereof some of our men drunke so much, that they had almost cast themselves away, for wee could scarce get life of them for the space of two or three houres after: other some were so cruelly swollen, what with the drincking in of the salt water, and what with the eating of the fruit which wee found on land, hauing a stone in it much like an almond (which fruit is called Capule) that they were all in very ill case, so that we were in a maner all of vs both feeble, faint and weak.

Capule a kind
of stone fruit.

The next morning being Tuesday, the ninth of October, we thought it best to trauell along by the sea coast, to seeke out some place of habitation: (whether they were Christians or Sauesges, we were indifferent, so that we might haue wherewithall to sustaine our hungry bodies) and so departing from an hill where we had rested all night, not hauing any drie cheere about vs, (for those that were not wet being not throwen into the sea, were choicely wet with raine, for all the night it rained cruelly.) As we went from the hill, and were come into the plaine, we were greatly troubled to passe for the grasse and weedes that grewe there higher then any man. On the left hand we had the sea, and vpon the right hand great woods, so that of necessitie we must needs passe on our way Westward, through those marshes; and going thus, suddenly we were assaulted by the Indians, a warlike kind of people, which are in a maner as Canibals, although they doe not feede vpon mans flesh as Canibals doe.

Chichimici a
warlike and
cruel people.

These people are called Chichimici, and they vse to weare their haire long, euen down to their knees, they doe also colour their faces greene, yellow, red and blew, which maketh them to seeme very ugly and terrible to beholde. These people doe keepe warres against the Spaniards, of whom they haue bene oftentimes very cruelly handled: for with the Spaniards there is no mercy. They perceiuing vs at our first comming on land, supposed vs to haue bene their enemies, the bordering Spaniards, and hauing by their forerunners deseried what number we were, and how feeble and weak without armour or weapon, they suddenly according to their accustomed maner, when they encounter with any people in warlike sort, raised a terrible and huge crie, and so came running fiercely vpon vs, shooting off their arrowes as thicke as halle, vnto whose mercy we were constrained to yeld, not hauing amongst vs any kind of armour, nor yet weapon, sauing one caluer, and two old rustie swords, whereby to make any resistance, or to saue our selues: which when they perceiued, that wee sought not any other then saouer and mercie at their handes, and that we were not their enemies the Spaniards, they had compassion on vs, and came and caused vs all to sit down: and when they had a while surueyed, and taken a perfect view of vs, they came to all such as had any coloured clothes amongst vs, and those they did strip stark naked, and tooke their clothes away with them, but those that were apparelled in blacke they did not meddle withall, and so went their wayes, and left vs without doing vs any further hurt, onely in the first yunt they killed eight of our men. And at our departure, they perceiuing in what weak case we were, pointed vs with their hands which way we should go to come to a towne of the Spaniards, which as we afterwards perceiued, was not past ten leagues from thence, vsing these words: Tampice, Tampice Christiano, Tampice Christiano, which is as much (we thinke) as to say in English, at Tampice you shall find the Christians. The weapons that they vse are no other but bowes and arrowes,

Our men assal-
ted by the Chi-
chemici.

Eight of our
men slaine.

arrowes, and their arme is so good, that they very selborne misse to hit any thing that they shoote at. Shortly after they had left vs stript (as aforesayd) we thought it best to deuide our selues into two companies, and so being separated, halfe of vs went vnder the leading of one Anthony Godard, who is yet a man alieue, and dwelleth at this instant in the towne of Plimmouth, whom before we chose to be captaine ouer vs all, and those which went vnder his leading, of which number Miles Philips was one, trauailed Westward that way which the Indians with their hands had be-
 pointed vs to go. The other halfe went vnder the leading of one Iohn Hooper, whom they did choose for their captaine, & with the company that went with him, Dauid Ingram was one, and they tooke their way and trauelled Northward, and shortly after, within the space of two dayes, they were againe incountered with the sauage people, and their captaine Hooper and two more of his company were slaine: then againe they diuided themselves, and some held on their way still Northward, and other some, knowing that we were gone Westward, sought to meet with vs againe, as in truth there was about the number of 25 or 26 of them that met with vs in the space of foure dayes againe, and then we began to reckon amongst our selues, how many wee were that were set on shore, and we found the number to be an hundred and fourteene, whereof two were drowned in the sea, and eight were slaine at the first incounter, so that there remained an hundred and soute, of which 25 went Westward with vs, and 52 to the North with Hooper and Ingram: and as Ingram since hath often told me, there were not past three of their company slaine, and there were but fire and twenty of them that came againe to vs, so that of the company that went Northward, there is yet lacking, and not certainly heard of, the number of three and twenty men. And verely I doe thinke that there are of them yet alieue, and married in the said countrey, at Cibola, as hereafter I purpose (God willing) to discourse of more particularly, with the reason and causes that make mee so to thinke of them that were lacking, which were Dauid Ingram, Twide, Browne, and sundry others, whose names wee could not remember. And being thus met againe together, we trauelled on still Westward, sometime thorow such thicke woods, that we were inforced with cudgels to breake a way the brambles and bushes from tearing our naked bodie: o-
 ther some times we should trauell thorow the plaines, in such high grasse that wee could scarce see one another, and as we passed in some places, we should haue of our men slaine, and fall downe suddenly, being strooken by the Indians, which stood behinde trees and bushes, in secret places, and so killed our men as they went by, for wee went scatteringly in seeking of fruites to relieue our selues. We were also oftentimes greatly annoyed with a kind of flie, which in the Indian tongue is called Tequani, and the Spaniards called them Muskitos. There are also in the sayd countrey a number of other kinde of flies, but none so noysome as these Tequanies bee: you shall hardly see them they be so small, for they are scarce so big as a gnat: they will sucke ones blood maruelously, and if you kill them while they are sucking, they are so venomous that the place will swell extremely, euen as one that is stung with a Waspe or Bee: but if you let them sucke their fill, and to goe away of themselves, then they doe you no other hurt, but leaue behinde them a red spot somewhat bigger then a flea-biting. At the first wee were terribly troubled with these kinde of flies, not knowing their qualities, and resistance wee could make none against them, being naked: as for cold wee feared not any, the countrey there is alwayes so warme. And as we trauelled thus for the space of tenne or twelue dayes, our captaine did oftentimes cause certaine to goe vpon the toppes of high trees, to see if they could descrie any towne or place of inhabitants, but they could not perceiue any, and vying often the same order to climbe vpon high trees, at the length they descried a great riuer that fell from the Northwest into the maine sea, and presently after, we heard an harquebuzze shot off, which did greatly incourage vs, for thereby wee knew that we were neere to some Christians, and did therefore hope shortly to finde some succour and comfort, and within the space of one houre after, as we trauelled, we heard a cocke crowe, which was also no small ioy vnto vs, and so we came to the North side of the riuer of Panuco, where the Spaniards haue certaine Salines, at which place it was that the harquebuzze was shot off, which before we heard: to which place we went not directly, but missing thereof, we left it about a bow-shot vpon our left hand: of this riuer wee dranke very greedily, for wee had not met with any water in fire dayes before, and as we were here by the riuer side resting our selues, and longing to come to the place where the cocke did crowe, and where the harquebuzze was shot off, we perceived many Spaniards vpon the other side of the riuer, riding vpon and downe on horsebacke, and they perceiuing vs, did suppose that we had bene of the Indians their bordering enemies, the Chichimeci: the riuer was not past halfe a bowe shoot ouer: and presently one of the Spaniards tooke an Indian boate called a Canoas, and so came ouer, being rowed by two Indians, and hauing taken the view of vs, did presently rowe ouer backe againe to the Spaniards, who with-

Anthony Godard

Dauid Ingram.

The riuer of Panuco.

out any delay made out about the number of twenty horsemen, and imbarcking themselves in the Canoas, they led their horses by the reines swimming ouer after them, and being come ouer to that side of the riuer where we were, they sadled their horses, and being mounted vpon them with their lances charged, they came very fiercely running at vs. Our capitaine Anchony Godard seeing them come in that order, did perswade vs to submit and peelde our selues vnto them, for being naked, as we at this time were, and without weapon, we could not make any resistance, whose bidding we obeyed, and vpon the peelding of our selues, they perceiued vs to be Christians, and did call for moze Canoas, and caried vs ouer by foure and foure in a boat, and being come on the other side, they vnderstanding by our capitaine how long we had bene without meate, imparted between two and two a loafe of bread made of that countrey wheat, which the Spaniards call Maiz, of the bignesse of our halfe penie loaues, which bread is named in the Indian tongue Clashacally. This bread was very sweete and pleasant vnto vs, for we had not eaten any in a long time before: and what is it that hunger doth not make to haue a sauory and a delicate taste? And hauing thus parted the bread amongst vs, those which were men they sent afoze to the towne, hauing also many Indians inhabitants of that place to garde them: they which were yong, as boyes, and some such also as were feeble, they tooke vp vpon their horses, behind them, and so caried vs to the towne where they dwelt, which was very neere distant a mile from the place where we came ouer.

The Salines
of Panuco.

This towne is well situated, and well replenished with all kindes of fruits, as Oranges, Limons, Pomegranates, Appricoks, and Peaches, and sundry others, and is inhabited with a great number of tame Indians, or Mexicans, and had in it also at that time about the number of two hundred Spaniards, men, women, and chilozen, besides Negroes. Of their Salines, which lie vpon the West side of the riuer, moze then a mile distant from thence, they make a great profit, for it is an excellent good merchandize there: the Indians doe buy much thereof, and carie it vpon the countrey, and there sell it to their owne countrey people, in doubling the price. Also much of the Salt made in this place, is transported from thence by sea to sundry other places, as to Cuba, S. Iohn de Villua, and the other ports of Tamiago, and Tamachos, which are two barred hauens West and by South aboue threescore leagues from S. Iohn de Villua. When we were all come to the towne, the Gouverneur there shewed himselfe very seuerie vnto vs, and threatened to hang vs all: and then he demanded what money wee had, which in trueth was very little, for the Indians which we first met withall, had in a maner taken all from vs, and of that which they left, the Spaniards which brought vs ouer, tooke away a good part also: howbeit, from Anthony Godard the Gouverneur here had a chaine of gold, which was giuen vnto him at Carthagena, by the Gouverneur there, and from others he had some small store of money: so that wee accounted that amongst vs all he had the number of five hundred Pezos; besides the chaine of gold.

And hauing thus satisfied himselfe, when he had taken all that we had, he caused vs to be put into a little house much like a hogstie, where we were almost smothered: and before we were thus shut vp into that little coat, they gave vs some of the countrey wheate, called Mayz, sodden, which they feede their hogs withall. But many of our men which had bene hurt by the Indians at our first comming on land, whose wounds were very sore and grieuous, desired to haue the helpe of their Surgeons to cure their wounds. The gouernour, and most of them all answered, that wee should haue none other Surgeon but the hangman, which should sufficiently heale vs of all our griefes: and thus reuiling vs, and calling vs English dogs, and Lutheran heretikes, we remained the space of thre dayes in this miserable state, not knowing what should become of vs, waiting euery houre to be bereaued of our liues.

Chap. 4.

Wherin is shewed how we were vsed in Panuco, and in what feare of death we were there, and how we were caried to Mexico to the Viceroy, and of our imprisonment there and at Tescuco, with the courtesies and cruelties wee receiued during that time, and how in the end wee were by proclamation giuen to serue as slaues to sundry gentlemen Spaniards.

Vpon the fourth day after our comming thither, and there remaining in a perplexitie, looking euery houre when we should suffer death, there came a great number of Indians and Spaniards weaponed to fetch vs out of the house, and amongst them wee espied one that brought a great many of new halters, at the sight whereof we were greatly amazed, and made no other account but that we should presently haue suffered death, and so crying and calling to God for mercie and forgiveness of our sinnes, we prepared our selues, making vs ready to die: yet in the end,

as the sequel shewed, their meaning was not so: for when wee were come out of the house, with those halters they bound our armes behind vs, and so coupling vs two and two together, they commanded vs to march on through the towne, and so along the countrey from place to place toward the citie of Mexico, which is distant from Panuco West and by South the space of ninetie leagues, having onely but two Spaniards to conduct vs, they being accompanied with a great number of Indians warding on either side with bowes and arrowes, lest we should escape from them. And travelling in this order, vpon the second day at night we came vnto a towne which the Indians call Nohele, and the Spaniards call it Santa Maria: in which towne there is a house of white friers, which did very courteously vse vs, and gaue vs hote meat, as mutton and broth, and garments also to couer our selues withal, made of white bayes: we fed very greedily of the meat, and of the Indian fruit, called Nochole, which fruit is long and small, much like in fashion to a little cucumber. Our greedy feeding caused vs to fall sicke of hote burning agues. And here at this place one Thomas Baker one of our men died of a hurt: for he had bene before shot with an arrow into the throat at the first encounter.

The next morrow about ten of the clocke, we departed from thence, bound two & two together, and garded as before, and so traualled on our way toward Mexico, till we came to a towne within forty leagues of Mexico, named Mestlan, where is a house of blacke friers: and in this towne there are about the number of three hundred Spaniards, both men, women, and children. The friers sent vs meat from the house ready dished, and the friers, and the men and women vsed vs very courteously, and gaue vs some shirts and other such things as we lacked. Here our men were very sicke of their agues, and with eating of another fruit called in the Indian tongue, Guiacos, which fruit did binde vs so sore, that for the space of tenne or twelue dayes we could not ease our selues. The next morning we departed from thence with our two Spaniards and Indian gard, as aforesayd. Of these two Spaniards the one was an aged man, who all the way did very courteously intreate vs, and would carefully go before to prouide for vs both meat and things necessary to the uttermost of his power: the other was a young man who all the way trauelled with vs, and neuer departed from vs, who was a very cruell carline, and he caried a iaueline in his hand, and sometimes when as our men with very feeblenesse and faintnesse were not able to goe so fast as he required them, he would take his iauelin in both his handes, and strike them with the same betweene the necke and the shoulders so violently, that he would strike them downe: then would he cry, and say, Marchad, marchad Ingleses perros, Luterianos, enemigos de Dios: which is as much to say in English, as March, march on you English dogges, Lutherans, enemies to God. And the next day we came to a towne called Pachuca, and there are two places of that name: as this towne of Pachuca, and the mines of Pachuca, which are mines of silver, and are about five leagues distant from this towne of Pachuca towards the Northwest.

Here at this towne the good olde man our Gouvernour suffered vs to stay two dayes and two nights, hauing compassion of our sicke and weake men, full sore against the minde of the young man his companion. From thence we tooke our iourney, and trauelled foure or five dayes by little villages, and Scantias, which are farmes or dairie houses of the Spaniards, and euer as wee had neede, the good olde man would still prouide vs sufficient of meates, fruites, and water to sustaine vs. At the end of which five dayes wee came to a towne within five leagues of Mexico, which is called Quoghliclan, where wee also stayed one whole day and two nights, where was a faire house of gray friers, howbeit wee saw none of them. Here wee were told by the Spaniards in the towne, that wee had not past fiftene English miles from thence to Mexico, where of we were all very ioyfull and glad, hoping that when we came thither, we should either be relieved, and set free out of bonds, or els bee quickly dispatched out of our liues: for seeing our selues thus caried bound from place to place, although some vsed vs courteously, yet could wee neuer ioy, nor be merrie till wee might perceiue our selues set free from that bondage, either by death or other wise.

The next morning we departed from thence on our iourney towards Mexico, and so trauelled till wee came within two leagues of it, where there was built by the Spaniards a very faire church, called our Ladys church, in which there is an image of our Lady of silver & gilt, being as high, & as large as a tall woman, in which church, and before this image, there are as many lamps of silver as there be dayes in the yeere, which vpon high dayes are all lighted. Whensoever any Spaniards passe by this church, although they be on horse backe, they will alight, and come into the church, and kneele before this image, and pray to our Lady to defend them from all euil: so that whether he be horseman or footman he will not passe by, but first goe into the Church, and pray as aforesayd, which if they doe not, they thinke and beleue that they shall neuer prosper: which image

Nuestra Señora.

they call in the Spanish tongue, Nuestra Señora de Guadalupe. At this place there are certain cold baths, which arise, springing up as though the water did seeth: the water whereof is somewhat brackish in taste, but very good for any that haue any soze or wound, to wash themselves therewith, for as they say, it healeth many: and every yeere once vpon our Lady day the people vse to repaire thither to offer, and to pray in that Church before the image, and they say that our Lady of Guadalupe doeth worke a number of miracles. About this Church there is not any towne of Spaniards that is inhabited, but certaine Indians doe dwell there in houses of their own countrey building.

Certaine Englishmen taken prisoners at the fight at Sant Iuan de Villua.

Here we were met with a great number of Spaniards on horsebacke, which came from Mexico to see vs, both gentlemen, and men of occupations, and they came as people to see a wonder: we were still called vpon to march on, and so about foure of the clocke in the afternoone of the said day we entred into the citie of Mexico, by the way or street called La calle Santa Catherina: and we stayed not in any place till we came to the house or palace of the Vice Roy, Don Martin Henriques, which standeth in the middle of the city, hard by the market place, called La plaza del Marques. We had not stayed any long time at this place, but there was brought vs by the Spaniards from the market place great store of meat, sufficient to haue satisfied five times so many as we were: some also gaue vs hats, & some gaue vs money: in which place we stayed for the space of two houres, & from thence we were conueyed by water in two large Canoas to an hospitall where as certaine of our men were lodged, which were taken before the fight at S. Iohn de Villua: wee should haue gone to our Ladies hospitall, but that there were also so many of our men taken before at that fight that there was no roome for vs. After our coming thither, many of the company that came with me from Panuco dyed within the space of fourteene dayes: soone after which time we were taken forth from that place, and put altogether into our Ladies hospitall, in which place we were courteously vsed, and visited oftentimes by vertuous gentlemen and gentlewomen of the citie, who brought vs diuers things to comfort vs withall, as succats and marmilads, and such other things, and would also many times giue vs many things, and that very liberally. In which hospitall we remained for the space of sixe moneths, vntill we were all whole and sound of body, and then we were appointed by the Vice Roy to be caried vnto the towne of Tescuco, which is from Mexico South-west distant eighthe leagues: in which towne there are certaine houses of correction and punishment for ill people called Obraches, like to Bridewell here in London: in which place diuers Indians are sold for slaves, some for ten yeeres, and some for twelue. It was no small grieue vnto vs when we understood that we should be caried thither, and to be vsed as slaves, we had rather be put to death: howbeit there was no remedy, but we were caried to the prison of Tescuco, where we were not put to any labour, but were very straitly kept, & almost famished, yet by the good prouidence of our mercifull God, we happened there to meet with one Robert Sweeting, who was the sonne of an Englishman bozne of a Spanish woman: this man could speake very good English, and by his means wee were holpen very much with victuals from the Indians, as mutton, hennes, & bread. And if we had not bene so relieved, we had surely perished: and yet all the prouision that wee had gotten that way was but slender. And continuing thus straightly kept in prison there for the space of two moneths, at the length wee agreed amongst our selues to breake forth of prison, come of it what would, for we were minded rather to suffer death then longer to liue in that miserable state. And so hauing escaped out of prison, we knew not what way to flie for the safetie of our selues, the night was darke, and it rained terribly, and not hauing any guide, we went we knew not whither, and in the morning, at the appearing of the day, we perceived our selues to be come hard to the citie of Mexico, which is 24 English miles fra Tescuco.

Robert Sweeting an Englishman

English gentlemen hostages.

Almost an hundred Englishmen prisoners in Mexico.

The day being come we were espied by the Spaniards, & pursued, and taken, and brought before the Vice Roy and head iustices, who threatened to hang vs for breaking of the kings prison. Yet in the end they sent vs into a garden belonging to the Vice Roy: & coming thither, we found there our English gentlemen which were deliuered as hostages when as our General was betrayed at S. Iohn de Villua, as is aforesaid, and with them wee also found Robert Barret, the Master of the Iesus, in which place we remained labouring and doing such things as we were commanded, for the space of 4 moneths, hauing but two sheepe a day allowed to suffice vs all, being very neere a hundred men, and for bread we had euery man two loaves a day, of the quantity of one halfe penny loaf. At the end of which foure moneths, they hauing remooued our gentlemen hostages, and the Master of the Iesus to a prison in the Vice Roy his owne house, did cause it to be proclaimed, that what gentleman Spaniard soeuer was willing, or would haue any English man to serue him, and be bound to keepe him forth coming, to appeare before the Iustices within one moneth after notice giuen, that they should repaire to the said garden, and there take their choice: which

procla-

proclamation was no sooner made, but the gentlemen came and repaired to the garden againe, so that happie was he that could soonest get one of vs.

Chap. 5.

Wherein is shewed in what good sort, and how wealthily we liued with our masters yntill the coming of the Inquisition, when as againe our sorowes began a fresh: Of our imprisonment in the holy house, and of the seuerer iudgement and sentences giuen against vs, and with what rigour and crueltie the same were executed.

The gentlemen that thus tooke vs for their seruants or slaues, did new apparell vs through out, with whom we abode, doing such seruice as they appointed vs vnto, which was for the most part to attend vpon them at the table, and to be as their chamberlaines, & to waite vpon them when they went abroad, which they greatly accounted of: for in that countrey no Spaniard will serue one another, but they are all of them attended and serued by Indians weekly, and by Negroes which be their slaues during their life. In this sort we remained and serued in the said citie of Mexico, and thereabouts for the space of a yeere and somewhat longer. Afterwards many of vs here by our masters appointed to go to sundry of their Mines where they had to doe, and to be as ouerseers of the Negroes and Indians that laboured there. In which mines many of vs did profite & gaine greatly: for first we were allowed three hundred Pezos a man for a yeere, which is threescore pound sterling, and besides that the Indians and Negroes which wrought vnder our charge, vpon our well vsing & intreating of them, would at times as vpon Saturdays when they had left worke, labour for vs, and blow as much siluer as should be worth vnto vs 3 markes or thereabouts, euery marke being worth 6 Pezos, and a halfe of their money, which 12 Pezos & a halfe, is worth 4 li. 10 s. of our money. Sundry weekes we did gaine so much by this meanes besides our wages, that many of vs became very rich, and were woorth three thousand or foure thousand Pezos, for we liued and gained thus in those Mines some three or foure yeeres. As concerning those Gentlemen which were deliuered as hostages, and that were kept in prison, in the Viceroy his house, after that we were gone from out the garden to serue sundry gentlemen as aforesaid, they remained prisoners in the said house for the space of 4 moneths after their coming thither, at the end whereof the fleet being readie to depart from S. Iohn de Villua, to goe for Spaine, the said Gentlemen were sent away into Spaine with the fleet, where as I haue heard it credibly reported, many of them died with the cruell handling of the Spaniards in the Inquisition house, as those which haue bene deliuered home after they had suffered the persecution of that house can moze perfectly declare. Robert Barret also master of the Iesus, was sent away with the fleet into Spaine the next yeere following, where afterwards he suffered persecution in the Inquisition, and at the last was condemned to be burnt, and with him one moze of our men whose name was Iohn Gilbett.

Now after that five yeeres were fully expired since our first coming into the Indies, in which time we had bene imprisoned and serued in the said countreys as is before truly declared, In the yeere of our Lord one thousand five hundred seuentie foure, the Inquisition began to be established in the Indies, very much against the mindes of many of the Spaniards themselves: for neither vntill this time since their first conquering and planting in the Indies, were they subiect to that bloodie and cruell Inquisition. The chiefe Inquisitor was named Don Pedro Moya de Contreras, and Iohn de Bouilla his companion, and Iohn Sanchez the Fischall, and Pedro de los Rios, the Secretary: they being come and settled, and placed in a very faire house neere vnto the white Friers, considering with themselves that they must make an entrance and beginning of that their most detestable Inquisition here in Mexico, to the terror of the whole countrey, thought it best to call vs that were Englishmen first in question, and so much the rather, for that they had perfect knowledge and intelligence, that many of vs were become very rich, as hath bene already declared, and therefore we were a very good booty and pray to the Inquisitors: so that no w againe began our sorowes a fresh, for we were sent for, and sought out in all places of the countrey, and proclamation made vpon paine of loosing of goods and excommunication, that no man should hide or keepe secret any Englishmen or any part of their goods. By means whereof we were all soone apprehended in all places, and all our goods seized and taken for the Inquisitors vse, and so from all parts of the countrey we were conueied and sent as prisoners to the citie of Mexico, and there committed to prison in sundry darke dungeons, where we could not see but by candle light, & were neuer past two together in one place, so that we saw not one another, neither could one of vs tell what was become of another. Thus we remained close imprisoned for the space of a yeere and a halfe

halfe, and others for some lesse time, for they came to prison euer as they were apprehended. During which time of our imprisonment, at the first beginning we were often called befoze the Inquisitors alone, and there seuerely examined of our faith, and commanded to say the Pater noster, the Aue Maria, & the Creed in Latin, which God knoweth a great number of vs could not say, otherwise then in the English tongue. And hauing the said Robert Sweeting who was our friend at Tescuco alwayes present with the for an interpreter, he made repozt for vs, y in our own countrey speech we could say them perfectly, although not word for word as they were in Latin. Then did they proceede to demand of vs vpon our othes what we did beleue of the Sacrament, & whether there did remaine any bread or wine after the words of consecration, yea or no, and whether we did not beleue that the host of bread which the priest did hold vpon his head, and the wine that was in the chalice, was the very true and perfect body & blood of our Saviour Christ, yea or no: To which if we answered not yea, then was there no way but death. Then they would demand of vs what we did remember of our selues, what opinions we had held, or had bin taught to hold contrary to the same whiles we were in England: to which we for the safety of our liues were constrained to say, that we neuer did beleue, nor had bene taught otherwise then as befoze we had sayd. Then would they charge vs that we did not tell them the truth, that they knew the contrary, and therefore we should cal our selues to remembrance, & make them a better answer at the next time, or els we should be rackt, and made to confesse the truth whether we would or no. And so comming againe befoze them the next time, we were still demanded of our beleue whiles we were in England, and how we had bin taught, & also what we thought or did know of such of our owne company as they did name vnto vs, so that we could neuer be free from such demands, and at other times they would promise vs, that if we would tell them truth, then should we haue fauour & be set at libertie, although we very wel knew their faire speeches were but means to intrap vs, to the hazard and losse of our liues: howbeit God so mercifully wrought for vs by a secret meanes that we had, that we kept vs still to our first answer, & would still say that we had told the truth vnto them, and knew no more by our selues nor any other of our fellows then as we had declared, and that for our sinnes and offences in England against God and our Lady, or any of his blessed Saints, we were heartily sorry for the same, and did cry God mercy, and besought the Inquisitors for Gods sake, considering that we came into those countreys by force of weather, & against our wils, and that neuer in all our liues we had either spoken or done any thing contrary to their lawes, that therefore they would haue mercy vpon vs. Yet all this would not serue: for still from time to time we were called vpon to confesse, and about the space of 3 moneths befoze they proceeded to their seuerer iudgement, we were al rackt, and some enforced to utter that against themselves, which after wards cost them their liues. And thus hauing gotten from our owne mouths matter sufficient for them to proceed in iudgement against vs, they caused a large scaffold to be made in the middelt of the market place in Mexico right ouer against the head church, & 14 or 15 daies befoze the day of their iudgement, with the sound of a trumpet, and the noise of their Atabalies, which are a kind of drummes, they did assemble the people in all parts of the citie: befoze whom it was then solemnely proclaimed, that whosoever would vpon such a day repaire to the market place, they should heare the sentence of the holy Inquisition against the English heretikes, Lutherans, and also see the same put in execution. Which being done, and the time appoaching of this cruell iudgement, the night befoze they came to the prison where we were, with certaine officers of that holy hellish house, bringing with the certaine fooles coats which they had prepared for vs, being called in their language S. Beoritos, which coats were made of yellow cotten & red crosses vpon them, both befoze & behind: they were so busied in putting on their coats about vs, and in bringing vs out into a large yard, and placing and pointing vs in what order we should go to the scaffold or place of iudgement vpon the morrow, that they did not once suffer vs to sleepe all that night long. The next morning being come, there was giuen to euery one of vs for our breakfast a cup of wine, and a slice of bread fried in honie, and so about eight of the clocke in the morning, we set forth of the prison, euery man alone in his yellow coat, and a rope about his necke, and a great greene Ware candle in his hand vnsighted, hauing a Spaniard appoointed to goe vpon either side of euery one of vs: and so marching in this order and maner toward the scaffold in the market place, which was a bow shoot distant or thereabouts, we found a great assembly of people all the way, and such a throng, that certaine of the Inquisitors officers on horseback were constrained to make way, and so comming to the scaffold, we went by by a paire of stappes, and found seates readie made and prepared for vs to sit downe on, euery man in order as he should be called to receiue his iudgement. We being thus set downe as we were appoointed, presently the Inquisitors came by another paire of staires, and the Viceroy and all the chiefe Iustices with them. When they were set downe and placed

Our men are
cruelly rackt.

under

under the cloth of estate agreeing to their degrees and calling, then came vp also a great number of Friers, white, blacke and gray, about the number of 300 persons, they being set in the places for them appointed. Then was there a solemne Oyes made, and silence commanded, and then presently beganne their seuer and cruell iudgement.

The first man that was called was one Roger the chiefe Armourer of the Iesus, and hee had iudgement to haue thre hundred stripes on his backe, and after condemned to the gallies as a slave for 10 yeeres.

After him were called Iohn Gray, Iohn Browne, Iohn Rider, Iohn Moone, James Collier, and one Thomas Browne: these were adiudged to haue 200 stripes on his backe, and after to be committed to the gallies for the space of 8 yeeres.

Then was called Iohn Keyes, and was adiudged to haue 100 stripes on his backe, and condemned to serue in the gallies for the space of 6 yeeres.

Then were seuerally called the number of 53 one after another, and euery man had his seuerall iudgement, some to haue 200 stripes on his backe, and some 100, and condemned for slaves to the gallies, some for 6 yeeres, some for 8 and some for 10.

And then was Miles Philips called, and was adiudged to serue in a monasterie for 5 yeeres, without any stripes, and to weare a fooles coat, of S. Benico, during all that time.

Then were called Iohn Storie, Richard Williams, David Alexander, Robert Cooke, Paul Horswell and Thomas Hull: these six were condemned to serue in monasteries without stripes, some for 3 yeeres and some for foure, and to weare the S. Benico during all the said time. Which being done, and it now drawing toward night, George Riely, Peter Momfrie, and Cornelius the Irishman, were called and had their iudgement to be burnt to ashes, and so were presently sent away to the place of execution in the market place but a little from the scaffold, where they were quickly burnt and consumed. And as for vs that had receiued our iudgement, being 68 in number, we were caried backe that night to prison againe. And the next day in the morning being good Friday, the yeere of our Lord 1575, we were all brought into a court of the Inquisitors pallace, where we found a horse in a readineesse for euery one of our men which were condemned to haue stripes, and to be committed to the gallies, which were in number 60 and so they being enforced to mount vpon his backe naked from the middle upward, were carried to be shewed as a spectacle for all the people to behold through out the chiefe and principall streetes of the citie, and had the number of stripes to euery one of them appointed most cruellly laid vpon their naked bodies with long whips by sundry men appointed to be the executioners thereof: and before our men there went a couple of criers which cried as they went: Behold these English dogs, Lutherans, enemies to God, and all the way as they went there were some of the Inquisitors themselves, and of the familiars of that rakehell order, that cried to the executioners, Strike, lay on those English hereticks, Lutherans, Gods enemies: and so this horrible spectacle being shewed round about the citie, they returned to the Inquisitors house, with their backs all gore blood, and swollen with great bumps, and were then taken from their horses, & carried againe to prison, where they remained untill they were sent into Spaine to the gallies, there to receiue the rest of their martirdome: and I and the 6 other with me which had iudgement, and were condemned amongst the rest to serue an apprenticeship in the monastery, were taken presently and sent to certaine religious houses appointed for the purpose.

Chap. 6.

Wherein is shewed how we were vsed in the religious houses, and that when the time was expired, that we were adiudged to serue in them, there came newes to Mexico of M. Francis Drakes being in the South Sea, and what preparation was made to take him, and how I seeking to escape, was againe taken and put in prison at Vera Cruz, and how againe I made mine escape from thence.

Miles Philips and William Lowe were appointed to the blacke Friers, where I was appointed to be an ouerser of Indian workmen, who wrought there in building of a new church: amongst which Indians I learned their language or Mexican tongue very perfectly, and had great familiarity with many of them, whom I found to be a courteous and louing kind of people, ingenious, and of great understanding, and they hate and abhorre the Spaniards with all their hearts, they haue vsed such horrible cruelties against them, and doe still keepe them in such subiection and seruitude, that they and the Negros also doe daily lie in waite to purchase their deliverance out of that thraldome and bondage, that the Spaniards doe keepe them in.

Lowe he was appointed to serue the Cooke in the kitchen, Richard Williams and David Alexander were appointed to the gray Friers, Iohn Story and Robert Cooke to the white Friers: Paul Horfewel the Secretary tooke to be his seruant: Thomas Hull was sent to a Monastery of priests, where after ward he died. Thus we serued out the peeres that we were condemned for, with the vse of our fooles coates, and we must needs confesse that the Friers did vse vs very courteously: for euery one of vs had his chamber with bedding & diet, and all things cleane and neat: yea many of the Spaniards and Friers themselves do bitterly abhorre and mislike of that cruell Inquisition, and would as they durst bewaile our miseries, and comfort vs the best they could, although they stood in such feare of that diuelish Inquisition, that they durst not let the left haube know what the right doth. Now after that the time was expired for which we were condemned to serue in those religious houses, we were then brought againe before the chiefe Inquisitor, and had all our fooles coates pulled off and hanged vp in the head church, called Ecclesia Maior, and euery mans name and iudgement written thereupon with this addition, An heretike Lutheran reconciled. And there are also all their coates hanged vp, which were condemned to the gallies, with their names and iudgements, and vnderneath his coat, Heretike Lutheran reconciled. And also the coats and names of the three that were burned, wh. r. upon were written, An obstinate heretike Lutheran burnt. Then were we suffered to goe up and downe the countrey, and to place our selues as we could, and yet not so free, but that we very well knew that there was good espyall alwayes attending vs and all our actions, so that we durst not once speake or looke awry. David Alexander & Robert Cooke returned to serue the Inquisitor, who shortly after married them both to two of his Negro women: Richard Williams married a rich widow of Biskay with 4000 Pезos: Paul Horfewell is married to a Mestisa, as they name those whose fathers were Spaniards, and their mothers Indians, and this woman which Paul Horfewell hath married, is sayd to be the daughter of one that came in with Hernando Cortes the Conquerour, who had with her in marriage foure thousand Pезos, and a faire house: Iohn Story is married to a Negro woman: William Lowe had leaue and licence to goe into Spaine where he is now married: for mine owne part I could neuer thoroughly settle my selfe to marry in that countrey, although many faire offers were made vnto me of such as were of great abilitie and wealth, but I could haue no liking to liue in that place, where I must euery where see and know such horrible idolatrie committed, and durst not once for my life speake against it: and therefore I had alwayes a longing and desire to this my natiue countrey: and, to returne and serue againe in the Pines where I might haue gathered great riches and wealth, I very well saw that at one time or another I should fall againe into the danger of that diuelish Inquisition, and so be stript of all, with losse of life also, and therfore I made my choise rather to learne to weaue Grogranes and Taffaties, and so compounding with a Silke-weauer, I bound my selfe for three peeres to serue him, and gaue him an hundred and fiftie Pезos to teach me the science, or otherwise he would not haue taught mee vnder seuen peeres prentiship, and by this meanes I liued the more quiet, and free from suspicion. Nowbeit I should many times be charged by familiars of that diuelish house, that I had a meaning to runne awry into England, and to be an heretike Lutheran againe: To whom I would answer that they had no neede to suspect any such thing in mee, for that they knewe all very well that it was impossible for me to escape by any manner of meanes: yet notwithstanding I was called before the Inquisitor, and demaunded why I did not marrie: I answered that I had bound my selfe at an occupation. Well said the Inquisitor, I knowe thou meanest to runne away, and therefore I charge thee here vpon paine of burning as an heretike relapsed, that thou depart not out of this citie, nor come neere to the port of S. Iohn de Villua, nor to any other port: To the which I answered, that I would willingly obey. Yea said he, see thou doe so and thy fellows also, they shall haue the like charge.

So I remained at my science the full time, and learned the Art, at the end whereof there came newes to Mexico that there were certaine Englishmen landed with a great power at the port of Acapulco, vpon the South sea, and that they were coming to Mexico to take the spoyle therof, which wrought a marvellous great feare amongst them, & many of those that were rich, began to shift for themselves, their wiues & children: vpon which hurle burlie the Viceroy caused a generall muster to be made of all the Spaniards in Mexico, and there were found to be the number of 7000 and odde householders of Spaniards in the citie and suburbs, and of single men unmarried, the number of 3000 and of Mestizoes, which are counted to be the sonnes of Spaniards bozne of Indian women, twenty thousand persons, and then was Paul Horfewell & Miles Philips sent for before the Viceroy, and were examined if we did know an English man named Francis Drake, which was brother to Captaine Hawkins: to which we answered, that Captaine Hawkins had

had not any brother but one, which was a man of the age of threescore yeeres or thereabouts, and was now gouernour of Plimmouth in England. And then he demanded of vs if we knewe one Francis Drake, and we answered, no.

While these things were in doing, there came newes that all the Englishmen were gone, yet were there eight hundred men made out vnder the leading of seuerall Captains, wherof two hundred were sent to the port of S. Iohn de Vllua, vpon the North Sea vnder the conduct of Don Luys Suares, two hundred were sent to Guatimala in the South sea, who had for their captaine Iohn Cortes, two hundred more were sent to Guatulco, a port of the South sea, ouer whom went for captaine Don Pedro de Robles, and two hundred more were sent to Acapulco, the port where it was said that Captaine Drake had bene. And they had for Captaine doctor Robles Alcalde de Corre, with whom I Miles Philips went as interpreter, hauing licence giuen by the Inquisitors. When we were come to Acapulco, we found that Captaine Drake was departed from thence, more then a moneth before we came thither. But yet our captaine Alcalde de Corte there presently embarked himselfe in a small ship of threescore tunne or thereabout, hauing also in companie with him two other small barkes, and not past two hundred men in all, with whom I went as interpreter in his owne ship, which God knoweth was but weake and ill appointed, so that for certaine, if we had met with Captaine Drake, he might easily haue taken vs all: We being embarked kept our course and ranne Southward towards Panama, keeping still as nigh the shore as we could, and leauing the land vpon our left hand, and hauing coasted thus for the space of eighteene or twentie dayes, and being more to the South then Guatimala, we met at last with other ships which came from Panama, of whom we were certainly informed that he was cleane gone off the coast more then a moneth before: and so we returned backe to Acapulco againe, and there landed, our Captaine being thereunto forced, because his men were very sore sea-sicke: All the while that I was at Sea with them, I was a glad man, for I hoped that if we met with master Drake, we should all be taken, so that then I should haue bene freed out of that danger and miserie wherein I liued, and should returne to mine owne countrey of England againe. But missing thereof, when I sawe there was no remedie but that we must needs come on land againe, little doeth any man knowe the sorow and grieve that inwardly I felt, although outwardly I was constrained to make faire weather of it. And so being landed, y next morow after, we began our iourney to wardes Mexico, and past these townes of name in our way, as first the towne of Tuatpec, 50 leagues from Mexico, from thence to Washaca, 40 leagues from Mexico: from thence to Tepiaca 24 leagues from Mexico, and from thence to Pueblo de los Angeles, where is a high hill which casteth out fire three times a day, which hill is 18 leagues in maner directly West from Mexico: from thence we went to Scapelapa, 8 leagues from Mexico, and there our captaine and most of his men tooke boat, and came to Mexico againe, hauing bene soorth about the space of seuen weekes or thereabouts. Our captaine made report to the Viceroy what he had done, and how farre he had trauelled, and that for certaine he was informed that captaine Drake was not to be heard of. To which the Viceroy replied and said, Surely we shall haue him shortly come into our hands giuen a land through necessitie in some one place or other, for he being now in these seas of Sur, it is not possible for him to get out of them againe, so that if he perith not at sea, yet hunger will force him to land. And then againe I was commanded by the Viceroy that I should not depart the citie of Mexico, but alwaies be at my masters house in a readinesse at an houres warning, when soeuer I should be called: for that notwithstanding within one moneth after certaine Spaniards going to Mecameca, 18 leagues from Mexico, to send away certaine hides and Cochinilla, that they had there at their Stancias or dairie houses, and my master hauing leaue of the Secretarie for me to go with them, I tooke my iourney with them being very well hoysed and appointed, and comming thither and passing the time there at Mecameca certaine dayes till we had perfect intelligence that the flete was ready to depart, I not being past 3 dayes iourney from the port of S. Iohn de Vllua, thought it to be the meetest time for me to make an escape, and I was the boldest, presuming vpon my Spanish tongue, which I spake as naturally as any of them all, thinking with my selfe, that when I came to S. Iohn de Vllua, I would get to be entertained as a souldiour, and so go home into Spaine in the same flete, and therefore secretly one euening late, the moone shining faire, I conueyed my selfe away, and riding so for the space of two nights and two dayes, sometimes in, and sometimes out, resting very little all that time, vpon the second day at night I came to the towne of Vera Cruz, distant from the port of S. Iohn de Vllua, where the ships rode, but only 5 leagues, and here purposing to rest my selfe a day or two, I was no sooner alighted, but within the space of one halfe houre after, I was by ill hap arrested, and brought before Iustices there, being taken and suspected to be a gentlemans sonne of Mexico, that was runne away

Tuatpec, Washaca, Tepiaca, Pueblo de los Angeles, Scapelapa.

The Spanish Viceroy promised, but false.

Vera Cruz distant 5 leagues from S. Iohn de Vllua.

from

from his father, who in trueth was the man they sought for: So I being arrested, and brought before the Iustices, there was a great hurly burly about the matter, euery man charging me that I was the sonne of such a man dwelling in Mexico, which I flatly denied, affirming that I knewe not the man, yet would they not beleue me, but urged still vpon me that I was he that they sought for, and so I was conueied away to prison. And as I was thus going to prison, to the further increase of my grieffe, it chanced that at that very instant there was a poore man in the presse that was come to towne to sell hennies, who told the Iustices that they did me wrong, and that in trueth he knew very well that I was an Englishman and no Spaniard. They then demanded of him how he knew that, and threatened him that he said so, for that he was my companion, and sought to conuey me away from my father, so that he also was threatened to be laid in prison with me: he for the discharge of himselfe stood stiffly in it, that I was an Englishman, & one of captaine Hawkins men, and that he had knowen me weare the S. Benito in the Blacke-friers at Mexico, for 3 or 4 whole yerres together: which when they heard, they forooke him, and began to examine me a new, whether that speech of his were true, yea or no, which when they perceiued that I could not denie, and perceiuing that I was run from Mexico, & came thither of purpose to conuey my selfe away with the fleete, I was presently committed to prison with a sorrowfull heart, often wishing my selfe that that man which knew me had at that time bene further off: howbeit he in sinceritie had compassion of my distressed estate, thinking by his speech, and knowing of me, to haue set me free from that present danger which he saw me in: howbeit, contrary to his expectation, I was thereby brought into my extreme danger, and to the hazard of my life, yet there was no remedy but patience perforce. And I was no sooner brought into prison, but I had a great paire of bolts clapt on my legs, and thus I remained in that prison for the space of 3 weekes, where were also many other prisoners which were thither committed for sundry crimes, & condemned to the gallies. During which time of imprisonment there, I found amongst those my prison-fellowes some that had knowen me before in Mexico, and truly they had compassion of me, & would spare of their victuals and any thing els that they had to doe me good: amongst whom there was one of them that told me that he vnderstood by a secret friend of his which often came to the prison to him, that I should be shortly sent backe againe to Mexico by wagon, so soone as the fleete was gone from S. Iohn de Vllua, for Spaine. This poore man my prison-fellow of himselfe, & without any request made by me, caused his said friend which came often vnto him to the grate of the prison, to bring him wine and victuals, to buy for him 2 knives which had files in their backs, which files were so wel made that they would serue & suffice any prisoner to file off his irons, & of those knives or files he brought one to me, & told me that he had caused it to be made for me, and let me haue it at that very price it cost him, which was 2 Pezos, the value of 8, s. of our money: which knife when I had it, I was a ioyfull man, and conueied the same into the foote of my boot, vpon the inside of my left leg, and so within 3 or 4 dayes after that I had thus receiued my knife. I was suddenly called for, & brought before the head Iustice which caused those my irons with the round bolt to be stricken off and sent to a Smiths in the towne, where was a new paire of bolts made ready for me of another fashion, which had a broad iron barre comming betweene the shackles, and caused my hands to be made fast with a paire of manacles, and so was I presently laid into a wagon all alone, which was there readie to depart with sundry other wagons, to the number of 60, towarde Mexico, and they all were laden with sundry merchandise which came in the fleete out of Spaine.

The wagon that I was in was foremost in all the companie, and as we trauelled I being alone in the wagon, began to trie if I could plucke my hands out of the manacles, and as God would, although it were somewhat painefull for me, yet my handes were so slender that I could pull them out, and put them in againe, and euer as we went, when the wagon made most noyse, and the men were busiest, I would be working to file off my bolts, & traueilling thus for the space of 8 leagues from Vera Cruz, we came to an high hill, at the entering vp of which (as God would) one of the wheelles of the wagon wherein I was, brake, so that by that meanes the other wagons went afoze, and the wagon-man that had charge of me set an Indian Carpenter a worke to mend the wheele: and here at this place they baited at an hostrie that a Negro-woman keepes: and at this place, for that the going vp of the hill is very steepe, for the space of two leagues and better, they doe alwaies accustome to take the moiles of 3 or 4 wagons, and to place them all together for the drawing vp of one wagon, and so to come downe againe, and fetch vp others in that order. All which came very well to passe: for as it drew towards night when most of the Wagons were gone to draw vp their wagons, in this sort I being alone had quickly filed off my bolts, and so espying my time in the darke of the evening before they returned downe the hill againe, I conueyed my selfe into the woods there adioynning, carryng my bolts and manacles with me, & a few biscuits,

Miles Philips his
last wonderfull
escape.

biscuits, and two small cheeses. And being come into the woods, I threw my prons into a thicke bush, and then couered them with mosse and other things, and then shifted for my selfe as I might all that night. And thus by the good prouidence of Almighty God, I was freed from mine prons all sauing the collar that was about my necke, and so got my libertie the second time.

Chap. 7.

Wherein is shewed how I escaped to *Guatimala*, vpon the South sea, and from thence to the port of *Canallos*, where I got passage to goe into *Spaine*, and of our arriuall at *Hauana*, and our comming to *Spaine*, where I was againe like to haue bene committed prisoner, and how through the great mercy of God I escaped, and came home in safetie into *England* in February 1582.

The next morning (day light being come) I perceiued by the Sunne rising what way to take to escape their hands, for when I fledde, I tooke the way into the woods vpon the left hand: and hauing left that way that went to Mexico vpon my right hand, I thought to keepe my course as the woods and mountaines lay, still direct South as neere as I could: by meanes whereof I was sure to conuey my selfe farre ynough from that way that went to Mexico. And as I was thus going in the woods, I saw many great fires made to the North not past a league from the mountaine where I was, and traouailing thus in my bootes with mine prons collar about my necke, and my bread and cheese, the very same forenoone I mette with a company of Indians which were hunting of Deere for their sustenance: to whom I spake in the Mexican tongue, and told them how that I had of a long time bin kept in prison by the cruel Spanyards, and did desire them to helpe me fild to off mine prons collar, which they willingly did: reioycing greatly with me, that I was thus escaped out of the Spanyards hands. Then I desired that I might haue one of them to guide mee out of those desert mountaines towardes the South, which they also most willingly did: and so they brought mee to an Indian towne 8. leagues distant from thence, named *Shalapa*, where I stayed three dayes, for that I was somewhat sickely. At which towne (with the gold that I had quilled in my dublet) I bought me an horse of one of the Indians, which cost mee 6. pezos, and so traouailing South, within the space of 2. leagues I happened to ouertake a gray Friar, one that I had bene familiar withall in Mexico, whom then I knewe to be a zealous good man, and one that did much lament the crueltie vsed against vs by the Inquisitors, and truly hee used me very courteously: and I hauing confidence in him did inueade tel him, that I was minded to aduenture to see if I could get out of the sayd countrey if I could finde shipping, and did therefore pray him of his ayde, direction, and aduise herein, which he faithfully did, not onely in directing me which was my safest way to trauaile, but he also of himselfe kept me company for the space of three dayes, and euer as we came to the Indians houses (who vsed and intertaind vs well) hee gathered among them in money to the value of 20. pezos, which at my departure from him hee freely gaue vnto mee. So came I to the citie of *Guatimala* vpon the South sea, which is distant from Mexico about 250. leagues, where I stayed 6. dayes, for that my horse was weake. And from thence I trauailed still South and by East seuen dayes iourney, passing by certayne Indian townes, vntill I came to an Indian towne distant from Mexico, direct South 309. leagues. And here at this towne enquiring to go to the Port de *Cauillos* in the North east sea, it was answered that in traouailing thither I should not come to any towne in 10. or 12. dayes iourney: so heere I hired two Indians to be my guides, and I bought hennes, and bread to serue vs so long time, and tooke with vs things to kinde fire euerie night, because of wilde beastes, and to dresse our meate: and euerie night when we rested, my Indian guides would make two great fires, betweene the which we placed our selues, and my horse. And in the night time we should heare the Lions roare, with Tygres, Dunces, and other beastes, and some of them we should see in the night, which had eyes shining like fire. And traouailing thus for the space of twelue dayes, wee came at last to the port of *Cauillos* vpon the East sea, distant from *Guatimala* South and by East, two hundred leagues, and from Mexico 450. or thereabouts. This is a good harborough for shippes, and is without either caille or bulwarke. I hauing dispatched away my guides, went downe to the *Wauen*, where I saw certayne ships laden chiefly with *Canary* winies, where I spake with one of the Masters, who asked me what Countrey man I was, and I told him that I was borne in *Granado*, he said, that then I was his countreyman: I required him that I might passe home with him in his ship, paying for my passage: and he said yea, so that I had a safe conduct, or letter testimonial to shew, that he might incurre no danger: for said he, it may be that you haue killed some man, or be indebted, and would therefore run away. To that I answered, that there was not any such cause.

Guatimala on the South sea.

Puerto de Cauillos.

¶ Wel, in the end we grew to a price, that for 60. pezos he would carry me into Spaine: a glad man was I at this good hap, and I quickly solde my horse, and made my provision of hennes and bread to serue me in my passage; And thus within 2. dayes after we set saile, and neuer stayed untill we came to Hauana, which is distant from puerto de Cauillos by sea 500. leagues: where we found the whole fleete of Spaine, which was bound home from the Indies. And heere I was hired for a souldier to serue in the Admiral ship of the same fleete, wherein the General himself went. There landed while I was here 4. ships out of Spaine, being all full of souldiers and ordnance, of which number there were 200. men landed here, & 4. great brasse pieces of ordnance, although the castle were before sufficiently provided: 200. men more were sent to Campeche, & certaine ordnance: 200. to Florida with ordnance: and 100. lastly to S. John de Villua. As for ordnance there they haue sufficient, and of the very same which was ours, which we had in the Iesus, and those others which we had planted in the place, where the Vice-roy betrayed M. Hawkins our general, as hath bene declared. The sending of those souldiers to euery of those Ports, and the strengthening of them, was done by commandement from the king of Spaine, who wrote also by them to the general of his fleete, giuing him in charge so to doe, as also directing him what course he should keepe in his comming home into Spaine, charging him in any hand not to come nigh to the ples of Agores, but to keepe his course more to the Northward, aduertising him withal, what number and power of French ships of warre, and other, Don Antonio had at that time at Tercera, & the ples aforesaid: which the general of the fleete wel considering, and what great store of riches he had to bring home with him into Spaine, did in all very duefully obserue and obey: for in truely he had in his said fleete 37. saile of ships, and in euery of them there was as good as 30. pipes of siluer one with another, besides great store of gold, Cochinilla, sugars, hides, and Cana Fistula, with other Apothecary drugs. This our general, who was called Don Pedro de Guzman, did providently take order for, for their most strength and defence, if neede should be, to the uttermost of his power, and commanded vpon paine of death, that neither passenger nor souldier should come aboard without his sword and harquebush, with shot and powder, to the end that they might be the better able to encounter the fleete of Don Antonio, if they should hap to meete with them, or any of them: and euer as the weather was faire, the said general would himself go aboard from one ship to another, to see that euery man had his full provision according to the commandement giuen. Yet to speake truely what I thinke, two good tall ships of warre would haue made a foule spoile amongst them. For in all this fleete there were not any that were strong and warlike appointed, sauing only the Admiral, and Vice-admiral: And againe ouer and besides the weakenesse and the ill furnishing of the rest, they were all so deeply laden, that they had not bene able (if they had bene charged) to haue held out any long fight. ¶ Wel, thus we set saile, & had a very ill passage home, the weather was so contrary. We kept our course in maner North-east, and brought our selues to the height of 42. degrees of latitude, to be sure not to meete with Don Antonio his fleete, and were vpon our voyage from the 4. of Iune, vntill the 10. of September, and neuer saw land till we fell with the Arenas Gordas hard by S. Lucar. And there was an order taken that none should goe on shoare vntill he had licence: as for me, I was knowen by one in the ship, who told the Master that I was an Englishman, which (as God would) it was my good hap to heare: for if I had not heard it, it had cost me my life. Notwithstanding, I would not take any knowledge of it, and seemed to be mery & pleasant, that we were all come so wel in safety. Presently after, licence came that we should go on shoare, and I pressed to be gone with the first: howbeit, the Master came vnto me, & said, Sirra, you must goe with me to Siuil by water: I knew his meaning well enough, & that he meant there to offer me vp as a sacrifice to the Holy house. For the ignorant zeale of a number of these superstitious Spaniards is such, that they thinke that they haue done God good seruice, when they haue brought a Lutheran heretike to the fire to be burnt: for so do they account of vs. ¶ Wel, I perceiuing all this, tooke vpon me not to suspect any thing, but was still iocund & mery: howbeit, I knew it stood me vpon to shift for my selfe. And so wayting my time when the Master was in his cabbin asleepe, I conueyed my selfe secretly downe by the throwds into the ship boate, and made no stay but cut the rope wherewithal she was moored, and so by the cable haled on shoare, where I leapt on land, & let the boate goe whither it would. Thus by the helpe of God I escaped that day, & then neuer stayed at S. Lucar, but went all night by the way which I had seene other take toward Siuil: so that the next morning I came to Siuil, and sought me out a workemaster, that I might fall to my science, which was weauing of cassataes; and being intertained I set my selfe close to my worke, and durst not for my life once to stirre abroad for feare of being knowen: and being thus at my worke, within 4. dayes after I heard one of my fellowes say, that he heard there was great inquiry made for an Englishman that came home in the fleete: what an heretique Lutheran (quoth I) was it, I would

Don Pedro de
Guzman.

to God I might knowe him, surely I would present him to the Holy house. And thus I kept still within doores at my worke, and fained my selfe not well at ease, & that I would labour as I might to get me new clothes. And continuing thus for the space of 3. moneths I called for my wages, and bought me all things new, different from the apparell that I did weare at sea, and yet durst not be overbold to walke abroad: and after vnderstanding that there were certaine English ships at S. Lucar bound for England, I tooke a boat and went aboard one of them, and desired the Master that I might haue passage with him to goe into England, and told him secretly that I was one of those which Captaine Hawkins did set on shore in the Indies: he very courteously prayed me to haue him excused, for he durst not meddle with me, & prayed me therefore to returne from whence I came. Which when I perceiued, with a sorrowful heart, God knoweth, I tooke my leaue of him, not without watry cheekes. And then I went to S. Mary port, which is 3. leagues from S. Lucar, where I put my selfe to be a souldier to goe in the king of Spaines Gallies, which were bound for Maiorca, and comming thither in the end of the Christmas holidaies, I found there two English ships, the one of London, and the other of the West countrey, which were ready freighted and stayed but for a faire wind. To the Master of the one, which was of the West countrey went I, and told him that I had bene 2. yeeres in Spaine to learne the language, and that I was now desirous to goe home and see my friends, for that I lacked maintenance: and so having agreed with him for my passage, I tooke shipping. And thus through the prouidence of Almighty God, after 16. yeeres absence, hauing sustained many and sundry great troubles and miseries, as by this discourse appeareth, I came home to this my natie countrey of England in the yeere 1582. in the moneth of February, in the ship called the Landret, and arrived at Poole.

He commeth home in an English ship from Maiorca.

The trauailes of Job Hortop, which Sir Iohn Hawkins set on land within the Bay of Mexico, after his departure from the Hauen of S. Iohn de Vllna in Nuova España, the 8. of October 1568.

Of vntreuely nor without cause said Job the faithfull seruant of God (whom the sacred Scriptures tell vs, to haue dwelt in the land of Hus) that man being borne of a woman, liuing a short time, is replenished with many miseries: which some know by reading of histories, many by the view of others calamities, and I by experience in my selfe, as this present Treatise insuing shall shew.

It is not vnknewen vnto many, that I Job Hortop powder-maker was borne at Bourne, a towne in Lincolnshire, from my age of twelue yeeres brought vp in Redriffe neere London, with M. Francis Lee, who was the Queenes Maiesties powder-maker, whom I serued, vntill I was pressed to go on the 3. voyage to the West Indies, with the right worshipful Sir Iohn Hawkins, who appointed me to be one of the Gunners in her Maiesties ship called the Iesus of Lubeck, who set saile from Plymouth in the moneth of October 1567. hauing with him another ship of her Maiesties, called the Minion, and foure ships of his owne, namely the Angel, the Swallow, the Iudith, and the William and Iohn. We directed his Vice-admirall, that if foule weather did separate them, to meete at the Island of Tenerif. After which by the space of seuen dayes and seuen nights, we had such stormes at sea, that we lost our long boats and a pinnelle, with some men: comming to the Ile of Tenerif, there our Generall heard that his Vice-admirall with the Swallow, and the William and Iohn were at the Island called Gomera, where finding his Vice-admirall, he anchored, tooke in fresh water, and set saile for Cape Blank, where in the way wee tooke a Portugal carauel, laden with fish called Bullets: from thence we sailed to Cape Verde. In our course thither we met a Frenchman of Rochel called captaine Bland, who had taken a Portugal carauel, whom our viceadmirall chased and tooke. Captaine Drake, now Sir Francis Drake was made master & captaine of the Carauel, and so we kept our way till we came to Cape Verde, and there we anchored, tooke out boates, & set souldiers on shore. Our Generall was the first that leapt on land, & with him Captaine Dudley: there we tooke certaine Negroes, but not without damage to our selues. For our Generall, Captaine Dudley, & 8. other of our company were hurt with poysoned arrowes: about nine dayes after, the 8. that were wounded died. Our general was taught by a Negro, to draw the poyson out of his wound with a cloue of garlike, whereby he was cured. From thence we went to Sierra leona, where be monstrous fishes called Sharkes, which will deuoure men. I amongst others was sent in the Angell with two pinnelles into the riuer called Caloufa, to seeke two Carauels that were there trading with the Negroes: wee tooke one of them with the Negroes, and brought them away.

A remedie against poysoned arrowes.

The riuer of Caloufa.

In this riuer in 8 night time we had one of our pinnelles bulged by a sea-horse, so that our men

swimming

Swimming about the riuer, were all taken into the other pinnelles, except two that tooke hold one of another, and were caried away by the sea-horse. This monster hath the iust proportion of a horse, sauing that his legs be short, his teeth very great, and a span in length: hee vseth in the night to goe on land into the woods, seeking at vnawares to deuoure the Negroes in their cabbins, whom they by their vigilancie pzeuent, and kill him in this maner. The Negroes keepe watch, and diligently attend their comming, and when they are gone into the woods, they forthwith lay a great tree ouerthwart the way, so that at their returne, for that their legs be so short, they cannot goe ouer it: then the Negroes let vpon them with their bowes, arrowes and darts, and so destroy them.

From thence we entred the riuer called the Casseroes, where there were other Carauels trading with the Negroes, and them we tooke. In this Island betwixt the riuer and the maine, trees grow with Differs vpon them. There grow Palmiro trees, which bee as high as a ships maine mast, and on their tops grow nuts, wine and oyle, which they call Palmiro wine and Palmiro oyle. The Plantan tree also groweth in that countrey; the tree is as bigge as a mans thigh, and as high as a firre pole, the leaues thereof be long and broad, and on the top grow the fruit which are called Plantanos: they are crooked, and a cubite long, and as bigge as a mans wrist, they growe on clusters: when they be ripe, they be very good and daintie to eate: Sugar is not moze delicate in taste then they be.

The riuer of
Taggarin.

500. Negroes
taken.

Rio grande.

From thence with the Angel, the Iudich, and the two pinnelles, we sailed to Sierra leona, where our Generall at that time was, who with the captaines and souldiers went by into the riuer called Taggarin, to take a towne of the Negroes, where he found three kings of that countrey with fiftie thousand Negroes besieging the same towne, which they could not take in many peeres before, when they had warred with it. Our General made a breach, entred, & valiantly tooke the towne, wherein were found five Portugals which yeelded themselves to his mercy, and hee saued their liues: we tooke & caried thence for traffique to the West Indies 500. Negroes. The three kings droue 7000. Negroes into y sea at low water, at the point of the land, where they were all drowned in the Dze, for that they could not take their canoas to saue themselves. Wee returned backe againe in our pinnelles to the ships, and there tooke in fresh water, and made ready sayle towards Rio grande. At our comming thither we entred with the Angel, the Iudich, and the 2. pinnelles, and found there seuen Portugal Caruels, which made great fight with vs. In the ende by Gods helpe wee wonne the victorie, and droue them to the shore, from whence with the Negroes they fled, and we fetcht the caruels from the shore into the riuer. The next morning M. Francis Drake with his caruel, the Swallow, and the William and Iohn came into the riuer, with captaine Dudley and his souldiers, who landed being but a hundred souldiers, and fought with seuen thousand Negroes, burned the towne, and returned to our Generall with the losse of one man.

In that place there be many muske-cats, which breed in hollow trees: the Negroes take the in a net, & put them in a cage, & nourish them very daintily, & take the muske from them with a spoone.

Now we directed our course from Guinea towards the West Indies.

And by the way died Captaine Dudley.

Dominica.

Margarita.

In sayling towards the Indies, the first land that we espyed, was the Island called Dominica, where at our comming we anchored, & tooke in fresh water and wood for our prouision: which done, we sayled towards the Island called Margarita, where our Generall in despite of the Spaniards anchored, landed, & tooke in fresh victuals. A mile off the Island there is a rocke in the sea, where in doe breed many fowles like vnto Barnacles: in the night we went out in our boates, and with cutgels we killed many of them, and brought them with many of their eggs aboard with vs: their eggges be as bigge as Turkies eggges, and speckled like them. We did eate them, and found them very good meate.

Burboroota.

Placencia in the
maine.

From thence wee sayled to Burboroota, which is in the maine land of the West Indies: there we came in, mozed our ships, and caried two moneths trimming and dyelling our ships, and in the meane time traded with certaine Spaniards of that countrey. There our Generall sent vs vnto a towne called Placencia, (which stood on a high hil) to haue intreated a Bishop that dwelt there for his fauour & friendship in their lawes, who hearing of our comming, for feare forsooke y towne.

In our way by the hil to Placencia, wee found a monstrous venemous womne with two heads: his body was as bigge as a mans arme, and a yard long: our master Robert Barret did cut him in sunder with his sword, and it made it as blacke as if it were coloured with ynke.

Deere be many Tygers, monstrous and furious beastes, which by subtiltie deuoure and destroy many men: they vse the traded wayes, & wil shew themselves twise or thise to the trauellers, and so depart secretly, lurking till they be past, then suddenly & at vnawares they leape vpon them and deuoure

denoure them: they had so used two of our company, had not one of them looked behind. Our Generall sent three ships vnto the Island called Coracao, to make prouision for the rest, where they remayned vntill his comming. Wee sent from thence the Angel and the Iudith to Rio de Hacha, where we anchored before the towne. The Spaniards shot three pieces at vs from the shore, whom we requited with two of ours, and shotte through the Gouernours house: we wayed anchor, & anchored againe without shot of the towne, where wee rid five dayes in despite of the Spaniards, and their shot. In the meane space there came a Caruel of aduise from S. Domingo, whom with the Angel, and the Iudith wee chased and drove to the shore: we fetcht him from thence in spite of 200. Spaniards hargubush shot, and anchored againe before the towne, and rid there with them, till our Generalls comming, who anchored, landed his men, and valiantly tooke the Towne, with the losse of one man, whose name was Thomas Surgeon: wee landed and planted on the shore for our safeties, our field ordinance: we drove the Spaniards by into the country aboue two leagues, whereby they were enforced to trade with our General, to whom he sold most part of his Negroes.

Rio de la Hacha taken.

In this riuer we killed a monstrous Lagarto or Crocodile in this port at sunne set: seuen of vs went in the pinnesse by into the Riuer, carying with vs a dogge, vnto whom with rope-yarne we bound a great hooke of Steele, with a chaine that had a swivel, which we put vnder the dogs belly, the point of the hooke comming ouer his back fast bound, as afore said: we put him ouer boord, and vered out our rope by little and little, rowing away with our boate: the Lagarto came & presently swallowed by the dogge, then did we rowe hard, till we had choked him: he plunged and made a wonderful stirre in the water: we leapt on shore, and haled him on land: he was 23. foote by the rule, headed like a hogge, in body like a serpent, full of scales as broad as a sawcer: his taile long and full of knots as bigge as a sawcon shotte: he hath foure legs, his feete haue long nailes like vnto a dragon: we opened him, tooke out his guts, flayed him, dried his skinne, and stuffed it with straw, meaning to haue brought it home, had not the ship bin cast away. This monster will cary away and deuoure both man and horse.

From hence we shaped our course to Santa Martha, where we landed, traded, and sold certaine Negroes: there two of our company killed a monstrous adder, going towards his caue with a Conie in his mouth: his body was as bigge as any mans thigh, and seuen foote long: vpon his tayle he had sixteene knottes, euery one as bigge as a great walnut, which they say, doe show his age: his colour was greene and yellow: they opened him, and found two conies in his belly.

Santa Martha.

From thence wee sailed to Cartagena, where we went in, moored our Shippes, and would haue traded with them, but they durst not for feare of the King: wee brought up the Minion against the Castle, and shotte at the Castle and Towne: then we landed in an Island, where were many gardens: there in a caue we found certaine Botijos of wine, which wee brought away with vs, in recompence whereof, our Generall commanded to be set on shore woollen and linnen cloth, to the value thereof. From hence by foule weather wee were forced to seeke the Port of Saint Iohn de Villua. In our way thwart of Campeche we met with a Spaniard, a small ship,

Cartagena.

Campeche.

who was bound for Santo Domingo: he had in him a Spaniard called Augustin de villa nueva, who was the man that betrayed all the Noble men in the Indies, and caused them to be beheaded, wherefore he with two Friers fled to S. Domingo: them we tooke and brought with vs into the Port of S. Iohn de Villua. Our Generall made great account of him, and vled him like a Noble man: howbeit in the ende he was one of them that betrayed vs. When wee had moored our ships, and landed, wee mounted the Ordinance that wee found there in the Islande, and for our safeties kept watch and warde. The next day after wee discovered the Spanish fleete, whereof Lugo a Spaniard was Generall: with him came a Spaniard called Don Martin Henriquez, whom the king of Spaine sent to be his Vice-roy of the Indies. We sent a Pinnesse with a flagge of cruce vnto our Generall, to knowe of what Countrey those Shippes were that rode there in the King of Spaines Port: who sayd, they were the Queene of Englands ships, which came in there for victuals for their money: wherefore if your Generall will come in here, he shall giue me victuals and all other necessaries, and I will goe out on the one side of the Port, and he shall come in on the other side. The Spaniard returned for answer, that he was a Vice-roy, and had a thousand men, & therefore he would come in. Our Generall sayd, If he be a Vice-roy, I represent my Queenes person, & I am a Vice-roy as well as he: and if he haue a thousand men, my powder and shot will take the better place. Then the Vice-roy after counsell among themselves, peeled to our Generalls demaund, swearing by his King and his Crowne, by his commission and authoritie that he had from his King, that hee would performe it, and thereupon pledges were giuen on both parts. Our Generall hearing a godly and Christian minde, voyde of fraude and deceit, iudged the Spaniards to haue done the like, deliuered to them five gentlemen, not doubting to haue

Don Martin de Henriquez the trecherous Vice-roy.

received the like from them: but the faithlesse Spanyards, in costly apparell gaue of the basest of their company, as afterwarde it was well known. These things finished, proclamation was made on both sides, that on payne of death no occasion should be giuen, whereby any quarel should grow to the breach of the league, and then they peaceably entred the port, with great triumph on both sides.

Augustine de villa noua a most thankesleffe traitour.

The Spanishe vice-admirall fiered.

One of those three was Job Hortop the reporter herof. Foure Spanishe ships sunke.

The Spaniards presently brought a great Hulke, a ship of five hundred, and moored her by the side of the Minion, and they cut out ports in their other ships, planting their ordinance towards vs, in the night they filled the Hulke with men, to lay the Minion aboard, as the sequel did shew, which made our General doubtful of their dealings: wherefore, for that he could speake the Spanishe tongue, he sent Robert Barrer aboard the Vice-roy, to knowe his meaning in those dealings, who willed him with his company to come in to him, whom he commanded presently to be set in the bilbowes, and forthwith a Coorie (for a watchword among the false Spaniards) was sounded for the enterprising of their pretended treason against our General, whom Augustine de villa noua sitting at dinner with him, should then presently haue killed with a poynado which hee had priuily in his sleue, which was espyed and prevented by one Iohn Chamberlayne, who tooke the poynado out of his sleue. Our General hastily rose vp, and commanded him to be put prisoner in the Stewards roome, & to be kept with two men. The faithlesse Spanyards, thinking all things to their desire had bene finished, suddenly sounded a Trumpet, and therewith three hundred Spaniards entred the Minion, whereat our General with a loude and fierce voyce called vnto vs, saying, God and Saint George, vpon those traitorous villaines, and rescue the Minion, I trust in God the day shall be ours: and with that the Mariners & souldiers leapt out of the Iesus of Lubeck into the Minion, and beat out the Spanyards, and with a shot out of her fiered the Spaniards Vice-admirall, where the most part of 300. Spanyards were spoyled, and blowen ouer boord with powder. Their Admirall also was on fire halfe an houre: we cut our cables, wound off our ships, and presently fought with them: they came vpon vs on euery side, and continued the fight from ten of the clocke vntil it was night: they killed all our men that were on shore in the Island, sauing three, which by swimming got aboard the Iesus of Lubeck. They sunke the Generals ship called the Angel, and tooke the Swallow: the Spaniards Admirall had aboute threescore shot through her: many of his men were spoyled: foure other of their ships were sunke. There were in that fleete, and that came from the shore to rescue them, fifteene hundred: we slew of them five hundred and fourtie, as we were credibly informed by a note that came to Mexico. In this fight the Iesus of Lubeck had five shotte through her mayne Mast: her fore-mast was strooke in sunder vnder the hounds with a chayne shotte, and her hull was wonderfully pearced with shotte, therefore it was impossible to bring her away. They set two of their owne Shippes on fire, intending therewith to haue burnt the Iesus of Lubeck, which we prevented by cutting our cables in the halfe, and winding off by our sternefast.

The Minion was forced to set saile and stand off from vs, and come to an anker without shot of the Island. Our General courageously cheered by his souldiers and gunners, and called to Samuel his page for a cup of Beere, who brought it him in a siluer cup, and hee drinkeing to all men willed the gunners to stand by their Ordinance lustily like men. He had no sooner set the cup out of his hand, but a demy Culuerin shot stroke away the cup and a Coopers plane that stood by the maine mast, and ranne out on the other side of the ship: which nothing dismayd our General, for he ceased not to incourage vs, saying, feare nothing, for God, who hath preserved me from this shot, will also deliuer vs from these traitours and villaines. Then Captaine Bland meaning to haue turned out of the port, had his maine mast stroke ouer boord with a chaineshot that came from the shore, wherefore he ankered, fired his ship, tooke his pinnelle with all his men, and came aboard the Iesus of Lubeck to our General, who said vnto him, that he thought he would not haue runne away from him: he answered, that he was not minded to haue run away from him, but his intent was to haue turned vp, and to haue laid the weathermost ship of the Spanishe fleete aboard, and fired his ship in hope therewith to haue set on fire the Spanishe fleete, hee said if he had done so he had done well. With this, night came on. Our General commanded the Minion, for safegard of her masts to be brought vnder the Iesus of Lubecks lee: he willed M. Francis Drake to come in with the Iudich, and to lay the Minion aboard, to take in men and other things needefull, and to goe out, and so he did.

At night when the wind came off the shore, wee set saile, and went out in despite of the Spaniards and their shot, where wee ankered, with two ankers vnder the Island, the wind being Northerly, which was wonderfull dangerous, and wee feared euery houre to be driuen with the lee shore. In the end when the wind came larger, we waied anker, and set saile, seeking the riuer

of Panuco for water, whereof we had very little, and victuals were so scarce, that we were driven to eat hides, cats, rats, parrats, minkies, and dogges: wherefore our Generall was forced to divide his company into two parts, for there was a mutinie among them for want of victuals: and some said that they had rather be on the shore to shift for themselves among the enemies, then to sterue on ship-boord. He asked them who would go on shore, and who would carry on ship-boord, those that would goe on shore, he willed to goe on foremast, and those that would carrie, on back mast: fourescore and sixteene of vs were willing to depart. Our Generall gaue vnto euery one of vs five yards of Roane cloth, and money to them that demanded it. When we were landed, he came vnto vs, where friendly imbracing euery one of vs, he was greatly grieved that he was forced to leaue vs behind him, he counselled vs to serue God, and to loue one another, and thus courteously he gaue vs a sorrowful fare well, and promised if God sent him safe home, he would do what he could, that so many of vs as liued should by some means be brought into England, & so he did.

About an hundred English men landed.

Since my returne into England I haue heard that many misliked that he left vs so behind him, and brought away Negroes: but the reason is this, for them he might haue had victuals, or any other thing needfull, if by foule weather hee had bene driven vpon the Islands, which for gold no silver he could not haue had.

And thus our Generall departed to his ship, and we remained on land, where for our safeties, fearing the wild Indians that were about vs, we kept watch all night, and at Sunne rising wee marched on our way, three and three in a ranke, vntill that we came into a fielde vnder a groue, where the Indians came vpon vs, asking vs what people we were, and how we came there. Two of our company, namely Anthony Goddard, and Iohn Cornish, for that they could speake the Spanish tongue, went to them, and said wee were Englishmen, that neuer came in that countrey before, and that we had fought with the Spaniards, and for that we lacked victuals, our Generall set vs on shore: they asked vs whither we intended to goe, we said to Panuco. The Captaine of the Indians willed vs to giue vnto them some of our clothes & shirts, which we did: then he had vs giue them all, but we would not so doe, whereupon Iohn Cornish was then slaine with an arrow, which an Indian boy that stood by the Captaine shot at him, wherefore hee strooke the boy on the necke with his bow, that he lay for dead, and willed vs to follow him, who brought vs into a great fielde, where we found fresh water: hee had vs sit downe about the pond and drinke, and he with his company would goe in the meane space to kill five or sixe Deere, and bring them vs. We tarried there till three of the clocke, but they came not: there one of our company whose name was Iohn Cooke, with foure other departed from vs into a groue to seeke reliefe, where presently they were taken by the Indians, and stript as naked as euer they were bozne, and so returned to vs.

Iohn Cornish slaine.

Then we diuided our selues into two parts, halfe to Anthony Goddard, and the rest to James Collier, and thus seuerally we sought for Panuco. Anthony Goddard with his company, bid vs farewell, they passed a riuer, where the Indians robbed many of them of their clothes, and so passing on their way, came to a stony hill, where they stayed. James Collier with his company that day passed the same riuer, and were also robbed, and one of them slaine by chance: wee came that night vnto the hill, where Anthony Goddard and his company rested, there we remained till morning, and then we marched altogether from thence, entring betweene two groues, where the Indians robbed vs of all our clothes, and left vs naked, they hurt many, and killed eight of vs. Three dayes after we came to another riuer, there the Indians shewed vs the way to Panuco, and so left vs: we passed the riuer into the wilderness, where we made wreaths of greene grasse, which we wound about our bodies, to keepe vs from the Sunne, and gnats of that Countrey. We trauelled there seuen dayes, and seuen nights, before wee came to Panuco, feeding on nothing but roots, and Guiauos, a fruit like figs. At our comming to the riuer of Panuco two Spanish horsemen came ouer vnto vs in a Canowe: they asked vs how long we had bene in the wilderness, and where our generall was, for they knewe vs to be of the company that had fought with their countymen: we told them seuen dayes and seuen nights, and for lacke of victuals our Generall set vs on shore, & he was gone away with his ships. They returned to their Gouernour, who sent them with five Canowes to bring vs all ouer. Which done, they set vs in aray, where a hundred horsemen with their lances, came forceably vpon vs, but did not hurt vs, they carried vs prisoners to Panuco, where we remained one night. In the riuer of Panuco there is a fish like a calfe, the Spaniards call it a Mallatin, hee hath a stone in his head, which the Indians vse for the disease of the Collicke, in the night he cometh on land, and eateth grasse. I haue eaten of it, and it eateth not much vnlike to bacon. From thence we were sent to Mexico, which is 90 leagues from Panuco. In our way thither, 20 leagues from the sea side, I did see white Crabs running by & downe the sands.

Anthony Goddard.

A riuer.

James Collier.

8. English men slaine. Another riuer.

Seuen dayes trauell to Panuco.

The manifest
Use of Maguies.

lands, I haue eaten of them, and they be very good meat. There groweth a fruit which the Spaniards call Auocottes, it is proportioned like an egge, and as blacke as a cole, hauing a stone in it, and it is an excellent good fruit. There also groweth a strange tree which they call Magueis, it serueth them to many vses, below by the root they make a hole, wherat they do take out of it twice every day a certaine kind of licour, which they seeth in a great kettle, till the third part be consumed, & that it waxe thick, it is as sweet as any hony, and they do eat it. Within 20. daies after that they haue taken all the licour from it, it withereth, & they cut it down, & vse it as we vse our hempe here in England, which done, they conuert it to many vses: of some part they make mantles, ropes, and threed: of the ends they make needles to sow their saddles, pannels, & other furniture for their hoxles: of the rest they make ryles to couer their houses, and they put it to many other purposes.

Mexico.

And thus we came to Mexico, which is seuen or eight miles about, seated in a great fen, inuironed with 4 hills, it hath but two wayes of entrance, and it is full of creeks, in the which in their Canowes they passe from place to place, & to the Islands there within. In the Indies ordinarily three times a peece bee wonderfull earthquakes, which put the people in great feare and danger: during the time of two peeres that I was in Mexico, I saw them sixe times: when they come they throw downe trees, houses, and Churches. There is a citie 25. leagues from Mexico, called Tlaxcalla, which is inhabited with a hundred thousand Indians, they goe in white shirts, linnen breeches, and long mantles, and the women weare about them a garment much like vnto a Spanneil petticoate. The kings pallace was the first place that wee were brought vnto in Mexico, where without we were willed to sit downe. Such people, men, women, and children came wondering about vs, many lamented our misery, & some of their clergie asked vs if we were Christians, we said, we praised God, we were as good Christians as they: they asked how they might know that, we said, by our confessions. From thence we were carried in a Canow to a Tanners house, which standeth a little from the citie: the next morning two fraters and two priests came thither to vs, and willed vs to blesse our selues, and say our prayers in the Latin tongue, that they might vnderstand vs, many of our company did so, whereupon they returned to the viceroy, and told him that we were good Christians, and that they liked vs well, and then they brought vs much reliefe, with clothes, our sicke men were sent to their Hospitals, where many were cured, and many died. From the Tanners house we were led to a gentlemans place, where vpon paine of death we were charged to abide, and not to come into the citie, thither we had all things necessary brought vs: on Sundayes and holy dayes much people came, and brought vs great reliefe.

The viceroy practised to hang vs, and caused a paire of new gallowes to be set vp, to haue executed vs, wherunto the noblemen of that countrey would not consent, but prayed him to stay vntill the ship of aduise brought newes from the king of Spaine, what should be done with vs, for they said they could not find any thing by vs, where by they might lawfully put vs to death.

The viceroy then commanded vs to be sent to an Island there by, and he sent for the Bishop of Mexico, who sent foure priests to the Island, to examine and confesse vs, who said, that the viceroy would burne vs, when wee were examined and confessed according to the lawes of the countrey. They returned to the Bishop, and told him that we were very good Christians. The Bishop certified the viceroy of our examinations and confessions, and said that wee were good Christians, therefore he would not meddle with vs. Then the viceroy sent for our master R. Barret, whom he kept prisoner in his pallace, vntill the flecte was departed for Spayne. The rest of vs he sent to a towne seuen leagues from Mexico called Tescuco, to card wooll among the Indian slaues, which drudgery we disdained, and concluded to beat our masters, and so wee did: wherefore they sent to the viceroy, desiring him for Gods sake and our Ladies, to send for vs, for they would not keepe vs any longer, they said that we were deuils and no men.

The viceroy sent for vs, and imprisoned vs in a house in Mexico, from thence he sent Anethony Goddard, & some other of our company with him into Spaine, with Lucon, the General that tooke vs: the rest of vs staid in Mexico two yeres after, and then were sent prisoners into Spaine, with Don Iuan de Velasco de Varre, admittall and generall of the Spanish flect, who caried with him in his ship, to be presented to the K. of Spaine, the anatomie of a giant, which was sent from China to Mexico, to the viceroy Don Martin Henriquez, to bee sent to the king of Spaine for a great wonder. It did appeare by the anatomie, that he was of a monstrous size, the skull of his head was neere as bigge as halfe a bushel, his necke-bones, shoulde-plates, arme-bones, and all other lineaments of his other partes, were huge and monstrous to behold, the thanke of his legges from the ankle to the knee was as long as from any mans ankle vp to his waist, and of bignesse accordingly.

At this time, and in this ship, were also sent to be presented to the king of Spaine, two chests full of earth with ginger growing in them, which were also sent from China, to be sent to the king of

of Spaine. The ginger runneth in the ground like to liccoras, the blades grow out of it in length and proportion like vnto the blades of wild garlicke, which they cut euery fifteene dayes, they vse to water them twice a day, as we doe our herbes here in England, they put the blades in their potage, and vse them in their other meates, whose excellent sauour and cast is very delighfull, and procureth a good appetite.

When we were shipped in the Port of S. Iohn de Villua, the Generall called our master Robert Barret and vs with him into his cabbin, & asked vs if wee would fight against Englishmen, if we met them at the sea, we said that we would not fight against our Crowne, but if we met with any other, we would do what we were able. He said if we had said otherwise, he would not haue beleued vs, and for that we should be the better vled, and haue allowance as other men had: and he gaue a charge to euery one of vs, according vnto our knowledge. Robert Barret was placed with the pilote, I was put in the gunners roome, William Cawse with the boat-swaine, Iohn Beare with the quarter-masters, Edward Rider, & Geoffrey Giles, with the ordinary mariners, Richard the masters boy attended on him and the pilote: shortly after we departed from the port of S. Iohn de Villua with all the flecte of Spaine, for the port called Hauana: wee were 26. dayes sayling thither. There wee came in, ankered, tooke in fresh water, and stayed 16. dayes for the flecte of Nombre de Dios, which is the fleet that brings the treasure from Peru.

The Generall of that fleet was called Diego Flores de Valdes. After his comming, when he had watred his ships, both the flectes ioyned in one, and Don Iuan de Velasco de Varre was the first fifteene daies Generall of both the flectes, who turning through the chanell of Bahama, his pilote had like to haue cast away all the fleet vpon the Cape called Cannaueral, which was preuented by me Iohn Hortop, & our master Robert Barret: for I being in the second watch escried land, and called to Robert Barret, bidding him looke ouer boord, for I saw land vnder the lee-bow of the ship: he called to the boat-swaine, & bid him let flie the fore saile sheat, and lay the helm vpon the lee, and cast the ship about. When we were cast about, we were but in seuen fathome water: we shot off a peece, giuing aduice to the fleet to cast about, and so they did. For this we were beloued of the Generall, and all the fleet. The Generall was in a great rage, and swore by the king, that he would hang his pilote: for he said, that twice before he had almost cast away the Admirall. When it was day, he commanded a peece to be shot off, to call to counsell: the other Admirall in his ship came by to him, and asked what the matter was, he said, that his pilote had cast away his ship and all the fleet, had it not bene for two of the Englishmen, and therefore he would hang him. The other Admirall with many faire words perswaded him to the contrary.

When we came in the height of Bermuda, we discovered a monster in the sea, who shewed himselfe three times vnto vs from the middle vpwads, in which parts hee was proportioned like a man, of the complexion of a Mulato or tawny Indian. The Generall did command one of his clearks to put it in writing, and hee certified the King and his Nobles thereof. Presently after this, for the space of fifteene dayes we had wonderful foule weather, and then God sent vs a faire wind, vntill such time as we discovered the Iland called Faial.

On S. Iames day we made rackets, wheelles, and other fire-wozkes, to make pastime that night, as it is the order of the Spanyards. When we came neere the land, our master R. Barret conferred with vs, to take the pinnesse one night, when we came on the Iland called Terçera, to free our selues from the danger and bondage that we were going into, whereunto we agreed: none had any pinnesse afterne then but our ship, which gaue great courage to our enterpryse: we prepared a bagge of bread, and a Botijo of water, which would haue serued vs nine dayes, and prouided our selues to goe: our Master borrowed a small compasse of the Master gunner of the ship, who lent it him, but suspected his intent, and closely made the Generall priuy to it, who for a time dissembled the matter. In the ende seeing our pretense, he called R. Barret, commanding his head to be put in the stocks, and a great payre of ypon bolts on his legs, & the rest of vs to be set in the stocks by the legs. Then he willed a peece to be shot off, and hee sent the pinnesse for the other Admirall, and all the captaines, masters and pilotes of both flectes to come aboord of him. He commanded the mayne-yard to be strooke downe, and to put 2. pullies, on euery yard-arne one; the hangman was called, and we were willed to confesse our selues, for he swore by the king that he would hang vs.

When the other Admirall, and the rest were come aboord, he called them into his counsel-chamber, and told them that he would hang the master of the Englishmen, and all his company. The Admirall, whose name was Diego Flores de Valdes, asked him wherefore: he sayd, that we had determined to rise in the night with the pinnesse, and with a ball of fire-wozke to set the ship on fire, and goe our wayes: therefore, sayd he, I will haue you the Captaines, Masters, and Pilotes, to set your hands vnto that, for I sweare by the king that I will hang them, Diego Flores de Valdes answered

Hauana.

A sea-monster
in the shape of
a man.

answered, I nor the Captaines, Masters, and Pilotes wil not set our hands to that, for hee said, if he had bin prisoner as we were, he would haue done the like himselfe. He counselled him to keepe vs fast in prison, till he came into Spaine; & then send vs to the Contratacion house in Siuill, where, if we had deserved death the law would passe on vs, for hee would not haue it said that in such a fleet as that was, five men and a boy should take the pinnesse, and goe away, and so he returned to his ship againe.

When he was gone, the Generall came to the maine mast to vs, and swore by the king, that we should not come out of the stocks till we came into Spaine: within 16. dayes after we came ouer the Bar of S. Lucar, and came by to the Hurcados, then he put vs into a pinnesse in the stocks, and sent vs prisoners to the Contratacion house in Siuill. From thence after one yere we brake prison, on S. Steuens day at night, 7. of our company escaped, Robert Barret, Iob Hortop, Iohn Emeric, Humphrey Roberts, and Iohn Gilbert were taken, and brought backe to the contratacion house, where we remained in the stocks till twelue tide was past. Then our keeper put by a petition to the Iudge of the contratacion house, that we might be sent to the great prison house in Siuill, for that we brake prison, whereupon we were presently led thither, where we remained one moneth, and then from thence, to the castell of the Inquisition house in Triana, where wee continued one yere: which expired, they brought vs out in procession, euery one of vs hauing a candle in his hand, and the coate with S. Andrewes crosse on our backs: they brought vs by on an high scaffold, that was set by in the place of S. Francis, which is in the chiefe street of Siuill: there they set vs downe upon benches, euery one in his degree, and against vs on another scaffold sate all the Iudges, and the Clergy on their benches: the people wondered, and gazed on vs, some pittying our cases, other said, burne those heretikes. When we had sit there two houres, we had a sermon made to vs: after which one called Bresinia, secretarie to the Inquisition, went by into the pulpit with the processe, and called Robert Barret and Iohn Gilbert, whom two familiars of the Inquisition brought from the scaffold befoze the Iudges, where the secretarie read the sentence, which was that they should be burnt, and so they returned to the scaffold, and were burnt.

Robert Barret
and Iohn Gil-
bert burned.

Iob Hortop his
condemna-
tion.

Then Iob Hortop, and Iohn Bone were called, and brought to the place, as befoze, where we heard our sentence, which was, that we should go to the Gallies, and there row at the oares ende ten yeeres, and then to be brought backe to the Inquisition house, to haue the coate with S. Andrewes crosse put on our backs, and from thence to goe to the eueralasting prison remedileffe, and so we were returned from the scaffold from whence we came. Thomas Marks, & Thomas Ellis were called, and had sentence to serue in the Gallies eight yeeres, and Humphrey Roberts, and Iohn Emery to serue five yeeres, & so were returned to the benches on the scaffold, where we sate till foure of clocke in the afternoone. Then we were led againe to the Inquisition house, from whence we were brought. The next day in the morning Bresinia the treasurer came thither to vs, and deliuered to euery one of vs his sentence in witing. I with the rest were sent to the Gallies, where we were chained foure and foure together: euery mans daily allowance was 26. ounces of course blacke bisket and water, our clothing for the whole yeere two shirts, two paire of breeches of course canuas, a red coat of course cloth, soone on, and soone off, and a gowne of haire with a friers hood: our lodging was on the bare boords, and banks of the Gallies, our heads and beards were shauen euery month, hunger, thirst, cold, and stripes we lacked none, til our seuerall times expired. And after the time of 12. yeeres, for I serued two yeeres aboue my sentence, I was sent backe to the Inquisition house in Siuill, and there hauing put on the coat with S. Andrewes crosse, I was sent to the eueralasting prison remedileffe, where I wore the coat 4. yeeres, & then upon great suit, I had it taken off for 50. duckets, which Hernando de Soria treasurer of the kings mine lent me, whom I serued for it as a vudge 7. yeeres, and vntill the moneth of October last, 1590. and then I came from Siuill to S. Lucar, where I made meanes to come away in a flie-boat, that was laden with wines and salt, which were Flemings goods, the king of Spaines subiects, dwelling in Siuill, married to Spanish women, and sworn to their king. In this moneth of October last, departing from S. Lucar, at sea, off the southernmost Cape, we met an English ship, called the Galeon Dudley, who took the Flemming, & me out of him, & brought me to Portsmouth, where they set me on land, the 2. day of December last past, 1590. From thence I was sent by M. Muns the lieutenant of Portsmouth, with letters to the R. honorable the Earle of Suffex, who commanded his secretary to take my name and examination, how long I had bene out of England, and with whom I went, which he did. And on Christmas euen I took my leaue of his honor, and came to Redriffe.

1590

1590

The Computation of my imprisonment.

I suffered imprisonment in Mexico two yeeres.
In the Contratacion house in Siuill one yeere.

In the Inquisition house in Triana one yeere.

I was in the Gallies twelve yeeres.

In the euerlasting prison remediles, with the coat with S. Andrews crosse on my back 4. yeeres.

And at libertie I serued as a Iudge Hernando de Soria 3. yeeres, which is the full complement of 23. yeeres.

Since my departure from England, vntill this time of my returne, I was fūe times in great danger of death, besides the many perils I was in, in the Gallies.

First in the Port of S. Iohn de Villua, where being on shore, with many other of our company, which were all slaine sauing I, and two other that by swimming got aboord the Iesus of Lubek.

Secondly, when we were robbed by the wild Indians.

Thirdly, after we came to Mexico, the viceroy would haue hanged vs.

Fourthly, because he could not haue his mind to hang vs, he would haue burnt vs.

Fifthly, the Generall that brought vs into Spaine, would haue hanged vs at sea.

Thus hauing cruelly set downe vnto you my trauels, misery and dangers, endured the space of 23. yeeres, I ende.

A relation of the Hauen of Tecuanapa, a most conuenient place for building of ships, situate vpon the South sea not farre from Nicaragua, which was sent vnto the viceroy of Mexico or to the king of Spaine: wherein are described the riuers of Ometepec, Tlacamama, and Tlacolula falling into the said Hauen, with the townes, people, and mountaines adioyning to the said riuers, and other things fit for the building and victualling of ships.

The Port and small harbour of Tecuanapa hath in the driest time of Sommer in the chanell little lesse then one fathome at low water, and at full sea one fathome and an halfe: in the time of raine, with the increasing of the land-water it hath three fathoms and more. It lyeth toward the West, and there the Bishopricks of Guaxacan and Tlarcali are separated. From hence toward the point called Punta de Incha and Dordaci there is a Bay 2. leagues distant, which though it be no special harbour, yet vpon an extremity ships may come and ride there, as in times past they haue done. This Bay on the right hand toward the North maketh a lake somewhat large towards the midst of the chanell, and in some parts deepe, but specially on the side of Cuahintla, but on either side it is but shallow. As you passe betweene the sea & certaine great and large woods of orange trees, and trees of other nature which grow along the sea coast, which are of no great breedth, al the countrey appeareth very open: howbeit on the side of Cuahintla the mountaines haue many creeks and a small lake called Tulaningo, and the countrey cannot be trauelled, except you take the way betweene the sea and the end of this lake, which may be about two leagues of landy way. And on the North side there is another small creeke. And going by the sands side one quarter of a league, you come to the way that leadeth vnto Quacapotla a mansion of Incha.

The riuier of Ometepec being the principal riuier which commeth to this hauen hath his head in the mountaines of Xicayan de Touer about 24. leagues frō this hauen, from diuers brooks which come out of the mountaines of Cacatepec, and beneath a towne called Suchistlahuaca a little more then 3. leagues all the brooks ioyn together: and from that place you may passe downe to the sea with Candas and Lighters; and you might come farther but for the fall of a furious streame or current which runneth between two great rocks, passing from Cocahulapa a mansion of Ometepec vnto Yanguile a mansion of the said Ometepec. These inconueniences being past (which in my iudgement may be about one league) the riuier is more nauigable, so that you may sayle in the same about 12. leagues. During the space of which 12. leagues, about a league and a halfe distance from the waters side, and in many other parts of the same riuier it hath great quantitie of woods which vse to grow in hot soiles, fit for ship-timber, as Huber trees, & Suchicuhitil, whereof they of Nicaragua make great profit. Also there be white okes and Tehegurtes in great quantitie, and many other kinds of timber: and in the mountaines there be firre-trees, okes, and cork-trees, which easily may bee caried downe the riuier, because they may be cut some 2, 3, 4, and 5. leagues from the riuier, and may be brought downe to the waters side with the seruice and helpe of those that dwell in the townes thereabout.

At the head of these brooks where the riuier beginneth is the towne which is called Xicaian, belonging to the heires of Francis de Touer y de Guillen, containing about 350. Indians of rude speech and of little policie, being 24. leagues from the sea, little more or lesse. The place it selfe is hot, although the mountaines round about be cold.

The Port of Tecuanapa.

A little

- Aioanapa.** A little from this is the towne of Aioanapa possessed by the heires of Perez Gomez, hauing in it about 300. Indians of the selfe same speech and qualitie. The countrey is more subiect to heate then cold; yet hath it neere it cold countreys and mountaines. It is distant from Xicaian de Touer 4. leagues; and from the sea 20. leagues.
- Suchistlahuaca.** Sire leagues downeward toward the South is the towne of Suchistlahuaca on the said riuer, and the inhabitants are of the same speech and qualities. The countrey is more subiect to heate then cold. It is in the charge of Gonzaluo Fernandez a citizen of Mexico, and hath about 150. Indians, and is 15. leagues distant from the sea.
- Ometepec.** From this towne vnto the towne of Ometepec are 6. leagues. The place is very hot, and in the same gouernment, and is situate betwene certaine hils one league from the riuer: he and his followers haue vnder them about 700. Indians, which speake the Ayacastecan, Amusgan, and Niciecan tongues, and this place is from the sea nine leagues.
- Ihualapa.** From this towne vnto Ihualapa are two great leagues: it is in the gouernment of the heires of Laurence de Castro, of the fore said temperature, and the people vse the said language, and are of the like stature: and it standeth three leagues from the riuer, and from the sea ten leagues.
- Niciecan.** These are the best townes, and of the best traffique that are vpon all this coast. The Indians are rich in Cacao and victuals, and in these townes doe the Indians of Niciecan principally trade. And in the towne of Ihualapa the thiefe Alguazil of the prouince is resident for the most part of the yeere.
- Pio a frontier towne against the Pericans.** More lowe beneath the riuer of Tlacolula, about a league or a league and an halfe from the towne of Ometepec is the towne called Pio, which was wont to be a towne of Tlacolula, and was a frontier towne against the Pericans. There be in it about 50. Indians of the ancient inhabitants: one Grauiel de Chiauex a citizen of Mexico hath the gouernement thereof: it is 4. leagues from Ihualapa, and 6. from the sea.
- Huehuatlan.** A little below this is the towne of Huehuatlan in the selfe same gouernment standing one league from the riuer on certaine high hils: it hath 10. Indians, and is from the sea 5. leagues.
- Cuahucapotla.** And one league from this towne stands the towne of Cuahucapotla a mansion of Antla or Inla: it hath to the number of 15. Indians; it standeth one league and a halfe from the riuer, and 4. leagues from the mouth thereof.
- Cacatepec.** At the fountaines or heads of the rest of the brooks is the towne of Cacatepec being in the gouernment of Raphael de Treyo: he and his tenants haue vnder them some 700. Indians of Niciecan: it is from the sea some 22. leagues.
- The riuer of Tlacamama.** The riuer which is called Tlacamama cometh from the mountains of Atoyaque and Amusgos, which are some 17. leagues from the sea. There it maketh a formed riuer, so big, that it is nauigable to the sea with canoas and lighters: I say from a litle below Tolistlahuaca a mansion of Xicaian. It is nauigable 8. moneths in the yeere, and the other 4. not, because that the sands of the plaines do soke and drink vpon the water in such wise, that there remaineth so litle, that there is no passage: howbeit in small lighters timber may bee brought downe this riuer one league from the place where it is cut, vnto the place that I haue spoken of; whereas bigger vessels may bee made; for nigh vnto that place other brooks and running waters doe ioyne and meet, which make it a maine riuer. It hath nigh vnto it in the mountaines of Atoyaque, Cacatepec, and Amusgos many woods of pine-trees, cork-trees, and oaks of great bignesse: and beneath those mountaines in the warme countrey, neere vnto the riuers there is much timber of those sorts which I mentioned before to be about the riuer of Ometepec, which may easily be cut and carried downe vnto Tecuanapa in the time before specified.
- Atoyaque.** This riuer hath likewise townes adioyning to it; the first at the foote of the mountaines is the town of Atoyaque belonging to the king, & to the heires of Pronetto: their language is Niciecan, the countrey hot, the people politique, & it is from the sea 15. leagues. It hath about 200. Indians.
- Xicaian.** One league from this towne, and 14. from the sea is the towne of Xicaian belonging likewise to the king, and to the heires of Pronetto. They are Niciecan people and very comely, and in a hot countrey. It hath by account 300. Indians. There are resident in it the Vicar and Justice; it is from the riuer a league and a halfe.
- Pinotepan.** A league from this towne, and 14. from the sea is situate the mansion of Pinotepan subiect to Tututepec, which hath with the manors subiect vnto it 500. Indians.
- The towne of Tlacamama.** Two leagues from the towne, and one from Xicayan, and 13. from Tecuanapa, and 3. from the riuer is the towne of Tlacamama: the people are very comely and politique. It containeth some 100. Indians, and belongeth to the king.
- More toward the South 5. leagues from the riuer, and two from this towne, and 14. from the sea

sea is the towne called Pinotepan del Rey. They are handsome people, but of slow speech: this towne containeth about 100. Indians like unto the former. They be wealthie, because they make great quantitie of salte; for they haue a lake in which salte groweth vnder the water, (a thing repugnant to nature, that two contraries doe grow and are conserued together) whereout they take it in breaking it with stones vpon the ground vnder the water.

A lake having
hard salte grow-
ing vnder the
water.

It hath also the towne of Amulgos, which is in the gouernment of Fernando de Auila, which may be from Tecuanapa 18. leagues. They speake the Amulgan tongue. The countrey is hotter: it standeth on the high way from Nicieca: it hath 400. Indians, few more or lesse.

These are all the townes of account situate neere this riuer.

Neere vpon this riuer are two farmes, the one belonging to Pedro Brauo, and the other to him that maketh this relation vnto your Excellencie, which may be from the sea some 8. or 9. leagues all plaine ground. And in this territorie there is but one towne called Quesala situate vpon the ri-
uer, and 6. leagues from the sea; which in times past hath bene a great towne, and nowe hath but three Indians onely, and it is from the farmes 3. leagues.

Quesala.

The mansion house of Don Mattheo is more toward the South, standing in a large mountai-
nous and waste countrey, which aboundeth with cattell, being 3. leagues from the riuer; and as farre from Tecuanapa, as from the place where all the cattell is; and the sea that way is from it but one league.

A little below this mansion about 4. leagues, and 7. leagues from the sea, is a garden of Alon-
so Pedraza which beareth Cacao.

And 2. leagues from this garden, and 6. leagues from the sea standeth the towne of Cuahint-
lan belonging to the king, a towne of 19. households, but very rich, for they gather much Cacao and the best in that countrey. They speake the Tlapanecan tongue. This towne hath the sea that way within halfe a league.

Cuahintlan del
Rey.

And this coast from Cuahintlan to Tecuanapa, and the coast which runneth to Huatulco is a
coast of much pearle, for in olde time the Indians gathered much pearle there.

Huatulco or
Guatulco in 15.
deg. and 50.
minutes.

And 2. leagues from Cuahintlan and 4. from Tecuanapa is the garden of Cacao in the landes
of Francisco Maldonado, which is called Cacahu- Atoyaque.

These are the things worthy of relation from the head-springs of this riuer of Tlacamama vnto
the sea: and this foresaid riuer entreth into the riuer of Ometepepec 5. leagues from Tecuanapa.

The riuer of Tlacolula springeth within the boundes of Chiliztlahuaca subiect to Comas-
tlahuaca a towne of Suchitlahuaca, neere which are many mountaines. This riuer is naviga-
ble little more then 2. leagues before it entreth into the riuer of Ometepepec, where it is 5. leagues
from the sea.

The riuer of
Tlacolula.

Near by it is the towne of Tlacolula abouenamed; and 3. leagues from it is the towne of A-
zoyoque an olde manour of Tlapa. The towne of Chiliztlahuaca hath but 3. Indians; and the
towne of Azoyoque hath more then 300. Indians. But because in this haven must bee the buil-
ding of ships the prouinces of Tlapa and Tututepec may stand them in great stead; the prouince of
Tututepec being neighbour to the riuer of Tlacamama, and the prouince of Tlapa to the riuer of
Tlacolula. For they may, as I haue sayd, carrie the timber in lighters or rafts downe the riuers,
and may vse the Indians in the townes thereabout to sell, and draw the same out of the cold moun-
taines; for in the warme countreyes the most is plaine ground, whereas with very fewe men and
open it may be brought vnto the place where it should be imbarqued.

Azoyoque.

The prouin-
ces of Tutute-
pec and Tlapa.

There may come flat bottomes, and canoas vnto the townes threabout, and lade themselves
with victuals: For they haue already come by that riuer to the rode of Ometepepec, & made there
prouision at the mansion of Don Mattheo, and at the farmes, at that time when his Maiestie did
people the plaines which are betweene these riuers, containing a large and voyde countrey suffici-
ent for the erecting of 20. manours, being a countrey well furnished with water and pasture with-
out any danger or perill, according to the description hereunto annexed.

This small harbour of Tecuanapa being scene and viewed, seemeth very commodious for to
build shippes in, by reason of the great abundance of mountaines full of good timber for that pur-
pose, with the commodities of riuers, and with the seruice and victuals from the townes thre-
about, which be very good for coast townes.

Tecuanapa a
most fit harbo-
rough to build
ships for the
South sea.

The desire of him that made this relation, hath bene with zeale to serue your excellencie; who
therewithall desireth the Lord God to giue the successe.

THE PRINCIPAL VOYAGES OF
the English Nation to the Isles of *Trinidad, Margarita, Dominica, Deseada, Monserrate, Guadalupe, Martinino*, and all the rest of the *Antilles*; As likewise to *S. Iuan de Puerto rico*, to *Hispaniola, Iamaica* and *Cuba*: and also to *Tierra firma*, and all along the coast and Islands therof, euen from *Cumana* and the *Caracos* to the neckland of *Dariene*, and ouer it to the Gulfe of *S. Michael* and the Isle of *Perles* in the South sea: and further to *Cabeça Catina, Nombre de dios*, and *Venta de cruces*, to *Puerto Belo, Rio de Chagre*, and the Isle of *Escudo*, along the maine of *Beragua*, to the Cape and Gulfe of the *Honduras*, to *Truxillo, Puerto de canillos*, and all other the principall Townes, Islands and harbours of accompt within the said Gulfe, and vp *Rio dulce* falling into this Gulfe, about 30. leagues: As also to the Isle of *Cocumel*, and to *Cape Cotoche*, the towne of *Campeche*, and other places vpon the land of *Iucatan*; and lower downe to *S. Iuan de Vllua, Vera Cruz, Rio de Panuco, Rio de Palmas*, &c. within the bay of *Mexico*: and from thence to the Isles of the *Tortugas*, the port of *Hanana*, the Cape of *Florida*, and the Gulfe of *Bahama* homewards.

With the taking, sacking, ransoming, or burning of most of the principall Cities and townes vpon the coasts of *Tierra firma, Nueua Espanna*, and all the foresaid Islands; since the most traitorous burning of her Maiesties ship the *Iesus of Lubec* and murdering of her Subiects in the port of *S. Iuan de Vllua*, and the last generall arrest of her Highnesse people, with their ships and goods throughout all the dominions of the King of *Spaine* in the moneth of Iune 1585. Besides the manifold and tyrannicall oppressions of the Inquisition inflicted on our nation vpon most light and friuolous occasions.

The voyage of Sir Thomas Pert, and Sebastian Cabot, about the eight yeere of King Henry the eight, which was the yere 1516. to *Brasil, Santo Domingo*, and *S. Iuan de Puerto rico*.

That learned and painefull writer Richard Eden in a certaine Epistle of his to the duke of Northumberland, before a worke which he translated out of Munster in the yeere 1553, called A treatise of new India, maketh mention of a voyage of discouerie undertaken out of England by sir Thomas Pert and Sebastian Cabota, about the 8. yere of King Henry the eight of famous memorie, imputing the ouerthrow thereof vnto the colwardise and want of stomach of the said Sir Thomas Pert, in maner following. If manly courage, saith he, (like vnto that which hath bene seene & proued in your Grace, as well in forreine realmes, as also in this our countrey) had not bene wanting in other in these our dayes, at such time as our soueraigne lord of famous memorie king Henry the 8. about the same yeere of his raigne, furnished and sent out certaine shippes vnder the gouernance of Sebastian Cabot yet living and one sir Thomas Pert, whose faint heart was the cause that the voyage tooke none effect; if, I say, such manly courage, whereof wee haue spoken, had not at that time bene wanting, it might happily haue come to passe, that that rich treasure called *Perularia*, (which is now in *Spaine* in the cite of *Smill*, and so named, for that in it is kept the infinite riches brought thither from the newfound land of *Pernu*) might long since haue bene in the tower of *London*, to the kings great honour and wealth of this realme. Hereunto that also is to bee referred which the worshipfull M. Robert Thorne wrote to the sayde king Henry the 8. in the yeere 1527. by doctor Leigh his ambassadour sent into *Spaine* to the Emperour Charles the first, whose wordes bee these. Now rest to be discovered the North parts, the which it seemeth vnto me, is onely your highnes charge and durie, because the situation of this your realme is thereunto neerest and aptest of all other: and also, for that already you haue taken it in hand. And in mine opinion it will

This Sir Thomas Pert was Vice-admirall of England, and dwelt in Poplar at Black-wall.

will not seeme well to leaue so great and profitable an enterprife, seeing it may so easily and with so litle cost, labour and danger be followed and obtained. Though hitherto your grace haue made thereof a prooffe, & found not the commoditie thereby as you trusted, at this time it shalbe none impediment: for there may be now provided remedies for things then lacked, and the inconueniences and lets remooued, that then were cause your graces desire tooke no full effect: which is, the courses to be changed, and to follow the aforesayd new courses. And concerning the mariners, ships, and prouision, an order may be deuised and taken meete and conuenient, much better then hitherto: by reason whereof, & by Gods grace, no doubt your purpose shall take effect. And whereas in the aforesayd wordes M. Robert Thorne sayth, that he would haue the old courses to bee changed, and the newe courses (to the North) to be followed: It may plainly be gathered, that the former voyage, whereof twise or thise he maketh mention, wherein it is like that sir Thomas Pert and Sebastian Cabot were set forth by the king, was made toward Brasil and the South parts. Moreover it seemeth that Gonsaluo de Ouiedo, a famous Spanish wyter, alludeth vnto the sayde voyage in the beginning of the 13. chapter of the 19. booke of his generall and natural historie of the West Indies, agreeing very well with the time about which Richard Eden writeth that the foresaid voyage was begun. The authors wordes are these, as I finde them translated into Italian by that excellent and famous man Baptista Ramusius, *Nel 1517. Vn Corsaro Inglese, sotto colore di venire a discoprire se ne venne con una gran naue alla volta del Brasil nella costiera di Terra ferma, & indi attrauerse a questa isola Spagnuola, & giunse presso la bocca del porto di questa città di S. Domenico, & mandò in terra il suo battello pieno di gente, & chiese licentia di potere qui entrare, dicendo che venia con mercantie a negoziare. Ma in quello instante il castellano Francesco di Tapia fece tirare alla naue vn tiro d' artiglieria da questo castello; perche ella se ne venina diritta al porto. Quando gli Inglesi videro questo si ritirarono fuori, & quelli del battello tosto si raccolsero in naue. Et nel vero il Castellan fece errore: perche se ben fosse naua entrata nel porto, non sarebbono le genti potuto smontare a terra senza volontà & della città & del castello. La naue adunque veggendo come vi era riceuuta, tirò la volta dell' isola di San Giouanni, & entrata nel porto di San Germano parlarono gli Inglesi con quelli della terra, & dimandarono vettonaglie & fornimenti per la naue, & si lamentarono di quelli di questa città, dicendo che essi non venivano per fare dispiacere, ma per contrattare, & negoziare con suoi danari & mercantie. Hora quiui hebbero alcune vettonaglie, & in compensa essi diedero & pagarono in certi stagni lauorati & altre cose. Et poi si partirono alla volta d' Europa, done si crede, che non gungessero, perche non se ne seppe piu noua mai.* This extract importeth thus much in English, to wit: That in the yeere 1517. an English Rouer under the colour of traouelling to discouer, came with a great shippe vnto the parts of Brasil on the coast of the firme land, and from thence he crossed ouer vnto this Island of Hispaniola, and arriued neere vnto the mouth of the hauen of this citie of S. Domingo, and sent his shipboate full of men on shoare, and demanded leaue to enter into this hauen, saying that hee came with marchandise to traffique. But at that very instant the gouernour of the castle Francis de Tapia caused a tire of ordinance to be shot from the castle at the ship, for she bare in directly with the hauen. When the Englishmen sawe this, they withdrew themselves out, and those that were in the shipboate, got themselves with all speede on shipboord. And in trueth the warden of the castle committed an ouersight: for if the shippe had entred into the hauen, the men thereof could not haue come on lande without leaue both of the citie and of the castle. Therefore the people of the ship seeing how they were receiued, sayled toward the Island of S. Iohn, and entering into the port of S. Germaine, the English men parled with those of the towne, requiring victuals and things needefull to furnish their ship, and complained of the inhabitants of the city of S. Domingo, saying that they came not to doe any harme, but to trade and traffique for their money and merchandise. In this place they had certaine victuals, and for recompence they gaue and paid them with certain vessell of wrought time and other things. And afterward they departed toward Europe, where it is thought they arriued not: for wee neuer heard any more newes of them. Thus farre proceedeth Gonsaluo de Ouiedo, who though it please him to call the captain of this great English ship a rouer, yet it appeareth by the Englishmens owne wordes, that they came to discouer, and by their traffique for pewter vessell and other wares at the towne of S. Germaine in the Island of S. Iohn de puerto rico, it cannot bee denied but that they were furnished with wares for honest traffique and exchange. But whosoever is conuersant in reading the Portugall and Spanish writers of the East and West Indies, shall commonly finde that they account all other nations for pirats, rouers and theeuers, which visite any heathen coast that they haue once sayled by or looked on. Nowbeit their passionate and ambitious reckoning ought not to bee preiudiciall to other mens chargeable and painefull enterprises and honourable trauels in discouerie.

An English
great shippe
at Brasil 1517.

San Iuan de
puerto Rico.

A brieft note concerning a voyage of one *Thomas Tison* an English man, made before the yeere 1526 to the *West Indies*, & of his abode there in maner of a secret factor for some English marchants, which vnder hand had trade thither in those dayes: taken out of an olde ligier-booke of *M. Nicolas Thorne* the elder, a worshipfull marchant of *Bristol*.

It appeareth out of a certaine note or letter of remembrance, in the custodie of mee *Richard Hakluyt*, written 1526, by master *Nicolas Thorne* the elder, a principall marchant of *Bristol*, unto his friend and factour *Thomas Midnall*, and his seruant *William Ballard* at that time remaining at *S. Lucar* in *Andaluzia*: that before the sayd yeere one *Thomas Tison* an Englishman had found the way to the *West Indies*, and was there resident: unto whom the aforesayd *M. Nicolas Thorne* sent armour and other commodities specified in the letter aforesayd. This *Thomas Tison* (so farre as I can coniecture) may seeme to haue bene some secret factour for *M. Thorne* and other English marchants in those remote partes; wherevnto it is probable that some of our marchants had a kinde of trade to the *West Indies* euen in those ancient times and before also: neither doe I see any reason why the *Spaniards* should debarre vs from it at this present.

The first voyage of the right worshipfull and valiant knight
sir *Iohn Hawkins*, sometimes treasurer of her Maiesties nauie Roial, made
to the *West Indies* 1562.

After *Iohn Hawkins* hauing made diuers voyages to the *Iles* of the *Canaries*, and there by his good and upright dealing being grown in loue and fauour with the people, informed himselfe amongst them by diligent inquisition, of the state of the *West India*, whereof hee had receiued some knowledge by the instructions of his father, but increased the same by the aduertisements and reports of that people. And being amongst other particulars assured, that *Negros* were very good marchandise in *Hispaniola*, and that store of *Negros* might easily bee had vpon the coast of *Guinea*, resolved with himselfe to make triall thereof, and communicated that deuise with his worshipfull friendes of *London*: namely with *Sir Lionell Duckett*, *sir Thomas Lodge*, *M. Gunson* his father in law, *sir William Winter*, *M. Bromfield*, and others. All which persons liked so well of his intention, that they became liberall contributors and aduenturers in the action. For which purpose there were three good ships immediatly provided: The one called the *Salomon* of the burthen of 120. tunnes, wherein *M. Hawkins* himselfe went as Generall: The second the *Swallow* of 100. tunnes, wherein went for Captaine *M. Thomas Hampton*: and the third the *Jonas* a barke of 40. tunnes, wherein the Master sayd the Captaines roome: in which small fleete *M. Hawkins* tooke with him not aboue 100. men, for feare of sicknesse and other inconueniences, whereunto men in long voyages are commonly subiect.

M. Thomas Hampton.

Sierra Leona
called *Tagarin*.

The *Iles* of
Caycos.

With this companie he put off and departed from the coast of *England* in the moneth of *October* 1562, and in his course touched first at *Teneriffe*, where hee receiued friendly intertainement. From thence he passed to *Sierra Leona*, vpon the coast of *Guinea*, which place by the people of the countrey is called *Tagarin*, where he staid some good time, and got into his possession, partly by the sword, and partly by other meanes, to the number of 300. *Negros* at the least, besides other merchandises which that countrey yeeldeth. With this praye hee sayled ouer the *Ocean sea* vnto the *Iland* of *Hispaniola*, and arrived first at the port of *Isabella*: and there hee had reasonable vtterance of his English commodities, as also of some part of his *Negros*, trusting the *Spaniards* no further, then that by his owne strength he was able still to master them. From the port of *Isabella* he went to *Puerto de Plata*, where he made like sales, standing alwaies vpon his guard: from thence also hee sayled to *Monte Christi* another port on the North side of *Hispaniola*, and the last place of his touching, where he had peaceable traffique, and made vent of the whole number of his *Negros*: for which he receiued in those 3. places by way of exchange such quantitie of merchandise, that hee did not onely lade his owne 3. shippes with hides, ginger, sugars, and some quantitie of pearles, but he freighted also two other hulkes with hides and other like commodities, which hee sent into *Spaine*. And thus leauing the *Iland*, he returned and disembogued, passing out by the *Ilands* of the *Caycos*, without further entring into the bay of *Mexico*. In this his first voyage to the *West India*. And so with prosperous successe and much gaine to himselfe and the aforesayd aduenturers, he came home, and arrived in the moneth of *September* 1563.

The

The voyage made by M. Iohn Hawkins Esquire, and afterward knight, Captaine of the *Iesus of Lubek*, one of her Maiesties shippes, and Generall of the *Salomon*, and other two barkes going in his companie, to the coast of *Guinea*, and the *Indies* of *Noua Hispania*, begun in *An. Dom. 1564.*

M After Iohn Hawkins with the *Iesus of Lubek*, a shippe of 700. and the *Salomon* a shippe of 140. the *Tiger* a barke of 50. and the *Swallow* of 30. tunnes, being all well furnished with men to the number of one hundredeth threescore and tenne, as also with ordinance and victuall requisite for such a voyage, departed out of *Plymouth* the 18. day of *October*, in the yeere of our Lord 1564. with a prosperous winde: at which departing, in cutting the foresaile, a marueilous misfortune happened to one of the officers in the shippe, who by the pullic of the heate was slaine out of hand, being a sorrowfull beginning to them all. And after their letting out ten leagues to the sea, he met the same day with the *Minion* a ship of the *Queenes Maiestie*, whereof was Captaine *Dauid Carlet*, and also her consort the *Iohn Baptis* of *London*, being bounde to *Guinea* also, who hailed one the other after the custome of the sea with certaine pieces of ordinance for ioi of their meeting: which done, the *Minion* departed from him to seeke her other consort the *Merlin* of *London*, which was a sterne out of sight, leauing in M. Hawkins companie the *Iohn Baptis* her other consort.

October 18.

The Minion,
the Iohn Baptis,
and the
Merline bound
for Guirca.

Thus sayling forwarde on their way with a prosperous winde untill the 21. of the same moneth, at that time a great storme arole, the winde being at Northeast about nine a clocke in the night, and continued so 23. houres together, in which storme M. Hawkins lost the companie of the *Iohn Baptis* aforesayd, and of his pinnesse called the *Swallow*, his other 3. shippes being sore beaten with a storme. The 23. day the *Swallow* to his no small reioycing, came to him againe in the night, 10. leagues to the Northward of *Cape Finister*, he hauing put roomer, not being able to double the *Cape*, in that there rose a contrary winde at South-west. The 25. the wind continuing contrary, hee put into a place in *Galicia*, called *Ferroll*, where hee remained fise dayes, and appointed all the Masters of his shippes an order for the keeping of good companie in this manner: The small shippes to bee alwayes ahead and aweather of the *Iesus*, and to speake twise a day with the *Iesus* at least: if in the day the Ensigne bee ouer the poope of the *Iesus*, or in the night two lights, then shall all the shippes speake with her: If there bee three lights aboord the *Iesus*, then doeth she call about: If the weather bee extreme, that the small shippes cannot keepe companie with the *Iesus*, then all to keepe companie with the *Salomon*, and forthwith to repaire to the *Island* of *Teneriffe*, to the Northward of the road of *Sirroes*; If any happen to any misfortune, then to shew two lights, and to shoote off a piece of ordinance. If any lose companie, and come in sight againe, to make three pawes, and strike the *Hylson* three times: Serue God daily, loue one another, preserve your victuals, beware of fire, and keepe good companie.

Good orders
for a flecte in
a long voyagt.

The 26. day the *Minion* came in also where hee was, for the reioycing whereof hee gaue them certaine pieces of ordinance, after the courtesie of the sea for their welcome: but the *Minions* men had no mirth, because of their consort the *Merline*, whome at their departure from Master Hawkins vpon the coast of *England* they went to seeke, and hauing met with her, kept companie two dayes together, and at last by misfortune of fire (through the negligence of one of their gunners) the powder in the gunners roome was set on fire, which with the first blast strooke out her poope, and therewithall lost three men, besides many sore burned (which escaped by the brigandine being at her sterne) and immediatly, to the great losse of the owners, and most horrible sight to the beholders, shee sunke before their eyes.

A dreadfull
mischance by
fire.

The 20. day of the moneth M. Hawkins with his consorts and companie of the *Minion*, hauing nowe both the brigandines at her sterne, wayed anker, and set saile on their voyage, hauing a prosperous winde thereunto.

The fourth of *November* they had sight of the *Island* of *Madera*, and the sixt day of *Teneriffe*, which they thought to haue bene the *Canarie*, in that they supposed themselves to haue bene to the Eastward of *Teneriffe*, and were not: but the *Minion* being three or foure leagues ahead of vs, kept on her course to *Teneriffe*, hauing better sight thereof then the other had, and by that meanes they parted companie. For M. Hawkins and his companie went more to the West, vpon which course hauing sayled a while, hee espied another *Island*, which hee thought to bee *Teneriffe*, and being not able by meanes of the fogge vpon the hills, to discern the same, nor yet to fetch it by night, went roomer untill the morning, being the seuenth of *November*, which as yet hee could not dis-

cerne, but sayled along the coast the space of two houres, to perceiue some certaine marke of Teneriffe, and found no likelihood thereof at all, accompting that to bee, as it was in deede, the Ile of Palmes: and so sayling forwards, espied another Iland called Gomera, and also Teneriffe, with the which hee made, and sayling all night, came in the morning the next day to the port of Adecia, where he found his pinnesse which had departed from him the first of the moneth, being in the weather of him, and espying the pike of Teneriffe all a high, bare thither. At his arriuall somewhat before hee came to anker, hee hoysed out his shippes pinnesse rowing a shoare, intending to haue sent one with a letter to Peter de ponte, one of the gouernours of the Iland, who dwelt a league from the shoare: but as hee pretended to haue landed, suddenly there appeared vpon the two points of the roade, men leuellling of bales and hargubuzes to them, with diuers others to the number of fourescore, with halberds, pikes, swordes and targets, which happened so contrary to his expectation, that it did greatly amaze him, and the more, because hee was nowe in their danger, not knowing well howe to auoyde it without some mischief. Wherefore hee determined to call to them for the better appeasing of the matter, declaring his name, and professing himselfe to bee an especiall friend to Peter de ponte, and that he had sundry things for him which he greatly desired. And in the meane time, while hee was thus talking with them, whereby hee made them to holde their hands, hee willed the mariners to rowe away, so that at last hee gat out of their danger: and then asking for Peter de ponte, one of his sonnes being Sennor Nicolas de Ponte, came forth, whom hee perceiuing, desired to put his men aside, and hee himselfe would leape a shoare, and commune with him, which they did: so that after communication had betweene them of sundry things, and of the feare they both had, master Hawkins desired to haue certaine necessaries provided for him. In the meane space, while these things were providing, hee trimmed the maine mast of the Iesus which in the storme aforesayd was sprung: here he sojourned 7. dayes, refreshing himselfe and his men. In the which time Peter de ponte dwelling at S. Cruz, a citie 20. leagues off, came to him, and gaue him as gentle intertainment as if he had bene his owne brother. To speake somewhat of these Ilands, being called in olde time Insula fortunata, by the meanes of the flourishing thereof, the fruitfulness of them doeth surely exceede farre all other that I haue heard of: for they make wine better then any in Spaine, they haue grapes of such bignesse, that they may bee compared to damsons, and in taste inferiour to none: for sugar, suckets, raisins of the Sunne, and many other fruits, abundance: for rosine & raw silke, there is great store, they want neither corne, pullets, cattell, nor yet wilde foule: they haue many Camels also, which being young, are eaten of the people for victuals, and being olde, they are vled for caryage of necessaries: whose propertie is as hee is taught to kneele at the taking of his load, and vnlading againe: his nature is to ingender backward contrary to other beastes: of vnderstanding very good, but of shape very deformed, with a little bellie, long misshapen legges, and feete very broad of flesh, without a hooft, all whole, sauing the great toe, a backe bearing vp like a molehill, a large and thin necke, with a little head, with a bunch of hard flesh, which nature hath giuen him in his breast to leane vpon. This beaust liueth hardly, and is contented with strawe and stubble, but of force strong, being well able to carrie 500. weight. In one of these Ilands called Fierro, there is by the reports of the inhabitants, a certaine tree that raineth continually, by the dropping whereof the inhabitants and cattell are satisfied with water, for other water haue they none in all the Iland. And it raineth in such abundance, that it were incredible vnto a man to beleue such a vertue to bee in a tree, but it is knowen to be a diuine matter, and a thing ordeined by God, at whose power therein wee ought not to maruell, seeing hee did by his prouidence as we read in the Scriptures, when the children of Israel were going into the land of promise, feede them with Manna from heauen, for the space of 40. yeeres. Of the trees aforesaid wee saw in Guinie many, being of great height, dropping continually, but not so abundantly as the other, because the leaues are narrower, and are like the leaues of a peare tree. About these Ilands are certaine flitting Ilands, which haue bene oftentimes seene, and when men approched neere them, they vanished: as the like hath bene of these Ilands nowe knowen by the report of the inhabitants, which were not found of long time one after the other: and therefore it should seeme hee is not yet bozne to whom God hath appoynted the finding of them. In this Iland of Teneriffe there is a hill called The Pike, because it is piked, which is in height by their reports twentie leagues, hauing both winter and summer abundance of snowe in the top of it: this Pike may bee seene in a cleere day fiftie leagues off, but it sheweth as though it were a blacke cloude a great height in the element. I haue heard of none to be compared with this in height, but in the Indias I haue seene many, and in my iudgment not inferiour to the Pike, and so the Spaniards write.

The 15. of Nouember at night we departed from Teneriffe, and the 20. of the same wee had sight

sight of ten Carauels, that were fishing at sea, with whome we would haue spoken, but they seeing vs, fled into a place of Barbarie, called Cape de las Barbas.

Cape de las Barbas.

The twentieth, the ships pinnesse with two men in her, sayling by the ship, was ouerthrowne by the ouersight of them that went in her, the winde being so great, that before they were espied, and the ship had cast about for them, she was driuen halfe a league to leeward of the pinnesse, and had lost sight of her, so that there was small hope of recouerie, had not Gods helpe and the Captaines diligence bene, who hauing wel marked which way the pinnesse was by the Sunne, appointed 24 of the lustiest rowers in the great boate, to rowe to the wind-wardes, and so recovered, contrary to all mens expectations, both the pinnesse and the men sitting upon the keele of her.

The 25 he came to Cape Blanco, which is vpon the coast of Africa, and a place where the Portugals do ride, that fish there in the moneth of Nouember especially, and is a very good place of fishing, for Pargoes, Mullet, and Dogge fish. In this place the Portugals haue no holde for their defence, but haue rescue of the Barbarians, whom they entertaine as their souldiers, for the time of their being there and for their fishing vpon that coast of Africa, doe pay a certaine tribute to the king of the Moores. The people of that part of Africa are tawnie, hauing long haire without any apparell, sauing before their priue members. Their weapons in warres are bowes and arrowes.

Cape Blanco.

The 26 we departed from S. Auis Baye, within Cape Blanco, where we refreshed our selues with fish, and other necessaries: and the 29 wee came to Cape Verde, which lieth in 14 degrees, and a halfe. These people are all blacke, and are called Negros, without any apparell, sauing before their priuities: of stature goodly men, and well liking by reason of their food, which passeth all other Guyneans for kine, goats, pullin, rise, fruits, and fish. Here wee tooke fishes with heades like conies, and teeth nothing varying, of a lolly thicknesse, but not past a foote long, and is not to be eaten without slaying or cutting off his head. To speake somewhat of the sundry sortes of these Guyneans: the people of Cape Verde are called Leophares, and counted the goodliest men of all other, sauing the Congoes, which do inhabite on this side the cape de Buena Esperança. These Leophares haue warres against the Ieloffes, which are borderers by them: their weapons are bowes and arrowes, targets, and short daggers, darts also, but varying from other Negros: for whereas the other vse a long dart to fight with in their hands, they carry five or sixe small ones a peece, which they cast with. These men also are more ciuill then any other, because of their dayly trafficke with the Frenchmen, and are of nature very gentle and louing: for while we were there, we tooke in a Frenchman, who was one of the 19 that going to Brasile, in a Barke of Diepe, of 60 tunnes, and being a sea boord of Cape Verde, 200 leagues, the planks of their Barke with a sea brake out vpon them so suddenly, that much a doe they had to saue themselves in their boats: but by Gods prouidence, the wind being Westerly, which is rarely scene there, they got to the shore, to the Isle Braua, and in great penurie gotte to Cape Verde, where they remained sixe weekes, and had meate and drinke of the same people. The said Frenchman hauing forsaken his fellows, which were three leagues off from the shore, and wandring with the Negros too and fro, fortun'd to come to the waters side: and communing with certaine of his countrey men, which were in our ship, by their perswasions came away with vs: but his entertainment amongst them was such, that he desired it not: but through the importunate request of his Countrey men, consented at the last. Here we stayed but one night, and part of the day: for the 7 of December wee came away, in that pretending to haue taken Negros there perforce, the Mynions men gaue them there to vnderstand of our coming, and our pretence, wherefore they did auoyde the snares we had layd for them.

Ieloffes.

The trafficke
of the French
men at Cape
Verde.

The 8 of December wee ankred by a small Island called Alcatrazas, wherein at our going a shore, we found nothing but sea-birds, as we call them Ganets, but by the Portugals, called Alcatrazes, who for that cause gaue the said Island the same name. Here in halfe of our boates were laden with yong and olde fowle, who not being vled to the sight of men, flew so about vs, that we stroke them downe with poles. In this place the two shippes riding, the two Barks, with their boates, went into an Island of the Sapies, called La Formio, to see if they could take any of them, and there landed to the number of 80 in armour, and espying certaine made to them, but they fled in such order into the woods, that it booted them not to follow: so going on their way forward till they came to a riuer which they could not passe ouer, they espied on the other side two men, who with their bowes and arrowes shot terribly at them. Whereupon we discharged certaine harquebuzes to them againe, but the ignorant people wayed it not, because they knew not the danger thereof: but vled a marueilous crying in their sight, with leaping and turning their caples, that it was most strange to see, and gaue vs great pleasure to beholde them. At the last, one being hurt

with a harquebus vpon the thigh, looked vpon his wound and wist not howe it came, because hee could not see the pellet. Here Master Hawkins perceiuing no good to be done amongst them, because we could not finde their townes, and also not knowing how to goe into Rio grande, for want of a Pilote, which was the very occasion of our conning thither: and finding so many shoales, feared with our great ships to goe in, and therefore departed on our pretended way to the Idols.

The 10 of December, we had a Northeast winde, with raine and storme, which weather continuing two dayes together, was the occasion that the Salomon, and Tygre losse our company: for whereas the Iesus, and pinnesse ankered at one of the Islands called Sambula, the twelfth day, the Salomon and Tygre came not thither till the 14. In this Island we stayed certaine daies, going euery day on shore to take the Inhabitants, with burning and spoiling their townes, who before were Sapies, and were conquered by the Samboses, Inhabitants beyond Sierra Leona. These Samboses had inhabited there three yeres before our conning thither, and in so short space haue so planted the ground, that they had great plentie of Mil, Rife, Rootes, Pomptions, Poullin, goates, of small frye dried, euery house full of the Countrey fruite planted by Gods prouidence, as Palmito trees, fruites like dates, and sundry other in no place in all that Countrey so abundantly, whereby they liued more deliciously then other. These inhabitants haue diuerse of the Sapies, which they tooke in the warres as their slaues, whome onely they kept to till the ground, in that they neither haue the knowledge thereof, nor yet will worke themselves, of whome wee tooke many in that place, but of the Samboses none at all, for they fled into the maine. All the Samboses haue white teeth as we haue, farre vnlke to the Sapies which doe inhabite about Rio grande, for their teeth are all filed, which they doe for a bzauerie, to set out themselves, and doe tagge their flesh, both legges, armes, and bodies, as workemanlike, as a Jerkinmaker with vs pinketh a ierkin. These Sapies be more ciuill then the Samboses: for whereas the Samboses liue most by the spoile of their enemies, both in taking their victuals, and eating them allo, The Sapies doe not eate mans flesh, vnlke in the warre they be driuen by necessitie thereunto, which they haue not vsed but by the example of the Samboses, but liue onely with fruites, and cattell, whereof they haue great store. This plentie is the occasion that the Sapies desire not warre, except they be therunto prouoked by the inuasions of the Samboses, whereas the Samboses for want of foode are enforced therunto, and therefore are not wont onely to take them that they kill, but also keepe those that they take, vntill such time as they want meate, and then they kill them. There is also another occasion that prouoketh the Samboses to warre against the Sapies, which is for couetousnes of their riches. For whereas the Sapies haue an order to burie their dead in certaine places appointed for that purpose, with their golde about them, the Samboses digge vp the ground, to haue the same treasure: for the Samboses haue not the like store of golde, that the Sapies haue. In this Island of Sambula we found about 50 boates called Almadyes, or Canoas, which are made of one peece of wood, digged out like a trough, but of a good proportion, being about 8 yards long, and one in breadth, hauing a beak-head and a sterne very proportionably made, and on the out side artificially carued, and painted red and blew: they are able to cary twenty or thirty men, but they are about the coast able to cary threescore and vppward. In these canoas they rowe standing vpright, with an oare somewhat longer then a man, the ende whereof is made about the breadth and length of a mans hand, of the largest sort. They row very swift, and in some of them foure rowers and one to steere make as much way, as a paire of oares in the Thames of London.

Their Townes are prettily diuided with a maine streete at the entring in, that goeth thorough their Towne, and another ouerthwart street, which maketh their townes crosse wayes: their houses are built in in a ranke very orderly in the face of the street, and they are made round, like a douer cote, with stakes set full of Palmito leaues, in stead of a wall: they are not much more then a fathome large, and two of heighth, & thatched with Palmito leaues very close, other some with reede, and ouer the rooffe thereof, for the better garnishing of the same, there is a round bundle of reede, prettily contriued like a louer: in the inner part they make a loft of sticke, whereupon they lay all their prouision of victuals: a place they reserue at their enterance for the kitchen, and the place they lie in is deuided with certaine mattes artificially made with the rine of Palmito trees: their bedsteades are of small stauess layd along, and rayled a foote from the ground, vpon which is layde a matte, and another vpon them when they list: for other couering they haue none. In the middle of the towne there is a house larger and higher then the other, but in forme alike, adioyning vnto the which there is a place made of foure good stancions of woode, and a round rooffe ouer it, the ground also rayled round with clape a foote high, vpon the which floore were strawed many fine mats: this is the Consultation-house, the like whereof is in all Townes, as the Portugals affirme: in which place, when they sitte in Counsell the King or Captaine sitte in the midst,

and

and in the Elders upon the floore by him: (for they giue reuerence to their Elders) and the com-
mon sort sitte round about them. There they sitte to examine matters of theft, which if a man be
taken with, to steale but a Portugal cloth from another, hee is sold to the Portugals for a slave.
They consult also, and take order what time they shall goe to warres: and as it is certainly repor-
ted by the Portugals, they take order in gathering of the fruites in the season of the yeare, and also
of Palmito wine, which is gathered by a hole cut in the top of a tree, and a gourd set for the re-
ceiuing thereof, which falleth in by dropes, and yeeldeth fresh wine againe within a moneth, and
this deuided part and portion-like to euery man, by the iudgement of the Captaine and Elders,
euery man holdeth himselfe contented: and this surely I iudge to be a very good order: for ocher-
wise, whereas scarcitie of Palmito is, euery man would haue the same, which might breed great
strife: but of such things, as euery man doeth plant for himselfe, the sower thereof reapeth it
to his owne vse, so that nothing is common, but that which is vsed by mans hands. In their hou-
ses there is more common passage of Lizardes like Cuats, and other greater, of blacke and blew
colour, of neere a foote long, besides their tailes, then there is with vs of Pise in great houses. The
Sapies and Samboles also vse in their warres bowes, and arrowes made of reedes, with heads
of yron poysoned with the iuyce of a Cucumber, whereof I had many in my handes. In their
battels they haue target-men, with broad wicker targets, and darts with heades at both endes,
of yron, the one in forme of a two edged sworde, a foote and an halfe long, and at the other ende,
the yron long of the same length made to counterpease it, that in casting it might stie leuel, rather
then for any other purpose as I can iudge. And when they espie the enemye, the Captaine to
cheere his men, cryeth Hungry, and they answer Heygre, and with that euery man placeth
himselfe in order, for about euery target man three bowemen will couer themselves, and shoote
as they see aduantage: and when they giue the onlet, they make such terrible cries, that they may
bee heard two miles off. For their belife, I can heare of none that they haue, but in such as
they themselves imagine to see in their dreames, and so worshippe the pictures, whereof wee
sawe some like vnto deuils. In this Island atorelayde wee sojourned vnto the one and twentieth
of December, where hauing taken certaine Negros, and as much of their fruites, rise and mill,
as we could well carry away, (whereof there was such store, that wee might haue laden one of our
Barkes therewith) wee departed, and at our departure diuers of our men being desirous to goe
on shore, to fetch Pompons, which hauing procured, they found to bee very good, certaine of the
Tygres men went also, amongst the which there was a Carpenter, a yong man, who with his
fellowes hauing fet many, and carped them downe to their boates, as they were ready to depart,
desired his fellow to tary while he might goe by to fetch a few which he had layed by for him selfe,
who being more licorous then circumspect, went by without weapon, and as he went by alone, pos-
sibly being marked of the Negros that were vpon the trees, espying him what hee did, perceai-
uing him to be alone, and without weapon, dogged him, and finding him occupped in binding
his Pompons together, came behinde him, ouerthrowing him and straight cutte his thyoate, as
hee afterwarde was found by his fellowes, who came to the place for him, and there found him
naked.

Palmito is a

The extreme
negligence of
one of the
company.

The two and twentieth the Captaine went into the Riuer, called Callowfa, with the two
Barkes, and the Iohns Pinnelle, and the Salomons boate, leauing at anker in the Riuers mouth
the two shippes, the Riuer being twenty leagues in, where the Portugals roade: hee came thither
the five and twentieth, and dispatched his businesse, and so returned with two Carauels, laden
with Negros.

The riuer
Callowfa.

The 27, the Captaine was aduertised by the Portugals of a towne of the Negros called
Bymba, being in the way as they returned, where was not onely great quantitie of golde, but al-
so that there were not aboue fortie men, and an hundred women and children in the Towne, so
that if hee would giue the aduenture vpon the same, hee might gette an hundred slaves:
with the which tydings hee being gladd, because the Portugals shoulde not thinke him to
bee of so base a courage, but that hee durst giue them that, and greater attempts: and
being thereunto also the more prouoked with the prosperous successe hee had in other Islands ad-
iacent, where he had put them all to flight, and taken in one boate twentie together, determined to
stay before the Towne three or foure houres, to see what hee could doe: and thereupon prepared
his men in armour and weapon together, to the number of fortie men well appointed, hauing to
their guides certaine Portugals, in a boat, who brought some of them to their death: wee landing
boat after boat, and diuers of our men scattering themselves, contrary to the Captaines will, by
one or two in a company, for the hope that they had to finde golde in their houses, ransacking the
same, in the meane time the Negros came vpon them, and hurte many being thus scattered,

The Towne
of Bimba.

Portugals not
to be trusted.

Want of ris-
cumspect in
our

whereas

whereas if five or six had bene together, they had bene able, as their companions did, to giue the ouerthrow to 40 of them, and being driuen downe to take their boates, were followed so hardly by a route of Negroes, who by that tooke courage to pursue them to their boates, that not onely some of them, but others standing on shore, not looking for any such matter by meanes that the Negroes did flee at the first, and our companie remained in the towne, were suddenly so set vpon that some with great hurt recovered their boates; other some not able to recouer the same, tooke the water, and perished by meanes of the oaze. While this was doing, the Captaine who with a dosen men, went through the towne, returned, finding 200 Negroes at the waters side, shooting at them in the boates, and cutting them in pieces which were drowned in the water, at whole comming, they ranne all away: so he entred his boates, and before he could put off from the shore, they returned againe, and shot very fiercely and hurt diuers of them. Thus wee returned backe some what discomfited, although the Captaine in a singular wise maner caried himselfe, with countenance very cheerefull outwardly, as though hee did litle weigh the death of his men, nor yet the great hurt of the rest, although his heart inwardly was broken in pieces for it; done to this ende, that the Portugals being with him, should not presume to resist against him, nor take occasion to put him to further displeasure or hinderance for the death of our men: hauing gotten by our going ten Negroes, and lost seuen of our best men, whereof M. Field Captaine of the Salomon, was one, and we had 27 of our men hurt. In the same houre while this was doing, there happened at the same instant, a marueilous miracle to them in the shippes, who roade ten leagues to sea-ward, by many sharkes or Tiburons, who came about the shippes: among which, one was taken by the Iesus, and foure by the Salomon, and one very sore hurt escaped: and so it fell out of our men, whereof one of the Iesus men, and foure of the Salomons were killed, and the fift hauing twentie wounds, was rescued, and scaped with much adoe.

M. Field Cap-
taine of the
Salomon slain.

The 28 they came to their shippes, the Iesus, and the Salomon, and the 30 departed from thence to Taggarin.

Taggarin,
The riuer of
Casserroes.

The first of January the two barkes, and both the boates forsooke the shippes, and went into a riuer called the Casserroes, and the 6 hauing dispatched their businesse, the two barkes returned, and came to Taggarin where the two shippes were at anker. Not two dayes after the comming of the two shippes thither, they put their water calke a shore, and filled it with water, to season the same, thinking to haue filled it with fresh water afterward: and while their men were some on shore, and some at their boates, the Negroes set vpon them in the boates, and hurt diuers of them, and came to the calkes, and cut of the hoopes of twelue butts, which lost vs 4 or 5 dayes time, besides great want we had of the same: so iourning at Taggarin, the Swallow went by the riuer about her trafficke, where they saw great townes of the Negroes, and Canoas, that had threescore men in a piece: there they vnderstood by the Portugals, of a great battell betweene them of Sierra Leona side, and them of Taggarin: they of Sierra Leona, had prepared three hundred Canoas to inuade the other. The time was appointed not past sixe dayes after our departure from thence, which we would haue seene, to the intent we might haue taken some of them, had it not bene for the death and sickenesse of our men, which came by the contagiousnes of the place, which made vs to make hast away.

The contagi-
on of the coun-
tre of Sierra
Leona.

The 18 of Januarie at night, wee departed from Taggarin, being bound for the West Indies, before which departure certaine of the Salomon men went on shore to fill water in the night, and as they came on shore with their boat being ready to leape on land, one of them espied an Negro in a white coate, standing vpon a rocke, being ready to haue receiued the when they came on shore, hauing in sight of his fellowes also eight or nine, some in one place leaping out, and some in another, but they hid themselves streight againe: whereupon our men doubting they had bene a great companie, and sought to haue taken them at more aduantage, as God would, departed to their shippes, not thinking there had bene such a mischief pretended toward them, as then was in deede. Which the next day we vnderstood of a Portugall that came downe to vs, who had trafficked with the Negroes, by whom hee vnderstood, that the king of Sierra Leona had made all the power hee could, to take some of vs, partly for the desire he had to see what kinde of people we were, that had spoiled his people at the Idols, whereof he had newes before our comming, and as I iudge also, vpon other occasions prouoked by the Tangomangos, but sure we were that the armie was come downe, by meanes that in the euening wee saw such a monstrous fire, made by the waiting place, that before was not seene, which fire is the onely marke for the Tangomangos to know where their armie is alwayes. If these men had come downe in the euening, they had done vs great displeasure, for that wee were on shore filling water: but God, who worketh all things for the best, would not haue it so, and by him we escaped without danger, his name be prayesd for it.

Tangomangos.

The

The 29 of this same moneth we departed with all our shippes from Sierra Leona, towards the West Indies, and for the space of eightene dayes, we were becalmed, hauing nowe and then contrary windes, and some Ternados amongst the same calme, which happened to vs very ill, beeing but reasonably watered, for so great a companie of Negroes, and our selues, which pinched vs all, and that which was worst, put vs in such feare that many neuer thought to haue reached to the Indies, without great death of Negroes, and of themselves: but the Almighty God, who neuer suffereth his elect to perish, sent vs the sixteenth of Februarie, the ordinary Bise, which is the North-west winde, which neuer left vs, till wee came to an Island of the Canyvals, called Dominica, where wee arrived the ninth of March, vpon a Saturday: and because it was the most desolate place in all the Island, we could see no Canyvals, but some of their houses where they dwelled, and as it should seeme forsooke the place for want of fresh water, for wee could finde none there but raine water, and such as fell from the hills, and remained as a puddle in the dale, whereof wee filled for our Negroes. The Canyvals of that Island, and also others adiacent are the most desperate warriors that are in the Indies, by the Spaniards report, who are neuer able to conquer them, and they are molested by them not a little, when they are driuen to water there in any of those Islands: of very late, not two moneths past, in the said Island, a Carauel being driuen to water, was in the night sette vpon by the inhabitants, who cutte their cable in the halter, whereby they were driuen a shore, and so taken by them, and eaten. The Greene Dragon of Newhauen, whereof was Captaine one Bontemps, in Marche also, came to one of those Islands, called Granada, and being driuen to water, could not doe the same for the Canyvals, who fought with him very desperately two dayes. For our part also, if we had not lighted vpon the desertest place in all that Island, wee could not haue missed, but should haue bene greatly troubled by them, by all the Spaniards reports, who make them deuils in respect of me.

Dominica
Island.

Canyvals ex-
ceeding cruell
and to be as-
uopbed.

The tenth day at night, we departed from thence, and the fifteenth had sight of nine Islands, called the Testigos: and the sixteenth of an Island, called Margarita, where wee were entertained by the Alcalde, and had both Beecues and sheepe giuen vs, for the refreshing of our men: but the Gouvernour of the Island, would neither come to speake with our Captaine, neither yet giue him any licence to trafficke: and to displease vs the more, whereas wee had hired a Pilote to haue gone with vs, they would not onely not suffer him to goe with vs, but also sent word by a Carauel out of hand, to Santo Domingo, to the Vice-roy, who doeth represent the kings person, of our arriual in those partes, which had like to haue turned vs to great displeasure, by the meanes that the same Vice-roy did send word to Cape de la Vela, and to other places along the coast, commanding them that by the vertue of his authoritie, and by the obedience that they owe to their Prince, no man should trafficke with vs, but should resist vs with all the force they could. In this Island, notwithstanding that wee were not within foure leagues of the Towne, yet were they so afraid, that not onely the Gouvernour himselfe, but also all the inhabitants forsooke their Towne, assembling all the Indians to them and fled into the mountaines, as wee were partly certified, and also sawe the experience our selues, by some of the Indians comming to see vs who by three Spaniards a horsebacke passing hard by vs, went vnto the Indians, hauing euery one of them their bowes, and arrowes, procuring them away, who before were conuersant with vs.

The Testigos
Island.
Margarita
Island.

Here perceiuing no trafficke to be had with them, nor yet water for the refreshing of our men, we were driue to depart the twentieth day, and the 2 and twentieth we came to a place in the maine called Cumana, whither the Captaine going in his Pinnisse, spake with certaine Spaniards, of whom he demanded trafficke, but they made him answer, they were but souldiers newly come thither, and were not able to by on Negro: whereupon hee asked for a watering place, and they pointed him a place two leagues off, called Santa Fe, where we found marvellous goodly watering, and commodious for the taking in thereof: for that the fresh water came into the Sea, and so our shippes had aboard the shore twentie fathome water. Neere about this place, inhabited certaine Indians, who the next day after we came thither, came down to vs, presenting mill and cakes of breade, which they had made of a kinde of corne called Patz, in bignesse of a pease, the eare whereof is much like to a teafell, but a spanne in length, hauing thereon a number of granes. Also they brought down to vs Henries, Potatoes and Pines, which we bought for beades, pewter whistles, glasses, knives, and other trifles.

Cumana
Santa Fe

These Potatoes be the most delicate rootes that may be eaten, and doe farre exceed our pappes or carets. Their pines be of the bignes of two fists the outside whereof is of the making of a pine-apple, but it is soft like the rinde of a Cucumber, and the inside eateth like an apple, but it is

The crueltie of
the Caribes.

more delicious then any sweet apple sugred. These Indians being of colour tawnie like an Oliue, hauing euery one of them both men and women, haire all blacke, and no other colour, the women wearing the same hanging downe to their shoulders, and the men rounded, and without beards, neither men nor women suffering any haire to growe in any part of their body, but dayly pull it off as it groweth. They goe all naked, the men couering no part of their body but their yard, vpon the which they weare a gourd or piece of cane, made fast with a thrid about their loynes, leauing the other parts of their members vncouered, whereof they take no shame. The women also are vncouered, sauing with a cloth which they weare a hand-breach, wherewith they couer their priuities both before and behind. These people be very small feeders, for travelling they cary but two small bottels of gourdies, wherein they put in one the iuice of Soyrell wherof they haue great store, and in the other slowze of their Haiz, which being moist, they eate, taking sometime of the other. These men cary euery man his bowe and arrowes, whereof some arrowes are poisoned for warres, which they keepe in a Cane together, which Cane is of the bignesse of a mans arme, other some with broad heades of iron wherewith they stricke fish in the water: the experience whereof we saw not once nor twise, but dayly for the time we taried there, for they are so good archers that the Spaniards for feare thereof arme themselves and their horses with quilted canuas of two ynches thicke, and leaue no place of their body open to their enemies, sauing their eyes which they may not hide, and yet oftentimes are they hit in that so small a scantling: their popson is of such a force, that a man being stricken therewith dyeth within foure and twentie howers, as the Spaniards do affirme, & in my iudgement it is like there can be no stronger popson as they make it, vning therewith apples which are very faire and red of colour, but are a strong popson, with the which together with venomous Bats, Vipers, Adders and other serpents, they make a medley, and therewith anoint the same.

The Indian women delight not when they are yong in bearing of children, because it maketh them haue hanging breastes which they account to bee great deforming in them, and vpon that occasion while they bee yong, they destroy their seede, saying, that it is fittest for olde women. Forcouer, when they are deliuered of childe, they goe straight to washe themselves, without making any further ceremonie for it, not lying in bed as our women doe. The beds which they haue are made of Goslopine cotton, and wrought artificially of diuers colours, which they cary about with them when they trauell, and making the same fast to two trees, lie therein they and their women. The people be surely gentle and tractable, and such as desire to liue peaceably, or els had it bene vnpossible for the Spaniards to haue conquered them as they did, and the more to liue now peaceably, they being so many in number, and the Spaniards so few.

From hence we departed the eight and twentie, and the next day we passed betwene the maine land, and the Island called Tortuga, a very lowe Island, in the yeere of our Lorde God one thousande five hundred sixtie five aforesaide, and sayled along the coast vntill the first of Aprill, at which time the Captaine sayled along in the Iesus pinnesse to discerne the coast, and saw many Caribes on shore, and some also in their Canoas, which made tokens vnto him of friendship, and shewed him golde, meaning thereby that they would trafficke for wares. Whereupon he stayed to see the maners of them, and so for two or three trifles they gaue such things as they had about them, and departed: but the Caribes were very importunate to haue them come on shore, which if it had not bene for want of wares to trafficke with them, he would not haue denyed them, because the Indians which we saw before were very gentle people, and such as do no man hurt. But as God would haue it, hee wanted that thing, which if hee had had, would haue bene his confusion: for these were no such kinde of people as wee tooke them to bee, but more deuillish a thousand partes and are eaters and deuourers of any man they can catch, as it was afterwards declared vnto vs at Burboroata, by a Carauel comming out of Spaine with certaine souldiers, and a Captaine generall sent by the king for those Eastward parts of the Indians, who sayling along in his pinnesse, as our Captaine did to descry the coast, was by the Caribes called a shoore with sundry tokens made to him of friendship, and golde shewed as though they desired trafficke, with the which the Spaniard being moued, suspecting no deceite at all, went ashore amongst them: who was no sooner ashore, but with foure or five more was taken, the rest of his company being inuaded by them, saued themselves by flight, but they that were taken, paid their ranfome with their liues, and were presently eaten. And this is their practise to toll with their golde the ignorant to their snares: they are bloodsuckers both of Spaniards, Indians, and all that light in their laps, not sparing their owne countrey men if they can conueniently come by them. Their policie in fight with the Spaniards is marvellous: for they chuse for their refuge the moountaines and woodes where the Spaniards with their horses cannot follow them, and if they fortune to be met in the plaine

plaine where one horseman may ouer-runne 100. of them, they haue a deuise of late practised by them to pitch stakes of wood in the ground, and also small iron pikes to mischiefe their horses, wherein they shew themselves politique warriors. They haue more abundance of golde then all the Spaniards haue, and liue vpon the mountaines where the Pines are in such number, that the Spaniards haue much adoe to get any of them from them, and yet sometimes by assembling a great number of them, which happeneth once in two yeeres, they get a piece from them, which afterwards they keepe sure ynough.

Thus hauing escaped the danger of them, wee kept our course along the coast, and came the third of April to a Towne called Burboroata, where his ships came to an anchor, and hee himselfe went ashore to speake with the Spaniards, to whom hee declared himselfe to be an Englishman, and came thither to trade with them by the way of marchandize, and therefore required licence for the same. Vnto whom they made answer, that they were forbidden by the king to trafique with any forren nation, vpon penaltie to forfeit their goods, therefore they desired him not to molest them any further, but to depart as he came, for other comfort he might not looke for at their handes, because they were subiects and might not goe beyond the law. But hee replied that his necessitie was such, as he might not so do: for being in one of the Queenes Armadas of England, and hauing many souldiours in them, hee had neede both of some refreshing for them, and of victuals, and of money also, without the which hee coulde not depart, and with much other talke perswaded them not to feare any dishonest part of his behalfe towards them, for neither would hee commit any such thing to the dishonour of his prince, nor yet for his honest reputation and estimation, vnlesse hee were too rigorously dealt withall, which hee hoped not to finde at their handes, in that it should as well redound to their profite, as his owne, and also hee thought they might doe it without danger, because their princes were in amitie one with another, and for our parts wee had free trafique in Spaine and Flanders, which are in his dominions, and therefore hee knew no reason why he should not haue the like in all his dominions. To the which the Spaniards made answer, that it lay not in them to giue any licence, for that they had a gouernour to whom the gouernment of those parts was committed, but if they would stay tenne dayes, they would send to their gouernour who was threescore leagues off, and would returne answer within the space appointed, of his minde.

In the meane time they were contented hee should bring his ships into harbour, and there they would deliuer him any victuals he would require. Whereupon the fourth day we went in, where being one day and receiuing all things according to promise, the Captaine aduised himselfe, that to remaine there tenne dayes idle, spending victuals and mens wages, and perhaps in the ende receiue no good answer from the gouernour, it were meere follie, and therefore determined to make request to haue licence for the sale of certaine leane and sicke Negros which hee had in his shippe like to die vpon his hands if he kept them ten dayes, hauing little or no refreshing for them, whereas other men hauing them, they would be recovered well ynough. And this request hee was forced to make, because he had not otherwise wherewith to pay for victuals & for necessities which he should take: which request being put in writing and presented, the officers and towne-dwellers assembled together, and finding his request so reasonable, granted him licence for thirtie Negros, which afterwards they caused the officers to view, to the intent they should graunt to nothing but that were very reasonable, for feare of answering thereunto afterwards. This being past, our Captaine according to their licence, thought to haue made sale, but the day past and none came to buy, who before made shewe that they had great neede of them, and therefore wist not what to surmise of them, whether they went about to prolong the time of the Gouernour his answer because they would keepe themselves blamelesse, or for any other policie hee knew not, and for that purpose sent them worde, marueiling what the matter was that none came to buy them. They answered, because they had granted licence onely to the pooze to buy those Negros of small price, and their money was not so ready as other mens of more wealth. More then that, as soone as euer they sawe the shippes, they conueyed away their money by their wiues that went into the mountaines for feare, & were not yet returned, & yet asked two dayes to seeke their wiues and fetch their money. Notwithstanding, the next day diuers of them came to cheape, but could not agree of price, because they thought the price too high. Whereupon the Captaine perceiuing they went about to bring downe the price, and meant to buy, and would not confesse if hee had licence, that he might sell at any reasonable rate, as they were worth in other places, did send for the principals of the Towne, and made a shewe hee would depart, declaring himselfe to be very sozpy that he had so much troubled them, and also that he had sent for the gouernour to come downe, seeing nowe his pperence was to depart, wherewith they maruelled much, and asked him what cause moued him thereunto, seeing by their working he was in possibilitie to haue his licence.

To the which he replied, that it was not onely a licence that he sought, but profit, which he perceived was not there to be had, and therefore would seeke further, and withall shewed him his writings what he payed for his Negros, declaring also the great charge he was at in his shipping, and mens wages, and therefore to counteruaile his charges, hee must sell his Negros for a greater price then they offered. So they doubting his departure, put him in comfort to sell better there then in any other place. And if it fell out that he had no licence, that he should not loose his labour in carrying, for they would buy without licence. Whereupon, the Captaine being put in comfort, promised them to stay, so that hee might make sale of his leane Negros, which they granted vnto. And the next day did sell some of them, who hauing bought and payed for them, thinking to haue had a discharge of the Custom for the custome of the Negros, being the Kings duetie, they gaue it away to the poore for Gods sake, and did refuse to giue the discharge in writing, and the poore not trusting their wordes, for feare, least hereafter it might be demanded of them, did reframe from buying any more, so that nothing else was done vntill the Gouvernours comming downe, which was the fourteenth day, and then the Captaine made petition, declaring that hee was come thither in a shippe of the Queenes Maiesties of England, being bound to Guinie, and thither driven by winde and weather, so that being come thither, hee had neede of sundry necessities for the reparation of the said Naue, and also great need of money for the payment of his Souldiours, vnto whom hee had promised payment, and therefore although hee would, yet would not they depart without it, & for that purpose he requested licence for the sale of certaine of his Negros, declaring that although they were forbidden to trafique with strangers, yet for that there was a great amitie betweene their princes, and that the thing pertained to our Queenes highnesse, he thought hee might doe their prince great seruice, and that it would be well taken at his hands, to doe it in this cause. The which allegations with diuers others put in request, were presented vnto the Gouvernour, who sitting in counsell for that matter, granted vnto his request for licence. But yet there fell out another thing which was the abating of the kings Custome, being vpon every slaue 30. duckets, which would not be granted vnto.

Whereupon the Captaine perceiuing that they would neither come neere his price hee looked for by a great deale, nor yet would abate the Kings Custome of that they offered, so that either he must be a great looser by his wares, or els compell the officers to abate the same kings Custome which was too vnreasonable, for to a higher price hee coulde not bring the buyers: Therefore the sixteenth of April hee prepared one hundred men well armed with bowes, arrowes, harquebuzes and pikes, with the which hee marched to the towne wards, and being perceiued by the Gouvernour, he straight with all expedition sent messengers to knowe his request, desiring him to march no further forward vntill he had answere againe, which incontinent he should haue. So our Captaine declaring how vnreasonable a thing the Kings Custome was, requested to haue the same abated, and to pay seuen and a halfe per centum, which is the ordinarie Custome for wares through his dominions there, and vnto this if they would not graunt, hee would displease them. And this word being caried to the Gouvernour, answere was returned that all things should be to his content, and thereupon hee determined to depart, but the souldiers and Mariners finding so little credite in their promises, demanded gages for the performance of the premises, or els they would not depart. And thus they being constrained to lend gages, wee departed, beginning our trafique, and ending the same without disturbance.

Thus hauing made trafique in the harborough vntill the 28. our Captaine with his ships intended to goe out of the roade, and purposed to make shew of his departure, because nowe the common sort hauing imployed their money, the rich men were come to towne, who made no shew that they were come to buy, so that they went about to bring downe the price, and by this pollicie the Captaine knew they would be made the more eger, for feare least we departed, and they should goe without any at all.

The nine and twentie wee being at anker without the roade, a French ship called the Greene Dragon of Newhauen, whereof was Captaine one Bon Temps came in, who saluted vs after the maner of the Sea, with certaine pieces of Ordnance, and we resaluted him with the like againe: with whom hauing communication, he declared that hee had bene at the Mine in Guinie, and was beaten off by the Portugals gallies, and inforced to come thither to make sale of such wares as he had: and further that the like was happened vnto the Minion: besides the Captaine Dauid Carlet and a Marchant, with a dozen Mariners betrayed by the Negros at their first arriuall thither, and remayning prisoners with the Portugals; and besides other misadventures of the losse of their men, happened through the great lacke of fresh water, with great doubts of bringing home the ships: which was most sorrowfull for vs to vnderstand.

Thus

300 hundred
Englishmen
in armoir.

The reports of
the mishaps of
the Minion in
Guinie.

Thus hauing ended our trafique here the 4. of May, we departed, leauing the Frenchman behind vs, the night before the which the Caribes, whereof I haue made mention before, being to the number of 200. came in their Canoas to Burboroara, intending by night to haue burned the towne, and taken the Spaniards, who being more vigilant because of our being there, then their custome was, perceiving them comming, raised the towne, who in a moment being a horsebacke, by meanes their custome is for all doubts to keepe their horses ready saddled, in the night set vpon them, & tooke one, but the rest making shift for themselves, escaped away. But this one, because he was their guide, and was the occasion that diuers times they had made inuasion vpon them, had for his trauele a stake thrust through his fundament, and so out at his necke.

Horses kept ready saddled.

The first of May aforesaide, wee came to an yland called Curaçao, where wee had thought to haue anchored, but could not find ground, and hauing let fall an anchor with two cables, were faine to weigh it againe: and the seuenth sayling along the coast to seeke an harborow, and finding none, wee came to an anchor where we rode open in the Sea. In this place we had trafique for hides, and found great refreshing both of beefe, mutton and lambes, whereof there was such plentie, that sauing the skinnes, we had the flesh giuen vs for nothing, the plentie whereof was so abundant, that the worst in the ship thought scozne not onely of mutton, but also of sodden lambe, which they disdaind to eate vnrosted.

Exceeding plentie of cattell in Curaçao.

The increase of cattell in this yland is marueilous, which from a dozen of each sort brought thither by the gouernour, in 25. yeeres he had a hundred thousand at the least, & of other cattel was able to kill without spoile of the increase 1500. yeerely, which hee killeth for the skinnes, and of the flesh saueth onely the tongues, the rest hee leaueth to the soule to deuoure. And this I am able to affirme, not onely vpon the Gouernours owne report, who was the first that brought the increase thither, which so remaineth vnto this day, but also by that I saw my selfe in one field, where an hundred oren lay one by another all whole, sauing the skinne and tongue taken away. And it is not so marueilous a thing why they doe thus cast away the flesh in all the ylands of the West Indies, seeing the land is great, and more then they are able to inhabite, the people fewe, hauing delicate fruites and meates ynough besides to feede vpon, which they rather desire, and the increase which passeth mans reason to beleue, when they come to a great number: for in S. Domingo an yland called by the finders thereof Hispaniola, is so great quantitie of cattell, and such increase thereof, that notwithstanding the daily killing of them for their hides, it is not possible to allmage the number of them, but they are deuoured by wilde dogs, whose number is such by suffering them first to range the woods and mountaines, that they eate and destroy 60000. a yeere, and yet small lacke found of them. And no marueile, for the said yland is almost as bigge as all England, and being the first place that was founde of all the Indies, and of long time inhabited before the rest, it ought therefore of reason to be most populous: and to this houre the Viceroy and counsell royall abideth there as in the chiefest place of all the Indies, to preserue orders to the rest for the kings behalfe, yet haue they but one Citie and 13. villages in all the same yland, whereby the spoile of them in respect of the increase is nothing.

Great numbers of wilde dogs.

The 15. of the foresaid moneth wee departed from Curaçao, being not a little to the reioycing of our Captaine and vs, that wee had there ended our trafique: but notwithstanding our sweete meate, wee had lower sauce, for by reason of our riding so open at sea, what with blastes whereby our anchor being a ground, thre at once came home, and also with contrary windes blowing, whereby for feare of the shoze we were faine to hale off to haue anchor-hold, sometimes a whole day and a night we turned vp and downe; and this happened not once, but halfe a dozen times in the space of our being there.

The 16. wee passed by an yland called Aruba, and the 17. at night anchored sixe houres at the West ende of Cabo de la vela, and in the morning being the 18. weighed againe, keeping our course, in the which time the Captaine sayling by the shoze in the pinnesse, came to the Rancheria, a place where the Spaniards vse to fish for pearles, and there spoke with a Spaniard, who tolde him how far off he was from Rio de la Hacha, which because he would not ouershoot, he anchored that night againe, & the 19. came thither; where hauing talke with the kings treasurer of the Indies resident there, he declared his quiet trafique in Burboroara, & shewed a certificate of the same, made by the gouernour thereof, & therefore he desired to haue the like there also: but the treasurer made answer that they were forbidden by the Viceroy and counsell of S. Domingo, who hauing intelligence of our being on the coast, did sende expresse commission to resist vs, with all the force they could, inso much that they durst not trafique with vs in no case, alleaging that if they did, they should loose all that they did trafique for, besides their bodies at the magistrates commaundement. Our Captaine replied, that hee was in an Armada of the Queenes Maiesties of England,

Aruba.

La Rancheria.

Rio de la Hacha.

*M. Hawkins his
letter to the
Treasurer of
Rio de la Hacha.*

and sent about other her affaires, but dyuen besides his pretended voyage, was inforced by contrary winde to come into those parts, where he hoped to finde such friendship as hee should doe in Spaine, to the contrary whereof hee knewe no reason, in that there was amitie betwixt their princes. But seeing they would contrary to all reason go about to withstand his trafique, he would it should not be said by him, that hauing the force he hath, to be dyuen from his trafique perforce, but he would rather put it in aduventure to try whether he or they should haue the better, and therefore willed them to determine either to giue him licence to trade, or else to stand to their owne harmes: So vpon this it was determined hee should haue licence to trade, but they would giue him such a price as was the one halfe lesse then he had sold for before, and thus they sent word they would do, and none other wise, and if it liked him not, he might do what he would, for they were not determined to deale otherwise with him. Whereupon, the captaine waying their vnconscionable request, wrote to them a letter, that they dealt too rigorously with him, to go about to cut his throte in the price of his commodities, which were so reasonably rated, as they could not by a great deale haue the like at any other mans handes. But seeing they had sent him this to his supper, hee would in the morning bring them as good a breakfast. And therefore in the morning being the 21. of May, hee shot off a whole Culuering to summon the towne, and preparing one hundred men in armour, went a shore, hauing in his great boate two Faulcons of brasse, and in the other boates double basses in their noses, which being perceiued by the Townesmen, they incontinent in battell aray with their drumme and ensigne displayed, marched from the Towne to the sands, of footemen to the number of an hundred and fiftie, making great bragges with their cries, and weaving vs a shore, whereby they made a semblance to haue fought with vs in deed. But our Captaine perceiuing them so bragge, commanded the two Faulcons to be discharged at them, which put them in no small feare to see, (as they afterward declared) such great pieces in a boate. At euery shot they fell flat to the ground, and as wee approached neere vnto them, they broke their aray, and disperseed themselves so much for feare of the Ordnance, that at last they went all away with their ensigne. The horsemen also being about thirtie, made as braue a shew as might be, courting vp and downe with their horses, their braue white leather Targets in the one hand, and their iauelings in the other, as though they would haue receiued vs at our landing. But when wee landed, they gaue ground, and consulted what they should doe, for little they thought wee would haue landed so boldly: and therefore as the Captaine was putting his men in aray, and marched forward to haue encountered with them, they sent a messenger on horsebacke with a flagge of truce to the Captaine, who declared that the Treasurer marvelled what he meant to doe to come a shore in that order, in consideration that they had granted to euery reasonable request that he did demand: but the Captaine not well contented with this messenger, marched forwards. The messenger prayed him to stay his men, and saide, if hee would come apart from his men, the Treasurer would come and speake with him, whereunto hee did agree to commune together. The Captaine onely with his armour without weapon, and the Treasurer on horsebacke with his iaueling, was afrayde to come neere him for feare of his armour, which he said was worse then his weapon, and so keeping aloofe communing together, granted in fine to all his requests. Which being declared by the Captaine to the company, they desired to haue pledges for the performance of all things, doubting that otherwise when they had made themselves stronger, they would haue bene at defiance with vs: and seeing that now they might haue what they would request, they iudged it to be more wisdom to be in assurance then to be forced to make any more labours about it. So vpon this, gages were sent, and we made our trafique quietly with them. In the meane time while we stayed here, wee watered a good breadth off from the shore, where by the strength of the fresh water running into the Sea, the salt water was made fresh. In this Riuer we saw many Crocodils of sundry bignesses, but some as bigge as a boate, with 4. feere, a long broad mouth, and a long taile, whose skinn is so hard, that a sword wil not pierce it. His nature is to liue out of the water as a frogge doth, but he is a great deuourer, and spareth neither fish, which is his common food, nor beastes, nor men, if hee take them, as the prooue thereof was knowne by a Negro, who as hee was filling water in the Riuer was by one of them caried cleane away, and neuer scene after. His nature is euer when hee would haue his prey, to cry and sobbe like a Christian body, to prouoke them to come to him, and then hee snatcheth at them, and thereupon came this prouerbe that is applied vnto women when they weepe, *Lachrymæ Crocodili*, the meaning whereof is, that as the Crocodile when hee crieth, goeth then about most to deceiue, so doeth a woman most commonly when she weepeth. Of these the Master of the Iesus watched one, and by the banks side stroke him with a pike of a bill in the side, and after three or foure times turning in sight, hee sunke downe, and was not afterward scene. In the time of our being in the Riuer Guinie, wee sawe many of a monstrous bignesse,

amongst

amongst the which the captaine being in one of the Barks comming downe the same, shot a Faulcon at one, which very narrowly hee missed, and with a feare hee plunged into the water, making a streame like the way of a boate.

Now while we were here, whether it were of a feare that the Spaniards doubted wee would haue done them some harme before we departed, or for any treason that they intended towards vs, I am not able to say: but then came thither a Captaine from some of the other townes, with a dozen souldiers vpon a time when our Captaine and the treasurer cleared all things betweene them, and were in a communication of a debt of the gouernours of Burboroara, which was to be payd by the said treasurer, who would not answer the same by any meanes. Whereupon certaine words of displeasure passed betwixt the Captaine and him, and parting the one from the other, the treasurer possibly doubting that our Captaine would perforce haue sought the same, did immediately command his men to armes, both horsemen and footemen: but because the Captaine was in the River on the backe side of the Towne with his other boates, and all his men unarmed and without weapons, it was to be iudged he ment him little good, hauing that aduantage of him, that comming vpon the sudden, hee might haue mischieued many of his men: but the Captaine hauing vnderstanding thereof, not trusting to their gentlenesse, if they might haue the aduantage, departed aboard his ships, and at night returned againe, and demanded amongst other talke, what they ment by assembling their men in that order, & they answered, that their Captaine being come to towne did muster his men according to his accustomed maner. But it is to be iudged to bee a cloake, in that comming for that purpose hee might haue done it sooner, but the truth is, they were not of force vntill then, whereby to enterprise any matter against vs, by meanes of pikes and harquebuzes, whereof they haue want, and were now furnished by our Captaine, and also 3. Faulcons, which hauing got in other places, they had secretly conueyed thither, which made them the bolder, and also for that they saw now a conuenient place to do such a feat, and time also seruing thereunto, by the meanes that our men were not onely unarmed and vnprouided, as at no time before the like, but also were occupied in hewing of wood, and least thinking of any harme: these were occasions to prouoke them thereunto. And I suppose they went about to bring it to effect, in that * I with another gentleman being in the towne, thinking of no harme towards vs, and seeing men assembling in armour to the treasurers house, whereof I maruelled, and reuoking to minde the former talke betweene the Captaine and him, and the vnrედinnesse of our men, of whom aduantage might haue bene taken, departed out of the Towne immediately to giue knowledge thereof, but before we came to our men by a slight shot, two horsemen riding a gallop were come neere vs, being sent, as wee did gesse, to stay vs least wee should cary newes to our Captaine, but seeing vs so neere our men they stayed their horses, comming together, and suffering vs to passe, belike because wee were so neere, that if they had gone about the same, they had bene espied by some of our men which then immediately would haue departed, whereby they should haue bene frustrate of their pretence: and so the two horsemen ridde about the bushes to espie what we did, and seeing vs gone, to the intent they might shadow their comming downe in post, whereof suspicion might bee had, faigned a simple excuse in asking whether he could sell any wine, but that seemed so simple to the Captaine, that standing in doubt of their courtesie, he returned in the morning with his three boats, appointed with Bales in their noses, and his men with weapons accordingly, where as before he carried none: and thus dissembling all iniuries conceived of both parts, the Captaine went ashore, leauing pledges in the boates for himselfe, and cleared all things betweene the treasurer and him, sauing for the gouerners debt, which the one by no meanes would answer, and the other, because it was not his due debt, would not molest him for it, but was content to remit it vntill another time, and therefore departed, causing the two Barks which rode neere the shore to weigh and go vnder saile, which was done because that our Captaine demanding a testimoniall of his good behauiour there, could not haue the same vntill hee were vnder saile ready to depart: and therefore at night he went for the same againe, & receiued it at the treasurers hand, of whom very courteously he tooke his leaue and departed, shooting off the bales of his boat for his farewell, and the townsmen also shot off foure Faulcons and 30. harquebuzes, and this was the first time that he knew of the conueyance of their Faulcons.

The 31. of May wee departed, keeping our course to Hispaniola, and the fourth of Iune wee had sight of an pland, which wee made to be Iamaica, marueiling that by the vehement course of the Seas we should be driuen so farre to leeward: for setting our course to the West end of Hispaniola we fel with the middle of Iamaica, notwithstanding that to all mens sight it thewed a headland, but they were all deceiued by the clouds that lay vpon the land two dayes together, in such sort that we thought it to be the head land of the said pland. And a Spaniard being in the ship, who

to the West Indies
in the year 1570

was a Merchant, and inhabitant in Iamaica, hauing occasion to go to Guinie, and being by treason taken of the Negroes, & afterwards bought by the Tangomangos, was by our Captaine brought from thence, and had his passage to go into his countrey, who perceiuing the land, made as though he knew euery place thereof, and pointed to certaine places which he named to be such a place, and such a mans ground, and that behinde such a point was the harborow, but in the ende he pointed so from one point to another, that we were a leeboord of all places, and found our selues at the West end of Iamaica before we were aware of it, and being once to leeward, there was no getting up againe, so that by trusting of the Spaniards knowledge, our Captaine sought not to speake with any of the inhabitants, which if he had not made himselfe sure of, he would haue done as his custome was in other places: but this man was a plague not onely to our Captaine, who made him loose by ouershooting the place 2000. pounds by hides, which hee might haue gotten, but also to himselfe, who being three yeeres out of his Countrey, and in great misery in Guinie, both among the Negroes and Tangomangos, and in hope to come to his wife and friends, as he made sure accompt, in that at his going into the pinnelle, when he went to shore he put on his new clothes, and for ioy flung away his old, could not afterwards finde any habitation, neither there nor in all Cuba, which we sailed all along, but it fell out euer by one occasion or other, that wee were put beside the same, so that he was faine to be brought into England, and it happened to him as it did to a duke of Samaria, when the Israelites were besieged, and were in great misery with hunger, & being tolde by the Prophet Elizaeus, that a bushell of flower should be sold for a sickle, would not beleue him, but thought it impossible: and for that cause Elizaeus prophesied hee should see the same done, but hee should not eate thereof: so this man being absent three yeeres, and not euer thinking to haue seene his owne Countrey, did see the same, went vpon it, and yet was it not his fortune to come to it, or to any habitation, whereby to remaine with his friends according to his desire.

June.

The deceitfull
force of the
current.

Two hundred
plands for
the most part
not inhabited.

The Cape of
S. Anthony in
Cuba.

Florida.

Thus hauing sailed along the coast two dayes, we departed the seuenth of June, being made to beleue by the Spaniard that it was not Iamaica, but rather Hispaniola, of which opinion the Captaine also was, because that which hee made Iamaica seemed to be but a piece of the land, and thereby tooke it rather to be Hispaniola, by the lying of the coast, and also for that being ignorant of the force of the current, he could not beleue he was so farre driuen to leeward, and therefore setting his course to Iamaica, and after certaine dayes not finding the same, perceiued then certainly that the pland which he was at before was Iamaica, and that the cloudes did deceiue him, whereof he marvelled not a little: and this mistaking of the place came to as ill a passe as the ouershooting of Iamaica: for by this did he also ouerpasse a place in Cuba, called Santa Cruz, where, as he was informed, was great store of hides to be had: & thus being disappointed of two of his portes, where he thought to haue raised great profite by his trafique, and also to haue found great refreshing of victuals and water for his men, hee was now disappointed greatly, and such want he had of fresh water, that he was forced to seeke the shore to obtaine the same, which he had sight of after certaine dayes ouerpasse with stormes and contrary windes, but yet not of the maine of Cuba, but of certaine plands in number two hundred, whereof the most part were desolate of inhabitants: by the which plands the Captaine passing in his pinnelle, could finde no fresh water vntill hee came to an pland bigger then all the rest, called the yle of Pimas, where wee anchored with our ships the 16. of June, and found water, which although it were neither so toothsome as running water, by the meanes it is standing, and but the water of raine, and also being nere the Sea was brackish, yet did wee not refuse it, but were more glad thereof, as the time then required, then wee should haue bene another time with fine Conduit water. Thus being reasonably watered we were desirous to depart, because the place was not very couenient for such ships of charge as they were, because there were many shoales to leeward, which also lay open to the Sea for any wind that should blow: and therefore the captaine made the more haste away, which was not vnnecessfull: for little sooner were their anchors weyed, and forsaile set, but there arose such a storme, that they had not much to spare for doubling out of the shoales: for one of the barks not being fully ready as the rest, was faine for haste to cut the cable in the hawse, and loose both anchor and cable to saue her selfe.

Thus the 17. of Jun, wee departed and on the 20. wee fell with the West end of Cuba, called Cape S. Antony, where for the space of three dayes wee doubled along, till wee came beyond the shoales, which are 20. leagues beyond S. Anthony. And the ordinary Brise taking vs, which is the North-east winde, put vs the 24. from the shore, and therefore we went to the Northwest to fetch wind, and also to the coast of Florida to haue the helpe of the current, which was iudged to haue set to the Eastward: so the 29. wee found our selues in 27. degrees, and in the soundings of Florida, where we kept our selues the space of foure dayes, sailing along the coast as nere as we could, in tenne or twelue fadome water, hauing all the while no sight of land.

The

The fift of July we had sight of certeine Islands of land, called the Tortugas (which is lowe land) where the captaine went in with his pinnelle, and found such a number of birds, that in halfe an houre he laded her with them; and if they had beene ten boats more, they might haue done the like. These Islands beare the name of Tortoises, because of the number of them, which there do breed, whose nature is to liue both in the water and vpon land also, but breed onely vpon the shore, in making a great pit wherein they lay egges, to the number of three or foure hundred; and couering them with sand, they are hatched by the heat of the Sunne; and by this meanes commeth the great increase. Of these we tooke very great ones, which haue both backe and belly all of bone, of the thicknes of an inch: the fish whereof we proued, eating much like beale; and finding a number of egges in them, tasted also of them, but they did eat very sweetly. Heere wee ankered sixe houres, and then a faire gale of winde springing, we weped anker, and made satle toward Cuba, whither we came the sixt day, and weathered as farre as the Table, being a hill so called, because of the forme thereof: here we lay off and on all night, to keepe that we had gotten to wind-ward, intending to haue watered in the morning, if we could haue done it, or els if the winde had come larger, to haue plied to wind-ward to Hauana, which is an harborow wherunto all the fleet of the Spanyards come, and doe there tary to haue one the company of another. This hill we thinking to haue beene the Table, made account (as it was indeed) that Hauana was but eight leagues to wind-ward, but by the perswasion of a French man, who made the captaine beleue he knew the Table very well, and had beene at Hauana, sayd that it was not the Table, and that the Table was much higher, and neerer to the sea side, and that there was no plaine ground to the Eastward, nor hilles to the Westward, but all was contrary, and that behinde the hilles to the Westward was Hauana. To which perswasion credit being giuen by some, and they not of the woozst, the captaine was perswaded to goe to lee ward, and so sailed along the seueneth and eight dayes, finding no habitation, nor no other Table; and then perceiuing his folly to giue eare to such praters, was not a little soyy, both because he did consider what time he should spend yet he could get so far to wind-ward againe, which would haue bene, with the weathering which we had, ten or twelue dayes worke, & what it would haue bene longer he knew not, and (that which was woozst) he had not aboue a dayes water, and therfore knew not what shift to make: but in fine, because the want was such, that his men could not liue with it, he determined to seeke water, and to goe further to lee ward, to a place (as it is set in the card) called Rio de los puercos, which he was in doubt of, both whether it were inhabited, & whether there were water or not, and whether for the shoalds he might haue such access with his ships, that he might conueniently take in the same. And while we were in these troubles, and kept our way to the place aforesayd, almighty God our guide (who would not suffer vs to run into any further danger, which we had bene like to haue incurred, if we had ranged the coast of Florida along as we did before, which is so dangerous (by reports) that no ship escapeth which commeth thither, (as the Spanyards haue very wel proued the same) sent vs the eight day at night a faire Westerly winde, whereupon the captaine and company consulted, determining not to refuse Gods gift, but euery man was contented to pinch his owne bellie, whatsoeuer had happened; and taking the sayd winde, the ninth day of July got to the Table, and sailing the same night, vnawares ouershot Hauana; at which place wee thought to haue watered: but the next day, not knowing that wee had ouershot the same, sailed along the coast, seeking it, and the eleuenth day in the morning, by certeine knownen marks, we vnderstood that we had ouershot it 20 leagues: in which coast ranging, we found no conuenient watering place, whereby there was no remedie but to disemboque, and to water vpon the coast of Florida: for, to go further to the Eastward, we could not for the shoalds, which are very dangerous; and because the current shooteth to the North-east, we doubted by the force thereof to be set vpon them, and therefore durst not approach them: so making but reasonable way the day aforesayd, and all the night, the twelfth day in the morning we fell with the Islands vpon the cape of Florida, which we could scant double by the meanes that fearing the shoalds to the Eastwards, and doubting the current comming out of the West, which was not of that force we made account of; for we felt little or none till we fell with the cape, and then felt such a current, that bearing all sailes against the same, yet were driuen backe againe a great pace: the experience whereof we had by the Iesus pinnelle, and the Salomons boat, which were sent the same day in the afternoone, whiles the ships were becalmed, to see if they could finde any water vpon the Islands aforesayd; who spent a great part of the day in robbing thither, being further off then they deemed it to be, and in the meane time a faire gale of winde springing at sea, the ships departed, making a signe to them to come away, who although they saw them depart, because they were so neere the shore, would not lose all the labour they had taken, but determined to keepe their way, and see if there were any water to be had, making no account

but

but to finde the shippes well enough: but they spent so much time in filling the water which they had foud, that the night was come before they could make an end. And hauing lost the sight of the ships, they rowed what they could, but were wholly ignorant which way they should seeke them againe; as indeed there was a more doubt then they knew of: for when they departed, the shippes were in no current; and sailing but a mile further, they found one so strong, that bearing all sailes, it could not preuaile against the same, but were driuen backe: whereupon the captaine sent the Salomon, with the other two barks, to heare neere the shoze all night, because the current was lesse there a great deale, and to heare light, with shooting off a piece now and then, to the intent the boats might better know how to come to them.

The Iesus also bare a light in her toppes gallant, and shot off a piece also now and then, but the night passed, and the morning was come, being the thirteenth day, and no newes could be heard of them, but the ships and barks ceased not to looke still for them, yet they thought it was all in vaine, by the meanes they heard not of them all the night past; and therefore determined to tary no longer, seeking for them till noone, and if they heard no newes, then they would depart to the Iesus, who perforce (by the vehemency of the current) was caried almost out of sight; but as God would haue it, now time being come, and they hauing tacked about in the pinnacles top, had sight of them, and tooke them by: they in the boats, being to the number of one and twenty, hauing sight of the ships, and seeing them tacking about; whereas before at the first sight of them they did greatly reioyce, were now in a greater perplexitie then euer they were: for by this they thought themselves utterly forsaken, whereas before they were in some hope to haue found them. Truly God wrought maruellously for them, for they themselves hauing no victuals but water, and being sore oppressed with hunger, were not of opinion to bestow any further time in seeking the shippes then that present noone time; so that if they had not at that instant espied them, they had gone to the shoze to haue made prouision for victuals, and with such things as they could haue gotten, either to haue gone for that part of Florida where the French men were planted (which would haue bene very hard for them to haue done, because they wanted victuals to bring them thither, being an hundred and twenty leagues off) or els to haue remained amongst the Floridians; at whose hands they were put in comfort by a French man, who was with them, that had remained in Florida at the first finding thereof, a whole yeere together, to receiue victuals sufficient, and gentle entertainment, if need were, for a yeere or two, vntill which time God might haue prouided for them. But how contrary this would haue fallen out to their expectations, it is hard to iudge, seeing those people of the cape of Florida are of more sauage and fierce nature, and more valiant then any of the rest; which the Spanyards well proued, who being five hundred men, who intended there to land, returned few or none of them, but were enforced to forsake the same: and of their cruelty mention is made in the booke of the Decades, of a frier, who taking vpon him to persuaue the people to subiection, was by them taken, and his skin cruelly pulled ouer his eares, and his flesh eaten.

In these Islands they being a shoze, found a dead man, dried in a maner whole, with other heads and bodies of men: so that these sorts of men are eaters of the flesh of men, as well as the Cannibals. But to returne to our purpose.

The foureteenth day the shippe and barks came to the Iesus, bringing them newes of the recovery of the men, which was not a little to the reioycing of the captaine, and the whole company: and so then altogether they kept on their way along the coast of Florida, and the fifteenth day came to an anchor, and so from five and twenty degrees to thirty degrees and a halfe, where the French men abode, ranging all the coast along, seeking for fresh water, ankering euery night, because we would ouershoot no place of fresh water, and in the day time the captaine in the ships pinnace sailed along the shoze, went into euery creeke, speaking with diuers of the Floridians, because hee would vnderstand where the French men inhabited; and not finding them in eight and twenty degrees, as it was declared vnto him, marvelled thereat, and neuer left sailing along the coast till he found them, who inhabited in a riuer, by them called the riuer of May, and standing in thirty degrees and better. In ranging this coast along, the captaine found it to be all an Island, and therefore it is all lowe land, and very scant of fresh water, but the countrey was maruellously sweet, with both marish and medow ground, and goodly woods among. There they found sozell to grow as abundantly as grasse, and where their houses were, great store of maiz and mill, and grapes of great bignesse, but of taste much like our English grapes. Also Decere great plentie, which came vpon the sands before them. Their houses are not many together, for in one house an hundred of them do lodge; they being made much like a great barne, and in strength not inferiour to ours, for they haue stanchions and rafters of whole trees, and are couered with palmito-leaves, hauing

having no place divided, but one small roome for their king and queene. In the middelt of this house is a hearth, where they make great fires all night, and they sleepe upon certaine pieces of wood heven in for the bowing of their backs, and another place made high for their heads, which they put one by another all along the walles on both sides. In their houses they remaine onely in the nights, and in the day they desire the fields, where they dresse their meat, and make prouision for victuals, which they prouide onely for a meale from hand to mouth. There is one thing to be maruelled at, for the making of their fire, and not onely they but also the Negros doe the same, which is made onely by two stickes, rubbing them one against another: and this they may doe in any place they come, where they finde stickes sufficient for the purpose. In their apparell the men onely vse deere skinnnes, wherewith some onely couer their priuy members, ocher some vse the same as garments to couer them before and behind; which skinnnes are painted, some yellow and red, some blacke & russet, and euery man according to his owne fancy. They do not omit to paine their bodie also with curious knots, or antike worke, as euery man in his owne fancy deuiseeth, which painting, to make it continue the better, they vse with a thorne to pricke their flesh, and dent in the same, whereby the painting may haue better hold. In their warres they vse a sleigher colour of painting their faces, thereby to make themselves shew the more fierce; which after their warres ended, they wash away againe. In their warres they vse bowes and arrowes, whereof their bowes are made of a kind of Yew, but blacker then ours, and for the most part passing the strength of the Negros or Indians, for it is not greatly inferior to ours: their arrowes are also of a great length, but yet of reeds like other Indians, but varping in two points, both in length and also for nocks and feathers, which the other lacke, whereby they shoot very stedy: the heads of the same are vipers teeth, bones of fishes, flint stones, piked points of knives, which they hauing gotten of the French men, broke the same, & put the points of them in their arrowes heads: some of them haue their heads of silver, ocher some that haue want of these, put in a kinde of hard wood, notched, which pierceth as farre as any of the rest. In their fight, being in the woods, they vse a maruellous policie for their owne safegard, which is by clasping a tree in their armes, and yet shooting not withstanding: this policy they vsed with the French men in their fight, whereby it appeareth that they are people of some policy: and although they are called by the Spanyards Gente triste, that is to say, Bad people, meaning thereby, that they are not men of capacity: yet haue the French men found them so witty in their answers, that by the captaines owne report, a counsellor with vs could not giue a more profound reason.

The manner of
kindling of fire
in Florida.

The women also for their apparell vse painted skinnnes, but most of them gownes of mosse, somewhat longer then our mosse, which they sowe together artificially, and make the same surpless like wife, wearing their haire downe to their shoulders, like the Indians. In this riuer of May aforesayd, the captaine entring with his pinnesse, found a French ship of fourescore tun, and two pinnesse of fiftene tun a piece, by her, and speaking with the keepers thereof, they tolde him of a fort two leagues by, which they had built, in which their captaine Monsieur Laudonniere was, with certaine souldiers therein. To whom our captaine sending to vnderstand of a watering place, where he might conveniently take it in, and to haue licence for the same, he straight, because there was no convenient place but by the riuer fife leagues, where the water was fresh, did send him a pilot for the more expedition thereof, to bring in one of his barks, which going in with other boats prouided for the same purpose, ankered before the fort, into the which our captaine went; where hee was by the Generall, with other captaines and souldiers, very gently entertained, who declared vnto him the time of their being there, which was foureteene moneths, with the extremity they were driuen to for want of victuals, hauing brought very little with them; in which place they being two hundred men at their first comming, had in short space eaten all the maiz they could buy of the inhabitants about them, and therefore were driuen certaine of them to serue a king of the Indians against other his enemies, for mill and other victuals; which hauing gotten, could not serue them, being so many, so long a time: but want came vpon them in such sort, that they were faine to gather acorns, which being stamped small, and often washed, to take away the bitterneffe of them, they did vse for bread, eating withall sundry times, roots, whereof they found many good and hole some, and such as serue rather for mebedines then for meates alone. But this hardnesse not contenting some of them, who would not take the paines so much as to fish in the riuer before their doores, but would haue all things put in their mouthes, they did rebell against the captaine, taking away first his armour, and afterward imprisoning him: and so to the number of fourescore of them, departed with a barke and a pinnesse, spoiling their store of victuall, and taking away a great part thereof with them, and so went to the Islands of Hispaniola and Iamaica a rousing, where they spoiled and pillled the Spanyards; and hauing taken two carauels

laden with wine and casavi, which is a bread made of roots, and much other victuals and crea-
ture, had not the grace to depart therewith, but were of such haughty stomachs, that they thought
their force to be such that no man durst meddle with them, and so kept harborow in Iamaica, go-
ing dayly ashore at their pleasure. But God which would not suffer such euill doers unpunished,
did indurate their hearts in such sort, that they lingered the time so long, that a ship and galliassie
being made out of Santa Domingo came thither into the harborow, and tooke twenty of them,
whereof the most part were hanged, and the rest caried into Spaine, and some (to the number of
five and twenty) escaped in the pinnelle, and came to Florida; where at their landing they were
put in prison, and incontinent foure of the chiefeest being condemne d, at the request of the souldi-
ers, did passe the harquebuzers, and then were hanged vpon a gibbet. This lacke of threescore
men was a great discouragement and weakening to the rest, for they were the best souldiers that they
had: for they had now made the inhabitants weary of them by their dayly crauing of maiz, hauing
no wares left to content them withall, and therefore were enforced to rob them, and to take away
their victual perforce, which was the occasion that the Floridians (not well contented therewith)
did take certeine of their company in the woods, and slew them; whereby there grew great warres
betwixt them and the Frenchmen; and therefore they being but a few in number durst not ven-
ture abroad, but at such time as they were enforced thereunto for want of food to do the same: and
going twenty harquebuzers in a company, were set vpon by eightene kings, hauing seuen or
eight hundred men, which with one of their bowes slew one of their men, and hurt a dozen, & droue
them all downe to their boats; whose pollicy in fight was to be marvelled at: for hauing shot at
diuers of their bodies which were armed, and perceiuing that their arrowes did not preuaile a-
gainst the same, they shot at their faces and legs, which were the places that the Frenchmen were
hurt in. Thus the Frenchmen returned, being in ill case by the hurt of their men, hauing not a-
boue forty souldiers left unhurt, whereby they might ill make any more inuasions vpon the Flori-
dians, and keepe their fort withall: which they must haue bene driuen vnto, had not God sent vs
thither for their succour; for they had not aboue ten dayes victuall left before we came. In which
perplexity our captaine seeing them, spared them out of his ship twenty barrells of meale, & foure
pipes of beanes, with diuers other victuals and necessaries which he might conueniently spare:
and to helpe them the better homewards, whither they were bound before our comming, at their
request we spared them one of our barks of fifty tun. Notwithstanding the great want that the
Frenchmen had, the ground doth yeeld victuals sufficient, if they would haue taken paines to get
the same; but they being souldiers, desired to liue by the sweat of other mens browes: for while
they had peace with the Floridians, they had fish sufficient, by weares which they made to catch
the same: but when they grew to warres, the Floridians tooke away the same againe, and then
would not the Frenchmen take the paines to make any more. The ground yeeldeth naturally
grapes in great store, for in the time that the Frenchmen were there, they made 20 hogheads of
wine. Also it yeeldeth roots passing good. Deere marvellous store, with diuers other beasts, and
fowle, seruiceable to the vse of man. These be things wherewith a man may liue, hauing corne or
maiz wherewith to make bread: for maiz maketh good sauoy bread, and cakes as fine as flowre.
Also it maketh good meale, beaten and sodden with water, and eateth like pap wherewith we feed
chilozen. It maketh also good beuerage, sodden in water, and nourishable; which the Frenchmen
did vse to drinke of in the morning, and it assuageth their thirst, so that they had no need to drinke
all the day after. And this maiz was the greatest lacke they had, because they had no labourers to
sowe the same, and therefore to them that should inhabit the land it were requisite to haue labourers
to till and sowe the ground: for they hauing victuals of their owne, whereby they neither rob nor
spoil the inhabitants, may liue not onely quietly with them, who naturally are more desirous of
peace then of warres, but also shall haue abundance of victuals profered them for nothing: for it
is with them as it is with one of vs, when we see another man euer taking away fro vs, although
we haue enough besides, yet then we thinke all too little for our selues: for surely we haue heard
the Frenchmen report, and I know it by the Indians, that a very little contenteth them: for the
Indians with the head of maiz roasted, will trauell a whole day, and when they are at the Spany-
ards finding, they giue them nothing but sodden herbs & maiz: and in this order I saw threescore
of them feed, who were laden with wares, and came fifty leagues off. The Floridians when they
trauell, haue a kinde of herbe dried, who with a cane and an earthen cup in the end, with fire, and
the dried herbe put together, doe sucke thorow the cane the smoke thereof; which smoke satisfieth
their hunger, and therewith they liue foure or five dayes without meat or drinke, and this all the
Frenchmen vied for this purpose: yet do they holde opinion withall, that it causeth water & fleame
to void from their stomachs. The commodities of this land are more then are yet known to any
man:

man: for besides the land it selfe, whereof there is more then any king Christian is able to inhabit, it flourisheth with meadow, pasture ground, with woods of Cedar and Cypres, and other sorts, as better can not be in the world. They haue for apothecary herbs, trees, roots and gummes great store, as Storax liquida, Turpentine, Gumme, Myrthe, and Frankinsence, with many others, whereof I know not the names. Colours both red, blacke, yellow, & russet, very perfect, where with they so paint their bodies, and Deere skinnes which they weare about them, that with water it neither fadeth away, nor altereth colour. Golde and siluer they want not: for at the French mens first comming thither they had the same offered them for little or nothing, for they receiued for a hatchet two pound weight of golde, because they knew not the estimation thereof: but the souldiers being greedy of the same, did take it from them, giuing them nothing for it: the which they perceiuing, that both the Frenchmen did greatly esteeme it, and also did rigourously deale with them, by taking the same away from them, at last would not be knowen they had any more, neither durst they weare the same for feare of being taken away: so that sauing at their first comming, they could get none of them: and how they came by this golde and siluer the Frenchmen know not as yet, but by gesse, who hauing trauelled to the Southwest of the cape, hauing found the same dangerous, by meanes of sundry banks, as we also haue found the same; and there finding masts which were wracks of Spaniards comming from Mexico, iudged that they had gotten treasure by them. For it is most true that diuers wracks haue bene made of Spaniards, hauing much treasure: for the Frenchmen hauing trauelled to the cape ward an hundred and fiftie miles, did finde two Spaniards with the Floridians, which they brought after ward to their fort, whereof one was in a carauel comming from the Indies, which was cast away fourteene yeeres ago, & the other twelue yeeres; of whose fellows some escaped, other some were slain by the inhabitants. It seemeth they had estimation of their golde & siluer, for it is wrought flat and grauen, which they weare about their neckes; other some made round like a pancake, with a hole in the midst, to boustle by their breasts withall, because they thinke it a deformity to haue great breasts. As for mines either of gold or siluer, the Frenchmen can heare of none they haue vpon the Island, but of copper, whereof as yet also they haue not made the prooue, because they were but few men: but it is not vnlike, but that in the maine where are high hills, may be golde and siluer as well as in Mexico, because it is all one maine. The Frenchmen obtained pearles of them of great bignesse, but they were blacke, by meanes of rolling of them, for they do not fish for them as the Spaniards doe, but for their meat: for the Spaniards vse to keepe dayly asishing some two or three hundred Indians, some of them that be of choise a thousand: and their order is to go in canoas, or rather great pinnesles, with thirty men in a piece, whereof the one halfe, or most part be diuers, the rest doe open the same for the pearles: for it is not suffered that they should vse dragging, for that would bring them out of estimation, and marre the beds of them. The oysters which haue the smallest sort of pearles are found in seuen or eight fadome water, but the greatest in eleuen or twelue fadome.

The Floridians haue pieces of vnicoznes hornes, which they weare about their necks, whereof the Frenchmen obtained many pieces. Of those vnicoznes they haue many; for that they doe affirme it to be a beast with one horne, which comming to the riuer to drinke, putterth the same into the water before he drinke. Of this vnicoznes horne there are of our company, that hauing gotten the same of the Frenchmen, brought home thereof to shew. It is therfore to be presupposed that there are more commodities as well as that, which for want of time, and people sufficient to inhabit the same, can not yet come to light: but I trust God will reueale the same before it be long, to the great profit of them that shall take it in hand. Of beasts in this countrey besides deere, fores, hares, polcats, conies, ownces, & leopards, I am not able certainly to say: but it is thought that there are lions and tygres as well as vnicoznes; lions especially; if it be true that is sayd, of the enmity betweene them and the vnicoznes: for there is no beast but hath his enemy, as the cony the polcat, a sheepe the wolfe, the elephant the rinoceros; and so of other beasts the like: insomuch, that whereas the one is, the other can not be missing. And seeing I haue made mention of the beasts of this countrey, it shall not be from my purpose to speake also of the venimous beasts, as crocodiles, whereof there is great abundance, adders of great bignesse, whereof our men killed some of a yard and a halfe long. Also I heard a miracle of one of these adders, vpon the which a faulcon seizing, the sayd adder did claspe her taile about her; which the French captaine seeing, came to the rescue of the faulcon, and tooke her slaying the adder; and this faulcon being wilde, he did reclaine her, and kept her for the space of two moneths, at which time for very want of meat he was faine to cast her off. On these adders the Frenchmen did feed, to no little admiration of vs, and affirmed the same to be a delicate meat. And the captaine of the Frenchmen saw also a

serpent with three heads and foure feet, of the bignesse of a great spaniell, which for want of a harquebuz he durst not attempt to slay. Of fish also they haue in the river, pike, roch, salmon, trout, and diuers other small fishes, and of great fish, some of the length of a man and longer, being of bignesse accordingly, hauing a snout much like a sword of a yard long. There be also of sea fishes,

Flying fishes.

which we saw comming along the coast flying, which are of the bignesse of a smelt, the biggest sort whereof haue foure wings, but the other haue but two: of these wee sawe comming out of Guinea a hundred in a company, which being chased by the gilt-heads, other wise called the bonitos, do to auoid them the better, take their flight out of the water, but yet are they not able to flie farre, because of the dyping of their wings, which serue them not to flie but when they are moist, and therefore when they can flie no further, they fall into the water, and hauing wet their wings, take a new flight againe. These bonitos be of bignesse like a carpe, and in colour like a makarell, but it is the swiftest fish in swimming that is, and followeth her prey very fiercely, not onely in the water, but also out of the water: for as the flying fish taketh her flight, so doeth this bonito leape after them, and taketh them sometimes aboue the water. There were some of those bonitos, which being galled by a fishgig, did follow our shippe comming out of Guinea 500 leagues. There is a sea-fowle also that chaleteth this flying fish as well as the bonito: for as the flying fish taketh her flight, so doth this fowle pursue to take her, which to beholde is a greater pleasure then hawking, for both the flights are as pleasant, and also more often then an hundred times: for the fowle can flie no way, but one or other lighteth in her palwes, the number of them are so abundant. There is an innumerable yong frye of these flying fishes, which commonly keepe about the ship, and are not so big as butter-flies, and yet by flying do auoid the vnfaciablennesse of the bonito. Of the bigger sort of these fishes wee tooke many, which both night and day flew into the sailes of our ship, and there was not one of them which was not woorth a bonito: for being put vpon a hooke dabling in the water, the bonito would leape thereat, and so was taken. Also, we tooke many with a white cloth made fast to a hooke, which being tied so short in the water, that it might leape out and in, the greedie bonito thinking it to be a flying fish leapeeth thereat, and so is deceived. We tooke also dolphins which are of very goodly colour and proportion to behold, and no lesse delicate in taste. Fowles also there be many, both vpon land and vpon sea: but concerning them on the land I am not able to name them, because my abode was there so short. But for the fowle of the fresh riuers, these two I noted to be the chiefe, wherof the Flemengo is one, hauing all red feathers, and long red legs like a herne, a necke according to the bill, red, wherof the hypper neb hangeth an inch ouer the nether; and an egripe, which is all white as the swanne, with legs like to an hearnshaw, and of bignesse accordingly, but it hath in her taile feathers of so fine a plume, that it passeth the estridge his feather. Of the sea-fowle aboue all other not common in

Dolphins.**Flemingo.****The egripe.****The pellicane.**

England, I noted the pellicane, which is feined to be the louingst bird that is; which rather then her yong should want, wil spare her heart bloud out of her belly: but for all this louingnesse she is very deformed to beholde; for she is of colour russet: notwithstanding in Guinea I haue seene of them as white as a swan, hauing legs like the same, and a body like a hearne, with a long necke, and a thicke long beake, from the nether jaw whereof downe to the bzeast passeth a skinne of such a bignesse, as is able to receiue a fish as big as ones thigh, and this her big throat and long bill doeth make her seeme so ougly.

Spanes to
reape a suffi-
cient profit in
Florida and
Virginia.

Here I haue declared the estate of Florida, and the commodities therein to this day knowen, which although it may seeme vnto some, by the meanes that the plenty of golde and siluer, is not so abundant as in other places, that the cost bestowed vpon the same will not be able to quit the charges: yet am I of the opinion, that by that which I haue seene in other Islands of the Indians, where such increase of cattell hath bene, that of twelue head of beasts in five & twenty yeeres, did in the hides of them raise a thousand pound profit yerely, that the increase of cattell onely would raise profit sufficient for the same: for wee may consider, if so small a portion did raise so much gaines in such short time, what would a greater do in many yerres: and surely I may this affirme, that the ground of the Indians for the breed of cattell, is not in any point to be compared to this of Florida, which all the yeere long is so greene, as any time in the Summer with vs: which surely is not to be maruelled at, seeing the countrey standeth in so watery a climate: for once a day without faile they haue a shower of raine; which by meanes of the countrey it selfe, which is drie, and more feruent hot then ours, doeth make all things to flourish therein. And because there is not the thing we all seeke for, being rather desirous of present gaines, I doe therefore affirme the attempt thereof to be more requisite for a prince, who is of power as to go thorow with the same, rather then for any subiect.

From thence wee departed the 28 of July, vpon our voyage: mewards, hauing there all things

things as might be most conuenient for our purpose: and tooke leaue of the Frenchmen that there still remained, who with diligence determined to make as great speede after, as they could. Thus by meanes of contrary windes oftentimes, wee prolonged our voyage in such manner that victuals scanted with vs, so that we were diuers times (or rather the most part) in despaire of euer comming home, had not God of his goodnesse better prouided for vs, then our deserv-
 ing. In which state of great miserie, wee were prouoked to call vpon him by feruent prayer, which moued him to heare vs, so that we had a prosperous winde, which did set vs so farre shot, as to be vpon the banke of Newfound land, on Saint Bartholomews eue, and we sounded there-
 upon, finding ground at an hundred and thirtie fadoms, being that day somewhat becalmed, and tooke a great number of fresh codde-fish, which greatly relieued vs: and being very glad there-
 of, the next day we departed, and had lingring little gales for the space of foure or fve dayes, at the ende of which we sawe a couple of French shippes, and had of them so much fish as would
 serue vs plentifully for all the rest of the way, the Captaine paying for the same both golde and siluer, to the iust value thereof, vnto the chiefe owners of the saide shippes, but they not looking
 for any thing at all, were glad in themselves to meete with such good intertainment at sea, as they had at our hands. After which departure from them, with a good large winde the twen-
 tieth of September we came to Padstow in Cornewall, God be thanked, in safetie, with the losse
 of twentie persons in all the voyage, and with great profit to the venturers of the said voyage, as
 also to the whole realme, in bringing home both golde, siluer, pearles and other iewels great
 store. His name therefore be praised for evermore. Amen.

The Register and true accounts of all herein expressed hath beene
 approued by me Iohn Sparke the younger, who went vpon the same
 voyage, and wrote the same.

The third troublesome voyage made with the Iesus of Lubeck, the
 Minion, and foure other ships, to the parts of Guinea, and the West Indies,
 in the yeeres 1567 and 1568 by M. Iohn Hawkins.

The ships departed from Plimmouth, the second day of October, Anno 1567
 and had reasonable weather vntill the seuenth day, at which time fortie leagues
 North from Cape Finister, there arose an extreme storme, which continued
 foure dayes, in such sort, that the fleete was disperfed, and all our great boats
 lost, and the Iesus our chiefe shippe, in such case, as not thought able to serue
 the voyage: whercupon in the same storme we set our course homeward, de-
 termining to giue ouer the voyage: but the eleuenth day of the same moneth, the winde changed
 with faire weather, whereby we were animated to followe our enterprise, and so did, directing
 our course with the Islands of the Canaries, where according to an order befoze prescribed, all
 our shippes befoze disperfed, met at one of those Islands, called Gomera, where we tooke wa-
 ter, and departed from thence the fourth day of Nouember, towards the coast of Guinea, and ar-
 rived at Cape Verde, the eighteenth of Nouember: where we landed 150 men, hoping to ob-
 taine some Negroes, where we got but fewe, and those with great hurt and damage to our men,
 which chiefly proceeded of their enenomed arrowes: and although in the beginning they seemed
 to be but small hurts, yet there hardly escaped any that had blood drawn of them, but died in
 strange sort, with their mouths shut some tenne dayes befoze they died, and after their wounds
 were whole; where I my self had one of the greatest woundes, yet thanks be to God, escaped.
 From thence we past the time vpon the coast of Guinea, searching with all diligence the riuers
 from Rio grande, vnto Sierra Leona, till the twelfth of Januarie, in which time we had not got-
 ten together a hundred and fve Negroes: yet notwithstanding the sicknesse of our men, and the

late time of the peere commanded vs away: and thus hauing nothing wherewith to seeke the coast of the West Indies. I was with the rest of our company in consultation to goe to the coast of the Mine, hoping there to haue obtained some golde for our wares, and thereby to haue defraied our charge. But euen in that present instant, there came to vs a Negro, sent from a king, oppressed by other Kings his neighbours, desiring our aide, with promise that as many Negroes as by these warres might be obtained, aswell of his part as of ours, should be at our pleasure: whereupon we concluded to giue aide, and sent 120 of our men, which the 15 of Ianuarie, assaulted a towne of the Negroes of our Allies aduersaries, which had in it 8000 Inhabitants, being very strongly impaled and fenced after their manner, but it was so well defended, that our men preuailed not, but lost five men and forie hurt: so that our men sent forthwith to me for more helpe: whereupon considering that the good successe of this enterprize might highly further the commoditie of our voyage, I went my selfe, and with the helpe of the king of our side, assaulted the towne, both by land and sea, and very hardly with fire (their houses being couered with dry Palme leaues) obtained the towne, and put the Inhabitants to flight, where we tooke 250 persons, men, women, & children, and by our friend the king of our side, there were taken 600 prisoners, whereof we hoped to haue had our choise: but the Negro (in which nation is seldeome or neuer found truth) meant nothing lesse: for that night he remooued his campe and prisoners, so that we were faine to content vs with those few which we had gotten our selues.

Now had we obtained between foure and foue hundred Negroes, wherewith we thought it somewhat reasonable to seeke the coast of the West Indies, and there, for our Negroes, and other our merchandize, we hoped to obtaine, whereof to counteruaile our charges with some gaines, wherunto we proceeded with all diligence, furnished our watering, tooke fuel, and departed the coast of Guinea the third of Februarie, continuing at the sea with a passage more hard, then before hath bene accustomed till the 27 day of March, which day we had sight of an Iland, called Dominica, vpon the coast of the West Indies, in fourtene degrees: from thence we coasted from place to place, making our traffike with the Spaniards as we might, somewhat hardly, because the king had straightly commanded all his Gouvernors in those parts, by no meanes to suffer any trade to be made with vs: notwithstanding we had reasonable trade, and courteous entertainment, from the Ile of Margarita vnto Cartagena, without any thing greatly worth the noting, sauing at Capo de la Vela, in a towne called Rio de la Hacha (from whence come all the pearles) the treasurer who had the charge there, would by no meanes agree to any trade, or suffer vs to take water, he had fortified his towne with diuers bulwarkes in all places where it might be entered, and furnished himselfe with an hundred Hargabuziers, so that he thought by famine to haue inforced vs to haue put a land our Negroes: of which purpose he had not greatly failed, vnlesse we had by force entered the towne: which (after we could by no meanes obtaine his fauour) we were enforced to doe, and so with two hundred men brake in vpon their bulwarkes, and entered the towne with the losse onely of two men of our partes, and no hurt done to the Spaniards because after their voley of shot discharged, they all fled.

Thus hauing the town with some circumstance, as partly by the Spaniards desire of Negroes, and partly by friendship of the Treasurer, we obtained a secret trade: whereupon the Spaniards resorted to vs by night, and bought of vs to the number of 200 Negroes: in all other places where we traded the Spaniards inhabitants were glad of vs and traded willingly.

At Cartagena the last towne we thought to haue seene on the coast, we could by no meanes obtaine to deale with any Spaniard, the gouernour was so straight, and because our trade was so neere finished we thought not good either to aduenture any landing, or to detract further time, but in peace departed from thence the 24 of July, hoping to haue escaped the time of their stormes which then soone after began to reigne, the which they call Furicanos, but passing by the West end of Cuba, towards the coast of Florida there happened to vs the 12 day of August an extreme storme which continued by the space of foure dayes, which so beat the Iesus, that we cut downe all her higher buildings, her rudder also was sore shaken, and withall was in so extreme a leake that we were rather vpon the point to leaue her then to keepe her any longer, yet hoping to bring all to good passe, we sought the coast of Florida, where we found no place nor Hauens for our ships, because of the shallownesse of the coast: thus being in greater dispaire, and taken with a newe storme which continued other 3 dayes, we were inforced to take for our succour the Port which serueth the citie of Mexico called Saint Iohn de Villua, which standeth in 19 degrees: in seeking of which Port we tooke in our way 3 ships which carried passengers to the number of an hundred, which passengers we hoped should be a meane to vs the better to obtaine victuals for our money, & a quiet place for the repairing of our fleete. Shortly after this the 16 of September we entered the

the Port of Saint Iohn de Villua and in our entrie the Spaniards thinking vs to be the fleet of Spaine, the chiefe officers of the Countrey came aboord vs, which being deceiued of their expectation were greatly dismayed: but immediatly when they sawe our demand was nothing but victuals, were recomforced. I found also in the same Port twelue ships which had in them by the report two hundred thousand pound in gold & siluer, all which (being in my possession, with the kings Island as also the passengers before in my way thitherward stayed) I let at libertie, without the taking from them the waight of a groat: onely because I would not be delayed of my dispatch, I stayed two men of estimation and sent post immediatly to Mexico, which was two hundred miles from vs, to the Presidents and Councell there, shewing them of our arriual there by the force of weather, and the necessitie of the repaire of our shippes and victuals, which wantes we required as friends to king Philip to be furnished of for our money: and that the Presidents and Councell there should with all conuenient speede take order, that at the arriual of the Spanishe fleet, which was dayly looked for, there might no cause of quarrell rise betweene vs and them, but for the better maintenance of amitie, their commandement might be had in that behalfe. This message being sent away the first tenth day of September at night, being the very day of our arriual, in the next morning which was the seuenteenth day of the same moneth, we sawe open of the Hauen thirtene great shippes, and vnderstanding them to bee the fleet of Spaine, I sent immediatly to aduertise the Generall of the fleet of my being there, doing him to vnderstand, that before I would suffer them to enter the Port, there should some order of conditions passe betweene vs for our safe being there, and maintenance of peace. Now it is to be vnderstood that this Port is made by a little Island of stones not three foote above the water in the highest place, and but a bow-shoot of length any way, this Island standeth from the maine land two bow-shootes or more, also it is to be vnderstood that there is not in all this coast any other place for ships to arriue in safety, because the North winde hath there such violence, that unlesse the shippes be very safely moored with their ankers fastened vpon this Island, there is no remedie for these North windes but death: also the place of the Hauen was so little, that of necessitie the shippes must ride one aboord the other, so that we could not giue place to them, nor they to vs: and here I beganne to bewaile that which after followed, for now, said I, I am in two dangers, and forced to receiue the one of them. That was, either I must haue kept out the fleet from entring the Port, the which with Gods helpe I was very well able to doe, or else suffer them to enter in with their accustomed treason, which they neuer faile to execute, where they may haue opportunitie, to compass it by any meanes: if I had kept them out, then had there bene present shipwracke of all the fleet which amounted in value to fife Millions, which was in value of our money 1800000. li, which I considered I was not able to answere, fearing the Queenes Maiesties indignation in so waighie a matter. Thus with my selfe reuoluing the doubts, I thought rather better to abide the Iutt of the vncertainty, then the certaintie. The vncertaine doubt I account was their treason which by good policie I hoped might be prevented, and therefore as chusing the least mischiefe I proceeded to conditions. Now was our first messenger come and returned from the fleet with report of the arriual of a Viceroy, so that hee had authoritie, both in all this Province of Mexico (otherwise called Nueva Espanna) and in the sea, who sent vs word that we should send our conditions, which of his part should (for the better maintenance of amitie betweene the Princes) be both fauourably granted, and faithfully performed, with many faire wordes how passing the coast of the Indies he had vnderstood of our honest behaviour towardes the inhabitants where we had to doe, as well elsewhere as in the same Port, the which I let passe: thus following our demand, we required victuals for our money, and licence to sell as much ware as might furnish our wants, and that there might be of either part twelue gentlemen as hostages for the maintenance of peace: and that the Island for our better safetie might be in our owne possession, during our abode there, and such ordinance as was planted in the same Island which were cleven peeces of brasse: and that no Spaniard might land in the Island with any kind of weapon: these conditions at the first he somewhat misliked, chiefly the guard of the Island to be in our owne keeping, which if they had had, we had soone knowne our fare: for with the first North winde they had cut our cables and our ships had gone ashore: but in the end he concluded to our request, bringing the twelue hostages to ten, which with all speede of either part were receiued, with a writing from the Viceroy signed with his hande and sealed with his seale of all the conditions concluded, & forthwith a trumpet blownen with commandement that none of either part should be meane to violate the peace vpon paine of death: and further it was concluded that the two Generals of the fleets should meete, and giue faith ech to other for the performance of the premisses which was so done. Thus at the end of 3 dayes all was

Saint Iohn de Villua a Port. The Spaniards are deceiued.

The peace concluded.

concluded & the fleet entered the Port, saluting one another as the maner of the sea doth require. Thus as I said before, thursday we entered the Port, Friday we saw the fleet, and on munday at night they entered the Port: then we laboured 2 daies placing the English ships by themselves & the Spanish ships by themselves, the captaines of ech part & inferiour men of their parts promising great amity of al sides: which euen as with all fidelitie it was ment on our part, so the Spaniards ment nothing lesse on their parts, but from the maine land had furnished themselves with a supply of men to the number of 1000, and ment the next thursday being the 23 of September at dinner time to set vpon vs on all sides. The same Thursday in the morning the treason being at hand, some appearance thewed, as shifting of weapon from ship to ship, planting and bending of ordnance from the ships to the Island where our men warred, passing too and fro of companies of men moze then required for their necessary busines, & many other ill likelihoods, which caused vs to haue a belement suspicion, and therewithall sent to the Viceroy to enquire what was ment by it, which sent immediatly straight commandement to vnplant all things suspicious, and also sent word that he in the faith of a Viceroy would be our defence from all villanies. Yet we being not satisfied with this answer, because we suspected a great number of men to be hid in a great ship of 900 tunnes which was moored next vnto the Minion, sent againe to the Viceroy the master of the Iesus which had the Spanish tongue, and required to be satisfied if any such thing were or not. The Viceroy now seeing that the treason must be discovered, forthwith stayed our master, blew the Trumpet, and of all sides set vpon vs: our men which warred a shoze being stricken with sudden feare, gaue place, fled, and sought to recouer succour of the ships; the Spaniards being before provided for the purpose landed in all places in multitudes from their ships which they might easily doe without boates, and slewe all our men a shoze without mercie, a fewe of them escaped aboard the Iesus. The great ship which had by the estimation three hundred men placed in her secretly, immediatly fell aboard the Minion, but by Gods appointment, in the time of the suspicion we had, which was onely one halfe houre, the Minion was made readie to auoide, and so leeling her headstalls, and hapling away by the sternefastes she was gotten out: thus with Gods helpe she defended the violence of the first brunt of these three hundred men. The Minion being past out, they came aboard the Iesus, which also with very much a doe and the losse of manie of our men were defended and kept out. Then were there also two other ships that assaulted the Iesus at the same instant, so that she had hard getting loose, but yet with some time we had cut our head-fastes and gotten out by the sterne-fastes. Nowe when the Iesus and the Minion were gotten about two shippes length from the Spanish fleet, the fight beganne so hotte on all sides that within one houre the Admirall of the Spaniards was supposed to be sunke, their Vice-admirall burned and one other of their principall ships supposed to be sunke, so that the shippes were little able to annoy vs.

Then is it to be vnderstood, that all the Ordinance vpon the Islande was in the Spaniards hands, which did vs so great annoyance, that it cut all the mastes and yardes of the Iesus, in such sort that there was no hope to carrie her away: also it sunke our small shippes, whereupon we determined to place the Iesus on that side of the Minion, that she might abide all the batterie from the land, and so be a defence for the Minion till night, and then to take such reliefe of victuall and other necessities from the Iesus, as the time would suffer vs, and to leaue her. As we were thus determining, and had placed the Minion from the shot of the land, suddenly the Spaniards had fired two great shippes which were comming directly with vs, and hauing no meanes to auoide the fire, it bredde among our men a maruellous feare, so that some sayd, let vs depart with the Minion, other said, let vs see whither the winde will carrie the fire from vs. But to be short, the Minions men which had alwayes their sayles in a readinesse, thought to make sure worke, and so without either consent of the Captaine or Master cut their saile, so that very hardly I was receiued into the Minion.

The most part of the men that were left a liue in the Iesus, made shift and followed the Minion in a small boat, the rest which the little boate was not able to receiue, were inforced to abide the mercie of the Spaniards (which I doubt was very little) so with the Minion only and the Iudith (a small barke of 50 tunne) we escaped, which barke the same night forooke vs in our great miserie: we were now remooued with the Minion from the Spanish ships two bow-shootes, and there rode all that night: the next morning we recouered an Island a mile from the Spaniards, where there tooke vs a North winde, and being left onely with two ankers and two cables (for in this conflict we lost three cables and two ankers) we thought alwayes vpon death which euer was present, but God preserved vs to a longer time.

The weather waxed reasonable, and the Saturday we set saile, and hauing a great number of

of men and little victuals our hope of life wared lesse and lesse: some desired to yeeld to the Spaniards, some rather desired to obtaine a place where they might giue themselves to the Infidels, and some had rather abide with a little pittance the mercie of God at Sea: so thus with many sorrowfull hearts we wauided in an unknown Sea by the space of 14 dayes, till hunger inforced vs to seeke the land, for hies were thought very good meat, rats, cats, mice and dogs, none escaped that might be gotten, parrats and monkeyes that were had in great price, were thought there very profitable if they serued the turne one dinner: thus in the end the 8 day of October we came to the land in the botome of the same bay of Mexico in 23 degrees and a halfe, where we hoped to haue found inhabitants of the Spaniards, reliefe of victuals, and place for the repaire of our ship, which was so sore beaten with shot from our enemies and hysled with shooting off our owne ordnance, that our wearie and weake armes were scarce able to defende and keepe out water. But all things happened to the contrary, for we found neither people, victuall, nor haue of reliefe, but a place where hauing faire weather with some perill we might land a boat: our people being forced with hunger desired to be set on land, whereunto I consented.

Small hopes of life.

Hard choice.

Epitaphies.

And such as were willing to land I put them apart, and such as were desirous to goe homewardes, I put a part, so that they were indifferently parted a hundred of one side and a hundred of the other side: these hundred men we set a land with all diligence in this little place before said, which being landed, we determined there to take in fresh water, and so with our little remaine of victuals to take the sea.

200 hundred men set on land in 23. deg. and a halfe.

The next day hauing a land with me fiftie of our hundred men that remained for the speedier preparing of our water aboard, there arose an extreame storme, so that in three dayes we could by no meanes repaire aboard our ship: the ship also was in such perill that euery houre we looked for shipwacke.

The greatest miserie of all.

But yet God againe had mercie on vs, and sent faire weather, we had aboard our water, and departed the sixteenth day of October, after which day we had faire and prosperous weather till the sixteenth day of Nouember, which day God be prayesd we were cleere from the coast of the Indies, and out of the chanell and gulfe of Bahama, which is betweene the Cape of Florida, and the Ilandes of Iucayo. After this growing neere to the colde countrey, our men being oppressed with famine, died continually, and they that were left, grew into such weakenesse that we were scantily able to manage our shippe, and the winde being alwayes ill for vs to recouer England, we determined to goe with Galicia in Spaine, with intent there to relieue our companie and other extreame wantes. And being arriued the last day of December in a place neere vnto Vigo called Ponce Vedra, our men with excesse of fresh meate grew into miserable disleales, and died a great part of them. This matter was borne out as long as it might be, but in the end although there were none of our men suffered to goe a land, yet by accesse of the Spaniards, our feebleness was knowne to them. Whereupon they ceased not to seeke by all meanes to betray vs, but with all speede possible we departed to Vigo, where we had some helpe of certaine English ships and twelue fresh men, where with we repaired our wants as we might, and departing the 20 day of Ianuary 1568 arriued in Mounts bay in Cornewall the 25 of the same moneth, praised be God therefore.

If all the miseries and troublesome affaires of this sorrowfull voyage should be perfectly and thoroughly written, there should neede a painefull man with his pen, and as great a time as he had that wrote the liues and deathes of the Martyrs.

JOHN HAWKINS.

The first voyage attempted and set foorth by the expert and valiant captaine M. Francis Drake himselfe, with a ship called the *Dragon*, and another ship and a Pinnesse, to *Nombre de Dios*, and *Dariene*, about the yere 1572, Written and recorded by one *Lopez Vaz* a Portugall borne in the citie of *Eluas*, in manner follow: which Portugale, with the discourse about him, was taken at the river of *Plate* by the ships set foorth by the Right Honourable the Earle of *Cumberland*, in the yere 1586.

There was a certaine English man named Francis Drake, who hauing intelligence how the towne of *Nombre de Dios* in *Nueva Espanna*, had but small store of people remaining there, came on a night, and entred the Port with foure Pinnesses, and landed about 150 men, leaving 70 men with a trumpet, in a fort which was there, with the other 80 he entred the towne, without doing any harme, till he came to the market place,

X x 3

and

and there discharged his calliwers, & sounded a trumpet very loud, and the other which he had left in the Fort answered him after the same maner, with the discharging their calliwers, and sounding their trumpets: the people hereupon not thinking of any such matter, were put in great feare, and waking out of their sleepe fled all into the mountaines, inquiring one of another what the matter should be, remaining as men amazed, not knowing what that vppore was which happened so suddenly in the towne. But 14 or 15 of them topning together with their harquebuzes, went to the market place to know what they were that were in the towne, and in a corner of the market place they did discover the Englishmen, and seeing them to be but fewe, discharged their calliwers at those Englishmen: their fortune was such that they killed the Trumpetter, and shot one of the principall men thorow the legges, who seeing himselfe hurt, retyped to the Fort, where the rest of their company was left: they which were in the Fort sounded their Trumpet, and seeing that they in the towne did not answer them, and hearing the calliwers, thought that all they in the towne had bene slaine, and thereupon fled to their Pinnelles: the English captaine comming to the Fort, and not finding his men which he left there, he and his were in so great feare, that leaving their furniture behind them, and putting off their hose, they swamme, and waded all to their Pinnelles, and so went with their ships againe out of the Port.

Thus this English Captaine called Francis Drake, departed from Nombre de Dios, & slew onely one man in the towne which was looking out of a windowe to see what the matter was, and of his men had onely his Trumpetter slaine.

The balliant
exploit of
Francis Drake
besieging Pa-
ma and Nombre
de Dios.

M. Francis Drake
burnt the house
of Crosses.

But he being discontented with the repulse which he had receiued there, came to the sound of Dariene, and having conference with certaine Negros which were fled from their masters of Panama, and Nombre de Dios, the Negros did tell him, that certaine Pules came laden with gold and siluer from Panama to Nombre de Dios, who in companie of these Negros went thereupon on land, and staped in the way where the treasure should come with an hundred shot, and so tooke two companies of mules, which came onely with their druiers mistrusting nothing, and he carried away the gold onely, for they were not able to carrie the siluer through the mountaines. And two dayes after he came to the house of Crosses, where he killed sixe or seuen marchants, but found no golde nor siluer but much marchandize: so he fired the house, where was burnt about 200000 Duckets in marchandize, and so went to his ship againe: and within halfe an houre after he was a ship-board, there came downe to the sandes three hundred shot of the Spaniards in the sight of his ships, of purpose to seeke him, but he cared little for them being out of their reach, and so departed with his treasure.

The voyage of John Oxnam of Plimmouth, to the West India, and over the straight of Dariene into the South sea. Anno 1575. Written by the foresaid Lopez Vaz in the said discourse.

There was another Englishman, who hearing of the spoyle that Francis Drake had done vpon the coast of Nueva Espanna, and of his good aduenture and safe returne home, was thereby prouoked to vndertake the like enterprize, with a ship of 140 tunnes, and 70 men, and came thither, and had also conference with the foresaide Negros: and hearing that the golde and siluer which came vpon the Pules from Panama to Nombre de Dios, was now conducted wth souldiers, he determined to do that which neuer any man before enterprised: and landed in that place where Francis Drake before had had his conference with the Negros. This man couered his ship after he had brought her aground with boughes of trees, and hid his great Ordnance in the ground, and so not leaving any man in his ship, he tooke two small pieces of ordnance, and his calliwers, and good store of victuals, and so went with the Negros about twelue leagues into the maine land, to a riuer that goeth to the South sea, and there he cut wood and made a Pinnelle, which was fixe and fortie foote by the keele, and hauing made this Pinnelle, he went into the South sea, carrying sixe Negros with him to be his guides, and so went to the Island of Pearles, which is fixe & twentie leagues from Panama, which is in the way that they come from Peru to Panama, and there he was ten dayes without shewing himselfe to any man, to see if he might get any ship that came from Peru: At last, there came a small Barke by, which came from Peru from a place called Quiro, which he tooke and found in her sixtie thousand pezos of golde, and much victuals. But not contenting himselfe with this prize, hee staped long without sending away his prize or any of the men, and in the ende of fixe dayes after, hee tooke another Barke which came from Lima, in which he tooke an hundred thousand pezos of siluer in barres, with the which hee thought to haue

The Island of
pearles 25
leagues from
Panama.

hate gone, & entered the river, but first he went into the Islands to see if he could find any pearles: where he found a few, and so returned to his pinnelle againe, & so sailing to the river from whence he came, and comming neere to the mouth of the sayd river, hee sent away the two prizes that hee tooke, and with his pinnelle he went up the river. The Negros that dwelt in the Island of pearles, the same night that he went from them, went in Canoas to Panama, and the Gouvernour within two dayes sent foure barkes with 100 men, 25 men in every one, and Negros to rowe with the captaine John de Ortega, which went to the Island of pearles, and there had intelligence, which way the English men were gone, and following them he met by the way the ships which the English men had taken, of whom he learned, that the English men were gone up the river, and he going thither, when he came to the mouth of the river, the captaine of Panama knew not which way to take, because there were three partitions in the river to goe up in, and being determined to goe up the greatest of the three rivers, he saw comming downe a lesser river many feathers of hennes, which the Englishmen had pulled to eate, and being glad thereof, hee went by that river where hee saw the feathers, and after that he had bene in that river foure daies, he descried the Englishmens pinnelle upon the sands, and comming to her, there were no more then five Englishmen, whereof they killed one, and the other five escaped away, and in the pinnelle he found nothing but victuals: but this captaine of Panama not herewith satisfied, determined to seeke out the Englishmen by land, and leaving twenty men in his pinnelles, hee with 80 shot went up the countrey: hee had not gone halfe a league, but hee found a house made of boughs, where they found all the Englishmens goods, and the gold and silver also, and carrying it backe to their pinnelles, the Spaniards were determined to goe away, without following the English men any further.

But at the end of three dayes, the English captaine came to the river with all his men, and about 200 Negros, and set upon the Spaniards with great fury: But the Spaniards having the advantage of trees which they stood behind, did easily prevaille, and killed eleven Englishmen, and five Negros, and tooke other seven Englishmen alive, but of the Spaniards, two were slaine and five sore hurt.

Among other things, the Spaniards enquired of the Englishmen which they tooke, why they went not away in fiftene dayes liberty which they had. They answered, that their Captaine had commanded them to carie all that golde and silver which they had, to the place where they had left their shippe, and they had promised him to carie it, although they made three or foure journeys of it, for hee promised to give them part of it besides their wages, but the mariners would have it by and by, and so their Captaine being angry because they would not take his word, fell out with them, and they with him, in so much that one of the company would have killed the Captaine, so that the Captaine would not have them to carie the treasure, but sayd hee would seeke Negros to carie it, and so he went and sought for Negros, and bringing those Negros to carie it, hee met with the five English men that hee had left in his pinnelle which ranne from the Spaniards, and the rest also which ran from the house, and they told him what the Spaniards had done, and then making friendship with all his men, hee promised them halfe of all the treasure if they got it from the Spaniards, and the Negros promised to helpe him with their bowes and arrowes, and thereupon they came to seeke the Spaniards, and now that some of his company were killed and taken, hee thought it best to returne to his ship, and to passe backe for England. The Spanish captaine hearing this, having buried the dead bodie, and having gotten all things into his barkes, and taking the English men and their pinnelle with him, he returned to Panama: so the voyage of that English man did not prosper with him, as hee thought it would have done.

Nowe when the foure barkes were come to Panama, they sent aduise also to Nombre de dios, and they of Nombre de dios sent also from them other foure barkes which (as the Spaniards say) found the English ship where she was hid, and brought her to Nombre de dios: and that the Viceroy of Peru not thinking it good to suffer fiftie English men to remaine in the countrey, sent a servant of his called Diego de Frees, with a hundred and fifty shot into the mountaines to seeke them out, who found them making of certaine Canoas to goe into the North sea, and there to take some barke or other: some of them were sicke, and were taken, and the rest fled with the Negros, who in the end betrayed them to the Spaniards, so that they were brought to Panama. And the Justice of Panama asked the English captaine whether hee had the Queenes licence, or the licence of any other Prince or Lord for his attempt. And he answered he had none, whereupon hee and all his company were condemned to dye, and so were all executed, saving the Captaine, the Master, the Pilot, and five boyes which were caried to Lima, and there the Captaine was executed with the other two, but the boyes be yet living.

The English
betrayed to the
Spaniards.

The death of
John Oxnam.

The

The King of Spaine hauing intelligence of these matters, sent 300 men of warre against those Negros which had assisted those English men, which before were slaues vnto the Spaniards, and as before is sayd, fled from their masters vnto those mountaines, and so ioynded themselves to the Englishmen, to the ende they might the better reuenge themselves on the Spaniards.

At the first comming of these 300 souldiers, they tooke many of the Negros, and executed great iustice vpon them: But after a season, the Negros grew wise and wary, and prevented the Spaniards, so that none of them could be taken.

The Spaniards of that countrey maruelled much at this one thing, to see that since the conquering of this land, there haue bene many Frenchmen, that haue come to those Countreys, but neuer saw English men there but onely those two of whom I haue spoken. And although there haue many Frenchmen bene on the coast, yet neuer durst they put foote vpon land, only those two English men aduentured it, and did such exploits, as are before remembred.

The English
mens coming
to the Indies,
caused the king
of Spaine to
build gallies
to keepe the
Seas.

All these things comming to the hearing of the king of Spaine, he prouided two Gallies well appointed to keepe those coastes: and the first yeere they tooke sixe or seuen French ships. And after that this was knowen, there were no more Englishmen or Frenchmen of warre that durst aduenture to approach the coast, vntill this present yeere 1586, that the aforesayd Francis Drake, with a strong fleet of 24 ships arrived there, and made spoile of Santo Domingo, Carthagena, and S. Augustine, things that are knowen to all the worlde. But it is likely that if the King of Spaine liue, he will in time prouide sufficient remedy, to keepe his countreys and subiects from the inuasion of other nations.

The voyage of Master *Andrew Barker* of *Bristol*, with two ships, the one called the *Ragged staffe*, the other the *Beare*, to the coast of *Terra firma*, and the Bay of *Honduras* in the West Indies, in the yeere 1576. Wherein the reasons are premised which mooued him to set forth this voyage against the Spaniards: collected out of certaine notes and examinations touching this enterprise by *M. Richard Hakluyt*.

First of all *Andrew Barker* hauing abode in one of the Canary Islands called *Tenerif* for a certaine time, and returning home left behind him *Charles Chester* (the sonne of *Dominic Chester* merchant of *Bristol*) to learn the language. Now the sayd *Andrew Barker* fort. with vpon his arriual in England, in November, 1574, freighted a small ship (named the *Speedwell* of *Bristol*) to goe for the Canaries with cloth and other merchandise of a great value. He sent also one *John Druce* of *Bastable* as his factor to make sale and dispose of the said goods, who when he arrived at *Tenerif*, landed the merchandize, and sent home the barke with some small quantity of wine, making account to sell the sayd wares to greater advantage in prouiding wines and sugar for the lading of another ship, which *Andrew Barker* had appointed to send thither. Also according to this his purpose y^e said *Andrew* in March following sent a ship called the *Christopher* of *Dartmouth*, captaine wherof was one *Henry Roberts* of *Bristol*: who when he had landed in *Tenerif*, & was in good hope to find the lading of his ship in a readines, contrary to his expectation, was suddenly cast into prison: the Spaniards alleaging that *Andrew Barker* was accused to the inquisition by *Charles Chester*, whereupon his goods were confiscat, his factor *John Druce* was attached, and he also (the said captaine *Roberts*) being as they supposed *Barkers* partner, was in like sort to be imprisoned. In fine all the foresaid commodities appertaining to the said *Andrew* and his brother *M. John Barker* and others to the value of 1700 pound and upwards (as it doth appeare by proofes of record in the Admiralty) were viterly lost, being confiscat to the said inquisition. Howbeit captaine *Roberts* by the meanes of a frier was deliuered out of prison (which cost him all the merchandize he brought with him in his ship) and so returned with dead freight to the summe of 200 pound that afterwards *Andrew Barker* discharged. In recompense of which iniurie (for that no suite preuaileth against the inquisition of Spaine) & also to recouer his losse of the Spaniards themselves, at his owne charge with the help of his friends hee furnished two barkes for the West Indies, the greater of which barkes was called the *Ragged staffe*, himselfe being captaine, & *Philip Roche* Master thereof, the other named the *Beare* had one *William Cox* of *Limehouse* for her Master and captaine. And thus all our company being imbarked at *Plimouth* on *Whitsunday* in the beginning of June, we set forward, & in our course we met with a ship of *London*, & afterwards with another ship, but tooke nothing fro either of them. Our first arriual was at one of the Islands of *Cape Verde*, named *Del sal*, by the Isle of salt, where we tooke certain fishes called *Tortois*: and there we remained one night and halfe the day following. And from thence wee came to the

Isle of Maio, being distant from Isla del Sal, 14 or 15 leagues, where we tooke in fresh water and traffiqued with certaine Portugals inhabiting in that place, of whom we had some victuals for knives and beades: and there we remained one day and one night: but our trumpetter was treacherously slaine by those Portugals, in reuenge of which murder we set on fire two of their small villages. From this Island wee shaped our course ouer the maine Ocean toward the West Indies, and arriued happily at the Island of Trinidad, and had conference with certaine Indians inhabitants thereof, who gaue vs very friendly and courteous entertainment: and here we set by a pinnesse which we caried forth in the Ragged staffe, and traffiqued with the foresayd Indians for victuals. And after we had spent five dayes in this place we departed, and arriued next at the Isle of Margarita, where we tooke a small Spanish ship hauing in her certaine pitch and 30 tuns of Canarie wines whereof we reserued 4 or 5 tunnes to our selues, dismissing them without any further damage. Thence (hauing remained there a day) wee set saile to the Island of Curacao, where we remained a day & a night, & tooke in fresh water, at what time by the inhabitants of that Island (being few of them Spaniards, & the most part Indians) 14 of our men were treacherously hurt, but none slaine. And from thence we departed for the maine land Southwards, to a certain bay, and there we abode 3 daies, but nothing of any reckoning was there atchieued. From thence we arriued at Cape de la Vela, where grewe a contention betweene our Captaine M. Andrew Barker, and his Master Philip Roche, vpon comparisons made betweene them concerning the knowledge of Nauigation, and about other quarels, which quarels afterward were an occasion of further mischiefe. Hence we sailed to the bay of Tulu (which is about 18 leagues Southwestward from Carthagen) where wee tooke a frigate and certaine treasure therein to the value of 500 pound, namely barres of gold, and lingots of siluer, and some quantity of corriento or coyne in rials of plate, and certaine greene stones called Emeraunds, whereof one very great, being set in gold, was found tied secretly about the thigh of a frier. Here hauing stayed three dayes, and now being pursued by Spanish men of warre, wee departed with the sayd treasure, and left the frigate behind vs, all which treasure at that instant was committed to the keeping of our captaine Andrew Barker. From thence we passed to Nombre de dios, and so forth to the mouth of the riuer of Chagre 18 leagues distant from Nombre de dios towards the Northwest. There wee landed 10 of our men, who trauelled by into the woods three or foure daies to seeke the Simerons, (which are certaine valiant Negros fled from their cruel masters the Spaniards, and are become mortall enemies, ready to ioyne with the English and French against them) but in their search they could find none of them. And though our men returned all free from peril of the enemy, yet the most part of the sayd ten persons presently fell sicke, and diuers other of our company: so that within 14 dayes 8 or 9 of our men died of a disease called there the Calentura, which is a hote and vehement feuer. And passing betweene Chagre and Veragua, we tooke a frigate, and some quantity of golde wee found therein. In this frigate were 23 Spaniards whom wee set on shore, and two Flemings, them wee brought into England with vs: wee had therein also foure cast pieces of Ordnance, 3 harquebuzes on crocke, 16 Spanish calliues, and a booke of Nauigation: and in this frigate some of our company came homeward into England. Thus passing forward in our course, we came to Veragua, where captaine Barker, & Philip Roche his Master, fought vpon the foresayd quarel, in which combat the captaine was hurt a little in the checke. Here we sanke our Admirall the Ragged staffe, because of her great leakage, and imbarked part of our company in the Spanish frigate, which immediately before we had surprised. From hence (by the direction of certain Indians) we sailed into the gulf of the Honduras: there we tooke a barke wherein were rials of plate, to the value of 100 pound, Maiz or Indian wheat, hennes, beefe and other small things. In this barke also were certaine Spaniards, whereof one was the Scriuano or secretary of Carthagen, who (being a man of some note) was put to his ranfome, which was payd in gold: the rest were dismissed freely. And after passing by diuers Islands, we arriued at an Island called S. Francisco, being in the mouth of the great bay, called the Honduras. And within two dayes next after our arriuall there, William Coxe and diuers others (which for certaine causes shalbe namelesse) came aboard the ship wherein the captaine then was, and disposed him as well of the sayd ship, as of the treasure in the same, and forthwith put our captaine with violence on shore, where he and one Germane Weiborne fought together, and were both wounded. After this our captaine desirous to come on board, was resisted by the persons aforesayd, who answered him that he should not come on board till they were ready to depart. Our men had appointed ten persons of their company for the keeping of this Island of S. Francisco: but about break of the day, on a certaine morning, firtie Spaniards arriuing secretly in the Island, surprised our people on the sudden, what time there were thirtie of our men on shore: in which surprise, they

they slew our captaine, Mr. Andrew Barker with eight others, namely, one Wilde of Bristol, and Michael our Chirurgian, Richard of Bristol, Thomas Sampool, Thomas Freeman, Thomas Nightingale, Robert Jackson, Walter Newton; and the captaines boy and one other were hurt. Now after that William Coxe, and the rest (which were aboard the barke) perceived that the captaine, & some others were slain, he receiued them that were liuing into the ship, hauing before that time refused some of them. After this misfortune they went to an Island distant from thence a league, where Coxe deuised a chaine of gold (which was found in the captaines chest after his death) amongst the company. After this Coxe went in a pinelle (which wee tooke at the Isle of Sant Francisco) with certaine others of our men in a skiffe, to the towne of Truxillio, in the bay of Honduras, which towne they surprised, and had therein wine and oyle as much as they would, and diuers other good things, but no gold nor silver, nor any other treasure which they would confesse. But before they could returne to their company, those that were in the barke were had in chase by men of warre, whereby they were enforced euery man to shifte for himselfe: so for haste they left those that were in the skiffe (being 8 persons) in the bay of Honduras: what became of them afterward God knoweth. Whereupon we determined to saile for England, and being in the maine sea homeward bound, about 60 leagues from the Isle of S. Francisco, the Frigate wherein was the treasure for the aduenturers, and that which pertained to the captaine to the value of 2000 pound, being ouerset with sayle, with a flaw of wind was ouerthrowen, and all the goods therein perished: therein also were 14 persons drowned, and nine saued, whereof William Coxe and William Gillam were two. After this Philip Roche, Master of the Admirall called the Ragged staffe, died. And thus at length, (by the helpe of God) we arrived in the Isle of Silly neere Cornwall where we left our Frigate which we built new vpon the shoze of the Honduras, hauing in her at our landing ten bottles of oyle, and the foure cast peeces that were in Iohn Oxnam's Frigate (which the yee before was taken in the streit of Dariene) three harquebuzes on crocke, certaine calliues, and certaine treasure: Where William Cox and Andrew Browne deuised the treasure amongst their company, deliuering to some five pound, to some sixe pound, to some seuen pound, to some more, as euery man was thought to haue deserued. The barke and the rest of the Ordinance was left in the Island, to the vse of Andrew Browne. Diuers of our company, vpon our arriual at Plimmouth were committed to prison at the suite of Mr. Iohn Barker of Bristol, brother vnto our captaine Mr. Andrew Barker, as accessaries to our captains death, and betrayers of him vnto the enemy. And after straight examination of many of vs, by letters of direction from her Maiesties priuie Counsell, the chiefe malefactorz were onely chastised with long imprisonment, where indeede before God they had deserued to die: whereof some, although they escaped the rigor of mans law, yet could they not auoide the heauy iudgement of God, but shortly after came to miserable ends. Which may be example to others to shew themselves faithfull and obedient in all honest causes to their captaines and gouernours.

Parefcer de Don Aluaro Baqan, marques de Santa Cruz, tocante la Armada de Francisco Draque, estando en las yslas de Vayona: Hecha en Lisboa a 26 de Octubre, estilo de España de 1585.

LO que parefcer, que podra hazer el Armada Inglesse, en caso que quiere passar a las Indias, y entrar en el mar del Sur, (como lo ha hecho otra vez Francisco Draque) con las treynta y dos naues y galeones, y muchas lanchas y vergantines deremo que trae, y cinco mil hombres de guerra, que es el numero que a los de Vayona parefció que venian en el armada, es lo siguiente.

Leuera su derotta al Rio de Ienero, que es en la costa del Brasil en 23 grados de la parte del Sur de la Linea. Es puerto capaz de muchos nauios y muy seguro, adonde se tiene agua, lena, y carne: y tambien podra tomar harina de Maiz en vn lugar dos o tres leguas del dicho puerto, que se dize San Vincente. Y por ser camino per las yslas de la Madera, Canaria, y Cabo Verde, podra saquear estas yslas, dandole el tiempo lugar a ello.

Desde Vaiona a la ysla de Madera con los vientos Nortes, que aora correran (passados los vientos de Vallee, que aora reynan, por estar la costa de España llouida) yra la Armada en seis dias; de alli a las Canarias en quatro, y de las Canarias a Cabo verde en ocho, que son per todos diez y ocho dias: y tardera mas lo que se tuuiere en saquear las yslas.

De Cabo Verde al rio de Ienero tardera quarenta dias, que vernan a ser todos dos meses: por manera, que estando el Armada todo este mes en Galicia, podra ser en el rio de Ienero en fin de Deziembre.

San Vincente,
Islas de Madera
Canaria, y Cabo
Verde.

Rio de Ienero.

A la

A la entrada de la baia del Rio de Ienero ay vna baxa, adonde con facilidad se hara vn fuerte, en que pueden estar mas que quinientos hombres: y ponendole su artilleria, guardera el puerto, y el fuerte quedara assalado, que por la vna parte del sudueste y nordeste tiene los dos canales, por donde entran los nauios en el puerto: En el qual podra Francisco Draque concertar su Armada, y dexar alli alguna gente, y partir con la que le pareciere, para entrar en el Mar del Sur, y yr en seguimiento de su viaje al Estrecho de Magallanes (que es quinientas y cinquenta leguas de aquel puerto, y esta en cinquenta y dos grados y medio de parte del Sur) y entrar por el Estrecho a la Mar del Sur por todo el mes de Febrero; y yr a la ciudad de los Reys o Lima, que esta en la costa, y es de dos mil vezinos: y por no ser gente de guerra, ni puesta en milicia, y lugar abierto sin fortaleza, ni artilleria, le podra tomar y saquear, y yr se apoderando de la tierra; pues tomando los nauios, que ay en aquella mar, no les podra entrar socorro de Espanna.

Lugar por hazer vn fuerte,

Estrecho de Magallanes.

Mar del Sur,

Lima es ciudad de dos mil vezinos, pero facil a tomar.

Y es de creer que se preuerra a tomar a Panama.

Panama.

No queriendo hazer este viaje, repartira su armada en dos vandas, y saqueare la ysla de San Domingo, Puerto Rico, y la costa de Tierra firma, hasta Cartagena y Nombre de Dios. Y desde el rio de Chagre, que es xv. leguas de Nombre de Dios, podra meter la Infanteria en lanchas de remo, y en las varcas de carga y descarga en a quel rio, que son mas de cinquenta, y llegar hasta la Venta de Cruces, que es cinco leguas de Panama, que, por ser lugar abierto, sera facil a saquear.

La segunda viaje.

San Domingo.

Cartagena.

Rio de Chagre.

Panama lugar abierto y facil a saquear.

La Hauana.

Y tambien corre peligro la Hauana; que aunque tiene fortaleza, es chica y flaca, y sacando artilleria en tierra, la tomara con facilidad.

Y de mas de los dannos que podran hazer, conforme a este discurso, no sera el menor, cortar el hilo a la nauigacion de las Indias, a tomar las flotas, si alli fueren.

Tomar las flotas.

Lo que Conuernia hazer para reparar estos dannos.

Despachar carauelas con grandissima diligencia a los virreys y gouernadores de las Indias, auertiendo les de la Nueva de la Armada Inglesca, para que esten preuenidos, y se pogan en orden. Aunque, segun el numero de las Naues que han salido de Inglatierra, tengo por sin duda, hauran pasado de aquellas partes algunabanda dellas, hasta Tierra nueva. Porque la Reyna a tenido cuidado de embiar y tomar las naos de la Pesqueria del Baccalao: Y assi es de creer sin duda lo de las Indias.

Y teniendo se consideracion a que, por lo que se intiende de Inglatierra, han salido mas de ochenta nauios con los de Armada: Conuernia que su Magestad mandasse iuntar otra para buscar la Inglesca, y combatir con ella, ordinando que los galeones que tiene la corona deste Reino, y los que tiene su Magestad en el Rio de Seuilla se aderescan de yr opposito, dandoles carena, para che estubiesen a punto a qualquier viaje, por largo que fuesse: y que assi mismo se embarce vn galeon del Duque de Florencia, que esta muy bien armado y artillado, y a partido de Alicante para Cadiz, y cumplimiento hasta quarenta naos gruesas, que se hallaran en Viscaia y Guiposcoa: y que adereçadas, artilladas, y puestas en orden, como conuiene, se auitualen por ocho meses, y que desde luego se leuanten hasta mil marineros de Catalunna y Genoa para departir en las naues, y se trayen, como se hizo para la armada de la Terçera: y que assi mismo se leuanten seys mil soldados, dando condutas para mas gente, que esta, para que aya este numero de seruicio.

Quarenta naos gruesas.

Tambien conuernia, que de Viscaia venga para esta Armada 20 patazes, y veynte Azabras de Castro. Que las patazes sean de 50 hasta 60 toneladas: y las Azabras, como las que vinieran a la Iornada de la Terçera.

Que se poruea el artilleria, poluere, y cuerda, y plomo necessario, arcabuzes, mosquetas, y picas de respito para la guardia de la costa.

Conuerne hazer otra armada de dos naos cada 400 toneladas, y otras quatro de a dozientas, y quatro patazes, y mil soldados, de mas de la gente de mar.

Auiendo visto y considerado, que en dos meses han hecho tantos dannos los Ingleses con los nauios de mercantes que nauegan por estos mares, y que es de creer que haran lo mismo en las flotas que fueren y vinieren de las Indias, conuernia, que, como para la ordenança en tiempo de paz, lleua la armada las naos Capitana y Almirante, que lleuassen aora otras dos mas por lo menos en cada flota: y no por esto se ha de dexar de asegurar las con Armada.

Todas estas preuenciones, me parece, se deuen hazer, para solo lo que toca la Armada Inglesca, y otros nauios que han salido de aquel Reyno.

Pero

Pero en caso que Don Antonio Veniese con la Armada, y quise intentarlo de este Reyno, seran menester las preuenciones siguientes.

Que se apercibiesen el conde de Benaute, Marques de Soria, conde de Altamira, conde de Monte Rey, Marques de Cerraluo, y los de mas Sennores y Caualleros, a quien se dio orden que estubiesen a punto, quando se vino a este Reyno.

Que se exercibiese tam bien la gente de las Ciudades de Toro, Zamora, Salamanca, cuidar para socorrer a la parte dentro Doro y Minno. Y las de Estremadura y Seuilla para socorrer esta Ciudad de Lisbona, y su Comarca.

Que se auitallen los castillos desta ciudad, ribera, y comarca, y prouean de polucre, cuerda, y plomo, y lo demas tocante el artilleria, como lo he pedido en las relaciones, que he embiado a su Magestad en 7 de março deste anno 1585. Que se prouean las galeras por quatro meses: y vengan otras seys de Espanna a este Rio con 120 soldados por galera, para que los pueden repartir, en las ocho que estan aca. Y en caso que esto se ay, que la armada Inglesa no passe a las Indias, y se ocupen en lo deste Reyno, porque haure nauios de Ingleses, que acuden a lo vno y a lo otro, sera forçoso hazer otra armada para lo de las Indias, de doze naos, quatro patajes, y mil y quinientos soldados.

Todo esto, me parece, conuiene al seruicio de su Maiestad, se preuenga y apercibiese con mucha diligencia y cuidado, prouiendo del dinero necessario para ello, sin que se aguarde lo vno a lo otro, sino que todo se haga sin desferirlo: Remitiendo me en todo a mejor pareçer. Hecha en Lisboa a 26 de Octubre de 1585. Annos.

The opinion of Don Aluaro Baçan, Marques of Santa Cruz, and high Admirall of Spaine, touching the armie of sir Francis Drake lying at the Isles of Bayona in Galicia, written in Lisbon the 26 of October after the account of Spaine in the yere 1585.

That which it seemeth unto me, that the English army may doe, if they seeke to passe into the West Indies, and enter into the South sea (as Francis Drake hath done once before) with their thirty ships and galeons, and many pinnettes and thalops with oares, which they haue with them, and 5000 men of warre, which they of Bayona thinke to be in the flete, is as followeth.

They may take their course to the riuer of Ienero, which is on the coast of Brasil in 23 degrees to the South of the Equinoctial line. It is an hauien capable of many ships and very safe, where there is water, wood and flesh: and likewise Drake may haue coyne of Maiz in a towne two or three leagues from the sayd hauien, which is called S. Vincente.

And because the course is by the Isles of Madera, the Canaries, and Cape verde, he may sacke those Islands, the time seruing him for that purpose.

From Bayona to the Isle of Madera, with the Northerne winds which now wil begin to blow, when the Westerne winds be past, which presently doe blowe because that it beginneth to raine on the coast of Spaine, the flete may run in 6 daies, and from thence to the Canaries in foure, and from the Canaries to the Isles of Cape Verde in eight, which all together make eightene dayes: and he may stay as much time more as shall serue him to sacke the Islands in.

He may saile from Cape Verde to the riuer of Ienero in 40 dayes, which in the whole amount unto two moneths. So that the flete remaining all this moneth of October on the coast of Galicia, it may come to the riuer of Ienero in the end of December.

At the entry of the bay of the riuer of Ienero there is a flat low Island where a fort may very easily be made, wherein about 500 men may be left: and placing his artillerie therein, he may keepe the hauien, & the fort wil be able to hold out all assault, because that on the South west and North east sides are two chanelis whereby the ships come into the hauien: wherein Francis Drake may repaire his army, and leaue there some people, and depart with so much of the rest as shal seeme good unto him to enter into the South sea, & go on vpon his voyage to the streight of Magelan, which is 550 leagues from the fore said hauien, and standeth in 52 degrees & a halfe toward the South, and may enter by the streight into the South sea all the moneth of February, & so may goe to the citie of Lima, otherwise called the citie de los Reys, which standeth on the sea coast hauing two thousand inhabitants in it. But in respect that they be no warlike people nor exercised in armes, and because the place is open and without fortresse & artillerie, he may take and sacke it, and make himself master on the land, & afterward taking those ships which are in that sea, our people can haue no succour of ships out of Spaine, but by the streight of Magelan, which is a long way about.

It is also very credible that he will be able to take Panama.

If he seeke not to take this course he may deuide his army into two parts, & sacke the Isle of S. Domingo, Puerto Rico, the coast of Tierra firma vnto Cartagena and Nombre de Dios.

And

The damage which may be done by passing by the riuer of Ienero into the South sea.

Madera.

Canaries.
The Isles of
Cape Verde.

The riuer of
Ienero.

A fort may be
built on an
Island in the
mouth of the
riuer of Ienero.

The streight of
Magelan.

The citie of Li-
ma can be
taken, though
it haue 2000
inhabitants.
The ships in
the South sea
may be burnt.
Panama may be
taken.
The second
course which
take the Drake
books.

And from the riuer of Chagre, which is fiftene leagues from Nombre de Dios, he may send his footemen in shalops with oares and in the vessels which carrie goods vp and downe the riuer, whereof there are aboute fittie there, and passe by to the lodging of the Crofles, called in Spanish Venta de Cruzes, which is fve leagues from Panama, which because it is an vnwalled towne may easily be taken.

Panama being an open place is easie to be taken. Havana easie to be taken.

And Hauana also will bee in great danger, which albeit it haue a fortreffe, yet it is but little and weake, and bying his great ordnance on shor he may take the same with great facilitie.

And besides these domages which he may do, according to this discourse, it will not be the least to cut off the nauigation of the Indies, to take the West Indian fleet, if they chance to be there.

The Indian fleet may be taken.

What course is to be taken to preuent these mischiefes.

To dispatch Carauels with all possible diligence to the viceroyes and gouernours of the Indias, aduertising them of the newes of the English army, that they may be provided, and make themselves ready for them. Albeit, considering the number of ships which haue bene set forth out of England, I assure my selfe, that some part of them are gone out of those parts vnto Newfoundland. For the Queene hath taken carefull order to send to intercept the ships of the fishermen that goe to Baecalaos. And it is like wise to be thought that shee hath done the like for the intercepting of the fleet of the Indies.

Sir Barnard Drake took 170 sailes of the Spanish and Portugall shippers returning from Newfoundland, 1585. His intelligence was too true, as since I found in the office of the Admiralty.

And considering that according to our intelligence out of England, aboute fourescore shippes, and the army of Drake haue bene set forth from thence, it is meete that his maiestie should prepare another army to seeke the English fleet, and to fight with it, commanding that the Galeons which belong to the crowne of Portugall, and those of his maiestie which lye in the riuer of Siuill be prepared to send against them, and to giue them the Carena, that they may bee in a readinesse for any voyage howe long soeuer it bee: And like wise to arrest a Galeon of the Duke of Florence, which is very well armed and furnished with great ordnance, and passed lately from Alicante toward Cadiz, and to make by the number of fortie great shippes, which are to be had in Biscay and Guipuscoa: and that being rigged, armed and set in good order, they bee victualled for eight moneths, and that forthwith there bee leuied a thousand mariners of Catalunna and Genoa to bee diuided among the Fleet, and bee conducted, as they were for the Fleet of Terçera: furthermore that sixe thousande souldiers bee leuied, giuing commaundement to presse a greater number, to the ende that these may bee able men for seruice.

Fortie great ships to be provided.

1583. Terçera was won by the Marques of Santa Cruz.

Moreouer it is needfull for this armie that 20 pataches be brought from Biscay, and 20. Azabras from Castro. That the pataches bee from 50. to 60. tunnes: and that the Azabras bee like those which were in the expedition to Terçera.

That sufficient provision be made of artillerie, powder, match, and lead, and harquebuzes, muskets, and chosen pikers for the keeping of the coast.

It is also meete to provide another army of two ships of 400. tunnes apiece, and other foure of 200. tunnes, and foure pataches and a thousand souldiers, besides mariners.

Another army of ten sailes.

Having seene and considered that the Englishmen with their marchants ships onely that trauele these seas haue made such haucke in two moneths, and that it is to bee thought that they will doe the like against the fleetes which goe and come from the Indies: it is expedient, that as by order in time of peace the fleet hath an Admirall and Viceadmirall, that now it should haue two more at the least in eche Fleet: and neuertheless they are to bee wasted home with an armie.

The Indian fleet to be strengthened with 4. ships of warre.

In mine opinion all these provisions ought to bee made onely in regard of the English army, and the rest of the ships which haue bene set out of that kingdome.

But in case that Don Antonio should come with an armie, and should seeke to inuade this kingdome, these provisions following would be needefull.

That warning be giuen to the Conde de Beneuena, to the Marques de Soria, to the Conde of Altamira, to the Conde of Monterey, to the Marquesse of Zerraluo, and to the rest of the Lordes and Knights, which are to haue order to bee in a readinesse, against hee come vnto this kingdome.

What provision is to be made if Don Antonio should come with an army.

That the people also be trained of the cities of Toro, Zamora, and Salamanca, to bee ready to succour the countrey betweene the riuers of Doro and Minno: and the people of Extremadura

and Siuilla are likewise to bee trained to be ready to succour the citie of Lisbon, and the countrey about the same.

Also that the castles of this citie, riuer and territorie be victualled and prouided of gunpowder, match and lead, and all things else belonging to the artillerie, as I haue requested in the relations which I sent vnto his maiestie the 7. of March of this present yeere 1585.

An armie of
14. gallies to
be prouided.

That the gallies be furnished for foure moneths: and that sixe more bee brought from Spaine to this riuer of Lisbon with an hundred and twentie souldiers for ech gallie, that they may be de- uided among the eight gallies which remaine here.

Another armie
of 12. great
ships, 4. para-
chies, and 1500
souldiers.

And in case it fall out that the armie of the English goe not for the Indies, but occupie them- selues vpon this kingdome, (for there may be English ships, which may attend the one ant the o- ther) we shal be enforced to make another armie, besides that for the Indies, of twelue ships, foure pataches, and a thousand five hundred souldiers.

In mine opiaion all this is meet for his maiesties seruice to be forescene to be made ready with great diligence and care, and to prouide money needfull for the same, without neglecting the one or the other, but that all these things be done without delay: Referring my selfe in all things to those of wiser iudgement. Written in Lisbon the 26 of October, 1585.

A summarie and true discourse of *sir Francis Drakes* West Indian voyage, begun in the yeere 1585. Wherein were taken the cities of *Saine Iago, Santo Domingo, Cartagena*, and the towne of *Saint Augustine* in *Florida*; Publi- shed by *M. Thomas Cates*.

His worthy knight for the seruice of his Prince and countrey hauing prepared his whole flecte, and gotten them downe to Plimmouth in Deuonshire, to the number of five and twenty saile of ships and pinnelles, and hauing assembled of souldiers and mariners, to the number of 2300. in the whole, embarked them and himselfe at Plimmouth aforesaid, the 12. day of September 1585. being ac- companied with these men of name and charge, which hereafter follow:

Master Christopher Carleil Lieutenant general, a man of long experience in the warres as well by sea as land, who had formerly caried high offices in both kindes in many fights, which he dis- charged alwaies very happily, and with great good reputation.

Anthonie Powel Sergeant Maior.

Captaine Matthew Morgan, and Captaine Iohn Sampson, Corporals of the field.

These officers had commandement ouer the rest of the land-Captaines, whose names hereaf- ter follow.

Captaine Anthony Plat.
Captaine Edward Winter.
Captaine Iohn Goring.
Captaine Robert Pew.
Captaine George Barton.

Captaine Iohn Merchant.
Captaine William Cecill.
Captaine Walter Bigs.
Captaine Iohn Hannam.
Captaine Richard Stanton.

Captaine Martine Frobisher Viceadmirall, a man of great experience in sea-faring actions, who had caried the chiefe charge of many ships himselfe, in sundry voyages befoze, being now ship- ped in the *Primrose*.

Captaine Francis Knolles, Reereadmirall in the Galeon *Leicester*.

Master Thomas Vennor Captaine in the *Elizabeth Bonadventure* vnder the Generall.

Master Edward Winter Captaine in the *Aide*.

Master Christopher Carleil the Lieutenant general, Captaine of the *Tygar*.

Henry White Captaine of the *Sea Dragon*.

Thomas Drake Captaine of the *Thomas*.

Thomas Seelie Captaine of the *Minion*.

Bailly Captaine of the *Barke Talbot*.

Robert Crosse Captaine of the *Bark Bond*.

George Fortescue Captaine of the

Barke Bonner.

Edward Carelesse Captaine of the *Hope*.

Iames Erizo Captaine of the *White Lyon*.

Thomas Moone Captaine of the *Francis*.
Iohn Riuers Captaine of the *Vantage*.
Iohn Vaughan Captaine of the *Drake*.
Iohn Varney Captaine of the *George*.
Iohn Martin Captaine of the *Beniamin*.
Edward Gilman Captaine of the *Skout*.
Richard Hawkins Captaine of the *Galiot*
called the *Ducke*.
Birchfield Captaine of the *Swallow*.

After

After our going hence, which was the foureteenth of September, in the yeere of our Lord 1585, and taking our course towards Spaine, wee had the winde for a fewedayes somewhat skant, and sometimes calme. And being arriued neere that part of Spaine, which is called the Moores, wee happened to espie diuers sailes, which kept their course close by the shore, the weather being faire and calme. The Generall caused the Viceadmirall to goe with the pinnelles well manned to see what they were, who vpon sight of the said pinnelles approaching neere vnto them, abandoned for the most part all their ships (being Frenchmen) laden all with salt, and bound homewards into France, amongst which ships (being all of small burthen) there was one so wel liked, which also had no man in her, as being brought vnto the generall, he thought good to make stay of her for the seruice, meaning to pay for her, as also accordingly he performed at our returne: which barke was called the Drake. The rest of these ships (being eight or nine) were dismissed without any any thing at all taken from them. Who being afterwarde put somewhat farther off from the shore, by the contrariety of the wind, we happened to meet with some other French ships, full laden with Newland fish, being vpon their returne homeward from the said Newfoundland: whom the Generall after some speech had with them (and seeing plainly that they were Frenchmen) dismissed, without once suffering any man to go aboard of them.

The day following standing in with the shore againe, we discied another tall ship of twelue score runnes or thereabouts, vpon whom Master Carleil the Lieutenant generall being in the Tygar, vnderooke the chase, whom also anon after the Admirall followed, and the Tygar hauing caused the said strange ship to strike her sailes, kept her there without suffering any body to go aboard vntill the Admirall was come by: who forthwith sending for the Master, and diuers others of their principall men, and causing them to be seuerally examined, found the ship and goods to be belonging to the inhabitants of S. Sebastian in Spaine, but the mariners to bee for the most part belonging to S. Iohn de Luz, and the Passage. In this ship was a great store of dry Newland fish, commonly called with vs Poore Iohn, wherof afterwarde (being thus found a lawfull prize) there was distribution made into all the ships of the fleet, the same being so new and good, as it did very greatly bestead vs in the whole course of our voyage. A day or two after the taking of this ship, we put in within the Isles of Bayon, for lacke of fauourable wind: where wee had no sooner ankered some part of the fleet, but the Generall commanded all the pinnelles with the shipboats to be manned, and euery man to be furnished with such armes as were needful for that present seruice; which being done, the Generall put himselfe into his gallie, which was also well furnished, and rowing towards the city of Bayon, with intent, and the fauour of the Almighty to surprize it, before we had advanced one halfe league of our way, there came a messenger being an English merchant from the Gouvernour, to see what strange fleet we were, who came to our General, conferred a while with him, and after a small time spent, our Generall called for Captaine Sampson, and willed him to go to the Gouvernour of the citie, to resolue him of two points. The first, to know if there were any warres betweene Spaine and England. The second, why our marchants with their goods were embarged or arrested. Thus departed captaine Sampson with the said messenger to the citie, where he found the gouernour & people much amazed of such a sudden accident.

The Isles of Bayona.

The Generall with the aduise and counsell of M. Carleil his Lieutenant generall, who was in the galley with him, thought not good to make any stand, till such time as they were within the shot of the citie, where they might bee ready vpon the returne of Captaine Sampson, to make a sudden attempt if cause did require before it were darke.

Captaine Sampson returned with his message in this sort, First, touching peace or warres the Gouvernour said he knew of no warres, and that it lay not in him to make any, hee being so meane a subject as he was. And as for the stay of the marchants with their goods, it was the kings pleasure, but not with intent to endamage any man. And that the kings counter-commandement was (which had bene receiued in that place some seuen night before) that English marchants with their goods should be discharged: for the moze verifing wherof, he sent such merchants as were in the towne of our nation, who traffiqued those parts: which being at large declared to our General by them, counsell was taken what might best be done. And for that the night approached, it was thought needful to land our forces, which was done in the shutting vp of the day, & hauing quartered our selues to our most aduantage, with sufficient gard vpon euery strait, we thought to rest our selues for that night there. The Gouvernour sent vs some refreshing, as bread, wine, oyle, apples, grapes, marmalad and such like. About midnight the weather beganne to altercast, insomuch that it was thought meeter to repaire aboard, then to make any longer abode on land, and before wee could recouer the Fleet, a great tempest arofe, which caused many of our shippes to driue from their anker-hold, and some were forced to sea in great perill, as the barke Talbot, the barke

Hawkins, and the Speedewell, which Speedewell was onely driuen into England, the others recovered vs againe: the extremitie of the storme lasted three dayes, which no sooner began to assuage, but M. Carleil our Lieutenant generall was sent with his owne shippe and three others: as also with the gallie and with diuers pinnesses, to see what he might doe aboute Vigo, where hee tooke many boates and some carauels, diuersly laden with things of small value, but chiefly with household stuffe, running into the high countrey, and amongst the rest, he found one boat laden with the principal church-stuffe of the high Church of Vigo, where also was their great crosse of silver, of very faire embossed worke, and double gilt all ouer, hauing cost them a great masse of money. They complained to haue lost in all kind of goods about thirty thousand duckets in this place.

The next day the Generall with his whole flecte went from by the Isles of Bayon, to a very good harbour aboute Vigo, where M. Carleil stayed his comming, as well for the more quiet riding of his ships, as also for the good commoditie of fresh watering, which the place there did afford full well. In the meane time the Gouvernour of Galicia had reared such forces as hee might, his numbers by estimate were some two thousand foot, and three hundred horse, and marched from Bayon to this part of the countrey, which lay in sight of our flecte, where making a stand, he sent to parley with our Generall, which was granted by our Generall, so it might bee in boats vpon the water: and for safetie of their persons, there were pledges deliuered on both sides: which done, the Gouvernour of Galicia put himselfe with two others into our Viceadmirals skiffe, the same hauing bene sent to the shore for him, and in like sort our Generall went in his owne skiffe; where by them it was agreed, we should furnish our selues with fresh water, to be taken by our owne people quietly on the land, and haue all other such necessaries, paying for the same, as the place would afford.

When all our businesse was ended, wee departed, and tooke our way by the Islands of Canaria, which are esteemed some three hundred leagues from this part of Spaine, and sailing purposefully with Palma, with intention to haue taken our pleasure of that place, for the full digesting of many things into order, and the better furnishing our store with such seuerall good things as it affourderh very abundantly, we were forced by the vile Sea-gate, which at that present fell out, and by the naughtinesse of the landing place, being but one, and that vnder the fauour of many platformes well furnished with great ordinance, to depart with the receit of many their Canon-shot, some into our ships, and some besides, some of them being in very deepe full Canon high. But the only or chiefe mischiese was the dangerous sea-surge, which at shore all along plainly threatened the ouerthrow of as many pinnesses and boates, as for that time should haue attempted any landing at all.

Now seeing the expectation of this attempt frustrated by the causes aforesaid, we thought it meete to sail with the Isle Hierro, to see if we could find any better fortune: and comming to the Island, we landed a thousand men in a balley vnder a high mountaine, where we stayed some two or three houres, in which time the inhabitants, accompanied with a yong fellow bozne in England, who dwelt there with them, came vnto vs, shewing their state to be so poore, that they were all ready to starue, which was not but true: and therefore without any thing gotten, we were all commanded presently to imbarke, so as that night wee put off to sea Southsoutheast along towards the coast of Barbary.

Upon Saturday in the morning, being the 13. of December, we fell with Cape Blanke, which is a low land and shallow water, where we caught store of fish, and doubling the Cape, we put into the Bay, where we found certaine French ships of warre, whom wee entertained with great courtesie, and there left them. This afternoone the whole flect assembled, which was a little scattered about their fishing, and put from thence to the Isles of Cape Verde, sailing till the 16. of the same moneth in the morning, on which day we descried the Island of S. Iago, and in the evening we ankered the flect between the towne called the Playa or Praya, and S. Iago, where we put on shore 1000. men or more, vnder the leading of M. Christopher Carleil Lieutenant generall, who directed the seruice most like a wise commander. The place where we had first to march did afford no good order, for the ground was mountainous & full of dales, being a very stony and troublesome passage; but such was his industrious disposition, as he would neuer leaue, untill wee had gottē vp to a faire plain, where we made stand for the assembling of the army. And when we were all gathered together vpon the plaine, some 2 miles from the town, the lieutenant generall thought good not to make attēpt till daylight: because there was not one that could serue for guid or giuing knowledge at al of the place. And therfore after hauing wel rested, euen halfe an houre before day, he commanded the army to be diuided into 3 speciall parts, such as he appointed, whereas before we had marched by seuerall companies, being therunto forced by the badnesse of the way as is aforesaid.

Now

Now by the time wee were thus ranged into a very braue order, daylight began to appeare, and being aduanced hard to the wall, we saw noemie to resist, whereupon the Lieutenant generall appointed Captaine Sampson with thirtie shot, and Captaine Barton with other thirtie, to goe downe into the towne which stood in the valley vnder vs, and might very plainly bee viewed all ouer from that place where the whole Army was now arriued: and presently after these Captaines was sent the great ensigne, which had nothing in it but the plaine English crosse, to be placed towards the Sea, that our flect might see Saint Georges crosse flourish in the enemies fortresse. Order was giuen that all the ordnance throughout the towne and vpon all the platformes, which were about fiftie pieces all ready charged, should be shot off in honour of the Queenes Maiesties coronation day, being the seuenteenth of Nouember, after the peerely custome of England, which was so answered againe by the ordnance out of all the ships in the flecte which now was come neere, as it was strange to heare such a thundering noyse last so long together. In this meane while the Lieutenant generall held still the most part of his force on the hill top, till such time as the towne was quartered out for the lodging of the whole Armie: which being done euery captaine tooke his owne quarter, and in the euening was placed such a sufficient guard vpon euery part of the towne that we had no cause to feare any presentemie.

Thus we continued in the citie the space of 14. dayes, taking such spoiles as the place yeelded, which were for the most part, wine, oyle, meale, and some such like things for victuall, as vineger, olives, and some such other trash, as merchandise for their Indians trades. But there was not found any treasure at all, or any thing else of worth besides.

The citie of S. Iago taken and possessed for 14. dayes.

The situation of S. Iago is somewhat strange, in forme like a triangle, hauing on the East and West sides two mountaines of rocke and cliffe, as it were hanging ouer it, vpon the top of which two mountaines were builded certaine fortifications to preserve the towne from any harne that might bee offered, as in a plot is plainly shewed. From thence, on the South side of the towne is the maine sea, and on the North side, the valley lying betweene the foresayd mountaines, where in the towne standeth: the said valley & towne both do grow very narrow, insomuch that the space betweene the two cliffes of this end of the towne is estimated not to be about 10. or 12. score ouer.

In the midst of the valley commeth downe a riueret, rill, or brooke of fresh water, which hard by the sea side maketh a pond or poole, whereout our ships were watered with very great ease and pleasure. Somewhat about the towne on the North side betweene the two mountaines, the valley wareth somewhat larger then at the townes end, which valley is wholly conuerted into gardens and orchards well replenished with diuers sorts of fruites, herbes and trees, as lymmons, oranges, sugar-canes, rochers or cochos nuts, plantans, potato-roots, cucumbers, small and round onions, garlick, and some other things not now remembred, amongst which the cochos nuts, and plantans are very pleasant fruites, the saide cochos hath a hard shell and a greene huske ouer it, as hath our walnut, but it farre exceedeth in greatnesse, for this cochos in his greene huske is bigger then any mans two fistes: of the hard shell many drinking cups are made here in England, and set in silver as I haue often seene.

Next within this hard shell is a white rine resembling in thewe very much euen as any thing may do, to the white of an egge when it is hard boyled. And within this white of the nut lyeth a water, which is whitish and very cleere, to the quantitie of halfe a pynt or thereaboutes, which water and white rine before spoken of, are both of a very coole fresh taste, and as pleasing as any thing may be. I haue heard some hold opinion, that it is very restozatiue.

The plantan groweth in cods, somewhat like to beanes, but is bigger and longer, and much more thicke together on the stalk, and when it wareth ripe, the meate which filleth the rine of the cod becommeth yellow, and is exceeding sweet and pleasant.

In this time of our being there hapned to come a Portugall to the Westerne fort, with a flag of cruce, to whom Captaine Sampson was sent with Captaine Goring, who comming to the said messenger, he first asked them what nation they were, they answered Englishmen, hee then required to knowe if warres were betweene England and Spaine, to which they answered that they knew not, but if he would goe to their Generall he could best resolue him of such particulars, and for his assurance of passage and repassage, these Captaines made offer to ingage their credits, which he refused for that he was not sent from his Gouvernor. Then they told him, if his Gouvernor did desire to take a course for the common benefit of the people and countrey, his best way were to come and present himselfe vnto our noble and mercifull Gouverneur Sir Francis Drake, whereby hee might bee assured to find fauour, both for himselfe and the inhabitantes. Otherwise within three dayes wee should march ouer the land, and consume with fire all inhabited places, and put to the sword all such liuing soules as wee should chance vpon: so thus much hee tooke for the

the conclusion of his answer, and departing, hee promised to retorne the next day, but we neuer heard moze of him.

Upon the foure and twentieth of Nouember, the Generall accompanied with the lieutenant generall and sixe hundred men marched forth to a village twelue miles within the land, called Saint Domingo, where the Gouvernour and the Bishoppe with all the better sort were lodged, and by eight of the clocke wee came to it, finding the place abandoned, and the people fled into the mountaines: so we made stand a while to ease our selues, and partly to see if any would come to speake to vs.

After we had well rested our selues, the Generall commaunded the troupes to march away homewards, in which retreat the enemy shewed themselves, both horse and foote, though not such force as durst encounter vs: and so in passing sometime at the gale with them, it wared late and towards night before we could recouer home to S. Iago.

On Sunday the sixe and twentieth of Nouember, the Generall commaunded all the pinnesses with the boates, to vse all diligence to imbarke the Armie into such shippes as euery man belonged. The Lieutenant generall in like sort commaunded Captaine Goring and Lieutenant Tucker, with one hundred shot to make a stand in the market place, vntill our forces were wholly imbarked, the viceadmiral making stay with his pinnesse & certaine boats in the harbour, to bring the sayd last companie aboard the ships. Also the Generall willed forthwith the gallie with two pinnesses to take into them the company of Captaine Barton, and the company of Captaine Bigs, vnder the leading of captaine Sampson, to seeke out such munition as was hidden in the ground, at the towne of Praya or Playa, hauing bene promised to be shewed it by a prisoner, which was taken the day before.

The Captaines aforesayd comming to the Playa, landed their men, and hauing placed the troupe in their best strength, Captaine Sampson tooke the prisoner, and willed him to shewe that hee had promised, the which he could not, or at least would not: but they searching all suspected places, found two pieces of ordinance, one of yron, an other of brasse. In the after noone the Generall ankered with the rest of the fleet before the Playa, commaunding himselfe ashore, willing vs to burne the towne and make all haste aboard, the which was done by sixe of the clocke the same day, and our selues imbarked againe the same night, and so we put off to Sea South west.

But before our departure from the towne of S. Iago, wee established orders for the better gouernment of the Army, euery man mustered to his captaine, and others were ministrd to acknowledge her Maestie supreme Gouvernour, as also euery man to doe his uttermost endeour to aduance the seruice of the action, and to yeeld due obedience vnto the directions of the Generall and his officers. By this prouident counsell, and laying downe this good foundation before hand, all things went forward in a due course, to the achieuing of our happy enterprize.

In all the time of our being here, neither the Gouvernour for the king of Spaine, (which is a Portugall) neither the Bishop, whose authoritie is great, neither the inhabitants of the towne, or Island euer came at vs (which we expected they should haue done) to intreate vs to leaue them some part of their needfull prouisions, or at the least, to spare the ruining of their towne at our going away. The cause of this their vnrasonable distrust (as I doe take it) was the fresh remembrance of the great wrongs they had done to old M. William Hawkins of Plimmouth, in the voyage he made 4. or 5. yeres before. When as they did both breake their promise, and murdered many of his men, whereof I iudge you haue vnderstood, & therefore it is needlesse to be repeated. But since they came not at vs, we left written in sundry places, as also in the spittle house, (which building was only appointed to be spared) the great discontentment & scorne we tooke at this their refraining to come vnto vs, as also at the rude manner of killing, & sauage kind of handling the dead body of one of our boyes found by them stragling al alone, from whom they had taken his head and heart, and had stragled the other bowels about the place, in a most brutish and beastly manner.

In reuenge whereof at our departing we consumed with fire all the houses, as well in the cottetrey which we saw, as in the towne of S. Iago.

From hence putting off to the West Indies, wee were not many dayes at Sea, but there beganne among our people such mortalitie, as in fewe dayes there were dead about two or three hundred men. And vntill some seuen or eight dayes after our comming from S. Iago, there had not died any one man of sicknesse in all the fleete: the sicknesse shewed not his infection wherewith so many were stricken, vntill we were departed thence, and then seized our people with extreme hot burning and continuall agues, whereof very fewe escaped with life, and yet those for the most part not without great alteration and decay of their wittes and strength for a long time after. In some that died were plainly shewed the small spots, which are often found

36 wise course
to be imitated
in all great
actions.

The treason of
the Portugals
against M. Willi-
am Hawkins.

upon

upon those that be infected with the plague: wee were not above eightene dayes in passage betwene the sight of Saint Iago aforesaid, and the Island of Dominica, being the first Island of the West Indies that we fell withall, the same being inhabited with sauage people, which goe all naked, their skinnie coloured with some painting of a reddish tawney, very personable and handsome strong men, who doe admit little conuersation with the Spanyards: for as some of our people might vnderstand them, they had a Spaniard or twaine prisoners with them, neither doe I thinke that there is any safetie for any of our nation, or any other to be within the limits of their commandement, albeit they vsed vs very kindly for those few houres of time which wee spent with them, helping our folkes to fill and cary on their bare shoulders fresh water from the riuer to our ships boates, and fetching from their houses great store of Tabacco, as also a kind of bread which they fed on, called Cassau, very white and sauourie, made of the rootes of Cassau. In recompence whereof, we bestowed liberall rewards of glasse, coloured beades, and other things, which we had found at Saint Iago, wherewith (as it seemed) they rested very greatly satisfied, and shewed some sorrowfull countenance when they perceiued that we would depart.

From hence wee went to another Island Westward of it, called Saint Christophers Island, wherein we spent some dayes of Christmas, to refresh our sicke people, and to cleanse and ayre our ships. In which Island were not any people at all that we could heare of.

In which time by the General it was aduised and resolved, with the consent of the Lieutenant generall, the Vice-admirall, and all the rest of the Captaines to proceede to the great Islande of Hispaniola, as well for that we knewe our selues then to bee in our best strength, as also the rather allured thereunto, by the glorious fame of the citie of S. Domingo, being the ancientest and chiefe inhabited place in all the tract of Countrey thereabouts. And so proceeding in this determination, by the way we mette a small Frigate, bound for the same place, the which the Vice-admirall tooke: and hauing duely examined the men that were in her, there was one found, by whom wee were aduertised, the Hauen to be a barred Hauen, and the shore or land thereof to be well fortified, hauing a Castle thereupon furnished with great store of Artillerie, without the danger whereof was no conuenient landing place within ten English miles of the Citie, to which the sayd Pilot tooke vpon him to conduct vs.

All things being thus considered on, the whole forces were commaunded in the Euening to embarke themselves in Pinnesles, boats, and other small barkes appoynted for this seruice. Our souldiers being thus imbarked, the Generall put himselfe into the barke Francis as Admirall, and all this night we lay on the sea, bearing small saile vntill our arrivall to the landing place, which was about the breaking of the day, and so we landed, being Newyeeres day, nine or ten miles to the Westwards of that braue Citie of S. Domingo: for at that time nor yet is knowne to vs any landing place, where the sea-surge doth not threaten to ouerset a Pinnesle or boate. Our Generall hauing seene vs all landed in safetie, returned to his Fleete, bequeathing vs to God, and the good conduct of Master Carliell our Lieutenant Generall: at which time, being about eight of the clocke, we began to march, and about noone time, or towards one of the clocke, we approached the towne, where the Gentlemen and those of the better sort, being some hundred and fiftie braue horses or rather more, began to present themselves; but our small shot played vpon them, which were so lusted with good proportion of pikes in all parts, as they finding no part of our troope vnprepared to receiue them (for you must vnderstand they viewed all round about) they were thus driuen to giue vs leaue to proceed towards the two gates of the towne, which were the next to the seaward. They had manned them both, and planted their ordinance for that present, and sudden alarme without the gate, and also some troopes of small shot in Ambuscado vpon the hie way side. We diuided our whole force, being some thousand or twelue hundred men into two partes, to enterprise both the gates at one instant, the Lieutenant Generall hauing openly vowed to Captaine Powel (who led the troope that entred the other gate) that with Gods good fauour he would not rest vntill our meeting in the market place.

Their ordinance had no sooner discharged vpon our neere approach, and made some execution amongst vs, though not much, but the Lieutenant generall began forthwith to aduance both his voyce of encouragement, and pace of marching; the first man that was slaine with the ordinance being very neere vnto himselfe: and thereupon hastened all that hee might, to keepe them from the recharging of the ordinance. And notwithstanding their Ambuscados, we marched or rather ran so roundly in to them, as pell mell wee entred the gates, and gaue them more care euery man to saue himselfe by flight, then reason to stand any longer to their broken fight. We forthwith repayed to the market place: but to be more truly vnderstood, a place of very faire spacious square ground, whither also came as had bene agreed Captaine Powel with the other troope: which place

The citie of
S. Domingo taken.

place with some part next vnto it, we strengthened with Barricados, and there as the most conuenient place assured our selues, the Citie being farre too spacious for so small and weary a troope to vnder take to guard. Somewhat after midnight, they who had the guard of the Castle, hearing vs busie about the gates of the said Castle, abandoned the same: some being taken prisoners, and some fleeing away by the helpe of boates to the other side of the Hauen, and so into the countrey.

The next day we quartered a litle more at large, but not into the halfe part of the towne, and so making substantiall trenches, and planting all the ordinance, that ech part was correspondenc to other, we held this towne the space of one moneth.

In the which time happened some accidents, more then are well remembred for the present, but amongst other things, it chanced that the Generall sent on his message to the Spaniards a Negro boy with a flagge of white, signifying truce, as is the Spaniards ordinarie maner to doe there, when they approach to speake to vs: which boy unhappily was first mette withall by some of those, who had bene belonging as officers for the King in the Spanish Galley, which with the towne was lately fallen into our hands, who without all order or reason, & contrary to that good vsage wherewith wee had intertaind their messengers, furiously strooke the pooze boy thorow the body with one of their hozlemens stauers: with which wound the boy returned to the General, and after hee had declared the maner of this wzongfull crueltie, died forthwith in his presence, wherewith the Generall being greatly passioned, commaunded the Prouost Partiall, to cause a couple of Friers then prisoners, to be caried to the same place where the boy was stroken, accompanied with sufficient guard of our souldiers, and there presently to be hanged, dispatching at the same instant another pooze prisoner, with this reason wherefore this execution was done, & with this message further, that vntill the party who had thus murdered the Generals messenger were deliuered into our hands, to receiue condigne punishment, there should no day passe, wherein there should not two prisoners be hanged, vntill they were all consumed which were in our hands.

Whereupon the day following, hee that had bene Captaine of the kings Galley, brought the offender to the townes ende, offering to deliuer him into our hands; but it was thought to be a more honourable reuenge to make them there in our sight, to performe the execution themselves: which was done accordingly.

During our being in this towne, as formerly also at S. Iago there had passed iustice vpon the life of one of our owne company for an odious matter, so heere likewise was there an Irishman hanged, for the murdering of his Corpozall.

In this time also passed many treaties betweene their Commissioners and vs, for ransome of their Citie: but vpon disagreements we still spent the early mornings in sitering the outmost houses: but they being built very magnificently of stone, with high loftes, gaue vs no small trauell to ruine them. And albeit for diuers dayes together we ordeined ech morning by day breake, vntill the heat began at nine of the clocke, that two hundred Partiers did nought els. but labour to fire and burne the said houses without our trenches, whilst the souldiers in a like proportion stood forth for their guard: yet did wee not, or could not in this time consume so much as one third part of the towne: which towne is plainly described and set forth in a certaine Map. And so in the end, what wearied with firing, and what hastened by some other respects, wee were contented to accept of five and twentie thousand Ducats of five shillings six pence the peece, for the ransome of the rest of the towne.

Spott insatiable
the Spanish
ambition.

Amongst other things which happened and were found at S. Domingo, I may not omit to let the world know one very notable marke & token of the insatiable ambition of the Spanish king and his nation, which was found in the kings house, wherein the chiefe gouernour of that Citie and Countrey is appoynted alwayes to lodge, which was this: In the comming to the Hall or other roomes of this house, you must first ascend by by a faire large paire of staires; at the head of which staires is a handsome spacious place to walke in, somewhat like vnto a gallery: wherein vpon one of the wals, right ouer against you as you enter the said place, so as your eye cannot escape the sight of it, there is described & painted in a very large Scutchion the armes of the king of Spaine, and in the lower part of the said Scutchion, there is likewise described a Globe, containing in it the whole circuit of the sea and the earth, whereupon is a horse standing on his hinder part within the globe, and the other fore-part without the globe, lifted vp as it were to leape, with a scroll painted in his mouth, wherein was writtten these words in Latin, Non sufficit orbis: which is as much to say, as the world sufficeth not. Whereof the meaning was required to be knowen of some of those of the better sort, that came in commission to treat vpon the ransome of the towne, who would shake their heads, and turne aside their countenance in some smyling sort, without answering any thing, as greatly ashamed thereof. For by some of our company it was tolde them, that if

the

the Queene of England would resolutely prosecute the warres against the king of Spaine, hee should be forced to lay aside that proude and vnrasonable reaching vaine of his: for hee should finde more then enough to doe to keepe that which hee had already, as by the present example of their lost towne they might for a beginning perceiue well enough.

Now to the satisfiing of some men, who maruell greatly that such a famous and goodly builded Citie so well inhabited of gallant people, very braue in their apparell (whereof our souldiers found good store for their reliefe) should alsoo no greater riches then was found there: herein it is to be understood that the Indian people, which were the naturals of this whole Island of Hispaniola (the same being neere hand as great as England) were many yeeres since cleane consumed by the tyrannie of the Spaniards, which was y^e cause, that for lacke of people to worke in the Mines, the golde and siluer Mines of this Island are wholly giuen ouer, and thereby they are faine in this Island to vse Copper money, whereof was found very great quantitie. The chiefe trade of this place consisteth of Sugar and Ginger, which groweth in the Island, and of Hides of oxen and kine, which in this waste countrey of the Island are bredde in infinite numbers; the soyle being very fertile: and the sayd beasts are fedde vpon a very large growth, and so killed for nothing so much, as for their Hides aforesayd. Wee found heere great store of strong wine, sweete oyle, vineger, oliues, and other such like prouisions, as excellent Wheate-meale packed vp in wine-pipes and other caskes, and other commodities likewise, as Woollen and Linnen cloth, and some Silkes: all which prouisions are brought out of Spaine, and serued vs for great reliefe. There was but a little Plate or vessell of Siluer, in comparison of the great pride in other things of this towne, because in these hotte Countreys they vse much of those earthen dishes finely painted or varnished, which they call Porcellana, which is had out of the East India: & for their drinking, they vse glasses altogether, whereof they make excellent good and faire in the same place. But yet some plate we found, and many other good things, as their household garniture very gallant and rich, which had cost them deare, although vnto vs they were of small importance.

From Saint Domingo we put ouer to the maine or firme land, and going all alongst the coast, we came at the last in sight of Cartagena, standing vpon the sea side, so neere, as some of our barks in passing alongst, approached within the reach of their Culuerin shot, which they had planted vpon certaine platfomes. The Harbour mouth lay some three miles toward the Westward of the towne, whereinto wee entred about three or foure of the clocke in the afternoone without any resistance of ordinance, or other impeachment planted vpon the same. In the Euening wee put our selues on land towards the harbour mouth, vnder the leading of Master Carliell our Lieutenant Generall, who after hee had digested vs to march forwarde about midnight, as easily as foote might fall, expelly commanded vs to keepe close by the sea-wall of the shore for our best & surest way, whereby we were like to goe through, and not to misse any more of the way, which once wee had lost within an houre after our first beginning to march, through the slender knowledge of him that tooke vpon him to be our guide, whereby the night spent on, which otherwise must haue bene done by resting. But as we came within some two miles of the towne, their horsemen which were some hundred, met vs, and taking the alarme, retired to their townward againe vpon the first volley of our shot that was giuen them: for the place where wee encountered being wooddy and bushy euen to the water side was vnnieete for their seruice.

At this instant we might heare some pteces of Artillerie discharged, with diuers small shot towards the harbour, which gaue vs to vnderstand, according to the order set downe in the Euening before by our Generall, that the Vice-admirall accompanied with Captaine Venner, Captaine White, and Captaine Crosse, with other sea Captaines, and with diuers Minnells and boates should giue some attempt vnto the litle Fort standing on the entrie of the inner Hauen, neere adioyning to the towne, though to small purpose, for that the place was strong, and the entry very narrow was chained ouer: so as there could be nothing gotten by the attempt, more then the giuing of them an alarme on that other side of the Hauen being a mile and a halfe from the place we now were at. In which attempt the Vice-admirall had the rudder of his skiffe stroken through with a Saker shot, and a litle or no harme receiued elsewhere.

The troopes being now in their march, halfe a myle behither the Towne or lesse, the ground we were on grewe to bee streight, and not aboue fiftie paces ouer, hauing the maine Sea on the one side of it, and the harbour-water or inner sea (as you may tearme it) on the other side, which in the plot is plainly shewed. This streight was fortified cleane ouer with a stone wall and a ditch without it: the sayd wall being as orderly built with flanking in euery part, as can be set downe. There was onely so much of this streight vnwalled, as might serue for the issuing of the horsemen, or the passing of caryage in time of neede: but this vnwalled part was not without a very good

Barricado

Barricado of wine-buts or pipes, filled with earth, full and thicke as they might stand on ende one by another, some part of them standing even within the maine sea.

This place of strength was furnished with fire great peeces, Demi-culverins, and Sakers, which shotte directly in front vpon vs as wee approched. Now without this wall vpon the inner side of the streight, they had brought likewise two great Galleis with their prowes to the shoze, hauing planted in them eleuen peeces of ordnance, which did beate all crosse the streight, and flanked our comming on. In these two Galleis were planted three or foure hundred small shot, and on the land in the guard onely of this place, three hundred shot and pikes.

They in this their full readinesse to receiue vs, spared not their shot both great and small. But our Lieutenant generall, taking the aduantage of the darke (the day light as yet not broken out) approched by the lowest ground, according to the expresse direction which himselfe had formerly giuen, the same being the sea-wash shoze, where the water was somewhat fallen, so as most of all their shot was in vaine. Our Lieutenant generall commanded our shot to forbear shooting vntill we were come to the wall side, and so with pikes roundly together we approched the place, where we soone found out the Barricados of pipes or butts, to be the meetest place for our assault, which, notwithstanding it was well furnished with pikes and shot, was without staying attempted by vs: downe went the butts of earth, and pell mell came our swordes and pikes together, after our shot had first giuen their bolley, even at the enemies nose. Our pikes were somewhat longer then theirs, and our bodies better armed; for very few of them were armed: with which aduantage our swordes and pikes greiv too hard for them, and they driuen to giue place. In this furious entry, the Lieutenant generall slew with his owne hands the chiefe Ensigne bearer of the Spaniards, who fought very manfully to his liues end.

We followed into the towne with them, and giuing them no leasure to breathe, we wanne the Market-place, albeit they made head, and fought a while before we got it, and so wee being once seized and assured of that, they were content to suffer vs to lodge within their towne, and themselves to goe to their wiues, whom they had caried into other places of the countrey before our comming thither.

At euery streetes end they had raised very fine Baricados of earth-wozkes, with trenches without them, as well made as euer we saw any worke done: at the entering whereof was some little resistance, but soone overcome it was, with few slaine or hurt. They had ioynd with them many Indians, whom they had placed in corners of aduantage, all bowmen, with their arrowes most villanously empoisoned, so as if they did but breake the skinne, the partie so touched died without great maruell: some they slew of our people with their arrowes: some they likewise mischiewed to death with certaine pyicks of small sticks sharply pointed, of a foote and a halfe long, the one ende put into the ground, the other empoisoned, sticking fast vp, right against our comming in the way, as we should approch from our landing towarde the towne, whereof they had planted a wonderfull number in the ordinarie way: but our keeping the sea-wash shoze missed the greatest part of them very happily.

I ouerpasse many particular matters, as the hurting of Captaine Sampson at sword blowes in the first entering, vnto whom was committed the charge of the pikes of the Vanguard by his lot and turne; as also of the taking of Alonso Brauo the chiefe commander of that place by Captaine Goring, after the said captaine had first hurt him with his sword: vnto which Captaine was committed the charge of the shot of the sayd Vanguard.

Captaine Winter was likewise by his turne of the Vanguard in this attempt, where also the Lieutenant generall marched himselfe: the said Captaine Winter through a great desire to serue by land, hauing now exchanged his charge by sea with Captaine Cecil for his band of footemen.

Captaine Powel the Sergeant maiorz had by his turne the charge of the foure companies which made the battaile.

Captaine Morgan, who at S. Domingo was of the Vanguard, had now by turne his charge vpon the companies of the Rereward.

Euery man as well of one part as of another, came so willingly on to the seruice, as the enemy was not able to endure the furie of such hot assault.

We stayed here fire weekes, and the sicknesse with mortalicie before spoken of still continued among vs, though not with the same furie as at the first: and such as were touched with the sayde sicknesse, escaping death, very few or almost none could recouer their strength: yea, many of them were much decayed in their memozie, insomuch that it was growen an ordinarie iudgement, when one was heard to speake foolishly, to say he had bene sicke of the Calentura, which is the Spanissh

Alonso Brauo
the gouernour
of Cartagena
taken.

Spanish name of their burning Ague: for as I tolde you before, it is a very burning and pestilent ague. The originall cause thereof, is imputed to the Evening or first night ayre, which they call La serena, wherein they say and hold very firme opinion, that who so is then abroad in the open ayre, shall certainly be infected to the death, not being of the Indian or naturall race of those countrey people: by holding their watch, our men were thus subjected to the infectious ayre, which at S. Iago was most dangerous and deadly of all other places.

With the inconuenience of continuall mortallitie, we were forced to giue ouer our intended enterprise, to goe with Nombre de Dios, and so ouerland to Panama, where we should haue strooken the stroke for the treasure, and full recompence of our tedious traualles. And thus at Cartagena wee tooke our first resolution to returne homewards: the forme of which resolution I thought good here to put downe vnder the principall Captaines hands, as followeth.

A resolution of the Land-captaines, what course they thinke most expedient to bee taken. Given at Cartagena the xxvij of Februarie 1585.

Vhereas it hath pleased the Generall to demaund the opinions of his Captaines what course they thinke most expedient to be now undertaken, the Land-captaines being assembled by themselves together, and hauing aduised hereupon, doe in thre poynts deliver the same.

The first, touching the keeping of the towne against the force of the enemy, either that which is present, or that which may come out of *Spain*, is answered thus.

We holde opinion, that with this troope of men which we haue presently with vs in land-seruice, being victualled and munitioned, wee may well keepe the Towne, albeit that of men able to answer present seruice, we haue not aboue 700. The residue being some 150. men by reason of their hurts and sicknesse are altogether vnable to stand vs in any stead: wherefore hereupon the Sea-captaines are likewise to giue their resolution, how they will undertake the safetie and seruice of the Shippes vpon the arriual of any Spanish Fleet.

The second poynt we make to be this, whether it bee meete to goe presently homeward, or els to continue further tryall of our fortune in vnderraking such like enterprises as we haue done already, and thereby to seeke after that bountifull masse of treasure for recompence of our traualles, which was generally expected at our comming forth of *England*: wherein we answered.

That it is well knowen how both we and the souldiers are entred into this action as voluntarie men, without any impest or gage from her Maiestie or any body els: and forasmuch as we haue hitherto discharged the parts of honest men, so that now by the great blessing and fauour of our good God there haue bin taken thre such notable townes, wherein by the estimation of all men would haue bene found some very great treasures, knowing that S. Iago was the chiefe citie of all the Islands and traffiques thereabouts, S. Domingo the chiefe citie of Hispaniola, and the head gouernment not only of that Island, but also of Cuba, and of all the Islands about it, as also of such inhabitations of the firme land, as were next vnto it, & a place that is both magnificently builded, and interteineth great trades of marchandise; and now lastly the citie of Cartagena, which cannot be denied to be one of the chiefe places of most especiall importance to the Spaniard of all the cities which be on this side of the West India: we doe therefore consider, that since all these cities, with their goods & prisoners taken in them, and the ransoms of the said cities being all put together, are found farre short to satisfie that expectation which by the generalitie of the enterprisers was first conceiued: And being further aduised of the slenderesse of our strength, whereunto we be now reduced, as well in respect of the small number of able bodies, as also not a litle in regard of the slacke disposition of the greater part of those which remaine, very many of the better mindes and men being either consumed by death, or weakened by sicknes and hurts: And lastly, since that as yet there is not laid downe to our knowledge any such enterprise as may seeme conuenient to be undertaken with such few as we are presently able to make, and withall of such certaine likelihood, as with Gods good successe which it may please him to bestow vpon vs, the same may promise to yeeld vs any sufficient contentment: We doe therefore conclude hereupon, that it is better to hold sure as we may the honour already gotten, and with the same to returne towards our gracious

gracious Soueraigne and Countrey, from whence if it shall please her Maiestie to set vs forth againe with her orderly meanes and intertainment, we are most ready and willing to goe through with any thing that the vtermost of our strength and indouour shall be able to reach vnto; but therewithall wee doe aduise and protest that it is farre from our thoughts, either to refuse, or so much as to seeme to be wearte of any thing, which for the present shalbe further required or directed to be done by vs from our Generall.

The third and last poynt is concerning the ranfome of this citie of *Cartagena*, for the which, before it was touched with any fire, there was made an offer of some xxvij. or xxviii. thousand pounds sterling.

Thus much we utter herein as our opinions agreeing (so it be done in good sort) to accept this offer aforesayde, rather then to breake off by standing still vpon our demaunds of one hundred thousand poundes, which seemes a matter impossible to bee performed for the present by them, and to say truely, wee may now with much honour and reputation better be satisfied with that summe offered by them at the first (if they will now bee contented to giue it) then wee might at that time with a great deale more, inasmuch as we haue taken our full pleasure both in the vtermost sacking and spoyling of all their householde goods and marchandize, as also in that we haue consumed and ruined a great part of their Towne with fire. And thus much further is considered herein by vs, that as there bee in the Voyage a great many poore men, who haue willingly aduentured their liues and trauailes, and diuers amongst them hauing spent their apparell and such other little provisions as their small meanes might haue giuen them leaue to prepare, which being done vpon such good and allowable intencion as this action hath alwayes carryed with it, meaning, against the Spaniard our greatest and most dangerous enemy: so surely wee cannot but haue an inward regarde so farre as may lye in vs, to helpe eyther in all good sort towards the satisfaction of this their expectation, and by procuring them some little benefite to incourage them and to nourish this ready and willing disposition of theirs both in them and in others by their example against any other time of like occasion. But because it may bee supposed that heerein wee forgette not the priuate benefite of our selues, and are thereby the rather moued to incline our selues to this composition, wee doe therefore thinke good for the clearing of our selues of all such suspicion, to declare heereby, that what part or porcion soeuer it bee of this ranfome or composition for *Cartagena*, which should come vnto vs, wee doe freely giue and bestowe the same wholly vpon the poore men, who haue remayned with vs in the Voyage, meaning as well the Sayler as the Souldier, wishing with all our hearts it were such or so much as might seeme a sufficient rewarde for their painefull indouour. And for the firme confirmation thereof, we haue thought meete to subligne these presents with our owne hands in the place and time aforesayd.

Captaine *Christopher Carliell* Lieutenant Generall.

Captaine *Goring*. Captaine *Sampson*. Captaine *Powell* &c.

But while wee were yet there, it happened one day, that our watch called the Centinell, vpon the Church-steeple, had discovered in the Sea a couple of small Barkes or Boates, making in with the Harbour of *Cartagena*, whereupon Captaine Moone and Captaine Varney, with Iohn Grant the Master of the Tyger, and some other Sea-men, embarked themselves in a couple of small Pinnesses, to take them befoze they should come nigh the shore, at the mouth of the Harbour, lest by some stragling Spaniardes from the Lande, they might be warned by signes from comming in: which fell out accordingly, notwithstanding all the diligence that our men could vse: for the Spanish Boates, vpon the sight of our Pinnesses comming towards them, ranne themselves ashore, and so their men presently hidde themselves in bushes hard by the Sea side, amongst some others that had called them by signes thither. Our men presently without any due regard had to the qualitie of the place, and seeing no man of the Spaniards to shew themselves, aboarded the Spanish Barks or Boates, and so standing all open in them, were suddenly shotte at by a troope of Spaniardes out of the bushes: by which volley of shotte there were slaine Captaine Varney, which dyed presently, and Captaine Moone, who dyed some fewe dayes after, besides some foure or fife others that were hurt: and so our folkes returned without their purpose, not hauing any sufficient number of souldiers with them to fight on shore. For those men they carped were all Mariners to rowe, few of them armed, because they made account with their ordinance to haue taken the Barks well enough at

at sea, which they might full easily haue done, without any losse at all, if they had come in time to the harbour mouth, before the Spaniards boates had gotten so nere the shore.

During our abode in this place, as also at S. Domingo, there passed diuers courtesies betweene vs and the Spaniards, as feasting, and vsing them with all kindnesse and fauour: so as amongst others there came to see the Generall, the Gouernour of Cartagena, with the Bishop of the same, and diuers other Gentlemen of the better sort.

This towne of Cartagena we touched in the out parts, & consumed much with fire, as we had done S. Domingo vpon discontentments, and for want of agreeing with vs in their first treaties touching their rancome, which at the last was concluded between vs, should be 100, and 10000. Ducats for that which was yet standing, the Ducat valued at five shillings sixpence sterling.

This towne though not halfe so bigge as S. Domingo, giues as you see, a farre greater rancome, being in very deepe of farre more importance, by reason of the excellencie of the Harbour, and the situation thereof, to serue the trade of Nombre de Dios and other places, and is inhabited with farre more richer Merchants. The other is chiefly inhabited with Lawyers and braue Gentlemen, being the chiefe or highest appeale of their suites in law of all the Islands about it, and of the maine land coast next vnto it. And it is of no such accompt as Cartagena, for these and some other like reasons, which I could giue you, ouer long to be now written.

The warning which this towne receiued of our comming towards them from S. Domingo, by the space of twentie dayes before our arriual here, was cause that they had both fortified and euery way prepared for their best defence. As also that they had caried and conueyed away all their treasure and principall substance.

The rancome of an hundred & ten thousand Ducats thus concluded on, as is aforesaid, the same being written, and expressing for nothing more then the towne of Cartagena, vpon the payment of the sayd rancome, we left the said towne, and drew some part of our souldiers into the Priorie or Abbey standing a quarter of an English mile belowe the towne vpon the harbour water-side, the same being walled with a wall of stone, which we told the Spaniards was yet ours, and not redeemed by their composition: whereupon they finding the defect of their contract, were contented to enter into another rancome for all places, but specially for the sayd house, as also the Blockehouse or Castle, which is vpon the mouth of the inner harbour. And when wee asked as much for the one as for the other, they yeelded to giue a thousand Crownes for the Abbey, leauing vs to take our pleasure vpon the Blockehouse, which they sayd they were not able to rancome, hauing stretched themselves to the uttermost of their powers: and therefore the sayd Blockehouse was by vs undermined, and so with gunne powder blown vp in pieces.

While this latter contract was in making, our whole flecte of ships fell downe towards the harbour mouth, where they anchored the third time, and imployed their men in fetching of fresh water aboard the ships for our voyage homewards, which water was had in a great well, that is in the Island by the harbour mouth: which Island is a very pleasant place as hath bene seene, hauing in it many sorts of goodly and very pleasant fruites, as the Orange trees and others, being set orderly in walkes of great length together. Insomuch as the whole Island being some two or three miles about, is cast into grounds of gardening and orchards.

After six weekes abode in this place, we put to sea the last of March, where after two or three dayes a great ship which we had taken at S. Domingo, and thereupon was called The new yeeres gift, fell into a great leake, being laden with ordnance, hides, and other spoiles, and in the night she lost the company of our flecte, which being missed the next morning by the Generall, hee cast about with the whole flecte, fearing some great mischance to bee happened vnto her, as in very deepe it so fell out: for her leake was so great, that her men were all tyred with pumping. But at the last hauing found her & the Barke Talbot in her company, which stayed by great hap with her, they were ready to take their men out of her, for the sauing of them. And so the General being fully aduertised of their great extremitie, made saile directly backe againe to Cartagena with the whole flecte, where hauing staid eight or ten dayes more, about the vnlading of this ship, and the bestowing thereof and her men into other Ships, we departed once againe to Sea, directing our course towards the Cape S. Antony, being the Westermost part of Cuba, where wee arriued the seven and twentieth of April. But because fresh water could not presently be found, we weyed anchor, and departed, thinking in few dayes to recouer the Matanzas, a place to the Eastward of Hauana.

After wee had sailed some fourteen dayes, wee were brought to Cape S. Anthony againe, through lacke of fauourable winds: but then our scarcity was grown such, as neede made vs looke a litle better for water, which we found in sufficient quantitie, being indeede, as I iudge, none other

The Island of
Cares.

other then raine water newly fallen, and gathered up by making pits in a plot of marriſh ground, ſome three hundred paces from the ſea ſide.

As moſt com-
mendable ex-
ample of dili-
gence in a Ge-
nerall,

I doe wrong if I ſhould forget the good example of the Generall at this place, who to encourage others, and to haſten the getting of freſh water aboard the ſhips, tooke no leſſe paine himſelfe then the meanest; as alſo at S. Domingo, Cartagena, and all other places, hauing alwayes ſo vigilant a care and foreſight in the good ordering of his Fleet, accompanying them, as it is ſayde, with ſuch wonderfull trauell of body, as doubtleſſe had he bene the meanest perſon, as hee was the chiefest, he had yet deſerued the firſt place of honour: and no leſſe happy doe we account him, for being aſſociated with Maſter Carliel his Lieutenant generall, by whole experience, prudent counſell, and gallant perſormance he atchieued ſo many and happy enterpriſes of the warre, by whom alſo he was very greatly aſſiſted, in letting downe the needfull orders, lawes, and courſe of iuſtice, and the due adminiſtration of the ſame vpon all occaſions.

After three dayes ſpent in watering our Ships, wee departed now the ſecond time from this Cape of S. Anthony the thirteenth of May, and proceeding about the Cape of Florida, wee neuer touched any where; but coaſting alongſt Florida, and keeping the ſhoare ſtill in ſight, the 28. of May early in the Morning wee deſcried on the ſhoare a place built like a Beacon, which was in deede a ſcaffold vpon foure long maſſes raiſed on end, for men to diſcouer to the ſeaward, being in the latitude of thirtie degrees, or very neere thereunto. Our Pinneſſes manned, and comming to the ſhoare, wee marched vp alongſt the riuer ſide, to ſee what place the enemy held there: for none amongſt vs had any knowledge thereof at all.

Here the Generall tooke occaſion to march with the companies himſelfe in perſon, the Lieutenant generall hauing the Vant guard; and going a mile or ſomewhat more by the riuer ſide, we might diſcerne on the other ſide of the riuer ouer againſt vs, a Fort which newly had bene built by the Spaniards: and ſome mile or thereabout about the Fort was a little Towne or Village without walles, built of wooden houſes, as the Plot doeth plainely ſhew. Wee forthwith prepared to haue ordinance for the batterie; and one peece was a litle before the Evening planted, and the firſt ſhot being made by the Lieutenant generall himſelfe at their Enſigne, ſtrake through the Enſigne, as wee afterwards vnderſtood by a French man, which came vnto vs from them. One ſhot more was then made, which ſtrake the foote of the Fort wall, which was all maſſiue timber of great trees like Maſtes. The Lieutenant generall was determined to paſſe the riuer this night with 4. companies, and there to lodge himſelfe intrenched as neere the Fort, as that he might play with his muſkets and ſmalleſt ſhot vpon any that ſhould appeare, and ſo afterwards to bring and plant the batterie with him: but the helpe of Mariners for that ſudden to make trenches could not be had, which was the cauſe that this determination was remitted vntill the next night.

In the night the Lieutenant generall tooke a little rowing Skiffe, and halfe a dozen well armed, as Captaine Morgan, and Captaine Sampſon, with ſome others beſides the rowers, & went to view what guard the enemy kept, as alſo to take knowledge of the ground. And albeit he went as couertly as might be, yet the enemy taking ſuch Alarme, grew feareful that the whole force was approaching to the aſſault, and therefore with all ſpeede abandoned the place after the ſhooting of ſome of their peeces. They thus gone, and hee being returned vnto vs againe, but nothing knowing of their flight from their Fort, forthwith came a French man being a Phipper (who had bene priſoner with them) in a litle boate, playing on his Phiph the tune of the Prince of Orange his ſong; and being called vnto by the guard, he tolde them before he put foote out of the boate, what he was himſelfe, and how the Spaniards were gone from the Fort, offering either to remaine in hands there, or els to returne to the place with them that would goe.

Vpon this intelligence, the Generall, the Lieutenant generall, with ſome of the Captaines in one Skiffe, and the Vice-admirall with ſome others in his Skiffe, and two or three Pinneſſes furniſhed of ſouldiers with them, put preſently ouer to wards the Fort, giuing order for the reſt of the Pinneſſes to follow. And in our approach, ſome of the enemy holder then the reſt, hauing ſtayed behinde their company, ſhot off two peeces of ordinance at vs: but on ſhoare wee went, and entered the place without finding any man there.

When the day appeared, we found it built all of timber, the walles being none other but whole Maſtes or bodie of trees ſet by right and cloſe together in maner of a pale, without any ditch as yet made, but wholly intended with ſome more time; for they had not as yet finiſhed all their worke, hauing begunne the ſame ſome three or foure moneths before: ſo as, to ſay the truth, they had no reaſon to keepe it, being ſubiect both to fire, and eaſie aſſault.

The platforme whereon the ordinance lay, was whole bodie of long pine trees, whereof there is great plencie, layd a croſſe one on another, and ſome litle earth amongſt. There were in it thir-

Nicolas Bor-
goignon.

teene

teene or fouretee great peeces of Braſſe ordnance, and a cheſt vnbroken vp, hauing in it the value of ſome two thouſand pounds ſterling by eſtimation of the kings treaſure, to pay the ſouldiers of that place, who were a hundred and fiftie men.

The Fort thus wonne, which they called S. Iohns Fort, and the day opened, wee aſſayed to goe to the towne, but could not by reaſon of ſome riuers and broken ground which was betweene the two places: and therefore being enforced to imbarke againe into our Pinneſſes, wee went thither vpon the great maine riuer, which is called alſo the Towne, by the name of S. Auguſtin.

At our approaching to land, there were ſome that began to ſhew themſelues, and to beſtow ſome few ſhot vpon vs, but preſently withdrew themſelues. And in their running thus away, the Sergeant Maior finding one of their horſes ready ſaddled and bridled, tooke the ſame to follow the chace; and ſo ouergoing all his company, was (by one layd behind a buſh) ſhotte through the head: and falling downe therewith, was by the ſame and two or three more, ſtabbed in three or foure places of his body with ſwords and daggers, before any could come neere to his reliefe. His death was much lamented, being in very deepe an honeſt wiſe Gentleman, and a ſouldier of good experience, and of as great courage as any man might be.

In this place called S. Auguſtin, we vnderſtood the king did keepe, as is before ſaid, one hundred and fiftie ſouldiers, and at another place ſome dozen leagues beyond to the Northwards, called S. Helena, he did there likewiſe keepe an hundred and fiftie more, ſeruing there for no other purpoſe, then to keepe all other nations from inhabiting any part of all that coaſt; the gouernement whereof was committed to one Pedro Melendez Marquelle, nephew to that Melendez the Admiral, who had ouerthrowen Maſter Iohn Hawkins in the bay of Mexico ſome ſeuenteen or eigh- teene yeeres agoe. This Gouernour had charge of both places, but was at this time in this place, and one of the firſt that left the ſame.

Peere it was reſolued in full aſſembly of Captaines, to vndertake the enterpriſe of S. Helena, and from thence to ſeek out the inhabitation of our Engliſh countrey men in Virginia, diſtant from thence ſome ſix degrees Northward.

When we came thwart of S. Helena, the ſhoulds appearing dangerous, and we hauing no Pilot *Santa Helena* to vndertake the enterie, it was thought meeteſt to goe hence alongſt. For the Admirall had bene the ſame night in foure ſadome and a halfe, three leagues from the ſhore: and yet wee vnderſtood by the helpe of a known Pilot, there may and doe goe in Ships of greater burthen and draughte then any we had in our Fleete.

We paſſed thus alongſt the coaſt hard aboord the ſhore, which is ſhallow for a league or two from the ſhore, and the ſame is lowe and broken land for the moſt part.

The ninth of Iune vpon ſight of one ſpeciall great fire (which are very ordinarie all alongſt this coaſt, euen from the Cape of Florida hither) the Generall ſent his Skiffe to the ſhore, where they found ſome of our Engliſh countrey men (that had bene ſent thither the yeere before by Sir Walter Raleigh) and brought them aboard: by whole direction wee proceeded along to the place which they make their Port. But ſome of our ſhips being of great draught vnable to enter, anchored without the harbour in a wilde roade at ſea, about two miles from ſhore.

From whence the General wrote letters to maſter Ralfe Lane, being gouernour of thoſe Engliſh in Virginia, and then at his Fort about ſix leagues from the Rode in an Iſland which they call Roanoac, wherein eſpecially he ſhewed how ready he was to ſupply his neceſſities and wants, *Roanoac* which he vnderſtood of, by thoſe he had firſt talked withall.

The morow after, Maſter Lane himſelfe and ſome of his company comming vnto him, with the conſent of his captaines he gaue them the choiſe of two offers, that is to ſay: Either he would leaue a ſhip, a pinneſſe, and certaine boates with ſufficient Maſters and Mariners, together furniſhed with a moneths victuall, to ſtay and make farther diſcouery of the countrey and coaſtes, and ſo much victuall likewiſe as might be ſufficient for the bringing of them all (being an hundred and three perſons) into England, if they thought good after ſuch time, with any other thing they would deſire, and that he might be able to ſpare.

Or els if they thought they had made ſufficient diſcouerie already, and did deſire to returne into England, he would giue them paſſage. But they, as it ſeemed, being deſirous to ſtay, accepted very thankfully and with great gladneſſe, that which was offered firſt. Whereupon the ſhip being appointed and receiued into charge by ſome of their owne company ſent into her by Maſter Lane, before they had receiued from the reſt of the Fleete the prouiſion appointed them, there aroſe a great ſtorme (which they ſayd was extraordinary and very ſtrange) that laſted three daies together, and put all our Fleete in great danger, to bee driuen from the anchoring vpon the coaſt. For we brake many Cables, and loſt many Anchors; and ſome of our Fleete which had

lost all (of which number was the ship appointed for Waster Lane and his company) was driven to put to sea in great danger, in auoyding the coast, and could neuer see vs againe vntill we met in England. Many also of our small Iunelles and boates were lost in this storme.

Notwithstanding after all this, the Generall offered them (with consent of his Captaines) another ship with some provision, although not such a one for their turnes, as might haue bene spared them before, this being vnable to be brought into their Harbour. Or els if they would, to giue them passage into England, although he knew he should performe it with greater difficultie then he might haue done before.

But Waster Lane with those of the chiefest of his company which hee had then with him, considering what should be best for them to doe, made request vnto the General vnder their hands, that they might haue passage for England: the which being graunted, and the rest sent for out of the countrey and shipped, we departed from that coast the 18. of June.

And so, God bee thanked, both they and wee in good safetie arriued at Portesmouth the 28. of July 1586. to the great glory of God, and to no small honour to our Prince, our Countrey, and our selues.

The totall value of that which was gotten in this voyage is esteemed at three score thousand pounds, whereof the companies which haue trauelled in the voyage were to haue twentie thousand pounds, the aduenturers the other fortie. Of which twentie thousand pounds (as I can iudge) will redound some fixe pounds to the single share.

We lost some seuen hundred and fiftie men in the voyage: about three parts of them onely by sicknesse.

The men of name that dyed and were slaine in this voyage, which I can presently call to remembrance, are these.

Captaine Powel.
Captaine Varney.
Captaine Moone.
Captaine Fortescue.

Captaine Bigges.
Captaine Cecill.
Captaine Hannam.
Captaine Greenefield.

Thomas Tucker a Lieutenant.
Alexander Starkey a Lieutenant.
Master Escot a Lieutenant.
Master Waterhouse a Lieutenant.
Master George Candish.

Master Nicholas Winter.
Master Alexander Carliell.
Master Robert Alexander.
Master Scroope.
Master James Dier.
Master Peter Duke.

With some other, whom for haste I cannot suddenly thinke on.

The ordinance gotten of all sorts Brazle and Iron, were about two hundred and forty peeces, whereof the two hundred and some more were brazle, and were thus found and gotten.

At S. Iago some two or three and fiftie peeces.

In S. Domingo about fourescore, whereof was very much great ordinance, as whole Canon, Demi-canon, Culuerins, and such like.

In Cartagena some sixtie and three peeces, and good store like wise of the greater sort.

In the Fort of S. Augustin were foureteene peeces.

The rest was Iron ordinance, of which the most part was gotten at S. Domingo, the rest at Cartagena.

A relation of the ports, harbors, forts and cities in the West Indies which haue bene surueied, edified, finished, made and mended, with those which haue bene builded, in a certaine suruey by the king of Spaine his direction and commandement: Written by Baptista Antonio, surueyours in those parts for the said King. Anno 1587.

Santa Marta.

Santa Marta situate in 10. degrees and a halfe.

First Santa Marta the principall Citie of the Bishopricke or Dioces of the coast of Tierra firma, or the firme land, lieth in 10. degrees and $\frac{1}{2}$, the city being situated vpon a sandy bay adioyning vnto the sea side, containeth in it about 30. households; all the houses being made of canes, and covered ouer with Palmico trees, and some of them be covered with ycle.

They haue traffike with none, but with the Indians of the said countrey, which

doe bring vnto the Citie for to sell earthen Potes and Pipkins, and Couerlits of Cotton wooll, and great earthen Iarres. Also they doe traffique to Cartagena. It is a countrey which hath but small store of cattel, because it is all mountainous, and hath small store of people. There is a very good harbour before the said towne, inuironed with mighty hills & great rocks, which reach euen vnto the sea side, the which hie land doth greatly succour the harbour, as also two Islands which lie about 2 of a league on the North side: so that although they be subiect to Easterly winds, and that with great stormes, yet they doe no great harme to goe on land. Within this Harbour there is a place which is called La Caldera, where in times past they were wont to trimme and carene their Shippes. As touching the Harbour, there is no cause to fortifie it, nor to make any account of it, by reason there is no trade nor traffique to this place from any other places, according as I haue certified your Maiestie thereof. And also because here are but few dwellers or inhabitants, and loosing euery day so many as it doeth, by reason that it is euery day robbed and spoyled by the enemy. But if your Maiestie would command that the Fleete of Noua Hispania might direct their course to this Harbour being in their way, and here to water and refresh themselves, all the Pilots doe say that the Fleete may proceede on their Voyage from this place, still going before the winde, and so goe to the Cape of Saint Anthony, which lieth on the Island of Cuba, and from thence goe their direct course to Noua Hispania; and by this meanes the Fleete should haue no occasion to passe so many dangers as they doe, by reason of the Huricanos or stormy windes which many times do come vpon them, when they are vpon the coast of Hispaniola: and this is the cause that there are so many ships cast away, as your Maiestie doeth well know.

A new course
to Noua Hispania,
by the way
of Santa Marta
lesse subiect to
danger then
the ordinary
course.

And as concerning this course according as I haue certified your Maiestie, they shall come in to no danger at all, nor shall make any further way about; so by this meanes both the Fleetes may come from Spaine in company, and then come to S. Marta, and the Fleete of Noua Hispania may come into this Harbour, and the Fleete which doeth goe vnto the firme land, may goe directly to Cartagena as they doe. Then your Maiestie may send to fortifie the said Harbour, and the fortification must be thus: That on the morro or mount which is in the entering in of the said harbour, there be built a litle Fort, and so to plant some small quantitie of ordinance. And hard by on the South side, there to build a litle Towre, and another Sconce, where wee may plant some more ordinance. So by this meanes not onely the Shippes may ride heere in securitie, but also it will bee a defence for those which dwell heere in the Towne: and the better to effect this purpose, there is hard by the Towne great store of Lyme, Stone, Sande, and Tymber, if occasion should serue.

Cartagena.

Cartagena is a Citie, and the principall place of the Bishopricke; it lyeth fourtie leagues from Santa Marta: it standeth in scant 11. degrees. The sayd Citie is situated vpon a sandy banke or bay like vnto an Island: it hath about 450. dwellers therein. There are very faire buildings therein: as concerning their houses, they are made of stone, and there are three Monasteries, of which two of them are of Friers which are within the city, the one called Santo Domingo, and the other called Santo Augustin, and the other which is called Saint Francis, which standeth without the citie about 30. paces off. And for to goe vnto the said frierie, you must goe vpon a Causey made of stone, and water on both sides. This citie hath great trade out of Spaine, and out of The new kingdome of Granada, and out of the Islands there adioyning, from Peru, and from all the coast of this firme land, and of the fishing of the pearles of Rio de la Hacha, and of Margarita: it is a very sound countrey.

Cartagena lieth
ate in 11. de-
grees scant.

This Citie hath a very good Harbour, and sufficient to receiue great store of Ships: this said Harbour hath two entrances in, the one of them lyeth halfe a league from the Citie, where all the Ships doe enter into the sayd Harbour: the mouth or entering in of the sayd Harbour is 1400. paces or paces in bredth, and very deepe water. The other entering in which is called La boca chica, or litle mouth, lieth a league beyond this place to the westwards. It is 900. yards in bredth, and in the entering in thereof there lieth a channel in the midst of it, which is 200. yards broad, and 20. or 15 fadome water, some places more, some lesse. And to enter into the Harbour, you must go through this channel, and the land doth double in and out. And at the entering in of the sayd Harbour, after you haue past this Channell, you must beare vp to the shoareward neere vnto the Island of Cares, and looke how much is ouerplus more then the two hundred paces of the Channell, all the rest are certaine ledges of Rockes, couered with two or three foote water vpon the toppe of them, some places more, and some lesse. So the ships which must enter

in at the mouth, must bring very good Pilots with them, which must be very skilfull: yet all this will not serue, but they must carry their Boate before, and sound with their Lead to know where the best place of the Channell lyeth for them to goe in, so it will be small hinderance to any shippe that shall enter, neither per danger at all of sinking.

Francis Drake.

There are three places about the sayde Citie, where the Enemie may giue an attempt by Land. The one of them is where the enemie did enter in and landed, which is a sandy Bay, and on the one side of the Bay is the Sea, and on the other side a great Lake which goeth towards the Harbour. The sandy bay or banke, on the one side is 500. yardes broad, all sandy ground without any trees. So that the enemie which giueth the assault in this place must bee constrained to march all alongst this sandie Bay, the enemie lying open these 500. yardes, which reach vntill you doe come to the trench: And on the backside other 500. yardes, till you doe come vnto the Citie.

The sayde sandie bay or banke is 130. yardes broad, where the trench is builded. And in this place this Citie hath bene taken by the enemie twice. Wherefore heere wee haue driuen in a great many of wooden stakes, which goe downe into the sea 50. yardes deepe: and this wee haue done, because this is a very dangerous and filthy coast. And below in the bottome of the Valley there we haue builded a little Sconce, where we may plant 3. or 4. peeces of ordinance. And likewise wee haue made a deepe ditch, which doeth answere to both parts of the sea; so on this side the Citie is very strong and sufficient. For this was the place whereof the Citizens were most afraid.

The other entring is lower downe by the sayde sandy Bay, which is called Cienaga, or The fenne del Roreado. This is another place which is on the sayd sandy bay, which is 300. yardes broad from the one place downe to the sea. And on the other side there lyeth the Cienaga, which is a certaine plat of ground that is ouerflown with water all the yeere long. So that the enemie which shall come this way to winne the Citie, must come marching ouer land a good way vpon a sandie banke or Bay, where the Sea lyeth on the one side, and a groue or boske of wood on the other side, and through a plat of ground which is ouerflown with water, but not all couered. So in this place wee haue made a Fort or Sconce with certaine Flankers belonging thereunto. And I haue caused a deepe ditch to be digged of 60. foote in bredth, so that the Sea doeth come to that plat or place which is ouerflown. And in this order we haue stoppt this passage, so that the Citie standeth in maner like vnto an Island. There is 2600. yardes distance from this place to the other trench where the enemie Francis Drake did land last.

The entring in of this Harbour is by the bridge and Causey which doeth goe from the Citie to S. Francis; the sayd Causey is 300. yardes in length, and 12. yardes in bredth: and the water is on both the sides of the said Causey: so this is the strongest place of all the rest of the three places. Also in this place there is order taken to make a draw bridge, and vpon the top of the said bridge, to build a platfome, and plant ordinance vpon it: and on both sides of the bridge there are certaine trenches made, where our men may be close kept.

At the point of this land called ycacos, which is in the entring in of the harbour to wards S. Anna, we haue made a Fort of timber foursquare of 300. foote euery way, and trencht, where wee may plant 15. or 16. peeces of ordinance, and keepe 50. men in garison, and behinde the bourdes on the backside of the timbers, a Barricado of earth or mudde wall being foure foote in thicknesse, and behinde the mud-wall, sand: so this Fort will bee of great importance for safegard of this Harbour, because all the Shippes which doe enter into this Harbour doe come close to this place where it is strongest, so that sometimes one may cast a stone into the ships when they are comming in: and when any ship of warre or Pirate will giue any attempt to enter into this Harbour, there is order giuen that the two galleys shall go forth, and put themselves behinde the Fort with their prowes to the sea, and so shooting at their enemies in the forepart of the ship, and then the Fort answering likewise with their ordinance at the side of the shippe, and at their tackling, so the enemie being in the Harbour all vnrigged, they must of necessity be constrained to lye houerling within the Harbour, or els they must driu vpon the rockes called the Ismo, or els vpon those rockes which are couered with the sea at the Island of Cares.

The galleies of Caragena.

And put case that in this place we can doe no good by this meanes, and that the enemie will venture to come in with their long boates & Pinnelles through this narrow mouth: then we are to haue in a readinesse 4. Frigats to ayde and helpe the galleies, & to row with oares, and so to go to the narrow mouth, and there to stay in the channell. And forasmuch as the entring in is so dangerous, according as I haue certified your Matestie, there can no ship come into this harbour, but we must needes sinke them; so that these defences shall not onely bee annoyance to the enemie, but also

also animate and encourage the inhabitants of this citie : for they haue bene and are in such feare of the enemye, and pirates, that if wee had not made these fortifications, strengthened the citie in this order, and put some souldiers in garison, the citizens would haue fledde, and forsaken this citie : for all the persuasions made to them by the gouernour coulde not perswade them to the contrary, but they would bee gone, if it had not bene for this fortification, and yet for all this wee haue much to doe to make them to stay here : so nowe by reason of these souldiers which shall come hither, the people of the citie haue taken heart of grasle : so I haue tolde them that your maiestie will command that this citie and the harbour shall be better fortified and made stronger, and all this which I haue caused to be builded, is with that money which I haue borrow- ed of the citizens.

As touching the safegard and defence of this harbour, if your maiestie so please, here may we builde a very faire and strong castle with foure bulwarks, on the poynt of the Ycacos which both lie on the side where the citie is builded, because all the shippes which doe come to this harbour, must come close aboord this shoze, so neere, that wee may cast a stone into them, and so ouertake any ship. So likewise if the shippes will goe on the other shoze, then they doe goe in greater danger, because of those shoals and ledges of rockes, and so are often cast away. And forasmuch as those ships which here doe arrive are brought hither by Easterly winds, and sometimes with those winds which come out from the sea, and therefore perforce must giue a good birth off, other- wise they cannot enter into this harbour, therefore of necessity they must come so close to the shoze: And on the other side where the Island of Cares standeth, there may wee builde another tower foure-square, and plant some foure or fve pieces of ordinance, and this will serue for the night, if occasion be offered that any small shippe or barke should come in here, or any pinnelle in the night, to doe any harme, or to attempt to burne any flete which shoulde ride here at an anker within this harbour : so the fort being on the one side, and the tower on the other side, keeping good watch, there can no shippe nor barke come into this harbour, but they will bee espied.

The poynt of
YCACOS.

In the narrow mouth at the entring in the other way towards the Island of Cares, where the channell doth runne neere the shoze, as I haue already certified your maiestie, there may an- other castle be made, and there foure or fve pieces of ordinance planted, and some sixe or eight men to keepe watch and ward : this being done, your maiestie shall haue this citie very well fortified, by reason it is of such importance for the seruice of your maiestie, and the trade of all Spaine and Peru, and all the Indies : for this is the principall fort of all this countrey.

Duer against this point of the Ycacos, in the Isle of Cares, hard by the water side, there are great store of stones, free stones, and other stones to make lyme, and wood to burne the stones withall for the lyme, and great part of the stones doe lie about the water : so the wood will cost but the cutting of it downe, and the working of it, and with little paines taking it will bee brought to good perfection, for wee haue already made triall thereof, for there was neuer building that went to decay after it hath bene made, nor perished by the sea: so the charge hereof will be but little or nothing.

And for to put this in practife to build a fort, it is needefull that your maiestie should send hi- ther and to many other places, where any fort shall bee made, some store of Negros, and to this place would be sent 150 Negros brought from Guyney : and if the Negros of Hauana are not to bee employed there, nor those which are in Sant Iuan de Vllua, it may please your maiestie to cause them to bee sent for to this place, for most of them be artificers, some masons, brick- layers, smithes and sawyers, and to send some masons from Spaine to teach our men these occu- pations. And after these fortifications are ended and all furnished, then the Negros may be solde to great profit, for a Negro that is of any occupation is sold here for 600. and 700. pesos.

Nombre de Dios.

NOMBRE DE DIOS is builded vpon a sandy Bay hard by the sea side, it is a citie of some thirtie households or inhabitants : their houses are builded of timber, and most of the people which are there be forreiners, they are there to day and gone to morrow : it is full of woods and some places of the land are ouerflown with water continually by reason of much raine which doth fall vpon the hills. It is a very bad harbour, neither is there any good water : and it is sub- iect to northerly winds and Easterly windes, which continually doe blow vpon this coast : many of the great ships which doe come to this place doe vnlade halfe their commodities betweene the two ledges of rockes, for that there is but little water in the harbour : and after that a ship

hath

hath unladen halfe of her goods, then shee goeth to the second rocke, as it doth appeare by the platforme, but the small ships come neere vnto another rocke on the West side. If the winde chance to come to the North and North-west, and that it ouerblowe, then such great ships as then be in the roade must of force moze themselves with sixe cables a head, especially in a storme, and yet neuertheless sometimes they are driuen ashore and so cast away, and all because they dare not bier cable prouough, because of so many shelles and rockes which are in both those places: also the shippes doe roule very much in the harbour, by reason in foule weather the Sea will bee mightily growen, which is the cause that their cables do oftentimes breake, and their ruthers are vnhanged, the cause thereof is by reason the shippes doe ride but in litle water, yet goeth there a great sea.

The citie is builded and situated very well if it were a good harbour, it standeth vpon the East side vpon a rocke where they may builde a very good fort, according to the platforme for the safeguard of this harbour: but seeing it is but a bad haven and shallow water, therefore I doe thinke that it is not needefull for your maiestie to be at any charges in fortifying that place, but onely a trench to be made of earth or clay, so that these townesmen may defend themselves from danger of 3. or 4. shippes.

The citie of Panama is eightene leagues from Nombre de Dios, the wayes are exceeding bad thitherwards; yet notwithstanding all the silver is brought this way to Nombre de Dios, as well your maiesties treasure as other marchandize; so likewise the most part of those commodities which are caried to Peru, and the rest of the marchandize are carried to the riuer of Chagre which is some 18 leagues from this citie and it is brought vp by this riuer within fife leagues of Panama vnto an Inne or lodge called Venta de Cruzes, and from this place afterwards they are transported to Panama vpon Mules. The high way which goeth from Nombre de Dios to Panama may be very wel mended, only to remooue this way and to stop it quite vp, and so to make it againe vpon the side of a mountaine. This citie lieth in nine degrees and one tierce, and if your maiestie will giue order that this citie should be plucked downe and newly builded againe in Puerto Bello, then you are to make a new way through the mountains of Capira, by reason it may not be frequented and because the high wayes are very bad: with litle charges they may be broken and so shut vp, and the chanell of this harbour may bee stoppt with the timber of those old ships which are laid vp here euery yeere, and then afterwards may be cast a great number of stones into the same, and so by this meanes to damme vp the harbour: and here is great want of stones to ballast the shippes: wherefore they are faine to goe to an Island three leagues from Cartagena called Isla de los Bastimentos, and this is a thing very needefull for this Countrey, as by experience I haue scene,

Nombre de Dios
in 9. deg. and
one tierce.

Puerto Bello.

Puerto Bello lieth fife leagues from Nombre de Dios Westward: It is a very good harbour and sufficient to receiue great store of ships, and hath very good ankering, and fresh water: for neere the shore you shall find some sixe fathome water, and in the middelt of the same harbour you shall find twelue fathome, very good and cleane ground or sand, without eyther banks or rockes. There are twelue small riuers or brookes of water which doe belong to this harbour, and so doe meete all together: so that the flete may at all times prouide themselves of fresh water so much as shall serue their turnes. And likewise there is in this place great store of timber to build shippes, and stones to ballast shippes. Also the harbour hath no danger at all in comming in, but onely when the wind is Westerly, which is seldome scene vpon this coast. The windes which doe most blowe vpon this coast are Northerly windes, and they are moze dangerous and hurtfull then the Easterly windes are. Within this harbour there lieth a small creeke safe from all winds that can blow. This creek is about fife hundred yards long, and so many in breadth, and in the entring in of this creekes mouth it is some 300. yardes broad, and foure fathome and a halfe of water: and entring farther in, sixe fathome, all oaze and muddie ground: so that if a ship should chance to strike or come aground, shee could take no harme being soft oaze; also it doth ebbe and flow accoring as I haue certified your maiestie already.

And likewise the comming in and going out of this harbour is very good: and with all kinde of weather a shippe may set saile from this place except with a Westerly wind: and all this coast is very cleane where a shippe at all times may come to anker without the harbours mouth. This harbour is inuironed round about with woods: and at the ende of this harbour there is certaine land which is ouerflown with water: it may bee easily dyed vp and walled round about,

about, so this land will serue very well to feede cattell. For that is the chiefeſt thing which doth belong to any citie or towne, and of this pasture ground there is great want in Nombre de Dios, for there is no pasture at all to breede cattell, for all kinde of flesh which is spent in this place is brought from Panama: so towards the South there is a very good place, where the citie may be newe built on a certaine plaine ground which lieth at the foot of certaine mountaines, which bee not very high; and in this place there runne three little riuers of fresh water very sweete and good, and here is good arable ground to till and to sow Maiz and other kinds of graine. Also in this circuite there are great stones to make lyme, and these stones must needs prooue very good as I doe thinke, but we neuer had any triall thereof.

This harbour hath all things necessary to builde a citie, where your maiestie may haue your armies and fleetes of shippes to ride at an anker in safetie without danger of loosing: and it is a very healthfull countrey, and where the citie shall be builded it is all stony ground: and forasmuch as the raine water which doth fall from the mountaines may doe hurt vnto the citie, there at the foote of the mountaine wee will make a great pond to receiue in all the water which doth fall from the mountaines, and so from thence to goe into the sea, as moze at large your maiestie may see by my platfoyme.

If it would please your maiestie, it were good that the citie of Nombre de Dios might bee brought and builded in this harbour: it would not bee very chargeable vnto the citizens by reason that all their houses are made of timber, and they may benefite themselves with the same againe, and likewise with the tyles of their houses: the greatest charge will bee to land timber and to cut downe the mountaine of wood.

If it please your maiestie that the sayd citie of Nombre de Dios should bee builded in this harbour the first thing which must be finished is to make vp this high way, and so to pull downe the Church which is in Nombre Dios, and the Contractation house, and so newe build it in this harbour: and then to command all the fleetes of shippes from time to time to come and vnlade their goods in this sayd Puerto Bello: And that those marchants and factozs of Spaine which are lygers in Panama and Nombre de Dios, shall come to this harbour and builde anew their warehouses for receiuing of their goods. So by these meanes in short time it will be greatly inhabited with people: also the fleete shall not passe so many dangers as they dayly doe in Nombre de Dios: neither will there so many people die as there dayly doe in Nombre de Dios: and the cause thereof is, that those labouring men which doe vse to vnlade those marchandize, are all the whole day wading in the water vp to the armpits to bring the packs of cloth and other commodities aland; for there is no landing place where there can come any boates to land any goods close to the shore, so this wading and the parching of the Sunne is the cause why so many doe dye of a burning feuer. There are but 60. dwelling houses in Nombre de Dios, and but thirtie dwellers which doe continually dwell there, and the rest doe goe to Panama after the fleete is gone, and then this Towne doeth remayne desolate, euery man forsaking it because it is so full of diseases.

In the entering in of this harbour for the moze securitie thereof and defence of the towne it is needefull to build vpon the toppes of the mount which lyeth to the Northward, a little fort fouresquare that will hold foure or fve pieces of ordinance, and to appoynt fixe men to watch and ward; and this being done wee shall haue no occasion to make any moze defence, by reason the countrey is full of rocks and filthy wayes, and all full of woods round about the harbour.

And so likewise on the other side to builde a little tower in maner of a fort, with eight pieces of ordinance and fixe and twenty souldiers to keepe it. And this will bee of moze importance because it must be builded on the towne side. And a little beyond this place on the Northside there lyeth a creeke, where there is a very good ankering in eight fathome water: so this fort being builded in this place it will defend the harbour and offend the enemy: and will defend the coast along and a paynt of the land which doth runne from the East to the West, and reacheth to the Island of Buena Ventura. And put case that the fort which is builded on the other side doth decay, or be taken by the enemy, with this other fort wee may defend the citie very well, if the enemy should chauce to come into the harbour, and bee succoured and holpen by the citizens, and twenty musketters being planted vpon a mount which lyeth ouer the fort, will bee sufficient to defend vs from a good many of our enemies, that shoulde come to assault vs, because all the countrey is full of rockes and stones, and full of mountaines. So from this wood there may a way be made to goe to the citie, and to ioyne with that way which shall goe to Panama; and this may bee done with small charges. This harbour doth lie in nine degrees and one tierce, and if occasion shoulde serue wee may stop by the way which doth goe to Capira, and the rest of the wayes

wayes which goe from Nombre de Dios to Venta de Cruzes, according as it is certified me by the Negros called Simerons; for they told me that this way would not bee very troublesome. Although in the Winter it is reported that there is good store of water in this place, which in the Sommer it is all dzyed up, and where these waters are, there we may builde a causey, to which purpose there are great quantities of stones and timber very serviceable: so this way may bee made with that treasure which your maiestie doeth receiue of the auerages and customes of Nombre de Dios and Panama, which doth amount vnto twelue or foureteeen thousand pezos yearly: and an order might be taken for the same, that the sayd money may serue for the building and repairing of these wayes.

Panama.

Panama is the principall citie of this Dioces: it lieth 18. leagues from Nombre de Dios on the South sea, and standeth in 9. degrees. There are 3. Monasteries in this said city of fryers, the one is of Dominicks, the other is of Augustines, and the third is of S. Francis fryers: also there is a College of Iesuits, and the royall audience or chancery is kept in this citie.

This citie is situated hard by the sea side on a sandy bay: the one side of this citie is enuironed with the sea, and on the other side it is enclosed with an arme of the sea which runneth by into the land 1000. pards.

Panama hath
350. houses.

Negros Simerons
mostall ene-
mies to the
Spaniards.

This citie hath three hundred and fiftie houses, all built of timber, and there are sixe hundred dwellers and eight hundred souldiers with the townesmen, and foure hundred Negros of Guyney, and some of them are free men: and there is another towne which is called Santa Cruz la Real of Negros Simerons, and most of them are imployed in your maiesties seruice, and they are 100. in number, and this towne is a league from this citie vpon a great riuers side, which is a league from the sea right ouer against the harbour of Pericos. But there is no trust nor confidence in any of these Negros, and therefore we must take heede and beware of them, for they are our mostall enemies.

There are three sundry wayes to come to this citie, besides the sea, where the enemy may assault vs. The one is at the bridge which is builded vpon the riuier: and on the one side of this, there lieth a creeke: so on this side the citie is very strong, because it is all soft muddy ground, for in no way they cannot goe vpon it. And right ouer against it there lyeth a riuier which is in manner like vnto a ditch or moate; and on the other side of the Riuier there lyeth a great Lake or Pond which is full of water all the Winter, and part of the Sommer, so that on this side the city is very strong, for with very small store of souldiers this place might bee kept very well.

The best way
to take Panama.

Perico.

The greatest danger for the surprising of this citie is the way that doth come from Nombre de Dios: for all this way is playne ground and no woods: and 2000. pards from this citie there lyeth a riuier called Lauanderas, where the women doe vse to wash their linnen: and this riuier doth goe into the creeke, according as I haue certified your maiestie: and being once past this ritter, there is a causey which goeth directly vnto them. The other way which doth go towards the citie is lower downe towards the sea at a stone bridge lying vpon the way which goeth to the harbour of Perico. These two wayes cannot be kept nor resisted, because it is all playne ground and medowes.

An Island in
the harbour of
Panama.

Vpon the East side of this citie there are your maiesties royall houses builded vpon a rocke ioyning hard to the Sea side, and they doe as well leane towards the sea as the land. The royall audience or chancery is kept here in these houses, and likewise the prison. And in this place all your maiesties treasure is kept. There dwelleth in these houses your maiesties Treasurer, the Lord President, and 3. Iudges, and master Atturney. All these doe dwell in these houses, and the rest of your maiesties officers: which are sixe houses besides those of the Lord President, the which are all dwelling houses, and all adioyning together one by another along vpon the rockes. And they are builded all of timber and boardes, as the other houses are. So where the prison standeth and the great hall, these two places may bee very well fortified, because they serue so fitly for the purpose, by reason they are builded towards the sea, and that there lyeth certaine small rocks, which at a lowe water are all discovered and drie, and some of them are seene at a high water. Right ouer these houses to the Eastwardes there lyeth an Island about five hundred pards from these houses, and the Island is in forme of a halfe moone; and in this order it runneth all along very neere the maine land: so ouer against these houses there lyeth the harbour

harbour where all the shippes doe vse to ride at an anker, after that they haue discharged and vnladen their marchandize. For when they haue their lading aboord, there can come in none but small Barkes, and at a lowe water the shippes are all aground and drie, and so is all the space some thirtie pades from those houses. Right ouer against them standeth the citie.

When newes were brought to this citie of those Pirates which were come vpon this coast, the Lord President and Judges commanded that there should a sconce bee made, and trenched round about, made all of timber for the defence of this citie against the enemy, and to keepe your maiesties treasure. So your officers caused Venta de Cruzes to be fortified, and likewise Chagre, and Quebrada, and fortified the garrison of Ballano: for all these are places where the enemy may land, and by this meanes spoyle all this countrey.

Places good to land in.

There are three sundry places, where this citie may without difficulty be taken, and spoiled by the Pirates. The first is on the North seas in a certaine place which lyeth foureteene leagues from Nombre de Dios, the place is called Aele to the Eastwards, where once before certaine men of warre haue entred into those seas. The other place is Nombre de Dios, although this is a bad place and naughtie wayes, and full of waters and a very dirtie way: for three partes of the yeere the countrey people doe trauell vpon those waters, and an other very badde way, which is the going vp of certaine rockes and mountaines which they must climbe, called the mountaines of Capira, which are of height three quarters of a league, so in this place with very small stoze of souldiers wee can defend our selues from the fury of the enemy, so these dwellers doe say that in Sommer the wayes are very good without either dirt or water.

1. Place. This was Oxenham.
2. Place.

The other entrance is by the riuer of Chagre, which riuers mouth lyeth eighteene leagues from Nombre de Dios to the Westwards falling into the North sea, and this is the place which the citizens of Panama doe most feare, for they may come by this riuer to Venta de Cruzes, and so from thence march to this citie, which is but fine leagues off. So by this riuer there goe boates and barkes which doe carry 320. Quintals waight. These are they which carry the most part of the marchandize which doe come from Spaine to be transported to Peru, and from Venta de Cruzes it is carried to Limaret which is three leagues off that place, and the dwellers doe repute that it is a very good way: and if any men of warre will attempt to come into these seas, they may very easily come by this riuer as farre as Venta de Cruzes, and from thence march vnto this citie, and if the enemy will, they may bring their pinnesses ready made in foure quarters, and so taken in sunder, may afterwards set them together againe: as it is reported that Francis Drake hath vsed it once before when he came that voyage; and so he may attempt vs both by sea and land. And forasmuch as the most part of these people are marchants, they will not fight, but onely keepe their owne persons in safetie, and saue their goods; as it hath bene seene heretofore in other places of these Indies.

3. Place.

The place of most aduantage for the English.

So if it will please your maiesty to cause these houses to bee strongly fortified, considering it standeth in a very good place if any sudden alarms should happen; then the citizens with their goods may get themselves to this place, and so escape the terrour of the enemy: and so this will be a good securitie for all the treasure which doth come from Peru. So all the Pirates and rebels, which haue robbed in these parts, haue gone about what they can to stoppe this passage, and so by this meanes to stoppe the trade of Spaine, and to set souldiers in this place, for to intercept and take your maiesties treasure, whereby none might be caried into Spaine. Therefore it behooueth your maiesty to fortifie these places very strongly.

These places being fortified in this maner, your maiesty shal haue al your gold and siluer brought home in safetie which cometh from Peru. And all those commodities which are laden in Spaine may come safe to this place. And if perchance any rebels should rise in these parts, which would rebel against your maiesty, which God forbid, if they should chace to toyne with any of these pirats, hauing this place so wel fortified, & Puerto Bello in the North parts, & so to send some garrison your maiesty needs not to feare: for here in this harbor are alwayes 10 or 12 barks of 60 or 50 tunnes apiece, which do belong to this harbor. So if any of these places shalbe intercepted, the your maiesty hath no other place fitter then this to land your maiesties souldiers, for then they haue but 18. leagues to march by land, & presently they may be shipped to supply these places which shal stand in most need of them. In al the coast of Peru there is no harbour that hath any shipping but onely this place, and the citie of Lima, where there are some ships and barks. The harbour being thus open without any defence, a man of war may very easily come to this place, as I haue certified your maiesty, thorow the streits of Magellane, & arrive at that instant, when those barks do come from Peru with your maiesties gold & siluer, for sometimes they bring 5 or 6 millions in those barks; so the enemy may come and take al their treasure, & not leese one man, because here is not one man to resist.

Rebellion feared in the West Indies.

5. or 6. millions of gold & siluer.

resist

resist him, therefore this place being thus fortified, the treasure may be kept in the fort. There is a trench made round about your maiesties houses which are builded of timber: the President and Judges did cause it to be made, for that here was newes brought that there were certaine men of warre, & pirats coming for these parts. So this trench is thus maintained until such time as your maiesties pleasure is to the contrary, & in such wise that your souldiers may fight lying behind the trench; so there is order given to build a platfoyme vpon the plaine ground, and so to plant such ordinance in those places, as shall be thought most conuenient.

The harbour
of Perico.

If it will please your maiestie, here we may make a sconce or fort toward the land side, & so trench it round about and build it with stone, because here is a place and al things readie for the same purpose; and by this meanes the citie would be securely kept: as for the sea there is no danger at al, by reason that the water doth ebbe & flow twice a day, and then when it is ebbing water it will be all dry & muddy ground & rocks, so that in no wise at a low water the enemy can wade ouer the mud to come to this city, and it reacheth from the Island til you come to the bridge called Paita. Two leagues from this city there lieth a harbor called Perico downe to the Westward: this is a very sure harbour by reason of 3. Islands which do ioyne in manner of a halfe moone; they lie halfe a league from the maine, the Islands do enclose the harbor round about, the harbour is a very high land, & the Islands are but reasonable high, there is good store of fresh water: also there hath neuer any ship bene cast away in this harbour, for there is 7. fathome water at ful sea, and 3 or 4 fathome at lower water, and very good ground for their ankering, and when they will trimme their ships they may hale them ashore. All those ships and barks which come from Peru with gold, silver or any other kind of commodities, do first come to an anker in this harbour, and if they haue a contrary weather they cannot come into the harbour of Panama; and for so much as the harbour hath no defence for the safegard of the ships, if a man of warre should chance to come into the harbour, all the barks with the treasure may be very easily taken. And likewise these barks & ships which do nauigate in the South seas carrie not so much as one piece of ordinance or a rapier to defend them withall. From this place to Venta de Cruzes is not passing 5 leagues; so that if any pinelle should happen to arrive there, no doubt but they might robbe and take al your treasure which is in those barks, by reason that from the shore they cannot be rescued nor holpen, because it is an Island and refuge for all ships and barks. If it would please your maiestie here might some force or defence bee made in the middlemost Island, and some ordinance planted, and this might bee made with litle charges, because in the said Island there are all kinde of necessaries fit for that purpose, so by this meanes your maiestie may haue both the harbour and the citie very well kept.

Nota.

20 new way
into the south
sea.

And likewise there is another entring into the South sea which is called the riuer of Francisca, which lieth on this side of the Cabeça de Carina, and this riuer doth come into another riuer which is called Caracol, and is five leagues from this citie; and once before these Simerons brought into this place certaine Frenchmen.

The riuer of Chagre.

These five
leagues are
very good
ground on
champion
countrey.

The riuer of Chagre lieth in 9. degrees and one tierce. The mouth of this riuer is in the North seas 18. leagues from Nombre de Dios, and 13. leagues from Puerto Bello: there is caried by this riuer certaine quantitie of those merchandize which are vnladen at Nombre de Dios which come from Spaine. From the mouth of this riuer to Venta de Cruzes are eightene leagues. From this place where the barks vnlade their commodities, they are carried vpon mules to Panama, which is but five leagues off from this place.

This riuer hath great store of water in the Winter. And the barks which belong to this riuer are commonly of 320. Quintals that is of 16. cunnes in burthen: but in the Summer there is but small store of water: so then the barks haue much to doe to get by this riuer: and in many places these barks are constrained to vnlade their commodities; and are drawn by mens strength and force a good way by the riuer, and therefore if it would please your maiestie to command that all those goods may bee first vnladen in Puerto Bello, and there to build a litle castle in the mouth of the said riuer, and at the foote of the caille to build a storehouse to vnlade and keepe all the said goods, and there to build other barks of lesse burthen: then these would serue for Summer, and the great barks for the Winter.

If it would please your maiestie, there might a very good high way be made on the one side of the riuer, and so they might bee tolwed, for it may bee made and not with much cost because it is all plaine ground, and there is growing vpon the said riuer great store of timber and trees which

doe lie ouerthwart the said Riuer; so that they are very cumbersome and great annoiance vnto the said boates, as well those that go by the said Riuer, as also that doe come downe the said Riuer.

And therfore if it might please your maiestie to command, that Puerto belo might be inhabited, and the towne made neerer the Riuer's side, euery thing would be a great deale better cheape, if the commodities were caried by the Riuer: for it is a great danger to cary them by land, for it is daily seene that the mules do many times fall and breake their neckes with their lading vpon their backs, as well the treasure as other kinde of commodities, because it is such a bad way. And your maiestie might be at this charges and spend of your reuenues of Nombre de dios and Panama, which do yerely yeild 12 or 14 thousand pezos, & this being once done it would be a great ayd and benefit to those, which doe trade and trafficke, and to those merchantes which doe send their goods ouer-land, and ease them much of paine and purse, because the other is a most filthy way, as any is in the worlde.

A brieue remembrance of a voyage made in the yeere 1589 by William Michelson Captaine, and William Mace of Ratcliffe, Master of a ship called the *Dogge*, to the Bay of Mexico in the West India.

The aforesaid ship called the *Dogge*, of the burthen of threescore and ten tunnes was furnished, and armed forth with the number of fortie men: it departed from the coast of England in the moneth of May, directly for the West India: It fell with the Bay of Mexico, and there met with diuers Spanish ships at sundry times, whereof three fel into her layle and were forced to yeeld vnto the mercie of the English: the last that they met within the Bay was a Spanish man of warre, whom the English chased, and after three seuerall fightes, vpon three diuers dayes, pressed him so farre that he entreated a parle, by putting out a flagge of truce: the parle was granted, and certaine of the Spaniards came aboard the English. There after conference about those matters that had passed in the fight betwixt them, they receiued reasonable intertainement and a quiet farewell. The Spanish, as if they had ment to requite the English courtesie, invited our men to their shippe, who perlwading themselves of good meaning in the Spanish, went aboard: but honest and friendly dealing was not their purpose, suddenly they assaulted our men, and one with a dagger stabde Roger King's nod the English Pilot to the heart and slewe him, and others were serued with the like sauce, onely William Mace the Master & others, notwithstanding al the prepared trappes of the enemy, leapt ouerboard into the sea, and so came safe to their own ship: and directing his course for England, arriued at Plimouth the tenth day of September 1589, laden with wines, yron, Roans, which is a kinde of linnen cloth, and other rich commodities, looking for the arriual of the rest of his consortes, whereof one and the principall hath not long since obtained his Port. Thus much in generall termes onely I haue as yet learned, and receiued touching this voyage, extracted out of letters sent from the aforesaid William Mace, to Master Edward Wilkin-son of Towre-hill in London. My principall intention by this example is to admonish our nation of circumspection in dealing with that subtile enemy, and neuer to trust the Spanish further, then that their owne strength shall be able to master them: for otherwise whosoever shall through simplicitie trust their courtesie, shall by tryall taste of their assured crueltie.

Spanish
treason.

CERTAIN SPANISH LETTERS INTER-

cepted by shippes of the Worshipfull Master John VVattes

written from diuerse places of the Islandes and of the maine land

as well of *Nueva España*, as of *Tierra Firme* and *Peru*, containing

many secrets touching the aforesaid Countreys, and the state

of the South Sea, and the Trade to the *Philippinas*.

A letter sent from *Hauana* in *Cuba* from the general of the fleet

John de Orimo to the king of *Spain* the 18 of October 1590, touching the

building of certaine excellent Frigats, &c.

It may please your maiestie that at the date hereof one of the Frigates was launched: and three more will be ready against the fleet depart from hence. They are very bigge and excellent of layle, which will carie 150 men a piece with soldiers and mariners. And hauing good ordinance, there are fewe or none of our enemies that can offend vs. For wee shall both leaue and take at all times when

Aaa.

we

we list. But it behooveth your maiestie to send both souldiers and mariners to man the Frigats. For we have great want of souldiers and mariners, with tackling, ankers, powder, shot, calivers, and all kinde of furniture for them. For these things are not here to bee had for money: and likewise to send some great ordinance for the Zabras. For the merchants ships are so weake and so vnprouided, that they haue almost none to defend themselves. Also we shall be constrained to giue the carena againe vnto al the ships; for they are very weake by reason of the long voyage: and the mariners and souldiers are wearie with their long travelling and keeping of them here. Thus if it would please your maiestie to command with all expedition that these souldiers and mariners with al kinde of other furniture might be sent vs, then the fleete may set forward and so procede on their voyage. God preserve your Catholike royal maiestie. At Hauana the 20 October 1590.

Your maiesties seruant, whose royall feet I kisse,
JOHN DE ORIMO General of your Fleete.

A Letter sent from the Gouvernour of *Hauana* *John de Trexeda*, to the King of *Spaine*, the twentieth of October 1590, touching the wants of that place.

By three shippes which departed from this Harbour since the Fleetes arriual here, I haue giuen your maiestie at large to vnderstand, what hath happened as much as I can, and what thing is here to be done in this citie, and what your maiestie must prouide. And now once againe I will returne to put your maiestie in minde thereof. I beseech your maiestie to command to be prouided and to be sent hither two hundred Negros, if you will haue this fortification to goe forwardes: because your maiestie is here at great charges with the master workman and the Officers. And for want of Pioners the worke goeth not forwardes. For as the worke goeth dayly forward and increaseth farther and farther, so we want men to worke, and to garde it, and likewise to keep it. We dare not meddle with those of the Galies. And likewise it may please your maiestie to send new working tooles of yron, according to a remembrance which I haue sent to your maiestie of late, which doeth signifie our wants more at large.

Likewise it is needefull that your maiestie should send powder and match to furnish these forts. And likewise to send money to pay those souldiers which are newly come hither, & for that companie of souldiers which were sent from Mexico to this place. For it behooveth your maiestie not to haue them as yet left, till such time as the defences about the forts bee finished, and that which is in building vpon the hill, which will be ended very shortly if you send the Negros, and yron tooles.

Likewise I haue certified your maiestie, that with all speed I am making ready of the five Frigates, that they may cary all the treasure. Also John de Orimo seeing that it is of so great importance to haue them dispatched, doeth furnish mee with some money, although somewhat scantily, vntill such time as your maiestie doth send him some order therefore. I beseech you to command it to bee done; considering the great charges and expences that we are at here, as by the accounts your Maiestie shall more at large perceiue, what hath bene spent. These Frigates will be made an end of without all doubt by the moneth of Februarie: but as yet their tackling and sayles are not here arriued: but I doe stay the coming thereof euery day, according as the Duke of Medina and John de Ibarra haue written vnto me, that those ships which should bring the same were ready to depart from thence. All these things it behooveth your Maiestie to send in time: for I can assure your Maiestie that you shall not haue vpon the sea such good shippes as these are. For as touching the othere ships of the fleete, which are in this harbour, it is not conuenient to venture the silver in them. This counsell your Maiestie shall not take of mee, for I am a souldier, and haue but small skill in nauigation. But euery day it is tolde me openly and in secret by many of the pilots, captaines, masters, and mariners.

As touching the copper, I haue put it in practise twise more, and haue made prooue thereof: wherein there hath bene more spent, then I was willing there should haue bene, because I haue gotten no fruit thereof: I know not the cause, but that it is not done effectually by those that haue the working thereof. Therefore I beseech your Maiestie to send me that same souldier which I wrote to your Maiestie heretofore of. Our Lord keepe your Maiestie many yeeres. From Hauana the 20 of October, 1590.

Your Maiesties seruant, whose royall feet I kisse,
JOHN DE TREXEDA gouernour of *Hauana*.

A letter

The newe fortification in Hauana.

Souldiers sent to Hauana, to fort vpon an hill.

Five Frigates made at Hauana. John de Orimo General of the Fleete.

The excellency of the great Frigates built in Cuba.

Copper mines newly found in Cuba.

A letter sent to Don Petro de Xibar one of his Maiesties priuie Counsel of the West Indies, from Don Diego Mendez de Valdes Gouvernour of S. Iuan de Puerto Rico the 20 of Nouember 1590, touching the state of that Citie and Island.

Recieued your honour's letter the 20 of Februarie, whereby I receiued great content, to heare that your honour is in good health. As touching the imprisonment of our cousin Don Pedro de Valdes, it doeth grieue me to the very soule. I beseech God to send him his libertie: and likewise the imprisonment of Diego Flores de Valdes grieueth me very much: I pray God to send good iustice. The *P.* of the fiesle Iuan de Texela, and the *P.* workeman

Pedro de Valdes, prisoner in England.

Iohn Baptista Antonio the generall Iuge, honr of the West Indies.

Iuan Baptista Antonio arriued here in safetie, and haue bestowed this Citie with all the circuit round about and the situation as I haue informed his maiestie thereof. They haue marked a place to build a strong Fort, whereat the countrey remaineth very well contente. And it standeth in a good situation, and in a conuenient place on a high mount which doeth lye vpon the entering in of the Harbour, & so cutteth ouer to a point of land, leauing in the Fort as much space as will containe 3000 persons, without toyning thereunto any part of the coast. So the *P.* del campo hath named the fort Ciudadela. He left me great store of yron worke, tooles, eight workemen, and 200 Negros, which are the kings. And the Island doth finde 400 pioners, which are continually at worke. His maiestie hath sent me a warrant to spend the prouision of the Island, & to take those rents which his maiestie hath here, & to certifie his maiestie what there is wanting for the maintaining of the workmen & that they may haue all things necessary. So I haue sent to Nueva Espanna, for such things as are here wanting. I haue writte to the *P.* of the fiesle, which is gone to Hauana, informing him that it doeth greatly import that the worke with all expedition should go forward, seeing that it is begun for the defence of the Island. And we doe defend it as well as we can from the enemy, in respect of the great danger which otherwise might happen, if the enemy should come and finde it begun, and not ended. And likewise that his maiestie would send me that which I do request. And the most principal thing of al is, to send more Negros. And sending me all these things which be needful, I trust in God I shal in short time build up the fort, to defend vs from the enemy. The fort must be builded triangle wise: for it will reach into the bay: and we shal be able to plant in the same 40 pieces of good ordinance, Canon, Demi-canon, and Coluerine. The *P.* of the fiesle, hath promised to send me some from Hauana, for that he is determined to cast some there, by reason of the great store of copper, which now of late is found in Hauana: for here we haue as yet but small store of ordinance to defend vs. I looke for 5 Canons which his maiestie should send from Spaine, with shot and powder, and al kinde of weapons, because that here is great want in the Island. His maiestie hath sent the whole number of 200 souldiers, and in the companie there came two capitaines. The corps de Guard is kept in the market place: and twise in a moneth I muster all the men in the Island, and finde very nere 1500 fighting men, and 80 horsemen. The forte when it is ended will be the strongest that his maiestie hath in all the Indies. And now the people of the countrey sleepe in security. For commonly before, the Englishmen would come and beard vs to the hauens mouth. God keep your honour, and send you long health. From Puerto Rico the 20 of Nouember 1590.

A strong fort newly builded in S. Iuan de Puerto Rico.

This Fort was taken by the Earle of Cumberland, 1598.

Copper mines found nere Hauana, 200 souldiers sent to S. Iuan de Puerto Rico.

1500 fighting men in S. Iuan de Puerto Rico Island. The boldnes of the English.

The Gouvernour DIEGO MENDEZ DE VALDES.

A letter to Iohn Lopez Canauate, Alderman in the towne of Canauate in Spaine written from his seruant Iuan de Porua Canauates, from Hauana the seuenteenth of October 1590, touching the state of the said place.

This is to giue you to vnderstand, that since my departure from S. Lucar I haue writte vnto you twise of mine arriual here, and what successe I haue had. And now you shall vnderstand that I am determined to goe for Nueva Espanna. For I stay but opportunity of time. For here is great watch dayly kept and great looking to the souldiers in keeping of them together, for running away. But neuerthelesse I hope in God, to finde some friend to conuey mee away from hence. This countrey is so close and narrow, that if a man steale not away hidden in some shippe, it is not possible for him to escape, nor to goe a league out out of the towne, no way but by sea. And because the harbour is so close, it is the best harbour and the surest in the world. The harbour is made in this order. The entrie in towarde the land is by a narrow streight chanel, which continueth as long as a calluer shot, and from that place the riuer openeth broader and broader: There are in the entring in, two points which make with the land, whereupon are newly builded two strong forts, which are fortified with very great store of ordinance:

The souldiers run away from Hauana.

The boldnes
of the English.

18 ships built
in Cuba a-
gainst England.

ordinance: besides another strong and famous Forte which is in the Citie, so that it is impossible to take it. There are in these three Fortes, a thousand souldiers in Garison. And likewise here are two gallees to keepe the coast. Yet for all this, the audacious Englishmen being without all shame are not afraid to come and dare vs at our owne doores. Our iourney to goe for England is most certaine in the yeere 1592. Here are making with great expedition 18 ships, which are called Frigats for that effect. They are very strong shippes, and will drawe but very litle water, whereby they may enter amongst the shouds on the bankes of Flanders: they are builded the higher because here is great store of timber and excellent good and incorruptible. It is reported that the fleet will depart from hence in February, by reason that at that time the Englishmen are not departed out of their owne countrey. And thus I rest. From this Island of S. Christopher in Hauana this present day on S. Lukes euen; the 17 of October 1590.

Your Worships seruant, JOHN DE PORVA CANAVATES.

A letter from Mexico, of Sebastian Biscaino to his Father Antonio Biscaino in Corchio in Spaine, touching the great profit of the trade to China, and somewhat of M. Thomas Candish. Written the 20 of Iune 1590.

Acapulco the
harbour where
the ships lie
that goe for
China.

Having written to your worship by a friend of mine at large, now I will bee somewhat short. And this is onely to giue you to vnderstand, that foure moneths past, I came from China, and landed in Acapulco, 70 leagues from Mexico, which is the harbour where the ships that goe downe to China lye: and all the marchants of Mexico bring all their Spanish commodities downe to this harbour, to ship them for that countrey. It is one of the best harbours in all Nueua Espanna; and where the ships may ride most safely without all kinde of danger. For it lyeth vnder a necke of land, and behind a great point. And in this harbour here are foure great ships of Mexico of 600 and 800 tunnes a piece, which onely serue to cary our commodities to China, and so to returne backe againe. The order is thus. From hence to China is about two thousand leagues, farther then from hence to Spaine. And from hence their two first ships depart at one time to China: and are 13 or 14 moneths returning backe againe. And when those two ships are returned, then the other twaine two moneths after depart from hence. They goe nowe from hence very strong with souldiers. I can certifie you of one thing; That 200 ducates in Spanish commodities, and some Flemish wares which I carped with me thither, I made worth 1400 ducates there in the countrey. So I make account that with those silkes, and other commodities which I brought with me from thence to Mexico, I got 2500 ducates by the voyage: and had gotten more, if one packe of fine silkes had not bene spoiled with salt water. So as I sayd, there is great gaine to be gotten if that a man returne in safetie. But the yeere 1588 I had great mischance, comming in a ship from China to Nueua Espanna: which being laden with rich commodities, was taken by an Englishman which robbed vs and afterward burned our ship, wherein I lost a great deale of treasure and commodities.

From Acapulco
to China about
2000 leagues.

Flemish
wares good in
China.
A wonderfull
gaine.

M. Thomas
Candish.

Gold mynes
silver mynes
and pearles,
in China.
Fine linnen
cloth greatly
esteemed in
China.

Not above
one thousand
Spaniards in
the Phillipinas.

If I should write to you of the state of this countrey of China, and of the strange things which are there, and of the wealth of the countrey, I were not able to doe it, in an whole quier of paper. Onely I may certifie you, that it is the goodliest countrey, and the richest, and most plentiful in all the world. For here are great store of golde mynes, silver mynes, and pearle. great store of coten cloth: for the countrey people weareth nothing else but fine coten cloth, which is more accepted then silkes. For here is great store of silkes, & they are good cheape. All kinde of victuals, as bread, flesh, wines and hennies and all kindes of foules, are very plentifull. Here are great store of freriuers. The people are very louing. Here are very faire cities and townes with costly buildings, better then those in Spaine. And the countrey people go very richly apparelled, both in silkes and gold. But here we haue order from the king of Spaine, that a Spaniard may not dwell in China, about 3 yerres, and afterwards they must returne again into Nueua Espanna, and other souldiers must come in their places. The countrey is very vnwholesome for vs Spaniards. For within these 20 yerres of 14000, which haue gone to the Phillipinas, there are 13000 of them dead, and not past 1000 of them left aliue. There is a place in China which is an harbour, called Macaran, which the king hath giuen to the Spaniards freely: which shall be the place where the ships shall come and trafficke. For in this harbour there is a great riuer which goeth vp into the maine land, vnto diuers townes and cities, which are neere to this riuer. And thus troubling you no farther I rest. From Mexico the 20 of Iune 1590.

Your obedient sonne, SEBASTIAN BISCAINO.

A letter

A Letter of Bartholomew Cano to Peter de Tapia in Sinill, from Mexico the 30 of May 1590, touching the state of *Nueva España*, and the Fleet of that yeere.

BEcause I haue answered your letters which I haue receiued in the last Fleet, as touching that matter I haue no more to say. The occasion of my writing vnto you at this time, is to giue you to vnderstand, that those commodities which came in the last Fleet, were sold at the first good cheape, and those that bought them, got much by them. For now at this instant white Roan cloth is solde for 8 or 9 reals a bare. The cause of this was, by reason there came a carauel of Aduise from Hauana; which brought vs newes, how the armie that his maiestie did send for England, was all spoiled and cast away: and therefore they of Spaine did write that there would come no Fleet from Spaine hither this yeere: And this is the cause that all linnen cloth is very deere in these parts. Wines also are very deere: for they are sold for 90 and 100 deninas a pipe. When the Frigats departed from hence in August last 1589, Cochinilla was sold at that instant for 50 pesos the quintall; and now it is sold for 55 pesos. And since that newes came from Spaine in a carauel of S. Lucar, that it was solde there for 72 ducats the quintall, there are laden in this Fleet 14000 Arouas of Cochinilla, and 7000 Arouas more were laden in the Frigats which departed before the Fleet. There is laden in the Fleet great quantitie of treasure, more then hath bene sent to Spaine these many yeres, both for the Kings and the Vice-royes account. And the marchants and gentlemen of all these prouinces doe send great quantitie to supply the Kings wants: for that his maiestie hath written to the Vice-roy and to the gentlemen of these countreyes to ayde him with much money towarde the maintenance of his warres against France and other places, & therefore they haue sent good store: God send it well to Spaine. There are likewise laden aboard the Fleet to the number of 100000 hides, and great store of other kindes of this countrey commodities. So that the Fleet goeth very richly laden. Quicke siluer is here very deere, for here is almost none to bee had for any money to worke in the gold mynes: for without Quicke siluer wee cannot refine our gold. And no man vpon paine of death may bring any from Spaine hither; but all must come for the Kings account: and so the King doeth sell it here: there is exceeding great gaine therein. And thus I rest:
From Mexico, the 30 of May 1590.

BARTHOLOMEW CANO.

A letter of Frier Alonso new elected Bishop of Mechuacan, to the king of Spaine, written in Peru in the citie de los Reyes the first of March 1590, touching the state of Arica a chiefe Hauen in Peru.

Vpon Christmas euen the yere 1589, I receiued your maiesties commission in Potossi. For which I am and shall be continually bound to pray for your maiesties long health, for the great benefites which your maiestie hath bestowed vpon me, in sending me to Mechuacan: whereby my great trauell and paines may be recompenced, which I haue taken with that vngateful and desperate people of the riuer of Plate, which they haue bene the occasion of, in dealing so badly with me their Pastour, which haue counselled them, that they should haue a great care to serue God, and be dutifull to your maiestie, according as euery good and true subject ought to do. Now for this gift which your maiestie hath bestowed on me, I most humbly kisse your maiesties handes a thousand times. Thus presently I departed from Potossi somewhat sickely, to accomplish that which your maiestie hath commanded me. So I arriued at Lima in safetie the first of February by the way of Arica, which is an hauen towne, where they imbarke all the barres of siluer. And there I haue seene what is done, & what they haue prouided against the Englishmen in that hauen: which is, That there is a litle fort made hard by the waters side, with certaine small pieces of ordinance in the said fort to offend the enemy, if occasion should serue that they should offer to come into the harbour and offer any violence. But the principall thing of all that we want is to haue souldiers, foote men, and horsemen. For according as I am informed, here want 100 men which should keepe the coast, if they should offer to land and march by into the countrey. And likewise the people of this countrey haue told me, that if vpon an high mount which is here in the harbour neere to the hauens mouth, on the Southside of the harbour where the sea doth beat, ther were two or three great Canons planted on the top of the hill, (where very good watch is continually kept) from that place they may reach to doe the enemy great hurt, a league into the sea. The new Vice-roy Don Garcia Verrado de Mendoza, worthy of that dignitie, is in great fauour with al those of these

The people of the Riuer of Plate.

100 men wanting.

Good watch continually kept.

realmes : for that he is a great solliciter both by sea and land in all kinde of diligence, not loosing one houre in your seruice, and that which he hath in charge. With as much speed as may be I will depart from hence to Mechuacan, to serue that church and your maiesty : and there I will remaine according to your maiesties commandement, with the bulles or indulgences. Our Lord keepe your maiesty many yeres in his holy seruice. From the city de los Reyes the first of March 1590.

Frier Alonso bishop of Mechuacan.

A letter of Don Iohn de Miramontes Suasola to Don Iohn Garcias de Penafloa from Arica on the coast of Peru the tenth of March 1590.

After my long trauell and hadde successe, my fortune brought mee to the Indies; where being void of all hope, and full of griefe, I am become a souldier : a thing in this countrey which is most hated of all other things, not onely of men, but of the wilde beasts : and is an occupation which is chosen of idle persons. The occasion of this is, that there haue bene in these seas, and yet are certaine English rouers : and in seeking of them I haue trauelled these thre yeres : the one of the yeres a souldier, and the other two yeres I haue gone for captaine and ensigne-bearer. And at this time here is arriued Don Garcias Vrtado de Mendoza viceroy of these realmes : who hath chosen me to be chiefe ensigne-bearer of an army which departed from hence to scoure the coast. For here we haue newes of the enemy, which is comming vpon the coast : for wee haue stayed for their comming these foure moneths the same way which they must come, in a haven called Arica, which is the first entry of Peru. So I haue 90 pezos a moneth, besides other profits, at nine reals the pezo; & foure shares at nine reals the pezo. So that I haue 1800 pezos euer yere of pay : for the viceroy is my vere friend, and maketh great account of me. And I haue alwayes 400 ducats in my chest to goe like a man. I beseech God send vs quietnesse. But yet it is the part of a gentleman to serue the king his master in these actions. And thus I rest. From the harbour of Arica the tenth of March 1590.

I kisse your worshipps hands, and am at your commandement

Don Iohn de Miramontes Suasola.

There are foure great galeons of 350 tunnes a peece, which are in Arica men of warre, with a Generall, Admirall, Viceadmirall, with great store of souldiers which keepe this haven : for the viceroy hath intelligence that there are certaine Englishmen of war comming thither. This haven of Arica is the best harbour in all the South sea : for all the siluer which cometh from the mines of Potosi, is shipt in this harbour, and so brought to Lima. And likewise all the commodities which come from Spaine, and all the kings quicksiluer, is unladen in this harbour, and so carried to the city of Lima and other places, where the mines of siluer are.

A letter of the Licenciado Christopher Vslano to Gonfalu de Solana in the city of Encisa in Spaine, written from the city of Potosi in Peru the 20 of Iuly 1590, touching a great plague in Peru, and the shortnesse of the passage from the riuer of Plate into Potosi in Peru.

The last yere 1588 I receiued letters from your worship and from my sister : and since that time I haue receiued none, nor in the fleet which came to Cartagena 1589. And this yere 1590 there hath bene great want of corne in this kingdome of Potosi : for that there hath bene no raine in this kingdome of long time. For in March the husbandmen vse to sowe their corne : and in Aprill Winter doth begin. And if in April there be no raine, the corne which is sown will consume away : and so for want of raine we haue had two hadde yeres of corne. And likewise here hath bene in these countreys of Potosi, and in the city De la paz, great sicknesse among the Indians, Mullatos, and Mesticos, called the small pocks, and a certaine plague, which hath destroyed all this countrey. And there haue no olde people died, nor Spaniards, but onely this countrey people, from one yere to 30 yeres of age : so for want of Indians we can not worke in the mines. This sicknesse runneth al along the coast of Peru, and hath passed into the streights of Magalanes, whence we haue newes that those souldiers which were sent from Spain thither to build those forts are most of them dead, & especially the workemen which came to make the forts. The Generall Don Diego de Abols hath written to his maiesty to send more souldiers and more workemen, whereby these three forts might be builded according to the kings commandement. This sicknesse came first from Cartagena to this countrey, which is 1000 leagues distant : and, as I sayd, it hath gone all Peru ouer,

Plague.

to the utter undoing of this countrey: I pray God to cease it. I pray you when you write any letters to mee, send them in those shippes which come to Sain& Thomé, and take in Negros. And there are great store of ships which goe to Sain& Thomé for Negros, and it is but 15. dayes sailing ouer a gulfie to Brasill. And from Brasill their shippes bring their Negros to a haven called The haven of Buenos Aeres, which is within the entrance of the mightie river of Plate. And from this harbour all kinde of Spanish and Portugall commodities are caried to this citie of Potosi in carts and on horses: for it is but 10. or 12. dayes iourney, and the countrey is very plaine for carts to trauaile. And from Potosi to this harbour is great store of treasure brought to buy that countrey commodities, and so they are shipped for Portugall: and the ships go and come againe in short time. If his maiestie will consent that we may haue traffique from Spaine to this harbour, it will be very profitable: and in five or sixe moneths I shall heare from you, & you shall doe the like from me. And by the way of Cartagena it is sometime 2. yerres before we can receiue your letters from Spaine. By this way my brother may write, and so by this meane the letters may speedily come to my hand. And thus I rest. From this citie of Potosi the 20. of July 1590.

VSLANO.

A letter of Steuen de Tresio to Alonso Martines Vaca in Siuil from Pa-
nama the 21. of August 1590. touching the kings desire to borrow money
vpon priuie seales, and the want of the countrey.

It may please your worship to vnderstand, that I haue receiued a packet of letters from you, wherein you write vnto me of the great miseries and the calamities of Spaine. And I promise you that these countreys are in no lesse. For here is great want of corne and other kind of prouision: for here is almost none to be had for any money, by reason that from Lima there is no shipping come with maiz. Here wee haue had newes from Spaine of the great prouision which is making ready for those great wars which his maiestie is in preparing, & of the great sums of money that his maiestie standeth in neede of: So that it doth put vs all that are dwellers here in such a perplexitie and confusion, that we know not what we shall doe. I pray God his maiestie take not away our money which wee haue sent to Spaine in the flecte. For here are marchants that haue sent some 200000. pezos, some 100000. pezos, some 60000. some more some lesse, to haue it imployed in commodities of that countrey. Although the king hath sent hither his scedule or bill of assignement signed and sealed by his maiestie, which hath bene proclaimed here: The contents whereof are, That what man soeuer marchant or other will lend their money into Spaine in that flecte, his maiestie will not take away any part or portion thereof, (which in so doing will bee a great comfort vnto vs all) yet here we were in doubt that hee would take it from vs all. Newes from the citie of Lima as yet we haue none: But I can certifie your worshippe, that all things are very deere here, and that we stand in great extremitie for want of victuals; and likewise we haue great want of money. Also here is order come from the king with certaine priuie seales for to lend his maiestie money, for that hee hath great neede thereof. This countrey at this instant is very poore, and there are none that can lend the king at this time any money at all, by reason that this lande is left so vnprouided of money: But we are looking for great store of money, which is to come from Lima and from The Valles.

ney sent into
Peru.

Abundance of
money to come
from Lima and
from The Val-
les.

From Panama the 12. of August 1590.

STEVEN de TRESIO.

A letter of the Licenciado Iohn de Labera to the Licenciado Alonso
Sapata de Henao in Castile in Calamea de la Sorengo, written from S. Fee de Bogo-
za in the new kingdom of Granada, the 10. of May 1590. touching therich siluer mines
of Marequita newly found out, and the long way thither by the river of Magdalena.

In other letters which I dispatched fro hence in August 1589. I wrote vnto your wor-
ship by 2. or 3. wayes: but I know not whether you haue receiued them or no. Presently
after I departed to the gouernment of Popayan, which ioyneeth with the citie of Quirio
in the coast of Peru, in companie of the gouernours lieutenant Don Diego Ordenez de
Lara

The citie of
Santa Fee in the
new kingdom
of Granada.

Great store of
metal found
in the newe
mines of Ma-
requita.
The great ri-
uer of Magda-
lena.

The richest
mines in all
Peru.

Lara of Salamanca. But I was faine to forsake his companie by reason I fell sicke in the citie of Marequira, where they haue discovered the great siluer mines: which citie is about 200. leagues from Cartagena: where I remained a certaine time very sicke. And because this countrey is extreme hotte, and I euery day grewe worse and worse, I was faine to traualle 30. leagues further by into the maine land to a citie called S. Fee in the new kingdom of Granada, being on the coast of Peru: which is a cold countrey: where I am admitted a procurator, for that the Roial audience is kept in this citie. So I finde my selfe very healthy of bodie, by reason this countrey is full of all kind of victuals, very good and very plentifull, as bread, cheese, bacon, beefe, great store of hennes, and great store of comfiteures. Onely here is want of golde: so that this countrey will be utterly vndone, if the mines of Marequira help not to restore the same again: whereof there is good hope: for here is great store of metall already found, and the workmen are in hand to refine the said metal: so that we are in good hope that great store of siluer will be found in these mines of great value and profite to his maiestie. This riuer is called The great riuer of Magdalena. There is a fish in the riuer called Cayman, which followeth after the canoas: and if it can reach any man in the canoa, it will haile him out and deuoure him. All night they lie in the sand on shore. In this riuer as we are going by, there is at certaine seasons great store of lightning and thunder, with such abundance of raine, as though the skies would fall downe: and so it doth continue from midnight vntil morning: so that we are faine to go aboard the canoas, & with certaine broad leaues which grow in the countrey, the mariners make a couering to cast ouer the wares which are laden in the canoas: and it doth keepe both the raine & sunne from vs which are passengers. The canoas are drawen by this riuer of Magdalena by maine force of the mariners in rowing and haling them with ropes. There are 7. or 8. Indians commonly which guide these canoas, besides the Master which keepeth the helme, and the passengers. We are commonly two moneths in going by this riuer. It is 150. leagues to the landing place. And there the marchants vnlade their marchandise, which serue for all the cities and townes which are in this newe kingdom of Granada. And the marchants lade the canoas backe againe from thence with great store of siluer and golde which is gotten out of the mines for Cartagena, and there it is shipped for Spaine. And likewise here is great quantitie of treasure laden in the sayd canoas which is for the kings custome and other dueties which are paid: But they are but a moneth or three weekes going downe the riuer to Cartagena. These are the richest mines in all Peru. And thus I rest.

From Santa Fee de Bogota in the new kingdom of Granada in Peru the 10. of May 1590.

The Licenciate IOHN de
LABERA.

A letter of Hieronymo de Nabares to the licenciado Iohn Alonso dwelling in Valladolid, written from Panama to Siuil the 24. day of August 1590. touching the gainefulnes of the trade to the Philippinas, and the extreme feare they haue of the Englishmen.

At long agoone I wrote to your worship from Panama by the way of Hauana: giuing you to vnderstand of my being here, & of the state of these countreys. After I departed from Spaine, in 37. dayes wee arrived at Cartagena: and from thence I tooke shipping to goe to Nombre de Dios, which is 80. leagues from Cartagena: and in 4. dayes wee got thither. And from thence I went to Panama: where I haue remained these 20. dayes, till the shippes goe for the Philippinas. My meaning is to carie my commodities thither: for it is constantly reported, that for euery hundred ducats a man shall get 600. ducats cleerely. Wee must stay here in Panama from August till it be Christmasse. For in August, September, October and Nouember it is winter here, and extreme foule weather vpon this coast of Peru, and not nauigable to goe to the Philippinas, nor to any place else in the South sea. So that at Christmasse the shippes begin to set on their voyage for those places: and then in these parts the summer beginneth with very faire weather, and alwayes we shall haue the windes with vs. For in July vntil October here is terrible thundering and lightening with extreme raines, so that it is not possible to go any way in this countrey. Here are in Panama 10. great shippes of 500, 400, 300, & 200. tunns apiece, & some 15. barkes which vse commonly to saile in the South sea to Lima, to the Valles, to Arica, and to the Philippinas. This countrey

The great pro-
fite of the trade
to the Philippi-
nas.

countrey in the summer is so extreme hotte, that it is not possible to trauele in the day time: it standeth in 8. deg. & 1. and all this coast is in 9. and 10. deg.. Here is great store of adders, snakes and toades, which are in the houses, but they doe but small hurt. Here bread, wine, and bacon are very deere, by reason the countrey doth not yeeld it: for it is brought from Peru. A li. of bread is worth here 2. rials of plate: a quart of wine is solde for 4. rials: for none groweth here. Here are very few sheep, and those extreme deere. The only food here for flesh, are oxen, kine, buls & heifers: you may buy 20. li. of beefe for one rial of plate. Their smallest money of siluer is a rial of plate, & very few of them, but all pieces of 4. & 8. For the siluer mines which dayly be found in Peru be wonderfull to bee spoken of. If a man did not see the siluer made, hee would neuer beleue it: for the very earth which commeth out of the mines, & is afterward washed, being but 3. or 4. peres on a mount, yeeldeth great store of siluer afterwards againe. But as here we get much, so our charge in meat, drinke and apparell doth cost very much. As for fruite here is none that is good, but onely mulke melons, and they are sold for 6. or 8. rials apiece. I can certifie your worship of no newes, but only, that all this countrey is in such extreme feare of the Englishmen our enemies, that the like was neuer seene nor heard of: for in seeing a saile, presently here are alarmes in all the countrey. I pray you to write vnto me as touching the wars that his Maiestie hath with our enemies, and howe his Maiestie doth preuaile. And thus I rest. From Panama in the firme land the 28. of Aug. 1590.

Twenty li. of
beefe may bee
bought for five
pence in Peru.

The English-
men extremely
feared in Peru.

HIERONYMO de
NABARES.

A relation of a memorable fight made the 13. of Iune 1591. against certaine Spanish ships & gallies in the West Indies, by 3. ships of the honorable sir George Carey knight, then marshall of her Maiesties household, and capitaine of the Ile of Wight, now lord Hunsdon, lord Chamberlaine, and capitaine of the honourable band of her Maiesties Pensioners.

The 13. of Iune 1591. being Sunday, at 5. of the clock in the morning we descried 6. saile of the king of Spaine his ships. Four of them were armadas, (viz. the Admirall and viceadmirall of 700. tuns apiece, and the other 2. of 600. apiece) and the other 2. were small ships, each of them about 100. tuns. We met wth them off the Cape de Corrientes, which standeth on the Iland of Cuba. The sight of the foresaid ships made vs ioyfull, hoping that they should make our voyage. But as soone as they descried vs, they made false fires one to another & gathered their fleet together, lying all close by a wind to the Southwards. We therefore at 6. of the clock in the morning (the wind being at East) hauing made our prayers to almighty God, prepared our selues for the fight: And (in hope they had bene of the Cartagena fleete) wee bare vp with our admirall and viceadmiral, to determine of the combate for the better directio therof. Our parle being ended, our admirall, viceadmiral, & the Hopewell gaue their admirall the prow, bringing themselves to leeward of him. We in the Content bare vp with their viceadmiral, and (ranging along by his broad side aweather of him) gaue him a volley of muskets and our great ordinance: then comming vp with another small ship ahead of the former, wee hailed her in such sort, that shee payd roome. Thus being in fight with the little ship, we saw a great smoke come from our admirall, and the Hopewell & Swallow forsaking him with all the sailes they could make: whereupon bearing vp with our admirall (before we could come to him) we had both the small ships to windward of vs, purposing (if we had not bene too hotte for them) to haue layd vs aboard. Thus (the fight continuing between vs and them 3. houres) we were forced to stand to the Northwards, the Hopewell and the Swallow not comming in all this while to ayd vs, as they might easily haue done. Our admirall by this time being in fight with their viceadmiral, and another great ship of theirs, stood off to sea with his topgallant saile, and all the sailes he could make: then might the Hopewell & the Swallow haue payd roome to second him, but they failed him as they did vs, standing off close by a wind to the Eastward. All this time we were forced to the Northwards with 2. of their great ships and one of their small. They hauing a loom gale (wee being altogether becalmed) wth both their great ships came vp faire by vs, shot at vs, and on the sudden furled their spritsailes & mainsailes, thinking that we could not escape them. Then falling to prayer, we shipped our oars that we might rowe to shore, & anker in shallow water where their great ships could not come nie vs. for other refuge we had none. Then 1. of their small ships being manned from 1. of their great, & hauing a boat to rowe themselves in, shipped her oars likewise & rowed after vs, thinking wth their small shot to haue put vs to our oars, until y^e great ships might come vp with vs: but by y^e time she was within musket shot, the

the Lord of his mercie did send vs a faire gale of wind at the North-west off the shore. What time (they being all to leeward of vs) wee stood to the East. The small ship was vnder our lee within Falcon shot, and another great shippe lay to the Westward, so that wee could no way possibly escape them vpon that boord: then (we thinking to auoyd them by casting about to the Westwards) the other great shippe gate vnder our lee, and the small ship on our weather quarter, purposing to make vs pay roome with the great ship, by force of her small & great shot. Then (we being lea boord tacked, and they sterboord) we made her spring her loofe, and by a fortunate shot which our gunner made, pierced her betwixt winde and water. Hereupon shee was forced to lay herselfe vpon the carena, and to stand with one of the other ships for ayde. Afterward (commending our selues to almightie God in prayer, and giuing him thanks for the winde which he had sent vs for our deliuerance) we looked forth and descried two saile more to the offen: these we thought to haue bene the Hopewell, and the Swallow that had stood in to ayde vs: but it prooued farre otherwise, for they were two of the kings gallies. Nowe hauing a loome gale of winde, wee shipped our oars, and rowed off the shore: and our watch was no sooner set, but wee espied one gallie vnder our lee hard by vs, boging vp with vs. Then (because it was euening) one of the great ships discharged fire great shot at vs, to the ende the gallies should knowe that wee were the shippe they looked for. Then the gallie came vp, and (hauing vs of whence our shippe was) a Portugall which wee had with vs, made them answere, that we were of the flecte of Tierra firma, and of Siuil: with that they bid vs amaine English dogs, and came vpon our quarter star-boord: and giuing vs fise cast pieces out of her prow, they sought to lay vs aboord: but wee so galled them with our muskets, that we put them from our quarter. Then they winding their gallie, came vp into our sterne, and with the way that the gallie had, did so violently thrust in the boordes of our captaines cabbine, that her nose came into it, minding to giue vs all their prow, and so to sinke vs. But wee being resolute, so plyed them with our small shot, that they could haue no time to discharge their great ordinance: and when they began to approach, wee heaued into them a ball of fire, and by that meanes put them off: wherupon they once againe fell asterne of vs, and gaue vs a prow. Then hauing the second time put them off, wee went to prayer, and sang the first part of the 25. Psalm, prayling God for our safe deliuerance. This being done, we might see 2. gallies and a frigate all three of them bending themselves together to encounter vs: hereupon we (eetsoones commending our estate into the hands of God) armed our selues, and resolved (for the honour of God, her Maestie, and our countrey) to fight it out till the last man. Then shaking a pike of fire in defiance of the enemy, and weauing them amaine, we had them come aboord: and an Englishman in the gallie made answer, that they would come aboord presently. So managing our selues to our furniture, and euery moment expecting the assault, wee heard them parle to this effect, that they determined to keepe vs companie till the morning, and then to make an end with vs: then giuing vs another shot from one of the gallies, they fell asterne. Thus our fight continued with the shippes and with the gallies, from seuen of the clock in the morning till eleuen at night. Howbeit God (which neuer faileth them that put their trust in him) sent vs a gale of winde about two of the clocke in the morning at Eastnortheast, which was for the preuenting of their crueltie, and the sauing of our liues. Also (the Lord be praised for it) in all this dangerous fight, wee had not one man slaine, and but 2. hurt: but our sayles and ropes were so rent with their shot, that it was wonderfull to behold: our maine mast also was shot cleane through, whereby wee were in exceeding great danger. Thus our confortes forooke vs, and left vs in these extremities. The next day being the 14. of June in the morning, wee saue all our aduersaries to lee-ward of vs, and they espying vs, chased vs till 10. of the clocke, and then seeing they could not preuaile, gaue vs ouer. So that day about 5. of the clocke in the afternoon, we bare vp to the South-west, in hope to finde our confortes, but we had no sight of them at that time, nor afterward. Then stood we in all that night for the Cape of S. Anthonie, hoping there to see our Admirall according to his direction. The 15. day of June early in the morning, we descried the Spanisch flecte againe, being within 5. leagues of Cape S. Anthonie. Then (hauing no sight of our confortes) wee stood for the place according to the direction of our owner sir George Carey, where we did plie for the space of 23. dayes, and neuer could see any sayle but two frigats, which wee gaue chase vnto the 24. of June, and could not fet them vp. Thus wee giue God most humble thanks for our safe deliuerance from the cruell enemy, which hath bene more mightie by the prouidence of God, then any tongue can expresse: to whom bee all prayse, Honour, and glorie, both now and euer, Amen.

Appendix.

The barke called The Content had but one Pinion, one Falcon, one Saker, & 2. port-bales. She continued fight (from seuen in the morning till sunset, with 3. armadas of 600. and 700. tunnes

the fight from
7. in the morn-
ing till 11. at
night.

tunnes aptee, and one small shippe of 100. tunnes, not being aboute musket shot from any of them. And before the sunne was set, there came vp to her two of the kings gallies. Besides, the Armadas shot their great ordinance continually at her, not so few as 500. times. And the sides, hull, and mastes of the Content were sowed thicke with musket bullets. Moreouer, all their sheats, tops and shrowdes were almost cut insunder with their great & small shot. There passed from the gallies (each whereof came thise vp to her, & discharged fise great pieces at a time, out of euery their prowes forthright, within three yards of her poope) through her maine saile 19. great shot, through her main top-saile foure: through her fore-saile seuen: through her fore-top-saile fise: and through her maine maste one. The vpper part of the Content was hurt in fise places. Onely 13. men continued this fight, the rest being in holbe.

A frigate of the Spaniards (being afterward taken) confessed, that there were in the gallies about 40. Spaniards slaine, and many were hurt in that combate.

The names of those 13. persons that continued the fight.

Nicolas Lisle, Capitaine,	}	Charles Creame.
M. Major, Lieutenant.		Thomas Godfrey.
William King, Master,		Giles Thornton.
Iohn Barwick, Mrs. mate,		Iohn Pells.
William Clement, gunner.		Iohn Bourel.
Thomas Houldships,		Ralph Grey.
Bote-swaine.		William Heore.

The names of the rest be these following.

Iohn Pic.	}	Iohn Twopenie.
Iohn Smith.		Edmund Giggs.
Iohn White.		William Bateman.
Iohn Butcher.		William White.
Iohn Brooke.		Laurence Shellie.

A true report of a voyage vndertaken for the West Indies by M.

Christopher Newport Generall of a flete of three shippes and a pinnesse, viz. *The golden Dragon* Admirall, whereof was Capitaine M. *Newport* himselfe; *The Prudence* Vice-admirall, vnder the conduct of Capitaine *Hugh Merrick*; *The Margaret* vnder Capitaine *Robert Fred*; and *The Virgin* our pinnesse vnder Capitaine *Henry Kidgil*: Begun from London the 25. of Ianuarie 1591. Written by M. *Iohn Twitt* of *Harewich*, Corporall in the *Dragon*. In which voyage they tooke and burnt vpon the coast of *Hispaniola*, within the bay of *Honduras*, and other places, 3. townes, and 19. saile of shippes and frigats,

On the 12. day of February An. 1591. we set saile from Douer roade, and hauing a prosperous winde, the 27. day of the same moneth wee fell with Cape Cancin on the coast of Barbarie, and on the 28. wee arrived at Santa Cruz roade, where hauing refreshed our selues some 3. or 4. dayes, we put off to sea againe, and about the 5. of March wee passed by the Islands of the Canaries: and hauing a fauourable wind, the 4. of April An. 1592. we fell with Dominica in the West

Indies: where making stay a day or two, wee bartred with the Saluages for certaine commodities of theirs, viz. Tabacco, hemmes, Potato rootes, &c.

Passing from thence to a watering place on the other side of the cliffe, wee tooke a Portugall ship of Lisbon of 300. tuns, which came from Guinie, and was bound for Cartagena, wherein were 300. Negros young and olde. Which ship we tooke along with vs to S. Iuan de Puerto rico, where we landed the marchant and one Spaniard more within a league of the towne, and landing some 20. or 30. musketers, some 20. horsemen made towards vs; but wee retired to our boates without any seruice done.

The 9. we lay houerling all day before the towne, the castle making a shot or two at vs.

The reason why wee set the Portugall marchant aland there was, for that he hoped to helpe vs to some money for his Negros there, but he falsified his worde with vs, so that passing along to the Westermost ende of the layde Island, about some 9. or 10. leagues from the towne wee landed the Negros, and sunke their ship.

The

The 11. of Aprill we passed from thence to Mona some 15. leagues off, where we landed: there were on the Island about 19. soules, the children of an olde Portugall, and his wife who afforded vs such fruits as their Island yeelded, viz. swines flesh, Potato rootes, &c.

From thence along wee passed to Saona, a long Island and very fruitfull, replenished with store of wilde beastes and swine, where we landed, hunted, and trained our men.

Passing from hence Westward along the South coast of Hispaniola, wee descryed a frigate, which wee chased and tooke; wherein were 22. farres of copper-money, being bound for S. Iuan de Puerto rico, to buy wine there.

The next day we tooke 2. small frigats more, but nothing of any value in them.

The 15. of Aprill at night wee sacked a towne in the sayde Island of Hispaniola called Ocoa, where was an Ingenio, wherein we found sugar & poultrie great store, but the people had discovered our ships ouer night, and were fled into the mountaines. This towne standeth a league from the seaside, consisting of some fortye or fiftie houses. They brought vs much cattell, and two wayne loades of sugar, to ransom the towne. While this action was perfourmed, Robert Freed of Harwich, captaine of the Margaret, tooke two frigats with certaine Spaniards on the other side of the bay, which came to lade sugar there at an Ingenio.

After we had here refreshed our selues, wee stode along for Cape Tiburon, where we watered: and making no stay there, about the 23. of Aprill wee left our shippes in a faire road-sted vnder an Island not inhabited, and with our frigats which wee had taken before, wherein wee shipped all our strength which possibly wee could afford, leauing onely so fewe aboard our shippes as could hardly if neede had bene, haue wrought them; we passed along by the sayd Island to the North-west part of Hispaniola, to a towne called Yaguana; where the 27. in the morning 2. houres before day we landed; but wee were discovered by meanes of a frigate that lay laden with victuals, bound for Carthagena, the men of which frigate recovering on lande before vs, gaue an alarme to the towne, who were presently vp in armes to the number of a hundred & fiftie hozles. Wee marched notwithstanding along to the towne, hauing a Spaniard for our guide, where by that time the day brake, we were before the towne, where vpon a faire greene making a stand, we were encountered by the hozlemen hauing no strength of foote, but certaine few loose shot which lay in a low valley at the entrie of the towne. The hozlemen charged vs very fiercely, but seeing they could not preuaile, brought in a droue before them of two hundred beastes or more: and so forcibly thinking to haue broken our array, it pleased God to cause their cattell to retorne backe vpon themselves: and thus their owne deuice sorted out to their owne detrimēt. In this skirmish wee slew their gouernour, a man very hardy, and of great valure.

In the end, by reason of the Spaniards brags which they gaue out, (as by the life of their wiues and children, &c. that not one of vs should goe aboard againe) a greater doubt of intercepting of vs and of our boates was stroken into our captaines hearts then needed: and so for that time we retired to our boates not entring the towne, and so passed with our boates to our ships againe; where the same night our captaine determined to goe vp with our shippes, but it fell so calme, that all the next day untill night we could not get vp, and they hauing discovered vs, baricaded vp their way, and conueyed all that they had into the mountaines, leauing their houses chely bare and naked; notwithstanding we landed, and with great difficultie wee passed their baricados with the losse of two men at both conflicts, entred their towne and fired it, leauing not an house vnburnt, being a towne of threestreets hauing about 150. households.

The same night wee passed with our boates to a small village called Aguaua, where we found excellent fruites of the countrey, which by reason of their cowardly brags wee also set on fire.

Being thus frustrated of our pretended voyage, we stode for the bay of Honduras, and about the ninth of May we discovered in the afternoone a saile thwart of the bay of Truxillo, with whom we stode, and hauing a Spanish flagge out, they mistrusted vs not, untill we had almost set them vp: and then wee went off with our boate, and tooke them within shot of the castle, and with our boates wee went and set thre or foure frigats which rode afore the towne, the castle playing vpon vs with their ordinance.

Our captaine hauing vnderstanding by the Spaniards, that there were thre shippes more at Puerto de Cauillos, stode along that night for that place, but it fell out to bee so calme, that it was the fifteenth day of May or euer wee came there, the shippes hauing peraduenture discovered vs, stole alongst the shoare towards Truxillo, so that being voyde of that hope, we landed; the inhabitants forsaking the towne, fled into the mountaines. Wee remained in the towne all night, and the next day till towards night: where we found 5. or 6. tuns of quick siluer, 16. tuns of old sacke, sheepe, young kids, great store of poultrie, some store of money, & good linnen, silkes, cotton-cloth, and

This towne
standeth from
the waters
side a league.

They thought
some here had
bene come
from Spaine,
for so they ex-
pected.

and such like; we also tooke three belles out of their church, and destroyed their images. The towne is of 200 houses, and wealthy; and that yere there were foure rich ships laden from thence: but we spared it, because wee found other contentment. And hauing taken our pleasure of the towne, as aforesayd, wee returned aboard our ships, standing backe againe for Truxillo, we discovered one of the shippes which was laden at Puerto de Cavallos: but they had espied vs before, as it should seeme; for they had conueyed away as much as possibly they could ashore, and set their ship on fire; which so soone as we had discerned, we made to her with our boats, and quenched the fire, and loaded by with hides the shippe which we tooke at our first comming; for she had but a thousand hides in her, and certaine tarres of ballamum: which being accomplished, wee sunke the shippe with the rest of the goods, and so stood alongst againe for Truxillo. It fell out to be so calme, that we were two and twenty dayes sailing backe that we had sailed in five dayes, which was about forty leagues: so that when we came before Truxillo, which was about the fifth of June, we found another of the ships there, but close vnder the castle, her rudder vnchanged, her sailes taken from the yards, &c. notwithstanding we entered her, but they had placed such a company of musketiers vnder a rampire, which they had made with hides and such like, that it was too hote for vs to abide, and so betaking vs to our shippes againe, and standing out of the bay into the sea, wee discovered great store of shot intrenched in those places where they suspected we would haue landed. That night there fell such a storme of raine, thunder, lightening and tempestuous weather, that our ships were disperled either from other. And hauing determined all of vs to meet at a certaine Island, where wee purposed to water and refresh our selues; by meanes of the storme and other contagious weather which followed, we were frustrated of that hope.

We had lost our prize, and certaine frigats with the men. Two of our shippes went to seeke our prize and our men: and other two of vs came homeward. And so we parted, not hearing either of other vntill we came into England.

Our place of meeting should haue bene at the Tortugas neere vnto the point of Florida, but the Golden dragon and the Prudence were put to leeward of this place: neuertheless we fell with certaine islands within the point of Florida, where the captaine of the Dragon M. Christopher Newport sent his pinnesse on shore with certaine shot to seeke for fresh water, where wee found none; but found the Sauages very courteous vnto vs, who came by a high into the sea, and brought vs a line to hallow in our boat on shore, and shewed vs that by into the land. Northward was fresh water, and much golde. And one Michael Bagge of Ipswich boatswaines mate of the Dragon, had giuen him by one of the Sauages for an olde rusty hatchet, a piece of golde wound hoilow, and about the bignesse and value of an English angell, which the Sauage ware hanging about his knee, with two pieces of fine siluer plate, whereof one the sayd Sauage gaue Iohn Locke, masters mate of the Dragon, being foureteene groats in value, for an olde knife; the other piece he gaue to one William Wright a sailer, for an olde knife: which pieces of siluer were in forme like vnto the bolle of a bible. These Sauages were farre more ciuill then those of Dominica: for besides their courtesie, they couered their priuities with a platted mat of greene straw, about three handfuls deepe, which came round about their waste, with the busk hanging downe behinde.

The next day in the morning very early, there came a frigate of the island of Cuba of 30 tunnes, put in by weather, which was bound for Hawana, wherein were fifty hogges; to which we gaue chase all that day, passing the gulfe of Bahama, and about five of the clocke in the afternoone, after a shot or two made at her, shee peeled vnto vs: wee hoisted out our boat, and went aboard, where we found some five Spaniards, five and fifty hogs, and about some two hundred weight of excellent tabacco rolled up in seynes. We lightened them of their hogges and tabacco, and sent the men away with their frigate.

In this voyage we tooke and sacked foure townes, seuenteen frigats, and two ships, whereof eight were taken in the bay of the Honduras; of all which we brought but two into England: the rest we sunke, burnt, and one of them we sent away with their men. And to make by the full number of twenty, the Spaniards themselves set one on fire in the bay of the Honduras, lest we should be masters of it.

We shaped our course from Florida homeward by the isle of Flores one of the Acores, where we watered, finding sir Iohn Burgh there, who tooke vs to be Spaniards, and made vp vnto vs; with whom wee toynd in the taking the mighty Portugall caracke called Madre de Dios, and our captaine M. Christopher Newport with diuers of vs was placed in her as captaine by the Generall sir Iohn Burgh to conduct her into England, where we arrived in Dartmouth the seuenth of September 1592.

The voyage made to the bay of Mexico by *M. William King* Cap-
taine, *M. Moore*, *M. How*, and *M. Boreman* Owners, with the *Salomon* of 200
tunnes, and the *Lane Bonaventure* of 40 tunnes of *Sir Henry Palmer*, from *Ratcliffe* the 26
of January 1592.

The *Salomon* was manned with an hundred men, all mariners, and the *Lane*
with fire and twenty, all likewise mariners. We came first to the Downes
in Kent, and neuer strooke saile in passing thence, vntill we came to Cape S. Vin-
cent on the coast of Portugall. From thence we shaped our course to Lancerota
one of the Canarie islands, where we landed threescore men, and fetched a cara-
uell out of an harborow on the South side, and from a small Island we tooke a
bemp-canon of brasse in despight of the inhabitants, which played vpon vs with their small shot
at our first landing: of whom we slew three; and gaue them the repulse. Thence we went to the
Grand Canaria, where wee boorded a barke lying at anker: out of which wee were driuen by
great store of shot from the Island. From thence wee directed our course for the West Indies,
and fell with the isle of Dominica about the tenth of April. There at a watering place we tooke
a shippe of an hundred tunnes come from Guiny, laden with two hundred and seuentie Negros,
which we caried with vs to S. Iuan de Puerto Rico, and there comming thowow El passage, we
gaue chase to a frigate which went in to S. Iuan de Puerto Rico, and in the night we sent in our
shallope with foureteene men. And out of the harborow we tooke away an English shippe of se-
uentie tunnes, laden with threescore tunnes of Canarie-wines, in despight of the castle and two
new bulwarks, being within caluer shot. These two prizes we caried away to the Westermost
part of the island, and put the Negros, except fiftene, all on land in a Spanish carauell which the
Lane Bonaventure tooke: and we caried away one of the former prizes, and set fire on the other.
We passed thence by the isle of Mona, where we watered, and refreshed our selues with potatoes
and plantans, and so came to the isle of Saona: and from thence arriued at the mouth of the ri-
uer of Santo Domingo. And as we sailed to Cape Tiburon, thre leagues to the Westward of
Santo Domingo we tooke a boat of fiftene tunnes, which had certeine farres of malosses or vn-
refined sugar, with three men; which men with their boat wee caried with vs to Cape Tiburon,
which, in respect of seruice done vnto vs in furnishing vs with fresh water, we dismissed. Thus
contrary to other Englishmens courses we shaped ours to the Southward of Iamaica, and our
shallop with 12 men ranged the coast but found nothing. Thence we ranged the three islands of
the Caimanes, and landed at Grand Caiman, being the Westermost, where we found no people,
but a good riuer of fresh water; and there we turned by threescore great tortoises; and of them
we tooke our choise, to wit, fiftene of the females, which are the best and fullest of egges, where-
of two serued an hundred men a day. And there with stones we might kill turtle doues, wilde
geese, & other good fowles at our pleasures. Thence we came to Cape de Corrientes on Cuba to
water, and from thence to Cape S. Antonio, and so went ouer for the Tortugas, without taking
of any new prize: and thence cut ouer to Rio de puercos on the coast of Cuba. There we tooke
a small barke of twenty tunnes, with foure men and forty liue hogs, with certeine dyed porke cut
like leather ierkins along, and dyed hogs tongues and neats tongues, and 20 ope hides. Then
passing thence, within foure dayes we tooke a ship of 80 tunnes laden with hides, indico, & salsa-
perilla, North of an headland called Corugna: thence the current set vs to the East to the old chan-
nel. There we tooke a frigate of 20 tunnes, hauing certeine peeces of Spanish broad cloth & other
small pillage: there continuing off the Marañcas 12 dayes, with the winde so Westerly that we
could hardly recouer Hauana in the moneth of May. Here we tooke two boats laden with tortoi-
ses, which we sunke, sauing some of the tortoises, & setting the men on shore. Then at length we
recovered by to Hauana, where we came so neere to the forts, that for one houres fight they over-
reached vs with their long ordinance. Then came out the two gallies, hauing 27 banks on a side,
and fought with vs another houre; which for that time left vs by reason of the increasing of the
winde. Then passing alongst nine leagues to the Westward we found out an excellent harbour,
hauing three sadome water at the flood, able within to receiue a thousand saile, where we found
hog-houses, which they terme coralles, and tooke away certeine hogs and pigs. As we came out
of this harbour, the weather being calme, we were incountered by the gallies, which had follow-
ed vs, and fought with them three houres, oftentimes within caluer shot: but wee made such
spoile of their men and oares, that they beganne to be weary, and gaue vs ouer, with their great
losse. Here within foure dayes after, as we lay to the Northward five leagues off this harbour of
Cauannas, we met with master capitaine Lane, Generall of master Wars his fleet, and capitaine
Roberts

The excellent
harbour of Ca-
uannas.

Roberts, in the Exchange, a ship of Bristol, of an hundred and forty tunnes, and master Benjamin Wood with his foure ships which were set out by my lord Thomas Howard with captain Kenel of Limehouse captaine of the Cantar of Weymouth. All we being heere together espied a ship of some 50 tunne, which we chased with their boats; but myshallope first boozed her, and tooke her: which had in her sacke, Canary-wine, muscadell, tent in iarres, and good store of oile in iarres. The ship we unladed and burned: the men ran on shore. Hence wee came all together, being about 13 sailes, before Hauana; but passing by we gaue chase to a ship of 60 tun, which entered into an harbour a league to the Northwest of Hauana, which with boats was boozed, and found to be of Puerto de Cavallos in the bay of Honduras, laden with tanned hides, salsa perilla, Indico, raw hides, and good store of balsamum: and she had foure chests of gold, which they got on land before we could come to them. We brought this ship into England. Thus spending a seuennight in lping off and on for purchase, and finding nothing come, I set saile for England, and arrived at Douer about the tenth of Nouember 1592.

A briefe note of a voyage to the *East Indies*, begun the 10 of April 1591, wherein were three tall ships, the *Penelope* of Captaine Raimond, Admirall, the *Merchant royall*, whereof was Captaine, Samuel Foxcroft, Viceadmirall, the *Edward Bonaventure*, whereof was Captaine, M. James Lancaster, Rereadmirall, with a small pinnesse. Written by Henry May, who in his returne homeward by the *West Indies* suffied ship wracke vpon the isle of *Bermuda*, wherof here is annexed a large description.

The tenth of April 1591 we departed from Plymmouth with the ships aforesayd. In May following wee arrived at Grand Canaria one of the fortunate Islands. Also toward the end of this moneth we tooke a Portugall shippe being bound for Brasil, within thre degrees to the Northward of the Equinoctiall, which serued greatly to our refreshing. The 29 of July following we came to Aguada Saldania a good harbour neere the cape of Buona Sperança, where we stayed about a moneth with the Merchant royall, which by reason of sicknesse in our fleet was sent home for England with diuers weake men. Here we bought an oxe for a knife of thre pence, a sheepe for a broken knife or any other odde trifle, of the people which were Negros, clad in cloaks or mantles of raw hides, both men and women. The 8 of September the *Penelope* & the *Edward Bonaventure* weyed anchor, and that day we doubled the cape of Buona Sperança. The 12 following we were taken with an extreame tempest or huricano. This euening we saw a great sea breake ouer our admirall the *Penelope*, and their light strooke out: and after that we neuer saw them any moze. In October following we in the *Edward* fell with the Westermost part of the isle of S. Laurence about midnight, knowing not where we were. Also the next day we came to an anchor at Quitangone a place on the main land of Africa, which is two or thre leagues to the Northward of Mozambique, where the Portugals of the isle of Mozambique fetch all their fresh water. Here we tooke a pangaia, with a Portugall boy in it; which is a vessel like a barge, with one mastsail of Coco nut leaues. The barge is sowd together with the rindes of trees, and pinned with wooden pinnes. In this pangaia we had certeine coyne called millio, hennes, and some fardels of blew Calicut cloth. The Portugall boy we tooke with vs, and dismissed the rest. From this place we went for an island called Comoro, vpon the coast of Melinde, which standeth about 11 degrees to the South of the equinoctial: in which island we stayed all Nouember, finding the people blacke and very comly, but very treacherous and cruell: for the day before we departed from thence they killed thirty of our men on shore, among whom was William Mace our master, and two of his mates; the one of them being in the boac with him to fetch water, the other being on shore against our ship; they hauing first betrayed our boat. From hence we went for the isle of Zanzibar, on the coast of Melinde, whereas wee stayed and wintered vntill the beginning of February following.

The second of February 1592 wee weyed anchor, and set saile directly for the East Indies; but hauing calmes and contrary winde, wee were vntill the moneth of June before wee could recouer the coast of India neere Calicut; whereby many of our men died for want of refreshing. In this moneth of June we came to an anchor at the isles of Pulo pinaom, whereas we stayed vntill the first day of September, our men being very sicke, and dying apace. This day we set saile, and directed our course for Malaca: and wee had not bene farre at sea, but wee tooke a shippe of the kingdome of Pegu of some fourescore tunnes with wooden anchors, and about fiftie men in her, with a pinnesse of some eightene tunnes at her stearne, both laden with pepper.

Zanzibar.

The isles of
Pulo pinaom.

But their pinnesse stole from vs in a gulf in the morning. Here we might haue taken two shippes more of Pegu laden likewise with pepper and rice. In this moneth also we tooke a great Portugall ship of six or seuen hundred tun, laden chiefly with victuals, chests of hats, pintados, and Calicut clothes. Besides this we tooke another Portugall ship of some hundred tun, laden with victuals, rice, Calicos, pintados, and other commodities. These ships were bound for Malaca with victuals: for those of Goa, of S. Thomas, and of other places in the Indies doe victuall it, because that victuals there are very scarce.

The isle of
Nicubar.

In the moneth of Nouember 1592 we shaped our course for the island of Nicubar lying certaine leagues to the Northwest of the famous island of Sumatra; whereas within short time wee came to anker: and here wee had very good refreshing: for after wee arrived there, the people (whom we found in religion Mahumetans) came aboard vs in their canoas, with hennies, cocos, plantans, and other fruits: and within two dayes they brought vnto vs reals of plate, giuing vs them for Calicut cloth: which reals they found by diuing in the sea, which were lost not long before in two Portugall ships which were bound for China, & were cast away there. This was the furthest place that we were at to the Southeast: and heere because our company by this time was much wasted and diminished, we resolved to turne backe to the isle of Zeilan. Wherefore we weyed anker in the moneth of Nouember, and arrived at Zeilan about the end of the same moneth. In this island groweth great store of excellent cinamom, and the best diamonds in the world. Here our captaine meant to stay to make vp our voyage: whereof hee conceiued great hope, by certaine intelligence which wee had receiued; but the company, which were in all but 33 men and boyes, being in a mutiny, and euery day ready to go together by the eares (the captaine being sicke and like for to die) would not stay, but would needs go home.

They returne
homeward.

The 8 of December 1592 we set saile homeward, but some 15 dayes before we had sight of the cape of Good hope, we were forced to share our bread, by reason we had certaine flies in our ship, which deuoured most part of our bread before we were aware: so that when we came to sharing, we had but 3 1 pound of bread a man to cary vs into England, with a small quantitie of rice a day.

They double
the cape of Bo-
na Speranza.
The isle of S.
Helena.

The last of March 1593 we doubled the cape of Bona Speranza.

In April next ensuing we came to anker at the island of S. Helena, whereas we found an English man a tailor, which had bene there 14 moneths before we came thither: so we sending our boat on shore with some ten men, they found this English man in the chapell; who by reason of the heat of the climat was enforced to keepe himselfe out of the Sun. Our company hearing one sing in the chapell, supposing it had bene some Portugall, thrust open the doore, and went in vnto him: but the poore man seeing so many come in vpon him on the sudden, and thinking them to be Portugals, was first in such a feare, not hauing seene any man in 14 moneths before, and afterwards knowing them to be Englishmen, and some of them of his acquaintance, in such ioy, that what betwene excessive sudden feare & ioy, he became distracted of his wits, to our great sorowes. Here we found of his dying some 40 goats. The party had made him for want of apparell two suits of goats skinner with the hairy side outwards, like vnto the Sauages of Canada. Here we stayed all this moneth. This man liued vntill we came to the West Indies, and then he died.

The strange
force of sub-
den feare and
sudden ioy.

The isle of Tri-
nidad in the
West Indies.

In the moneth of Iune 1593 we arrived at the island of Trinidad in the West Indies, hoping there to finde refreshing: but we could not get any, by reason that the Spanyards had taken it. Here we were imbayed betwene the island and the maine; and for want of victuals the company would haue forsaken the ship: whereupon the captaine was enforced to sweare euery man not to forsake the ship vntill we should see further occasion. Out of this bay, called Boca de Dragone, it pleased God to deliuer vs; from whence we directed our course for the isle of S. Iuan de Puerto rico, but fell with the small isle of Mona, where we abode some fiftene dayes, finding in that place some small refreshing. And heere arrived a ship of Caen in Normandy, whereof was captaine one Monsieur Charles de la Barbotiere, who greatly refreshed vs with bread and other provision, which we greatly wanted. And so we tooke our leaues the one of the other.

The isle of
Mona.

Cape Tiburon.

In Iuly hauing foule weather at Mona, we were forced to wey anker, and to set saile, directing our course for Cape Tiburon: and in doubling of the cape we had a gulf from the shore, which caried away all our sailes from the yards: so that we had left but one new forecourse to helpe our selues withall: which canuas the aforesayd Frenchman did helpe vs withall. Also hauing doubled the foresayd cape in the distresse aforesaid, the foresayd capitan de la Barbotiere with his pinnesse gaue chase vnto vs againe; who being come nere vnto vs, I went aboard him, certifying him what distresse we were in. The gentleman replied to me againe, that there was not any thing in his shippe, but what he could spare he would helpe vs withall. So to conclude, we agreed with him for canuas. Moreover, he sayd that if we would go with him to an harbour called *Gonnauy, which

Of Guanaba.

which is to the Northward of Cape Tiburon, that then he would helpe vs with fresh victuals enough. Whereupon I returned aboard our ship, and certified our captaine of all: who made it knowne vnto the company; which no sooner heard of it, but they would all go in. So here we staid with the aforesaid Frenchman 15 dayes: but small refreshing we could get, because the Spaniards stood in some feare of the Frenchman of warre, supposing our ship to be a Portugal, and that we were his prize: neuertheless hee certified them to the contrary. And in staying so long with him, and hauing little refreshing, our company began to be in a mutiny, and made report that the captaine & I went aboard the Frenchman but to make good cheere, and had not any care of them: but I protest before God, that our care was to get victuals wherby we might haue bene gone from him. But in the meane time a great part of our company had conspired to take away the Frenchmans pinnesse, and with her to boord the man of warre. While these things were in plotting, one of their consoorts went aboard the Frenchman, and certified him of all the conspiracy. Whereupon the captaine of the French ship sent for our captaine and me, to come aboard to dinner: and we staid with him all the afternoone, being invited vnto supper: and being at supper, he himselfe would not a great while come to vs: but at length hee came. At his comming wee asked of him what newes. Who answered vs, that either we must depart from him, or els he must goe seeke some other harborow. Whereupon I tolde captaine Lancaster; who prayed me to tell him that rather then we would be any hindrance vnto him, we would be gone. But in the mean time, while we were thus talking together, the Frenchman weyed & set saile: which we perceiued, and asked him what he meant by it. He replied to the captaine & me, that he kept vs for his security, and that our men had purposed as is aforesayd. When he came thwart our shippe, it blew a pretty gale of winde: the boat being asterne of them, hauing in her two Boozes & two men of Pegu, which we had giuen them, brake away. Then was the Frenchman worse then before, & did threaten vs very sore that we should pay his voyage. In the meane time the Edward seeing vs past, weyed and set saile to go for England: and they did share among them all the captaines victuals & mine, when they saw the Frenchman keepe vs as prisoners. So the next morning we went to seeke out the Frenchmans pinnesse: which being at Laguna we shot off a piece, & so she came to vs, hauing in her three more of our company, Edmund Barker our lieutenant, and one Iohn West, and Richard Lucland one of the mutinous crew. The which I told the Frenchman of; & he could not deny, but that there was such a thing pretended. Then I was put into the French pinnesse to seeke their boat: and in the meane time they would go to see if they could ouertake our shippe. And the next day we should meet againe at Cape S. Nicolas: so the next morning we met together all three of vs, but heard no newes of his boat. So he hauing Spaniards and Negros aboard of vs, requested to haue them. Our captaine desired him to send his boat aboard our shippe, and he should haue them with all his heart. So with much adoe he sent his boat and had them. Then he demanded of them, if his boat were not aboard the ship. They answered no. So that then Monsieur de la Barbotiere was satisfied: and then we were great friends againe, to all our ioyes.

The 12 of August 1593 our captaine was sent aboard our ship: but before his departure he requested the captaine of the French ship that he would giue mee passage home with him, to certifye the owners what had passed in all the voyage, as also of the unrulinesse of the company. And this day we tooke our leaues the one of the other; the Edward for England: and we bare in for Connauy, where afterwarde we found the Frenchmans boat.

The last of Nouember 1593 Monsieur de la Barbotiere departed from a port called Laguna in Hispaniola. The 17 of December next insuing it was his fortune to haue his ship cast away vpon the North-west part of the isle of Bermuda about midnight; the pilots making themselves at noone to be to the Southward of the island twelue leagues, certified the captaine that they were out of all danger. So they demanded of him their wine of heighth: the which they had. And being, as it should seeme, after they had their wine, carelesse of their charge which they tooke in hand, being as it were drunken, through their negligence a number of good men were cast away: and I being but a stranger among 50 and odde Frenchmen & others, it pleased God to appoint me to be one of them that were saued, I hope to his seruice & glory. We made account at the first that we were cast away hard by the shore, being hie cliffs, but we found our selues seuen leagues off: but with our boat and a raft which we had made & towed at our boats sterne, we were saued some 26 of vs; among whom were no more English but my selfe. Now being among so many strangers, & seeing not roome for the one halfe, I durst neither presse into the boat, nor vpon the raft, for feare lest they should haue cast me ouerboord, or els haue killed me: so I staid in the ship which was almost full of water, untill the captaine being entred the boat, called me vnto him being at hand, for that it stood vpon life or death: and so I presently entred, leauing the better halfe of our company

to the mercy of the sea. After this we rowed all the day until an houre or two before night yet we could come on land, towing the raft with the boat. When we came on shore, being all the day without drinke, every man tooke his way to see if he could finde any: but it was long before any was found. At length one of the pilots digging among a company of weeds found fresh water to all our great comforts, being only raine water: and this was all the fresh water that we found on shore. But there are in this Island many fine bays, wherein if a man did dig, I thinke there might be solid store of fresh water. This Island is divided all into broken Islands: and the greatest part I was upon, which might be some 4 or 5 miles long, and 2 miles & a halfe ouer; being all woods, as Cedar & other timber, but Cedar is the chiefeft. Now it pleased God before our ship did split, that we saved our carpenters tooles, or els I thinke we had bene there to this day: and hauing recovered the aforesaid tooles, we went roundly about the cutting downe of trees, & in the end built a small barke of some 18 tun, for the most part with cronels and very few nails. As for tackling we made a voyage aboard the ship before she split, and cut downe her shrouds, and so we tackled our barke, and rigged her. In stead of pitch we made lime, and mixed it with the oile of tortoises; and as soon as the carpenters had calked, I and another, with ech of vs a small sticke in our hands, did plaister the mortar into the seams, and being in April, when it was warm and faire weather, we could no sooner lay it on, but it was dry, and as hard as a stone. In this moneth of April 1594, the weather being very hot, we were afrayd our water should faile vs; and therfore made the more haste away: and at our departure we were constrained to make two great chests, and calked them, and stowed them on ech side of our maine mast, and so put in our provision of raine-water, and 13 liue tortoises for our food, for our voyage which we intended to Newfoundland. In the South part of this Island of Bermuda there are hogs, but they are so leane that you can not eat them, by reason the Island is so barren: but it yeeldeth great store of fowle, fish and tortoises. And to the Eastward of the Island are very good harbours, so that a shippe of 200 tun may ride there land-locked, without any danger, with water enough. Also in this Island is as good fishing for pearles as is any in the West Indies, but that the place is subiect to foule weather, as thundering, lightning and raine: but in April and part of May we had very faire and hot weather. The 11 of May it pleased God to set vs cleere of the Island, to the no little ioy of vs all, after we had liued in the same almost the space of 5 moneths. And the 20 of May we fell with the land nere to Cape Briton, where we ran into a fresh water riuer, whereof there be many, and tooke in wood, water, and ballast. And here the people of the countrey came vnto vs, being clothed all in furs, with the furred skin vnto their skins, & brought with them furs of sundry sorts to sell, besides great store of wild ducks: so some of our company hauing saved some small beads, bought some of their ducks. Here we stayed not about foure houres, and so departed. This should seeme to be a very good countrey. And we saw very fine champion ground, and woods. From this place we ranne for the banke of Newfoundland, whereas we met with diuers, but none would take in a man of vs, until it pleased God that wee met with a barke of Falmouth, which receiued vs all for a litle time; and with her we tooke a French ship, wherein I left capitan de la Barbotier my deere friend, and all his company, and stayed myselfe aboard the English barke: and hauing passage in the same, in the moneth of August I arrived at Falmouth 1594.

A voyage of the honourable Gentleman M. Robert Dudley, now knight, to the Isle of *Trinidad*, and the coast of *Paria*: with his returne home by the Isles of *Granata*, *Santa Cruz*, *Sant Iuan de puerto rico*, *Mona*, *Zacheo*, the shoalds called *Abrejos*, and the isle of *Bermuda*. In which voyage he and his company tooke and sunke nine Spanish ships, wherof one was an *armada* of 600 tunnes. Written at the request of M. *Richard Hakluyt*.

aving ever since I could conceiue of any thing bene delighted with the discoueries of nauigation, I fostered in my selfe that disposition till I was of more yeres and better ability to vnder take such a matter. To this purpose I called to me the aduise of sufficient seamen, and principally vnderooke a voyage for the South seas; but by reason that many before had miscaried in the same enterprize, I could not be suffered to hazard more of her Maiesties subiects upon so vncertaine a ground as my desire: which made me by constraint (great charges already by me defrayed) to prepare another course for the West Indies, without hope there to doe any thing woorth note: and so common is it indeed to many, as it is not woorth the registring. Neuerthelesse, I haue yeilded to your former importunity, and sent you this my iournall to supply a vacant roome amongst your more important discourses.

Now

Nowe being prouided for this last enterprize, rather to see some practise and experience, then any wonders or profice, I weighed anchor from Southampton roade the sixth of Nouember 1594. But the winde falling scant, it was the 17. day of the same moneth before I could put into the Sea. Upon this day my selfe in the Beare a shippe of 200. tunnes my Admirall, and Captaine Munck in the Beares whelpe vice-admirall, with two small pinnelles called the Frisking and the Barewig passed through the Needles, and within two dayes after bare in with Plimmouth. My busines at this port-towne dispatched, I set saile; whither againe by contrary winds to my great misfortune, I was enforced to retorne backe. I might call it misfortune; for by this meanes I vtterly (for all the voyage) lost my vice-admirall; which was the cause likewise of loosing mine owne pinnelle, which three were the principall stay of my voyage. For at this last leauing of England in a storme I lost mine owne pinnelle, as is before said. Notwithstanding all these crosses all alone I went wandering on my voyage, sailing along the coast of Spaine within view of Cape Finister, and Cape S. Vincent, the North & South capes of Spaine. In which space hauing many chales, I could meet with none but my countrey men or countreys friends. Leauing these Spanish hopes I directed my course the 14. of December towards the isles of the Canaries. Here I lingered 12 dayes for two reasons: The one, in hope to meete my vice-admirall: The other, to get some vessel to remoue my pestered men into, who being 140. almost in a ship of 200. tunnes, there grew many sicke. The first hope was frustrated, because my vice-admirall was returned into England with two prizes. The second expectation fell out to our great comfort: for I tooke two very fine Carauels vnder the calmes of Tenerif and Palma, which both refreshed and amended my company, and made me a flete of 3. sailes. In the one Carauel called The Intent, I made Benjamin Wood Captaine, in the other, one Captaine Wentworth. Thus cheared as a desolate raueller with the company of my small and newe erected flete, I continued my purpose for the West Indies, and first for Cape Blanco in Africa vpon the deserts of Libya. My last hope was to meete my lost ship, and withall to renew my victuals vpon the Canchers, which are Portugal fishermen: but the Canchers had bene so frightened by Frenchmen, as I could get none. Riding vnder this White Cape two daies, and walking on shoze to view the countrey, I found it a waste, desolate, barren, and sandie place, the sand running in drifts like snow and being very stony; for so is all the countrey sand vpon stone (like Arabia deserta, and Petrea) and full of blacke venemous lizards, with some wilde beasts and people which be tawny Moores, so wilde, as they would but call to my Carauels from the shoze, who roade very neere it. But not desirous to make any longer aboad in this place, by reason of the most infectious serenias or dewes that fall all along these coasts of Africa, I caused my Master Abraham Kendall to shape his course directly for the isle of Trinidad in the West Indies; which after 22. dayes we descried, and the first of February came to an anker vnder a point there of called Curiapan, in a bay which was very full of pelicans, and I called it Pelicans bay. About 3. leagues to the Eastwards of this place we found a mine of Marcasites which glister like golde (but all is not golde that glistereth) for so we found the same nothing worth, though the Indians did assure vs it was Caluori, which signifieth golde with them. These Indians are a fine shaped and a gentle people, al naked & painted red, their commanders wearing crownes of feathers. These people did often resort vnto my ship, & brought vs hennes, hogs, plantans, potatos, pinos, tabacco, & many other pretie commodities, which they exchanged with vs for hatchets, knives, hookes, belles, and glasse buttons. From this bay I fell downe lower to a place called Paracoa, where I desired rather to ride, because it was a couenient place to water, ballast, ground, & graue my Carauels. Then I commanded al my men to lye on shoze, after I had caused to be made for them a little skonce like an halfe moone for their defence, being iealous of the Spaniards, of whose estate I could gather no certaintie, till frō Margarita Antonie Berreo for his defence had gotten some 300. souldiers, a greater number then I was able to encounter withall, hauing then but 50. men, because my Carauels before their comming were sent away. The Simerones of the yland traded with me stil in like sort. And the Spaniards now prouided for me, began to send messengers to me in kindnesse. Notwithstanding though I had no reason to assault them, because they were both poore & strong, yet for my experience and pleasure I marched 4. long marches vpon the yland, & the last from one side of the yland to the other, which was some 50. miles: going and comming through a most monstrous thicke wood (for so is most part of the yland) and lodging my selfe in Indian townes. The country is fertile, and ful of fruits, strange beasts, and foules, whereof munks, babions & parats were in great abundance. Being much delighted with this yland, and meaning to stay here some time about discouering the maine right against the same (the entrance into the empire of Guiana) being shewed the discouery thereof by Captaine Popham, who receiued the discouery of the saide empire frō one captaine Harper, which being a prisoner learned of the Spaniards at the Canaries

This M. Benjamin Wood was in the end of the yeere 1596. sent forth with two ships, and certaine pinnelles vpon a voyage for the South seas and for China, at the charges of this honorable gentle man Sir Robert Duddleley. A description of Cape Blanco in Africa.

The isle of Trinidad descried.

Punta de Curiapan.

Paracoa, or Parico.

They inthroned themselves.

A reasonable practise of the Spaniards.

They march from one side of the yland to the other.

Captaine Harpers intelligence of Guiana.

His two Caravels sent to range the Indies.

Seawano called perhaps in Sir Walter Raleighs discovery of Saima, and Wikeri in his discovery.

This Indians name was Balchazar, who afterwards gave our men the slip at their greatest need.

A river called Cabota. The river of Amara and the kingdom of Tiucias are both mentioned by Sir Walter Raleigh.

A people sprinkled with powder of gold.

Captaine Pophams arrival.

in the selfe same maner almost, as Sir Walter Raleigh very discreetly hath written. The intelligence of Harper, I conceive, the Captaine hath yet to shew in Spanish. This discovery of Guiana I greatly desired: yet least I should adventure all occasions upon it onely, I sent my two Caravels from me the 17. day of February, to try their fortunes in the Indies, not appointing any other place to meet but England, furnishing them with all the provision that I could spare, and dividing my victuals equally with them, knowing they were able to do more good in the Indies then greater ships. The Caravels being gone, I began to enquire privately of the Sauvages concerning the maine over against vs, and learned that the names of the kingdomes adjoining to the Sea-coast were in order these. The kingdom of Morucca, the kingdom of Seawano, the kingdom of Waliame, the kingdom of Caribes, the kingdom of Yguiric, and right against the Northernmost part of Trinidad, the maine was called The high land of Paria, the rest a very lowe land. Morucco I learned to bee full of a greene stone called Tacarao, which is good for the stone. In Seawano I heard of a Mine of gold to be in a towne called Wackerew, the Captaines name Semaracon. Of Waliame I will speake last, because therein I made most discovery. The Caribes I learned to be man-eaters or Canibals, and great enemies to the Islanders of Trinidad. The kingdom of Yguiri I heard to be full of a metall called by the Indians Arara, which is either copper (as I could learne) or very base gold. In the high land of Paria I was informed by diuers of these Indians, that there was some Perora, which with them is silver, and great store of most excellent Cane-tabacco. But lastly to come to Waliame, it is the first kingdom of the empire of Guiana. The great wealth which I understood to be therein, and the assurance that I had by an Indian, mine interpreter, of a golden Mine in a towne of this kingdom called Orocoa, in the River (as he called it) of Owirinoicke was much to be esteemed. This Indian spake Spanish, and whatsoever he knew, he reueiled it to my selfe onely by a private interpreter, not in words alone, but offered vpon paine of life to be guide himselfe to any place that he spake of. This discovery of the Mine I mentioned to my company, who altogether mutined against my going, because they something feared the villany of Abraham Kendal, who would by no means go. I then wanted my lost pinnesse, and was constrained to send 14. men in my ship-boat for this discovery, with most of the discreetest men in my ship, & gave them their directions to follow, written vnder mine owne hand. They went from me, and entred into one of the mouthes by the broken lands, which river goeth vnder the name of the great River Orenoque, the foreland wherof was called Capulio bearing South & by West, wanting a fourth part, from the point of Curiapan aforesaid, being 4. leagues distant. They found the maine (as China is reported) full of fresh Rivers running one into another, abounding with fish, and a land all woody, seeming to haue great store of strange beastes and foules, & very populous. They entred into a small river called Cabota, the people named Veriotaus, a courteous people. The next river they passed was called Mana in the kingdom of Tiucias, where the king offered to bring a Canoa full of this golden ore, and to this purpose sent a Canoa, which returned and brought my men this answer, that Armago Captaine of the towne of Orocoa and the Mine refused them, but if they would come thither, hee himselfe would make them answer. Upon this my boat went, and at his appointed place hee met them with some 100. men in Canoas, and tolde them that by force they should haue nothing but blowes, yet if they would bring him hatchets, knives, and Jewes-harps, he bid them assure me, he had a Mine of gold, and could refine it, & would trade with me: for token wherof he sent me 3. or 4. Croissants or halfe moones of gold weighing a noble a piece or more, and two bracelets of silver. Also he tolde them of another rich nation, that sprinkled their bodies with the powder of golde, and seemed to be guilt, and farre beyond them a great towne called El Dorado, with many other things. My men being satisfied, and thinking their company too fewe to stay among these Sauvages, and their victuall spent, returned. This Balchazar my Indian their guide ranne from them: which distresse caused them to borrow of Armago newe guides, who brought them home another way through a River called Braha by the high land of Paria, and so to my ship. They accompted Orocoa 150. miles distant, so they rowed in my boate about 250. miles. Their absence from mee was 16. dayes, making but one nights aboad any where. The report of this made mee attempt my company to goe with them againe. But now they were worse then before; for vnlesse I would haue gone my selfe alone, not one man would goe with me (no albeit I had had commission to hang or kill them) for my men came home in very pitifull case almost dead for famine; and indeed such was their misery, as they dranke not in thzee dayes, for so long they were out of the fresh Rivers, before they recovered the shippe, and yet the boat was filled with as much victuall, as it could holde.

In this time of my boates absence there came to me a pinnesse of Plimmouth, of which Captaine Popham before named was chiefe, who gaue vs great comfort. And if I had not lost my pinnesse,

pinnesses, wherein I might haue caried victuals and some men, we had discouered further the secrets of those places. Also this Captaine and I stayed some five or eight dayes longer for Sir Walter Raleigh (who, as wee furnished, had some purpose for this discouery) to the ende, that by our intelligence and his boates we might haue done some good: but it seemed he came not in five or eight weekes after. So Captaine Popham and I helde it not conuenient to stay any longer: therefore new watering our selues at Paracoa, we set saile to see further of the Indies, leauing the yle of Trinidad the 12. day of March. The 13. I tooke a small prize of sackes 25. leagues to the Northward of an yland which I sailed by, called Granata. This prize refreshed vs well: yet meaning to sel her at the yle of Sant Iuan de Puerto rico, and shaping our course thither by the ylands of Santa Cruz and Inferno, I coasted all the South side of the said yle of S. Iohn, till I came to an anchor at Cape Roxo: where riding 14. dayes to expect S. Domingo men, which oftentimes fall with the yland of Mona, and finding none (neither would the Spaniards of S. Iuan de puerto rico buy my prize) I vnladed her, tooke in the goods, and after burned her. This ended, I dis-embarked (where se we Englishmen had done before, by reason of the great dangers betweene this yland of S. Iuan de puerto rico and Hispaniola) by a little yland called Zacheo. And after carefully doubling the shoulde of Abrejos, I caused the Master, (hearing by a Pilot, that the Spanish fleet ment now to put out of Hauana) to beare for the Meridian of the yle of Bermuda, hoping there to finde the fleet dispersed. The fleet I found not, but foule weather enough to scatter many fleets; which companion left mee not in greatest extremitie, till I came to the yles of Flores and Cuernuo: whither I made the more haste, hoping to meete some great fleet of her Maiestie my souereigne, as I had intelligence, and to giue them aduise of this rich Spanish fleet: but finding none, and my victuals almost spent, I directed my course for England.

Returning alone, and worse manned by halfe then I went forth, my fortune was to meete a great Armada of this fleet of some 600. tunnes well appointed, with whom I fought board and board for two dayes, being no way able in all possibilitie with fiftie men to board a man of warre of six hundred tunnes. And hauing spent all my powder I was constrained to leaue her, yet in such distresse without sailes and masts, and hull so often shot through with my great Ordnance betweene winde and water, that being three hundred leagues from land, I dare say, it was impossible for her to escape sinking. Thus leauing her by necessitie in this miserable estate, I made for England, where I arriued at S. Iues in Cornwall about the latter ende of May 1595, scaping most dangerously in a great fogge the rocks of Silly.

Thus by the prouidence of God landing safely, I was kindly intertained by all my friends, and after a short time learned more certaintie of the sinking of that great shippe, being also repared rich by diuers intelligences out of Spaine: which we then supposed not, & were doubtfull whether she had bin of Biscay or S. Iohn de Luz in France laden with fish onely from Newfoundland.

In this voyage I and my fleet tooke, sunke and burnt nine Spanish ships; which was losse to them, though I got nothing.

Here follow certaine wordes of the language of *Trinidad* which I obserued at my being there.

G Vttemock.	A man.	Dacutti	The fleet.
Tabairo, Daba-	The heare of	Cattie	The moone.
rah, Dz Dabarra.	ones head.	Tauraroth	A rope.
Dessie	The forehead.	Arkeano	A paire of rizers.
Dasereth, or Dacofi	An eye.	Wecuah	The heauen.
Dalacoack	The mouth.	Harowa	A stone good for
Areheh	The teeth.	Mointiman	the head ache.
Daria	The gummies.	Howa	Iron or Steele.
Desire	The lips.	Carotta	Munkets in generall.
Dill	The tongue.	Sakel	A thing like pappe.
Dudica	The eares.	Techir	It is well, or I am well.
Dacan	A hand.	Bodad	A bracelet.
Dacabbo	The palme of the hand.	Mentinie	A bore or chest.
Dadena	The wrist.	Addhegaeno	A tree.
Dacurle	A knee.	* Calcouri	A glasse.
Daddano	The calfe of the legge.	Perota	Gold.
Dabodda	The toes.		Silver.
			Tacotao

Then departed from the yle of Trinidad. A prize taken North of the yle of Granata. The yles of Santa Cruz and Inferno. Cape Roxo.

Then disembarked by the yle of Zacheo. The shoulde called Abrejos; that is open the eyes, of look out. Bermuda, Flores and Cuernuo.

A fight of two dayes with a Spanish Armada of 600. tunnes.

Then arrived at S. Iues in Cornwall in May 1595.

It is before in this voyage called Calmaris.

Tacorao a green stone, } Arrara copper.
 Caulpiri } A white stone.
 Casparo A sword, } Tibetebe cockles.
 Marrahabo a bow, } Semaro an arrow.
 Huculle } A bow-string.
 Halete } A potato roote.
 Caerwoda } A sweete root.
 Maurisse Wheat, } Queca A basket.
 Yeddola A knife, } Sambolers A hat.
 Beyou A pipe, } Callit Bread.
 * Oronuie } Water.
 Arguecona } A paire of cizzers.
 Heldaro } A spoone.
 Hemachugh A bread which they eate.

Hicket Fire, } Walrowa A parrot.
 Vreit Tabacco, } Barudda A combe.
 Addoth } A nicke.
 Barrennaire } A button, or beads.
 Curaballa & Sibath, for 2 sundry stones;
 but Sibath in general signifieth a stone.
 Tollerillero bels, } Vllasso a Tuny-fish.
 Bohery A flying fish, } Bara Water.
 Haddalle } The Sunne.
 Babage-Canoaseen The manner of
 the Indians hailing of a ship, calling
 it after the name of their Canoas.
 Non quo, Or } I know not, Or
 Non quapa } I cannot tell.

* The name of
 the river Ore-
 noque may
 seeme to be de-
 rived from
 this word.

The victorious voyage of Captaine Amias Preston now knight,
 and Captaine George Sommers to the West India, begun in March 1595.
 Wherein the yle of *Puerto Santo*, the yle of *Coche neere Margarita*, the fort and towne
 of *Coro*, the stately city of *S. Iago de Leon* were taken sacked and burned, and the towne
 of *Cumana* ransomed, & *Jamaica* entered. Written by *Robert Danie* one of the company.

Captaine Amias Preston, and captaine Sommers, both valiant gentlemen & dis-
 creet commanders, lying ready with two tall ships, the *Ascension* and the *Gift*,
 and a small pinnesse at *Plimmouth*, for the space of a moneth attending the com-
 ming of captaine Iones their consort, which in al that time, through the bad dea-
 ling of those which he put in trust, could not make his ship in readines, according
 to his appointment, the 12. of March 1595. set forward on their voyage for the
 West Indies. He with captaine Iones in the *Derling*, and Captaine Prowse in the *Angel*, fol-
 lowed after them the 19. of the said moneth. The last of March, captaine Preston by giuing chase
 to a saile, was separated from captaine Sommers, and his pinnesse, so that they vterly lost sight ech
 of other: whereupon captaine Preston in his ship alone, resolved to surpise the yle of *Puerto Santo*,
 and shortly after came before the same. This yland standeth in the Northerly latitude of 33. de-
 grees, and lieth to the Northward of the yle of *Madera*, and is inhabited by old souldiers, which the
 kings of Portugal were wont to reward for their former olde seruices, by placing of them there.
 This yland is rich in corne, wine, & oile: and hath good store of sheep, asses, goats & kine: they haue
 also plenty of fowles, fishes & fruits. Captaine Preston coming before this yland with one ship only
 fought with 2. long boats to land his men & to force the same: but the people were on thore in war-
 like array, with baricados & trenches made, ready to withstand them. Whereupon, considering the
 great danger, and disadvantage of the place, he caused his people to returne aboard againe. And the
 next morning 3 or 4 houres before day, he landed in a place of greater security, with 60 men onely,
 who lay closely in a chapel, to defend themselves from the raine til break of the day, and so marchen
 forward vpon the backs of their enemies, which kept their baricados vpon the thore. By this time
 the enemy was 500 strong. But, being so suddenly surprised, after some resistance of our mus-
 kets, when they saw our pikes appoch, and had tasted somewhat of their force they began to flee in-
 to certaine thickets & shrubs, thinking from thence to gall our men: but with very litle or no losse
 at all, our men dislodged them of that place also. Whereupon, they all fled toward the chiefe towne of
 the yland: but once againe they thought to make a new stand at a certaine house by the way, from
 whence they were repulsed by captaine Roberts. So in the flight part of them were slaine, and an
 ensigne, which one captaine Haruey an English man had lost not long before, was recovered: and
 the chiefe towne it selfe was by our men wholly woon and possessed. But before the entrance of our
 men they had conueighed their wiues, their children, and the rest of their goods into an exceeding
 high hill which standeth neere the towne, and could not be conquered, but with exceeding losse. Al-
 though they sent diuers times to redeeme their towne, which was very faire and large, yet in re-
 gard of their crueltie and treachery, which they vsed towards captaine Haruey and his people,
 captaine Preston would shew them no fauour, but vterly burnt their towne to ashes, and sent his
 men to wast the rest of their villages of the yland, preferring the honour & iust reuenge of his coun-
 try men, before his owne priuate gaine, & commodity. And so with small pillage and great honour
 he retired in safetie and all his small company with him, from the conquered yland vnto his ship.
 But we in our ship met not with him, vntill the 12. of April following. We therefore in the *Der-*
ling

The yle of
Puerto Santo tak-
 en and the
 chiefe towne
 in it burnt.

ling pursuing our voiage, had sight of the ples of the Canaries the 6 of April, and the 8 of the same, we watered on the Southeastside of the grand Canaria. There we met with capt. Sommers, & his pinnesse, & 3 ships of Hampton, in one whereof was cap. Willis. The 9 of April we al departed for Tenerif to seeke captaine Preston: and standing ouer towards Tenerif, the 9 day at night I came into captaine Sommers ship. The 10 in the morning we brake our maine yard, yet we recovered Tenerif, & the same day towards night we ankered vnder the southside of the same. There I went a land in our boat, & found 3 or 4 fisher boats, and brought one of them off. The rest bulged themselves. Here we rode to mend our yard til the 11 at night: then we set saile to find captaine Amias Preston: and standing towards Gomera, the 12 in the morning we had sight of him. Then we thought to haue landed in Gomera: but the wind blew so much, that we could not. So we departed altogether with toy the 13 of April, & set our course for the West Indies. And the 8 of May next ensuing, we arriued at the pland of Dominica. In all which time nothing happened vnto vs sa- uing this, that the 18 day of April at midnight, our admiral lost her long boat in towing. We staid at Dominica til the 14 of May, to refresh our sicke men. Here the Indians came vnto vs in canoas made of an whole tree, in some wherof were 3 men, in some 4 or 6, & in others 12 or 14, & brought in them plantans, pinos, and poratos, and trucked with vs, for hatchets, kniues, & smal beadstones. Here in refreshing of our men, we found an hot bath hard ioyning to a cold riuer side: wherein our sick men bathed themselves, and were soone recovered of their sicknelles. This is a goodly pland, and something high land, but al ouergrown with woods. The 14 we departed from thence, & the 16 sailing Southwestward, we had sight of Granada, but landed not there. The 17 we arriued at the Testigos & ankered there, and consorted with the 3 ships of Hampton, wherin captaine Willis was. The 18 we landed our men & tooke view and muster of all, & the same night set saile away. The 19 we had sight of Margarita, where the Spaniards by their Indians fish for pearles: we stood in very neere the rode, but saw nothing there. Therefore we went no further in, but stood from it againe. The same day toward night, we had sight of a litle pland, betweene Margarita & the maine, called Coche. We came neer it in the night with our ships within some 3 leagues, & there ankered vnder the maine side, and about midnight we manned our pinnesles & boats, and in the morning about break of day, we landed on the pland, wherin are few or none inhabitants, but they comonly come fro Margarita in boats on the munday, and remaine there fishing for pearles vntill the saturday, and then returne & cary al that they haue taken to Margarita. Here we tooke some few Spaniards and Negros their slaues with them, and had some smal quantitie of pearls. We remained on this land the 20 and 21, in which time we went a fishing with our seine, and tooke good stoze of mullets and other fish, and amongst the rest drew a shoze in the seine a fish called by the Spaniards Lagarto, and by the Indians Caiman, which is indeed a Crocodile, for it hath 4 feete and a long taile, and a wide mouth, and long teeth, & wil deuour men. Some of these Lagartos are in length 16 foot, some 20 foot, and some 30 foot: they haue mulke in them, and liue as wel on the land, as in the water. The 21 of May we departed for Cumana, thinking to haue gotten in that night to haue landed: but the current striketh so strong out of the bay that we could not recover the towne till day light. In the morning we espied 2 sailes befoze the towne, but could not fetch them. Here we plied too and againe in the sound all the forenoone, but could not get by so farre as the towne. These 2 sailes came roome to vs, after they saw that we were at an anker, & came somewhat neere vs, and sent their skypys aboyd our admiral. They were 2 flieboats of Middleburgh which traded there, & had secretly aduertised the counry of our coming, to our great hinderance: but we knew it not at our first arriuall. Here they of Cumana perceiuing that we would land, came to parle with vs, and tolde vs, if we would land, we might easily take the towne, for they ment not to withstand vs, but that they had caried all their goods into the mountaines, but, if we would not land to burne and spoile the towne, chey would giue vs some reasonable ransome, and any victuals that we wanted. So our general agreed with them, receiued their ransome, and departed without landing. But at our first arriuall in this bay, our generals long boat was sent forth wel manned, and tooke 3 Carauels, but found litle or nothing of value in them: sauing in one were some sides of bacon, and some maiz and Guiny-wheat. Here we staid til the 23 of May, & in the euening we set saile, and departed fro thence. And the 26 of the same we thought to haue landed at a fozt that standeth by the sea-coast in the Caracos, as you go for S. Iago. This is a marueilous high land, as high as the pike of Tenerif, we could not land here ouer night, by reason of the roughnes of the sea, which goeth in that place, & there is but one litle creeke against the fozt, to come in with your boat. So, we perceiuing no fit place to land, by reason of the sea, stood away some league to the West-ward, about a litle head-land, there we ankered al night: and the 27 in the morning we all landed in safety, none resisting vs. Then we presently set our selues in aray, and marched toward the fozt, & tooke it with-

out any resistance. Here we remained all the rest of this day until the 28, about 3 of the clock in the afternoon. We found nothing in this fort but a little meale, or 2 or 3 tunnes of wine, which by reason of some disorder amongst the company overcharging themselves with the wine, our general for the most part caused to be spilt. While we remained here, some of our company ranging the woods, found the gouernor of the fort where he lay asleepe, brought him to our general: who examined him touching the state of the citie of S. Iago de Leon. Who declared vnto vs that they had newes of our coming a moneth before, and that they of the towne had made preparation for our coming: and that if we did go the common beaten way, it was neuer possible for vs to passe, for that they had made in the midst of the way betweene this fort and the said city, an exceeding strong baricado on the top of a very high hill, the passage being not about 25 or 30 foot in breadth, & on each side marueilous steep, vpright, and the woods so thicke that no man could passe for his life: which indeed at our returning backe we found to be true. Upon which speeches our general demanded of him if there were not any other way: who answered, there is another way marueilous bad and very ill to trauel which the Indians do commonly vse: but he thought that the Spaniards had stooped the same, by cutting downe of great trees and other things, as indeed they had. The Spaniard was a very weake and sickly man not able to trauel, so our general sent him aboard his ship, & there kept him. In the taking of our 3 small Carauels at Cumaná, we had a Spaniard in one of them that had traueiled these wayes to the citie of S. Iago. He told vs he would carry vs thither by any of both these wayes, if after ward we would set him at libertie: the which was granted. While we remained at the fort by the waters side, the Spaniards came downe vnto vs by the great & beaten way on horsebacke, who being discovered, our general sent out to meete them captaine Roberts with some 40 or 50 musketeers, who came to skirmish with them, but they would not stay. The same day in the afternoon we marched forth toward S. Iago, & tooke the Indians way called The yeknownen way. In our march we came to diuers Indians houses, which we neuer hurt, but passed by and left them vntouched: but the Indians were all fled into the woods, and other places, we know not whither. We marched vntil it was night ouer such high mountaines, as we neuer saw the like, and such a way as one man could scarce passe alone. Our general being in the foreward, at length came where as a riuer descended downe ouer the mountaines, and there we lodged all that night. Here in going this way, we found the Spanish gouernours confession to be true: for they had baricadoed the way in diuers places with trees, & other things in such sort, that we were driven to cut our way through the woods by Carpenters, which we carried with vs for that purpose. The next day being the 29 of May early in the morning we set forthward to recover the tops of the mountaines: but (God knoweth) they were so extreme high and so steep vpright, that many of our souldiers fainted by the way: and when the officers came vnto them, and first entreated them to goe, they answered, they could goe no further. Then they thought to make them goe by compulsion, but all was in vaine: they would goe a little and then lie downe, and bid them kill them, if they would, for they could not, yor would not goe any further. Whereby they were enforced to depart, & to leaue them there lying on the ground. To be short, at length with much ado we gat the top of the mountaine about noone: there we made a stand til all the company was come vp, and would haue stayed longer to haue refreshed our men: but the fogge and raine fell so fast, that we durst not stay. So wee made hast to descend towards the towne out of the fogge and raine: because that in these high mountaines by report of the Spaniards themselves, it doeth almost continually raine. As soone as we were descended downe nere halfe the way to the towne the raine ceased, and going downe a little further, on the toppes of a hill we saw the towne not farre distant from vs. Here we all cleared our muskets: and when our colours came in sight, we discharged a second vollee of shot to the great discouragement of the enemy. Thus we marched on a round pace. The enemy was in readinesse a little without the towne to encounter vs on horsebacke. Being now fully descended from the mountaines wee came into a faire plaine champion fielde, without either hedge, bush or ditch, sauing certaine trenches which the water had made, as it descended from the mountaines. Here we set our selues in a readinesse, supposing the enemy would haue encountered vs: but hauing pitched our maine battell, and marching forthward a good round pace, captaine Beling, and captaine Roberts tooke ech of them some loose shot, and marched in all hast toward the enemy before the maine battell, wherein was our general with capt. Sommers and came to skirmish with them: but it was soone ended: for the enemy fled. One Spaniard was slaine in this skirmish, and not any one of our companies touched either with piece or arrow, God be thanked. We soone marched into the towne, and had it without any more resistance: but there we found not the wealth that we expected: for they had conueyed all into the mountaines, except such goods as they could not easily carry, as wine, and iron, and such things. By three of the clocke

clocke in the afternoone the 29 of May, we entred the citie. Here we remained until the 3 of June without anie great disturbance, saving sometime by night they would come on horse-backe hard vnto our Corps du guard, and finding vs vigilant, and readie for them, would depart againe.

The first of June, there came a Spaniard neere vnto vs alone: the Corps du guard perceiuing him, called our General, who soone came towards him: but before he approached, the Spaniard made signes that he should lay aside his armes: which he refused to doe, but promised as he was a souldier, if he would come, hee should haue free passage. Upon which promise hee came to him on horse-backe, and our General brought him within the towne, and there communed with him. Who demanded what he ment to do with the towne: he answered that he meant to remaine there and keepe it; or if he did depart from it he would burne it. The Spaniard then demanded, what the rancome of it should be. Our General required 30000 ducats. Whereunto he replied that it was very much. So hauing had some other conference together, hee shewed him that hee had bene a souldier in Flanders a long time, and now was sent thither by his kings commandement. Among other things our General demanded of him, what the reason was they had not walled the citie, being so faire a thing as that was. The Spaniard replied, that hee thought it to bee stronger walled then anie citie in the world, meaning, by those huge & high mountaines which the enemy must passe ouer before he can approach it; which we found very true. Thus with many other faire speeches, heooke his leaue for that day, and told our Generall, that he would go speake with the gouernour: (but it might be himselfe, for any thing we know) howbeit because our General had granted him free comming and going, he suffered him to depart: who before his departure, requested to haue a token of our General, that he might shew to the Gouernour how he had spoken with vs, or else he doubted, that he would not beleue him. Whereupon our General gaue him a piece of 12 pence: so he departed and promised the next day by ten of the clocke to returne vnto vs with an answer: in which meane time nothing befel. The next day being the 2 of June, at his houre appointed, he returned to his Indian running by his horses side. So he was brought to the General, and there remained till after dinner, and dined in his company in the gouernours house that was. The dinner ended, with the best entertainment which could be giuen him, they communed again about the rancome of the citie. Our General proposed his old demand of 30000 ducats. The Spaniard first proffered him 2000, then 3000, last of all 4000, and more he would not giue. Our General counting it a small summe of money among so many, did utterly refuse it. So the Spaniard departed. But before his departure our general told him, that if he came not to him again before the next day noone, with the rancome which he demanded, he would set all on fire. That whole day past, and the night also without any thing of moment, except some shew of assault, by their approaching towards our Corps du guard, and retiring backe againe. The 3 day being come, in the morning some of our company went forth, a league or more from the towne, & some two leagues and more vnto certaine villages thereabout, & set them on fire: but the enemy neuer came to resist them, so they returned backe againe safe into the towne, and brought certaine Indian prisoners with them, among whom there was one which spake broken Spanish, which being examined, confessed vnto vs of his own accord, how the General had sent to the other towns thereabout for aide, and that he thought they would be there with him that day. When we understood this, we grew into some distrust of the Spaniards trechery, and thought vpon the messenger, how he had vied long delayes with vs: whereupon we were commanded presently, euery man to make ready to depart, and to fire the citie: which forthwith was done. And after we had seene it all on fire, & burnt to ashes, we tooke our leaues and so departed, & marched away that day being the 3 of June, not that way we came, but by the great beaten way. And when we had marched halfe the way towards the waters side, we came vnto that strong baricado which they had made, and there lay all that night. Here we found the Spanish captaines word to be true which we tooke at the fort by the waters side: for this baricado was of such force, that 100 men in it well furnished, would haue kept backe from passing that way 100000: first by reason of the huge and high mountaines, next the steepenes of them, on both sides, last of all in regard of the fine contriuing of it with the large trenches, and other munitions, which I cease to recite. The fourth day of June in the morning wee departed from thence: but before our departure, wee ouerthrew on the one side of the steepe hill two bales of yron, which we found there planted by the enemy, and so set forthward toward our ships, and by 12 of the clocke came to the waters side, and there remayned in the fort which wee had taken before, vntill the fift day at night: in which time we laded some small quantity of hides, and Salsa-perilla, which we found there at our first landing. So the fift day at night we departed from thence, to goe to a towne called Coro: but before wee departed, wee set fire in the fort, and all the Indians houses that were about it, and burnt them. Then we set sayle,

Ccc

and standing along the coast, our Spanish guide signified unto vs, that there were foure sayles of ships about five leagues from thence, in a place called Checherebiche, and Caio, and Maio. So the 6 day in the morning we were thwart of the place, and there our generall sent away his long boate with captaine Sommers, unto those places, where they found 3 of the ships: but the Spaniards had conueyed their sailes ashore into the woods, so that they could not bring them off, but set fire in them and burnt them. From hence we stood along the shore, sailing untill the ninth day of June, on which day toward the evening we embarked our selues in our pinnesses and small carauels, to land at Coros: but we had none that knew the place certainly: wherefore we anchored that night some two leagues to the Eastward of it, and in the morning I went on land, and nine more with me, to see if we could discover the towne, but we could not, wee went aboue a league vp into the countrey, but could not see any village or towne. So returning backe, wee met our Generall, with diuers others which came ashore with him, with whom we marched into the countrey againe, but could see nothing, & so returned. At the water side captaine Prowse died. There we remained all that day on land, by reason the wind blew so much that wee could not get aboard untill the evening. After our comming aboard a boat which we sent into the bay, returned and brought vs newes, that there rode a barke within the bay, and by all likelihood the towne should be there. So presently our Generall went into the bay with the Derling and some of the small carauels. The tenth day in the morning, the rest of our shipping came into the bay, and our men landed the same day, about 10 or 11 of the clocke in the night, & so marched on toward the towne: but in the way they had made baricados, and kept them very strongly. Notwithstanding the courage of our men was such, as that they feared nothing, and forced them to leaue their forces, and flie. Having wonne this baricado they there remained untill the next day being the 11 of June, and then early in the morning they marched on towards the towne, where by the way, the enemye often times came to skirmish with them, but alwayes fled. In fine they won the towne without any great losse of men, God be thanked. Having gotten the town, they found nothing in it at all; for they had intelligence from Sancto Iago, how wee had used them before, which caused them to conuey all their goods into the mountaines and woods: finding nothing in it, our Generall caused it to be set on fire, thinking it not good to remaine there, but to returne againe, backe to the ships: and the greatest cause was by reason of the departure of captaine Sommers: who the day before in a most furious tempest, being in the pinnesse, with some 50 men at anker, had his cables broken and lost all his ankers, and so was faine to put to sea to saue himselfe, otherwise they had bene in danger of perishing. Thus our General and his company, returned backe againe the twelfth day and embarked themselves, and departed away with all speede to seeke captaine Sommers. The 13 toward night, hee came where captaine Sommers was, and found him riding, but not by anie ankers, but by two bales, which they had made for to stay their barke by: at which meeting the company was very glad. Then they determined to go into a mighty great bay, to a towne called Laguna: but the bay was so deepe and should withall, that we returned backe againe, after wee had stood in two daies & a night. So we sayled ouer toward the Isle of Hispaniola the sixteenth of June: and the twentieth day we saw it. The 21 we anchored vnder Cape Tiburon. Here we watered, and stayed untill the 25 of the same. After our departure out of the bay of Laguna, a great sickness fell among our fleete, and there died about eighty men of the same. This sickness was the flure of the bellie, which is a common disease in that countrey. We remainyd about this Island untill the eight and twentieth of this moneth. Then we departed from thence, and the second of July arrived at the Island of Iamaica. Before our comming hither, the three ships of Hampton had forsaken vs, and left our company. And the Derling wherein was captaine Iones, was sent to discover some other secret matter, in which discovery the valiant gentleman ended his life. So our whole fleete was now but our generall, with captaine Sommers, and a small pinnesse. We stayed at this Isle of Iamaica until the sixt of July, in which meane time we landed to see if we could kill any beeuies, but we could not, they were so wild: here is great store of them, and great plenty of fresh-fish. We departed hence the 6 of July, and passed by the Islands, called Caimanes, and the Isle de Pinos, and the 12 of the said moneth by Cape de Corrientes where we watered, and the same night, wee set saile towards the cape of S. Anthony, being the westernmost part of the Isle of Cuba. The 13 day in the morning we were vnder this cape, and the same day we met with the honourable knight, Sir Walter Raleigh, returning from his painful, and happy discovery of Guiana, and his surprize of the Isle of Trinidad. So with glad hearts, wee kept him and his fleete of three ships company till the twentieth day at night, what time we lost them. In all which time nothing of moment fell out, save that we gaue chase to a couple of frigats, but could not fetch them.

After-

Afterward we plyed to recouer Havana, untill the five and twentieth of July: then we set our course for the head of the Martyrs, the 27 we were in sight of them. The 28 wee entred the gulfe of Bahama: then we set out course homeward toward Newfoundland, but we could not fetch it, but were on the Banke, and tooke fish there the 20 day of August. The same night we set sayle to come home, by reason the wind was contrary to goe in with Newfoundland. So the tenth day of September, we arrived in safety (God be thanked) in Milford haven in Wales, hauing performed so long a voyage in the space of five moneths, or somewhat lesse.

The Banke of Newfoundland.

The voyage truly discoursed, made by sir Francis Drake, and sir John Hawkins, chiefly pretended for some speciall seruice on the Islands and maine of the West Indies, with sixe of the Queenes ships, and 21 other shippes and barks, containing 2500 men and boyes, in the yeere 1595. In which voyage both the foresayd knights died by sicknesse.

We brake ground out of the sound of Plimmouth on Thursday the 28 of August, and that night ankozed againe in Caulson bay, where we rode till Friday. Then we set sayle and stood South-west: and about thre of the clocke the next morning the Hope, wherein sir Thomas Baskeruil went, strake upon the Edy Stone, and shot off a piece, but after cleared herselfe wel enough.

On Sunday at sixe of the clocke in the morning the landes end bare North-west and by North, and then we stood away South-west and by South for the coast of Spaine.

The 8 of September we tooke two small Flemish shiboats bound for Barbary; which we carried a while with vs and after ward dismissed them without doing them any harme: only we learned newes of them, and stayed them from discerning our fleet to the enemy.

The 26 we saw Fortenventura, being one of the Islands of the Canaries.

The 27 being Saturday by break of day we had ouer-shot the chiefe towne of Grand Canaria to the North-east, and then stood about for it againe, and by nine of the clocke were at anker sayle before the fort to the Eastward of the towne some league. At one of the clocke wee offered to land one thousand and foure hundred men in the sandie bay betwixt the fort and the towne: But by our detracting of the time they had made a bulwarke in the sandie bay and planted Ordnance: so that by reason thereof, and the great breach of the sea that went then on shore we were not able to land without endangering our whole forces, which our General would not doe. There were of Spaniards horsemen and footmen some 900. which played upon vs out of their trenches, most of them being shot. At the time of our landing there went by commandement of our Generals within musket shot of the shore, a rode there at anko some three hours; the Salomon, the Bonaventure, the Elizabeth Constance, the Phenix, the Luell, the Little John, the Delight, the Pegasus, the Exchange, the Francis, the caratell, and the two catches: But when the Generall sir Francis Drake gaue ouer the landing being in his barge, the ships weighed being in some danger, and stood off againe to the great ships. Then we went to the West end of the Island and there watered: where captaine Grimston going by the hill with 6 or 7 in his company was set vpon by the herdmens, who with their dogs and stauers killed the captaine and thre or foure of his company: the rest were soze wounded: the Salomons Chirurgian taken prisoner, who disclosed our pretended voyage as much as in him lay: so as the Viceroy sent a carauel of aduiso into the Indies, vnto all such places as wee did pretend to goe to. Howbeit they had intelligence from the king of all our voyage the eight of August, which was thre weekes before we set forth of England: as also by a Fleming that had seene all our provision at London.

The 28 being Sunday at ten of the clocke at night wee set saile, and stood away South-west and South-west some 200 leagues, untill we came in the height of the Islands of Cape Verde, and then more Westerly for Martinino, one of the Islands of the West Indies, which we saw the 27 of October: but the night before we had a storme, in which sir Francis with foure or five other ships bearing on head of the fleet was separated. Then we stood for Dominica, an Island full of inhabitants of the race of the Canibals, not past ten leagues distant from Martinino. In it groweth great store of Tabacco: where most of our English and French men barter knives, hatchets, sawes, and such like yron tooles in trucke of Tabacco.

Dominica.

Before we came to Dominica our Generall Sir Francis Drake altered his course, and went for Marigalante, which we had sight of the 28 day, and came to an anker on the North-east side a saker shot off the shore in 12 fathomes water faire holding. There the Generall went on shore in his barge, and by chance met a Canoa of Dominicans, to the people whereof he gaue a pelton

wastcoate of flanel and an hankerchiefe; and they gaue him such fruits as they had, and the Dominicans rowed to Dominica againe. They came thither to fetch some fruits which they sowe and plant in diuers places of that Island, which they keepe like gardens.

The next morning by breake of day we weped and stode betweene the Todos Santos, which are 4 or 5 little Islands betweene Guadalupe and Dominica. There is nothing vpon these Islands but wood. We came to the Southeast side of Guadalupe and there ankered hard aboord the shoze: the Southwest side of the Island is deepe water and good ankoze: where that day sir Iohn Hawkins came to vs againe standing vp from the South side of Dominica. There we watered, washed our ships, set vp our pinnelles, and refreshed our souldiers on shoze.

The 30 captaine Wignol in the Francis, a barke of 35 tunnes, being the sternmost of sir Iohn Hawkins fleete was chased by five of the king of Spaines frigats or Zabras being ships of 200 tunnes a peece, which came of purpose with 3 other Zabras for the treasure of S. Iuan de Puerto rico: The Francis going roome with them, supposing they had bene our owne fleete, was by them taken in sight of our carauel. They left the Francis dying in the sea with 3 or 4 hurt and sicke men, and tooke the rest of our men into their ships, as the prisoners which wee tooke at S. Iuan de Puerto rico told vs.

The 4 of Nouember we began to vnlade the Richard, one of our victuallers, which was by the next day vnladen, vnrigged and then sunken. Then we stode North-west & by North: and the next morning saw the Islands of Monferrata, Redonda, Estazia, S. Christopher and Saba. The biggest of these Islands is not past 8 leagues long. There is good ankoze in 8, 7, and 5 fadomes water faire white sand. Then we stode away South-west, and on the 8 in the morning being Saturday came to an anker some 7 or 8 leagues off within certain broken Islands called las Virgines, which haue bene accounted dangerous: but we found there a very good rode, had it bene for a 1000 sails of ships in 14, 12, and 8 fadomes faire sand and good ankoze, high Islands on either side, but no fresh water that we could find: here is much fish to be taken with hockes and nets: also we stayed on shoze and fowled. Here sir Iohn Hawkins was extreme sicke; which his sickness began vpon newes of the taking of the Francis. The 18 day wee weped and stode North and by East into a lesser sound, which sir Francis in his barge discovered the night before, and ankoze in 13 fadoms, hauing hie steepe hills on either side, some league distant from our first riving.

The 12 in the morning we weied and set sayle into the sea due South through a small streit but without danger, and then stode West and by North for S. Iuan de Puerto rico, and in the after noone left the 3 small Islands called The passages to the Southward of vs, and that night came by to the Eastermost end of S. Iohn, where sir Iohn Hawkins departed this life: vpon whose decease sir Thomas Baskeruil presently went into the Garland. At 2 of the clocke we came to anker at the Eastermost side of the chiefe towne called Puerto rico in a sandie bay 2 miles off: where we receiued from their forts and places where they plantred Ordnance some 28 great shot, the last of which strake the admirall through the misin, and the last but one strake through her quarter into the sterage, the Generall being there at supper, and strake the stoole from vnder him, but hurt him not, but hurt at the same table sir Nicholas Clifford, M. Browne, captaine Straiford, with one or two more. Sir Nicholas Clifford and master Browne died of their hurts.

Then wee set sayle and stode to the Eastward, and at midnight tacked about to the West, and in the morning came to an anker before the point without the towne, a little to the Westwards by the 3 Islands.

The 13 we rode still vntill night, when in the beginning with twenty five pinnelles, boats and Challops manned and furnished with fire-wozkes and small shot wee went into the rode within the great castles, and in despite of them fired the five Zabras or frigats, all ships of two hundred tunnes the peece or more, quite burning the Rereadmirall downe to the water, which was the greatest shippe of them all, and also mightily spoiled the admirall and viceadmirall, notwithstanding the castles and ships gaue vs a hundred eightie and five great shot, besides small shot abundance. They had also sunke a great shippe in the mouth of the chanell and rafted it ouer with her mastes almost to the very fortres and castles, so as they thought it impregnable. The frigats had in each of them twenty peeces of brasse, and a hundred barrels of powder. Their chiefe lading that they brought thither was like, oyle, and wine. The treasure which they went to fetch, which was brought thither in a ship called the Vigonia, was conueyed into the strongest and surest castell of defence; being, as one of the prisoners confessed, three millions of ducats or five and thirty tunnes of siluer. Also they had sent all the women, children, and vnable persons into the woods, and left none but souldiers and fighting men in the towne. The fight on our side was resolute, hote, and dangerous: wherein wee lost some forty or fifty men, and so many

The death of
sir Iohn Haw-
kins.

The fight at S.
Iuan de Puerto
rico.

many were hurt. There was also great death of the Spaniards aboard the frigats, with burning, drowning, and killing, and besides some taken prisoners.

The 14 we rode still, being within shot of the uttermost castell: but they fearing the next night we would come in againe, began to warpe vp the other 4 frigats, beginning first with the Admirall: which whether by chance or their owne willes wee saw to sinke; and as wee suppose so did they with all the rest, or else by stealth got vp farther within their chiefest forces.

The 15 also we rode still, and at afternoone wee espied a carauell coming from the castell point: but befoze our pinnelles could fetch her vp, she ranne on shore, where our boates could not come at her because of the breach, and also many of the Islanders came downe to guard her with shot. The beginning of this night we weyed, and stood one houre to the East, and then tacked about to the West.

The 16 being Sunday, and the 17 also we were becalmed.

The 18 we ankered a litle to the Southward of the Southwest point of the Island, giuing the point a birch because of a shoale of sand that lieth some two cables length off: there we rode in foure, fise, and sixe fadomes faire white sand, where wee set vp more pinnelles, washed our ships, and refreshed our men on shore. Here the Generall tooke a pinnelle of Hispaniola with diuers letters, signifying that two Englishmen of warre had done great hurt along their Island.

The 20 the Generall rowed to the Phenix, the Delight and the carauell, and caused them to wey and anker right against the mouth of a fresh riuer in two fadomes water in ozie sand to the Southward of the other ships some league or more. The Generall went into this riuer three or foure leagues vp, and tooke horses in the countrey. Sir Thomas Baskervill rowed vp the riuer and stayed there all night, and went vp into the land three or foure leagues.

The 23 wee discharged a barke called the Pulpie and burnt her: and at three of the clocke that afternoone, when we were ready to set saile, there came aboard the Defiance our Admirall, a Spaniard with his wife, who feared some great torment for not hauing repaired to the towne according to the Generals commandement of that Island, who had commanded that all able men of the fleete should repaire to the towne to defend it against vs. Then we stood againe West and by North because of a ledge of rocks that lie sunke 4 or 5 leagues off the Southside of the Island.

The 25 we stood away Southwest, and saw Mona being a lowe flat Island betweene Hispaniola and S. Iuan de Puerto rico. That day the Exchange of captaine Winter spent her boult-spizite; and in the beginning of the night the Phenix was sent backe to seeke her: which by Gods help that night met with her, and kept her company vntil the next morning, then taking in a small cable from her for a tow: but by 9 that morning she spent her maine mast and split her foreyard, breaking also her tow: so as they were faine to saue some trifles out of her and the men, and to sinke the hull. Then we stood away South and South and by West after the fleete: and the 26 in the morning had sight of the fleete againe.

The 29 we had sight of the Island called Curacao within 8 leagues of the maine, and on the Northwest side came to an anker in very deepe water hard aboard the shore without any danger: but the Generall weyed presently and stood away Northwest and by West, and Northnorthwest for the maine, and that night saw Aruba, being somewhat a lesse Island then the other: we left it some three leagues to the Southward of vs.

On Sunday morning being the last of Nouember wee saw three or foure little Islands called the Monjes, betwixt Aruba and the next North point of the maine. At 12 of the clocke we sawe the maine, where we saw a great current setting to the Westward, and also the water changing very white. The Phenix, the carauell, and one of the catches kept within, and at midnight came vnder Cape de la Vela, and made a fire, whereby the rest of the fleete came to anker vnder the Cape, where is a very good rode, faire sholding and sandie ground, fourteene, twelue, and tenne fadoms neere the shore. Toe Cape is a bare land without trees or shrubs, and falleth in eight or ten leagues Southeast and Northwest: and a saker shot off the point standeth a litle Island like Mewestone neere Plimmouth, but somewhat bigger. In the morning the first of December wee imbarked all our souldiers for Rio de la Hacha, which is a towne twenty leagues to the Westwards, one of the ancientest in all the maine, although not very bigge: but it standeth in a most fertile and pleasant soyle. Our men tooke it by ten of the clock in the night. The ships bearing all that night and the day befoze in 5 and 6 fadomes, the lesser ships in 2 fadomes and an halfe water: the Phenix went so neere the shore by the Generals commandement, that shee strake on ground, but got off againe. There lieth to the Eastward of the towne a mile or thereabout a shoale of sand: therefore giue a birch some halfe league or more befoze you come right against the town. There wee came to anker in two fadomes, but the great ships rode off in fise and sixe fadomes.

A fresh riuer.

There is a fresh riuer about a bow-shot to the Eastward of the towne; whereinto our pinnesles could scarce enter by reason of a barre of sand in the riuers mouth, but within it is nauigable for barkes of twenty or thirty tunnes some sixe or eight leagues by.

La Rancheria taken.

The sixth day the Spaniards came in to talke about the ransome of the towne, but not to the Generall his liking: and that night Sir Thomas Baskeruil marched by into the countrey to ouer-runne those parts: and the Generall the same night with some hundred and fiftie men went by water sixe leagues to the Eastward, and tooke the Rancheria a fisher towne, where they drage for pearle. The people all fled except some sixteene or twenty souldiers, which fought a little, but some were taken prisoners, besides many Negros, with some store of pearles and other pillage. In the houses we refreshed our selues, and were all imbarked to come away, and then had sight of a brigandine or a bredger, which the Generall tooke within one houres chase with his two barges: she had in her Indie-wheat, which we call Maiz, and some silver and pearle, but of small value.

On Saturday the seventh, master Yorke captaine of the Hope dyed of sicknes, and then master Thomas Drake the Generals brother was made captaine of the Hope, and master Ionas Bodenhams captaine of the Aduenture, and master Charles Caesar captaine of the Amicie.

The tenth day the Spaniards concluded for the ransome of the towne for 24000 ducats, and one prisoner promised to pay for his ransome 4000 ducats.

The fourteenth day they brought in the townes ransome in pearles, but rated so deare as the Generall after conference with them, misliking it, sent it backe againe, giuing them foure houres respite to cleere themselves with their treasure.

The sixteenth the gouernour came into the towne about dinner, and vpon conference with the Generall told him plainly, that he cared not for the towne, neither would he ransome it: and that the pearle was brought in without his command or consent, and that his detracting of time so long was onely to send the other townes word, that were not of force to withstand vs, whereby they might conuey all their goods, cattell, and wealth into the woods out of danger. So the Generall gaue the gouernour leaue to depart according to promise, hauing two houres to withdraw himselfe in safety.

Tapia taken.

The seventeenth Sir Thomas Baskeruil with the Elizabeth Constance, the Phenix, the carauel with foure or five pinnesles went some five leagues to the Westward & landing, marched some foure leagues by into the countrey to a place called Tapia, which he tooke & burned certain villages and ferme houses about it. He had some resistance as he passed ouer a riuer, but had but one man hurt, which he brought aboard alieue with him: he marched one league farther and burned a village called Sallamca, and so returned with some prisoners, the souldiers hauing gotten some pillage.

Sallamca burnt.

The 18 the Rancheria, and the towne of Rio de la Hacha were burnt cleane downe to the ground, the Churches and a Ladies house onely excepted, which by her letters written to the Generall was preserved. That day wee set sayle and fell to lee-ward, to meete with Sir Thomas Baskeruil.

Cape de Aguja.

The 19 we weighed and stood to leeward for Cape de Aguja, which the twentieth at sunne rising we saw. It is a Cape subject much to flawes, by reason it is a very hie land: and within the cape lieth an Island within the mouth of the sound, which hath a white cliffe or spot in the West-northwest part of the Island. The land all about the cape riseth all in homocks or broken steeple hills. A league South-west within that, (for so falleth the land thereabout) there standeth on the top of a cliffe a watch-house: and a little within that a small Island: you may goe in betweene the maine and it, or to leeward if you lust: and hard within that is the rode and towne of Santa Martha, which at 11 of the clocke we tooke, the people all being fled, except a few Spaniards, Negros & Indias, which in a brauado at our landing gaue vs some 30 or 40 shot, & so ran away.

Santa Martha taken.

That night their Lieutenant generall was taken and some little pillage brought in out of the woods: for in the town nothing was left but the houses swept clean. In all the maine is not a richer place for gold: for the hops were mixt with the earth in euery place, and also in the sand a little to the leewards of the towne. In the bay wee had a bad rode by reason of a small moone, for euery small moone maketh foule weather all the maine along.

The 21, the Generall caused the towne to be burnt, and all the ships to wey, and stood out, many of the souldiers being imbarked where the Generall had appointed, in the small ships which rode neere the shore. We lost that night the company of the Phenix, captaine Austin, Peter Lemon, and the Garland pinnesse, which stood along the shore, and being chased off by gallies out of Carthagea Peter Lemon with nine of our men was taken, the rest came safe to our fleet.

The

The 26 we saw the Islands some twelue leagues to the Eastward of Nombre de Dios standing in toward the shore, but toward night we stood to the off in untill the next day.

The 27 we came into the mouth of Nombre de Dios, and by one of the clocke tooke the towne, the people being all fled except some 100 Spaniards, which kept the Fort, and played vpon vs, hauing in the fort some 3 or 4 small pieces of ordnance, and one of them brake in discharging at vs. They gaue vs also a volley of small shot: but seeing our resolution in running vpon them they all fled and tooke the woods.

The towne was bigge, hauing large streetes, houses very hie, all built of timber, but one Church very faire and large wrought all of timber likewise. Nothing was left in the towne of value: there was a shew in their shops of great store of marchandises that had bene there. There was a mill about the towne, and vpon the toppe of another hill in the woods stood a little watch-house, where we tooke twentie sowes of silver, two barres of gold, some money in coyne, besides other pillage.

The towne was situated in a waterie soile, and subiect much to raine, very vnhealthy as any place in the Indies, hauing great store of Dyenges, plantains, cassay-roots, & such other fruites; but very dangerous to be eaten for breeding of diseases. To the Eastward of the towne within the bay runneth out a fresh riuer of excellent good water, with houses, and all about it gardens: halfe a league from hence due East into the countrey was an Indian towne, whither as we marched a little before our comming away with an hundred men they had broken downe a bridge to hinder our passage, where they lay in ambush with some twentie or thirtie small shot, and bowes and arrowes, set vpon vs, and killed Lieutenant Iones, hurt three or foure and so fled into the woods, ranne before vs and fired their owne towne, and then fled farther into the woods: our men fired diuerse other houses in pursuing them, and so returned againe: our Generall with Sir Thomas being in the Riuer's mouth with thirtie or fortie men filling water about some myle from vs.

The road of Nombre de Dios is a faire road: but on each side, as yet come to ride before the towne, lyeth a ledge of rockes, but there is no danger because they are in sight. You may ride betweene them in thre or foure fadome water, and without if you will in eight or ten fadomes, where neither Castle nor Fort can annoy you. The name of Nombre de Dios was greater then their strength. For they had no Castle nor Fort, but onely the little fort aforesaid standing on the top of an hill, although they might haue made it stronger if they would.

The 29 sir Thomas Baskeruil with 750 armed men, besides Chirurgicalians and prouand boyes, went for Panama.

The last of December the Generall burned halfe the towne, and the first of Januarie burnt the rest, with all the frigats, Barks & Gallies, which were in the harbour and on the beach on shore, hauing houses built ouer them to keepe the pitch from melting.

The second of January sir Thomas returned with his souldiers both weary and hungry, hauing marched more then halfe the way to the South sea. The Spaniards played diuers times vpon vs both outward and home ward in the woods, the way being cut out of the woods & rockes both very narrow, and full of myze and water. The march was so soze as neuer English man marched before. Hauing marched some ten leagues in a maruellous strait way, vpon the top of an hill, through which we must needes passe, the Spaniards had set vp a Fort and kept it with some 80 or 90 men, who played vpon vs as we came vp, before wee were aware of them, and so killed some twentie or more of vs, amongst whom was Captaine Marchant quarter-master Generall, and Ensigne Sampson, Maurice Williams one of her Maiesties guard, besides diuerse were hurt, as M. Captaine Nicholas Baskeruil a valiant gentleman, with diuers others. Then sir Thomas had perfect knowledge that they must passe two such Forts more, if he got that, besides Panama to be very strong, the enemy knowing of our comming long before.

Also our souldiers had no victuals left, nor any meanes to get more: which considerations caused sir Thomas to returne and giue ouer his attempt. As he marched thitherward he tooke an Indian and sent him to Nombre de Dios with letters of his returne and proceeding.

The 5 we set saile at 12 of the clocke, and stood to the Westward.

The 10 day we saw an Island lying Westward some 30 leagues called Escudo, where wee came to anker on the Southside in 12 fadoms water, faire sand and good ankorage. If you come into the Easterne point, giue it a birth, because of a ledge of rockes, that lyeth out there from the end of the Island: comming to anker we sawe a roader, who seeing vs, set sayle, but that night with our Pinnesses we tooke him, he had nothing in him but a little maiz. The men being examined by the Generall confessed him to be an Aduisor sent from Nombre de Dios to all the ports along

Nombre de Dios taken.

An Indian towne fired.

The Ile of Escudo.

along the coast Westward. This Island lyeth 9 or 10 leagues from the maine, & is not past two leagues long full of wood, and hath great store of fresh water in euery part of the Island, and that very good. It is a sickly climat also, and giuen to much raine: here we washed our ships, and set vp the rest of our Pinnesles.

The 15 day captaine Plat died of sicknesse, and then sir Francis Drake began to keepe his cabin, and to complaine of a scowring or flure.

The 23 we set saile and stood by againe for Puerto Bello, which is but 3 leagues to the Westwards of Nombre de Dios.

The death of
sir Francis Drake

The 28 at 4 of the clocke in the morning our Generall sir Francis Drake departed this life, hauing bene extremely sicke of a flure, which began the night before to stop on him. He vled some speeches at 2 a little before his death, rising and apparelling himselfe, but being brought to bed againe within one houre died. He made his brother Thomas Drake and captaine Ionas Bodenhams executors, and M. Thomas Drakes sonne his heire to all his lands, except one manor which he gaue to captaine Bodenhams.

Puerto Bello.

The same day we ankoied at Puerto Bello, being the best harbour we found al along the maine both for great ships and small. There standeth a saker shot off the shoie at the Easterne point a little Island: and there is betwixt the maine & that 5 or 6 fadomes: but the best comming in is the open mouth betwixt that Island & another Island that lyeth to the westward with a range of rocks.

In Puerto Bello were but 8 or 10 houses, besides a great new house which they were in building for the Gouvernour that should haue bene for that place: there was also a very strong fort all to the waters side with flankers of great trees and stones filled with earth betwene: and had not our comming disappointed their pretence, they would haue made it one of the strongest places in all the maine. There they ment to haue builded a great towne. We found there three pieces of brasse ordnance sunke in the sea, which we weighed vp, all the people were fled and their goods carried away.

Up within this bay there was a little village but of no force, where we found a great fresh riuer, our men rowing by some two leagues found pillage, as wine and oyle, and some small quantitie of yron. After our comming hither to anker, and the solemne buriall of our Generall sir Francis in the sea: Sir Thomas Baskervill being aboard the Defiance, where M. Bride made a sermon, hauing to his audience all the captaines in the flecte, sir Thomas commanded all aboard the Garland, with whom he held a Councell, & there shewing his Commission was accepted for General, & captaine Bodenhams made captaine of the Defiance, & M. Sauill captaine of y^e Adventure.

The 27 died captaine Iosias of the Delight, and captaine Egerton a Gentleman of the Foresight, and Iames Wood chiefe chirurgion of the flecte out of the Garland.

The 28 died Abraham Kendall out of the Saker. At this place we watered againe, washed our ships & made new sailes, it being by the Generall and all the captaines agreed, that if we could by any meanes turne by againe for Santa Martha, we should, if not, to goe directly for England. Here also we tooke in some ballast as our neede required.

The 6 of februarie the Elizabeth of M. Wares was discharged and sunke, and that day the Pegasus iolly was going on shoie for water, carrying no garde: The Spaniards perceiuing it came downe vpon them, killed two of them, and tooke 2 or 3 prisoners, and so ranne vp into the woods againe.

The seuenth the Delight and captaine Edens frigate were discharged and sunke because they were old and leaked, and the Queenes ships wanted saylers.

That day our men being mustered we had sicke and whole 2000. And the next day we set on shoie all our prisoners as Spaniards and Negros. But before at our first comming to Puerto Bello sir Thomas sent two of those Spaniards to Nombre de Dios and to Panama to fetch ransom for some of the chiefest prisoners, but they neuer returned againe. As we were setting saile there came one with a flagge of truce, and told the General that they had taken 18 of our men, and that they were well vled, adding that if he would stay 8 or 10 dayes longer they should be brought from Panama. We supposed this to haue bene but a delay to haue kept vs there while the kings forces had come about by sea, as they dayly expected. We set saile the 8 of februarie, turning by for Santa Martha, and the 14 day we saw the Islands of Baru some 14 leagues to the Westward of Carthagea: The Generall that night told vs he would stand in for the towne of Baru in the bay: but that night blew so much winde and continued that small moone, that the same night we lost the Foresight, and the next day standing againe to make the land which we had made, we lost companie of the Susan Parnel, The Helpe, and the Pegasus. Then the next day we put ouer for Cape S. Antonie, and gaue ouer Santa Martha.

The

The 25 we saw the Island of Grand Cayman some 30 leagues to the North-westward of Iamaica, being a low sandie Island, hauing many toztopsles about it.

The Grand Cayman.

The 26 we saw the hie land of Cuba to the Eastward of the broken Islands, to the East of the Island of Pinos, and were imbayed in among those dangerous places. But perceiuing it, we stood out againe South-southeast and so got cleere, and then stood away West and by North for the Ile of Pinos, which we saw the first of March. It is a low land with wood and fresh water to the Western end. If you come in with the middelt of it you shall see rise by about the rest of the land 8 or 9 round homockes, and the Westernmost hath three in one.

The Ile of Pinos.

Being shot forth with the West end, and standing in for to water we espied 20 sayle of ships about one in the afternone. This was a third part of the fleete which the king sent for Carthagena, the rest of the fleete being gone for the Honduras. They were in all 60 sailes sent onely to meete our fleete, being commanded wheresoeuer they heard we were, to come vpon vs with all their three forces. This fleete which we met withall came standing for Cape de los Corrientes, and had bene refreshed at Hauana.

Asloone as they discried vs, they kept close vpon a tacke, thinking to get the winde of vs: but we weathered them. And when our Admirall with all the rest of our fleet were right in the winds eye of them, sir Thomas Baskeruil putting out the Queenes armes, and all the rest of our fleet their brauerie, bare roome with them, and commanded the Defiance not to shoot, but to keepe close by to second him. The Viceadmirall of the Spaniards being a greater ship then any of ours, and the best sayler in all their fleet looked by and gaue the Concord the two first great shot, which she repayed presently againe, thus the fight began. The Bonauenture bare full with her, ringing her such a peale of ordinance and small shot withall, that he left her with tozne sides. The Admirall also made no spare of powder and shot. But the Defiance in the middelt of the Spanish fleet thundering of her ordinance and small shot continued the fight to the end. So that the Viceadmirall with 3 or 4 of her consoys were forced to tacke about to the Eastward, leauing their admirall and the rest of the fleet, who came not so hotly into the fight as they did. The fight continued two houres & better. At sunne set all the fleet tacked about to the Eastward, we continued our course to the Westward for cape de los Corrientes, supposing we should haue met with more of their consoys. In this conflict in the Defiance we had five men slaine, three English men, a Greeke and a Negro. That night some halfe houre after, their fleet keeping vpon their weather quarter, we saw a mightie smoke rise out of one of their great ships which stayed behind: which happened by meanes of powder as we thinke, and presently after she was all on a light fire, and so was consumed and all burnt, as we might well perceiue.

The fight betwene the English and the Spanish fleets.

One of the Spanish great ships burnt.

The next day being the second of March in the morning by breake of day we were hard aboord Cape de los Corrientes, which is a bare low cape, hauing a bush of trees higher then the rest some mile to the Eastward of the cape. All Cuba is full of wood on the Southside. The Spanish fleet which then were but 14 no more then we were, kept still vpon our weather quarter, but dared not to come roome with vs although our Admirall stayed for them. Asloone as we had cleered our selues of the Cape 3 of their best saylers came roome with the Salomon, which was so neere the land that she could not double the Cape, but tacked about to the Eastward, & so was both a sterne and also to leeward of all our fleet: But when we saw the Spaniards working, the Defiance tacked about to rescue her: which the Spaniards seeing, & hauing not forgotten the fight which she made the night before, they looked by into the middelt of their fleet againe, and then all the fleet stayed vntill the Salomon came by, and so stood along for Cape S. Antonio, which we came in sight of by two in the after noone, being a low cape also, and to the Southwest a white sandie bay where 3 or 4 ships may very well water. There is a good road for North & Easterly windes: there the Spaniards began to fall a sterne. That night we stood away a glasse or two North-west, and North-north-west, and Northeast, and in the morning-watch South, and in the morning had sight of Cuba about the East part of the Organes, which are dangerous rocks lying 8 leagues off vpon the North part of Cuba, presently asloone as you passe Cape S. Antonio: then we stood to the Eastward of the land, the winde at South-south-west, and at 6 at night had foule weather, but after were becalmed all night. The 5 the winde came scant. The 7 we sawe a hie land like a crowne, which appeareth so 13 or 14 leagues to the Westward of Hauana, and another place in Cuba called The Table, 8 leagues to the Eastward of the crowne. The land ouer Hauana maketh two small mountaines like a womans breasts or paps. Here we found no great current vntill we came to the Gulfe of Bahama.

Cape Sant Antonio.

The Crowne.

The 10 we saw the Cape of Florida being but a reasonable low land and broken Islands to the Southward of the Cape. And at two in the afternoone we lost sight of the land 12 leagues to the

The cape of Florida.

the Northward of the Cape. After we had disembogued, we stood West till midnight, and were in 28 degrees, and then stood Northeast till the 13 at night, when we were in 31 degrees. And after the wind scanted with a great storme, in which we lost the Bonaventure, and the Little John, they bearing on head. Then we stood with our larboard tackt Eastnortheast.

The 19 we were in 29 degrees our course Eastnortheast. The 21 we had a great stormie gale of winde and much raine but large. And then all the rest of our fleete fell a sterne except the Hope, which bare a head: so that there kept no more with the Admirall, but the Defiance, the Adventure, and the Phenix.

The 28 we were in 39 degrees, and stood away for Flores, which the 8 of Aprill we saw, and the 9 came to an anker on the Southside, where we watered because the Defiance when we came in had but two butts of water. We bartered with the Portugals for some fresh victuals, and set here on shore at our coming away out of the Admirall our two Portugall Pilots; which Sir Francis Drake caried out of England with him.

The 10 being Easter-eue at night we set saile the winde serving vs to lie some stent in our course. That night and Easter day we had much raine: the winde came by at Northeast, we beare it by some 30 leagues to the Eastward, & then about to the West, and so againe to the East, and tryed, and the next boord to the West. On Thursday towards night, being the 16 wee had sight of Coruo againe, we tryed all that night: and on Friday towards night we came to an anker to the Westward of the point of Santa Cruz vnder Flores: but before midnight we draue, and set saile the next day standing away Northeast. About three of the clocke in the afternoone the winde came by againe at North. On Sunday the 19 by two of the clocke in the afternoone we had made 20 leagues an East way: and then the winde came by a good gale at Northwest, and so Northeast with a flowne sheete we made the best way we could: but being disperled by bad weather we arrived about the beginning of May in the West parts of England. And the last ships which came in together to Plimmouth were the Defiance, the Garland, the Adventure, and the Phenix.

A Libell of Spanish lies written by Don Bernaldino Delgadillo de Auellaneda, Generall of the king of Spaines Armada, concerning some part of the last voyage of Sir Francis Drake; together with a confutation of the most notorious falsehoods therein contained, and a declaration of the truth by M. Henrie Savile Esquire: and also an approbation of both by Sir Thomas Baskerville Generall of her Maiesties Armada after the decease of Sir Francis Drake.

To the courteous Reader.

Hereas Don Bernaldino Delgadillo de Auellaneda, Generall of the Spanish fleete, hath by his printed letters published to the world diuerse vntruthes, concerning our fleete and the Commanders thereof, seeking thereby his owne glorie, and our disgrace; I haue taken vpon me (though of many least able) to confute the same, the rather for that the printed copie came first into my hands, hauing my selfe bene Captaine of one of her Maiesties ships in the same voyage. Take this therefore (gentle Reader) as a token of my dutie and loue to my countrey and countrey-men, and expect onely a plaine truth, as from the pen of a souldier and Nauigator: Which if you take in good part, you may draw me hereafter to publish some greater labour.

HENRY SAVILE.

The true copie of a letter found at the sacking of Cadiz, written by Don Bernaldino Delgadillo de Auellaneda, Generall of the king of Spaine his Maie in the West Indies, sent vnto Doctor Peter Florez, President of the contractation house for the Indies, and by him put in print with priuilege: wherein are declared many vntruthes, and false reports, tending to the disgrace of the seruice of her Maiesties Maie, and the commanders thereof, lately sent to the West Indies, vnder the command of Sir Francis Drake, and Sir Iohn Hawkins Generals at the sea; and Sir Thomas Baskerville Generall at land: with a confutation of diuers grosse lies and vntruthes, contayned in the same letter: together with a short relation of the fight, according to the truth.

Copia

Copia de vna carta, que embio Don Bernaldino Delgadillo de Auellaneda, General de la Armada de su Magestad, embiada al Doctor Pedro Florez, Presidente de la casa de la Contratacion de las Indias: en que trata del suceso de la Armada de Ynglatierra, despues que partio de Panama, de que fue por General Francisco Draque, y de su muerte.

DE Cartagena di cuenta a vuestra Merced como sali del puerto de la ciudad de Lisboa, en busca de la armada Ynglesa, aunque por la mucha priessa, no se pudieron reparar tambien los Galeones como fuera necessario, y con el tiempo se perdio uno, y por desgracia se quemo vn Filibote, y auiendo andado muchos dias en busca del enemigo, hasta que llegue a Cartagena, donde auiendo tomado el parecer de Don Pedro de Acunna Gouernador y capitán general de aquella ciudad, porque tenia mucha necesidad de agua, y reparar los Nauios por que venian faltos della, me detuue en aquel puerto, adonde tuve noticia por vn Auiso, que Francisco Draque murio en Nombre de Dios, de pena de auer perdido tantos Baxeles y gente, aunque despues se supo mas por estenso. Y auiendo dado a vuestra Merced cuenta de lo que hasta alli a sucedido, agora la doy de que sali de aquel puerto a dos de Março, y tome la derrota de la Hauana, donde entendi hallarlo: y auiendo hecho la diligencia posible, Lunes à onze del dicho mes, alas dos despues de medio dia, al salir de la Ysla de Pinos, en la ensenada de Guaniguanico, tope con el, que yua con catorze Nauios muy buenos: fueme arrimando a el, aunque tenia el viento por fuyo, y el Almiranta que yua mas al viento con otros dos Nauios commenço arrimarfele, y aunque vino sobre ella con todos los suyos tres vezes, no fue parte acercarle para que quiesse enuestir: los que estauamos mas apartados fuymos dando bordos acercandonos hasta jugar la artilleria, Mosqueteria, y Arcabuzeria de los mas dellos, en lo qual el recibio muy conocido danno, el lo hizo con el artilleria como suele, y particularmente el Almiranta, y en reconociendo la voluntad con que a el nos arrimauamos, con mas diligencia de lo que se puede creer se desembaraço de todos, poniendose en huyda, dando las velas, dexando en la mar todas las Lanchas que traya. Yo le seguí con nueue Nauios toda la noche, y con quatro mas todo el dia, hasta hazerle doblar el cabo de Sant Anton, y tomar la derrota de la Canal de Bahama, conforme a las instrucciones de su Magestad: siruio de poco el ver me con menos numero de Nauios, ni todas las diligencias que se hizieron, para que se inclinase a esperar ni abordar, ni tirar vn arcabuz, ni vna pieça, porque el se dio la diligencia que pudo, porque sus Nauios los auia reduzido a la mitad, y los mejores, y estos acabaua de reparar en Puerto Bello, donde se estuvo mas de quarenta dias, y así venian muy reparados; y yo saque los mios desbaratados, que no me dio el tiempo lugar para adereçarlos. A que nauego dos meses y medio, y traygo la capitana, que desde que parti de Cartagena no an parado las bombas, y el dia que sali se me lo arrimo vna Zabra con esta necesidad; la Almiranta y los demas Nauios vienen con el mismo trabajo, pero sin embargo, por lo que yo vi en los enemigos; era muy conocida la ventaja que nos hazia, y mucha dicha seria apoderarse del, sino es hallarlo sobre el Ferro. Con todo esso me an dexado vn Nauio muy bueno en las manos con muy buena gente, la qual dize como murio el Draque en Nombre de Dios, y que va por general de la dicha armada Ynglesa el Coronel Quebraran, y por el poco lugar que se a dado no an podido tomar Agua, lenna, ni carne, y van de manera que no se como an de llegar a Ynglatierra. Entre la gente deuen de ser ciento y quarenta, y quinze nobles capitanes de lo mejor de alli, y algunos ricos, segun se echa de ver en ellos. No se ofrece otra cosa: nuestro sennor guarde a vuestra Merced, como puede, y yo desseo. De la Hauana, 30 de Março, de 1596. Annos.

Don Bernaldino Delgadillo de Auellaneda.

EL Licenciado Don Iuan Bermudes y Figueroa, Teniente mayor de Asistente desta ciudad de Seuilla y su tierra, que hago officio de Asistente della por ausencia de su Sennoria del Conde de Priego, Doy licencia a Rodrigo de Cabrera, para que pueda imprimir la Relacion de la muerte de Francisco Draque. La qual haga por dos meses, y por ellos no lo imprima otro alguno. So pena de diez mil maravedis para la camara de su Magestad. Fecha en Seuilla a quinze de Mayo, de mil y quinientos y nouenta y seys annos.

El Licenciado Don Iuan Bermudez y Figueroa.

Por su mandado, Gregorio Gutierrez, Escriptano.

The

The Spanish letter Englished.

The Copie of a letter which Don Bernaldino Delgadillo de Auellaneda, Generall of the king of Spaine his armie, sent vnto Doctor Peter Florez, President of the contractation house for the Indies, wherein he maketh mention of the successe of the English armie, after they departed from Panama, whereof was Generall Francis Drake, and of his death.

From Cartagena I gaue relation vnto your Worship how I departed from the citie of Lisbon, in the pursuite of the English armie: although for the great haste the Galeons could not be so well repaired as was needfull, and with foule weather one was lost, and a Fly-boat was burnt. And hauing sayled many dayes in pursuite of the enemye, vntill I arriued at Cartagena, and there taking the aduise of Don Pedro de Acunna, Gouvernour of the citie, and Captaine generall (for wee had great neede of water, and to repaire our shippes) we staid in that port: whereas I had intelligence by an Indian that Francis Drake died in Nombre de Dios, for very griefe that he had lost so many Barkes and men, as was afterwards more manifestly knowne. Thus hauing giuen you a relation of all that happened hitherto, now I let you vnderstand, that I left this Port the second of March, and tooke our course towardes Hauana, where I thought to haue found the English fleet. And hauing vsed all the diligence possible, vpon Sunday the eleuenth of the said moneth, about two of the clocke in the afternoone, at the end of the Ile of Pinos, in the entrance of Guaniguanico, I met with the English fleet, being fourteene very good ships: I drew towardes them although they had the winde of vs, and our Admirall who boze vp towardes the winde, with other two ships beganne to draw neere them, and although we set thus vpon them, thre times with all their ships, yet would they not set againe vpon vs, and those of our men which were farthest off cryed to them amaine, being both within shot of artillerie, muskets, and caluers, where-by they receiued euident hurt by vs: They plyed their great ordnance according to their manner, and especially their Viceadmirall, and seeing our resolution how sharpe we were bent towardes them, they with all expedition and speede possible prepared to flie away, hoysing sailes and leauing their boates for haste in the sea: but I followed them, with nine ships all the night following, and with foure more the next day, till I made them double the Cape of S. Antonie, and to take the course towardes the Chanell of Bahama, according to the instructions from his Maestie. It little auailed vs to be seene, with lesse number of ships, neither yet all the diligence we could vse, could cause them to stay or come neere vs, nor to shoot off one harquebuz or peece of artillerie, for they fled away as fast as they could, and their shippes were halfe diminished, and that the best part of them; the rest they repaired in Puerto Bello, whereas they were about fortie dayes, and so by that meanes they were all well repayred; and our shippes were very foule, because the time would not permit vs to trim them: I haue sayled 2 moneths and a halfe in the Admirall, since we departed from Cartagena, we haue not repaired their pumpe nor clenched them: and the same day I departed thence, there came vnto me a small Winnesse in the like distresse: our Viceadmirall and the rest of our ships haue the like impediment, but no great hinderance vnto vs, for ought I could perceiue by our enemies: It is manifest what aduantage they had of vs, and by no meanes was it possible for vs to take them, vntlesse we could haue come to haue found them at an anker. Neuerthelesse they left vs one good shippe behinde for our share, well manned, which tolde me that Drake died in Nombre de Dios, and that they haue made for Generall of the English fleet the Colonel Quebraran: and also by meanes of the small time, being straightly followed by vs, they had no opportunitie to take either water, wood or flesh, and they are also in such bad case, that I know not how they will be able to arriue in England. The number of men we haue taken are about an hundred and fortie, and fiftene noble captaines of their best sort, and some of them rich, as well may appeare by their behauiour: I haue no other thing to write at this time. Our Lord keepe you who best can, and as I desire, From Hauana the 30 of March, 1596.

DON BERNALDINO DELGADILLO
DE AVELLANEDA.

The

THe Licenciat *Don Iohn Bermudes* of *Figueroa* Lieutenant of the Assistants of the citie of *Siull*, and the Prouince thereof, who doth supply the office of the Assistant in the absence of the Right honourable the Earle of *Priego*, giueth licence to *Roderigo de Cabrera* to imprint the Relation of the death of *Francis Drake*, which onely he may do for two moneths, and no other to imprint the same within the said terme, vpon paine of tenne thousand *Maravedis* for his Maiesties chamber. Given in *Siull* the 15 of May, 1596.

The Licenciat *Don Iohn Bermudes* of *Figueroa*.

By his Assigne *Gregorie Gutierrez*
Notarie.

THis letter of the Generall *Don Bernaldino* sent into Spaine declaring the death of Sir *Francis Drake* and their supposed victorie, was altogether receiued for an vndoubted trueth, and so pleasing was this newes vnto the Spaniards, that there was present comman- dement giuen to publish the letter in print, that all the people of Spaine might be partakers of this common ioy: the which letter printed in *Siull*, bearing date the 15 of May, 1596 came to the hands of *Henrie Saule* Esquire, who being employed in that seruice for the West Indies, and Captaine of her Maiesties good shippe the *Aduenture*, vnder the conduct of Sir *Francis Drake*, and Sir *Iohn Hawkins*, hath caused the said printed letter to be translated into English. And that the impudencie of the Spanish Generall may the more plainly appeare, the sayde *Henrie Saule* doth answere particularly to every vnrueith in the same letter contayned, as hereafter followeth.

The answere to the Spanish letter.

First the Generall doth say, that *Francis Drake* died at *Nombre de Dios*, as he had intelli- gence by an Indian.

He Generall sent this newes into his countrey confirmed with his hand and seale of Armes: It is the first newes in his letter, and it was the best newes that he could send into Spaine. For it did ease the stomackes of the timorous Spaniards greatly to heare of the death of him, whose life was a scourge and continuall plague vnto them: But it was a point of great simplicitie, and scarcely befitting a Generall, to tie the credite of his report locally to any place vpon the report of a silly Indian slaue. For it had bene sufficient to haue sayd, that *Francis Drake* was certainly dead, without publishing the lie in print, by naming *Nombre de Dios*: for it is most certaine Sir *Francis Drake* died twixt the *Iland of Escudo*, and *Puerto Bello*: but the Generall being raiued with the suddaine ioy of this report as a man that hath escaped a great danger of the enemy, doth breake out into an insolent kinde of bragging of his valour at Sea, and heaping one lie vpon another, doth not cease vntill he hath drawn them into sequen- ces, and so doth commend them vnto *Peter the Doctor*, as censor of his learned worke.

The Generall first newes, & his best newes is in part ly- ing newes.

Secondly, The Generall doth write vnto the Doctor, that *Francis Drake* died for very griefe that he had lost so many barkes and men.

AThing very strange that the Generall or the Indian, whom hee doth bouch for his lie, should haue such speculation in the bodie of him whom they neuer saw, as to deliuer for truth vnto his countrey, the very cause of disease whereof hee died: and this second report of his is more grosse then the first. For admit the mistaking of the place might be tollerable; not- withstanding, this precise affirming the cause of his death doth manifestly prouue that the Ge- neral doth make no conscience to lie. And as concerning the losse of any Barkes or men in our Naue, by the valour of the Spaniards before Sir *Francis Drake* his death, we had none (one small *Pinnelle* excepted) which we assuredly know was taken by chance, falling single into a flecte of five frigates (of which was Generall *Don Pedro Telio*) neere vnto the *Iland of Do- minica*, and not by the valour *Don Bernaldino*: the which five frigates of the kings after- wardes had but ill successe, for one of them we burnt in the harbour of *S. Iuan de Puerto rico*.

Don Bernaldino doth lie impu- dently.

The successe of the kings five frigates.

died.

and one other was sunke in the same harbour, and the other thre were burnt amongst many other shippes at the taking of Cadiz. This I thinke in wise mens iudgements, will seeme a silly cause to make a man sorowe to death. For true it is, Sir Francis Drake died of the flure which hee had growen vpon him eight dayes before his death, and peeled by his spirit like a Christian to his creatour quietly in his cabbin. And when the Generall shall suruey his losse, he shall finde it more then the losse of the English, and the most of his, destroyed by the bullet: but the death of Sir Francis Drake was of so great comfort vnto the Spaniard, that it was thought to be a sufficient amends, although their whole fleet had bene utterly lost.

Thirdly, the Generall doth say of his owne credite, and not by intelligence from any Indian or other, that on the eleuenth of March last he met the English fleet at the Ile of Pinos, being foureene good shippes: who although they had the winde of him, yet he set vpon them three times with all their shippes: but the English fleet fled, and refused to fight, shooting now and then a shot, but especially the Viceadmirall.

Lanchas is here
mistaken.

This lie was
made in the
Generalls own
foige.

This third lie of the Generall Don Bernaldino Delgadillo de Auellaneda (whose name for the prolixitie thereof may be drawn somewhat neere the length of a cable) hath no colour of protection, but it hath a iust proportion in measure to the lies of olde Bernardino de Mendoza his countreyman, concerning the ouerthrowe of his Paletties Nauie in the yeere one thousand five hundred eightie and eight. For except Don Bernaldino the Generall did purpose to winne the wherstone from Don Bernardino de Mendoza the olde Spanish lyer; I cannot coniecture why he should write to his countrey for a truth, that he chased the English Nauie with nine shippes, and did three seuerall times giue the onset to the English fleet, who being foureene good shippes (as he saith) did flie and refuse to fight; considering that the Spanish Viceadmirall (if he be liuing) and many other, can witness the contrarie: who fighting like a true valiant man, departed from the fight with a torne and battered shippe to saue her from sinking. Neither can I imagine that there is any one in the Spanish fleet (Don Bernaldino excepted) that will say they were lesse then twentie sayle of shippes when they met the English fleet: and the Spanish Nauie can witness that they receiued such store of bullets from the English fleet, that they were glad to depart, and in despight of them the English nauie did holde their determined course: And taking a viewe of the Spanish fleet the next day, their number was not aboue thirteene ships, which did argue that they were either sunke or fled to harbour to saue themselves.

Fourthly, the General saith, that the English fleet fled away, and left their *oares for haist behind them in the sea.

It was strange that they should leaue behind them oares in the sea, since there was not in the English fleet either Galley or Galliasse, which required the vse of oares: as for the oares of their ship-boates and other such small vessels, they had stowed them aboard their shippes, and were no impediment vnto them, but most necessarie for them to vse, and therefore not likely they would cast them ouerboard: But it is more likely, that the Generall fell into some pleasant dreame at Sea, wherein he did see a false apparition of victorie against the English, and for lacke of matter did set this downe in his letter for newes to his countrey: It is sinne to belie the Deuill, and therefore the Generall shall haue his right: the letter is so well contriued, and yet with no great eloquence, but with such art, that there are not many more lines, then there are lies, which shewed that there are wonderfull and extraordinarie gifts in the Generall: but I am perswaded if Don Bernaldino had thought that his letter should haue bene printed, he would haue omitted many things contained in the letter: for the Doctor did vse him somewhat hardly in shewing the letter openly, and more in suffering it to bee printed: for friends may like good fellows send lies one to the other for recreation, and feed their friends with some small taste thereof, so it be kept close, without danger to incur the title of a lying Generall: But as the matter is now handled through the simplicitie of the Doctor, I cannot see but the Generall Don Bernaldino is like to carrie the title equally twixt both his shoulders.

Fifly,

Fiftly, the Generall doth say in his printed letter, that notwithstanding all the diligence he could vse, he could not cause the English fleet to stay nor come neere them, nor discharge one harquebuz or peece of artillerie, but fled away as fast as they could.

AND this lie also he doth not receiue by intelligence from any other, but himselfe was an eye-witnesse in the action, which made him bold to sende this with the rest into his countrey for current newes: but herein Don Bernaldino was more bolde then wise, for the toyme and battered sides of his Galeons, being compared with her Matesties shippes, and others that serued in that fight, doe declare, that his ships receiued at least two bullets for one. Neither can it be concealed but his owne countreyemen (if any do fauour truth) may easily see the losse, and late reparations, done vnto the kings fleet, since they did encounter with the English Nauie, whensoever they that remaine shall arriue in Spaine. But the Generall seemeth to be a very good proficient in his profession, and wareth somewhat bold, treading the true steps of olde Bernardino de Mendoza: and yet Mendoza was somewhat more warie in his lies, for he had sometime the colour of intelligence to shadowe them: but the Generall growing from boldnesse to impudencie maketh no scruple to say, that the English Nauie fled as fast as they could without discharging any harquebuz or peece of artillerie, when as the battered sides of his ships doe returne the lie to his face: For in this conflict Don Bernaldino do behaue himselfe so valiantly, that he was alwayes farthest off in the fight, and had so great care of his owne person, that he stood cleare from the danger of musket or any small shot, and durst not approach; whereas our Generall was the foremost, and so helde his place, vntill by order of fight other shippes were to haue their turnes, according to his former direction: who wisely and politickely had so ordered his vanguard, and reterward, that as the manner of it was altogether strange to the Spaniards, so might they haue bene without all hope of victorie, if their Generall had bene a man of any iudgement in sea-fights: I knowe no reason why the English Nauie should flie from him; for the Spaniards may put all the gaine in his eye that euer he did winne from the English: Peraduenture some silly nouice of our countrey meeting the Generall in Spaine, and hearing a repetition of so many sillables in one name, as Don Bernaldino Delgadillo de Auellaneda, might thinke them to be wordes of coniuration, and for feare of rapsling a spirit, might flie from him as from the Deuill: or some simple Indian slaue hearing the like repetition of his long and tedious name, might suppose it to be an armie of Spaniards, and for feare runne away: but the commanders and captaines of the English Nauie were men of such resolution, that no Spanish bragges could dismay them (for they haue often met them with their pikes in their Spanish bearded) nor the countenance of Don Bernaldino quaille them, although hee were acowered in his gilt leather buskins, and his Toledo rapier.

The toyme sides of the Spanish ships doe conuenne Don Bernaldino of lying.

The order of the English Nauie.

The Spaniards cannot bragge of his game.

Spanish bragges are of no value with the English.

Sixtly, the Generall saith in his letter, that notwithstanding their flying away so fast, the English left them one good ship well manned, who tolde him that *Drake* dyed in *Nombre de Dios*: in which ship were one hundred and fortie men, and fiftene noble captaines of the best sort.

THE Generall Don Bernaldino, like a resolute Spaniard hauing already gone ouer his shoes, maketh no danger to wade ouer his booties also: and as he hath begunne, so hee doth conclude. I maruaile that he did not in writing his discourse remember this old saying: that is, A liar ought to haue a good memorie: It were much better for him in mine opinion to reuoke the testimonie which he saith he had from the Englishmen, concerning Sir Francis Drake his death at *Nombre de Dios*, and stand to the intelligence receiued from the silly Indian slaue, as it appeareth in his first lie: for without all doubt there is no English man that will say (if he haue his right senses) that he dyed at *Nombre de Dios*, for they all knowe the contrarie: neither can the General auouch that he receiued intelligence from any English man, that after the death of Sir Francis Drake they did elect for Generall Colonel Quebraran (as he doth most fallely affirme in the latter ende of his vaine and frivolous letter) seeing that this name was strange & vknownen to any in the English Nauie. Neither do I imagine that any of those which the Generall saith he hath taken, were so forgetfull, as not to remember their Generals name. But without all doubt this addition of so new and strange a name to the English Generall, doth proue that Don Bernaldino is not vnfurnished of a farge and storehouse of lies, from whence as fro an euerspringing fountaine, he sendeth forth lies of al sorts sufficient for his own store,

Don Bernaldino his rare gift in copying a new and strange name.

and great plentie to furnish his friends: the Generall was much beholding to his godfathers who gaue him the name Bernaldino, which we in English doe take to be plaine Barnard, which name hath as it were a kinde of priuilege from being sharply reprehended, when the partie is thought to erre: for it is a common saying amongst the schoolemen that Bernardus non videt omnia, viz. Barnard seeth not all things, (when he doth dissent from their opinions) the which fauour we could be content to yeeld to Bernaldino for the name sake, if he were not taken with so many manifest and impudent lies: neither doe I thinke that Sennor Bernaldino will say, that he sawe all that he hath written, be it spoken in councell for shaming the Generall: for is there any man so void of reason as to thinke, that any Englishman being demanded of his Generals name, would write or speake Quebraran for Baskervill. So much difference there is in the sound of the syllables, as there is no affinity at all, or likelihood of truth. But such are the Generals rare gifts, (be it spoken to his small prayse) that we Englishmen must of force confesse, that the Generall hath given a proud onset to carrie the whetstone from Sennor Bernardino de Mendoga: neither will the hundred and fortie men and fiftene noble Captaines (which he saith he did take, of whom he might haue bene rightly informed of their Generals name) acquit him of lying forgerie, for giuing the name of Quebraran to the English Generall. As for the good shippe well manned, which he saith the English left them after the fight, I am perswaded he hath no man to witnesse that lie, for the ship was separated by weather from the English fleet in the night, thirteene dayes before the fight with the Spanish Maie, and neuer to any mans knowledge came more in sight of the English fleet. If the Spanish ship by chance did take the saide well manned ship (as they call her) I doubt not but they haue the ship, the hundred and forty men, and the fiftene noble Captaines to shew: But euermore I gesse the Spanish reckoning will fall short when it is examined, for the fiftene noble Captaines will pzoone (as I take it) but thye, whose losse I griue to thinke on: Neither did the Spaniards gaine them by valour, or we loose or leaue them for cowardise, as most vntruely this bragging lier hath certified. But the Generall like a proud man, to make his fame and credite the greater with his Prince and countrey, taketh vpon him amongst other his miracles performed before the English fleet (by way of amplification to make small matters seeme great, as a little hooe to serue a great foote, and finding that it can hardly be brought to passe, he doth so stretch the leather with his teeth that it is readie to breake: and yet notwithstanding al this will not serue his purpose, for the printing of the letter doth marre the play, and bringeth such matter in question, as the Generall doth with might be concealed, and were he not of so drye and cholerick a complexion, as commonly Spaniards are, he would blush for very shame in publishing so impudently such manifest vntruthes. For sithence his meeting with the English fleet at the Ile of Pinos, there hath bene by the worthe English Generals an honourable expedition from England into the Continent of Spaine, where amongst other exploits hauing taken the citie of Cadiz, in the sacke thereof was found some of Don Bernaldino his printed letters: which comming to the handes of a captaine that serued in Sir Francis Drakes last voyage to the West Indies, he hath thought very fit (in regard of the slanders to the English Maie contained in the saide letter) to quote the errors, that the truely may appeare, to all such as haue a desire to be rightly informed of such accidents as befell them in this late voyage to the West Indies: and this may suffice to shew Don Bernaldino Delgadillo de Auellaneda his great iudgement in amplyfying small matters, or of nothing to make in shewe somewhat. And now hauing thus farre informed you of the truely in reproofe of the slanderous, false, and vntrue repozes of this glorious lying Generall, with a true disproofe to some of the grossest of his lyes, I will leaue him with the rest of his lying letter, and the circumstances therein contained to your censures: who in discretion may easily discern the same: And haue here following plainely and truely set downe the course and order of our whole fight after we met.

The meeting of our English Nauie and the Spanish fleet, and the order of our encounter.

The first disco-
very of the
Spanish fleet.

Monday the first of March, according to our computation, wee descryed the Island of Pinos, where haling in for the Westerne part thereof, thinking there to haue watered, being within foure leagues off it Southerly, we sent in thre of our Pinnesses to discover the harbour, and to sound afore vs, about one of the clocke in the afternoone; the same day we discovered a fleet of twentie sailes, and deeming them to be the Spanish fleet, we kept our loofe to get the winde, but their Viceadmirall with diuers other ships went about to cut off our Pinnesses; so that

that our Generall with some other of our shippes, was forced to tacke about vpon the harbour
 tacke, and so ranne in towarde the lande keeping the winde, so as we recovered our winnells;
 which forced the enemies shippes to tacke about, and to take the aide of their fleete, and bring
 come neere vnto them they shot at vs; we still approached, hauing our close fights vp, our flags,
 ensignes and streamers displayed, our men orderly placed in each quarter; but forbare our
 fight vntill our Generall beganne, and gaue vs warning to come in and fight, by shooting off a
 great peece, according to his former directions: so being within musket shot, the Viceadmirall
 of the Spanish fleete came neere vnto vs, to whom our Viceadmirall Iohn Traughton Cap-
 taine of the Elizabeth Bonadventure gaue fight, betwixt whom there was the greatest voley
 of small shot changed that lightly hath bene heard at Sea, which continued a long halfe houre.
 In which time the Spanish fleete came in to fight. Our Generall sir Thomas Baskerville being
 in the Garland (whereof Humphrey Reignolds was Captaine, being the next shippe vnto the
 Elizabeth Bonadventure) bare vp to the enemye, playing with his great ordinance hotly vntill
 he came within musket shot. Ionas Bodenham Captaine of the Defiance, and Henrie Saule
 Captaine of the Adventure, came likewise in to fight with them. After the Garland being with-
 in musket shot played her part, and made good fight for the space of an houre. The Defiance
 bare vp likewise and had her turne: after came the Adventure againe within musket shot, who
 hauing changed many a great bullet with them before, renewed his fight, & continued it an houre
 with small shot. Then came Thomas Drake Captaine of the Hope, who last of all had his turne.
 Thus had all the Queenes shippes their course: The marchants shippes with other small vessels
 being without the Queenes shippes, shot when they saw opportunitie. After the enemye finding
 no good to be done (being well beaten) fell from vs, the Adventure playing vpon them with
 her great ordinance, made three of the last shot at them: their Viceadmirall with diuers others
 of their shippes, were so beaten that they left off the fight, and were forced to lie in the winde,
 for that they durst not lie of either boord by reason of their many and great leakes, which they
 had receiued by our great shot. The Generall with the rest of their fleete tacking about, fell in
 our wake, thinking to get the winde, which in the beginning wee sought to hinder. But our
 Generall seeing that in holding the winde we should shoot our selues into the bay, gaue them the
 winde. All that night they kept themselves vpon our boord side, notwithstanding our Admi-
 ral carried his cresset-light all night, hauing great care of our smallest shippes. This fight conti-
 nued about foure houres till it was neere night, in the which fight, thanks be to God, there were
 slaine so few persons of our English fleete, as I thinke the like conflict hath not bene performed
 with so little losse of men: What harme befell the Spaniards in their fleete I leaue to your
 iudgements. Yet our eyes can witnesse their shippes were soze beaten and raked thorough, where-
 by there was such falling backe and lying by the lee to stoppe their leakes, as some of them were
 driuen to haste away, and rather to runne on shore to saue themselves then sinke in the Sea:
 besides within two houres after our fight with them, we sawe one of their great shippes on fire
 which burnt into the Sea, and all the sterne of another of their shippes blown vp: And in the mor-
 ning a shippe of our fleete was runne so neere the land, that to double the Cape de los Corrien-
 tes he must of necessitie tacke about and fall in the wake of the enemye, which caused our Ge-
 nerall in the Garland and the Defiance to tacke about; which two shippes forced the three shippes
 of the enemyes (which were put forth to take our shippe, or else to cause her runne on ground)
 to returne to their fleete to saue themselves, hoysing all their sayles for haste: This morning
 they were faire by vs hauing the winde of vs, being but thirteene sayle of their twentie to be
 seene: then we strooke our toppe sayles thinking to haue fought with them againe, which they
 perceiuing tacked about from vs, and after that neuer durst nor would come neere vs: What
 became of the rest of their fleete wee knowe not, but true it was that they were in great di-
 stress mightily beaten and toze, by hauing receiued many bullets from vs. All this day wee
 had sight of them, but they shewed little will to fight or come neere vs, so we keeping our course
 West, and by North, about sixe of the clocke at night lost the sight of them. And this is a true
 discourtse of our fight with the Spanish fleete. The which the authoꝝ hereof will iustifie with
 the adventure of his life, against any Spaniarde seruing in that action, that shall contradict
 the same.

The encounter

HENRY SAVILE.

Ddd 3

Thomas

Thomas Baskervill knight, his approbation to the former two-fold discourse of Captaine Saule.

Thomas Baskervill knight, Generall of her Maiesties late Indian armada in the late conflict had betwene the Spanish fleet and vs, hauing perused the Spanish letter written by Don Bernaldino Delgadillo de Auellaneda, Generall of the king of Spaines Maie, and also hauing perused captaine Henrie Saule his answers vnto the five exceptions in the Generals letter, with his discourse of the manner of our fight with the Spanish fleet, doe say that the said Henrie Saule hath answered the letter, and set downe the order of the fight sincerely according to truth, for testimonie of which I haue hereunto set my hand.

And if Don Bernaldino Delgadillo de Auellaneda the Generall shall take any exceptions to this my approbation, or stand in the iustification of his lying letter written to Doctor Peter Florez, President of the Contratacion house for the Indies, and by him for Bernaldinos glorie lately put in print: I then say that he falsely lyed, and that I will maintaine against him with whatsoever armes he shall make choyce of. And because the kingdomes wherein we abide are enemies (by reason of which there is no meanes in either of them, to maintaine that I haue written) let him make choise of any indifferent kingdom of equall distance from either realme, and I will there be readie to maintaine as much as I haue written: But if by my employments into France I be so stayed by her Maiesties commandements, that I cannot out of that realme meete him in any other, I cannot see why he should take any exception to that, considering the equalitie of the place, and that the Armies of both our Princes be there resident.

THOMAS BASKERVILLE.

A true relation of the voyage vndertaken by Sir Anthony Sherley

Knight in Anno 1596. intended for the Ile of *San Tomé*, but performed to *S. Iago*, *Dominica*, *Margarita*, along the coast of *Tierra firma*, to the Ile of *Jamaica*, the bay of the *Honduras*, 30 leagues vp *Rio Dolce*, and homewarde by *Newfoundland*. With the memorable exploitcs atchieued in all this voyage.

We departed from Hampton the 23 of Aprill with nine ships and a gallie. The Beuice Admirall being 300 tunnes, the Galeon Viceadmirall being 240 tunnes. The George Rereadmirall being 160 tunnes. The Archangel being 250 tunnes. The Swanne 200 tunnes, the George Noble being 140 tunnes, the Wolfe 70 tunnes, the Mermayde 120 tunnes, the Little John 40 tunnes the Galley and a Pinnesse. All which ships we sufficiently victualled and furnished for ten monethes, with all necessaries fit for the voyage. They were also manned with souldiers and saylers, exceeding well appointed with all furniture necessarie for the intended purpose of our Generall to the full number of 900. ratably & orderly distributed into euery ship. We arriued at Plimmouth the 29 of Aprill, where wee found the Right honourable Earle of Essex readie for the attempt of his Cadiz Action, with whom our Generall left three ships and 500 souldiers well victualled and furnished. So the 21 of May we departed from Plimmouth with the Beuice, the Gallion, the George, the George Noble, the Wolfe and the Galley and Pinnesse, determining our voyage for the Ile of *S. Tomé*. But if our whole force had remained with vs our Generals purpose was to haue first sackt the *Madera* Ile, and so to haue proceeded for *S. Tomé*. The 27 of May we arriued vpon the coast of Spaine, coasting all the shore, hoping to meete with some of the kings ships. From thence we past in sight of the coast of *Barbary*, and came to *Malagant*, within shot of the Fort, which our Generall reported to be an excellent fortification, where the Spaniard is in strong garrison. And bending our course for the *Canarie* Isles there purposing to water, our galley lost her rudder; so our Generall directed the *George Noble* to goe for the Ile *Mogador*, there to repaire the Gallies wants. Betwene which place and the *Canarie* Isles we tooke a fly-bote of two hundred tunnes bound for *Brasill*, hauing nothing aboard her but some small portion of victuals for their reliefe. The Captaine of this fly-bote tooke vpon him to be a perfect Pilot of *S. Tomé*, and willingly consented to stay with vs, being a Fleming. Hauing watered at the *Canaries*, by the counsell of this Fleming we shaped our course for the Isles of *Cape Verde*, he assuring vs that we should there meet the fleet of *Saint Tomé*, for the peere was so farre past, that we knewe they were all departed from *S. Tomé*.

The Fort of
Malagant.

A Flyboat
taken.

The

The first of July we fell with the Isle Maio, where wee saw small hope of any fleet to bee expected, & therefore departed for Cape Verde, the appointed place for the George noble to meete us: where we arrived the first of July, and there found him. And so instantly we proceeded for our voyage, because the peere was farre spent. At this place most unfortunately our General fell exceeding sicke, and we wanting water were enforced to goe with a place named Pescadores in 10 degrees of North latitude, where we had many skirmishes with the barbarous Negros. Our Generall now hopelesse of life, and we all dismayed and comfortlesse through that his exceeding extremity, having his memory very perfect, he called all his Captaines, Masters, and officers unto him, unto whom he made a very pittie and brieve speech, tending to this purpose: That as we were Christians and all baptised and bred by vnder one and the true faith, so wee should live together like Christians in the feare and service of God: And as we were the subiects of our most excellent Souveraigne, and had vowed obedience unto her: so we should tend all our courses to the advancement of her dignity, and the good of our countrey, and not to enter into any base or vnfit actions. And because we came for his loue into this action that for his sake we would so loue together as if himselfe were still living with vs, and that we would follow (as our chiefe commander) him, unto whom vnder his hand he would giue commission to succede himselfe: all which with solemne protestation we granted to obey. Then for that the peere was past, and finding the coast of Guynoa most tempestuous, hee saw in reason that the bay of Ethiopia would be our vtter overthrow, and infect vs all to death: whereupon he aduised vs to be respectiue of our selues, and to diuert our purpose from S. Tomé, either for Brasil or the West India, yeelding many reasons that it was our best course: but we all with one voice desired to proceede for S. Tomé. And so departing from this contagious filthy place, we directed our course for S. Tomé, but could by no means double the holds of Madrabomba, but very dangerously ran into shold water, still hoping of the best. In fine we were enforced to beare by & take some other course; for the time wasted, our men fell sicke, and the coast was contagious alwayes raging & tempestuous. The water falling from the heauens did stinke, and did in 6 houres turne into maggots where it fell either among our clothes, or in wads of Dcombe.

The Isle of Mayo.

A most contagious & filthy place.

So by a general consent it was held to be our best course to goe for the West India; & so much the rather, because we had good pilots for that place, who undertooke more then was after performed. So we bent our course for the Isles of Cape Verde, & arriving at the Isle of S. Iago the 30 of August, we presently landed at Praia, where we found a smal barke in the rode laden with wine and meale.

After we were departed from this vile coast of Guyny our General to our great comforts began to recouer strength; so that being now at Praia, he was able to land with vs. In our landing the people made a shew of great resistance, but we entred the towne without hindrance, being a very pperie towne, hauing a small fort in it, with 6 or 8 cast pieces.

The towne of Praya vpon the Isle of S. Iago taken.

Being here on shore, and finding nothing left in the towne, diuers of our company were very importunate with our Generall, that he would go to the citie of S. Iago being 6 miles off: through their importunitie he yeelded consent, and so we marched towards the citie with 280 souldiers. As we passed by the Negros and herds men, they would crie vnto vs Guarda S. Iago. That night we lost our way, & lay vnder a hedge. The next morning the Ordinance of S. Iago was shot off to giue vs notice where the towne was: so wee marched towards it at the breake of the day. The countrey then being all spred ouer with people made shew of feare only to draw vs into the towne: but we farther marched with our colours flying by the drumme. The gentelmen would come gallopping by vs and biewing vs very much. But when we came in sight of the towne, we could see no way how to get into it, but by one little path downe a very steepe hill, only man by man to go downe. The strength and situation of this towne was sufficient to haue daunted a man of very good courage, for it standeth between two steepe cliffes strongly bouled, & thre exceeding good forts commanding the whole, the chiefe and best standing vpon the top of the hill right ouer the towne: so that from thence with muskets they command euery streete, the other 2 forts standing by the waters side, all thre commanding the rode, and these two euery streete in the towne. Upon the front of the towne the sea beate, the rest standeth betweene two mighty cliffes, not accessible but by one small path, by which wee were enforced to goe. Our Generall seeing himselfe thus straitened, and perceiuing the drift of the Portugals was to draw him into this trench, and knowing wel that he could not returne as we came, by reason of many straights and aduantageable places, with an excellent resolution (like vnto himselfe) cryed out, all courage my hearts: assure your selues that the deuice of the Portugals shall serue our turne this day: for they will suffer vs quietly to passe downe into their supposed trappe, and then will pursue vs, then which nothing can

A description of the towne of S. Iago: taken by Sir Francis Drake 1585.

The towne of
S. Iago taken by
Sir Anthony
Sherley.

can happen better. The day is ours now shew your selues as I know you will: and so presently we descended into the trench, And being downe the enemy pursued with a mightie crye, and all the cliffes on both sides were beset full of men; shot, and stones we wanted none from them on e- uery side in great plenty; for this naturall trench was not halfe a musket shot ouer. Those that attempted our Receward by our Generals policie were so receiued that they made a stand, and neuer moze came neere vs. We had nowe halfe a mile to the towne, into the which when wee came, wee were receiued with the streetes full of souldiers, who toynd with vs at the push of the pike. But their captaine and diuers of them being slaine (feare possessing them) they fled: and our Generall pursuing with such furious speede, did so dismay them that they fled the towne, and the thirde of August we possessed both the lower forts.

Being now masters of the towne, we presently by the Generals direction (whose skill, spirit, and diligence can neuer haue sufficient commendation) baricadoed vp all the streets, and brought our selues into a very conuenient strength. After we had bene sixe houres in the towne the Portugals still comming in great multitudes to the vpper fort, began to sally downe vpon vs, and to assault vs at euery baticado: so that in the first assault they slew and wounded eighty of our men, to our very great weakening. But they had small cause of triumph, for their losse was thise moze then ours: but they still prosecuted their assault, not giuing vs time either to sleepe or eate, so that we were in exceeding extremitie; for their forces did dayly increase to the number of thre thousand persons: but we dayly lost of our pooze number. Whilest we were thus keeping the towne, our ships came about vnto vs, who receiued many dangerous shot from the vpper castle. Our Generall finding himselfe thus streighted, & discretely looking into the policie and strength of the enemy, and scarce able to defend any one assault moze, sent to the forts and to his ships that about ten of the clocke in the darke of the night they should shoote at the vpper fort with all possible diligence, and send all the boates ahoze, which was accordingly perfourmed. And wee likewise keeping a tumult in the towne, the enemy supposing that our purpose was to assault the vpper fort, (which God knowes was most impregnable for vs) retyred from their plotted purpose for the defence thereof. So we in a souldierlike order with very good safety departed the towne, although the Portugals hauing espied our Generals policie came very furiously vpon the backe of vs, after we had kept it two dayes and two nights.

Isla del Fuego.

In the rove of S. Iago we tooke a ship with wine and cloth, which did greatly refresh our men. From hence we sayled to an Isle called Fuego, being a very small Isle, with a very high hill in the midst of it, which continually burneth: this Isle is inuincible by nature, high cliffed round about, yet by diligent searce we found a small path where wee landed our men with exceeding much difficulty, and so were masters of the Isle the eleuenth of September, where wee tooke in water, but the Isle peeled vs nothing but miserable infection. One night wee had a showze of ashes which fell so thicke into our ships from that burning hill of Fuego, that you might wyte your name with your finger vpon the vpper decke.

Departing from this place the twentieth of September, we shaped our course for Dominica an Isle in the West India: but before we came thither our men fell generally downe, so that the hole could not relieue the sicke, the disease was so vile that men grew lothsome vnto themselves, franticke and desperately rauiing, among whom our good Generals part was not the least; for his disease was vehement, the griefe of his mind, the lamentation of his men, and the losse of those whom he loued were to him torments moze then durable: all which with patience and humilitie in prayer he humbled himselfe vnto. But had not his mind bene inuincible and his desires aboue the ordinary course of men, it had bene impossible that life should now haue rested in him: but God (I hope) hath preserved him to some exceeding good purpose.

Dominica.
Two excellent
hote bathes.

Arryuing at Dominica the seuenteenth of October, with all our men sicke and feeble, wee found theretwo hote bathes, wherein our weake men washing themselves were greatly comforted: and the Indians of this place vsed vs with great kindness, so that we were all perfectly well before we departed from this place. For here we stayed untill the 25 of Nouember. From Dominica we sayled to Margarita, betweene the Isle and the maine, chynking to meete with the perle dyeggers, but wee found them not. And comming to the point of Araia in the road of Cumaná, we sawe a Flemish ship riding; the marchant and men whereof came aboard vs, and brought with them my lord Admirals passe. By which meanes our General would in no sort meddle with them yet they were very rich. Departing thence by Cape Coadera, going for Cape de la Vela at the Isle Buen aire our Fliboat was cast away, & some of the men lost, but the most part saued. Coasting all the shoze from Cape de la Vela, being bound for S. Marcha, we tooke a small frigate laden with Guiny cozne, the eleuenth of September: she had in her money to the balew of 500 pound,

Margarita.

linnen.

linnen cloth and China silke, all which our General bestowed vpon his company to comfort them after their long sustained miseries: Out of which frigate we had 2 good pilots for those coasts: for our pilot, that promised many things before we came thither, was now absent in the Wolfe, who, we thinke, did wilfully loose vs. Arriuing at S. Marcha, two leagues West from the towne in a faire bay, we landed the 12 of September, & so marched to the towne being often times encountered by the way, and in a narrow way at our descent downe a hill, they had placed two cast pieces of brasse, which we recouered, and so entred the towne, the enimie flying before vs. While we abode in this towne, there came one Don Martin de Castilla, a gentleman of good education and a very great traoueller, who knew the whole state of the West India, Malucos, & Philippinas: he had bene in China, and made many relations to our Generall, his purpose was to saue the towne from burning, wherein he preuailed, but ran some I know of none we had: for this gentleman made many great protestations of great pouerty to be in that place. So wee departed, onely taking their ordinance, and a prisoner lost there by Sir Francis Drake, with some reliefe of victuals. Hauing stayed there al the time of Christmas, we departed thence on Newyeres day, with termes of great content to our General in the Spaniards great submission vnto him, for they were now within a league of vs with 700 souldiers. And being challenged by him to defend their towne like men of worth, they did notwithstanding intreat sauiour with great humilitie. Whilest we were at S. Marcha, the Wolfe came againe vnto vs: so wee shaped our course for Iamaica, and missing the rode, were constrained to saile round about the Isle, a thing not before done. In this place the Wolfe absolutely againe forsooke vs with the smal barke that we tooke at S. Iago, and returned for England with hard newes of our ruine, but by Gods fauourable help wee arrived in the road of Iamaica the 29 of January, which is very dangerous to enter by reason of the sholds and rocks that lie before it. Here we landed and marched 6 miles into the countrey, where the towne standeth; the people all on horsebacke made shew of great matters, but did nothing. Now being masters of the towne and whole Isle, the people submitted themselves to our Generals mercy: and here they prouided for vs great store of dried beefe, and Cassau meale, a base food, yet the best that the countrey yeeldeth, to continue at sea. This Isle is a marueilous fertile Isle, & is as a garden or store house for diuers parts of the maine. It is full of plaine champion ground, which in the rest of the Indies we haue not seene: it aboundeth with beeuies and Cassau, besides most pleasant fruits of diuers sorts. We haue not found in the Indies a more pleasant and holsonie place. During the time that we remained in this Isle the captaine of the Isle came often aboard vs, we hauing pledges for the security of their promise. They were in fine at our Generals deuotion, to dispose of al things, and in all things as he pleased, so that now we were as one people & in one peate together. Being almost ready to depart, M. captaine Parker of Plimmouth came into the rode in his ships boat the second of March, with whom our Generall consozted to goe for the bay of Honduras, where by his perswasion we had great hope of a very good voyage. And departing fro Iamaica the 6 of March, we sailed to Cape de Corrientes in Cuba, to looke for a barke of M. Parkers for our better strength: but not finding her, we went for the cape of Honduras, where we purposed to entrap the watch, & so to sacke the towne of Truxillo, but the watch discovering vs, made great fires, and the towne presently shot off a great piece, and answered with fires. Notwithstanding the next day being the 31 of March we brought our ships vnder the fort, and landed our men, but it was a vaine purpose: for the towne is not to be taken but by exceeding multitudes, for it is inuincible by nature. It standeth vpon the top of a very steepe hill, bordering close to the sea: so enuironed with woods of such exceeding thiknes, that there is no passage among the trees, which if they were gone, yet there is no climbing by the hill, only hauing one narrow lane to go into the towne; at the end whereof is a great gate very strongly fortified, so that it is not to be approached vnto, so that with the losse of some few men, we retired from this enterprise, being altogether impossible to be atchieued by our few and weake men.

Santa Marta taken.

The Isle and chiefe towne of Iamaica taken.

We departed from Truxillo the second of April and went for Puerto de Cauillos lower down in the bay, still nourishing our hope of good successe: and comming thither found it reasonably fortified, but wee presently preuailed and tooke it the 7 of April, being the most pooze and miserable place of all India. Now our hopes were all frustrate and no likelihood remayning how we could by any meanes make a voyage: our General referring vnto himselfe his silent inward impatience, laboured to doe some memorizable thing. And in fine concluded by Rio Dolce to search with his boats some narrow passage or Istmos for the South sea, alleaging that if hee could but finde a boat there, it should serue him to great purpose; against which there could be no reasonable contradiction. All his chiefe sea men consented hereunto, but especially the Captaine of the Admirall. So sayling with the ships to Cape de tres puntas in the bottome of the bay, there leauing the

Puerto de Cauillos taken.

Guatimala, Son-
sonate, and Sa-
catocaluca.
Their returne

the ships well moored the tenth of Aprill he departed with his boats for Rio Dolce, which in many Charts hath his passage through the land. Up this riuer by many vncertaine windings we passed 30 leagues and better, where we found a strong built fort, a towne, and diuers store-houses: but for money or merchandize we found none. Wee learned by the miserable people that we tooke, that the South sea was 20 leagues from the nerest of that riuer, and that it was 50 leagues to Guatimala, 40 leagues to Sonsonate, and 30 leagues to Sacatocaluca, being townes which we hoped to march vnto: so that now we were in worse case then before: for wee were fallen sicke with the vnholsomenesse of this ayre, and our victuals so wasted, as that we were desperate how to recouer our countrey. Whereupon with most vnwilling minds we returned to our shipping, and with all possible expedition weyed, & so laboured vpon the tacke to turne out of this very deepe bay, being 60 leagues within the point of land. Being out of the bay, wee shaped our course for Cape S. Anthony. Our General, whose restless spirit continually laboured to auoide the frownes of fortune, had now plotted with the Beuice and Galeon to goe for Newfoundland, and there to reuitual, and to haue fresh men, of which we stood in good assurance, & so to depart for the streies of Magellan, and so by his very good policie would haue concluded his voyage in the East India, which plat I thinke it vnnecessary here to reueale, being put in principall trust by him.

Being thwart Hauana, by what chance I know not, but all his ships forsooke him the 13 of May, and here in a desperate place hee was left desperately alone. The George departed by consent with his letters, the Galeon I know not how: but our misery in the Admirall was very great, for there was not one in the ship that was euer before in the Indies, besides our miserable want of victuals, the danger of the place, and the furious current of the chanel. Notwithstanding we were enforced without stay to disemboque: which happily being perfozmed, we shaped our course for Newfoundland. And by Gods mercy we arriued there the fifteenth of June, not hauing one houres victuals to spare, and there by our countreyemen we were well refreshed: where we stayed till the 24 of June, still expecting the Galeon, for the execution of this his last purpose: but the not comming, and that plat ouerthrowen, we returned for England, where we found the right honourable the Erie of Essex bound to the seas, with whom wee presently departed in his lordships ship, to doe him our humble seruice.

A voyage of Master William Parker of Plimmouth gentleman, to

Margarita, Iamaica, Truxillo, Puerto de Cauallos situate within the bay of Honduras, and taken by sir Anthony Sherley and him, as likewise vpon Rio dulce: with his returne from thence, and his valiant and happie enterprize vpon Campeche the chiefe towne of Iucatan, which he tooke and sacked with sixe and fifty men, and brought out of the harbour a Frigat laden with the kings tribute, and surprized also the towne of Sebo.

In the yeere 1596, Master William Parker of Plimmouth gentleman being furnished with a tall shippe and a barke at his owne charges, the ship called the Prudence of one hundreth and twenty tunnes, wherein himselfe went captaine, and the barke called the Aduenture of fise and twentie tunnes, whereof was captain one Richard Hen, departed fro the foresayd haven of Plimmouth in the moneth of Nouember, hauing one hundreth men in his company.

Margarita.

Sixe English
men redeemed

Truxillo assailed

The first place where wee touched in the West Indies was the Isle of Margarita on the coast of Tierra firma, where we tooke a Spanish gentleman and others, who for his ransome set at libertie Master Iames Willis, and fise other Englishmen which were prisoners in Cumana, who other wise were neuer like to haue come from thence. Thus passing from thence, wee sayled ouer to the Isle of Iamaica, where the second of March we met with sir Anthony Sherley, who before our comming had taken the chiefe towne in the Island, and was now almost in a readines to depart. And here consozting our selues with him, we departed from Iamaica the first of March, and resolved to set vpon the strong towne of Truxillo nere the mouth of the bay of the Honduras. And hauing sayled to Cape de Corrientes vpon Cuba, to seeke a barke of mine for our better strength; but not finding her, we went for the cape of Honduras, where wee purposed to intrap the watch, and so to haue sacked the towne of Truxillo. But the watch discovering vs, made great fires, and the towne presently shot off a great piece, and answered with fires. Notwithstanding, the next day being the one and thirtieth of March, wee brought our ships vnder the fort, and landed our men: but it was a vaine purpose, for the towne is inuincible by nature,

nature, and standeth vpon the top of a very steepe hill ioyning close to the sea, emironed with woods of such exceeding thicknes, that there is no passage through the trees: there is also but one very narrow and steepe lane to goe into the towne, at the end whereof is a gate very strongly fortified: so that it is not to be approached vnto, vnlesse it be vpon the sudden, and with surprize of the watch: wherefore with the losse of some few men wee retired from this enterprize.

From hence we passed vp farther into the gulfe the second of Aprill, with intention to inuade the towne of Puerto de Cavallos, where wee arriued the senenth of Aprill, and tooke the same, finding it well fortified, but nothing answering our expectation for wealth. Whereupon Sir Anthony Sherley and I being hitherto frustrate of our hopes, resolved here to enter vp to the bottom of Rio dolce, and to passe ouerland vnto the South sea. Wherefore wee set forthward, and enired about thirty leagues vp the sayd Rio dolce, thinking to haue passed ouerland with two companies of men, and to haue caried a pinnesse in five quarters to be set together with skrewes, and therein to haue embarked our selues in the South sea, and there for a time to haue tried our fortune; and to haue returned ouerland to the bay of Honduras. But this our diligence tooke no effect, because of the huge highnes of the mountaines, and the length of the way, being more then was giuen out at the first. Then with much griefe we returned out to Truxillo, where I departed from Sir Anthony Sherley.

Puerto de Cavallos taken.

They passe about 30 leagues vp Rio dolce.

After my departure from this worthy knight, I set my course for Cape de Corroche which lieth on the East part of Iucatán from whence I ranged al the North coast of the said promontory of Iucatán, vntill I came vnto Cape Desconoscido, where I put 56 of my men into a Periago, or long Indian Canoa; and leauing my ship five leagues from the towne of Campeche at three of the clocke in the morning * I landed hard by the monastierie of San Francisco, and tooke the sayd towne of Campeche, with the capitaine and Alcalde, finding therein five hundred Spaniards, and in two towne close adioyning to the same eight thousand Indians. The multitude of the Spaniards which fled vpon my first assault by ten of the clocke in the morning assembling together renewed their strength, and set furiously vpon me and my small company. In which assault I lost some five of my men, and my selfe was shot vnder the left breast with a bullet, which bullet lieth still in the chine of my backe. Being thus put vnto our shifts wee deuised on the sudden a new stratagem: for hauing diuers of the towne men prisoners, we tied them arme in arme together, and placed them instead of a baricado to defend vs from the fury of the enemies shot. And so with ensigne displayed, taking with vs our five dead men, wee retired with more safetie to the haue, where we tooke a frigate which rode ready fraught with the kings tribute in siluer and other good commodities, * which were presently to bee transported to S. Iuan de Villua, and brought the same and our Periago of Canoa to my ship, which lay in two fadomes water five leagues from the towne, being not able to come any neerer for the shoals vpon that coast. Duer against the place where our ship rode, stood a towne of 300 or 400 Indians called Sebo, which we like wise tooke, where wee found Champeche-wood good to dye withal, with waxe, and hony. This done we left this coast, and turned vp to Cape de Corroche againe, and anchored euery day at noone, because of the byzes, and in turning by I lost my barke called the Aduenture, which was taken by 2 frigats of warre, which were manned out from Campeche: wherein Captaine Hen and thirteen of my men were taken, and after ward executed, as since we vnderstand by some Spanish prisoners that were taken in those parts. After we had stayed five weekes on this coast, wee shaped our course for Hauana, where finding nothing, we disemboqued, and came along by the Isle of Bermuda, and crossed ouer to The banke neere Cape Race in 22 fadomes: and from thence sayling for England, we sel with Sillic about the first of Iuly, and within two dayes after arriued at Plimmouth, where we found the Right honorable the Earle of Essex setting forth with a great fleet for the Isles of the Açores.

Cabo de Corroche.

Cabo desconoscido: * On Easter euen 1597. The towne of Campeche taken.

A new stratagem.

* To the value of 5000 pounds.

Sebo an Indian towne taken.

An excellent rutier for the Islands of the West Indies, and for Tierra firma, and Nueva España.

IF a man depart from the barre of S. Lucar in Summer time, hee must steere South-west vntill hee hath sight of Punta de Naga, which is in the Isle of Tenerif. The markes to know it be these. An high point sloping to the sea, & at the Easter point it hath two down falles like partitions, and they shew to be separated from the maine of the Island & stand in 28 degrees & a halfe. And if thou wilt haue sight of the Grand Canaria, and findest thy selfe with Punta de Naga, thou shalt then steere Southwest and by South, and so thou shalt haue sight of Canaria which standeth in 28 degrees. And thou must come to ankor on the South.

Spinn

Southeast side of the Island. But I advise thee, if it be in winter time, that thou keepe another course, and that as followeth.

The course that a man must keepe departing in winter for the Indies from
San Lucar.

Cape Cantin.

A great wood
before you
come at Cape
Cantin.

Departing from San Lucar in winter thou shalt goe West and by South keeping along the coast, because if thou goe farre from the coast, thou shalt meete with the wind off the sea untill thou be as high shot as Cape Cantin, which is a low flat cape with the sea. And thou shalt see a great wood before thou come at this cape, called Casa del Cavallero. And from thence thou shalt steere thy olde course, that is Southwest and by South for the Isles of Alegrança and Lancerota; and when thou art North and South with Alegrança, thou shalt steere thence Southwest, and so thou shalt see the Canaria, which is a round high land, and standeth in twentie eight degrees.

What thou must doe if a contrary wind take thee fiftie leagues off
the shore.

The bay of
Cadiz.

San Pedro.

San Sebastian.

Los Puercos.

The Diamant.

The Canaries.

The Isle Descada
in the West
Indies standeth
in 15 degrees
of latitude.

Markes to

S. Iuan de Puerto
rico.

Cape Roxo.

When thou art fiftie leagues shot on thy way into the sea Southwest off, and there thou chance to meete with a contrary winde off the sea, and if it force thee to put roome, then thou shalt steere Northeast and by East, and shalt haue sight of Cabos del Plara, which shew when thou art a seaboord so farre as thou mayest descrie them, to be like two points of white sand: and if it be cleere thou shalt see within the land certain high hilles lying Northwest and by West called las Sierras de Zahara, and being three leagues from land thou shalt haue thirtie fadomes water, and land: And from thence to the bay of Cadiz thou shalt goe along Northwest by the coast: and if thou be in thirtie or forty fadomes, thou shalt haue vaze; but if thou bee in lesse then thirtie fadomes, thou shalt haue ocher sounding; which if it chance, then thou art against S. Pedro. And if it bee by day thou shalt see the Ermitage of San Sebastian, which seemeth to be a shippe vnder sayle. And thou shalt goe into the bay taking heede of the Puercos, giue them a good birth off. And if thou chance to bee benighted when thou fallest with the bay, and wouldst goe into the bay, thou shalt carie thy lead in thy hand, and be sounding: and finding thy selfe in rockie ground, thou shalt steere North because of shunning the Puercos: and yet giue them not too great a birth because of The Diamant, and so thou mayest goe in, sounding when thou thinkest good. And being benighted and then not East and West with the bay, and if thou doest not goe into it, then make the largest boord thou canst keeping off till day.

If thou be at the Canaries and wouldst sayle to Nueva Espanna, thou shalt sayle soure and twenty houres South because of the calmes of Fierro. And from thence thou shalt goe West-Southwest, untill thou finde thy selfe in twenty degrees. And then thou must goe West and by South, which is the course for the Isle Descada. And from Descada thou shalt goe West and by North, because of the variation of the compasse. And falling with Descada, thou shalt finde it to rise low with the sea: and it standeth in 15 degrees. And the easternmost part is the sharpest, and smaller then the West point.

And if thou art going for Tierra firma, thou shalt goe West and by South untill thou come to Dominica, and there on the Northwest side is a riuer, where thou mayest water. The marks to know it bee a certaine high land full of hilles. And seeing it when thou art farre off to the seaward, it maketh in the midst a partition; so that a man would thinke it deuided the Island in two parts. And this Island standeth in 14 degrees and a halfe.

I advise thee that if thou wouldst goe for Nueva Espanna, and so doest passe betweene Guadalupe and Monserate to the Westward, that being thus open off the entrance betwixt them thou shalt go Westnorthwest, and so shalt haue sight of Santa Cruz, which standeth in seuentene degrees and a halfe. And the markes to know it be these. It is an Island not very high, and lyeth East and West, and at the East end it is lower then at the West end.

And going forward on thy course thou shalt runne Westnorthwest, and so thou shalt goe to haue sight of the Isle of San Iuan de Puerto rico, which is an Island lying East and West, and standeth in eightene degrees. And the markes be these. That on the West end it is lowest, and the Easternmost is the highest. And if thou fall with the midst of the Island, then thou shalt goe a long it to the West vnto Cabo Roxo, which is the end of the Isle. And from thence the

the coast runnech North to Punta Aguada. Cape Roxo hath certaine red cliffes. Thou must steere West and by South from Cape Roxo to find Mona, and so thou shalt haue sight of Mona. And Mona, the marks thereof be these, it is a low land lying East and West: and on the East end it is highest, it hath a slope towards the sea, and standeth in 18. degrees, rather lesse then more. And if it be by day, then thou shalt runne West and shalt see Saona: which is an Island lying without Hispaniola, and lyeth East and West, and is full of trees; and hath certaine sandy bayes. And if it be cleere weather thou shalt see within the land of Hispaniola certaine hie hills called las Sierras de Ygney. And being benighted upon Mona, then thou shalt steere West and by South, because of certaine shoals that lye off Saona: but hauing day light and no sight of land, thou shalt loose by North-west and so passe by it, and as thou goest along the coast of Hispaniola, and seest the sea to be cast up into the aire, then thou shalt be about 10 leagues off the harbour of Santo Domingo, and these mountings by are called The Spoutes.

But I aduise thee, that if thou bee benighted when thou fallest with Santo Domingo, then thou must keepe the hills called Sierras de las minas viejas to the North-west. And if thou wouldest goe into Santo Domingo, and meetest there with a forcible Northerly wind, then the best way is to runne East till it be day. And hauing day light thou shalt cast about, and so thou must ply to wind-ward vntill the Northerly wind be done: and when it is past, make all the saile thou canst to hale with the sight of Calle de las Damas: and when thou hast sight thereof thou shalt lye with thy femme with a sandie Bay, which lyeth on the other side: and thou must take in thy maine saile, and go so till thou bring thy selfe open with the midst of the riuer; and so hauing opened the riuer, thou must go with great care in the midst of the same, with all thy sailes vp, except thy maine saile, and thou must haue thy boat out, if it be needefull to sound or to row thy ship, if the cast too much to the loose, for the currents will cast here to the loose: wherefore bee sure to haue thy boat out to helpe thy steerage: and this is the way whereby thou must worke.

The course from Santo Domingo to go for Nueva Espanna.

I aduise thee that if thou wilt goe from Santo Domingo for Nueva Espanna, thou shalt goe South-west and by South, and so thou shalt haue sight of Punta de Nizao, which is a low point, and is the end of the hills called Sierras de las minas Viejas, and towards the North-west of them thou shalt see a lowe land, and to goe into Hocoa thou shalt stirre from this point of Nizao West-north-west, and thou shalt see the point of Puerto Hermoso, and the Bay that it maketh: and thou must be sure to keepe neere the shore to find a good road, and feare not to go neere the land: for all is deepe water, and cleare ground, and let not fall thine anker till thou be past all the riuers; and beware of the land, for if thou ride much without, thy anker wil come home, because it is rocky and flatte ground. And thou must be ready, that when thine anker commeth home, thou haue thy moarings readie in thy boat to carry on shore with foure or fise men, and if thou thinke good, thou mayest let them fall on land with a rope. And when thou art come to anker thou mayest send on shore to moare, so shalt thou be best moared.

The course from Hocoa to Nueva Espanna.

Ging from Hocoa to Nueva Espanna thou shalt stirre South-west: and this way thou shalt find the Illes Beata, and Alto velo: Beata hath these marks: It is a low land with the sea, and full of trees: and on the East side an high land or cliffe; and Alto velo hath these markes. A blacke round land, and the Eastermost part thereof is highest, and it hath a downefall. When thou art North and South with * then thou shalt go West, vntill thou be so farre Not as the Frailes: and from thence goe West and by North, and keeping this course thou shalt haue sight of Cape Tiburon. And if by keeping this course thou haue sight of a little Island, thou mayest make account it is the Ile of Baque: and it is hard to the land, and from thence thou shalt go West, keeping thy selfe out vntill thou double a point that maketh as it were a great Bay, and then thou must go West and by North, till thou come to Cape Tiburon, that hath a round blacke land, and in some part thereof certaine white cliffes.

I aduise thee that when thou art against Cape de Tiburon, thou shalt stirre North-west, and so thou shalt haue sight of Cuba, which lyeth East and West: and thou shalt see certaine hills which are called Sierras del Cobre, and in the highest of them is the harbour of S. Iago de Cuba: and finding thy selfe so, thou mayest runne West vnto Cape de Cruz. And before thou seest Cape de Cruz thou shalt see the hills called Sierras de Tarquino, and from these hills to Cape de Cruz the

The nine fathoms.

Cape de Cruz in 19. deg. and better.

Los Iardines.

The Isle de Pinos.

land wareth lower and lower, and it is lowest of all at the Cape it selfe. And if thou chance to haue the water troubled, as though thy ship did raise by the sand from the ground, be not afraid: for this place is called The nine fathoms: for thou shalt find no lesse water vpon it, and it is the shallowest water that thou shalt haue.

Thou must marke that Cape de Cruz maketh an ende of the coast that commeth from the East to the West, and beginneth the course that goeth North and South, and standeth in 19. degrees, rather more then lesse.

From Cape de Cruz thou must stirre Westnorthwest: and this way thou shalt haue sight of the Isle de Pinos, and if thou haue faire weather, then thou must goe Northwest and by West, because of the currents that will set thee out to sea. And keeping this course thou shalt haue sight of an high land. I tell thee it is the marke of the Isles called los Iardines, and is commonly called the land of Zagheio: and then thou shalt goe West and by South: and if it bee by night, then goe Westsouthwest untill thou haue brought thy selfe out from The Iardines. And being by day thou shalt keepe off the land, and shalt goe Westnorthwest, and so thou shalt see the Isle de Pinos.

The markes to know the *Cape de Santo Antonio.*

Cape de Corrientes.
Cape de Santo Antonio in 22. degrees.

The headland called Capo de Santo Antonio is a lowe land, and full of trees, and vpon the Cape it selfe it hath two or thre thicke woods, and the coast lyeth Northwest and Southeast. And thou must also take good heed that thou haue sight on the same coast of a white sandie Bay: and it is on the same coast that lyeth Northwest and Southeast. And these be the markes from Punta de las Arenas, or The point of the sands, to the Cape of Saint Anthony, and from the Cape de Corrientes to Punta de las Arenas thou shalt haue a great Bay, being so long, that if thou be not very neere the shore thou canst not see land, it is so low. And if thou see not the land well, it will shew to be a tuft of trees. And the Cape of S. Anthony standeth in 22. degrees.

A ruttier that a man must keepe from *Dominica* to *Martinino*, and so to *Tierra firma.*

The Testigos Frailes.

Puerto de Iuan Griego.

Curaçao, Aruba, Monjes three little Islands.

Coquebacoa.

Baia honda. Portete. Cape de la vela.

Cape del Aguja.

I aduise thee that going from Martinino or Dominica, if thou wouldst goe for Margarita, that thou stirre South and by West, because of the great currents that goe here, and set Northwest. And by this course thou shalt find the Testigos, which be 4 or 5 Islands: and if thou wilt not goe so much to windward, then thou shalt see Frailes, which bee three small Islands. And if thou wilt goe into the harbour of Manpater, it is presently in doubling of the point on the East side to the Southward. And being minded to go for puerto de Iuan Griego, which lieth on the Northside, then go neere the land, and along the coast of the West, and presently thou shalt haue sight of puerto de Iuan Griego; it standeth in 11. degrees.

I aduise thee that going from Maralino, which standeth in 13. degrees, if thou wouldst goe to Carragena, thou shalt goe West and by South, and by this way thou shalt haue sight of the Isles of Curaçao and Aruba, which stand in 12. degrees: from these Islands thou shalt go West: and when thou art North and South with Monjes, thou shalt see them to be three little white Islands, and they are white because of the multitude of birds that are there: they stand in a triangle. From thence thou shalt goe West, if it be by day, and so shalt haue sight of Coquebacoa that standeth in 12. degrees. And being by night, then goe Northwest: and by day thou shalt cast to goe for the land againe Westsouthwest. Coquebacoa hath a certaine point not very high, and within this point thou shalt see in the inland certain hilles which bee called las Sierras de Auice.

Going from this point of Coquebacoa thou shalt run West, and shalt run along the coast, and shalt go to haue the sight of Baya honda and Portete, which is a low land even with the sea.

The Cape de la Vela lieth with a redde shewe not very high; and without this Cape about a league there is a little coppled rocke. A man may be bold to go betwixt this rocke and the maine. And going from this Cape to haue sight of Cape del Aguja thou must stirre Southwest, and thou shalt haue sight of the Ancones which lye at the ende of the hilles called Sierras Neuadas. And then presently thou shalt see the Cape del Aguja: the marks whereof are these: It is a low Cape, and vpon it is a cople not very high, and there beginneth the high land of the Sierras Neuadas, or snowpy mountaines.

Take this for a warning that if thou goe for Cape de la Vela by night by the course abovesayd, and comest into a whitish water, then sound and thou shalt find 40. fathoms, and thy sound will

will be certaine smal sandy whice oaze, and some smal weeds. And then thou mayest make account that thou art North and South with the riuer called Rio de Palominos, which commeth out of the midd of the Sierras Neuadas. And being benighted thou shalt go Westnorthwest, or West and by North until day: and being day then thou mayest hale in with sight of the land Southwest, because thou mayest be sure to come right in with it.

If thou goe from Cape del Aguja for Cartagena, if it bee by day, thou shalt goe West and by South, and shalt goe to haue sight of Morro Hermoso, that is The faire mountaine, which lyeth to the Westward of Rio grande. And being alone, and with a good ship of saile, and drawing towards night, then thou must come to anker behind Morro hermoso: and after the first watch thou must set saile, and go out West and by North, because thou must be sure to keepe a seaboord from the Island de Arenas, which lyeth 2 leagues to seaward right against Samba.

And if thou goe from Cape del Aguja by night, thou shalt goe West and by North: and so thou shalt goe without the force of the water of Rio Grande. And being by day thou shalt goe along the coast, and shalt see Morro hermoso, which, as I haue sayd, lyeth to the West of Rio Grande, and hath for markes, a face of a blacke land not very hie, and it is round. And if thou depart by day from Morro hermoso, thou must goe West, and must take heede, as I sayde before, of the Isle de Arenas, which lyeth North and South off Samba. Samba hath for a marke as it were a gallie towed. And going this way by day, thou shalt see El buio del Gato, which is an high land with certaine white cliffes to the seaward: and also more to the West thou shalt see the poynt called Punta de la Canoa, which is a low land euen with the water: and there endeth the coast which lyeth East and West. And the Bay that goeth to Cartagena beginneth here, and lyeth Northeast and Southwest.

And take this for a warning, that if thou be benighted against Samba, thou shalt take in thy sailes, & lye off to the offward until midnight without any saile abroad until midnight: and from midnight forward thou shalt lye so into the land without saile: and if in the breake of day thou see no land, then goe Southwest, and if this way thou haue sight of certaine white cliffes, make account it is Buio del Gato. Take this for a warning, if thy ship bee great come not nigh the land in the Bay: I meane thou mayest not with a great ship come nigh the land from the poynt de la Canoa until thou come to Cartagena, because in many places there are not aboue 3 or 4 fathoms at the most. In all this Bay there is no hie land but the Gallie, which is right ouer the harbour of Cartagena.

And if it chance that any man come for this place that neuer was here before, then let him looke for a little hill like a towed gallie lying East and West, and all the land is low, and seemeth to be full of trees. Having these sights, then make account thou art against Cartagena, and to goe in thou hast nothing to be afraid of: but keepe thy selfe hard aboard the poynt of Ycacos: and then when thou comest to double the poynt del Iudeo, giue a breadth off, because there is a shoald.

I aduise thee that if thou be benighted when thou art at The poynt de la canoa, and wouldest enter into Cartagena by night, that thou take good heede of a shoald that lyeth halfe a league to the sea, and so thou shalt goe in 8 fathoms, and sandie ground. And when thou findest thy selfe in deepe water, as in 30 fathoms and more, then the harbour will bee open before thee. And if thou haue any fresh Northerne winds, then looke by to the seaward, and lye with thy Remme East-southeast, and so thou mayest goe in East through the middell of the chanell: and though it bee by night, yet thou mayest goe in safely, because it is all cleere. And if the night be cleere thou shalt haue sight of the Island called Cares, and it is an high land.

Comming from Cartagena to goe for Nombre de Dios in the time of the Northerne winds, thou must bring thy selfe to the offward of Sal medina: and thence stirre West till thou bring thy selfe North and South with Cabeça de Catua: and then goe Southwest and by West, and thou shalt so fall with Rio de Francisco. It hath for markes a certaine land not very high, and within the land certaine high hills lying East and West. And on the West of the riuer of Francisco thou shalt see certaine cliffes that bee sixe leagues from Nombre de Dios, inclining toward the sea.

I aduise thee that going this course aboue written; if thou see 3 or 4 Isles lying lowe with the sea, and also lying East and West, thou mayest make account that they be the Illands de Catua, and then runne West, and so thou shalt go along the coast. And if thou see by this way a poynt of low land, make account it is Punta de Samblas: and vpon it thou shalt see a row of hie rockie hills, and they be the mountaines of Santa Cruz.

If thou come from Cartagena to go to Nombre de Dios in the time of the sea winds, when thou

Nombre de Dios.

art out from Sal Medina, thou shalt goe West and by North, that thou mayest haue sea-roome, and take the Brisas or Northerne winds when they come: and goe till thou be North and South with the harbour of Nombre de Dios: and from thence goe Southwest, and if by this way thou see a row of high hills on a coast that lyeth North-east and Southwest, make account they are Sierras de las minas Viejas, which minas Viejas lie North and South with the harbour of Velo alto. Having kept this course abovesaid, and having sight of the former marke, thou mayest account that thou art on the West side of Nombre de Dios.

Sierra de Capira.
A ledge of
rocks.

Furthermore when thou hast sight of an high land, and thou bee North and South with it, and in the toppe thereof thou seest as it were a little table, if it be highest toward the East, then make account that thou art North and South with Nombre de Dios, I say, with the harbour of Nombre de Dios, and this hill is called Sierra de Capira. And if thou wilt goe into the harbour, thou must keepe thy prow right against this hill, and comming nearer to the shore, thou shalt see a ledge of rocks, and it is without, so thou mayest goe in what depth thou thinkest good, or at which place thou findest most water in. And to the West of the harbor thou shalt see two or three Islands called *Isas de los Balcimentos*.

Isas de los Balcimentos.
The course to
goe back from
Nombre de Dios
to Cartagena.

Take this for a warning, if thou come out of Nombre de Dios in the time of the Brisas or Northerne winds, and wouldest goe for Cartagena, thou shalt come out in the morning, and shalt go Northnorthwest untill 3 of the clocke at afternoone, and then cast about to the land, untill thou be hard aboord the shore, and so thou must go turning untill thou hast doubled Cabeça de Catina: and having doubled it then ply to windward all that thou mayest: and if thou be Eastnortheast off it, then thou shalt haue sight of the Islands of Baru, which are 3 or 4 Islands lying low, and are all full of trees: and then presently thou shalt haue sight of the gallie that is ouer Cartagena, and it is like a gallie towed.

Isas de Baru.

Isa fuerte.
A ledge of
rocks.

I aduise thee, that if thou come for Cartagena in the time abovesayde, and comest from Cabeça de Catina, if the wind will not suffer thee to lye but West, then going thus if thou seest a great high Island full of mountaines, and on the North side thereof thou see a ledge of rocks two leagnes into the sea, thou mayest be sure it is *Isa fuerte*: but if thou see not the rocks, giue them a good breadth: and if thou wilt come to anker, thou mayest ride well on the West side of them, betwixt the maine and them in fifteene fathomes; and the sounding is clay. And if thou wilt go betweene this and the Islands of Saint Barnardo to goe into Cartagena, thou mayest goe safely. And if any man aske thee how thou knowest the Islands of Baru and San Barnardo, thou mayest answer truely, that the Isles of San Barnardo are full of high hills, and certaine landie bayes to seaward; and the sayd Isles haue a good depth two or three leagues to the sea: and this depth is called *The Bacilla*. And these are all the markes for the Isles of San Barnardo. And touching the Isles of Baru, they bee 3 or 4 little Islands and very euen with the sea, and full of trees, and there is no good depth about them, but hard aboord them.

Isas de San Barnardo.

La Bacilla

A ruttier from Cartagena to Hauana in Cuba.

The shoals
of Serrana,
Serranilla.

Comming from Cartagena to goe to Hauana, thou must goe Northnorthwest untill thou be in foureteene degrees: and then forwardest thou shalt goe with great care to anker euery night, and when it is day set sayle. And this is to bee done in this place because of the shoals of Serrana: and so thou mayest procede with a care to anker when thou comest about Serranilla, or neere to it, which is in fifteene degrees and a halfe. And vpon it thou shalt see a lowe flatte land lying North-east and Southwest: and the sea beatech vpon it round about, except that on the Southeast part it hath certaine shelues of land, and on the West side it hath a certain little cople, which from sea seemeth to bee a shippe vnder sayle: and being North-east and Southwest off it, scant a league from the shoale cometh out on the West side a certayne shoale, whereupon the sea doth alwayes beate.

Cape de Corrientes,
Cape de San Antonio.

I aduise thee that if thou canst not passe on the West side, then thou must goe betwixt the sayd little cople that is like a sayle and the shoale; for the passage is good. But if thou depart from the Serranilla to the North-west, and seest a lowe land with the sea, and certaine white sandy bayes, and on the West side seest a low land, and on the East side a little coast lying East and West, thou mayest make account it is Cape de Corrientes.

And if thou goe from Cape de Corrientes for Cape de Santo Antonio, thou must goe West-northwest, and so thou shalt goe with the Cape. The marks be a low land full of trees with certaine white landie bayes: and vpon the Cape it selfe thou shalt see two thicke groues of great trees, and they be vpon the Cape it selfe.

To go from the Cape de Sant Antonio for Hauana in the time of the North winds, thou shalt goe North-west untill thou be cleere of all the shoals of the Cape, and then hale thy bowlines, and go as neere the wind as thou canst possibly, untill thou bring thy selfe vnto 24. degrees, and there sound, and thou shalt find it the Tortugas, and thy sounding will be white sand.

The Tortugas.

Thou must take heede what is said in the Chapter before: for he that writ the same hath seene it, and bene witnesse to this: that comming from Seranilla, and stirring North and by East he had sight of an Island standing in 16. degrees, and it is on the shoals of Cape de Camaron. And from thence, if thou haue the wind large, goe North-east and by East, because of the variation of the compasse, and thou shalt make thy way East-north-east, and thou shalt fall with Isla de Pinos. This I I say, because the currents set sometime West: and so it fell out to bee true in March, Anno Domini 1582. I tell thee farther, that wee came out from this aforesayd Isle stirring North and by East, for the wind would not suffer vs to lye neerer the East, and one euening at Summe going downe we fell with a land, that had the same markes to our iudgement with the Cape de Corrientes: and because night was at hand, we wrought to double Cape de Sant Antonio, stirring West: and about midnight we had land all high right ahead, & the coast lying South-west: and then we cast and lay North-east till day: And being day, wee saw the land all ahead, and we plied to wind-ward to the East, and kept it a larboord till we had brought it South-west. And to be short, we went here on land in the same place that we first fell with in the euening before: and it was an Island called Cozumel, lying on the coast of Iucatan. And this Island was the land which we saw first, seeming by the marks to be the Cape de Corrientes. Wee came to an anker about the middelt of the Island, rather to the North-er then the Souther part: there we found a towne of Indians, who gaue vs all things which we needed for our money: and wee carried our Astrolabs on shore and tooke the height in 19. degrees and one tierce. A man may goe betweene this Island and the coast of Iucatan, and the Cape de Cotoche at pleasure North-east; and the water will set in thy fauour: and thou must go till thou be in 24. degrees, and so thou shalt haue the sounding of the Tortugas.

Las Tortugas.

The course to be kept from the Cape de Santo Antonio for Nueva Espanna.

If thou goe from the Cape de Santo Antonio for Nueva Espanna, and being late, thou shalt stirre West-north-west till thou be in the height of 24. degrees: and from thence thou shalt stirre something to the West, untill thou bring thy selfe North and South with the little Island called Vermeja: and when thou art so, thou shalt go South-west, & by this way thou shalt find Villa Rica, which is in 19 degrees & a halfe, and the signes be these. Thou shalt find a ledge of high hills lying North-east and South-west. But if thou chance to fall with a coast that lieth North and South, then thou mayest account, that it is about the low ground of Almeria which hath these markes. It is a land not very high, and it is full of little copples. And if thou haue cleare weather, thou shalt see within the land certaine high hills which are called the hills of Papalo.

The little Isle
called Vermeja.
Marks of Vil-
la Rica.
The low
ground of Al-
meria.

Las Sierras de
Papalo.

And I aduise thee that being so farre thote as the poynnt called Punta delgada, which is the ende of all those hills of Villa Rica, thou mayest stirre thence South and by West, and thou shalt goe along the coast, and shalt see a lowe land, and with this land thou shalt fall, going for Saint Paul, and being so farre thote as Saint Paul, if thou wilt goe into the harbour, thou must stirre South-west: and this is the course that thou must keepe being thote into the Bay. And thou shalt goe along the coast of the lowe land in sight thereof: and keeping this course thou shalt see on the other side a blacke hill, and it is called Monte de Carneros. Take this for a note, that it lyeth ouer the house of Buytron: and as thou doest come neerer to the poynnt of rockes, thou must bee sure to keepe thy lead going, and shalt haue foure fathomes and a halfe or five fathomes, and so thou mayest goe through the middelt of the chanell. And comming against the rattle, thou shalt giue it some breadth off towards the Arrecife or rocke: and hauing doubled the rattle, thou shalt goe from thence and shalt bring thy selfe to an anker hard by the Herreria, which is a cleane Bay, and thou shalt ride against the hospitall.

Saint Paul.

Monte de Car-
neros.
Casa de Buytron.

The castle of
S. Juan de Villu-
la.

The hospitall.

I aduise thee that if thou be benighted when thou art neere to S. Paul, and meetest with a North-erly wind after midnighe, that then thy best way is to bring thy selfe into thy coarces, and lye by, plying to windward, and to seaward in 20. fathomes, which depth thou shalt haue neere the shore, to the Northward: and being day, then goe in with the harbour as thou canst best, obseruing what is aboue said.

And I aduise thee if thou come from Villa Rica, and findest thy selfe in 20. degrees and a halfe, and seest no land, and seest that the water doth alter, thou shalt sound 60. fathomes water: and if

The river of
Almeria.

in this depth thou shalt oaze, make account thou art East and West with the river of Almeria. This course is from the Cape of Santo Antonio to Nueva Espanna without or aleeboord the Alacranes or Scorpions.

The triangle.

Now followeth how to worke, if a man come betwixt the Alacranes and the maine.

Alacranes or
Scorpions.

The triangle.

Surta of Zarza.
The high hills
of S. Martin.

If thou goe from the Cape de Santo Antonio and wouldest goe for Nueva Espanna within the Alacranes, thou must stirre West and by South, and by this way thou shalt bring thy selfe in 20. fathoms; and if thou keeping this course findest lesse water, then go West and by North, and that way thou shalt bring thy selfe into 20. fathomes againe, untill thou have brought thy selfe North and South with the triangle. And being North and South with the triangle, then thou shalt be also North and South with Surta: from thence thou shalt go South west: and by this course thou shalt have sight of the high hills of S. Martin, which are certaine high hills lying North west and Southeast, and they have a partition in the midst, and to the North west they be highest: and on the Southeast part within the land, thou shalt see something an high land, called Pan de Minsapa, that is, the loafe of Minsapa, which is a round loafe not very high.

The hills of S. Martin stand in 18. degrees lesse one fift part.

I advise thee, that when thou fallest with Saint Martin, and wouldest go with Saint Iohn de Villua, then thou shalt goe Westnorthwest: and this is the course that thou must keepe, if thou bee farre off at sea, I meane so farre off as thou mayest well discerne the hills of S. Martin.

But if thou be neere to the land, then thou must goe North west and by West, and thou shalt so come along the coast, and thou shalt find the coast to be low land: and comming this course thou shalt have sight of certaine little hillies not very high: then thou shalt fall with the poynct called Punta de Antoni Serro: and these hillies lye ouer the river of Medelin. And if when thou art East and West, with The Volcan or hill that casteth out fire, any man doe aske thee, where the harbour of Sant Iuan de Villua is, thou mayest truly answer, West and by South, and it standeth in 18. degrees and a halfe.

Rio de Medelin.

S. Iuan de Villua
is in 18. deg.
and a halfe.

The course to be kept from Nueva Espanna to the maine of Spaine in Europe.

The Tortugas.

The currents
to the East.
Pan de Cabanas.

Havana.

Comming from S. Iuan de Villua to goe for Spaine, thou shalt stirre Northeast untill thou be in 24. degrees: and so being thou shalt goe East untill thou bring thy selfe in the soundings of the Tortugas, and thy ground wil be white sand. I advise thee, that if it be by night, thou goe East; and finding the water to ware shoalder, then goe Southwest, with a care to keepe thy lead going, untill thou loose ground, and come into great depth, because thou mayest fall to the North of the Tortugas. And going from this sound for Havana thou must stirre Southsouth east, because of the currents that carrie thee to the East. And if by this way thou have sight of an hie land, that seemeth to be like a loafe, make account it is the loafe of Cabanas. And to the East of this loafe thou shalt see a land that hath a plaine. It sheweth to be low, even with the sea, and as smooth as the sea: and from this land to the East the land is lower and lower. And from thence to Havana thou must goe East. And if the wind will not let thee go that course, thou must turne vp till thou be upon the harbour of Havana.

The marks of the poynct of Havana be these, that on the East side it hath an hie blacke land, which is sloping to the sea, with a litle white tower on the top thereof: and as thou goest into the port, thou must keepe neere the high blacke land, and when thou art haru to it, strike thy toppes in signe of peate to the castle, least it shote at thee.

What course the Spaniards keepe from Havana to Spaine.

Los Martyres.

If from Havana thou wouldest set thy course for Spaine, thou must goe Northeast, and shalt so have sight of the Martyres, which stand in 24. degrees and a halfe. And the coast lieth East and West. The marks be these, it sheweth like heads of trees, and in some places certaine rocks with white sandy bayes. And if the wind be large, thou mayest go East and by South untill thou see the coast to lye Northeast and Southwest: and if the wind be scant, then go turning vp: and take good heed that every evening at Sunne going downe thou have sight of the land, and so thou must do being in the channell, untill thou bring thy selfe into the middest of the channell: and thou must lye off

off from the going downe of the sunne, vntill the ende of the first watch with thy coarles alone, without any more sayle; and from midnight forwards east about, and lye the other way with the like sayle vntill day: and thus thou must doe vntill thou bring thy selfe into the chanel. And if being in the Chanel thou finde the winde large, thou shalt stirre North-east, with a care to goe cleane off the holds of the Mimbres of the Diars. And if being in the chanel thou meete with the wind at North, then thou must turne with a litle saile 4. glasses one way, and 4. another, as thou thinkest good. And if thou canst not beare sayle, then thou mayest goe with all thy sayles downe, except when thou wouldst cast about, thou mayest loose some small sayle to winde thy ship.

The holds of Mimbres, that is, of Diars.

I aduise thee, that when thou art come out of the Chanel, thou shalt be in 28. degrees. And if it be in summer, thou shalt goe North-east vntill thou be in 39. degrees and $\frac{1}{2}$, which is the height of Flores: and thou shalt goe to the Northward of Bermuda. And if thou thinke good to go in more degrees, to haue the sea winds, thou shalt goe by the same height, as I haue sayd: and if thou shalt finde the winde off the sea, thou shalt no neede to goe in more heights: and from thence thou shalt goe East and by South: and thou must goe thus because of the variation of the Compasse. And thus thou shalt find the illes of Flores and Cueruo, which stand in 39. degrees $\frac{1}{2}$, and in 40. large. The markes be these. *

The Chanel reacheth to 28. degrees. La Bermuda.

The variation of the Compasse.

Thou mayest goe from betwixt Flores and Cueruo, and must goe East Southeast, and so thou shalt haue sight of the Island of Sayles, which is the Island of S. George. And being at the land thou shalt goe along it, and when thou shalt doubled a certaine litle Head-land that lyeth in the East point, then thou shalt stirre East and by North, and East. And thus going, thou shalt haue sight of Terçera, which is in 39. degrees. The markes be these. *

Flores and Cueruo, Saint George.

Terçera.

And behinde a certaine blacke land something high, which is called el Brasil, standeth the Citie called Angra. Going from Terçera, thou shalt runne East North-east, vntill thou bring thy selfe North-west, and Southeast with the Cape of Saint Vincent. And thou mayest worke thus being in summer: for allwayes thou shalt haue the windes at North-west. And being North-west and Southeast with this Cape, thou shalt stirre Southeast and by East, and thou shalt so fall with the land 6. or 7. leagues to the windward off the Cape on the coast, which lyeth North and South: then thou shalt goe along the coast to the South, vntill thou see the Cape. And the Cape standeth in 37. degrees: the markes be these. It is a Cape not very hie, and is blacke, sloping to the sea. And from thence thou shalt double the Alagresal Southeast: and so running, thou shalt then goe East vnto the Cape of S. Mary: and from this Cape goe East North-east, and so thou shalt runne to haue sight of Arenas Gordas: and then thou shalt see presently a litle hill towardes the East which is called Cabeça de Pedro Garcia. And if thou be benighted, and comming into 8. or 9. fathoms, then I wish thee to come to anchor, vntill it be day, and then call for a Pilote, that may by some meanes carie thee into harbour.

The Cape of S. Vincent. The windes are allwayes at North-west in the summer.

The markes of Cape S. Vincent. The Alagresal. The Cape of Saint Mary.

I aduise thee, if in the Winter time thou bee shot out of the narrowest of the Chanel of Bahama, and wouldst goe for Spaine, that thou must goe East North-east, vntill thou be in 30. degrees rather lesse then more: and then thou mayest goe East and by South, because of the variation of the Compasse. And stirring hence East Southeast, thou shalt goe on the Southside of Bermuda: and must goe with great care, because many haue bene lost heere about this Island, because of their negligence. And when thou art sure thou art past this Island, then goe East North-east, vntill thou bee in the height of seven and thirtie degrees: which is in the height of the Island of Saint Marie. And going thus, and not seeing Land, but seeing the Sea to breake, make accompt it is the rocks called las Hormigas. And if thou thinke good to goe to Faial, thou shalt goe till thou be in 38. degrees: scant, and then thou shalt goe East, and so shalt haue sight of Faial. The markes of it be these. *

The course in winter from the Chanel of Bahama. The variation of the Compasse.

Many lost by on Bermuda by negligence. The Isle of S. Marie.

Faial.

Commung out from Faial, and leauing all the Islandes, then goe East and by South vntill thou bring thy selfe in 37. degrees, which is the height of Cape Saint Vincent: and then goe East, and thou shalt see the Cape hauing the markes aforesayd. And from Cape S. Vincent thou must goe East Southeast, till thou be North-east, and South-west, with the barre of S. Lucar: and then goe North-east for the Barre.

The barre of S. Lucar.

Take this for a warning, that if going in 37. degrees thou haue not sight of Cape S. Vincent, and hast sight of certaine hie hills, make accompt they are Sierras de Monchico.

Sierras de Monchico. To any one men of warre.

I aduise thee, that if thou stand in feare of men of warre about the Cape of S. Vincent, then goe in 36. degrees. And finding thy selfe within the Cape, if thou see many signes of greene weedes, then cast about to the North North-east, and by this way finding land, and the same shewing white, be sure it is the castle of Aimonte.

The castle of Aimonte.

A ruttier

A ruttier for the old Chanel from the East point of *Cuba* by the North side thereof to *Hauana*.

The Cape of
S. Nicolas on the
East ende of
Cuba,
Punta de May-
aci.
Baracoa.

Going from the Cape of S. Nicolas, thou shalt goe North Northwest, but thou must keepe to windward off the point, that thou mayest weather it, & it is called the point of Mayaci: and it is a very low land and smooth: and aboute by within the land about a league it hath a long Hill, which is not very high but flat. And from that point to Baracoa is 7. leagues.

Shoald on the
East side of
Baracoa.

And being disposed to goe into Baracoa, keepe the weather-choze all along, vntill thou open the Harbour. And to knowe if thou bee open of the Harbour, looke vpon the South side; and thou shalt see an Hill by it selfe, which maketh as it were a crowne vpon it. And if thou come along, it maketh as it were a Fort with Portes about it: And this is the marke if thou come out of the Sea. And this Hill is North and South of the Harbour, ouer the Harbour of Baracoa. And if thou wilt goe in, thou must take heede of a Shoald which lyeth on the East side, and thou must keepe the West side: and goe not much from the Shoald, because the foote of the Shoald that shooteth Westward hath 5. fathoms water. And when thou art within the Shoalds, thou must goe a litle within them, and then let fall an anchor: and looke that thou come not much on the East side, for it is shoalbie.

Cayo de Moa.
This worde
Cayo in the
Biskayne
tongue signi-
fith a flat of
a shoald.
Pracellas.

And comming out from Baracoa, being to passe through the old chanel, you shall set your course Northwest vntill you come with the Cayo de Moa, or the shoald of Moa, vntill you thinke you are Northeast and Southwest with it, or till you thinke you are gone 12. leagues: and you shall know that you are vpon Cayo de Moa. For before you come at it by 2. leagues or moze, you shall vnderstand that it hath a point of lowe land, and vpon the point it hath a Palme tree; which tree you shall see alwayes, before you see the point: and it is like a sayle. From thence to The Pracellas or Flats you shall stirre Northwest two parts of your way, that you haue to runne from Cayo de Moa to the sayd Pracellas or Flats, and the one halfe part of the way North Northwest and by West. And this way you shall see The Pracellas or Flats in a cleane place of the shoald about the water, for all the breach of the sea. The Mosowes bee from the Pracell West, and you shall leaue them to windward.

Camoloquea.

The flats of
Mecala to be a-
uoyded.

Cropeda a flat
Island.
2. Rocks of
stone.

Punta de Caucas.
Matanzas.

The currents.

The Teates of
Hauana.
The harbour
of Xaroca.

Markes to
know the har-
bour of Ha-
uana.

And if you will goe with the Pracellas or Flats, you shall finde 4. or 5. fathomes: and you may goe sure without danger a Northwest course vntill you come in 7. fathomes. And if you will goe vpon the Shoald, you shall goe vpon that depth, vntill you haue runne 40. or 45. leagues: And from thence you shall set your course Southwest, till you see the Flattes of the maine land. You shall then see to the Westward a rocke diuided into 3. partes, which is called the Camoloquea. And looke that when you come from the Pracellas Southwest, you haue certaine Flats before you: take heede of them that you fall not by night with them by foure leagues, for feare of the Mecala: and you shall set your course West Northwest vntill day: and when it is day, you must beare close aboord the shoze, and then you shall see a flat Island with many broken lands, which is called Cropeda, and lyeth but a litle out of the trade way, somewhat to the Northward. Off that you shall see 2. Rocks of stone, which are the point of all the Flats: And two leagues from them on the mayne land you shall see a point which sheweth like broken land. This is called The point of Caucas. And from that point to Matanzas on the Northside of Cuba are 12. leagues, and your course lieth West and by North: and then you must borrow vpon the land all that you can, because of the currents: for the currents will carry you into the Chanell. And being at Matanzas, you must runne all along the shoze, because of the currents. Remember that when you see one league before you a Rocke, and a Shoald, that hath vpon it but 2. fathomes water; and your marke if you come out of the sea is an Hill, and the Hill is not very hie, it standeth East and West, and vpon it are some litle risings and they are not very high, and vpon these risings stand two round homocks close together, you shall see the Teates of Hauana.

To know along the shoze when you are against the Harbour of Xaroca, the markes are these. A litle to the Westward one league, you shall see along the shoze a Hill that is broken, and that broken Hill is ouer the Harbour of Xaroca: and then a litle moze to the Westward a league, there is another broken Hill. And you shall see that North and South from these broken hills is a Flat off. And from that to Hauana is 7. leagues: and it is all cleane ground, and you may goe along the shoze till you come to Hauana. To know the harbour of Hauana, you shall see before you come at it one litle rocke of stone not very hie, and smooth toward the sea: vpon the rocke standeth a litle white tower, wherein they keepe watch. And then if you haue the winde large, you shall see the harbour open, and then you may beare in with it.

Your shippe being of great burthen, when you are within, then keepe on the West side, because

on the East side, on the West end of the Rocks aforesayd, there lieth a ledge to the Westward, which hath but three or foure fathoms: vpon it. If your ship be of small burthen, you may run along the weather shore, vntill you come right against the Castle; and then halfe the Way ouer you may come to an anchor.

How to worke comming through the olde Chanell, if you be not minded to goe ouer the *Pracellas* or shoalds.

If you will come through the olde Chanell, when you come as hie as the Shoalds, comming by Ion your course from the Caio de Moa, as I told you, keepe 2. leagues from the Pracel or shoald: and then set our course West vnto the low islands of the firme land. And vpon this course you shall ken the flats on the point of Caio Romano: and within it is one flat higher then the other, and smooth vpon, and in the midst it maketh as it were broken land; and when you are in the chanell in the day time, you must take heede you come not neere the shore by 2. leagues, and by your sounding no neerer then 3. fathoms. And you must take heede still when y night commeth to keepe 2. or three leagues off for feare of the shoalds. And in the night you must goe North-west as is aforesaid. And also you must take heed that you keepe in the middle of the chanell, as nere as you can toward the shoald. And finding much wind & being benighted, from midnight till day stirre West North-west, and when it is towards day, then you may edge towards the flats as is aforesaid.

And as you stirre hence one day and one night from Caio Romano to the Inwards of the Chanell, you shall see the firme land of Cuba, and other markes; and among the rest, a round hamocke, which you may easily know. It is called Alcane de Barasoga. And from thence to Sauano and to Basquo is 6. leagues, and likewise Hauana 6. leagues. And from thence to crosse vnder the fort is 45. leagues. And stirre hence vpon your course aforesaid. And if you haue gone from Barasoga 30. leagues, you shall see none of the flats of Mecala: And giue them a breadth off two or three leagues, and keepe your course West North-west, as aforesaid, vntill it be day, and presently you may edge round to the flats. And thus stirring, keepe your course vntill you see the hills of Camaloqua.

And looke that when you come from Caio de Moa, along the Pracel or shoald by night close by it, you shall not see what land it is, till it be day: and in the Morning you shall set your course as is aforesaid, vntill you see the shoald, and in seeing it, you may stirre on your course as is aboue mentioned, vntill you come to Hauana.

For to set your course from the point of Mance to Caio Romano, when you are North and South with the point of Mance, you shall stirre thence West North-west, vntill you thinke you be North-east and South-west with the hill of Hama. And this hill is an high hill and smooth to the seashore. And from this hill to Caio Romano you shall stirre North-west and by West: and vpon this course you may be bolde to see Caio Romano. And the marke of this flat is, that it maketh an hie land and smooth vpon the top: and in the midst of it, it sheweth as it were broken. And when you come to it, you must take heede you come not neere it by 2. leagues, because it is fowle. And looke that you bring not your selfe too neere the hill of Hama by night. For you must take heede of Caio Romano to keepe off it vntill Morning: in the Morning you may goe your course vntill you see it, and then set your course, as is abouesaid.

A principal ruttier containing most particular directions to saile from S. Lucar in Andalusia by the Isles of the Canaries, the small Isles called *Las Antillas*, along the South parts of the Isles of S. Iuan de Puerto rico, Hispaniola and Cuba: and from Cabo de Corrientes, or Cabo de S. Anton without and within the litle Isles called *Los Alacranes*, to the port of S. Iuan de Vllua in Nuova Espanna: and the course from thence backe againe by Hauana, and through the Chanell of Bahama to Spaine: together with the speciall markes of all the Capes, Islands, and other places by the way; and a brieue declaration of their latitudes and longitudes.

If you depart from the barre of S. Lucar de Barameda toward the West Indias in the Summer time, you must stirre away South-west vntill you come to the head-land called Punta de Naga vpon the Isle of Tenerif. But if your departure be from the sayd barre in the Winter, you must stirre away South-west and by South, vntill you come to the height of Cape Cantic on the coast of Barbarie: the markes and signes whereof be these following.

The

Caio de Moa.

Caio Romano.

Alcane de Barasoga.
Sauano, Basquo.

The flats of Mecala.
Take heede of that which is here sayd, for it hath litle reason.

Sierras de Camaloqua.
Caio de Moa.
Pracellas.
Hauana.

Punta de Mance.

Sierra del Hama.
Caio Romano.

The markes of the flat of Caio Romano.

Punta de Naga.

The markes to know Cape Cantin.

Cape Cantin is a lowe Cape and small to the sea-ward, and maketh a snout like the nose of a galley, and hath vpon the top of the poynnt a Heath or shrubby place, and on the toppe thereof stand two hemocks; that to the sea-ward being higher then the other; but that on the Souther side sheweth like a tower: and this Cape is in 32. degrees and 1/2.

And he that wil seeke from this Cape to discouer Punta de Naga beforesayd, must stirre away Southwest and by West, vntill hee bring himselfe Northeast and Southwest with the same point, and then he must stirre away South to fetch the said point.

The signes of Punta de Naga.

The said point or Head-land is a high point of Land, and plaine vpon the toppe like a cable, and without it there are two litle rockie Islands; and vpon the North side of the said point is another poine called Punta de Hidalgo, and vpon the top thereof are 2. picked rockes like vnto the eares of a Ware.

Punta de Hidalgo.

The course from the Canaries to the West Indies.

If you set saile from any of the Islands of the Canaries for the West Indies, you must stirre away 30. or 40. leagues due South, to the ende you may auoid the calmes of the Island of Fierro: and being so farre distant from the said Island, then must you stirre away West Southwest, vntill you finde your selfe in 20. degrees, and then saile West and by South vntill you come to 15. degrees and 1/2. And from thence stirre away West and by North; and so shall you make a West way by reason of the Northwelling of the Compasses which West way will bring you to the Island of Descada.

The calmes of Fierro.

The variation of the compass.

The markes of the Island of Descada.

This Island Descada lieth East Northeast, and West Southwest, hauing no trees vpon it, and it is proportioned like a Galley, and the Northeast ende thereof maketh a lowe nose like the snout of a galley; and by comming neere it, and passing by the North end thereof, you shall perceiue white broken patches like heapes of sand with red strakes in them: & the Southwest end of this Island maketh like the tilt of a galley. And this Island standeth in 15. degrees and 1/2.

Descada in 15. degrees and a halfe.

Markes of the Island of Monserate.

Monserate is an high Island, and round, full of trees, and vpon the East side thereof you shall perceiue certain white spots like sheeres; and being vpon the South side at the very point of the Island, somewhat off the land, it maketh like a litle Island: and putting your selfe either East or West from that point, in the midst thereof will appeare a great broken land.

Markes of the Island of Marigalanta.

Marigalanta is a smooth Island, and full of wood or trees, and as it were of the fashion of a galley vpon her decke: and being on the Southeast side about halfe a league off you shall make certaine homocks of blacke stones, and certain white patches: but on the West side appeare faire white sandy shoies or plaines.

Markes of the Isle of Dominica.

The Island of Dominica lieth Northwest and Southeast, and vpon the Northwest side it sheweth more high: and if you come neere it at full sea, it will shew like two Islands, but by comming neerer vnto it, you shall perceiue it to be but one: and vpon the Southeast side you shall make or see a plaine and long point, and vpon the same point appeareth a cliffe like to the cliffe of Cape Tiburon; and vpon the North side a litle from the land it sheweth like a litle Island, and vpon the top thereof is, as it were, an high steeple, and vpon the North side you shall perceiue it like many white sheeres.

Markes of the Island of Guadalupe.

The Island of Guadalupe lieth on the West of Descada, and vpon the Southwest part thereof appeare many hie mountaines, but vpon the East side it maketh certaine tables, which are called the high part of Guadalupe. And this Island is cut North and South; so that the Canoas of India do passe from the North to the South of it, as if it were two Islands.

Markes

Markes of the Isle of *Matalina*, or *Martinino*.

The Isle of Matalina is high and full of mountaines, hauing in the midst thereof 3. homocks: the middlemost homocke being highest theweth like the great bowle of an hat. And vpon the North side it appeareth like thre little Islands. And in this Island there are warlik Indians like those of Dominica.

Warlike and dangerous Indians like those of Dominica.

Markes of the three small Islands called *Isas de Los Santos*, or the Islands of *Saintes*.

Los Santos are 3. Islands lying one close by another vpon the South side of Guadalupe. For to goe with S. Iuan de Puerto rico you must stirre away Northwest, vntill you fall with the Isle of Saba.

Markes to know the Isle of *Saba*.

Saba is a little Island, and round about it you shall see the bottome; but feare not, for there is no danger but that which you shall see; and round about it, it maketh as it were certaine heapes of white sand; and by the side thereof it sheweth like a Ship vnder saile: but follow that direction that I haue giuen, and you shall see La virgin gorda.

Markes to know the Isle called *La virgin gorda*.

A virgin gorda is an high Island and round, and seeing it, you shall espie all the rest of the Virgines which lye East and West one from another, and are bare without any trees. You may goe about by them vntill you see the little gray Island, which you shall see by it selfe by the Virgines; and comming neere to the sayd Island, ouer that you shall by and by rayse sight of the white little Island, which seemeth like a ship vnder saile. And if you will passe betweene this little white Island or bare rocke, and the greene Island, you must beware that you leaue the white Island on the laboured side of you, and come no neerer it then a Castiener-shot, and so shall you passe through 12. fadome-water: and then stirre away Northwest, and so shall you enter into the Hauen of Puerto rico: and if you chance to passe the sayd Island by night, goe by the foresaid direction, vntill the first watch be out, and then take in your sayles, and so bryue vntill it bee neere day: and then hoise sayles, and stirre away Southwest, seeking the sayde Port: and when you come to the entring within, you must stay till 10. of the clocke for the sea-turne. And know, that hauing the Loguilo at Southwest, then shall the Harbour be off you North and South.

These 2. the white and the gray Islands are rather bare rocks in the sea, for so doeth Farrallon the Spanish word signifie. But I interpte it Island, because all the rocks separated from the bigger Islands are sayd to be little Islands. This white & bare Island is made white by the dung of birdes and sea-fowles that rest vnto it.

Directions from *Monserate* to *Santa Cruz*.

He that departeth from Monserate to Santa Cruz, must stirre away Westnorthwest: and by the same course you shall seaze vpon S. Iuan de Puerto rico.

Markes to know the Isle of *Santa Cruz*.

Santa Cruz is an Island not very high, all full of homocks: and comming with it at full sea, it will shew like the Virgines: and vpon the East side there are two homocks higher then all the rest. And by this course you may goe to the Isle of S. Iuan de Puerto rico; and hauing found it, you may sayle along the South coast East and West, vntill you come to Cabo Roxo.

Markes to know *Cape Roxo*.

Cape Roxo is a low Cape and trayling to the sea-ward, hauing certaine heapes of broken ground thereon, which are like a homocke, and at full sea the same sheweth like a little Island from the land by it selfe, but comming neere vnto it, it will make all a whole land.

Directions from *Cabo roxo* to the Isle of *Mona*.

If you will seeke Mona from Cape roxo, you must stirre away West and by North.

Markes of the Isle of *Mona*.

The Isle of Mona is a low, round, and smooch Island, lying lowe by the sea, and full of trees: and to goe from thence to the Isle of Saona you must stirre away West; and if you fall with it in the night season, and come any thing neere the land, then stirre away West and by South, vntill it be neere day, that you may keepe your selfe by the land; and if so be that in the Morning you see it not, then stirre away Northwest, and so shall you finde it: and if it be faire weather, and you perceiue that the current hath set you to the Southwest, then stirre away Northwest, and so shall you goe cleare off the land.

Markes

Markes of the Isle of Saona.

If you chance to see the Isle of Saona, it is an Island smooth with the sea, and lyeth Northeast Land South west, and you shall see the trees before you see the Island: and on the South west end of this Island appeareth a great high banke of white sand which is called the head of Saona. And if you would come to an anchor, you may, for all is cleare ground. And to go from this Island to Santa Catelina, you must stirre away North west.

Markes of the Isle of Santa Catelina.

These rocks
are called Los
Buffaderos, or
the spouters.
The point of
Causedo,
San Domingo.

Sierras de las mi-
nas viejas.

Santa Catelina is a litle lowe Island all full of low rocks euen from the water, and hath not any trees, and it is close by the land; and if you doe not run along the coast of Hispaniola, you shall not see it: and from that Island to goe to Saint Domingo, you shall sayle along as the land lyeth West and by North: and before you come to the point called Causedo, you shall see certaine holes in rocks, which ly alongst as the rocks doe that cast up the water, which will shew like to the spouting of Whales. And a litle ahead off that, you shall see the point of Andresa: and ahead thereof the poynt of Causedo. This poynt of Causedo lyeth lowe close by the water, and passing thereby, the coast will make to thee North west and Southeast; and from thence to S. Domingo are 5 leagues. And if the winde chop by at North upon you, by meanes whereof you should be cast off from the coast or Port, and that you happen to see the olde Pines (called Sierras de las minas viejas) beare North west off you, and The reares which are within the land be open of you, then shal you be North and South with the harbour; and if The olde Pines beare North off you, then shall you be below the harbour.

Directions from Saint Domingo to Nueua Espanna.

The point of
Nisao.
The Isle of
Beata.
Ocoa,
Puerto hermoso.

The Isle of
Alto Velo.

If you will sayle from Saint Domingo in Hispaniola to Nueua Espanna, stirre away South South west, vntill you come by as farre as the point of Nisao: and from thence stirre away West South west, and so you shall finde the Isle of Beata. And if you saile from this point of Nisao for Ocoa, you must passe along the coast West and by North, vntill you come to Puerto Hermoso, or The beautifull haven, which is 18 leagues distant from Saint Domingo: and if you proceede from Puerto Hermoso for Nueua Espanna, you must stirre away South south west, vntill you looke out for Beata and Alto velo.

Markes of the Isle of Beata.

Los Frailes.

Bacoa.

Las sierras de
donna Maria.

Isla Baque.

Beata is a small Island and not very high: you may passe along the outside thereof, and there is no danger but that you may see; and by and by you shall raise Alto velo: and from thence you must stirre away West and by South, to giue a birth from the Islands called Los Frailes, or The Friers. And when you are as farre ahead as the Frailes, then must you stirre away West and by North, and so shall you goe right with Bacoa, and before you come to it, you shall see high craggie cliffes, and at the descending of them white paths like great sheetes; these high craggie mountaines are called Las sierras de donna Maria. And before you come to the sayde point of Bacoa, you shall discover a litle lowe Island euen with the Sea and full of trees, which is called Isla Baque.

Directions from Isla Baque to Cape Tiburon.

Cape Tiburon.
The Isle of
Nauaza.

If you will goe from the Island Baque, or from the point of Bacoa for Cape Tiburon, or to the Isle of Nauaza, you must stirre away West north west, and edge in somewhat to the North west, and you shall passe betweene Nauaza and Cape Tiburon.

Markes of Cape Tiburon, which is the Western cape of Hispaniola.

Cape Tiburon lyeth sliding downe to the Seaward, and maketh a sharpe cliffe like the snout of a Tiburon or sharke-fish; and vpon the top thereof it appeareth like white wayes with certaine gullets or draines vpon it, which are caused by the passage of the water from the mountaine in the Winter time.

Markes of the Isle of Nauaza.

Nauaza is a litle round Island full of low trees or shrubs, and it lyeth East and West from Cape Tiburon, and from this small Island to go for Sierras de Cobre, or The mountaine of mines of Copper vpon the Southeast part of Cuba, you must stirre away North north west.

Directions

Directions from Cape Tiburon to Cabo de Cruz in Cuba.

If you will saile from Cape Tiburon to Cape de Cruz in Cuba, you must stirre away North-west, and you shall see the Sierras or mountaines de Cobre; and from thence you may goe along the coast Westwardes Cabo de Cruz; and before you come at it, you shall see The great Tarquino, and from this Tarquino you shall haue to Cape de Cruz 30. leagues, and this great Tarquino is the highest land vpon all that coast; and then by and by you shall see the lesser Tarquino, from whence to the foresayd Cape you haue 12. leagues, and so shall you goe discovering the coast, vntill you come to Cabo de Cruz.

Markes of Cabo de Cruz.

Cape de Cruz is a low Cape full of shrubs; and from thence Westward you shall see no land; for the distance or bay is great between the sayd Cape and the Isles called Los Iardines.

Directions from Cape de Cruz to Isla de Pinos.

If you saile from Cape de Cruz to seeke the Island of Pinos, you must stir away Westnorth-west. And note, that if in this course you happen to sounde, doe not feare; for you haue nine fathoms. If also going this course, you meete with certaine little Islands vpon the larboord side, which are called The Caimanes, or The crocodiles, hauing sight of them, stir away North-west, and so shall you finde the Island of Pinos. And if by seeing the sayde Islands called Caimanes you are amazed, you shall knowe by the latitude, whether they bee The Iardines or no: for if you finde your selfe in one and twentie degrees, then bee you sure they are The Iardines, and then stir out againe South, till you bee cleare of them; and when you haue brought them North of you, then may you stirre away West, if it bee by day; if it bee by night, West and by South, till you see the Island of Pinos.

The markes of Isla de Pinos.

The Island of Pinos stretcheth it selfe East and West, and it is full of homocks, and if you chance to see it at full sea, it will shewe like 3. Islands, as though there were diuers soundes betweene them, and that in the midst is the greatest; and in rowing with them, it will make all a firme lande: and vpon the East side of these three homocks it will shewe all ragged; and on the West side of them will appeare vnto you a lowe point euen with the sea, and oftentimes you shall see the trees before you shall discerne the point.

Directions from the Isle of Pinos to Cape de Corrientes.

If you saile from the foresayde Isle of Pinos to Cape de Corrientes, stir away West and by North; and before you come to the sayd Cape vpon the Northside of you, you shall see certaine mountaines all full of homocks, which are called Las Sierras de Guanaguarico, and that vpon the West part hath more homocks then that on the other.

Markes of Cape de Corrientes.

Cape de Corrientes is a lowe Cape, though not so low as the other part of the land that lyeth along by it: for it is more lowe, and hath vpon it 4. or 5. great splats like vnto open, and the very point of the Cape is all white sand: and from thence Westward you shall discerne no lande, for it maketh a great bay: and from hence you must saile to Cape de Sant Anton.

Markes of Cape de Sant Anton.

The cape of Sant Anton is lowe by the sea, and all full of shrubs or trees; and you shall see with in the land a lake of fresh water; and if you want water, there you may water: and vpon the North side of the said Cape you shall discerne a palme tree higher then the rest of the trees, and it sheweth round like a bowle at the top, like to the top of a ship: and North from the Cape are certaine holdes which are 2. or 3. leagues long.

Directions from the Cape de S. Anton to Nueva Espanna on the outside of the small Islands called Los Alacranes or The Scorpions.

If you will saile from Cape Sant Anton to Nueva Espanna with a Northwinde, then stirre away Westnorthwest from 21. to 22. degrees, and then sound vpon the prael or flat; and if you see by this direction, that you holde water, then stir away Northwest, vntill you lose the ground;

F ff.

and

The Isle Vermeja.
Villa rica.

S. Iuan de Villua.
The volcan or
burning hill.

and then follow your course againe, untill you haue brought your selfe into 24. degrees and $\frac{1}{2}$. and then saile West untill you bring your selfe North and South with the Isle Vermeja, or The red Isle: then stir away Southwest, and by this way you shall finde Villa rica on the coast of Nueva Espanna. And if by going this course you be in 19. degrees and $\frac{1}{2}$. and chance not to see the lande, then stir away West untill you see Villa rica, and from thence saile you South for the harbour of S. Iuan de Villua: and if you should be neere the land you must stir South and by West towards the same harbour. And if you chance to see the Volcan or burning hill to beare west & by South from you, then know, that the harbour of S. Iuan de Villua shall be East and west off you.

Markes of Villa rica.

Villa rica standeth in 19. degrees and $\frac{1}{2}$. and the signes thereof are certaine high hills full of homocks of many heads, which haue on the top of the certain white patches after the maner of white beaten wapes; and these hills lie Northeast and Southwest. And if you doubt whether these be the Sierras or hills of S. Martin, wet your lead or sound, and if you finde bottome, they are the Sierras of Villa rica: and saile you to the landward, and looke by how much you come neerer the land, so much will they seeme lower unto you: but so doe not the hills of S. Martin; for the neerer you come to them, the higher will they appeare to you: and likewise if they be the hills of S. Martin, you shall not finde bottome, but euen at land it selfe.

Sierras de Sant
Martin.
Sierras de Villa
rica.

Markes of Rio de las palmas, and of the riuier of mountaines called Rio de las montannas.

Rio de las palmas.
Rio de las montannas.
Rio de Panuco.
Rio Hermoso, or
The beautifull
riuier.
The current
of the bay of
Mexico (the
winde being
at the East)
setteeth to the
North, and 40.
leagues from
the shore to the
North-east.

If you should chance to fall with Rio de las palmas, or The riuier of palmes, or els with the riuier of Mountaines, it is all a plaine lande, and full of trees and certaine woodie homocks, and among them certaine heapes of sand, and all this along by the sea side: and if you went by land to the riuier of Panuco, you shall haue many mouthes or openings of plaies or strands, where also are many lizas or oazy places, which stretch to Rio Hermoso.

You must beware what part soeuer you happen of this coast to fall withall, to discover it, and although you knowe it, you must sound the depth; because if the windes bee Easterly, the current setteeth there much to the North: but if you should be 40. leagues at sea, then this current setteeth to the Northeast.

Markes of Rio Hermoso or The beautifull riuier.

If you wil seeke the riuier talled Rio Hermoso, looking well within the land, you shall see three homocks of an high hill, and those two which are to the landward within, are rounder than the other which is neerest the sea, for that it is longer and bigger, and lyeth North and South, and you shall be 4. leagues at sea when you shall see them: and they are called The sierras, or mountaines of Tamaclica; and from thence to the riuier of Panuco there is no high land, but all lowe and euen with the sea, and full of palme trees and other trees.

The mountaines of
Tamaclica.

Markes of the riuier of Panuco.

If you fall with the riuier of Panuco (betweene which and the foresayde Villa rica standeth the Island called Isla de Lobos or The Isle of seales) the markes bee these. From the mouth of the riuier it maketh a great bay without, and at the ende of this bay upon the Northside there is oazy, low, and bare ground altogether without trees, and at the out ende of the oazy lowe place upon the West side it maketh a low homock like to a Lizards head: and when you see the foresayde cliffe, you shall bee in the opening of the mouth of the sayd riuier, and then shall you see a little low tower hauing on the top of it a crosse, which the fishermen call Marien: and this barre bath on it 2. fathom water, and 2. and $\frac{1}{2}$. and you neede not to stay for the tyde, for that it floweth not there: and that you may the better knowe whether you bee in this bay which I haue mentioned, or not, you shall see certaine hills at West Southwest, which are called Las sierras de Tarquia; and forthwith also you shall see the oazy place that I speake of, which goeth to the mouth of the riuier, where standeth a towne called S. Luis de Tampice, and from thence to Panuco you haue 9. leagues by land.

No tide at the
riuier of Panuco
Las sierras de
Tarquia.
S. Luis de Tam-
pice.

The markes of Isla de lobos, or The Isle of seales.

Isla de lobos is a small Island nothing so big as the carde doth shew it, and in it is a litle groue or wood of palme trees, and all the rest of the Island is without trees, and round about it are sundry playas

Playas or strandes, and it is inclosed round about with arracifes or shoals, and chiefly toward the maine lande. And from thence to Cape Roxo or The red Cape are 3. leagues. And if you will come to anker at this Island to water, for that there is water in it, you may ride on all the South side close by the point that stretcheth to the Westward, and you may passe by the East side of it, and ride in 22. fathom, and untill you come to 15. fathoms, all is cleane ground.

Cabo Roxo.
A watering
place.

Markes of the riuier of *Tuspa*.

If you fall with the riuier of *Tuspa*, you must beware the sholles which run 5. or 6. leagues into the sea: and vpon this riuier of *Tuspa* within the lande there are high hilles which lie Northeast and Southwest, and haue their ending vpon the bay of *Cassones*: and vpon the riuier you shall perceiue a white cliffe, which will shew vnto you like the castle of *S. Iuan de Villua*.

The bay of
Cassones.

Markes of the riuier of *S. Peter* and *S. Paul*.

If you chance to fall with the bay of *Cassones*, and vpon the riuier of *S. Peter* and *S. Paul*, take heede: for the sayd bay is a deepe bay, and the hilles of *Tuspa* haue their ending vpon this bay. And in the mouth of this riuier of *S. Peter* and *S. Paul* are two homockes of white sand, the West-ermost being bigger then that on the Northeast. And by and by you shall perceiue the water to change white which commeth out of the riuier, and sounding you shall finde sande mixed with clay vpon your lead; and looke vpon the West side, and you shall see the *Sieras* or mountaines of *S. Paul*, which are two, and that on the North side is higher then the other.

All these are
vpon the coast
of *Tabasco*.
Las Sierras de
S. Pablo.

Markes of *Almeria*.

If you should chance to fall or come vpon the plaines of *Almeria*, it is a lande full of many homocks, some with tuftes of trees on them, and some bare with white sand, and in 60. fathoms you shall haue clay or oaze, and in 30. fathom to the landward sand. And from thence to *Punta de hidalgo* or *Punta delgada* the coast lyeth Northeast and Southwest.

Punta delgada,
or The slender
point.

Soundings of *Villa rica*.

If you fall with *Villa rica* in 30. fathoms, you shall finde clay or oaze, and in some places stones, and neere the lande you shall haue sand; and vpon the port of *S. Iuan de Villua* you shall haue in some places clay or oaze, and in some places herring bones, and in other places mase and; and vpon the rocks called *Cabeças anegadas* you shall haue small blacke sande at 17. fathom two leagues from land. And if you see a coast that lieth Northeast and Southwest, and another Northeast and Southeast, you shall be vpon *S. Paul*: and if you should be vpon *Cabeças anegadas*, you shall finde in 30. fathoms great sand & blacke, and in 28. fathoms you shall haue the sand white like the shauings of free stone: and from *S. Paul* to the barre of *Vera Cruz* it is clay or oaze, and from thence to *S. Iuan de Villua* you haue many deeps, which at one sounding bring you clay, and at another sand, and at another clay and mase together, and herring bones: and in some 35. or 40. fathom you shall finde rockie ground, and in some places sand, and in some other places herring bones: and we call this *Comedera de pescado*, or The foode of fishes.

Cabeças anegadas are sunken
heads of rocks
vnder water.

Comedera de
Pescado.

The course from *Cabo de Corrientes* and *Cabo de S. Anton* vpon the West end of *Cuba*, towards *Nueva Espanna*, within the Isles called *Los Alacranes*, or *The Scorpions*.

If you saile from *Cape de Corrientes* towarde *Nueva Espanna* on the inside of The *Alacranes*, you must stir West: and when you thinke you haue sailed 35. or 40. leag. you shall sound vpon the prael, and you shall come vpon many bristlings of waters, which, if it were faire weather, would seeme a skull of fish. And before you come out of the bristlings, if you sound you shall haue depth as I haue sayd. If you goe from *Cape de S. Anton* by the inside of The *Alacranes*, you must stir away West and by South, and you shall finde sounding in the same order as I haue sayd: you shall haue white sand, and neere the land you shall finde it like the shauings and peckings of free stone, and white sand like houre-glasse-sand, and sometimes periwinkles or small shelles. Also if you sound in deepe water, and on the sudden finde rocks, then knowe that you are vpon The *Alacranes*, and then stir away Westsouthwest untill you finde cleane ground, and til you bring your selfe into 18. or 20. fathoms. And if you goe deeping your water, then stir away West, and by these depchs you shall go sounding; and then taking your heigth by sunne or starre, you must beware that you passe not 21. degrees $\frac{1}{2}$, or 21. degrees

Cabo de Cor-
rientes.

Cabo de S. An-
ton.

nas.

and 1. at the most; and in this heighth, and at 18. or 20. fathoms you shall follow your way: and if you deepen water, edge to the Northward, and if you alter more your depth, edge to the Southwestward, untill you haue gotten so farre ahead as Cape Sisal, and discovered the coast of Campeche, which coast lyeth North and South, and you shall take by on your lead white sande like houre glasse sand, and sometime periwinkles or small shelles; and by and by you shall goe increasing depth, untill you lose it, and so shall you passe between the Triangle and the Sandy Island.

The course betweene the Triangle and the Sandy Island to S. Iuan de Vllua.

Sierras de S. Mar-
tin.

Roca partida.

Dj Misapa.

When you haue lost your depth, stirre away Southwest to fetch the Sierras or hills of S. Martin: and to knowe the hills of S. Martin, there are 2. hills stretching Northeast and Southwest, and the Southwest is greater then that on the Northeast, but the Northeastmost hill is higher, and maketh on the top a flat point and very high, and without it, it hath an Island which is called Roca partida, or The clouen rock: and if it be cleare, on the Southwest side an high lande like a top-saile will appeare, and then shall you see North and South with The Pan or Loafe of Misapa. Note, that these Sierras or Hillies of Sant Martin are all blacke and full of trees, and make no shewe as Villa rica doth: And marke this, that by how much you come neerer them, so much the higher will they shewe vnto you: neither shall you finde any bottome till you be at the very shoare.

The course from Roca partida or The clouen rocke to S. Iuan de Vllua.

Dj Antoniferra.

If you depart from Roca partida or The clouen rocke for Sant Iuan de Vllua, you must stir away Westnorthwest, and so shall you fetch or fall with the point of Anton Mislarido: and if you happen to sound vpon The sunken rocks called Cabeças anegadas, you shall haue black sand and 17. fathom water, and you shall be but a league from the land, and if you be 2. leagues from the land, you shall haue 34. fathoms.

The course from Sant Iuan de Vllua in the bay of Mexico to Spaine in Europe.

Las Tortugas.

If you depart from S. Iuan de Vllua to Hauana, you must stir away Northeast untill you bring your selfe in 25. degrees, and from thence you must stir away East from the little Islands called Las Tortugas, untill you haue the sounding of them; and if you finde white sande very small, you shall be East and West with them, and if your sounding be shellie ground and periwinkles, or small shelles or scales, then shall you be Northeast and Southwest, and the shelles or scales must be red, and if at some time you take by blacke sande, then are you North and South with the sayd Tortugas.

Markes of The Tortugas.

If you chance to fall with The Tortugas, they are 5. or 6. little Islands of white sand, lowe and close by the sea, sauing one which hath on it some shrubs or bushes of trees: and they are in 25. degrees.

The course from The Tortugas toward Hauana.

The hills cal-
led Los Orga-
nos byon Cuba
neere Hauana.
Rio de puercos.
Baya honda.

La quadrilla de
sierras.
El pan de Ca-
uannas.
La mesa de Ma-
rien.

If you depart from The Tortugas towards Hauana with a fresh winde, you must stir away Southwest: and if it be faire weather, and a small gale of winde, then stir South. that the current may not draw you in, nor set you too much to the Westward: and if you fall with Los Organos, they are a ranke of high and low hills with many sharpe heads like vnto Organ pipes, and at the entring thereof on the South side is Rio de puercos, or The riuer of hogs; and at the further ende is the deepe bay called Baya honda, and there is the round loafe or heape called El pan de bayu honda, that is to say, The loafe of the deepe bay: and from this place untill you come to Cape de S. Anton all is sholles and flats 4. or 5. leagues into the sea, euen as farre as the sayde Cape: and from Baya honda or The deepe bay to Hauana, all the coast is full of high and lowe hills, which they call La Quadrilla de sierras, which is as much to say, as A companie of hillies together like souldiers on a heape; and more to the Eastward you shall descry an high hill which is called El pan de Cabannas. And if you fall with Hauana, you shall see on the Southwest side an hill called La meza de Marien, or The Table of Marien; and if it be cleare, you shall see lower to the Westward the heape or loafe that is called El pan de Cabannas. You must note, that a-
bout

about Hauana it is all lowe land euen with the sea, till you come to Mela de Marien, and then looke well within the lande, and you shall see 2. little round trees like to the teates of womens breasts; and bringing your selfe North and South, you shall be with the harborough of Hauana, and then shall you soone perceiue the towre that is vpon the cliffes of Hauana.

The towre of Hauana.

Markes of the hauen or port called *Puerto de Marien*.

Puerto de Marien is a harbour that you may enter into without any danger or feare, but at the entrance thereof you must borrow on the West side, by reason of the rockes and shelues, and when you are within, then borrow on the East shoare, and leaue the other side, and so shall you enter safe: and from this place to Hauana is all lowe lande. Note, that if you ouerpasse the harborough of Hauana to the Eastward, or if the current hath set you past it by meanes of calmes, then shall you perceiue at full sea vpon the coast certaine broken places like the enterances of harboures, because the lande is lowe; and comming neere the shoare you shall see in some places of the coast Playas or strandes of lande which shew like vnto Chipiona: and looking Eastward along the sea coast, you shall see a round loafe which is called El pon de Matancas: and also you shall perceiue in certaine places round white heapes of lande called Barrancas. If you will recouer Hauana, go along the coast close by the lande, for the current runneth very swift in the chanell, and there is no feare but of that which you may see; for all the coast is cleane ground.

Note.

Chipiona a towne standing vpon the coast of Andalusia next vnto S. Lucar. El pan de Matancas. Barrancas also signifie creekes or broken enterances of landes. Cabeza de los Martires. Which Martires are a number of small Islands lying ahead the Cape of Florida. Los Mimbres. The marke of Pan de Matancas. Punta de los Puercos. The furious current in the chanell of Bahama.

The course from *Hauana* to *Spaine*.

If you will saile from Hauana to Spaine, you must stirre away Northeast, till you come to the head of The Martires called La Cabeça de los Martires. If it chance before you come to the said head, that the winde should chop vp at North on you, then stand to the Eastward, vntill you bring your selfe as farre ahead as Matancas; then cast about to the West, to discouer the lande of The Martires, or of Florida, that the current may not set you on The Mimbres: and if by chance you see The Pan de Matancas at full sea, it hath these markes following. It is a round heape or loafe, and high withall, and on the Westerne side thereof, appeareth a rocke like to the head of a Tortoise: and betweene this Pan and the hilles of Seluco, there will appeare vnto you a great broken lande, like as it were sunken places, and vpon the East side of this Pan toward Punta de los Puercos it is all lowe lande, and you shall see no high lande at all: and being so farre shot, that this Pan de Matancas shall beare Westnorthwest and Southsoutheast off you, and being desirous also to auoyde the furie of the current of the chanell of Bahama, stir away Northnortheast, and by this course you shall passe the chanell, and win the coast of Florida.

Markes of the head of *The Martires* called *Cabeza de los Martires*.

The head of The Martires are three heapes of white sande full of trees, and that in the midst hath on the top a crowne, as it were of white sande, and is higher and bigger then the other two: and to know whether you be entered into the chanell, marke well how the coast lyeth off you; and if you perceiue that the coast beareth off you East and West, you are not in the chanell; but if the coast should beare off you Northeast and Southwest, then are you in the chanell; and taking your heigth you shall know: for if you finde your selfe in 24. degrees and $\frac{1}{2}$, then are you East and West with the head of The Martires: and if you see the coast beare off you Northeast and Southwest, (as I haue sayde) stir away 4. or 5. leagues from the landward right off; and then stir away Northeast: and being in 28. degrees and a halfe, you shall be shot out of the chanell, and then shall you be East and West with Cape de Cannaueral, or The Cape of Reedes.

Directions to know whether you be in the chanell of Bahama or no.

Cabo de Cannaueral in 28. deg. and a halfe.

The course to come through the chanell of *Bahama* homeward for *Spaine*.

If in Winter you should passe through the chanell of Bahama for Spaine, stirre away the first Sangradura or course Eastnortheast, and afterward East and by North, and so shall you passe by the South side of Bermuda: and you must take heede that you goe these foure hundred or five hundred leagues, because you shall not come neere the said Isle of Bermuda; & when you are gone this course, then put your selfe in what heigth you will, and make your way as you will your selfe. But if you passe the chanell in the Summer time towards Spaine, stir away Eastnortheast, and you shall passe by the North side of Bermuda; and when you haue brought your selfe in 35. degrees, stirre East and by North, vntill you bring your selfe to 25. degrees and $\frac{1}{2}$, and from thence stir away East for the Isle of Faya or Flores.

The course in Winter.

The Isle of Bermuda.

The course in the Summer more Northerly.

Markes to know the Isle of Fayal.

The Island called Fayal vpon the Southwest side, maketh an high hill or loafe like to the top of Brasilia in the Island of Terçera; and behinde that high Pike or loafe is an harbour called Puerto Pini, and vpon the East side it maketh a little plaine Island; and vpon the North side there standeth a rocke or Island by it selfe. And from this Island being one of The Açores, you may shape your course to which of the Islands you please, or to any other place which you know.

Markes to know the Isle of Flores.

If you happen to fall with Flores first, by this you shall know it: the Island lyeth Northeast and Southsouthwest, and the West end thereof maketh a rocke or cliffe like the cliffe of Tiburon; and comming neere the lande, you shall see two little Islands neere the point of the lande; and to the Northward of this cliffe or rocke a little from the land you may ride and water; and betwene that and the village, in euery bay you may likewise ride and water: and you shall see the water run into the sea in euery part that you looke on.

Now followeth the course and direction to saile from Passage on the Northeast part of S. Iuan de Puerto rico, vnto Hauana, by the North side of the Isle of Hispaniola, and by The old chanell.

El Passage a place on the Northeast part of the Isle of S. Iuan de Puerto rico. Cabo del Enganno the most Easterly Cape of Hispaniola, w^{ch} Samana.

Las Ouejas,

If you depart from S. Iuan de Puerto rico to seeke Cabo del Enganno, you must stirre away Westnorthwest, and so shall you see a round heape or loafe in the sea, which lieth on the Southwest side of the gulf of Semana; and from thence it be- ginneth about the hill of the Cape del Enganno, & this is the mouth of the gulf. And if it should be neere night when you see this lande, stir away Northwest with a small sayle, because of certaine rockes called Las Ouejas, or The Sheepe: and in the morning cast about to see the land to the Southwestward; and if when you see the land, it seemeth vnto you a small island at full sea like a round mountaine, then is it The cape del Enganno: and from thence stir away West and by North toward Cabo Franco.

Cabo Franco.

Markes of Cabo Franco.

El Puerto de Plata.

Baracoa. Isla de Tortugas neerlye called Hinagua. The Isle of Iauco.

Las Sierras de Cabanca, Cayo Romano. This word Cayo in the West Indian tongue signifieth a flat or a shold. Cabo de Cruz.

This Island lyeth 100. leagues from Hauana.

Cabo Franco is a low Cape euen with the sea, and hath these markes * And from thence stir away West, and you shall see an high mountaine, and on the top thereof a clondie homock like the top of a hat; and at the soote of this hill is the haven or harbour called El puerto de plata. And if you will goe into this port, you must leaue the Island on the West side, and then take heede of that which you see, and borrow on the castles side. And from thence to goe with the olde chanell, you must stirre away Northwest, untill you come out of sight of lande, and then stir away West and by North, and so shall you goe with the lande of Baracoa, and here are hilles very high, which make the seats which looke like 3. crowes. And you shall passe betwene the Isle of Tortugas or Hinagua, and the Island of Iauco; and from thence run alongst the coast Northeast and Southwest; and hauing doubled the outmost high hill or mountaine, you shall see in the midst thereof a round hill, and vpon the Southwest side by the sea you shall see a lowe euen lande foure or fve leagues long, and a lowe point, and this point of the hill is called Las Sierras de Cabanca; and then becommeth the bay of Cayo Romano: and ahead the Sierras you shall see a rounde loafe which is in the midst of the same bay, and ahead of that you shall see a hill flat on the top like a table five or seuen leagues, which hill is not very high, and from these hilles to Cayo Romano you haue fve and thirtie leagues, and you must stirre the one halfe of the course Northwest, and the other halfe Northwest and by West, and so shall you make or see the sayd Cayo Romano vpon the larboard side of you. Note, that from Cayo Romano to Cabo de Cruz you haue thre leagues, and they lie North and South one from another.

Markes of Cayo Romano.

Cayo Romano is an high Island, and lyeth Northeast and Southwest, and stretcheth it selfe as it were 4. leagues; and comming on it Northeast & Southwest, it maketh a loafe or round heape or homock; in the midst there are two saddles, as wee terme them, or lowe partitions, the one on the one side, and the other on the other side; and comming with it North and South, it maketh all one lowe send or saddle in the midst. And if night should come on you at this Cayo Romano

niano, enter not the chanell, because in the mid way is an Isle, flat, or Cayo, which lyeth North and South with Cayo Romano; and it is called Cayo de la Cruz: and at full sea you shall discern a heath, which this Cayo hath in the midst of it, which is like to a saile; but at night beare but your foresaile a glasse one way and another glasse the other way untill it be day, and then enter the chanell, and leaue these Cayos, on the labourd side of you. Note, that if you bee within sight of the Parcel, and see two litle Islands of white sand, that then you are on the cantell of the Parcel; and if you goe more a head coasting the Parcel, about fiftene leagues, you shall see three Islands full of trees, which are called Las Anguillas and all these three Islands beare North and South one from another. Item from Cayo de Cruz to Hauana, if it be by day, stir away West North-west; but if it be by night, then stir a point more to the Westward: and if in this course you chance to see the Parcel, feare not; for in the lowest water there are sixe fathomes; then cast about to the Southwestward to get out about two glasses, and then stir away Westnorthwest untill it be day and so shall you goe by the Cayos: and in this course you must keepe twentie foure leagues or thereabout. And from this Cayo de Cruz sixe or seuen leagues lyeth another Cayo vpon the Northeast and by North, which is great and white, and all euen; But the point on the Southwest is smaller, and vpon the said point is a shrub or bush which sheweth like a saile: also there is a banke of white sand along by the sea-side, which in the midst thereof maketh a cliff full of trees that seemeth like a sadle: and vpon the Northeast side (for on this manner the coast lyeth along from the Cape) going by the chanell you shall see certaine hilles eightene or twentie leagues long lying Northeast and Southwest being all saddle-like; and bringing the point Southwest off you, you shall be in the midst of the chanell: and from thence you haue as farre to Matancas as to Cayo Romano. Likewise from thence on the side of Hauana you shall see certaine hilles which shewe to be three, and by Northeast and Southwest, and that on the Southwest is highest: they are called Las Sierras de Guana: and North and South from them lyeth a flat, which is called Cayo de Nicola, which stretched out two leagues into the Sea, and in the middle of the sayde flatte there is a litle Island of white sand: and from thence you must sayle to Cruz del Padre.

The great Parcel.

Las Anguillas.

Another Cayo 6 or 7 leagues from Cayo de Cruz.

El Puerto de Matanzas or The haven of slaughters. f Las Sierras de Guana.

Cruz del Padre.

Markes of Cruz del Padre.

Cruz del Padre is a Cape all broken in pieces: and from thence you must stir away North-east, because of the Bay that is there, called the Bay of Conel, and this Bay stretcheth to the Bay of Caos, which is within 20 leagues of the sayd point: and then stir away West North-west to goe with the Port of Matancas, and with the hilles of Camoniaca.

La Baiade Conel, La Baiade Caos, or Cayos.

Markes of the hilles of Camoniaca.

The hilles of Camoniaca ly North-west and Southeast, and the Southeast side is lowe land and euen: also vpon the Northeast side it is euen land, and runneth towards the Bay of Matancas, and in the middle of these hilles there is one high hill, and vpon the Northeast side there appeareth a round heape: and if you see this hill at West Southwest, the Pan or round heape of Matancas will beare off you West and by South.

Or Camoloquen.

Markes of the round hill called El pan de Matancas.

This Pan is a round heape standing on a lowe land: and if you bring your selfe North and South with it, it will make you two saddles; and on the West side it maketh a great parted lande as it were sinking with the sea. Note that wheresoeuer you shall goe to seeke the Tortugas, and shall come with the coast and finde it beare off you Northeast and Southwest, I aduise you to goe along the coast to the Southwestward: you may not deepen more then fortie sixe fathomes, for if you doe, you shall cast your selfe without the Tortugas.

Also you must note, that if by chance you finde your selfe shotte betweene the Tortugas, and the Martyres, and that you cannot goe on the out-side of the sayde Tortugas, then cause one to goe to the top, to see if you can descry them; and if you cannot see them, stir away Southwest untill you see them; and hauing gotten sight of them, founde, and you shall finde eightene or nineteene fathomes; and so sholding stir away South and by West, and goe by this course. And feare you not the sholding, for you shall meete with 12 fathoms, and shall haue blacke sand in your sounding. And going neerer to the ende of the said Tortugas (for hee that is on the toppe shall see them all) as you passe by, you shall finde but eight fathomes, and stony ground, and that

Note.

that is the sholdest water you shall haue. And you shall passe by a bustring of a tyde, that shoules out of the chanel that way: but you neede not feare any thing for you shall haue no lesse then eight fathome water: and being past the said bustring but a minion shot, you shal loose the ground and be in the chanell.

An aduertizment.

When you shall passe this course, goe not out of sight of the Tortugas. And if you will goe from thence to Hauana, hauing a faire winde, stir away Southwest because the current may not set you off: and if with a fresh winde and North erly, then stir away Southerly.

THE DISCOVERIE OF THE LARGE, RICH,
and Beautifull Empire of *Guiana*, with a relation of the great and
golden Citie of *Manoa* (which the Spaniards call *El Dorado*) and the Prouinces
of *Emeria*, *Aromaia*, *Aniapaia*, and other Countries, with their rivers adioyning.

Performed in the yeere 1595 by Sir Walter Raleigh Knight, Captaine

of her Maiesties Guard, Lorde Warden of the Stanneries,

and her Highnesse Lieutenant generall of the

Countie of *Corne-wall*.

To the right Honourable my singular good Lord and kinsman

Charles Howard, Knight of the Garter, Baron and Counciller, and of the
Admirals of *England* the most renowned: and to the right Honourable Sir *Robert Cecyl* knight, Counciller in her Highnesse Priuie Councils.

I Or your Honours many Honourable and friendly partes, I haue hitherto onely returned promises, and now for answere of both your aduentures, I haue sent you a bundle of papers, which I haue deuided betwene your Lordship, and Sir *Robert Cecyl* in these two respects chiefly: First for that it is reason, that wastful factors, when they haue consumed such stockes as they had in trust, doe yeeld some colour for the same in their account; secondly for that I am assured, that whatsoever shall bee done, or written by me, shall neede a double protection and defence. The triall that I had of both your loues, when I was left of all, but of malice and reuenge, makes me still presume, that you wil be pleased (knowing what litle power I had to performe ought, and the great aduantage of forewarned enemies) to answer that out of knowledge, which others shal but obiect out of malice. In my more happy times as I did especially Hon. you both, so I found that your loues sought mee out in the darke shadow of aduersitie, and the same affection which accompanied my better fortune, soled not away from me in my many miseries: al which though I can not requite, yet I shal euer acknowledge: & the great debt which I haue no power to pay, I can do no more for a time but confesse to be due. It is true that as my errors were great, so they haue yeelded very grieuous effects, & if ought might haue bene deserued in former times to haue counterpoysed any part of offences, the fruit thereof (as it seemeth) was long before fallen from the tree, & the dead stocke onely remained. I did therefore euen in the winter of my life, vndertake these trauels, fitter for bodies lesse blasted with mis-fortunes, for men of greater abilitie, and for mindes of better encouragement, that thereby, if it were possible, I might recouer but the moderation of excesse, & the least tast of the greatest plenty formerly possessed. If I had knowen other way to win, if I had imagined how greater aduentures might haue regained, if I could conceiue what farther meanes I might yet vie, but euen to appease so powreful displeasure, I would not doubt but for one yeere more to hold fast my soule in my teeth, till it were performed. Of that litle remaine I had, I haue wasted in effect all herein. I haue vndergone many constructions.

I haue bene accompanied with many sorrowes, with labour, hunger, heat, sickness, & perill: it appeareth notwithstanding that I made no other brauado of going to the sea, then was ment, and that I was neuer hidden in *Cornewall*, or els where, as was supposed. They haue grossly belied me, that foreiudged, that I would rather become a seruant to the Spanish king, then returne, and the rest were much mistaken, who would haue perswaded, that I was too easfull and sensuall to vndertake a iourney of so great trauell. But, if what I haue done, receiue the the gracious construction of a painefull pilgrimage, and purchase the least remission, I shall thinke all too litle, & that there were wanting to the rest many miseries. But if both the times past, the present, and what may be in the future, doe all by one graine of gall continue in eternall distast; I doe not then know whether I should bewaile my selfe, either for my too much trauell and expence, or condemne my selfe for doing lesse then that, which can deserue nothing. From my selfe I haue deserued no thanks, for I am returned a begger, and withered, but that I might haue betred my poore estate, it shall appeare by the following discourse, if I had not onely respected her Maiesties future Honour, and riches. It became not the former fortune in which I once liued, to goe iourneys of picory, it had sorted ill with the offices of Honour, which by her Maiesties grace I hold this day in *England*, to run from Cape to Cape, and from place to place, for the pillage of ordinaries prizes. Many yeeres since, I had knowledge by relation, of that mighty, rich and beautifull Empier of *Gniana*, and of that great and golden Citie, which the Spaniards call *El Dorado*, and the naturals *Manoa*, which Citie was conquered, reedified, and enlarged by a yonger sonne of *Guamatapa* Emperour of *Pern*, at such time as *Francisco Pizarro* and others conquered the said Empire, from his two elder brethren, *Gnascar*, and *Atabalipa*, both then contending for the same, the one being fauoured by the *Orejonas* of *Cuzco*, the other by the people of *Caxamalca*. I sent my seruant *Iacob Whiddon* the yere before, to get knowledge of the passages, and I had somelight from Captaine *Parker*, sometime my seruant, and now attending on your Lordship, that such a place there was to the Southward of the great Bay of *Charuas*, or *Guanipa*: but I found that it was 600 miles farther off then they supposed, and many other impediments to them vnknown and vheard. After I had displanted *Don Antonio de Berreo*, who was vpon the same enterprize, leauing my ships at *Trinidad*, at the Port called *Curiapan*, I wandred 400 miles into the said countrey by lande and riuer: the particulars I will leaue to the following discourse. The countrey hath more quantity of gold by manifolde, then the best partes of the *Indies*, or *Pern*: All the most of the kings of the borders are already become her Maiesties vassals: and seeme to desire nothing more then her Maiesties protection and the returne of the English nation. It hath another ground and assurance of riches and glory, then the voyages of the *West Indies*, an easier way to inuade the best parts thereof, then by the common course. The king of *Spainne* is not so impouerished, by taking three or foure Port townes in *America*, as wee suppose, neither are the riches of *Pern*, or *Nueva Espanna* so left by the sea side, as it can bee easily washt away with a great flood, or springtide, or left dry vpon the sandes on a lowe ebbe. The Port townes are fewe and poore in respect of the rest within the lande, and are of litle defence, and are onely rich, when the Fleets are to receiue the treasure for *Spainne*: and we might thinke the Spaniards very simple, hauing so many horses and slaues, if they could not vpon two dayes warning cary all the golde they haue into the land, and farre enough from the reach of our foote-men, especially the *Indies* being (as they are for the most part) so mountanous, so full of woodes, riuers, and marishes. In the Port townes of the Prouince of *Veneçuela*, as *Cumana*, *Coro* and *S. Iago* (whereof *Coro* and *S. Iago* were taken by Captaine *Preston*, and *Cumana* and *S. Ioseph* by vs) we found not the value of one riall of plate in either: but the Cities of *Barquasimeta*, *Valencia*, *S. Sebastian*, *Cororo*, *S. Lucia*, *Laguna*, *Maracaiba*, and *Truxillo*, are not so easely inuaded: neither doeth the burning of those on the coast impouerish the king of *Spainne* any one ducat: and if we sacke the riuer of *Hacha*, *S. Marta*, and *Cartagena*, which are the Portes of *Nuevo reyno*, and *Popayan*; there are besides within the land, which are indeed riche and populous, the townes and Cities of *Merida*, *Lagrita*, *S. Christophoro*, the great Cities of *Pamplon*, *S. Fe de Bogota*, *Tunxa* and *Mozo* where the *Esmeraldas* are found, the townes and Cities of *Marequita*, *Velez*, *la Villa de Lena*, *Palma*, *Unda*, *Augustura*, the great citie of *Timana*, *Tocaima*, *S. Aguila*, *Pasto*, *Iuago*, the great Citie of *Popaian* it selfe, *Los Remedios*, and the rest. If we take the Ports and villages within the Bay of *Vraba* in the kingdom or riuers of *Dariene*, and *Caribana*, the Cities and townes of *S. Iuan de Roydas*, of *Cassaris*, of *Antiocha*, *Caramanta*, *Cali*, and *Anserma* haue gold enough to pay the kings part, and are not easly inuaded by the way of the Ocean: or if *Nombre de Dios* and *Panama* be taken in the Prouince of *Castilla del oro*, and the

the villages vpon the riuers of *Cenn & Chagre*; *Pern* hath besides those & besides the magnificent cities of *Quito & Lima* so many ylands, ports, cities, and mines, as if I should name them with the rest, it would seem incredible to the reader: of all which, because I haue written a particular treatise of the *West Indies*, I wil omit the repetition at this time, seeing that in the said treatise I haue anatomized the rest of the sea-townes aswel of *Nicaragua, Incatan, Nuova Espanna*, & the ylands, as those of the *Inland*, & by what meanes they may be best inuaded, as far as any meane iudgement can cōprehend. But I hope it shal appeare that there is a way found to answer euery mans longing, a better *Indies* for her Maiestie then the King of *Spaine* hath any: which if it shal please her highnes to vndertake, I shal most willingly end the rest of my daies in folowing the same: if it be left to the spoile & sackage of cōmon persons, if the loue & seruice of so many nations be despised, so great riches, & so mighty an empire refused, I hope her maiesty wil yet take my humble desire and my labor therein in gracious part, which, if it had not bin in respect of her highnes future honor & riches, could haue laid hands on & ransomed many of the kings & *Casique* of the country, & haue had a reasonable proportion of gold for their redemptiō: but I haue chosen rather to beare the burden of pouerty, then reproch, & rather to endure a second trauel and the chances therof, then to haue defaced an enterprise of so great assurance, vntill I knew whether it pleased God to put a dispositiō in her princely & royal heart either to folow or fore-
flow the same: I wil therefore leaue it to his ordinance that hath only power in all things, & do humbly pray that your honors wil excuse such errors, as without the defence of art, ouerrun in euery part of the folowing discourse, in which I haue neither studied phraze, forme nor fashion, that you will be pleased to esteeme mee as your owne (though ouer dearly bought) and I shall euer remaine ready to do you all honour and seruice.

W. R.

¶ To the Reader.

BEcause there haue bin diuers opiniōs cōceiued of the gold oare broght frō *Guiana*, and for y an Alderman of *London* & an officer of her Maiesties Mint, hath giuen out that the same is of no price, I haue thought good by the additiō of these lines to giue answer aswel to the said malicious slāder, as to other obiections. It is true that while we abode at the yland of *Trinidad*, I was informed, by an Indian, that not far frō the Port, where we anchored, there were found certaine mineral stones which they esteemed to be gold, & were thereunto perswaded the rather for that they had seene both *English* and *Frenchmen* gather, & imbarke some quantities therof: vpon this likelyhood I sent 40. men & gaue order that each one should bring a stone of that mine to make trial of y goodnes: which being performed, I assured them at their returne that the same was *Marcasite*, & of no riches or value: notwithstanding diuers, trusting more to their owne sence, then to my opinion, kept of the said *Marcasite*, & haue tried therof since my returne in diuers places. In *Guiana* it selfe I neuer saw *Marcasite*, but al the rocks, moutrains, al stones in y plaines, woods, & by the riuers side are in effect through shining, and seem maruelous rich, which being tried to be no *Marcasite*, are the true signes of rich minerals, but are no other then *El madre del oro* (as the Spaniards terme them) which is the mother of gold, or as it is said by others the scum of gold: of diuers sorts of these many of my company brought also into *Englad*, euery one taking y fairest for the best, which is not general. For mine own part, I did not cōtermand any mans desire, or opinion, & I could haue aforded them litle if I should haue denied them the pleasing of their owne fancies therein: but I was resolued that gold must be found either in graines separate frō the stone (as it is in most of the riuers in *Guiana*) or els in a kind of hard stone, which we call *The white spar*, of which I saw diuers hills, & in sundry places, but had neither time nor men, nor instruments fit for labour. Neere vnto one of the riuers I found of the said *White sparre* or flint a very great ledge or banke, which I endeuoured to breake by al the meanes I could, because there appeared on the outside some smal graines of gold, but finding no meane to worke the same vpon the vpper part, seeking the sides and circuit of the said rocke, I found a clift in the same from whence with daggers, and with the head of an axe, we got out some smal quantitie therof, of which kind of white stone (wherin gold ingendred) we saw diuers hills and rocks in euery part of *Guiana*, wherein we traueiled. Of this there haue bin made many trials, and in *London* it was first assaid by M. *Westwood* a refiner dwelling in *Woodstreet*, and it held after the rate of 12000. or 13000. pounds a tunne. Another sort was afterward tried by M. *Bulmar* & M. *Dimock* Assay-master, & it held after the rate of 23000 li. a tunne. There was some of it againe tried by M. *Palmer* comptroller of the Mint, and M. *Dimock* in goldsmiths hal. & it held after 26900. li. a tun. There was also at the same time, & by the same persons a trial made of the dust of the said mine which held 8. li. 6. ounces weight of gold

Ggg

in

in the 100: there was likewise at the same time a triall of an image of copper made in *Guiana*, which held a third part of gold, besides diuers trials made in the countrey, & by others in *Lodon*. But because there came ill with the good, & belike the said Alderman was not presented with the best, it hath pleased him therefore to scandall all the rest, and to deface the enterprize as much as in him lieth. It hath also bene concluded by diuers, that if there had bin any such oare in *Guiana*, and the same discovered, that I would haue brought home a greater quantitie thereof: first I was not bound to satisfie any man of the quantitie, but such onely as aduentured, if any store had bin returned thereof: but it is very true that had al their mountaines bene of masse gold, it was impossible for vs to haue made any longer stay to haue wrought the same: and whosoever hath seene with what strength of stone the best gold oare is inuironed, hee will not thinke it easie to be had out in heapes, and especially by vs, who had neither men, instruments, nor time (as it is said before) to performe the same. There were on this discovery no lesse then 100. persons, who can all witnesse, that when we past any branch of the riuier to view the land within, and staied from our boats but 6. houres, wee were driuen to wade to the eyes, at our returne: and if wee attempted the same, the day following it was impossible either to ford it, or to swim it, both by reason of the swiftnesse, and also for that the borders were so pestred with fast woods, as neither boat nor man could find place, either to land or to imbarke: for in Iune, Iuly, August and September, it is impossible to nauigate any of those riuers: for such is the fury of the current, and there are so many trees and woods ouerflowne, as if any boat but touch vpon any tree or stake, it is impossible to saue any one person therein: and yer we departed the land it ranne with such swiftnes, as wee draue downe most commonly against the wind, little lesse then 100. miles a day: Besides our vessels were no other then whirries, one little barge, a small cockboat, and a bad Galiota, which we framed in hast for that purpose at *Trinidad*, and those little boats had 9, or 10. men a piece, with all their victuals, and armes. It is further true, that we were about 400. miles from our ships, and had bene a moneth from them, which also we left weakly manned in an open road, and had promised our returne in 15. dayes. Others haue deuised that the same oare was had from *Barbary*, and that we caried it with vs into *Guiana*: surely the singularitie of that deuice I doe not well comprehend: for mine owne part, I am not so much in loue with these long voyages, as to deuise, therby to cozen my selfe, to lie hard, to fare worse, to be subiected to perils, to diseases, to ill fauours, to be parched & withered, and withall to sustaine the care & labour of such an enterprize, except the same had more comfort, then the fetching of *Marcasie* in *Guiana*, or buying of gold oare in *Barbary*. But I hope the better sort wil iudge me by themselves, & that the way of deceit is not the way of honor or good opinion: I haue herein consumed much time, & many crownes, & I had no other respect or desire then to serue her Maiestie and my country thereby. If the Spanish nation had bene of like beliefe to these detracters, we should litle haue feared or doubted their attempts, wherewith we now are daily threatned. But if we now consider of the actions both of *Charles* the 5. who had the maidenhead of *Pern*, and the abundant treasures of *Atabalipa*, together with the affaires of the Spanish king now liuing, what territories he hath purchased, what he hath added to the acts of his predecessors, how many kingdoms he hath endangered, how many armies, garisons, & nauies he hath and doth mainteine, the great losses which he hath repaired, as in 88. about 100. saile of great ships with their artillery, & that no yere is lesse vnfortunate but that many vessels, treasures, and people are deuoured, and yet notwithstanding he beginneth againe like a storme to threaten shipwrack to vs all: we shall find that these abilities rise not from the trades of sacks, and *Simil* oranges, nor from ought els that either *Spaine*, *Portugal*, or any of his other prouinces produce: it is his *Indian* gold that indangereth and disturbeth all the nations of *Europe*, it purchaseth intelligence, creepeth into counsels, and setteth bound loyaltye at libertie, in the greatest Monarchies of *Europe*. If the Spanish king can keepe vs from forren enterprizes, & from the impeachment of his trades, either by offer of inuasion, or by besieging vs in *Britaine*, *Ireland*, or elsewhere, hee hath then brought the worke of our peril in great forwardnes. Those princes which abound in treasure haue great aduantages ouer the rest, if they once constrain them to a defensue war, where they are driuen once a yere or oftner to cast lots for their own garmets, and from such shal all trades, & entercourse be taken away, to the general losse and impouerishment of the kingdom and common weale so reduced: besides when our men are constrained to fight, it hath not the like hope, as when they are prest & encouraged by the desire of spoile & riches. Farther, it is to be doubted how those that in time of victory seeme to affect their neighbor nations, wil remaine after the first view of misfortunes, or if successe; to trust also to the doubtfulness of a battel, is but a fearefull & vncertaine aduenture, seeing therein fortune is as likely to preuaile

preuaile, as vertue. It shall not be necessary to alleage all that might bee said, and therefore I will thus conclude, that whatsoever kingdome shaibe enforced to defend it selfe may be compared to a body dangerously diseased, which for a season may be preserved with vulgar medicines, but in a short time, and by litle and litle, the same must needs fall to the ground, & be dissolved. I haue therefore laboured all my life, both according to my final power, & perswasion, to aduance al those attempts, that might either promise return of profit to our selues, or at least be a let and impeachment to the quiet course and plentifull trades of the Spanish nation, who in my weake iudgement by such a warre were as easily indangered & brought fro his powerfulness, as any prince of *Europe*, if it be considered from how many kingdomes and nations his reuenues are gathered, & those so weake in their owne beings, and so far seuered from mutual succour. But because such a preparation and resolution is not to be hoped for in hast, & that the time which our enemies embrace, cannot be had againe to aduantage, I wil hope that these prouinces, and that Empire now by me discovered shal suffice to inable her Maiestie & the whole kingdome, with no lesse quantities of treasure, then the king of *Spaine* hath in all the *Indies* East and West, which he possesseth, which if the same be considered and followed, ere the Spaniards enforce the same, and if her Maiestie wil vndertake it, I wil be contented to lose her highnesse fauour & good opinion for euer, and my life withall, if the same be not found rather to exceed, then to equal whatsoever is in this discourse promised or declared. I wil now referre the Reader to the following discourse, with the hope that the perillous and chargeable labours and induors of such as thereby seeke the profit and honour of her Maiestie, and the English nation, shall by men of qualitie and vertue receiue such construction, and good acceptance, as themselves would looke to be rewarded withall in the like.

W. R.

¶ The discoverie of *Guiana*.

Thursday the 6. of February in the yere 1595. we departed England, and the Sunday following had sight of the North cape of *Spaine*, the winde for the most part continuing prosperous: we passed in sight of the *Burlings*, & the *Rocke*, and so on towards for the *Canaries*, and sel with *Fuente ventura* the 17 of the same moneth, where we spent two or three dayes, and relieved our companies with some fresh meat. From thence we coasted by the *Grand Canaria*, & so to *Tenerif*, and stayed there for the *Lions* whelpe your Lordships ship, and for Captaine *Amyas Preston* and the rest. But when after 7. or 8. dayes wee found them not, we departed and directed our course for *Trinidad* with mine owne ship, and a small barke of captaine *Crosses* onely (for we had before lost sight of a final Galego on the coast of *Spaine*, which came with vs from *Plimmouth*): we arrived at *Trinidad* the 22. of March, casting anchor at point *Curiapan*, which the Spaniards call *punta de Gallo*, which is situate in 8. degrees or thereabouts: we abode there 4. or 5. dayes, & in all that time we came not to the speech of any Indian or Spaniard: on the coast we saw a fire, as we sailed fro the point *Carao* towards *Curiapan*, but for feare of the Spaniards none durst come to speake with vs. I my selfe coasted it in my barge close aboord the shore and landed in euery Cove, the better to know the pland, while the ships kept the chanell. From *Curiapan* after a few dayes we turned by North-east to reconer that place which the Spaniards call *Puerto de los Espannoles*, and the inhabitants *Conquerabia*, and as before (renewing my barge) I left the ships and kept by the shore, the better to come to speach with some of the inhabitants, and also to vnderstand the riuers, watering places, & ports of the pland, which (as it is rudely done) my purpose is to send your Lordship after a few dayes. From *Curiapan* I came to a port and seat of Indians called *Parico*, where we found a fresh water riuer, but saw no people. From thence I rowed to another port, called by the naturals *Piche*, and by the Spaniards *Tierra de Brea*: In the way betweene both were diuers little brookes of fresh water and one salt riuer that had store of oysters vpon the branches of the trees, and were very salt and well tasted. All their oysters grow vpon those boughs and sprates, and not on the ground: the like is commonly seene in other places of the West Indies, and else where. This tree is described by *Andrew Theuer* in his French *Antarctique*, and the founte figured in the booke as a plant very strange, and by *Plinie* in his 12. booke of his naturall historie. But in this pland, as also in *Guiana* there are very many of them.

At this point called *Tierra de Brea* or *Piche* there is that abundance of stone pitch, that all the ships of the world may be therewith laden from thence, and we made trial of it in trimming our shippes to be most excellent good, and melteth not with the Sunne as the pitch of *Norway*, and therefore for shippes trading the South parts very profitable. From thence wee went to

the mountaine foote called Annaperima, and so passing the riuer Carone on which the Spanishe Citie was seated, we met with our ships at Puerto de los Espannoles or Conquerabia.

This pland of Trinidad hath the forme of a sheephooke, and is but narrow, the North part is very mountainous, the soile is very excellent and will beare suger, ginger, or any other commoditie that the Indies yeeld. It hath store of deare, wilde pozks, fruits, fish and foule: it hath also for bread sufficient maiz, cassau, and of those rootes and frutes which are common euery where in the West Indies. It hath diuers beastes which the Indies haue not: the Spaniards confessed that they found graines of golde in some of the riuers, but they hauing a purpose to enter Guiana (the Magazin of all rich mettals) cared not to spend time in the search thereof any further. This pland is called by the people thereof Cairi, and in it are diuers nations: those about Parico are called I-aio, those at Punta de Carao are of the Arwacas, and betweene Carao and Curiapan they are called Saluajes, betweene Carao and Punta de Galera are the Nepoios, and those about the Spanishe citie terme themselves Carinepagotes: Of the rest of the nations, and of other ports and riuers I leaue to speake here, being impertinent to my purpose, and meane to describe them as they are situate in the particular plot and description of the pland, thzee parts whereof I coasted with my barge, that I might the better describe it.

The death of
Captaine
Whiddon.

Meeting with the ships at Puerto de los Espannoles, we found at the landing place a company of Spaniards who kept a guard at the descent, and they offering a signe of peace, I sent captaine Whiddon to speake with them, whom afterward to my great grieve I left buried in the said pland after my returne from Guiana, being a man most honest and valiant. The Spaniards seemed to be desirous to trade with vs, and to enter into termes of peace, more for doubt of their owne strength then for ought else, and in the ende vpon pledge, some of them came aboord: the same evening there stalle also aboord vs in a small Canoa two Indians, the one of them being a Casique or Lord of the people called Cantyman, who had the yeere before bene with Captaine Whiddon, and was of his acquaintance. By this Cantyman, wee vnderstood what strength the Spaniards had, howe farre it was to their Citie, and of Don Antonio de Berreo the gouernour, who was said to be slaine in his second attempt of Guiana, but was not.

While we remained at Puerto de los Espannoles some Spaniards came aboord vs to buy linnen of the company, and such other things as they wanted, and also to view our ships and company, all which I entertained kindly and feasted after our maner: by meanes whereof I learned of one and another as much of the estate of Guiana as I could, or as they knew, for those pooze souldiers hauing bene many yeeres without wine, a few draughts made them merrie, in which mood they vaunted of Guiana and of the riches thereof, and all what they knewe of the wayes and passages, my selfe seeming to purpose nothing lesse then the entrance or discouerie thereof, but bred in them an opinion that I was bound onely for the reliefe of those English which I had planted in Virginia, whereof the bzuite was come among them; which I had performed in my returne, if extremitie of weather had not forst me from the said coast.

8. Englishmen
betrayed by
Antony Berreo.

I found occasions of staying in this place for two causes: the one was to be reuenged of Berreo, who the yeere before 1594. had betrayed eight of Captaine Whiddons men, and tooke them while he departed from them to seeke the Edward Bonauenture, which arrived at Trinidad the day before from the East Indies: in whose absence Berreo sent a Canoa aboord the pinnelle onely with Indians and dogs inuiting the company to goe with them into the woods to kill a deare, who like wise men in the absence of their Captaine followed the Indians, but were no sooner one harquebuzze shot from the shore, but Berreos souldiers lying in ambush had them all, notwithstanding that he had giuen his word to Captaine Whiddon that they should take water and wood safely: the other cause of my stay was, for that by discourse with the Spaniards I dayly learned more and more of Guiana, of the riuers and passages, and of the enterprise of Berreo, by what meanes or fault he failed, and how he meant to prosecute the same.

While wee thus spent the time I was assured by another Casique of the North side of the pland, that Berreo had sent to Margarita and Cumana for souldiers, meaning to haue giuen mee a cassado at parting, if it had bene possible. For although he had giuen order throug all the pland that no Indian should come aboord to trade with me vpon paine of hanging & quartering, (hauing executed two of them for the same, which I afterwards founde) yet euery night there came some with most lamentable complaints of his crueltie, how he had deuised the pland and giuen to euery souldier a part, that hee made the ancient Casiques which were Lords of the countrey to be their slaues, that he kept them in chaines, and dropped their naked bodies with burning bacon, and such other torments, which I found afterwards to be true: for in the city after I entred the same, there were 5. of þe lords or little kings (which they cal Casiques in the West Indies) in one chaine almost

dead

dead of famine, and wasted with torments: these are called in their owne language Acarewana, and now of late since English, French and Spanish are come among them, they call themselves Capitaines, because they perceiue that the chiefe of euery ship is called by that name. Those five Capitaines in the chaine were called Wannawanare, Carroaori, Maquarima, Tarroopanama, and Aterima. So as both to be reuenged of the former wrong, as also considering that to enter Guiana by small boats, to depart 400. or 500. miles from my ships, and to leaue a garison in my backe interested in the same enterprize, who also dayly expected supplies out of Spaine, I should haue sauoured very much of the asse: and therefore taking a time of most aduantage, I set vpon the Corps du guard in the euening, and hauing put them to the sword, sent Captaine Calfield on-wards with 60. souldiers, and my selfe followed with 40. more and so tooke their new City which they called S. Ioseph by breake of day: they abode not any sight after a fewe shot, and all being dis- missed but onely Berreo and his companion, I brought them with me aboard, and at the instance of the Indians I set their new citie of S. Ioseph on fire.

The Citie of
S. Ioseph taken,
Antony Berreo
taken prisoner

The same day arriued captaine George Gifford with your Lordships ship, and captaine Key- mis whom I lost on the coast of Spaine, with the Galego, and in them diuers gentlemen and o- thers, which to our little armie was a great comfort and supply.

We then hasted away towards our purposed discouery, and first I called all the Captaines of the pland together that were enemies to the Spaniards; for there were some which Berreo had brought out of other countreys, and planted there to eate out and wast those that were naturall of the place, and by my Indian interpyter, which I caried out of England, I made them vnderstand that I was the seruant of a Queene, who was the great Casique of the North, and a virgine, and had more Casiqui vnder her then there were trees in that pland: that shee was anemie to the Castellani in respect of their tyrannie and oppression, and that she deliuered all such nations about her, as were by them oppressed, and hauing freed all the coast of the Northren world from their seruitude, had sent mee to free them also, and withall to defend the countrey of Guiana from their inuasion and conquest. I shewed them her Maesties picture which they so admired and honoured, as it had bene easie to haue brought them idolatrous thereof.

The like and a more large discourse I made to the rest of the nations both in my passing to Guiana, and to those of the borders, so as in that part of the world her Maestie is very famous and admirable, whom they now call Ezrabetta Cassipuna Aquerewana, which is as much as Eliza- beth, the great princesse or greatest commander. This done we left Puerto de los Espannoles, and returned to Curiapan, and hauing Berreo my prisoner I gathered from him as much of Gui- ana as hee knew.

This Berreo is a gentleman wel descended, and had long serued the Spanish king in Millain, Naples, the Low countreys and elsewhere, very valiant and liberall, and a gentleman of great as- surednes, and of a great heart: I vsed him according to his estate and worth in all things I could, according to the small meanes I had.

I sent Captaine Whiddon the yeere before to get what knowledge he could of Guiana, and the end of my iourney at this time was to discouer and enter the same, but my intelligence was farre from truth, for the countrey is situate about 600. English miles further from the Sea, then I was made beleue it had bin, which afterward vnderstanding to be true by Berreo, I kept it from the knowledge of my company, who else would neuer haue bene brought to attempt the same: of which 600. miles I passed 400. leauing my ships so farre from mee at anchor in the Sea, which was more of desire to performe that discouery, then of reason, especially hauing such pooze and weake vessels to transport our selues in; for in the bottom of an old Galego which I caused to be fashioned like a galley, and in one barge, two whirries, and a shipboat of the Lions whelpe, we ca- ried 100. persons and their victuals for a moneth in the same, being al driuen to lie in the raine and weather in the open aire, in the burning Sunne, and vpon the hard boards, and to dresse our meat, and to cary all maner of furniture in them, wherewith they were so pestered and vnsauory, that what with victuals being most fith, with the wette clothes of so many men thrust together, and the heat of the Sunne, I will vndertake there was neuer any prison in England, that could bee found more vnsauory and lothsome, especially to my selfe, who had for many yeeres before bene dieted and cared for in a sort farre more differing.

Sir W. Raleigh
passed 400.
miles toward
Guiana.

If Captaine Preston had not bene perswaded that he should haue come too late to Trinidad to haue found vs there (for the moneth was expired which I promised to cary for him there ere hee coulde recouer the coast of Spaine) but that it had pleased God hee might haue toynd with vs, and that we had entred the countrey but some ten dayes sooner ere the Riuers were ouerflown, wee had aduentured either to haue gone to the great Citie of Manoa, or at least taken so many

of the other Cities and townes neerer at hand, as would haue made a royall returne: but it pleased not God so much to fauour mee at this time: if it shall be my lot to prosecute the same, I shall willingly spend my life therein, and if any else shalbe enabled thereunto, and conquere the same, I assure him thus much, he shall perfourme more then euer was done in Mexico by Cortez, or in Peru by Pizarro, whereof the one conquered the Empire of Mutezuma, the other of Guascar, and Atabalipa, and whatsoever prince shall possesse it, that Prince shall be Lord of more golde, and of a more beautifull Empire, and of more Cities and people, then either the King of Spaine, or the great Turke.

But because there may arise many doubts, and how this Empire of Guiana is become so populous, and adorned with so many great Cities, townes, temples and treasures, I thought good to make it known, that the Emperour now reigning is descended from those magnificent princes of Peru, of whose large territories, of whose policies, conquests, edifices, and riches Pedro de Cieça, Francisco Lopez, and others haue written large discourses: for when Francisco Pizarro, Diego Almagro and others conquered the said Empire of Peru, and had put to death Atabalipa sonne to Guaynacapa, which Atabalipa had formerly caused his eldest brother Guascar to be slaine, one of the yonger sonnes of Guaynacapa fled out of Peru, and tooke with him many thousands of those souldiers of the Empire called Orejones, and with those and many others which followed him, hee vanquished all that tract and valley of America which is situate betweene the great riuer of Amazonas, and Baraquan, otherwise called Orenoque and Marannon.

The Empire of Guiana is directly East from Peru towards the Sea, and lieth vnder the Equinoctial line, and it hath more abundance of golde then any part of Peru, and as many or more great Cities then euer Peru had when it flourished most: it is gouerned by the same lawes, and the Emperour and people obserue the same religion, and the same forme and policies in gouernment as were vsed in Peru, not differing in any part: and I haue bene assured by such of the Spaniards as haue seene Manoa the Imperial Citie of Guiana, which the Spaniards call El Dorado, that for the greatnesse, for the riches, and for the excellent seat, it farre exceedeth any of the world, at least of so much of the world as is known to the Spanish nation: it is founded vpon a lake of salt water of 200. leagues long like vnto Mare Caspium. And if we compare it to that of Peru, & but read the report of Francisco Lopez and others, it will seeme more then credible: and because we may iudge of the one by the other, I thought good to insert part of the 120. Chapter of Lopez in his generall historie of the Indies, wherein he describeth the Court and magnificence of Guaynacapa, ancestor to the Emperour of Guiana, whose very wordes are these, Todo el seruicio de su casa, mesa, y cocina era de oro, y de plata, y quando menos de plata, y cobre por mas rezio. Tenia en su recamara estatuas huecas de oro, que parecian gigantes, y las figuras al propio, y tamaño de quantos animales, aues, arboles, y yeruas produze la tierra, y de quantos peces cria la mar y aguas de sus reynos. Tenia assi mesmo fogas, costales, cestas, y troxes de oro y plata, rimeros de palos de oro, que pareciesen lenna raiada para quemar. En fin no auia cosa en su tierra, que no la tuuiesse de oro contrahecho: y aun dizen, que tenian los Ingas vn vergel en vna Isla cerca de la Puna, donde se yuan a holgar, quando querian mar, que tenia la ortaliza, las flores, y arboles de oro y plata, inuencion y grandeza hasta entonces nunca vista. Allende de todo esto tenia infinitissima cantidad de plata, y oro por labrar en el Cuzco, que se perdio por la muerte de Guascar, ca los Indios lo escondieron, viendo que los Espannoles se lo tomauan, y embiauau a Espanna. That is, All the vessels of his house, table and kitchin were of gold and silver, and the meaneest of silver and copper for strength and hardnesse of metall. He had in his wardrobe hollow statues of gold which seemed giants, and the figures in proportion and bignesse of all the beasts, birds, trees and hearbes, that the earth bringeth forth: and of all the fishes that the sea or waters of his kingdome breedeth. He had also ropes, budgets, chestes and troughs of golde and silver, heapes of billets of gold, that seemed wood marked out to burne. Finally, there was nothing in his countrey, whereof he had not the counterfait in gold: Yea and they say, The Ingas had a garden of pleasure in an yland neere Puna, where they went to recreate themselves, when they would take the aire of the Sea, which had all kinde of garden-hearbs, flowers and trees of golde and silver, an inuention, and magnificence till then neuer seene. Besides all this, he had an infinite quantitie of silver and golde brough in Cuzco which was lost by the death of Guascar, for the Indians hid it, seeing that the Spaniards tooke it, and sent it into Spaine.

And in the 117. chapter Francisco Pizarro caused the gold and silver of Atabalipa to be weyed after he had taken it, which Lopez setteth downe in these wordes following. Hallaron cinquenta y dos mil marcos de buena plata, y vn millon y trezientos y veinte y seys mil, y quinientos pesos de oro, Which is: They found fiftie and two thousand markes of good silver, and one

Gomara hist.
gen. cap. 120.

one million, and three hundred twenty and five thousand and five hundred pezos of golde.

Now although these reports may seeme strange, yet if we consider the many millions which are dayly brought out of Peru into Spaine, wee may easily beleue the same: for we finde that by the abundant treasure of that countrey the Spanish king beareth all the princes of Eutope, and is become, in a few yeeres, from a poore king of Castile, the greatest monarch of this part of the world, and likely every day to increase, if other princes follow the good occasions offered, and suffer him to adde this empire to the rest, which by farre exceedeth all the rest: if his golde now in danger vs, hee will then be irresistible. Such of the Spanyards as afterwarde endeouored the conquest thereof (whereof there haue bene many, as shall be declared hereafter) thought that this Inga (of whom this emperour now liuing is descended) tooke his way by the riuer of Amazonas, by that branch which is called Papamene: for by that way followed Orellana (by the commandement of Gonzalo Picarro, in the yere 1542) whose name the riuer also beareth this day, which is also by others called Marannon, although Andrew Theuet doeth affirme that betwene Marannon and Amazonas there are 120 leagues: but sure it is that those riuers haue one head and beginning, and the Marannon, which Theuet describeth, is but a branch of Amazonas or Orellana, of which I will speake more in another place. It was attempted by Ordas; but it is now little lesse then 70 yeres since that Diego Ordas, a knight of the order of Saint Iago attempted the same: and it was in the yere 1542 that Orellana discovered the riuer of Amazonas; but the first that euer saw Manoa was Iuan Martinez master of the munition to Ordas. At a port called Morequito in Guiana there lieth at this day a great anker of Ordas his ship; and this port is some 300 miles within the land, vpon the great riuer of Orenoque.

I rested at this port foure dayes: twenty dayes after I left the ships at Curiapan. The relation of this Martinez (who was the first that discovered Manoa) his successe and ende are to be seene in the Chancery of Saint Iuan de puerto rico, wherof Berreo had a copy, which appeared to be the greatest encouragement as well to Berreo as to others that formerly attempted the discovery and conquest. Orellana after he failed of the discovery of Guiana by the sayd riuer of Amazonas, passed into Spaine, and there obtained a patent of the king for the inuasion and conquest, but died by sea about the Islands, and his fleet seuered by tempest, the action for that time proceeded not. Diego Ordas followed the enterprise, and departed Spaine with 600 souldiers, and 30 horse, who arriuing on the coast of Guiana, was slaine in a mutiny, with the most part of such as fauoured him, as also of the rebellious part, insomuch as his ships perished, and few or none returned, neither was it certainly knownen what became of the sayd Ordas, untill Berreo found the anker of his ship in the riuer of Orenoque; but it was supposed, and so it is written by Lopez, that he perished on the seas, and of other writers diuersly conceiued and reported. And hereof it came that Martines entred so farre within the land, and arriued at that city of Inga the emperour; for it chanced that while Ordas with his army rested at the port of Morequito (who was either the first or second that attempted Guiana) by some negligence, the whole store of powder provided for the seruice was set on fire; and Martinez hauing the chiefe charge, was condemned by the Generall Ordas to be executed forthwith: Martinez being much fauoured by the souldiers, had all the meanes possible procured for his life; but it could not be obtained in other sort then this: That he should be set into a canoa alone without any victuall, onely with his armes, and so turned loose into the great riuer: but it pleased God that the canoa was caried downe the streame, and that certeine of the Guianians mette it the same euening; and hauing not at any time seene any Christian, nor any man of that colour, they caried Martinez into the land to be wooedred at, and so from towne to towne, untill he came to the great city of Manoa, the seat and residence of Inga the emperour. The emperour after he had beheld him, knew him to be a Christian (for it was not long before that his brethren Guascar and Atabalipa were vanquished by the Spanyards in Peru) and caused him to be lodged in his palace, and well entertained. Hee liued seuen moneths in Manoa, but was not suffered to wander into the countrey any where. He was also brought thither all the way blindfold, led by the Indians, untill he came to the entrance of Manoa it selfe, and was fourteene or fifteene dayes in the passage. He auowed at his death that he entred the city at Noon, and then they vncouered his face, and that he trauelled all that day till night thorow the city, and the next day from Sun rising to Sun setting yer he came to the palace of Inga. After that Martinez had liued seuen moneths in Manoa, and began to vnderstand the language of the countrey, Inga asked him whether he desired to returne into his owne countrey, or would willingly abide with him. But Martinez not desirous to stay, obtained the fauour of Inga to depart: with whom he sent diuers Guianians to conduct him to the riuer of Orenoque, all laden with as much golde as they could cary, which he gaue to Martinez at his departure: but when he was arriued

The voyage of
Sir Iohn Burgh
to the West
Indies.

neere the riuers side, the borderers which are called Orenoqueponi robbed him and his Guianians of all the treasure (the borderers being at that time at warres, which Inga had not conquered) saue onely of two great bottels of gourds, which were filled with beads of golde curiously wrought, which those Orenoqueponi thought had bene no other thing then his drinke or meat, or graine for food, with which Martinez had liberty to passe: and so in canoas hee fell downe from the riuer of Orenoque to Trinidad, and from thence to Margarita, and also to Saint Iuan de puerto rico, where remaining a long time for passage into Spaine, he died. In the time of his extreme sicknesse, and when he was without hope of life, receiuing the Sacrament at the hands of his Confessor, he deliuered these things, with the relation of his trauels, and also called for his calabças or gourds of the golde beads which he gaue to the church and friers to be prayed for. This Martinez was he that Chriſtened the city of Manoa by the name of El Dorado, and as Berreo informed mee, vpon this occasion: Those Guianians, and also the borderers, and all other in that tract which I haue seene, are maruellous great drunkards; in which vice, I thinke no nation can compare with them: and at the times of their solempne feasts, when the emperour carowleth with his capitaines, tributaries, and gouernours, the maner is thus: All those that pledge him are first stripped naked, and their bodies anointed all ouer with a kind of white balsamum (by them called curca) of which there is great plenty, and yet very deare amongst them, and it is of all other the most precious, whereof we haue had good experience: when they are anointed all ouer, certeine seruants of the emperour, hauing prepared golde made into fine powder, blow it thorow hollow canes vpon their naked bodies, vntill they be all shining from the foot to the head: and in this sort they sit drincking by twenties, and hundreds, and continue in drunkennesse sometimes sixe or seuen dayes together. The same is also confirmed by a letter written into Spaine, which was intercepted, which M. Robert Duddeley tolde me he had seene. Vpon this sight, and for the abundance of golde which he saw in the city, the images of golde in their temples, the plates, armour, and shiels of gold which they vse in the warres, he called it El Dorado. After the death of Ordas and Martinez, and after Orellana, who was imployed by Gonzalo Pizarro, one Pedro de Osua a knight of Nauarre attempted Guiana, taking his way from Peru, and built his brigandines vpon a riuer called Oia, which riseth to the Southward of Quico, and is very great. This riuer falleth into Amazonas, by which Osua with his companies descended, and came out of that prouince which is called Metylonez: and it seemeth to mee that this empire is reserved for her Maiesty and the English nation, by reason of the hard successe which all these and other Spanyards found in attempting the same, whereof I will speake briefly, though impertinent in some sort to my purpose. This Pedro de Osua had among his troups a Biscain, called Agiri, a man meanly bozne, who bare no other office then a sergeant or alferrez: but after certeine moneths, when the souldiers were grieved with trauels, and consumed with famine, and that no entrance could be found by the branches or body of Amazonas, this Agiri raised a mutiny, of which hee made himselfe the head, and so preuailed, as he put Osua to the sword, and all his followers, taking on him the whole charge and commandement, with a purpose not onely to make himselfe emperour of Guiana, but also of Peru, & of all that side of the West Indies: he had of his party seuen hundred souldiers, and of those many promised to draw in other capitaines & companies, to deliuer by townes and forts in Peru, but neither finding by y^e said riuer any passage into Guiana, nor any possibility to returne to wards Peru by the same Amazonas, by reason that y^e descent of the riuer made so great a current, he was enforced to disembogue at the mouth of the sayd Amazonas, which can not be lesse then a thousand leagues from the place where they imbarked: from thence he coasted the land till he arrived at Margarita to the North of Mompatar, which is at this day called Puerto de Tyranno, for that he there slew Don Iuan de villa Andreda, gouernour of Margarita, who was father to Don Iuan Sarmiento, gouernor of Margarita when Sir Iohn Burgh landed there, and attempted the Island. Agiri put to the sword all other in the Island that refused to be of his party, and tooke with him certeine Simerones, and other desperate companions. From thence he went to Cumana, and there slew the gouernour, and dealt in all as at Margarita: hee spoiled all the coast of Caracas, and the prouince of Venezuela, and of Rio dela hacha; and as I remember, it was the same yere that Sir Iohn Hawkins sailed to Saint Iuan de Vllua in the Iesus of Lubeck: for himselfe tolde me that he met with such a one vpon the coast that rebelled, and had sailed downe all the riuer of Amazonas. Agiri from thence landed about Sancta Marta, and sacked it also, putting to death so many as refused to be his followers, purposing to inuade Nueuo reyno de Granada, and to sacke Pamplon, Merida, Lagrita, Tunxa, and the rest of the cities of Nueuo reyno, and from thence againe to enter Peru: but in a fight in the sayd Nueuo reyno he was ouerthrowen, and finding no way to escape, he first put to the sword his owne children, forgettelling them that they should

not

not to liue to be defamed or bybraided by the Spaniards after his death, who would haue termed them the children of a traitour or tyrant; and that sithence hee could not make them princes, hee would yet deliuer them from shame and reproch. These were the ends and tragedies of Ordas, Martinez, Orellana; Ozua, and Agiri.

Also soone after Ordas followed Ieronimo Ortal de Saragosa with 130 souldiers, who failing his entrance by sea, was cast with the current on the coast of Paria, & peopled about S. Miguel de Neucri. It was then attempted by Don Pedro de Silua, a Portugues of the family of Ruigomes de Silua, and by the fauour which Ruigomes had with the king, he was set out, but he also shot wide of the marke; for being departed from Spaine with his fleet, he entered by Marannon and Amazonas, where by the nations of the riuer, and by the Amazonas hee was utterly ouerthrowen, and himselfe and all his armie defeated, onely seuen escaped, and of those but two returned.

1534.
Gomar. cap. 84.
& 86.
Don Pedro de
Silua.

After him came Pedro Hernandez de Serpa, and landed at Cumaná in the West Indies, taking his iourney by land towards Orenoque, which may be some 120 leagues: but per he came to the borders of the sayd riuer, hee was set vpon by a nation of the Indians called Wikiri, and ouerthrowen in such sort, that of 300 souldiers, horsemen, many Indians, and Negros, there returned but 18. Others affirme, that he was defeated in the very entrance of Guiana, at the first ciuill towne of the empire called Macureguarai. Captaine Preston in taking S. Iago de Leon (which was by him and his companies very resolutely performed, being a great towne, and farre within the land) held a gentleman prisoner, who died in his ship, that was one of the company of Hernandez de Serpa, and saued among those that escaped, who witnessed what opinion is held among the Spaniards thereabouts of the great riches of Guiana, and El Dorado the city of Inga. Another Spaniard was brought aboard me by captaine Preston, who told me in the hearing of himselfe and diuers other gentlemen, that he met with Berreos campe-master at Caracas, when he came from the borders of Guiana, and that he saw with him forty of most pure plates of golde curiously wrought, and swords of Guiana decked and inlayed with gold, feathers garnished with golde, and diuers rarities which he caried to the Spanish king.

Pedro Hernandez
de Serpa.

After Hernandez de Serpa, it was vnderaken by the Adelantado, Don Gonzales Ximenes de Cafada, who was one of the chiefest in the conquest of Nueuo reino, whose daughter and heire Don Antonio de Berreo married. Gonzales sought the passage also by the riuer called Papamene, which riseth by Quito in Peru, & runneth Southeast 100 leagues, and then falleth into Amazonas, but he also failing the entrance, returned with the losse of much labour and cost. I tooke one captaine George a Spaniard that followed Gonzales in this enterprise. Gonzales gaue his daughter to Berreo, taking his oth & honour to follow the enterprise to the last of his substance and life, who since, as he hath sworne to me, hath spent 300000 ducats in the same, & yet neuer could enter so far into the land as my selfe with that poore troupe or rather a handfull of men, being in all about 100 gentlemen, souldiers, rowers, boat-keepers, boyes, & of all sorts: neither could any of the forepassed vnderakers, nor Berreo himselfe, discouer the countrey, till now lately by conference with an ancient king called Carapana, he got the true light thereof: for Berreo came about 1500 miles yet he vnderstood ought, or could finde any passage or entrance into any part thereof, yet he had experience of al these forenamed, and diuers others, and was perswaded of their errors and mistakings. Berreo sought it by the riuer Cassamar, which falleth into a great riuer called Pato: Pato falleth into Meta, and Meta into Baraquan, which is also called Orenoque.

Don Gonzales
Ximenes de
Cafada.

Antonio Berreo.

He tooke his iourney from Nueuo reyno de Granada where he dwelt, hauing the inheritance of Gonzales Ximenes in those parts: he was followed with 700 horse, he draue with him 1000 head of cattell, he had also many women, Indians, and slaues. Now all these riuers crosse and encounter, how the countrey lieth and is bordered, the passage of Ximenes and Berreo, mine owne discovery, and the way that I entred, with all the rest of the nations and riuers, your lordship shall receiue in a large Chart or Map, which I haue not yet finished, and which I shall most humbly pray your lordship to secret, and not to suffer it to passe your owne hands; for by a draught thereof all may be prevented by other nations: for I know it is this very peere sought by the French, although by the way that they now take, I feare it not much. It was also tolde me per I departed England, that Villiers the admirall was in preparation for the planting of Amazonas, to which riuer the French haue made diuers voyages, and returned much golde, and other rarities. I spake with a captaine of a French ship that came from thence, his ship riding in Falmouth the same pere that my ships came first from Virginia.

A new & rich
trade of the
French to the
riuer of Ama-
zones.

There was another this peere in Helford that also came from thence, and had bene foureteene moneths at an anker in Amazonas, which were both very rich. Although, as I am perswaded,
Guiana

Guiana cannot be entered that way, yet no doubt the trade of gold from thence passeth by branch of rivers into the riuer of Amazonas, and so it doth on euery hand far from the countrey it selfe; for those Indians of Trinidad haue plates of golde from Guiana, and those cannibals of Dominica which dwell in the Islands by which our ships passe perely to the West Indies, also the Indians of Paria, those Indians called Tucaris, Chochi, Apotomios, Cumanagotos, and all those other nations inhabiting nere about the mountaines that run from Paria theow the prouince of Venesuela, and in Maracapaná, and the cannibals of Guanipa, the Indians called Assawai, Coaca, Aiai, and the rest (all which shall be described in my description as they are situate) haue plates of golde of Guiana. And vpon the riuer of Amazonas, Theuer writeth that the people weare croissants of golde, for of that forme the Guianians most commonly make them: so as from Dominica to Amazonas, which is about 250 leagues, all the chiefe Indians in all parts weare of those plates of Guiana. Undoubtedly those that trade Amazonas retorne much golde, which (as is aforesayd) cometh by trade from Guiana, by some branch of a riuer that falleth from the countrey into Amazonas, and either it is by the riuer which passeth by the nations called Tisnados, or by Carepuna. I made inquiry amongst the most ancient and best trauelled of the Orenoqueponi, and I had knowledge of all the riuers betweene Orenoque & Amazonas, and was very desirous to understand the truth of those warlike women, because of some it is beleued, of others not. And though I digresse from my purpose, yet I will set downe that which hath bene deliuered me for truth of those women, & I spake with a casique or lord of people, that told me he had bene in the riuer, and beyond it also. The nations of these women are on the South side of the riuer in the prouinces of Topago, and their chiefe strength and retracts are in the Islands situate on the South side of the entrance some 60 leagues within the mouth of the sayd riuer. The memories of the like women are very ancient as well in Africa as in Asia: In Africa those that had Medusa for queene: others in Scithia nere the riuers of Tanais and Thermadon: we finde also that Lampedo & Marchesia were queenes of the Amazonas: in many histories they are verified to haue bene, and in diuers ages and prouinces: but they which are not far from Guiana doe accompany with men but once in a yere, and for the time of one moneth which I gather by their relation, to be in April: and that time all kings of the borders assemble, and queenes of the Amazonas; and after the queenes haue chosen, the rest cast lots for their Valentines. This one moneth, they feast, dance, and drinke of their wines in abundance; and the Moone being done, they all depart to their owne prouinces. If they conceiue, and be deliuered of a sonne, they retorne him to the father; if of a daughter they nourish it, and reteine it: and as many as haue daughters send vnto the begetters a present; all being desirous to increase their owne sex and kind: but that they cut off the right dug of the breast, I doe not finde to be true. It was farther tolde me, that if in these warres they tooke any prisoners that they vsed to accompany with those also at what time soeuer, but in the end for certaine they put them to death: for they are sayd to be very cruell and bloodthirsty, especially to such as offer to invade their territories. These Amazonas haue likewise great store of these plates of golde, which they recouer by exchange chiefly for a kinde of greene stones, which the Spanyards call Piedra shijadas, & we vse for spleene stones: and for the disease of the stone we also esteeme them. Of these I saw diuers in Guiana: and commonly euery king or casique hath one, which their wiues for the most part weare; and they esteeme them as great iewels.

The seat of the
Amazones,

But to retorne to the enterprise of Berreo, who (as I haue sayd) departed from Nueuo reyno with 700 horse, besides the prouisions aboue rehearsed, he descended by the riuer called Cassanar, which riseth in Nueuo reyno out of the mountaines by the city of Tuuia, from which mountaine also springeth Pato; both which fall into the great riuer of Meta: and Meta riseth from a mountaine toyning to Pamplon in the same Nueuo reyno de Granada. These, as also Guaiare, which issueth out of the mountaines by Timana, fall all into Baraquan, and are but of his heads; for at their comming together they lose their names; and Baraquan farther downe is also rebaptized by the name of Orenoque. On the other side of the city and hilles of Timana riseth Rio grande, which falleth in the sea by Santa Marta. By Cassanar first, and so into Meta, Berreo passed, keeping his horsemen on the banks, where the countrey serued them for to march, and where otherwise, he was bound to imbarke them in boats which he builded for the purpose, and so came with the current downe the riuer of Meta, and so into Baraquan. After he entered that great & mighty riuer, he began dayly to lose of his companies both men and horse; for it is in many places violently swift, and hath forcible eddies, many sands, and diuers Islands sharpe pointed with rocks: but after one whole yere, iourneying for the most part by riuer, and the rest by land, he grew dayly to fewer numbers; for both by sicknesse, and by encountering with the people of those regions, thorough which he trauelled, his companies were much wasted, especially by diuers encounters with the

the Amapaia: and in all this time hee neuer could learne of any passage into Guiana, nor any newes or fame thereof, untill he came to a further border of the sayd Amapaia, eight dayes iourney from the riuer Caroli, which was the furthest riuer that he entred. Among those of Amapaia, Guiana was famous, but few of these people accosted Berreo, or would trade with him the first three moneths of the six, which he sojourned there. This Amapaia is also marvellous rich in golde (as both Berreo confessed and those of Guiana with whom I had most conference) and is situate vpon Orenoque also. In this countrey Berreo lost 60 of his best souldiers, and most of all his horse that remained in his former peeres trauell: but in the end, after diuers encounters with those nations, they grew to peace; and they presented Berreo with tenne images of fine golde among diuers other places and croissantes, which, as he sware to me & diuers other gentlemen, were so curiously wrought, as he had not seene the like either in Italy, Spaine, or the Low-countries: & he was resolved, that when they came to the hands of the Spanish king, to whom he had sent them by his campmaster, they would appeare very admirable, especially being wrought by such a nation as had no yron instruments at all, nor any of those helps which our goldsmiths haue to worke withall. The particular name of the people in Amapaia which gaue him these pierces, are called Anebas, and the riuer of Orenoque at that place is about 12 English miles broad, which may be from his out fall into the sea 700 or 800 miles.

This prouince of Amapaia is a very low and a marish ground nere the riuer; and by reason of the red water which issueth out in small branches thorow the fenney and boggy ground, there breed diuers poisonfull wormes and serpents; and the Spaniards not suspecting, nor in any sort foreknowing the danger, were infected with a grievous kinde of flure by drinkeing thereof; and euen the very horses poisoned therewith: insomuch as at the end of the 6 moneths, that they abode there, of all their troupes, there were not left about 120 souldiers, & neither horse nor cattell: for Berreo hoped to haue found Guiana by 1000 miles nerer then it fel out to be in the end: by meanes whereof they sustained much want, and much hunger, oppressed with grieuous diseases, and all the miseries that could be imagined. I demanded of those in Guiana that had trauelled Amapaia, how they liued with that tawny or red water when they trauelled thither: and they tolde me that after the Sun was nere the middle of the skie, they vsed to fill their pots and pitchers with that water, but either before that time, or towards the setting of the Sun it was dangerous to drinke of, and in the night strong poison. I learned also of diuers other riuers of that nature among them, which were also (while the Sun was in the Meridian) very safe to drinke, and in the morning, euening, and night woonderfull dangerous and infectiue. From this prouince Berreo hasted away alsoone as the Spring and beginning of Summer appeared, and sought his entrance on the borders of Orenoque on the South side; but there ran a ledge of so high and impassable mountaines, as he was not able by any meanes to march ouer them, continuing from the East sea into which Orenoque falleth, euen to Quito in Peru: neither had he meanes to cary victuall or munition ouer those craggie, high, and fast hilles, being all woody, & those so thicke and spiny, & so full of prickles, thornes, and briers, as it is impossible to creepe thorow them: hee had also neither friendship among the people, nor any interpreter to perswade or treat with them: and more, to his disadvantage, the casiques and kings of Amapaia had giuen knowledge of his purpose to the Guianians, and that he sought to sacke and conquer the empire, for the hope of their so great abundance and quantities of golde: he passed by the mouthes of many great riuers, which fell into Orenoque both from the North and South, which I forbore to name for tediousnesse, and because they are more pleasing in describing then reading.

Berreo affirmed that there fell an hundred riuers into Orenoque from the North and South, whereof the least was as big as Rio grande, that passed betweene Popayan and Nueuo reyno de Granada (Rio grande being esteemed one of the renowned riuers in all the West Indies, and numbred among the great riuers of the world:) but he knew not the names of any of these, but Caroli onely; neither from what nations they descended, neither to what prouinces they led; for he had no meanes to discourse with the inhabitants at any time: neither was he curious in these things, being betterly vnlearned, and not knowing the East from the West. But of all these I got some knowledge, and of many more, partly by mine owne trauell, and the rest by conference: of some one I learned one, of others the rest, hauing with me an Indian that spake many languages, and that of Guiana naturally. I sought out all the aged men, and such as were greatest trauelers, and by the one and the other I came to vnderstand the situations, the riuers, the kingdomes from the East sea to the borders of Peru, and from Orenoque Southward as farre as Amazonas or Marannon, and the religions of Maria Tamball, & of all the kings of prouinces, and capitaines of towne and villages, how they stood in tearmes of peace or warre, and which were friends

Many great
riuers falling
into Orenoque.

friends or enemies the one with the other, without which there can be neither entrance nor conquest in those parts, nor elsewhere: for by the dissention betweene Guascar and Atabalipa, Pizarro conquered Peru, and by the hatred that the Tlaxcallians bare to Mutezuma, Cortez was victorious ouer Mexico; without which both the one and the other had failed of their enterprize, and of the great honour and riches which they attained vnto.

The prouince
of Emeria inhabi-
tied by gentle
Indians.
Carapana.

Now Berreo began to grow into dispaire, and looked for no other successe then his predecessors in this enterprize, vntill such time as hee arrived at the prouince of Emeria towards the East sea and mouth of the riuer, where he found a nation of people very fauourable, and the countrey full of all manner of victuall. The king of this land is called Carapana, a man very wise, subtile, and of great experience, being little lesse then an hundred yeeres olde: in his youth he was sent by his father into the Island of Trinidad, by reason of ciuill warre among themselves, and was bred at a village in that island, called Parico: at that place in his youth hee had seene many Christians, both French and Spanish, and went diuers times with the Indians of Trinidad to Margarita and Cumaná in the West Indies (for both those places haue euer beene relieved with victuall from Trinidad) by reason whereof he grew of more vnderstanding, and noted the difference of the nations, comparing the strength and armes of his countrey with those of the Christians, and euer after temporized so, as whosoever els did amisse, or was wasted by contention, Carapana kept himselfe and his countrey in quiet & plenty: he also held peace with the Caribes or Canibals his neighbours, and had free trade with all nations, whosoever els had warre.

Berreio sojourned and rested his weake troupe in the towne of Carapana sixe weeks, and from him learned the way and passage to Guiana, and the riches and magnificence thereof; but being then utterly disable to proceed, he determined to try his fortune another yere, when he had renewed his provisions, and regathered more force, which hee hoped for as well out of Spaine as from Nueuo reyno, where hee had left his sonne Don Antonio Ximenes to second him vpon the first notice giuen of his entrance, and so for the present imbarcked himselfe in canoas, and by the branches of Orenoque arrived at Trinidad, hauing from Carapana sufficient pilots to conduct him. From Trinidad he coasted Paria, and so recovered Margarita: and hauing made relation to Don Iuan Sermiento the gouernour, of his proceeding, and perswaded him of the riches of Guiana, he obtained from thence fifty souldiers, promising presently to returne to Carapana, and so into Guiana. But Berreo meant nothing lesse at that time; for he wanted many provisions necessary for such an enterprize, and therefore departed from Margarita, seated himselfe in Trinidad, and from thence sent his camp-master, and his sergeant-majour backe to the borders to discouer the neereest passage into the empire, as also to treat with the borderers, and to draw them to his party and loue; without which, he knew he could neither passe safely, nor in any sort be relieved with victuall or ought els. Carapana directed his company to a king called Morequito, assuring them that no man could deliuer so much of Guiana as Morequito could, and that his dwelling was but five dayes iourney from Macureguaray, the first ciuill towne of Guiana.

Morequito.

Vides the gou-
uernour of Cu-
mana compells
for with Berreo
in the conquest
of Guiana.

Now your lordship shall vnderstand, that this Morequito, one of the greatest lords or kings of the borders of Guiana, had two or three yeeres before bene at Cumaná and at Margarita, in the West Indies, with great store of plates of golde, which he carried to exchange for such other things as he wanted in his owne countrey, and was dayly feasted, & presented by the gouernours of those places, and held amongst them some two moneths, in which time one Vides gouernour of Cumaná wanne him to be his conductour into Guiana, being allured by those croissants and images of golde which hee brought with him to trade, as also by the ancient fame and magnificence of El Dorado: whereupon Vides sent into Spaine for a patent to discouer and conquer Guiana, not knowing of the precedence of Berreos patent, which, as Berreo affirmeth, was signed before that of Vides: so as when Vides vnderstood of Berreo, and that he had made entrance into that territory, and foregone his desire and hope, it was verily thought that Vides practised with Morequito to hinder and disturbe Berreo in all he could, and not to suffer him to enter thorow his signorie, nor any of his companies; neither to victuall, nor guide them in any sort; for Vides gouernour of Cumaná, and Berreo, were become mortall enemies, as well for that Berreo had gotten Trinidad into his patent with Guiana, as also in that he was by Berreo prevented in the iourney of Guiana it selfe: howsoever it was, I know not, but Morequito for a time dissembled his disposition, suffered Spanyards, and a frier (which Berreo had sent to discouer Manoa) to trauell thorow his countrey, gaue them a guide for Macureguaray, the first towne of ciuill and appareled people, from whence they had other guides to bring them to Manoa the great city of Inga: and being furnished with those things which they had learned of Carapana were of most price in Guiana, went onward, and in eleuen dayes arrived at Manoa, as Berreo affirmeth for certaine: although

Macureguaray.

Ten Span-
iards arrived at
Manoa.

could not be assured thereof by the lord which now governeth the prouince of Morequito, for he tolde me that they got all the golde they had, in other townes on this side Manoa, there being many very great and rich, and (as he sayd) built like the townes of Christians, with many roomes.

When these ten Spaniards were returned, and ready to put out of the border of Aromaiia, the people of Morequito set upon them, and slew them all but one that swam the riuer, and tooke from them to the value of forty thousand pezos of golde: and one of them onely liued to bring the newes to Berreo, that both his nine souldiers and holy father were benighted in the said prouince. I my selfe spake with the captaines of Morequito that slew them, and was at the place where it was executed. Berreo enraged herewithall, sent all the strength he could make into Aromaiia, to be reuenged of him, his people, and countrey. But Morequito suspecting the same, fled ouer Orenoque, and thorow the territories of the Saima, and Wikiri, recovered Cumaná, where hee thought himselfe very safe, with Vides the gouernour. But Berreo sending for him in the kings name, and his messengers finding him in the house of one Fashardo on the sudden per he was suspected, so as he could not then be conueyed away, Vides durst not deny him, as well to auoid the suspicion of the practise, as also for that an holy father was slaine by him and his people. Morequito offered Fashardo the weight of three quintals in golde, to let him escape: but the poore Guianian, betrayed on all sides, was deliuered to the campe-master of Berreo, and was presently executed.

Aromaiia.

Saima and Wikiri.

Morequito executed.

After the death of this Morequito, the souldiers of Berreo spoiled his territorie, and tooke diuers prisoners, among others they tooke the vncle of Morequito, called Topiawari, who is now king of Aromaiia (whose sonne I brought with me into England) and is a man of great understanding and policy: he is aboute an hundred yeeres olde, and yet of a very able body. The Spaniards ledde him in a chaine seuentene dayes, and made him their guide from place to place betwene his countrey & Emericia, the prouince of Carapana aforesayd, and he was at last redeemed for an hundred plates of golde, and diuers stones called Piedras Hijadas, or Splene-stones. Now Berreo for executing of Morequito, and other cruelties, spoiles, and slaughters done in Aromaiia, hath lost the loue of the Orenoqueponi, and of all the borderers, and dare not send any of his souldiers any further into the land then to Carapana, which he called the port of Guiana: but from thence by the helpe of Carapana he had trade further into the countrey, and alwayes appointed ten Spaniards to reside in Carapanas towne, by whose fauour, and by being conducted by his people, those ten searched the countrey thereabouts, as well for mines, as for other trades and commodities.

The towne of Carapana is the port of Guiana.

They also haue gotten a nephew of Morequito, whom they haue Christened, and named Don Iuan, of whom they haue great hope, endeououring by all meanes to establish him in the said prouince. Among many other trades, those Spaniards vied canoas to passe to the riuers of Barima, Pawroma, & Dissequebe, which are on the South side of the mouth of Orenoque, and there buy women and children from the Canibals, which are of that barbarous nature, as they will for three or foure hatchets sell the sonnes and daughters of their owne brethren and sisters, and for somewhat more, euen their owne daughters. Hereof the Spaniards make great profit: for buying a maid of twelue or thirteene yeres for three or foure hatchets, they sell them againe at Margarita in the West Indies for fifty and an hundred pezos, which is so many crownes.

Some fesse Spaniards are now seated in Dissequebe,

The master of my shippe, Iohn Dowglas, tooke one of the canoas which came laden from thence with people to be solde, and the most of them escaped; yet of those he brought, there was one as well fauoured, and as well shaped as euer I saw any in England, and afterwarde I saw many of them, which but for their tawny colour may be compared to any of Europe. They also trade in those riuers for bread of Cassai, of which they buy an hundred pound weight for a knife, and sell it at Margarita for ten pezos. They also recouer great store of Cotton, Brasill wood, and those beds which they call Hamacas or Brasill beds, wherein in hot countreyes all the Spaniards vse to lie commonly, and in no other, neither did we our selues while we were there. By meanes of which trades, for ranstone of diuers of the Guianians, and for exchange of hatchets and knives, Berreo recouered some store of golde plates, eagles of golde, and images of men and diuers birdes, and dispatched his campe-master for Spaine, with all that hee had gathered, therewith to leue souldiers, and by the shew thereof to draw others to the loue of the enterprise. And hauing sent diuers images as well of men as beasts, birds & fishes, so curiously wrought in gold, he doubted not but to perswade the king to yeeld to him some further helpe, especially for that this land hath neuer bene sacked, the mines neuer wrought, and in the Indies their works were well spent, and the golde drawn out with great labour and charge. He also dispatched messengers to his sonne in Nueuo reyno to leue all the forces he could, & to come downe the riuer Orenoque

to Emeria, the prouince of Carapana, to meet him: he had also sent to Saint Iago de Leon on the coast of the Caracas, to buy hozses and mules.

After I had thus learned of his proceedings past and purposed, I told him that I had resolved to see Guiana, and that it was the end of my iourney, and the cause of my comming to Trinidad, as it was indeed, (and for that purpose I sent Iacob Whiddon the peere before to get intelligence with whom Berreo himselfe had speech at that time, and remembered how inquisitiue Iacob Whiddon was of his proceedings, and of the countrey of Guiana) Berreo was stricken into a great melancholy and sadnesse, and vsed all the arguments he could to dissuade me, and also assured the gentlemen of my company that it would be labour lost, and that they should suffer many miseries if they proceeded. And first he deliuered that I could not enter any of the riuers with any barke or pinnesse, or hardly with any ships boat, it was so low, sandy, and full of flats, and that his companies were dayly grounded in their canoas, which drew but twelue inches water. Pee further sayde, that none of the countrey would come to speake with vs, but would all flie; and if we followed them to their dwellings, they would burne their owne townes: and besides that, the way was long, the Winter at hand, and that the riuers beginning once to swell, it was impossible to stem the current, and that we could not in those small boats by any means cary victuall for halfe the time, and that (which indeed most discouraged my company) the kings and lords of all the borders of Guiana had decreed that none of them should trade with any Christians for golde, because the same would be their owne ouerthrow, and that for the loue of gold the Christians meant to conquer and dispossesse them of all together.

The riuer of
Capuri.

Many and the most of these I found to be true, but yet I resolving to make triall of all whatsoeuer happened, directed captaine George Gifford my vice-admirall to take the Lions whelpe, and captaine Calfield his barke to turne to the Eastward, against the mouth of a riuer called Capuri, whose entrance I had before sent captaine Whiddon, and Iohn Dowglas the master, to discover, who found some nine foot water or better vpon the flood, and five at low water, to whom I had giuen instructions that they should anker at the edge of the shoald, and vpon the best of the flood to thrust ouer, which shoald Iohn Dowglas bwoyed and beckoned for them before: but they laboured in vaine; for neither could they turne it vp altogether so farre to the East, neither did the flood continue so long, but the water fell per they could haue passed the sands; as wee after found by a second experience: so as now wee must either giue ouer our enterprise, or leauing our ships at aduenture foure hundred mile behinde vs, must run vp in our ships boats, one barge, and two wheries. But being doubtfull how to cary victuals for so long a time in such hables, or any strength of men, especially for that Berreo assured vs that his sonne must be by that time come downe with many souldiers, I sent away one King, master of the Lions whelpe, with his ship-boat, to trie another branch of a riuer in the bottome of the bay of Guanipa, which was called Amana, to proue if there were water to be found for either of the small ships to enter. But when he came to the mouth of Amana, he found it as the rest, but stayed not to discover it thorowly, because he was assured by an Indian, his guide, that the Canibals of Guanipa would assaile them with many canoas, and that they shot poisoned arrowes; so as if he halted not backe, they should all be lost.

Iohn Hampton
captaine of the
Minion vnder
Sir Iohn Haw-
kins in his voy-
age to S. Iuan
de Villua.

In the meane time, fearing the worst, I caused all the carpenters we had, to cut downe a Galego boat, which we meant to cast off, and to fit her with banks to row on, and in all things to prepare her the best they could, so as she might be brought to draw but five foot, for so much we had on the barre of Capuri at low water. And doubting of Kings returne, I sent Iohn Dowglas againe in my long barge, as well to relieue him, as also to make a perfect search in the bottome of that bay: for it hath bene held for infallible, that whatsoeuer ship or boat shall fall therein, can neuer disembogue againe, by reason of the violent current which setteth into the sayde bay, as also for that the brize and Easterly winde bloweth directly into the same. Of which opinion I haue heard Iohn Hampton of Plymmouth, one of the greatest experience of England, and diuers other besides that haue traded to Trinidad.

I sent with Iohn Dowglas an olde casique of Trinidad for a pilot, who tolde vs that we could not returne againe by the bay or gulfe, but that he knew a by-branch which ran within the land to the Eastward, and that he thought by it we might fall into Capuri, and so returne in foure dayes. Iohn Dowglas searched those riuers, and found foure goodly entrances, whereof the least was as bigge as the Thames at Wolwich; but in the bay thitherward it was shoald, and but five foot water: so as we were now without hope of any ship or barke to passe ouer, and therefore resolved to go on with the boats, and the bottome of the Galego, in which we thrust 60 men. In the Lions whelps boat & whery we caried 20. Captaine Calfield in his whery caried ten more, and in my barge

barge other tenne, which made by a hundred: we had no other meanes but to cary victuall for a moneth in the same, and also to lodge therein as we could, and to boile and dresse our meat. Captaine Gifford had with him master Edward Porter, captaine Eynos, and eight more in his wheery, with all their victuall, weapons, and provisions. Captaine Calfield had with him my cousin Butthead Gorges, and eight more. In the galley, of gentlemen and officers my selfe had captaine Thin, my cousin Iohn Greeneuile, my nephew Iohn Gilbert, captaine Whiddon, captaine Keymis, Edward Handcocke, captaine Clarke, lieutenant Hewes, Thomas Vpton, captaine Facy, Ierome Ferrar, Anthony Welles, William Connocke, and aboue fifty more. We could not learne of Berreo any other way to enter but in bzanches, so farre to wind-ward, as it was impossible for vs to recouer: for wee had as much sea to crosse ouer in our wheries, as betweene Douer and Calice, and in a great billow, the winde and current being both very strong, so as we were driuen to goe in those small boats directly befoze the winde into the bottome of the bay of Guanipa, and from thence to enter the mouth of some one of those riuers which Iohn Dowglas had last discouered, and had with vs for pilot an Indian of Barema, a riuer to the South of Orenoque, betweene that and Amazonas, whose canoas we had formerly taken as hee was going from the sayd Barema, laden with Cassai-bread, to sell at Margarita. This Arwacan promised to bring me into the great riuer of Orenoque, but indeed of that which he entred he was viterly ignorant, for he had not seene it in twelue yeeres befoze; at which time he was very young, and of no iudgement: and if God had not sent vs another helpe, we might haue wandred a whole yere in that labyrinth of riuers, yee wee had found any way, either out or in, especially after wee were past ebbing and flowing, which was in foure dayes: for I know all the earth doeth not yeelde the like confluence of streames and bzanches, the one crossing the other so many times, and all so faire and large, and so like one to another, as no man can tell which to take: and if wee went by the Sunne or Compasse, hoping thereby to goe directly one way or other, yet that way wee were also caried in a circle amongst multitudes of Ilands, and euery Iland so bordered with high trees, as no man coulde see any further then the breadth of the riuer, or length of the breach. But this it chanced, that entering into a riuer, (which because it had no name, wee called the riuer of the Red crosse, our selues being the first Christians that euer came therein) the two and twentieth of May, as wee were rowing vp the same, wee espied a small canoa with three Indians, which (by the swiftnesse of my barge, rowing with eight oares) I ouertooke yee they could crosse the riuer, the rest of the people on the banks shadowed vnder the thicke wood, gazed on with a doubtfull conceit what might befall those three which we had taken. But when they perceived that we offered them no violence, neither entred their canoa with any of ours, nor tooke out of the canoa any of theirs, they then beganne to shew themselves on the banks side, and offered to traffique with vs for such chings as they had. And as wee drew neere, they all stayed, and we came with our barge to the mouth of a little creeke which came from their towne into the great riuer.

The bay of Guanipa.

Barema.

A wonderful confluence of streames.

The riuer of the Red crosse.

As we abode there a while, our Indian pilot, called Ferdinando, would needs goe ashore to their village, to fetch some fruits, and to drinke of their artificiall wines, and also to see the place, and know the lord of it against another time, and tooke with him a brother of his, which hee had with him in the iourney: when they came to the village of these people, the lord of the Iland offered to lay hands on them, purposing to haue slaine them both, yeelding for reason that this Indian of ours had brought a strange nation into their territory, to spoile and destroy them. But the pilot being drinke, and of a disposed body, slippt their fingers, and ran into the woods, and his brother being the better footman of the two, recovered the creekes mouth, where we stayed in our barge, crying out that his brother was slaine: with that we set hands on one of them that was next vs, a very olde man, and brought him into the barge, assuring him that if we had not our pilot againe, we would presently cut off his head. This olde man being resolved that he should pay the losse of the other, cried out to those in the woods to saue Ferdinando our pilot: but they followed him notwithstanding, and hunted after him vpon the foot with the Deere-dogges, and with so maine a cry, that all the woods ecked with the shout they made: but at the last this pooze chased Indian recovered the riuer side, and got vpon a tree, and as we were coasting, leaped downe and swamme to the barge halfe dead with feare. But our good happe was, that we kept the other olde Indian which we handfasted to redeeme our pilot withall; for being naturall of those riuers, we assured our selues hee knew the way better then any stranger could. And indeed, but for this chance, I thinke we had neuer found the way either to Guiana, or backe to our ships: for Ferdinando after a few dayes knew nothing at all, nor which way to turne, yea and many times the old man himselfe was in great doubt which riuer to take. Those people which dwell in these broken

Two nations
of the Tiutias,
called Ciawani,
and Warawecte.

A description
of the mighty
riuer of Oreno-
que of Baraquan.

What manner
of people the
Tiutias are.

The Arwacs

side of Oreno-
que.

The port of the
Ciawani.

A riuer called
The great A-
mana.

islands and drowned lands, are generally called Tiutias; there are of them two sorts, the one called Ciawani, and the other Warawecte.

The great riuer of Orenoque or Baraquan hath nine branches which fall out on the North side of his owne maine mouth: on the South side it hath seven other fallings into the sea, so it disemboueth by sixteene armes in all, betweene Islands and broken ground, but the Islands are very great, many of them as bigge as the Isle of Wight, and bigger, and many lesse. From the first branch on the North to the last of the South, it is at least 100 leagues, so as the riuers mouth is 300 miles wide at his entrance into the sea, which I take to be farre bigger then that of Amazonas. All those that inhabit in the mouth of this riuer vpon the severall North branches, are these Tiutias, of which there are two chiefe lords which haue continuall warres one with the other. The Islands which lie on the right hand, are called Pallamos, and the land on the left, Horotomaka, and the riuer by which Iohn Dowglas returned within the land from Amana to Capuri, they call Macuri.

These Tiutias are a very goodly people and very valiant, and haue the most manly speech and most deliberate that euer I heard, of what nation soeuer. In the Summer they haue houses on the ground, as in other places: in the Winter they dwell vpon the trees, where they build very artificiall towne and villages, as it is written in the Spanish story of the West Indies, that those people do in the low lands nere the gulfe of Vraha: for betweene May & September the riuer of Orenoque riseth thirty foot hygh, and then are those islands ouerflown twenty foot high aboue the leuell of the ground, sauing some few raised grounds in the middle of them: and for this cause they are enforced to liue in this manner. They neuer eat of any thing that is set or sown: and as at home they vse neither planting nor other manurance, so when they come abroad, they refuse to feed of ought, but of that which nature without labour bringeth forth. They vse the tops of Palmicos for bread, and kill deere, fish, and porcs, for the rest of their sustenance. They haue also many sorts of fruits that grow in the woods, and great variety of birds and fowle.

And if to speake of them were not tedious, and vulgar, surely we saw in those passages of very rare colours and formes, not else were to be found, for as much as I haue either scene or read. Of these people those that dwell vpon the branches of Orenoque, called Capuri and Macureo, are for the most part carpenters of canoas, for they make the most and fairest canoas, and sel them into Guiana for golde, and into Trinidad for tabacco, in the excessive taking whereof, they exceed all nations; and notwithstanding the moistnesse of the aire in which they liue, the hardnesse of their diet, and the great labours they suffer to hunt, fish and fowle for their liuing; in all my life, either in the Indies or in Europe, did I neuer behold a more goodly or better fauoured people or a more manly. They were wont to make warre vpon all nations, and especially on the Canibals, so as none durst without a good strength trade by those riuers: but of late they are at peace with their neighbours, all holding the Spaniards for a common enemy. When their commanders die, they vse great lamentation, and when they thinke the flesh of their bodies is putrified, and fallen from the bones, then they take by the carcase againe, and hang it in the caciques house that died, and decke his scull with feathers of all colours, and hang all his golde plates about the bones of his armes, thighs, and legs. Those nations which are called Arwacs, which dwell on the South of Orenoque, (of which place and nation our Indian pilot was) are dispersed in many other places, and doe vse to beat the bones of their lords into powder, and their wiues and friends drinke it all in their severall sorts of drinks.

After we departed from the port of these Ciawani, wee passed by the riuer with the flood, and ankered the ebbe, and in this sort we went onward. The third day that we entered the riuer, our galley came on ground, and stucke so fast, as we thought that euen there our discovery had ended, and that we must haue left fourescore and ten of our men to haue inhabited like rooks vpon trees with those nations: but the next morning, after we had cast out all her ballast, with tugging and halling to and fro, we got her afloat, and went on. At foure dayes end wee fell into as goodly a riuer as euer I beheld, which was called The great Amana, which ranne more directly without windings and turnings then the other: but soone after the flood of the sea left vs; and being enforced either by maine strength to row against a violent current, or to returne as wise as we went out, we had then no shift but to perswade the companies that it was but two or three dayes worke, and therefore desired them to take paines, euery gentleman & others taking their turnes to row, and to spell one the other at the houres end. Euery day we passed by goodly branches of riuers, some falling from the West, others from the East into Amana, but those I leaue to the description in the Cart of discovery, where euery one shalbe named with his rising and descent. When three dayes more were ouergone, our companies began to despair, the weather being extreme hot:

the

the riuer bordered with very high trees, that kept away the aire, and the current against vs euery day stronger then other : but we euermore commanded our pilots to promise an ende the next day, and used it so long, as we were driuen to assure them from foure reaches of the riuer to thzee, and so to two, and so to the next reach : but so long we laboured, that many dayes were spent, and wee driuen to drawe our selues to harder allowance, our bread euen at the last, and no drinke at all ; and our men and our selues so wearied and scorched, and doubtfull withall, whether wee should euer perfoyme it or no, the heat increasing as we drew towards the line ; for wee were now in five degrees.

They are in five degrees.

The further we went on (our victuall decreasing and the aire breeding great faintnesse) wee grew weaker and weaker, when wee had most need of strength and abilitie ; for hourly the riuer ranne more violently then other against vs, and the barge, wheries, and shippes boat of captaine Gifford and captaine Calfield, had spent all their provisions ; so as we were brought into despaire and discomfort, had wee not perswaded all the company that it was but onely one dayes worke more to attaine the land where wee should be relieued of all wee wanted, and if we returned, that wee were sure to starue by the way, and that the world would also laugh vs to scozne. On the banks of these riuers were diuers sorts of fruits good to eat, flowers and trees of such variety, as were sufficient to make tenne volumes of herbals : we relieued our selues many times with the fruits of the countrey, and sometimes with fowle and fish. Wee saw birds of all colours, some carnation, some crimson, orange-tawny, purple, watchet, and of all other sorts both simple and mixt, and it was vnto vs a great good passing of the time to beholde them, besides the reliefe we found by killing some stoze of them with our fowling pieces ; without which, hauing little or no bread, and lesse drinke, but onely the thicke and troubled water of the riuer, we had bene in a very hard case.

Our olde pilot of the Ciawani (whom, as I sayd before, wee tooke to redeeme Ferdinando) tolde vs, that if we would enter a branch of a riuer on the right hand with our barge and wheries, and leaue the galley at anker the while in the great riuer, he would bring vs to a towne of the Arwacas, where we should finde stoze of bread, hennes, fish, and of the countrey wine ; and perswaded vs, that departing from the galley at noone, we might returne per night. I was very glad to heare this speech, and presently tooke my barke, with eight musketiers, captaine Giffords whery, with himselfe and foure musketiers, and captaine Calfield with his whery, and as many ; and so we entred the mouth of this riuer : and because we were perswaded that it was so nere, we tooke no victuall with vs at all. When we had rowed thzee houres, we marvelled we saw no signe of any dwelling, and asked the pilot where the towne was : he tolde vs a little further. After thzee houres more, the Sun being almost set, we began to suspect that he led vs that way to betray vs ; for hee confessed that those Spanyards which fled from Trinidad, and also those that remained with Carapana in Emeria, were ioyned together in some village vpon that riuer. But when it grew towards night ; and wee demanded where the place was : hee tolde vs but foure reaches more. When we had rowed foure and foure, we saw no signe ; and our poore water-men, euen heart-broken, and tired, were ready to giue vp the ghost : for wee had now come from the galley neere forty miles.

At the last we determined to hang the pilot ; and if wee had well knowen the way backe againe by night, hee had surely gone ; but our owne necessities pleaded sufficiently for his safety : for it was as darke as pitch, and the riuer began so to narrow it selfe, and the trees to hang ouer from side to side, as wee were driuen with arming swords to cut a passage thorow those branches that couered the water. Wee were very desirous to finde this towne, hoping of a feast, because wee made but a short breakfast aboard the galley in the morning, and it was now eight a clocke at night, and our stomacks began to gnawe apace : but whether it was best to returne or goe on, we beganne to doubt, suspecting treason in the pilot more and more : but the poore olde Indian euer assured vs that it was but a little further, but this one turning and that turning : and at the last about one a clocke after midnight wee saw a light ; and rowing towards it, wee heard the dogges of the village. When we landed wee found few people ; for the lord of that place was gone with diuers canoas aboue foure hundred miles off, vpon a iourney to wardes the head of Orenoque to trade for golde, and to buy women of the Canibals, who after ward unfortunately passed by vs as wee rode at an anker in the port of Morequito in the darke of the night, and yet came so neere vs, as his canoas grated against our barges : he left one of his company at the port of Morequito, by whom wee vnderstood that hee had brought thirty young women, diuers plates of golde, and had great stoze of fine pieces of cotton cloth, and cotton beds. In his house we had good stoze of bread, fish, hennes, and Indian drinke, and so rested that night, and in the morning after we had traded

with such of his people as came downe, we returned towards our gally, and brought with vs some quantity of bread, fish, and hennes.

*A most beauti-
full countrey.*

On both sides of this riuer, we passed the most beautifull countrey that euer mine eyes beheld: and whereas all that we had seene befoze was nothing but woods, prickles, bushes, and thoznes, here we beheld plaines of twenty miles in length, the grasse short and greene, and in diuers parts groues of trees by themselves, as if they had beene by all the arte and labour in the world so made of purpose: and still as we rowed, the deere came downe feeding by the waters side, as if they had beene vsed to a keepers call. Upon this riuer there were great store of fowle, and of many sores: we saw in it diuers sortes of strange fishes, and of maruellous bignes: but for lagartos it exceeded, for there were thousands of those ugly serpents; and the people call it for the abundance of them, The riuer of Lagartos, in their language. I had a Negro a very proper young fellow, who leaping out of the galley to swim in the mouth of this riuer, was in all our sights taken and deuoured with one of those lagartos. In the meane while our companies in the gally thought we had bene all lost, (for wee promised to returne befoze night) and sent the Lions whelps shippes boat with captaine Whiddon to follow vs by the riuer; but the next day, after we had rowed vp and downe some fourescore miles, we returned, and went on our way, by the great riuer; and when we were euen at the last cast for want of victuals, captaine Gifford being befoze the galley and the rest of the boats, seeking out some place to land vpon the banks to make fire, espied foure canoas comming downe the riuer; & with no small ioy caused his men to trie the vttermost of their strengths, and after a while two of the foure gaue ouer, and ranne themselves ashore, euery man betaking himselfe to the fastnesse of the woods, the two other lesser got away, while he landed to lay holde on these; and so turned into some by-creeke, we knew not whither. Those canoas that were taken, were loaden with bread, and were bound for Margarita in the West Indies, which those Indians (called Arwacas) purposed to cary thither for exchange: but in the lesser there were three Spanyards, who hauing heard of the defeat of their gouernour in Trinidad, and that we purposed to enter Guiana, came away in those canoas: one of them was a cauallero, as the captaine of the Arwacas after tolde vs, another a souldier, and the third a refiner.

*Two canoas
taken.*

*Three Spany-
ards escaped.*

In the meane time, nothing on the earth could haue bene moze welcome to vs, nere vnto golde, then the great store of very excellent bread which we found in these canoas; for now our men cried, Let vs goe on, we care not how farre. After that captaine Gifford had brought the two canoas to the galley, I tooke my barge, and went to the banks side with a dozen shot, where the canoas first ranne themselves ashore, and landed there, sending out captaine Gifford, and captaine Thyn on one hand, and captaine Calfield on the other, to follow those that were fled into the woods: and as I was creeping thorow the bushes, I sawe an Indian basket hidden, which was the refiners basket; for I found in it his quick-siluer, salt-peter, and diuers things for the triall of metals, and also the dust of such ore as he had refined, but in those canoas which escaped there was a good quantity of ore and golde. I then landed moze men, and offered five hundred pound to what souldier soeuer could take one of those three Spanyards that we thought were landed. But our labours were in vaine in that behalfe; for they put themselves into one of the small canoas: and so while the greater canoas were in taking, they escaped. But seeking after the Spanyards, we found the Arwacas hidden in the woods, which were pilots for the Spanyards, and rowed their canoas; of which I kept the chiefe for a pilot, and caried him with me to Guiana, by whom I vnderstood where and in what countreyes the Spanyards had laboured for golde, though I made not the same knowen to all: for when the springs began to breake, and the riuers to raise themselves so suddenly, as by no meanes wee could abide the digging of any mine, especially for that the richest are defended with rocks of hard stones, which wee call the White spar, and that it required both time, men, and instruments fit for such a worke, I thought it best not to houer thereabouts, least if the same had beene perceiued by the company, there would haue beene by this time many barks and shippes set out, and perchance other nations would also haue gotten of ours for pilots; so as both our selues might haue beene prevented, and all our care taken for good vsage of the people bene vtterly lost, by those that onely respect present profit, and such violence of insolence offered, as the nations which are borderers would haue changed their desire of our loue and defence into hatred and violence. And for any longer stay to haue brought a moze quantity (which I heare hath beene often objected) who soeuer had seene or procured the fury of that riuer after it beganne to arise, and had bene a moneth and odder dayes, as we were, from hearing ought from our shippes, leauing them meanly manned 400 miles off, would perchance haue turned some what sooner then we did, if all the mountaines had bene golde, or rich stones. And to say the truth, all the branches and small riuers which fell into Orenoque were raised with such speed,

*The Spanissh
golde-finers
basket & other
things taken.*

*The richest
mines defend-
ed with the
white spar.*

as if we waded them over the shoos in the morning outward, we were covered to the shoulders homeward the very same day: and to stay to digge out gold with our nailes, had bene Opus laboris but not Ingenij: such a quantitie as would haue serued our turnes we could not haue had, but a discovery of the Mines to our infinite disadvantage wee had made, and that could haue bene the best profite of farther search or stay: for those Mines are not easily broken, nor opened in hast, and I could haue returned a good quantitie of gold ready cast, if I had not shot at another marke, then present profit.

This Arwacan Pilot with the rest, feared that wee would haue eaten them, or otherwise haue put them to some cruel death (for the Spaniards, to the end that none of the people in the passage towards Guiana or in Guiana it selfe might come to speach with vs, perswaded all the nations, that we were men-eaters, and Canibals) but when the pooze men and women had seene vs, and that wee gaue them meate, and to euery one something or other, which was rare and strange to them, they beganne to conceiue the deceit and purpose of the Spaniards, who indeed (as they confessed) tooke from them both their wiues and daughters dayly, and bled them for the satisfying of their owne lusts, especially such as they tooke in this maner by strength. But I protest before the Maiestie of the liuing God, that I neither know nor beleue, that any of our company one or other, by violence or other wise, euer knew any of their women, and yet we saw many hundreds, and had many in our power, and of those very yong, and excellently fauoured, which came among vs without deceit, stark naked.

The Spaniards bluely lies.

Nothing got vs more loue amongst them then this vsage: for I suffered not any man to take from any of the nations so much as a Pina, or a Potato roote, without giuing them contentment, nor any man so much as to offer to touch any of their wiues or daughters: which course so contrary to the Spaniards (who tyrannize ouer them in all things) drew them to admire her Maiestie, whose commaundement I tolde them it was, and also wonderfully to honour our nation.

But I confesse it was a very impatient worke to keepe the meaner sort from spoyle and stealing, when wee came to their houses: which because in all I coulde not preuent, I caused my Indian interpreter at euery place when wee departed, to knowe of the losse or wrong done, and if ought were stolen or taken by violence, either the same was restored, and the partie punished in their sight, or else was payed for to their vttermost demand.

A notable course of iustice.

They also much wondered at vs, after they heard that we had slaine the Spaniards at Trinidad, for they were before resolu'd, that no nation of Christians durst abide their presence, and they wondered more when I had made them know of the great ouerthrow that her Maiesties armie and Fleet had giuen them of late yeeres in their owne Countreys.

After we had taken in this supply of bread, with diuers baskets of rootes which were excellent meate, I gaue one of the Canoas to the Arwacas, which belonged to the Spaniards that were escaped, and when I had dismissed all but the Captaine (who by the Spaniards was christened Martin) I sent backe in the same Canoa the olde Ciawan, and Ferdinando my first Pilot, and gaue them both such things as they desired, with sufficient victuall to cary them backe, and by them wrote a letter to the ships, which they promised to deliuer, and performed it, and then I went on, with my newe hired Pilot Martin the Arwacan: but the next or second day after, wee came a ground againe with our Galley, and were like to cast her away, with all our victuall and provision, and so lay on the sand one whole night and were farre more in despaire at this time to free her then before, because wee had no tide of flood to helpe vs, and therefore feared that all our hopes would haue ended in mishaps: but we fastened an ancker vpon the lande, and with maine strength drew her off: and so the fifteenth day wee discovered as farre off the mountaines of Guiana to our great ioy, and towards the euening had a sent of a Northerly winde that blew very strong, which brought vs in sight of the great Riuer Orenoque; out of which this Riuer descended wherein wee were: wee descried as farre off three other Canoas as farre as wee could descerne them, after whom wee hastened with our barge and wherries, but two of them passed out of sight, and the thirde entered by the great Riuer, on the right hande to the Westward, and there stayed out of sight, thinking that wee meant to take the way Eastward towards the prouince of Carapana, for that way the Spaniards keepe, not daring to goe vponwards to Guiana, the people in those parts being all their enemies, and those in the Canoas thought vs to haue bene those Spaniards that were fled from Trinidad, and had escaped killing: and when wee came so farre to the opening of that branch into which they slipped, being neere them with our barge and wherries, wee made after them, and ere they coulde land, came within call, and by our interpreter tolde them what wee were, wherewith they came backe willingly aboord vs: and of such

They come on ground with their galley.

fish

fish and Tortugas egges as they had gathered, they gaue vs, and promised in the morning to bring the Lord of that part with them, and to do vs all other seruices they could.

Two branches
of the river O.
renoque.

That night we came to an anchor at the parting of the three goodly Riuer (the one was the Riuer of Amana by which we came from the North, and ranne athwart towards the South, the other two were of Orenoque which crossed from the West and ranne to the Sea towards the East) and landed vpon a faire sand, where wee found thousands of Tortugas egges, which are very wholesome meate, and greatly restoring, so as our men were nowe well filled and highly contented both with the fare, and neerenesse of the land of Guiana which appeared in sight.

Toparimaca.

In the morning there came downe according to promise the Lord of that border called Toparimaca, with some thirtie or fourtie followers, and brought vs diuers sorts of fruites, and of his wine, bread, fish, and flesh, whom wee also feasted as wee could, at least wee dranke good Spanish wine (whereof wee had a small quantitie in bottles) which aboue all things they loue. I conferred with this Toparimaca of the next way to Guiana, who conducted our galley and boates to his owne port, and caried vs from thence some mile and a halfe to his Towne, where some of our Captaines karoused of his wine till they were reasonable pleasant, for it is very strong with pepper, and the iuice of diuers hearbes, and fruites digested and purged, they keepe it in great earthen pots of tenne or twelue gallons very cleane and sweete, and are themselves at their meetings and feastes the greatest karousers and drunkards of the world: when wee came to his towne wee found two Casiques, whereof one was a stranger that had bene by the Riuer in trape, and his boates, people, and wife incamped at the port where wee anchored, and the other was of that countrey a follower of Toparimaca: they lay each of them in a cotten Hamaca, which wee call brasill beds, and two women attending them with fire cuppes and a little ladle to fill them, out of an earthen pitcher of wine, and so they dranke each of them three of those cups at a time one to the other, and in this sort they drinke drunke at their feastes and meetings.

That Casique that was a stranger had his wife staying at the port where wee anchored, and in all my life I haue seldome seene a better fauoured woman: Shee was of good stature, with blacke eyes, fat of body, of an excellent countenance, her haire almost as long as her selfe, tied vp againe in pretie knots, and it seemed she stood not in that awe of her husband, as the rest, for shee spake and discoursed, and dranke among the gentlemen and Captaines, and was very pleasant, knowing her owne comelinesse, and taking great pride therein. I haue seene a Lady in England so like to her, as but for the difference of colour, I would haue sworn might haue bene the same.

The towne of
Arowocay.

The great
breadth of the
riuer Orenoque.

The seat of this Towne of Toparimaca was very pleasant, standing on a little hill, in an excellent prospect, with goodly gardens a mile compasse round aboute it, and two very faire and large ponds of excellent fish adioyning. This towne is called Arowocai: the people are of the nation called Nepoios, and are followers of Carapana. In that place I sawe very aged people, that wee might perceiue all their sinewes and veines without any flesh, and but euen as a case couered onely with skinne. The Lord of this place gaue me an old man for Pilot, who was of great experience and traueile, and knew the Riuer most perfectly both by day and night: and it shall bee requisite for any man that passeth it, to haue such a Pilot, for it is foure, fise, and sixe miles ouer in many places, and twentie miles in other places, with wonderfull eddies, and strong currents, many great plands, and diuers sholles, and many dangerous rocks, and besides vpon any increafe of winde so great a bilowe, as wee were sometimes in great perill of drowning in the galley, for the small boates durst not come from the shoare, but when it was very faire.

They enter the
riuer Orenoque,
which runneth
East and
West.

The yle of A.
sapana.

The pland of
Iwana.

The next day we halted thence, and hauing an Easterly winde to helpe vs, we spared our armes from rowing: for after wee entred Orenoque, the Riuer lieth for the most part East and West, euen from the Sea vnto Quito in Peru. This Riuer is nauigable with barkes, litle lesse then a thousand miles, & from the place where we entred, it may be sailed vp in small pinnesses to many of the best parts of Nueuo reyno de Granada, and of Popayan: and from no place may the cities of these parts of the Indies be so easily taken and inuaded as from hence. All that day wee sailed by a branch of that Riuer, hauing on the left hand a great pland which they call Asapana which may containe some fise and twentie miles in length, and sixe miles in breadth, the great body of the Riuer running on the other side of this pland. Beyond that middle branch there is also another pland in the Riuer called Iwana, which is twise as bigge as the yle of Wight, and beyond it, and betweene it and the maine of Guiana, runneth a thirde branch of Orenoque called Arraroopana: all three are goodly branches, and all nauigable for great ships. I iudge the riuer in this place to be at least thirry miles brode, reckoning the plands which deuide the branches in it, for afterwards I sought also both the other branches.

After

After wee reached to the head of the yland, called Assapana, a little to the Westward on the right hand there opened a riuer which came from the North, called Europa, and fel into the great Riuer, and beyond it on the same side, wee ankered for that night, by another yland like miles long, and two miles broad, which they call Ocauwita: From hence in the morning wee landed two Guianians, which wee found in the Towne of Toparimaca, that came with vs, who went to giue notice of our conning to the Lord of that countrey called Putyma, a follower of Topiawari, chiefe Lord of Aromaia, who succeeded Morequito, whom (as you haue heard before) Berreo put to death: but his towne being sacre within the land, he came not vnto vs that day, so as we ankered againe that night neere the bankes of another yland, of bignesse much like the other, which they call Putapayma, ouer against which yland, on the maine land, was a very high mountaine called Oecope: we couered to anker rather by these ylands in the Riuer, then by the maine, because of the Tortugas egges, which our people found on them in great abundance, and also because the ground serued better for vs to cast our nets for fish, the maine bankes being for the most part stonie and high, and the rocks of a blew metalline colour, like vnto the best Steele-ore, which I assuredly take it to be: of the same blew stone are also diuers great mountaines, which border this riuer in many places.

The ple of Ocauwita.

The ple of Putapayma.

Steele-ore.

The next morning towards nine of the clocke, wee weighed anker, and the brize increasing, we sailed alwayes West by the riuer, and after a while opening the land on the right side, the countrey appeared to bee champaine, and the bankes shewed very perfect red. I therefore sent two of the little barges with Captaine Gifford, and with him Captaine Thyn, Captaine Calfield, my cosen Greeneuile, my nephew Iohn Gilbert, Captaine Eynus, Gasser Edward Porter, and my cosen Butthead Gorges, with some fewe souldiers, to march ouer the bankes of that red land, and to discouer what maner of countrey it was on the other side, who at their returne found it all a plaine leuell, as farre as they went or could discerne, from the highest tree they could get vpon: And my old Pilot, a man of great trauell, brother to the Casique Toparimica tolde mee, that those were called the plaines of the Sayma, and that the same leuell reached to Cumaná, and Caracas in the West Indies, which are a hundred and twentie leagues to the North, and that there inhabited foure principall nations. The first were the Sayma, the next Assawai, the thirde and greatest the Wikiri, by whom Pedro Hernandez de Serpa before mentioned was ouerthrowen, as hee passed with three hundred horse from Cumaná towards Orenoque, in his enterprize of Guiana: the fourth are called Aroras, and are as blacke as Negros, but haue smooth haire, and these are very ballant, or rather desperate people, and haue the most strong popson on their arrowes, and most dangerous of all nations, of which popson I will speake somewhat being a digression not vn-necessary.

The plaines of Sayma stretching to Cumaná, and the Caracas.

Aroras a blacke people being benemous arrowes.

There was nothing whereof I was more curious, then to finde out the true remedies of these popsoned arrowes: for besides the mortallitie of the wound they make, the partie shorte indureth the most insufferable torment in the world, and abiderth a most vgly and lamentable death, sometimes dying starke mad, sometimes their bowels breaking out of their bellies: which are presently discoloured as blacke as pitch, and so vsuauoy, as no man can endure to cure, or to attend them. And it is more strange to know, that in all this time there was neuer Spaniard either by gift or torment that could attaine to the true knowledge of the cure, although they haue martyred and put to inuenced torture I know not how many of them. But every one of these Indians know it not, no not one among thousands, but their soothsayers and priestes, who doe concale it, and onely teach it but from the father to the sonne.

Those medicines which are vulgar, and serue for the ordinarie popson, are made of the iuice of a roote called Tupara: the same also quencherth marueilously the heate of burning feauers, and healeth inward wounds, and broken veines, that bleed within the body. But I was more beholding to the Guianians then any other: for Anthonio de Berreo tolde mee that hee could neuer attaine to the knowledge thereof, and yet they taught mee the best way of healing as well thereof, as of all other popsons. Some of the Spaniards haue bene cured in ordinary wounds, of the common popsoned arrowes with the iuice of garlike: but this is a generall rule for all men that shall hereafter trauel the Indies where poisoned arrowes are vled, that they must abstaine from drinke, for if they take any licour into their body, as they shall bee marueilously prouoked thereunto by drought, I say, if they drinke before the wound bee dressed, or soone vpon it, there is no way with them but present death.

The iuice of garlike good against ordinary popson, Speedy by drinking to be as uopbed of such as are wounded with popsoned arrowes.

And so I will returne againe to our tourney which for this thirde day we finished, and cast anker againe neere the continent or the left hand betweene two mountaines, the one called Aroami, and the other Aio: I made no stay here but till midnight, for I feared hourly least any raine

shoul

should fall, and then it had bene impossible to haue gone any further vp, notwithstanding that there is euery day a very strong bzize, and Easterly winde. I deferred the search of the countrey on Guiana-side, till my returne downe the riuer.

The ple of Manoripano.

The next day we sailed by a great pland in the middle of the riuer called Manoripano, and as wee walked a while on the pland, while the Galley got a head of vs, there came for vs from the maine a small Canoa with seuen or eight Guianians, to inuite vs to ancker at their port, but I deferred till my returne; It was that Casique to whom those Nepoios went, which came with vs from the towne of Toparumaca: and so the fift day we reached as high vp as the prouince of Aromaia the countrey of Morequito whom Berreo executed, and ankered to the West of an pland called Murrecotima, tenne miles long and fife broad: and that night the Casique Aramiary, (to whose towne we made our long and hungry voyage out of the riuer of Amana) passed by vs.

The prouince of Aromaia.
The ple of Murrecotima.

The next day wee arrived at the port of Morequito, and ankered there, sending away one of our Pilots to seeke the king of Aromaia, vncle to Morequito slaine by Berreo as aforesaid. The next day following before noone hee came to vs on foote from his house, which was foureteenne English miles (himselfe being a hundreth and tenne yeeres olde) and returned on foote the same day, and with him many of the borderers, with many women and children, that came to wonder at our nation, and to bzing vs downe victuall, which they did in great plentie, as venison, porke, hennes, chickens, foule, fish, with diuers sorts of excellent fruites and rootes, and great abundance of Pinas, the princes of fruites, that grow vnder the Sunne, especially those of Guiana. They brought vs also store of bread, and of their wine, and a sort of Paraquitos, no bigger then wrennes, and of all other sorts both small and great: one of them gaue mee a beast called by the Spaniards Armadilla, which they call Cassacam, which seemeth to be all barred ouer with smal plates somewhat like to a Rinoceros, with a white horne growing in his hinder parts, as bigge a great hunting horne, which they vse to winde in stead of a trumpet. Monardus writeth that a little of the powder of that horne put into the eare, cureth deafenesse.

After this olde King had rested a while in a little tent, that I caused to be set vp, I beganne by my interpreter to discourse with him of the death of Morequito his predecessor, and after ward of the Spaniards, and ere I went any farther I made him knowe the cause of my comming thither, whose seruant I was, and that the Queenes pleasure was, I should undertake the voyage for their defence, and to deliuer them from the tyrannie of the Spaniards, dilating at large, (as I had done before to those of Trinidad) her Maiesties greatnesse, her iustice, her charitie to all oppressed nations, with as many of the rest of her beauties and vertues, as either I could expresse, or they conceiue: all which being with great admiration attentiuely heard, and marueilously admired, I beganne to sound the olde man as touching Guiana, and the state thereof, what sort of common wealth it was, how gouerned, of what strength and policie, howe farre it extended, and what nations were friendes or enemies adioynning, and finally of the distance and way to enter the same: hee tolde mee that himselfe and his people with all those downe the Riuer towards the Sea, as farre as Emeria, the prouince of Carapana, were of Guiana, but that they called themselves Orenoqueponi, and that all the nations betweene the riuer and those mountaines in sight called Wacarima, were of the same cast and appellation: and that on the other side of those mountaines of Wacarima there was a large plaine (which after I discovered in my returne) called the halley of Amariocapana, in all that halley the people were also of the ancient Guianians.

The halley of Amariocapana.

I asked what nations those were which inhabited on the farther side of those mountaines, beyond the halley of Amariocapana: hee answered with a great sigh (as a man which had inward feeling of the losse of his Countrey and libertie, especially for that his eldest sonne was slaine in a battell on that side of the mountaines, whom hee most entirely loved) that hee remembred in his fathers life time when hee was very olde, and himselfe a yong man, that there came downe into that large halley of Guiana, a nation from so farre off as the Sunne slept, (for such were his owne wordes) with so great a multitude as they coulde not bee numbred nor resisted, and that they wore large coates, and hattes of crimson colour, which colour hee expresse, by shewing a piece of red wood, wherewith my tent was supported, and that they were called Orejones, and Epuremei, those that had slaine and rooted out so many of the ancient people, as there were leaues in the wood vpon all the trees, and had nowe made themselves Lords of all, euen to that mountaine foote called Curaa, sauing onely of two nations, the one called Awarawaqueri, and the other Cassipagotos, and that in the last battell fought betweene the Epuremei, and the Iwarawaqueri, his eldest sonne was chosen to carry to the aide of the Iwarawaqueri, a great troupe of the Orenoqueponi, and was there slaine with all his people and friendes, and that hee had now remaining but one sonne: and farther tolde mee that those Epuremei had built a great Towne called

Orejones are the gentlemen of Peru. Lop de Gomar. Hist. Gen. cap. 119.

The towne of Macareguari.

Macu-

Macureguarai at the said mountaine foote, at the beginning of the great plaines of Guiana, which haue no ende: and that their houses haue many roomes, one ouer the other, and that there in the great King of the Orejones and Epuremei kept three thousande men to defend the borders against them, and withall dayly to inuade and slay them: but that of late yeeres since the Christians offered to inuade his territories, and those frontiers, they were all at peace, and traded one with another, sauing onely the Iwarawaqueri, and those other nations vpon the head of the riuer of Caroli, called Cassipagotos, which we after wards discovered, each one holding the Spaniards for a common enemye.

After hee had answered thus farre, he desired leaue to depart, saying that hee had farre to goe, that hee was olde, and weake, and was euery day called for by death, which was also his owne phrase: I desired him to rest with vs that night, but I could not increate him, but hee tolde mee that at my returne from the countrey aboue, hee would againe come to vs, and in the meane time prouide for vs the best he could, of all that his countrey yeelded: the same night hee returned to Orotona his owne towne, so as hee went that day eight and twentie miles, the weather being very hot, the countrey being situate betweene foure and fise degrees of the Equinoctial.

Orotona lies
betweene 4. and
5. degrees of
Northern lati-
tude.

This Topiawari is helde for the proudest, and wisest of all the Orenoqueponi, and so hee behaued himselfe towards mee in all his answers at my returne, as I marvelled to finde a man of that grauitie and iudgement, and of so good discourse, that had no helpe of learning nor breed.

The next morning we also left the port, and sailed Westward vnto the Riuer, to view the famous Riuer called Caroli, as well because it was marvellous of it selfe, as also for that I vnderstoode it ledde to the strongest nations of all the frontiers, that were enemies to the Epuremei, which are subiects to Inga, Emperour of Guiana, and Manoa, and that night we anchored at another yland called Caiama, of some fise or six miles in length, and the next day arrived at the mouth of Caroli. When we were short of it as lowe or further downe as the port of Morequito wee heard the great roze and fall of the Riuer, but when wee came to enter with our barge and whitties thinking to haue gone vp some fourtie miles to the nations of the Cassipagotos, wee were not able with a barge of eight oares to row one stone cast in an houre, and yet the Riuer is as broad as the Thames at Wolwich, and wee tried both sides, and the middle, and euery part of the Riuer, so as we incamped vpon the bankes adioyning, and sent off our Orenoquepone (which came with vs from Morequito) to giue knowledge to the nations vpon the Riuer of our being there, and that wee desired to see the Lordes of Canuria, which dwelt within the prouince vpon that Riuer, making them know that we were enemies to the Spaniards, (for it was on this Riuer side that Morequito slew the Frier, and those nine Spaniards which came from Manoa, the Citie of Inga, and tooke from them fourtie thousande pezos of golde) so as the next day there came downe a Lord or Casique called Wanuretona with many people with him, and brought all store of provisions to entertaine vs, as the rest had done. And as I had before made my coming knowne to Topiawari, so did I acquaint this Casique therewith, and howe I was sent by her Maestie for the purpose aforesaide, and gathered also what I could of him touching the estate of Guiana, and I founde that those also of Caroli were not onely enemies to the Spaniards, but most of all to the Epuremei, which abound in golde, and by this Wanuretona, I had knowledge that on the head of this Riuer were three mighty nations, which were seated on a great lake, from whence this Riuer descended, & were called Cassipagotos, Eparagotos, and Arawagotos, and that all those either against the Spaniards, or the Epuremei would ioyne with vs, and that if wee entered the land ouer the mountaines of Curaa, we should satisfie our selues with gold and aliother good things: he told vs farther of a nation called Iwarawaqueri before spoken off, that held dayly warre with the Epuremei that inhabited Macureguarai the first ciuill towne of Guiana, of the subiects of Inga the Emperour.

head of the ri-
uer Caroli.

Upon this riuer one Captaine George, that I tooke with Berreo tolde mee there was a great fluer of fine, and that it was neere the bankes of the saide riuer. But by this time as well Orenoque, Caroli, as all the rest of the riuers were risen foure or fise foote in height, so as it was not possible by the strength of any men, or with any boat whatsoever to rowe into the Riuer against the streame. I therefore sent Captaine Thyn, Captaine Greeneuile, my nephew Iohn Gylbert, my tosen Burshead Gorges, Captaine Clarke, and some thirtie shotte moze to coast the Riuer by land, and to goe to a towne some twentie miles ouer the valley called Amnatapoi, and they found guides there, to goe farther towards the mountaine foote to another great towne called Capurepana, belonging to a Casique called Haharacoa (that was a nephew to olde Topiawari King of Arromaia our chiefe friend) because this towne and prouince of Capurepana adioyned to Macureguarai,

lesse nation.

cure guarai, which was a frontier towne of the Empire: and the meane while my selfe with Cap-
taine Gifford, Captaine Calfield, Edward Hancocke, and some halfe a dosen shotte marched ouer
land to viewe the strange ouerfalls of the riuer of Caroli which rozed so farre off, and also to see the
plaines adioyning, and the rest of the prouince of Canuri: I sent also Captaine Whiddon, Willi-
am Connecke, and some eight shotte with them, to see if they coulde finde any Minerall stone a-
longst the riuer side. When we were come to the tops of the first hilles of the plaines adioyning
to the riuer, we behelde that wonderfull breach of waters, which ranne downe Caroli: and might
from that mountaine see the riuer howe it ranne in three parts, aboue twentie miles off, and there
appeared some tenne or twelue ouerfalls in sight, euery one as high ouer the other as a Church-
tower, which fell with that fury, that the rebound of water made it seeme, as if it had bene all cou-
red ouer with a great shower of raine: and in some places we tooke it at the first for a smoke that
had risen ouer some great towne. For mine owne part I was well perswaded from thence to
haue returned, being a very ill footeman, but the rest were all so desirous to goe neere the saide
strange thunder of waters, as they drew me on by little and little, till wee came into the next val-
ley where we might better discern the same. I neuer saw a more beautifull countrey, nor more
liuely prospectes, hills so raised here and there ouer the valleys, the riuer winding into diuers bran-
ches, the plaines adioyning without bush or stubble, all faire greene grasse, the ground of hard sand
easie to march on, either for horse or foote, the deere crossing in euery path, the birdes towards the
euening singing on euery tree with a thousand senerall tunes, cranes and herons of white, crim-
son, and carnation pearching in the riuers side, the aire fresh with a gentle Easterly winde, and
euery stone that we stouped to take up, promised either golde or siluer by his complexion. Your
Lordship shall see of many sorts, and I hope some of them cannot bee bettered vnder the Sunne,
and yet we had no meanes but with our daggers and fingers to teare them out here and there, the
rockes being most hard of that minerall Sparre aforesaide, which is like a flint, and is altogether
as hard or harder, and besides the veins lye a fathome or two deepe in the rockes. But we wanted
all things requisite saue onely our desires and good will to haue performed more if it had pleased
God. To be short, when both our companies returned, each of them brought also senerall sorts
of stones that appeared very faire, but were such as they found loose on the ground, and were for
the most part but coloured, and had not any golde fired in them, yet such as had no iudgement or
experience kept al that glittered, and would not be perswaded but it was rich because of the lustre,
and brought of those, and of Marquesite with all, from Trinidad, and haue deliuered of those
stones to be tried in many places, and haue thereby bzied an opinion that all the rest is of the same:
yet some of these stones I shewed after ward to a Spaniard of the Caracas, who tolde mee that it
was El Madre del oro, that is the mother of gold, and that the Mine was farther in the ground.

But it shall be found a weake policie in me, either to betray my selfe, or my countrey with ima-
ginations, neither am I so farre in loue with that lodging, watching, care, perill, diseases, ill sa-
uours, bad fare, and many other mischiefes that accompany these voyages, as to woo my selfe a-
gain into any of them, were I not assured that the Sunne couereth not so much riches in any
part of the earth. Captaine Whiddon, and our Chirurgion Nicholas Millechap brought mee a
kinde of stones like Saphires, what they may proue I know not, I shewed them to some of the O-
renoqueponi, and they promised to bring mee to a mountaine, that had of them very large pieces
growing Diamond wise: whether it be Christall of the mountaine, Bristol-Diamond, or Saphire
I doe not yet know, but I hope the best, sure I am that the place is as likely as those from whence
all the rich stones are brought, and in the same height or very neere.

On the left hand of this riuer Caroli are seated those nations which are called Iwarawakeri
before remembred, which are enemies to the Epuremei: and on the head of it adioyning to the great
lake Calsipa, are situate those other nations which also resist Inga, and the Epuremei, called Casse-
pagotos, Eparegotos, and Arrawagotos. I farther vnderstood that this lake of Calsipa is so
large, as it is aboute one dayes tourney for one of their Canoas to crosse, which may bee some four-
tie miles, and that therein fall diuers riuers, and that great store of graines of gold are found in
the Summer time when the lake falleth by the banckes, in those branches.

There is also another goodly riuer beyond Caroli which is called Arui, which also runneth
thorow the lake Calsipa, and falleth into Orenoque farther West, making all that land betwene
Caroli and Arui an yland, which is likewise a most beautifull countrey. Next vnto Arui there
are two riuers Atoica and Caora, and on that branch which is called Caora, are a nation of
people, whose heads appeare not aboue their shoulders; which though it may be thought a meere
fable, yet for mine owne part I am resolued it is true, because euery childe in the prouinces of
Arromaia and Canuri affirme the same: they are called Ewaipanoma: they are reported to
haue

haue their eyes in their shoulders, and their mouthes in the middle of their breasts, and that a long craine of haire groweth backward betweene their shoulders. The sonne of Topiawari, which I brought with me into England told me that they are the most mighty men of all the land, and vse bowes, arrowes, and clubbes thrice as big as any of Guiana, or of the Orenoqueponi, and that one of the Iwarawakeri tooke a prisoner of them the yeere before our arrivall there, and brought him into the borders of Aromaia his fathers countrey. And farther when I seemed to doubt of it, hee told me that it was no wonder among them, but that they were as great a nation, and as common as any other in all the provinces, and had of late yeeres slaine many hundreds of his fathers people, and of other nations their neighbours, but it was not my chance to heare of them till I was come away, and if I had but spoken one worde of it while I was there, I might haue brought one of them with mee to put the matter out of doubt. Such a nation was written of by Mandevile, whose reports were holden for fables many yeeres, and yet since the East Indies were discovered, we find his relations true of such things as heretofore were held incredible: whether it be true or no, the matter is not great, neither can there bee any profit in the imagination; for mine owne part I saw them not, but I am resolved that so many people did not all combine, or forgethinke to make the report.

When I came to Cumana in the West Indies afterwards by chance I spake with a Spaniard dwelling not farre from thence, a man of great travell, and after hee knew that I had bene in Guiana, and so farre directly West as Caroli, the first question hee asked me was, whether I had seene any of the Ewaipanoma, which are those without heads: who being esteemed a most honest man of his word, and in all things else, tolde mee that hee had seene many of them: I may not name him, because it may be for his disadvantage, but hee is well knownen to Monsieur Mucherons sonne of London, and to Peter Mucheron merchant of the Flemish shippe that was there in trade, who also heard what he avowed to be true of those people.

The fourth river to the West of Caroli is Casnero which falleth into Orenoque on this side of Amapaia, and that river is greater then Danubius, or any of Europe: it riseth on the South of Guiana from the mountaines which divide Guiana from Amazonas, and I thinke it to bee navigable many hundred miles: but wee had no time, meanes, nor season of the yeere, to search those rivers for the causes aforesayd, the Winter being come upon vs, although the Winter and Summer as touching colde and heate differ not, neither doe the trees ever sensibly lose their leaves, but haue alwayes fruit either ripe or greene, and most of them both blossome, leaves, ripe fruit, and greene at one time: but their Winter onely consisteth of terrible raines, and overflowing of the rivers, with many great stormes and gulses, thunder and lightnings, of which we had our fill, ere we returned.

On the North side, the first river that falleth into Orenoque is Cari, beyond it on the same side is the river of Limo, betweene these two is a great nation of Canibals, and their chiefe towne beareth the name of the river, and is called Acamacari: at this towne is a continuall market of women for three or foure hatchets a piece, they are bought by the Arwacas, and by them sold into the West Indies. To the West of Limo is the river Pao, beyond it Caturi, beyond that Voari and Capuri which falleth out of the great river of Meta, by which Berreo descended from Nuevo reyno de Granada. To the Westward of Capuri is the province of Amapaia, where Berreo wintered, and had so many of his people popponed with the tawny water of the marshes of the Anebas. About Amapaia toward Nuevo reyno fall in Meta, Pato, and Casanar. To the West of those towards the provinces of the Ashaguas and Catetios are the rivers of Beta, Dawney, and Vbarro, and toward the frontier of Peru are the provinces of Thomebamba, and Caxamalca. Adioyning to Quito in the North side of Peru are the rivers of Guiacar and Goauar: and on the other side of the sayd mountaynes the river of Papamene which descendeth into Maranon or Amazonas passing thorough the province Mutylones where Don Pedro de Osua who was slaine by the traytour Agiri before rehearsed, built his brigandines, when he sought Guiana by the way of Amazonas.

Betweene Dawney and Beta lyeth a famous Island in Orenoque now called Baraquan (for above Meta it is not knownen by the name of Orenoque) which is called Achule, beyond which, ships of burden cannot passe by reason of a most forcible overfall, and current of waters: but in the eddy al smaller vessels may be drawn euen to Peru it selfe: But to speake of more of these rivers without the description were but tedious, and therefore I will leaue the rest to the description. This river of Orenoque is navigable for ships little lesse then 1000 miles, and for lesser vessels neere 2000. By it (as aforesayd) Peru, Nuevo reyno, and Popaian, may be invaded: it also leadeth to the great empire of Inga, & to the provinces of Amapaia, and Anebas which abound

They retorne

The last conference of Sir Walter Raleigh with Topiawari, whose sonne he brought into England.

Counsell to be followed in other conquests

Macureguarai first towne of Guiana, and of rich and apparelled people.

in gold: his branches of Cosnero, Manta, Caora descended from the middle land & valley, which lieth betweene the easter prouince of Peru and Guiana; and it falles into the sea betweene Marannon and Trinidad in two degrees and a halfe: all which your Honours shall better perceiue in the general description of Guiana, Peru, Nueuoreyno, the kingdome of Popayan, and Roidas, with the prouince of Venecuela, to the bay of Vraba, behind Carragena Westward: and to Amazonas Southward. While we lay at ankor on the coast of Canuri, and had taken knowledge of all the nations vpon the head and branches of this riuer, and had found out so many several people, which were enemies to the Epuremei, and the new conquerours: I thought it time lost to linger any longer in that place, especially for that the fury of Orenoque began dayly to threaten vs with dangers in our returne: for no halfe day passed, but the riuer began to rage and ouerflowe very fearefully, and the raines came downe in terrible showers, and gusses in great abundance: and withall, our men began to crie out for want of shifte, for no man had place to bestowe any other apparell then that which he ware on his backe, and that was thoroughly washt on his body for the most part tenne times in one day: and we had now bene wel neere a moneth, euery day passing to the Westward farther and farther from our shippes. Wee therefore turned towards the East, and spent the rest of the time in discovering the riuer towards the sea, which we had not viewed, and which was most materiall.

The next day following we left the mouth of Caroli, and arriued againe at the port of Morequito where we were before: for passing downe the streame we went without labour, and against the winde, little lesse then a hundred miles a day. Assoone as I came to ankor, I sent away one for oloe Topiawari, with whom I much desired to haue further conference, and also to deale with him for some one of his countrey, to bring with vs into England, as well to learne the language, as to conferre withall by the way, the time being now spent of any longer stay there. Within three houres after my messenger came to him, he arriued also, and with him such a rabble of all sorts of people, and euery one laden with somewhat, as if it had beene a great market or faire in England: and our hungry companies clustered thicke and threefold among their baskets, euery one laying hand on what he liked. After he had rested a while in my tent, I shut out all but our selues, and my interpreter, and told him that I knew that both the Epuremei and the Spaniards were enemies to him, his countrey and nations: that the one had conquered Guiana already, and the other sought to regaine the same from them both: and therefore I desired him to instruct me what he could, both of the passage into the golden parts of Guiana, and to the ciuill townes and apparelled people of Inga. Wee gaue mee an answer to this effect: first that hee could not perceiue that I meant to goe onward towards the citie of Manoa, for neither the time of the yeere serued, neither could hee perceiue any sufficient numbers for such an enterprize: and if I did, I was sure with all my company to bee buried there, for the Emperour was of that strength, as that many times so many men more were too fewe: besides hee gaue mee this good counsell and aduised mee to holde it in minde (as for himselfe hee knewe, hee could not liue till my returne) that I should not offer by any meanes hereafter to invade the strong parts of Guiana without the helpe of all those nations which were also their enemies: for that it was impossible without those, either to bee conducted, to be victualled, or to haue ought caried with vs, our people not being able to indure the march in so great heate, and trauell, vnlesse the borderers gaue them helpe, to carie with them both their meate and furniture: For hee remembered that in the plaines of Macureguarai three hundred Spaniards were ouerthrowen, who were tired out, and had none of the borderers to their friendes: but meeting their enemies as they passed the frontier, were environed on all sides, and the people setting the long drie grasse on fire, smothered them, so as they had no breath to fight, nor could discerne their enemies for the great smoke. He told me farther that 4 daies iourney from his towne was Macureguarai, and that those were the next and merest of the subiects of Inga, and of the Epuremei, and the first towne of apparelled and rich people, and that all those plates of gold which were scattered among the borderers and caried to other nations farre and neere, came from the sayd Macureguarai and were there made, but that those of the land within were farre finer, and were fashioned after the images of men, beastes, birds, and fishes. I asked him whether hee thought that those companies that I had there with me, were sufficient to take that towne or no: He told me that he thought they were. I then asked him, whether he would assist me with guides, and some companies of his people to ioyne with vs: He answered that he would go himselfe with al the borderers, if the riuers did remaine sozdable, vpon this condition that I would leaue with him til my return againe fifty souldiers, which hee undertooke to victuall: I answered that I had not aboue fiftie good men in all there, the rest were labourers and rowers, & that I had no prouision to leaue with them

them of powder, shot, apparell, or ought else, and that without those things necessary for their defence, they should bee in danger of the Spaniards in my absence, who I knewe would vse the same measure towards mine, that I offered them at Trinidad: And although vpon the motion Captaine Calfeild, Captaine Grenuile, my nephew Iohn Gilbert and diuers others were desirous to stay, yet I was resolu'd that they must needs haue perished, for Berico expected daylie a supply out of Spaine, and looked also hourely for his sonne to come downe from Nueuo reyno de Granada, with many horse and foote, and had also in Valencia in the Caracas, two hundred horse ready to march, and I could not haue spared aboue fortie, and had not any store at all of powder, leade, or match to haue left with them, nor any other provision, either spade, pickeaxe, or ought else to haue fortified withall.

When I had giuen him reason that I could not at this time leaue him such a companie, he then desired mee to forbear him and his countrey for that time, for he assured mee that I should bee no sooner thre dayes from the coast, but those Epuremei would inuade him, and destroy all the remaine of his people and friendes, if hee should any way either guide vs or assist vs against them.

He further alleaged, that the Spaniards sought his death, and as they had already murdered his nephew Morequito lord of that prouince, so they had him seuentene dayes in a chaine before hee was king of the countrey, and ledde him like a dog from place to place, vntill hee had payde an hundred plates of golde, and diuers chaines of Syleen-stones for his ranome: and now since he became owner of that prouince, that they had many times layd waite to take him, and that they would bee now more vehement, when they should vnderstand of his conference with the English, and because, sayd hee, they would the better displant me, if they cannot lay handes on mee, they haue gotten a nephew of mine called Eparacano, whom they haue Christened Don Iuan, and his sonne Don Pedro, whom they haue also apparell'd and armed, by whom they seeke to make a partie against me in mine owne countrey: hee also had taken to wife one Louiana of a strong familie, which are borderers and neighbours, and my selfe now being olde and in the handes of death am not able to trauell nor to thiste, as when I was of yonger yeeres: hee therefore prayed vs to deferre it till the next yeere, when he would vndertake to draw in all the borderers to serue vs, and then also it would bee more seasonable to trauell, for at this time of the yeere, wee should not bee able to passe any riuer, the waters were and would bee so growen ere our returne.

He farther told me, that I could not desire so much to inuade Macureguari, and the rest of Guiana, but that the borderers would be more vehement then I, for hee peeled for a chiefe cause that in the warres with the Epuremei, they were spoyled of their women, and that their wiues and daughters were taken from them, so as for their owne parts they desired nothing of the golde or treasure, for their labours, but onely to recouer women from the Epuremei: for hee farther complayned very sadly (as it had bene a matter of great consequence) that whereas they were wont to haue tenne or twelue wiues, they were now inforced to content themselves with three or foure, and that the lords of the Epuremei had fifty or a hundred: And in truth they war more for women then either for gold or dominion: For the lords of countreys desire many children of their owne bodie, to increase their races and kinreds, for in those consist their greatest trust and strength. Diuers of his followers afterwards desired mee to make haste againe, that they might sacke the Epuremei, and I asked them of what? They answered, of their women for vs, and their gold for you: for the hope of those many of women they more desire the war, then either for gold, or for the recovery of their ancient territories. For what betwene the subiects of Inga, and the Spaniards, those frontiers are growen thinne of people, and also great numbers are fled to other nations farther off for feare of the Spaniards.

After I receiued this answer of the old man, we fell into consideration, whether it had bene of better aduice to haue entred Macureguari, and to haue begun a warre vpon Inga at this time, yea or no, if the time of the yeere, and all things else had sorted. For mine owne part (as we were not able to march it for the riuers, neither had any such strength as was requisite, and durst not abide the coming of the Winter, or to tarry any longer from our ships) I thought it were euill for vsell to haue attempted it at that time, although the desire of gold will answer many obiections: but it would haue bin in mine opinion an vtter overthrow to the enterprize, if the same should be hereafter by her Maiesty accepted: for then (whereas now they haue heard we were enemies to the Spaniards & were sent by her Maiesty to relieue them) they would as good cheape haue ioyned with the Spaniards at our returne, as to haue peeled vnto vs, whē they had proued that we came both for one errant, and that both sought but to sacke & spoile them, but as yet our desire of gold,

of our purpose of inuasion is not knowen to them of the empire : and it is likely that if her Maestie vndertake the enterprize, they will rather submit themselves to her obedience then to the Spaniards, of whose cruelty both themselves and the borderers haue already tasted : and therefore till I had knowen her Maesties pleasure, I would rather haue lost the sacke of one or two townes (although they might haue bene very profitable) then to haue defaced or indangered the future hope of so many millions, & the great good, & rich trade which England may be possessed of thereby. I am assured now that they will all die euen to the last man against the Spaniards in hope of our succour and returne : whereas otherwise if I had either layd handes on the borderers, or ransomed the lords, as Berreo did, or inuaded the subjects of Inga, I know all had bene lost for hereafter.

After that I had resolved Topiawari lord of Aromaia, that I could not at this time leaue with him the companies he desired, and that I was contented to forbear the enterprize against the Epuremei till the next yeare, he freely gaue me his onely sonne to take with me into England, and hoped, that though hee himselfe had but a short time to liue, yet that by our meanes his sonne should be established after his death : and I left with him one Francis Sparrow, a seruant of captain Gifford, (who was desirous to carie, and could describe a countrey with his pen) and a boy of mine called Hugh Goodwin, to learne the language. I after asked the maner how the Epuremei wrought those plates of golde, and howe they could melt it out of the stone; hee tolde mee that the most of the golde which they made in plates and images, was not leuered from the stone, but that on the lake of Manoa, and in a multitude of other riuers they gathered it in graines of perfect gold and in peeces as bigge as small stones, and that they put it to a part of copper, otherwise they could not worke it, and that they vled a great earthen pot with holes round about it, and when they had mingled the gold and copper together, they fastened canes to the holes, and so with the breath of men they increased the fire till the metall ran, & then they cast it into moulds of stone and clay, and so make those plates and images. I haue sent your Honours of two sortes such as I could by chance recouer, more to shewe the maner of them, then for the value : For I did not in any sort make my desire of gold knowen, because I had neither time, nor power to haue a greater quantity. I gaue among them manie more peeces of gold, then I receiued, of the new money of 20 shillings with her Maesties picture to weare, with promise that they would become her seruants thenceforth.

I haue also sent your Honours of the ore, whereof I know some is as rich as the earth yeeldeth any, of which I know there is sufficient; if nothing else were to be hoped for. But besides that we were not able to carrie and search the hills, so we had neither pioneers, barres, sledges, nor wedges of yron to breake the ground, without which there is no working in mines : but wee saw all the hills with stones of the colour of gold and silver, and we tried them to be no Marquesite, and therefore such as the Spaniards call Ekinadre del oro, or, The mother of gold, which is an vndoubted assurance of the generall abundance; and my selfe saw the outside of many mines of the Sparre, which I know to be the same that all couer in this world, and of those, more then I will speake of.

Hauiing learned what I could in Canuri and Aromaia, and receiued a faithfull promise of the principallest of those prouinces to become seruants to her Maestie, and to resist the Spaniards, if they made any attempt in our absence, and that they would draw in the nations about the lake of Cassipa, and those Iwarawaqueri, I then parted from olde Topiawari, and receiued his sonne for a pledge betweene vs, and left with him two of ours as aforesayd. To Francis Sparrowe I gaue instructions to trauell to Marcureguarai, with such merchandizes as I left with them, thereby to learne the place, and if it were possible, to goe on to the great citie of Manoa : which being done, we weped ankoy, and coasted the riuer on Guiana side, because wee came vpon the North side, by the launes of the Saima and Wikiri.

There came with vs from Aromaia a Cassique called Putijma, that commanded the prouince of Warapana, (which Putijma slewe the nine Spaniards vpon Caroli before spoken of) who desired vs to rest in the Port of his countrey, promising to bring vs vnto a mountaine adioyning to his towne that had stones of the colour of golde, which hee performed. And after wee had rested there one night, I went my selfe in the morning with most of the Gentlemen of my company, ouer land towards the said mountaine, marching by a riuers side called Manoa, leauing on the right hand a towne called Tuteritona, standing in the prouince of Taracoa, of the which Wariaaremagoto is principall. Beyond it lieth another towne towards the South, in the valley of Amariocapana, which beareth the name of the sayd valley, whose plaines stretch themselves some sixtie miles in length, East and West, as faire ground, and as beautiful

fields

fields, as any man hath euer seene, with diuers coppies scattered here and there by the riuers side, and all as full of deere as any forrest or parke in England, and in euerie lake and riuier the like abundance of fish and foule, of which Iraparragora is lord.

From the riuier of Mana, we crost another riuier in the said beautiful valley called Oiana, & re- Oiana.
sted our selues by a cleere lake, which lay in the middle of the said Oiana, and one of our guides kindling vs fire with two stickes, wee stayed a while to drie our shirts, which with the heate hong very wette and heauie on our sholders. Afterwards wee sought the foyd to passe ouer towards the mountaine called Iconuri, where Putijma foze told vs of the mine. In this lake we saw one of the great fishes, as big as a wine pipe, which they call Manati, being most excellent and hol- Great fishes
called Manati
most excellent
meate.
some meate. But after I perceiued, that to passe the said riuier would require halfe a dayes march moze, I was not able my selfe to indure it, and therefore I sent Capraine Keymis with fire shot to goe on, and gaue him order not to returne to the port of Putijma, which is called Chiparepare, but to take leisure, and to march downe the sayd valley, as farre as a riuier called Cumaca, where I promised to meete him againe, Putijma himselfe promising also to bee his guide: and as they marched, they left the towne of Emparepana, and Capurepana, on the right hand, and marched from Putijmas house, downe the sayd valley of Amariocapana, and wee returning the same day to the riuers side, saw by the way many rockes, like unto gold ore, and on the left hand, a round mountaine which consisted of minerall stone.

From hence we rowed downe the streame, coasting the prouince of Parino: As for the branches of riuers which I ouerpasse in this discourse, those shall be better expressed in the description with the mountaines of Aio, Ara, and the rest, which are situate in the prouinces of Parino and Carricurina. When we were come as farre down as the land called Ariacoa, (where Orenoque deuidenth it selfe into thre great branches, each of them being most goodly riuers) I sent away captaine Henric Thin, and captaine Greeneuile with the galley, the neerest way, and tooke with mee captaine Gifford, captaine Calfield, Edward Porter, and captaine Eynos with mine owne barge, and the two wherries, and went downe that branch of Orenoque, which is called Cararoopana, which leadeth towards Emeria the prouince of Carapana, and towards the East sea, as well to finde out captaine Keymis, whome I had sent ouer land, as also acquaint my selfe with Carapana, who is one of the greatest of all the lords of the Orenoqueponi: and when I came to the riuier of Cumaca (to which Putijma promised to conduct captaine Keymis) I left captaine Eynos and master Porter in the sayd riuier to expect his comming, & the rest of vs rowed downe the streame towards Emeria.

In this branch called Cararoopana were also many goodly Islands, some of sixe miles long, some of ten, and some of twenty. When it grew towards sunne-set, we entred a branch of a riuier that fell into Orenoque called Winicapora: where I was enformed of the mountaine of Chzi- Winicapora.
fall, to which in trueth for the length of the way, and the euill season of the peere, I was not able to march, nor abide any longer upon the iourney: wee saw it as farre off and it appeared like a white Church-tower of an exceeding height. There falleth ouer it a mighty riuier which cou- A mighty ca-
taract or ouer-
fall of water.
theth no part of the side of the mountaine, but russeth ouer the toppes of it, and falleth to the ground with so terrible a noyse and clamor, as if a thousand great bels were knockt one against another. I thinke there is not in the world so strange an ouer-fall, nor so wonderfull to behold: Berreo told mee that there were Diamonds and other precious stones on it, and that they shined very farre off: but what it hath I know not, neither durst he or any of his men ascend to the top of the sayd mountaine, those people adioynning being his enemies (as they were) and the way so it so impassable.

Upon this riuier of Winicapora wee rested a while, and from thence marched into the coun- Wacarina.
tre to a town called after the name of the riuier, whereof the captaine was one Timitwara, who also offered to conduct mee to the top of the sayd mountaine called Wacarina: But when wee came in first to the house of the sayd Timitwara, being upon one of their sayd feast dayes, we found them all as drunke as beggers, and the pots walking from one to another without rest: we that were weary, and hote with marching, were glad of the plenty though a small quantitie satisfied vs, their drinke being very strong and headie, and so rested our selues a while; after wee had fedde, we drew our selues backe to our boats, upon the riuier and there came to vs all the lordes of the countrey, with all such kinde of victuall as the place yeelded, and with their delicate wine of Pinas, and with abundance of hens, and other prouisions, and of those stones which wee call Splene stones.

Wee vnderstood by the chieftaines of Winicapora, that their lord Carapana was departed from Emeria which was now in sight, & that he was fled to Cairamo, adioynning to the mountaines

of Guiana, ouer the balley called Amariocapana, being perswaded by those tenne Spaniards which lay at his house, that we would destroy him, and his countrey.

But after these Cassiques of Winicapora & Saporatona his followers perceiued our purpose, and saw that we came as enemies to the Spaniards onely, and had not so much as harmed any of those nations, no though we found them to be of the Spaniards owne seruants, they assured vs that Carapana would be as ready to serue vs, as any of the lords of the prouinces, which we had passed; and that he durst doe no other till this day but entertaine the Spaniards, his countrey lying so directly in their way, and next of all other to any entrance that should be made in Guiana on that side.

And they farther assured vs, that it was not for feare of our comming that he was remooued, but to be acquitted of the Spaniards or any other that should come hereafter. For the prouince of Cairoma is situate at the mountaine foote, which deuideth the plaines of Guiana from the countreys of the Orenoqueponi: by meanes whereof if any should come in our absence into his townes, hee would slip ouer the mountaines into the plaines of Guiana among the Epuremei, where the Spaniards durst not follow him without great force.

But in mine opinion, or rather I assure my selfe, that Carapana (being a notable wise and subtil fellow, a man of one hundred yeeres of age, and therefore of great experience) is remooued, to looke on, and if he finde that we returne strong he will be ours, if not, hee will excuse his departure to the Spaniards, and say it was for feare of our comming.

Wee therefore thought it bootlesse to rowe so farre downe the streame, or to seeke any farther of this olde for: and therefore from the riuer of Waricapana (which lieth at the entrance of Emeria) we returned againe, and left to the Eastward those foure riuers which fall from the mountaines of Emeria into Orenoque, which are Waracayari, Coirama, Akaniri, and Iparoma: below those foure are also these branches and mouches of Orenoque, which fall into the East sea, whereof the first is Araturi, the next Amacura, the third Barima, the fourth Wana, the fift Moroo-ca, the sixt Paroma, the last Wijmi: beyond them there fall out of the land betweene Orenoque and Amazones 14 riuers which I forbear to name, inhabited by the Arwacas and Canibals.

It is now time to returne towards the North, and wee found it a wearisome way backe from the borders of Emeria, to recouer by againe to the head of the riuer Carerupana, by which we descended, and where we parted from the galley, which I directed to take the next way to the port of Toparimaca, by which we entred first.

All the night it was stormie and darke, and full of thunder and great showers, so as wee were driuen to keepe close by the bankes in our small boats, being all heartily afraid both of the billow and terrible current of the riuer. By the next morning we recouered the mouth of the riuer of Cumaca, where we left captaine Eynus and Edward Porter to attend the comming of captaine Keymis ouer land: but when wee eured the same, they had heard no newes of his arriual, which bred in vs a great doubt what might become of him: I rowed up a league or two farther into the riuer, shooting off pieces all the way, that hee might know of our being there. And the next morning wee heard them answere vs also with a piece: wee tooke them aboard vs, and tooke our leaue of Putima their guide, who of all others most lamented our departure, and offered to send his sonne with vs into England, if we could haue stayed till he had sent backe to his towne: but our hearts were cold to behold the great rage and increase of Orenoque, and therefore departed, and turned toward the West, till we had recouered the parting of the thre branches aforesayd, that we might put downe the streame after the galley.

The next day we landed on the Island of Assapano (which deuideth the riuer from that branch by which we sent downe to Emeria) and there feasted our selues with that beast which is called Armadilla presented vnto vs before at Winicapora, and the day following we recouered the galley at anko at the port of Toparimaca, & the same euening departed with very foule weather and terrible thunder, and showers, for the Winter was come on very farre: the best way, we went no lesse then 100 miles a day, downe the riuer: but by the way we entred, it was impossible to returne, for that the riuer of Amana, being in the bottome of the bay of Guanipa, cannot be sayled backe by any meanes, both the brize and current of the sea were so forcible: and therefore we followed a branch of Orenoque called Capuri, which entred into the sea Eastward of our ships, to the end we might beare with them before the wind, and it was not without neede, for we had by that way as much to crosse of the maine sea after we came to the riuers mouth, as between Grauelyn and Douer, in such boats as your Hon. hath heard.

To speake of what past homeward were tedious, either to describe or name any of the riuers, Islands, or villages of the Tiuiuias which dwell on trees: we will leaue all those to the generall

mappe:

The port of
Toparimaca.

mappe: and to be short, when we were arrived at the sea side, then grew our greatest doubt, and the bitterest of all our journey forepassed, for I protest before God, that we were in a most desperate estate: for the same night which we anchored in the mouth of the river of Capuri, where it falleth into the sea, there arose a mightie storme, and the rivers mouth was at least a league broad, so as we ranne before night close under the land with our small boates, and brought the Galley as neere as we could, but she had as much a doe to live as could be, and there wanted little of her sinking, and all those in her: for mine owne part I confesse, I was very doubtfull which way to take, either to goe over in the pestered Galley, there being but fire foote water over the sandes, for two leagues together, and that also in the channell, and she drew five: or to adventure in so great a billow, and in so doubtfull weather, to crosse the seas in my barge. The longer we tarried the worse it was, and therefore I tooke Captaine Gifford, Captaine Calfeild, and my cosen Greeneuile into my barge; and after it cleared up, about midnight we put our selves to Gods keeping, and thrust out into the sea, leauing the Galley at anker, who durst not adventure but by day-light: And so being all very sober, and melancholy, one faintly chearing another to shewe courage, it pleased God that the next day about nine of the clocke, wee descried the Ilande of Trinidad, and steering for the neerest part of it, wee kept the shore till wee came to Curipan, where wee founde our shippes at ankor, then which there was neuer to vs a more ioyfull sight.

Now that it hath pleased God to sende vs safe to our shippes, it is time to leaue Guiana to the Sunne, whom they worships, and steare away towards the North: I will therefore in a fewe wordes finish the discovery thereof. Of the severall nations which we found upon this discovery I will once againe make repetition, and howe they are affected. At our first entrance into Amana, which is one of the outlets of Orenoque, we left on the right hand of vs in the bottom of the bay, lying directly against Trinidad, a nation of inhumaine Canibals, which inhabit the rivers of Guanipa and Berbeese; in the same bay there is also a third river which is called Areo, which riseth on Paria side towards Cumaná, and that river is inhabited with the Wikiri, whose chiefe towne upon the sayd river is Sayma; In this bay there are no more rivers, but these three before rehearsed, and the foure branches of Amana, all which in the Winter thrust so great abundance of water into the sea, as the same is taken up fresh, two or three leagues from the land. In the passages towards Guiana (that is, in all those landes which the eight branches of Orenoque fashion into Ilands) there are but one sort of people called Tiniuas, but of two castes as they tearme them, the one called Ciawani, the other Waraweei, and those warre one with another.

On the hithermost part of Orenoque, as at Toparimaca, and Winicapora, those are of a nation called Nepoios, and are of the followers of Carapana, Lord of Emeria, Betweene Winicapora and the port of Morequito which standeth in Aromaia, and all those in the valley of Amariocapana are called Orenoqueponi, and did obey Morequito, and are now followers of Topiawari. Upon the river of Caroli, are the Canuri, which are governed by a woman (who is inheritor of that Province) who came farre off to see our Nation, and asked me diuerse questions of her Maiestie, being much delighted with the discourse of her Maiesties greatnesse, and wondering at such reports as we truly made of her Highnesse many vertues. And upon the head of Caroli, and on the lake of Cassipa, are the three strong Nations of the Cassipagotos. Right South into the land are the Capurepani, and Emparepani, and beyond those adioyning to Macureguarai (the first citie of Inga) are the Iwarawakeri: all these are professed enemies to the Spaniards, and to the rich Epuremei also. To the West of Caroli are diuerse nations of Canibals, and of those Ewaipanoma without heads. Directly West are the Amapaias and Anebas, which are also marvellous rich in gold. The rest towards Peru we will omit. On the North of Orenoque, betweene it and the West Indies are the Wikiri, Saymi, and the rest before spoken of, all mortall enemies to the Spaniards. On the South side of the maine mouth of Orenoque, are the Arwacas; and beyond them the Canibals and to the South of them the Amazonas.

To make mention of the severall beasts, birds, fishes, fruits, flowers, gummes, sweet woods, and of their severall religions and customes, would for the first require as many volumes as those of Gesnerus, and for the rest another bundle of Decades. The religion of the Epuremei is the same which the Ingas, Emperours of Peru used, which may be read in Cieça, and other Spanish stories, how they beleue the immortalitie of the soule, worship the Sunne, and burie with them aliae their best beloved wiues and treasure, as they likewise doe in Pegu in the East Indies, and other places. The Orenoqueponi bury not their wiues with them, but their iewels, hoping to

A rehearsal & description of all the nations and rivers found in this discovery.

Pedro de Cieça.

injoy

intoy them againe. The Arwacas by the bones of their Lords, and their wiues and friends drinke them in powder. In the graues of the Peruians the Spaniards found their greatest abundance of treasure: the like also is to be found among these people in euery Prouince. They haue all many wiues, and the Lords fine sould to the common sort: their wiues neuer eate with their husbands, nor among the men, but serue their husbands at meales, and afterwarde feede by themselves. Those that are past their younger yeeres, make all their bread and drinke, and worke their corten beds, and doe all else of seruice and labour, for the men doe nothing but hunt, fish, play, and drinke, when they are out of the warres.

I will enter no further into discouise of their manners, lawes and customes: and because I haue not my selfe seene the cities of Inga, I cannot auow on my credit what I haue heard, although it be very likely, that the Emperour Inga hath built and erected as magnificent pallaces in Guiana, as his ancestors did in Peru, which were for their riches and rarenesse most maruellous and exceeding all in Europe, and I thinke of the world, China excepted, which also the Spaniards (which I had) assured me to be true, as also the Nations of the borderers, who being but Salvages to those of the in-land, doe cause much treasure to be buried with them: for I was enformed of one of the Cassiques of the valley of Amariocapana which had buried with him a little before our arriual, a chaire of golde most curiously wrought, which was made either in Macureguaray adioyning, or in Manoa: but if we should haue grieued them in their religion at the first, before they had bene taught better, and haue digged by their graues, we had lost them all: and therefore I helpe my first resolution, that her Maestie should either accept or refuse the enterprise, ere any thing should be done that might in any sort hinder the same. And if Peru had so many heapes of golde, whereof those Ingas were Princes, and that they delighted so much therein; no doubt but this which now liueth and reigneth in Manoa, hath the same honour, and I am assured hath more abundance of golde, within his territorie, then all Peru and the West Indies.

Great riches.

Exceeding commendation of the river of Orenoque.

For the rest, which my selfe haue seene, I will promise these things that follow, which I know to be true. Those that are desirous to discouer and to see many nations, may be satisfied within this river, which bringeth forth so many armes and branches leading to severall countries, and prouinces, about 2000 miles East and West, and 800 miles South and North, and of these, the most eyther rich in golde, or in other marchandizes. The common souldier shall here fight for golde, and pay himselfe in steede of pence, with plates of halfe a foote broad, whereas he breaketh his bones in other warres for prouant and penury. Those commanders and chieftaines that shoot at honour and abundance, shall finde there more rich and beautifull cities, more temples adorne with golden images, more sepulchres filled with treasure, then either Cortez found in Mexico, or Pizarro in Peru: and the shining glorie of this conquest will eclipse all those so farre extended beames of the Spanish nation. There is no countrey which yeeldeth more pleasure to the inhabitants, either for those common delights of hunting, hawking, fishing, fowling, or the rest, then Guiana doth. It hath so many plaines, cleere riuers, abundance of Pheasants, Partridges, Quailles, Railes, Cranes, Herons, and all other fowle: Deere of all sorts, Horses, Hares, Lions, Tygers, Leopards, and diuers other sortes of beastes, either for chase, or food. It hath a kind of beast called Cama, or Anta, as bigge as an English beefe, and in great plentie.

To speake of the severall sorts of euery kind, I feare would be troublesome to the Reader, and therefore I will omit them, and conclude that both for health, good ayre, pleasure, and riches I am resolu'd it cannot bee equalled by any region either in the East or West. Moreover the countrey is so healthfull, as of an hundred persons & more (which lay without shift most sluttishly, and were euery day almost melted with heate in rowing and marching, and suddenly wet againe with great showers, and did eate of all sortes of corrupt fruits, and made meales offresh fish without seasoning, of Tortugas, of Lagartos or Crocodiles, and of all sortes good and bad, without either order or measure, and besides lodged in the open aire euery night) we lost not any one, nor had one ill disposed to my knowledge, nor found any Calentura, or other of those pestilent diseases which dwell in all hot regions, and so neere the Equinoctiall line.

The holtsomenesse of the countrey.

Gold.

Brasil wood, Excellent dyes.

Cotton, Silke, Balsamum, gummes, and Pepper.

Where there is store of gold, it is in effect needlesse to remember other commodities for trade: but it hath towards the South part of the river, great quantities of Brasil-wood, and diuerse berries that die a most perfect crimson and carnation: And for painting, all France, Italy, or the East Indies yeelde none such: For the more the skin is washed, the fairer the colour appeareth, and with which, euen those browne and tawnye women spot themselves, and colour their cheekes. All places yeeld abundance of cotton, of silke, of balsamum, and of those kindes most excellent, and neuer known in Europe, of all sortes of gummes, of Indian pepper: and what else the countries may affoord within the land we knowe not, neither had we time to abide the triall; and

search.

search. The soile besides is so excellent and so full of rivers, as it will carrie sugar, ginger, and all those other commodities, which the West Indies haue.

The nauigation is short, for it may be sayled with an ordinarie winde in six weekes, and in the like time backe againe, and by the way neither lee shore, enemies coast, rockes, nor sandes, all which in the voyages to the West Indies, and all other places we are subiect vnto, as the channell of Bahama, comming from the West Indies, cannot well be passed in the Winter, & when it is at the best, it is a perillous and a fearefull place. The rest of the Indies for calmes, and diseases very troublesome, and the sea about the Bermudas a hellish sea for thunder, lightning, and stormes.

The short, easie, and commodious nauigation to Guiana.

This very yeere there were seuentene sayle of Spanish ships lost in the channell of Bahama, and the great Philip like to haue sunke at the Bermudas was put backe to Saint Iuan de Puerto rico. And so it falleth out in that Nauigation euery yeere for the most part, which in this voyage are not to be feared: for the time of yeere to leaue England is best in Iuly, and the Summer in Guiana is in October, Nouember, December, Ianuarie, Februarie, and March, and then the ships may depart thence in Aprill, and so returne againe into England in Iune, so as they shall neuer be subiect to Winter-weather, either comming, going, or staying there: which for my part, I take to be one of the greatest comforts and encouragements that can be thought on, hauing (as I haue done) tasted in this voyage by the West Indies so many calmes, so much heat, such outrageous gulses, foule weather, and contrarie winde.

1595.

To conclude, Guiana is a countrey that hath yet her maydenhead, neuer sackt, turned, nor wrought, the face of the earth hath not bene tozned, nor the vertue and salt of the soyle spent by manurance, the graues haue not bene opened for golde, the mines not broken with sledges, nor their Images puld downe out of their temples. It hath neuer bene entered by any armie of strength, and neuer conquered or possessed by any christian Prince. It is besides so defensible, that if two forts be builded in one of the Prouinces which I haue seene, the flood setteth in so neere the banke, where the channell also lyeth, that no ship can passe by but within a Pikes length of the artillerie, first of the one, and afterwards of the other: Which two Forts will be a sufficient garde both to the Empire of Inga, and to an hundred other seuerall kingdomes, lying within the said riuer, euen to the citie of Quito in Peru.

There is therefore great difference betwene the easinesse of the conquest of Guiana, and the defence of it being conquered, and the West or East Indies: Guiana hath but one entrance by the sea (if it hath that) for any vessels of burden: so as whosoever shall first possesse it, it shall be found vnaccessible for any enemy, except he come in Wherries, Barges, or Canoas, or else in flat bottomed boates, and if he doe offer to enter it in that manner, the woods are so thicke two hundred miles together vpon the rivers of such entrance, as a mouse cannot sit in a boat vnbit from the banke. By lande it is more impossible to appoach, for it hath the strongest situation of any region vnder the sunne, and is so enuironed with impassable mountaines on euery side, as it is impossible to victuall any company in the passage: which hath bene well proued by the Spanish nation, who since the conquest of Peru haue neuer left five yeeres free from attempting this Empire, or discovering some way into it, and yet of three and twentie seuerall Gentlemen, Knights, and Noblemen, there was neuer any that knewe which way to leade an army by land, or to conduct shippes by sea, any thing neere the said countrey. Orellana, of whom the riuer of Amazonas taketh name, was the first, and Don Antonio de Berreo (whom we displanted) the last: and I doubt much, whether he himselfe or any of his yet knowe the best way into the sayde Empire. It can therefore hardly be regained, if any strength be formerly set downe, but in one or two places; and but two or three crumsters or gallies built, and furnished vpon the riuer within: The West Indies haue many portes, watering places, and landings, and nearer then three hundred miles to Guiana, no man can harbour a shippe, except he knowe one onely place, which is not learned in halfe, and which I will undertake there is not any one of my companies that knoweth, whosoever hearkened most after it.

Besides by keeping one good Fort, or building one towne of strength, the whole Empire is guarded, and whatsoeuer companies shall be afterwarde planted within the land, although in twentie seuerall Prouinces, those shall be able all to reuiewe themselves vpon any occasion eyther by the way of one riuer, or be able to march by land without either wood, bogge, or mountaine: whereas in the West Indies there are fewe townes or Prouinces that can succour or relieue one the other, eyther by land or sea: By land the countreies are either desert, mountaynous, or strong enemies: by sea, if any man inuade to the Eastward, those to the West cannot in many moneths turne against the byze and Eastern wind, besides the Spaniards are therein so dispersed, as they are no where strong, but in Nueva Espanna onely: the Sharpe mountaines, the thornes,

thornes, and poysoned prickles, the sandie and deepe wayes in the valleys, the smothering heate and aire, and want of water in other places are their onely and best defence, which (because those nations that invade them are not victualled or provided to stay, neither have any place to friend adoyning) doe serve them in steede of good armes and great multitudes.

The West Indies were first offered her Maiesties grandfather by Columbus a stranger, in whom there might be doubt of deceit, and besides it was then thought incredible that there were such and so many lands & regions neuer written of before. This Empire is made known to her Maiestie by her owne vassall, and by him that oweth to her moze duetie then an ordinary subject, so that it shall fill soot with the many graces and benefices which I haue receiued to abuse her Highnesse, either with fables or imaginations. The countrey is already discovered, many nations wonne to her Maiesties loue and obedience, and those Spaniards which haue latest and longest laboured about the conquest, beaten out, discouraged and disgraced, which among these nations were thought inuincible. Her Maiestie may in this enterprize employ all those souldiers and gentlemen that are younger brethren, and all captaines and chieftaines that want employment, and the charge will be onely the first setting out in victualling and arming them: for after the first or second yeere I doubt not but to see in London a Contractation house of moze receipt for Guiana, then there is now in Siuill for the West Indies.

And I am resolu'd that if there were but a small army a foote in Guiana, marching towards Manoa the chiefe citie of Inga, he would yeeld to her Maiestie by composition so many hundred thousand pounds yeerely, as should both defend all enemies abroad, and defray all expences at home, and that he would besides pay a garrison of three or foure thousand souldiers very royally to defend him against other nations: For he cannot but knowe, how his predecessors, yea how his owne great vnckles Guascar and Atabalipa sonnes to Guainacapa Emperour of Peru, were (while they contended for the Empire) beaten out by the Spaniards, and that both of late yerres and euer since the said conquest, the Spaniards haue sought the passages and entrep of his countrey: and of their cruelties vsed to the borderers he cannot be ignorant. In which respects no doubt but he will be brought to tribute with great gladnesse, if not, he hath neither shot nor yron weapon in all his Empire, and therefore may easily be conquered.

And I farther remember that Berreo confessed to me and others (which I protest before the Maiestie of God to be true) that there was found among prophesies in Peru (at such time as the Empire was reduced to the Spanish obedience) in their chieftest temples, amongst diuers others which foretold the losse of the said Empire, that from Inglaciera those Ingas should be againe in time to come restored, and deliuered from the seruitude of the said Conquerours. And I hope, as we with these few hands haue displanted the first garrison, and driuen them out of the said countrey, so her Maiestie will giue order for the rest, and either defend it, and hold it as tributary, or conquere and keepe it as Emppesse of the same. For whatsoever Prince shall possesse it, shall be greatest, and if the king of Spaine enioy it, he will become vnrresistable. Her Maiestie hereby shall confirme and strengthen the opinions of all nations, as touching her great and princely actions. And where the South border of Guiana reacheth to the Dominion and Empire of the Amazonas, those women shall hereby heare the name of a virgin, which is not onely able to defend her owne territories and her neighbours, but also to invade and conquer so great Empires and so farre remoued.

To speake more at this time, I feare would be but troublesome: I trust in God, this being true, will suffice, and that he which is King of all Kings and Lord of Lords, will put it into her heart which is Ladie of Ladies to possesse it, if not, I will iudge those men worthy to be kings thereof, that by her grace and leaue will undertake it of themselves.

**An abstract taken out of certaine Spaniards letters concerning
Guiana and the countries lying vpon the great river Orenoque: with cer-
taine reports also touching the same.**

An advertisement to the Reader.

Those letters out of which the abstracts following are taken, were surpris'd at sea as they were passing for Spaine in the yeere 1594. by Captaine George Popham: who the next yeere, and the same that Sir Walter Ralegh discovered Guiana, as he was in a voyage for the West Indies, learned also the reports annexed. All which, at his returne, being two moneths after Sir Walter, as also so long

long after the writing of the former discourse, hearing also of his discouerie: he made knowne and deliuered to some of her Maiesties most honourable priuie Councell & others. The which seeing they confirme in some part the substance, I meane, the riches of that countrey: it hath bene thought fit that they should be thereunto adioyned. Wherein the Reader is to be aduertised, that although the Spaniards seeme to glorie much of their formall possession taken before *Morequito* the Lord of *Aromaya*, and others thereabouts, which throughly vnderstood them not at that time, whatsoeuer the Spaniards otherwise pretend: yet, according to the former discourse, and as also it is related by *Cayworaco*, the sonne of *Topiamay* now chiefe Lord of the said *Aromaya*, who was brought into England by Sir Walter Ralegh, and was present at the same possession and discouerie of the Spaniards mentioned in these letters; it appeareth that after they were gone out of their countrey, the Indians then hauing farther consideration of the matter, and more then coniecture of their intent, hauing knowen and heard of their former cruelties vpon their borderers and others of the Indians elsewhere: At their next comming, there being ten of them sent and imployed for a farther discouery, they were provided to receiue and entertaine them in an other maner of sort then they had done before; that is to say, they slew them and buried them in the countrey so much sought. They gaue them by that meanes a full and complete possession, the which before they had but begunne. And so they are minded to doe, to as many Spaniards as come after. Other possession they haue had none since. Neither doe the Indians meane, as they protest, to giue them any other. One other thing to be remembred is that in these letters the Spaniards seeme to call *Gniana* and other countries neere it, bordering vpon the riuer of *Orenoque*, by the name of *Nueno Dorado*, because of the great plentie of golde there in most places to be found. Alluding also to the name of *El Dorado* which was giuen by *Martinez* to the great citie of *Manoa*, as is in the former treatise specified. This is all I thought good to aduertise. As for some other matters, I leaue them to the consideration and iudgement of the indifferent Reader.

W. R.

Letters taken at sea by Captaine George Popham. 1594

Alonso his letter from the *Gran Canaria* to his brother being commander of *S. Lucar*, concerning *El Dorado*.

There haue bene certaine letters receiued here of late, of a land newly discovered called *Nueno Dorado*, from the sonnes of certaine inhabitants of this citie, who were in the discouery: they wryte of wonderfull riches to be found in the said *Dorado*, and that golde there is in great abundance: the course to fall wityh it is fiftie leagues to the windward of *Margarita*.

Alonso's letter from thence to certaine Marchantes of *Sant Lucar* concerning *El Dorado*.

Sirs, we haue no newes worth the wryting, sauing of a discouery lately made by the Spaniards in a new land called *Nueno Dorado*, which is two dayes sayling to the windward of *Margarita*: there is golde in such abundance, as the like hath not bene heard of. We haue it for certaine in letters wrytten from thence by some that were in the discouerie, vnto their parents here in this citie. I purpose (God willing) to bestow tenne or twelue dayes in search of the said *Dorado*, as I passe in my voyage towards *Carthagena*, hoping there to make some good sale of our commodities. I haue sent you therewith part of the information of the said discouerie, that was sent to his Maiestie.

Part of the Copie that was sent to his Maiestie, of the discouery of *Nueno Dorado*.

In the riuer of *Pato* otherwise called *Orenoque*, in the principall part thereof called *Warismero*, the 23 of April 1593 *Domingo de vera* master of the campe, and Generall for *Antonio de Berreo* Gouvernour and Captaine generall for our lord the king, betwixt the riuers of *Pato* and *Papamene* alias *Orenoque*, and *Marannon*, and of the Island of *Trinidad*, in presence of me *Rodrigo de Carançá* Register for the sea, commanded all the souldiers to be gathered together and

and put in order of battraile, the Captaines and souldiers, and Master of the campe standing in the midst of them, said vnto them: Sirs, Souldiers, and Captaines, you vnderstand long since that our General Antonio de Berreo, with the trauell of eleuen yeeres, and expence of more then an hundred thousand pezos of golde, discovered the royall Prouinces of Guiana and Dorado: of the which he tooke possession to gouerne the same, but through want of his peoples health, and necessarie munition, he issued out at the Island Magarita, and from thence peopled Trinidad. But now they haue sent me to learne out and discover the wayes most easily to enter, and to people the said Prouinces, and where the campes and armies may best enter the same. By reason whereof I intend so to doe in the name of his Maiestie, and the saide gouernour Antonio de Berreo, and in token thereof I require you Francis Carillo, that you aide mee to aduance this crosse that lieth here on the ground, which they set on end towarde the East, and the said Master of the campe, the captaines and souldiers kneeled downe, and did due reuerence vnto the saide crosse, and thereupon the master of the campe tooke a bowle of water and dranke it off, and tooke more and threw abroad on the ground: he also drew out his sword and cut the grasse off the ground, and the boughes off the trees saying, I take this possession in the name of the king Don Philip our master, and of his Gouernour Antonio de Berreo: and because some make question of this possession, to them I answer, that in these our actions was present the Cassique or principall Don Antonio, otherwise called Morequito, whose land this was, who yelded consent to the said possession, was glad thereof, and gaue his obedience to our lord the king, and in his name to the said Gouernour Antonio de Berreo. And the said master of the campe kneeled downe being in his libertie, and all the Captaines and souldiers said, that the possession was well taken, and that they would defend it with their liues, vpon whosoever would say the contrary. And the said master of the campe hauing his sword drawn in his hand saide vnto me: Register, that art here present, giue me an instrument or testimoniall to confirme me in this possession, which I haue taken of this land, for the Gouernour Antonio de Berreo, and if it be needefull I will take it a newe. And I require you all that are present to witnesse the same, and do further declare that I will goe on, taking the possession of all these landes wheresoeuer I shall enter. Signed thus,

Domingo de vera, and vnderneath, Before me Rodrigo de Carança, Register of the armie.

AND in prosecution of the said possession, and the discoverie of the way and Prouinces, the 27 of April of the said yeere, the master of the campe entred by little and little with all the campe and men of warre, more then two leagues into the in-land, and came to a towne of a principall, and conferring with him did let him vnderstand by meanes of Antonio Bisante the Interpreter, that his Maiestie and Antonio de Berreo had sent him to take the said possession. And the said frier Francis Carillo by the Interpreter, deliuered him certain things of our holy Catholique faith, to all which he answered, that they vnderstood him well and would become Christians, and that with a very good will they should aduance the crosse, in what part or place of the towne it pleased them, for he was for the Gouernour Antonio de Berreo, who was his master. Thereupon the said master of the campe tooke a great crosse, and set it on end towarde the East, and requested the whole campe to witnesse it, and Domingo de vera firmed it thus,

It is well and firmly done. And vnderneath, Before me Rodrigo Carança, Register of the armie.

THE first of May they prosecuted the said possession and discoverie to the towne on Carapana. From thence the said Master of the campe passed to the towne of Toroco whose principall is called Topiawary being five leagues farther within the land then the first Nation, and well inhabited. And to this principall by meane of the Interpreter they gaue to vnderstand that his Maiestie and the said Corrigidor commanded them to take the possession of that lande, and that they should yelde their obedience to his Maiestie, and to his Corrigidor, and to the master of the campe in his name, and that in token thereof he would place a crosse in the middle of his towne. Whereunto the said Cassique answered they should aduance it with a very good will, and that he remained in the obedience of our lord the king, and of the said Gouernour Antonio de Berreo whose bassall he would be.

The fourth of May we came to a Prouince aboue five leagues thence, of all sides inhabited with much people, the principall of this people came and met vs in peaceable maner: and he is called Reuato, he brought vs to a very large house where he entertained vs well, and gaue vs much

vs much Golde, and the interpreter asking him from whence that golde was, he answered, ffrom a Province not passing a dayes iourney off, where there are so many Indians as would shade we the sunne, and so much Golde as all yonder plaine will not containe it. In which Countrey (when they enter into the Borracheras or their drunken feasts) they take of the said Golde in dust and anoynt themselves all ouer therewith to make the bzauer shew; and to the end the Golde may couer them, they anoynt their bodies with stamped herbes of a glewy substance: & they haue warre with those Indians. They promised vs that if we would goe vnto them, they would ayde vs; but they were such infinite numbers, as no doubt they would kill vs. And being asked how they gat y same Golde, they tolde vs they went to a certaine Downe or playne, and pulled or digged vp the grasse by the roote: which done, they tooke of the earth, putting it in great buckets, which they caried to wash at the riuer, and that which came in powder they kept for their Borracheras or drunken feasts: and that which was in peeces they brought into Eagles.

The eight of May wee went from thence, and marched about fife leagues: at the foote of a Hill wee found a principall called Arataco with three thousand Indians, men and women all in peace and with much victuall, as Pennes and Venison in great abundance, and many sortes of wine. Wee intreated vs to goe to his house, and to rest that night in his Towne, being of fife hundred houses. The interpreter asked whence hee had those Pennes: he sayde they were brought from a mountaine not passing a quarter of a league thence, where were many Indians, pea so many as grasse on the ground, and that these men had the points of their shoulders higher then the Crownes of their heads, and had so many Pennes as was wonderfull; and if wee would haue any, wee should send them Jewes harpes, for they would giue for euery one two Pennes. Wee tooke an Indian, and gaue him fife hundred Harpes; the Pennes were so many that hee brought vs, as were not to be numbred. Wee sayde wee would goe thither; they tolde vs they were now in their Borracheras or drunken feasts, and would kill vs. Wee asked the Indian that brought the Pennes, if it were true; hee sayde it was most true. Wee asked him how they made their Borracheras or drunken feasts; hee sayde, they had many Eagles of golde hanging on their breasts, and Pearles in their eares, and that they daunced being all couered with Golde. The Indian sayde vnto vs, if wee would see them, wee should giue him some Watchers, and he would bring vs of those Eagles. The Master of the Campe gaue him one Watchet (hee would giue him no more because they should not vnderstand we went to seeke golde) he brought vs an Eagle that weighed 27. pounds of good Golde. The Master of the Campe tooke it, and shewed it to the souldiers, and then threw it from him, making shewe not to regard it. About midnight came an Indian and sayd vnto him, Giue mee a Pickeaxe, and I will tell thee what the Indians with the high shoulders meane to doe. The Interpreter tolde the Master of the Campe, who commanded one to be giuen him: hee then tolde vs, those Indians were comming to kill vs for our marchandize. Whereupon the Master of the Campe caused his company to bee set in order, and beganne to march. The eleuenth day of May wee went about seuen leagues from thence to a Province, where wee found a great company of Indians apparelled: they tolde vs that if wee came to fight, they would fill vp those plaines with Indians to fight with vs; but if wee came in peace, wee should enter and bee well entertained of them, because they had a great desire to see Christians: and there they tolde vs of all the riches that was. I doe not heere set it downe, because there is no place for it, but it shall appeare by the information that goeth to his Maiestie: for if it should heere bee set downe, foure leaues of paper would not containe it.

Indians with
high shoul-
ders.

The Letter of George Burien Britton from the sayde Canaries vnto his cousin a French man dwelling in S. Lucar, concerning El Dorado.

Sir, and my very good cousin, there came of late certaine Letters from a new discovered countrey not farre from Trinidad, which they write, hath Golde in great abundance: the newes seemeth to bee very certaine, because it passeth for good amongst the best of this Citie. Part of the information of the Discovery that went to his Maiestie, goeth inclosed in Alonsos letters; it is a thing worth the seeing.

The report of Domingo Martinez of Iamaica concerning El Dorado.

He sayth that in 1593, being at Carchagena, there was a generall report of a late discovery called Nueuo Dorado, and that a litle before his comming thither, there came a Frigate from

Kkk

from the said Dorado, bringing in it the portrature of a Giant all of Gold, of weight 47. kintals, which the Indians there held for their Idoll. But now admitting of Christianitie and obedience to the King of Spaine, they sent their sayd Idoll vnto him in token they were become Christians, and held him for their King. The company comming in the said frigate, reported Golde to be there in most abundance, Diamonds of inestimable value, with great store of pearle.

The report of a French man called Bountillier of Sherbrouke, concerning *Trinidad* and *Dorado*.

1591.

Paracoa.

HE saith that beeing at *Trinidad* in 1591. he had of an Indian there a peece of Golde of a quarter of a pound in exchange of a knife; the sayde Indian tolde him hee had it at the head of that riuer which commeth to *Paracoa* in *Trinidad*: and that within the Riuer of *Orenoque*, it was in great abundance. Also in 1593. beeing taken by the Spaniards, and brought prisoner into the Island of *Madera* (the place for his prison) there came in this meane time a Barke of fortye Tunnes from a new Discouery, with two millions of Golde; the company whereof reported Golde in that place to be in great abundance, and called it *El Nuevo Dorado*. This Frenchman passed from Spaine in the Barke, and hauing a cabbenecere a gentleman, one of the Discouerers that came from that place in the sayde Barke, had diuers times conference with him, and amongst other things, of the great abundance of Golde in the sayd *Dorado*, being as they sayd within the riuer of *Orenoque*.

Reportes of certaine Marchants of *Rio de Hacha*, concerning *El Nuevo Dorado*.

They sayd (aduancing the kings great treasure in the Indies) that *Nuevo Reyno* peesed beery many Golde mines, and wonderfull rich; but lately was discouered a certaine Province so rich in Golde, as the report thereof may seeme incredible, it is there in such abundance, and is called *El Nuevo Dorado*: Antonio de Berreo made the said discouerie.

The report of a Spaniard, Captaine with *Berreo* in the discouerie of *El Nuevo Dorado*.

That the information sent to the King was in euery poynt truely sayde, that the riuer *Orenoque* hath seuen mouths, or outlets into the sea, called *Las Siete bocas de dragon*, that the sayd riuer runneth farre into the land, in many places very broad, and that *Anth. de Berreo* lay at *Trinidad*, making head to goe to conquire and people the sayd *Dorado*.

A Relation of the second Voyage to *Guiana*, performed and written in the yeere 1596. by Laurence Keymis Gent.

TO THE APPROVED, RIGHT VALOROUS, AND worthy Knight, Sir *Walter Raleigh*, Lord warden of the Stanneries, Captaine of her Maiesties Guard, and her Highnesse Lieutenant generall of the Countie of *Cornewall*.

HAue here briefly set downe the effect of this your second Discouerie without any enlargement of made wordes: for in this argument, single speech best becometh a simple truth. Where the affinitie of the matter with your person, leadeth mee to write of your selfe, vnto your selfe, that small libertie which I haue therein vsed, shall, I doubt not, without offence or sinister construction, be giuen to the cause in hand: which, whether it suffer not detriment, by attributing lesse then of right belongeth; the iudgement bee theirs, that vprightly and indifferently shall weigh the consequents of their euill purpose, who in seeking to detract from the Author of these Discoueries, doe so much as in the lieth, wound, deface, & tread vnder foot the thing it selfe. But this is no nouelty, nor proper only to these our dayes. For long since it hath bin said, *Landes eo vsque sunt tolerabiles, donec ea dicuntur, qua auditores se quoque facere posse existimant: si maiora prosperantur, inuidens, non credunt*. The feruent zeale & loyalty of your minde in labour with this birth of so honorable expectation, as it hath deserued a recompence farre different, so needeth it not my poore suffrage to endear the toyle, care and danger that you

Pericles.

you haue willingly vndergone for the good and aduancement of our weale publique. The praise-worthinesse thereof doeth approue it selfe, and is better read in your liuing doings, then in my dead vnregarded papers. All that I can wish, is that my life were a sufficient pledge, to iustifie, how much more easie, and more materiall, the course for *Guiana* would bee then others, which requiring greater charge, yeelde not so large benefit, and are subiect to more doubtfull euent. If vnto their wisdomes who sit in place and authority, it shall appeare otherwise, and that in following of other attempts there is lesse difficultie, certainer profit, and needfuller offence vnto the enemy: the cost and trauaile which you haue bestowed, shall not, I hope, be altogether lost, if vnto your Honour I can proue how, and where the amends is to be had, maugre the force and preuention of all Spaniards.

Your Lordships to be commanded in all service,

LAVRENCE KEYMIS.

To the Fauourers of the Voyage for Guiana.

IN things earnestly desired, though neuer so likely, we are still suspicious: thinking it more credite to our common wisdom, to discredite most noble and profitable inducements with distrust, then touch to our valours and safeties, to lie wilfully idle. So that howsoeuer an action well and iudicially attempted, bee esteemed halfe performed; yet is this my ielous conceite concerning *Guiana*, that nothing is begun, before all be ended. In this regarde (gentle Reader) I haue presumed to burthen thine eares with the weake plea of a good cause, and in stead of opening it thoroughly to thy prudent consideration, to note only mine owne vn-satisfied affection: hoping that because I doe name *Guiana* vnto thee, thou wilt vouchsafe *hoc nomine*, to vaile and couer all other my defects in the desert of a good meaning. In publishing this Treatise, my labor principally tendeth to this end; to remoue all fig-leaues from our vn-beliefe, that either it may haue cause to shake off the colourable pretences of ignorances: or if we will not be perswaded; that our selfe-will may rest inexcusable. They that shall apply, and construe this my doing, to serue the Spaniard his turne so wel as our owne; in so much as it may seeme to instruct, warne, and arme him: for their satisfaction herein, they must not be ignorant, that his eyes, in seeing our shipping there, doe as effectually informe him, that many of our hearts are toward that place, as if it should be credibly aduertised by some corrupt hireling, that we thinke, write, and discourse of nothing els. Neither can I imagine, that to conceale our knowledge herein (which to conceale may perhaps proue, & be hereafter taken for worse the paricide) would be of better purpose, then to hobdwinke our selues, as who would say, No man shall see vs. Besides, if the action were wholly to bee effected at her Maiesties charge; then might it at her Highnesse pleasure be shadowed with some other drift, and neuer be discovered, vntill it were acted. But since it craueth the approbation and purses of many Aduenturers, who cannot be so prodigall both of their possessions and liues, as voluntarily to run themselues out of breath, in pursuing they know not what: great reason it is, that where assistance is to be asked, due causes be yeilded to perswade & induce them vnto it. The Spaniard is not so simple, vnsetled, & vncertaine in his determinations, as to build them on our breath, or to make our papers his Bulwarks; nor so slow as to expect a precedent of our forwardnes. His proceedings are sufficiently strengthened with the trauailes, reports, & substantiall proofes of his own men, that haue about 60. yeres beaten round about this bush. And to say a trueth, the expedition that he hath vsed in sending so many ships in February last to people this country, & disappoint vs; as it doth consequently shew, that he findeth his chiefest force and sinewes to consist in golde: so doeth he thereby plainly to our faces exprobrate our remisnesse & long deliberations, that in 12. moneths space haue done, or sought to doe nothing worthy the ancient fame & reputation of our English nation, interested in so weighty businesse. * His late prouision of a new supply of whole families to the number of 600. persons, bound for *Guiana*, but that it pleased God, that by meanes of that right honourable service most resolutely performed in the sea-fight, and sack of *Cadiz*, the ships wherein they should haue bin conueyed, were conuerted into ashes: what might it signifie? Certes, as it doth evidently proue, that *El Dorado* hath vndoubted credit & account in their iudgements: so pointeth it at vs, whilst we only to entertaine idle time, sit listening for *Guiana* newes, & instantly forget it, as if it were nought els, but a pleasing dreame of a golde fancy.

In June 1596

If we with our selues shall expostulate, how this commeth to passe, that the aduantage wholly resting on our side, in respect that *Berre* was this last yere beaten out, the countrey thoroughly discovered, & the Inhabitants made desirous of her sacred Maiesties happy gouernment; they notwithstanding by entring before vs, haue now gotten y^e start of vs: what may we thinke? Shall wee iudge that their native countrey is lesse deare, or more wearisome vnto them, then ours is vnto vs? Their *Peruleri*, who going bare & empty out of *Spaine*, do againe within 3. or 4. yeres returne from *Pern*, rich and in good estate, doe apparantly disproue all such conceits of them. Shall wee say that they haue more spare men to be employed in such actions? It is no secret to know the contrary. Are they subiect to penury? In all parts of Christendom, where money is not scant, all other things are plentiful. Or is their land not able to sustain their numbers of people? They buy many slaues to follow their husbandry, & themselves disdainig base idleness & beggery, do all honour military profession, highly esteeming it in their mercenaries and strangers. Is it then want of ability, in those that are willing, lacke of encouragement, or default of speedy order and direction for those that doe voluntarily offer themselves, their substance, & best indeuour to further this cause; that maketh vs to be thus coated of the Spaniard? The first is no question. The later needeth no answer. The profit then by their example to be gathered, is, not to loose opportunitie by delay, or to seeme feareful and dismayed, where there is no cause of doubt. For as yet their post-haste doeth no way preiudice our aduised leisure in setting forward, since their preparations of *Negros* to worke in the mynes, their horses, cattell, and other necessities may (by the fauour of God) at our first comming, both store vs wth quantities of gold oare, and ease vs of much trouble, paines, and trauaile. If we should suppose our selues now to liue in the dayes of King *Henry* the seuenth of famous memory, and the strange report of a *West Indies*, or new world abounding with great treasure should entice vs to beleue it: perhaps it might be imputed for some blame to the grauity of wise men, lightly to be carried with the perswasion and hope of a new found *Utopia*, by such a one as *Columbus* was, being an alien, and many wayes subiect to suspition. But since the penance of that incredulity lieth euen now heauy on our shoulders; the example forethreatning. I know not what repentance: and that we haue the personal triall of so honourable and sufficient a Reporter, our own Countirman: let it be farre from vs to condemne our selues in that, which so worthily we reprove in our predecessors; and to let our idle knowledge content it selfe with naked contemplation, like a barren wombe in a Monastery. We cannot denie that the chiefe commendation of vertue doth consist in action: we truly say, that *Orum* is *anima viva sepultura*: we beleue, that perfect wisdom in this mobility of all humaine affaires, refuseth not with any price to purchase safetie: and we iustly do acknowledge that the Castilians from barelegged mountainer haue attained to their greatnesse by labour & industrie. To sleepe then, because it costeth nothing; to imbrace the present time, because it flattereth vs with deceitfull contentment; and to kisse security, saying, What euill happeneth vnto vs? is the plaine high way to a fearefull downfall: from which the Lord in his mercy deliuer vs, and giue vs an vnderstanding heart, in time to see, and to seeke that, which belongeth vnto our peace.

De Guiana carmen Epicum.

What worke of honour and eternall name,

For all the world t^enuie and vs t^earchieue,

Filles me with furie, and giues armed hands

To my hearts peace, that els would gladly turne

My limmes and euery sense into my thoughts

Rapt with the thirsted action of my mind?

O *Clio*, Honors Muse, sing in my voyce,

Tell the attempt, and prophetic th^e exploit

Of his *Eliza*-consecrated sworde,

That in this peacefull charme of *Englands* sleepe,

Opens most tenderly her aged throte,

Offring to powre fresh youth through all her vaines,

That flesh of brasse and ribs of Steele retaines.

Riches, and Conquest, and Renowne I sing,

Riches with honour, Conquest without blood,

Enough

Enough to seat the Monarchie of earth,
 Like to *Jones* Eagle on *Elizas* hand,
GUIANA, whose rich feete are mines of golde,
 Whose forehead knockes against the roofe of Starres,
 Stands on her tip-toes at faire *England* looking,
 Kissing her hand, bowing her mightie breast,
 And euery signe of all submission making,
 To be her sister, and the daughter both
 Of our most sacred Maide: whose barrenesse
 Is the true fruite of vertue, that may get,
 Beare and bring forth anew in all perfection,
 What heretofore sauage corruption held
 In barbarous *Chaos*; and in this affaire
 Become her father, mother, and her heire.

Then most admired Soueraigne, let your breath
 Goe forth vpon the waters, and create
 A golden world in this our yron age,
 And be the prosperous forewind to a Fleete,
 That seconding your last, may goe before it
 In all successe of profite and renoume:
 Doubt not but your election was diuine,
 (Aswell by *Fate* as your high iudgement ordred)
 To raise him with choise Bounties, that could adde
 Height to his height; and like a liberall vine,
 Not onely beare his vertuous fruite aloft,
 Free from the Presse of squint-eyd *Ennies* feete,
 But decke his gracious Proppe with golden bunches,
 And shroude it with broad leaues of *Rule* oregrowne
 From all blacke tempests of inuasion,

Those Conquests that like generall earthquakes shooke
 The solid world, and made it fall before them,
 Built all their braue attempts on weaker grounds,
 And lesse perswasive likelihoods then this;
 Nor was there euer princely Fount so long
 Pow'd forth a sea of *Rule* with so free course,
 And such ascending Maiestie as you:
 Then be not like a rough and violent wind,
 That in the morning rends the Forrests downe,
 Shoues vp the seas to heauen, makes earth to tremble,
 And toombes his wastfull brauery in the Euen:
 But as a riuer from a mountaine running,
 The further he extends, the greater growes,
 And by his thriftie race strengthens his streame,
 Euen to ioyne battell with th'imperious sea
 Disdayning his repulse, and in despight
 Of his proud furie, mixeth with his maine,
 Taking on him his titles and commandes:
 So let thy Soueraigne Empire be encrease,
 And with *Iberian Neptune* part the stake,
 Whose *Trident* he the triple world would make,

You then that would be wise in Wisdomes spight,
 Directing with discredite of direction,
 And hunt for honour, hunting him to death,
 With whom before you will inherite gold,

Kkk 3 You

You will loose golde, for which you loose your soules;
 You that chuse nought for right, but certaintie,
 And feare that valour will get onely blowes,
 Placing your faith in *Incredulitie*.
 Sit till you see a wonder, *Verine* rich:
 Till *Honour* hauing golde, rob golde of honour,
 Till as men hate desert that getteth nought,
 They loath all getting that deserues not ought;
 And vse you gold-made men as dregges of men;
 And till your poysoned soules, like Spiders lurking
 In sluttish chinckes, in mystes of Cobwebs hide
 Your foggie bodies, and your dunghill pride.

O *Incredulitie*, the wit of Foppes,
 That flouently will spit on all things faire,
 The *Cowards* castle, and the *Sluggards* cradle
 How easie 'tis to be an Infidel?

But you *Patrician* Spirites that refine
 Your flesh to fire, and issue like a flame
 On braue indeuours, knowing that in them
 The tract of heauen in morne-like glory opens,
 That know you cannot be the Kings of earth,
 (Claiming the Rights of your creation)
 And let the Mynes of earth be Kings of you;
 That are so farre from doubting likely drifts,
 That in things hardest y'are most confident:
 You that know death liues, where power liues vnusde,
 Ioying to shine in waues that burie you,
 And so make way for life euen through your graues;
 That will not be content like horse to hold
 A thread-bare beaten way to home affaires:
 But where the sea in enuie of your reigne,
 Closeth her wombe, as fast as 'tis disclosde,
 That she like *Anarice* might swallow all,
 And let none find right passage through her rage:
 There your wise soules as swift as *Eurus* lead
 Your Bodies through, to profit and renowne,
 And skorne to let your bodies choke your soules,
 In the rude breath and prisoned life of beastes:
 You that herein renounce the course of earth,
 And lift your eyes for guidance to the starres,
 That liue not for your selues, but to possesse
 Your honour'd countrey of a generall store;
 In pitié of the spoyle rude selfe-loue makes,
 Of them whose liues and yours one ayre doth feede,
 One soile doeth nourish, and one strength combine;
 You that are blest with sence of all things noble,
 In this attempt your compleat woorthes redouble.

But how is *Nature* at her heart corrupted,
 (I meane euen in her most ennobled birth)
 How in excessse of Sence is Sence bereft her!
 That her most lightening-like effects of lust
 Wound through her flesh, her soule, her flesh vnwounded;
 And she must neede incitements to her good,
 Euen from that part she hurtes! O how most like
 Art thou (*héroike* Autor of this Act).

To

To this wrong'd soule of *Nature*, that sustaint
 Paine, charge, and perill for thy countreys good,
 And she much like a bodie numb'd with surfeits,
 Feeles not thy gentle applications
 For the health, vse, and honour of her powers!
 Yet shall my verse through all her ease-lockt eares
 Trumpet the Noblesse of thy high intents
 And if it cannot into act proceed,
 The fault and bitter penance of the fault
 Make red some others eyes with penitence,
 For thine are cleare; and what more nimble spirits,
 Apter to byte at such vnhooked baytes,
 Gaine by our losse; that must we needs confesse
 Thy princely valure would haue purchast vs.
 Which shall be fame eternall to thy name,
 Though thy contentment in thy graue desires,
 Of our aduancement, faile deseru'd effect.
 O how I feare thy glory which I loue,
 Least it should dearly grow by our decrease.
 Natures that sticke in golden-graueld springs,
 In mucke-pits cannot scape their swallowings.

But we shall soorth I know; Golde is our Fate,
 Which all our actes doth fashion and create.

Then in the *Thespiads* bright Propheticke Fount,
 Me thinkes I see our Liege rise from her throne,
 Her eares and thoughts in steepe amaze erected,
 At the most rare endeouour of her power.
 And now she blesteth with her woonted Graces
 Th'industrious Knight, the soule of this exploit,
 Dismissing him to conuoy of his starres,
 And now for loue and honour of his woorth,
 Our twise-borne Nobles bring him Bridegroome-like,
 That is espoused for vertue to his loue
 With feasts and musicke, rauishing the aire,
 To his *Argolian* Fleet, where round about
 His bating Colours English valure swarms
 In haste, as if *Guianian Orenoque*
 With his Fell waters fell vpon our shore.
 And now a wind as forward as their spirits,
 Sets their glad feet on smooth *Guianas* breast,

Where (as if ech man were an *Orpheus*)

A world of Sauages fall tame before them,
 Storing their theft-free treasures with golde,
 And there doth plentie crowne their wealthie fields,
 There *Learning* eates no more his thristlesse bookes,
 Nor *Valure* Estridge-like his yron armes.
 There *Beantie* is no trumpet for her wants,
 Nor *Gallique* humours putrifie her blood:
 But all our Youth take *Hymens* lights in hand,
 And fill ech rooffe with honor'd progenie.
 There makes *Societie* Adamantine chaines,
 And ioyns their hearts with wealth, whom wealth disioin'd.
 There healthfull Recreations strow their meades,
 And make their mansions daunce with neighbourhood,
 That here were drown'd in churlish *Auarice*.
 And there do Pallaces and temples rise

Out

Out of the earth, and kisseth enamored skies,
Where new *Britannia* humbly kneeles to heauen,
The world to her, and, both at her blest feet,
In whom the Circles of all Empire meete.

G. C.

Ad Thomam Hariotum Matheseos, & vni-
uersæ Philosophiæ peritissimum, de *Guiana*
Carmen. Dat. Anno. 1595.

Montibus est Regio, quasi muris, obstita, multis:
Circumsepit aquis quos *Raleana* suis.

Intus habet largos *Guaiana* recessus:

hostili gestans libera colla iugo.

Hispanus clinis illis sudavit, & alit

septem annos, nonies: nec tamen inualuit.

Numen, & omen inest numeris. Fatale sit illi:

Et nobis virtus sit recidua, precor.

Gualtero, patefacta via est duce & auspice *Ralegh*

Mense uno: ô factum hoc nomine quo celebrem?

Nocte dieq; datis velis, remisque laborans,

Exegit summa dexteritatis opus.

Scilicet expensis magnis non ille pepercit,

Communi natus consuluisse bono.

Providus excubuit simili discrimine *Ioseph*:

Sic fratres, fratrem deseruere suum:

Fama coloratam designet si bona, vestem:

Vestis Scissa malis sic fuit illa modis.

Mirales. Aureque animumque tuum arrige, *Tellus*

Hec aurum, & gemmas graminis instar habet.

Veri ibi perpetuum est: ibi prodiga terra quotannis

Luxuriat, sola fertilitate nocens.

Anglia nostra licet dives sit, & undique felix:

Anglia, si confers, indigna frugis erit.

Expertes capitum, volucres, piscesque ferasq;

Prætereo: hand profunt, quæ nouitate, placent.

Est ibi, vel nusquam, quod quarimus. Ergo petamus:

Det Deus, hanc *Canaan* possideamus. Amen.

Tui Amantis. L. K.

The second voyage to *Guiana*.

They sail with
the Canary
Isles.

Cape Verde.

Onday the 26. of January, in the yeere of our Lord 1596. we departed from
Portland road, in the Darling of London, hauing in company the Discou-
rer, a small pinnesse, whom we lost at sea, in foule weather, the Thursday next
following. Friday the 13. of February, wee fell with the Canarie Islands,
where we expected our pinnesse, according to our appoyntment, seuen or eight
dayes. Here we tooke two boats, the one a passenger, we bulged, the other wee
towed at our shippe sterne, steering Southsouthwest for the Islands of Cape Verde. There-
hence we set saile the 28. of February, keeping a Westsouthwest course. In this passage wee
found very smooth seas, faire weather, and steddie winds, blowing ordinarily betweene the East
and Northeast pointes. Neere 30. leagues from these Islands, wee came into a growne sea, the
swollen waters making a strange noise & hurling together, as if it might be two strong currents
encountering ech other. The 12. of March wee sounded, and had sandie ground in 47. fathome. At
midnight in twelue fathom wee came to an anker, the ground sandie oaze. Sunday the 14. to-
wards night, about some five leagues from the shore, wee descried a low land in the bottome of a
Bay. From the 9. of March vntill this time, we kept for the most part a Southsouthwest course.
The water in this place is smooth, but muddie, and the colour red or tawny. From the West-
most

most of the Cape Verde-Islands vnto this Bay I doe estimate the distance to be neere 550. leagues. It seemed to most of our sea-men, to be the very banke of a shoale vpon a lee-shore: the rather because without it, in the cleane greene sea wee had but 7. fathome depth: but after by prooue finding that there is no sudden alteration in any part of the coast, and that the sea is smoothest neere the land, we alwayes at night sought to anker in three or foure fathome. And doubtlesse as the hand of God is woonderfull in all his workes: so herein his mercifull prouidence is most admirable, that vpon a lee-shore subiect vnto a perpetuall Easterly gale, neither much wind can endanger shipping, by reason that the foule heauie water is not capable of vehement motion, and the soft light oaze, if they touch, cannot bruise them: nor is there any teopardie in beeing wind-bound, or imbayed: for the most forcible windes make the greatest flood-tides, whereby the freshets when they take their ordinarie course of ebbe, doe grow strong and swift, setting directly off to sea against the wind. Wee by turning went cleere of all Bayes: howbeit in this case, as also in the riuers, the vse of a brone sayle seemeth a good and readie helpe. The first place wherein wee ankered, was in the mouth of Arrowari, a faire and great riuier. It standeth in one degree and fourtie minutes: for we fell so farre to the Southwardes by your lordships direction. The barre without hath at the least three fathome, at the shoalest place, when it is lowe ebbe. The depth within is eight and tenne fathome. The water alwayes brackish. We found not any inhabitants in this place neere the sea coast. I omit here to recite the names of the nations that are borderers, their towne, Captaines and commodities that their countreys doe yeelde, as also the soundings, tydes, and how the coast lyeth &c. thinking it fittest to reduce these disioyned and scattered remembrances to one place. As wee passed we alwayes kept the shore within viewe and stopped the floods, still ankering at night in three or foure fathome. When we came to the North headland of this Bay (which wee named Cape Cecyl) we sawe two high mountaines like two Islands, but they ioyned with the mayne. In this tract lying Northnorthwest neere 60. leagues, there fall into the sea these seuerall great riuers, Arrowari, Iwaripoco, Maipari, Coanawini, Caipurogh. Wee ankered in two fathome not farre from these hills, and filled all our caskes with fresh water by the shippe side, for in the sea thirtie miles from the mouth of any riuier it is fresh and good. This second Bay extendeth it selfe aboute thirtie leagues to the Westward, and containeth within it these riuers Arcooa, Wiapoco, Wanari, Caparwacka, Cawo, Caian, Wia, Macuria, Cawroor, Curassawini. Here leauing the ship at anker, I tooke into the boate Iohn Prouost, my Indian Interpreter, Iohn Linsey, and eight or nine others, intending to search some of these riuers, and to seeke speech with the Indians. In Wiapoco, at the foote of the Eastermost mountaine, where the riuier falleth into the sea, wee found twentie or thirtie houses, but not inhabited. Wee stayed there but one night. Wanari we ouerpassed, because the entrance is rockie and not deepe. In Caparwacka we sailed some fourtie miles, but could see no Indian. At one of their portes vnder the side of a hill, wee tooke in so much Brasill wood as our boate could carrie. Amongst other trees we cut downe one for an example, which I do verily beleue to be the same sort of sinamon, which is found in the streights of Magellan. From Caparwacka wee passed to Cawo, and there met with a Canoa, wherein were two Indians. It was long time befoze wee could procure them to come neere vs, for they doubted least wee were Spanish. When my interpreter had perswaded them the contrarie, and that wee came from England, they without farther speech or delay, brought vs to Wareo their Captaine, who entertained vs most friendly, and then at large declared vnto vs, that hee was lately chased by the Spaniards from Moruga, one of the neighbour riuers to Raleana, or Orenoque: and that hauing burnt his owne houses, and destroyed his fruites and gardens, hee had left his countrey and towne to bee possessed by the Arwaccas, who are a vagabound nation of Indians, which finding no certaine place of abode of their owne, doe for the most part serue and follow the Spaniards. Hee shewed me that he was of the nation of the Iaos, who are a mightie people, and of a late time were Lords of all the sea coast so farre as Trinidad, which they likewise possessed. Howbeit, that with a generall consent, when the Spaniards first began to borrow some of their wiues, they all agreed to change their habitation, and doe now liue vnted for the most part towards the riuier of Amazonas. But the especiall cause of his present remooue was, because two or three yeeres past, twentie Spaniards came to his towne, and sought to take his best wife from him: but befoze they carried her away, hee at time and place of aduantage killed halfe of them: the rest fledde, most of them sore hurt. Now in this case hee thought it best to dwell farre ynough from them. Your Indian pilot Ferdinando, who conducted you by Amana, and now abideth neere the head of Deslekebe, is one of this mans subiects: By whom (as it may seeme) hee hath taken good notice of our princeesse and countrey. For hee descended more particularly

A notable observation.

The Iaos a mightie nation.

Ferdinando the Indian pilot of Sir Walter Raleigh.

particularly to inquire what forces were come with vs, assuring me of the Spaniards beeing in Trinidad, and that the Indians our friends betwixt hope and feare, haue earnestly expected our returne from England these foure or five moneths. When I had answered him, that at our departure we left no Spaniards alive to annoy them; that we now came only to discover, and trade with them; and that if her Maestie should haue sent a power of men, where no enemy was to resist, the Indians might perhaps imagine, that wee came rather to invade, then to defend them: He replied, that this course very wel sorted with the report which they had heard of our Princesses iustice, rare graces, and vertues: the fame of whose power in beeing able to vanquish the Spaniards, and singular goodnesse in vnder taking to succour and defend the afflicted Indians, was now so generall, that the nations farre and neere were all agreed to ioyne with vs, and by all meanes possible to assist vs in expelling and rooting out the Spaniards from all parts of the land: and that we were deceived, if wee thought this countrey not large ynough to receiue vs, without molestation or intrusion vpon the Indians, who wanted not choise of dwelling places, if they forsooke one to lue in another: but stood in neede of our presence at all times to ayde them, and maintaine their libertie, which to them is deeter then land or liuing. He then farther desired, that he with his people might haue our fauour against the Arwaccas, who not being content to enioy their groundes and houses, had taken from them many of their wiues and children, the best of whose fortune was, if they liued, to lue in perpetuall slauerie vnder the Spaniards. Wee put him in good hope and comfort thereof. And hee to deserve some part of this friendship, commended vnto vs an elderly man to be our Pilote in hying vs to Raleana. When we were ready to depart, he demanded whether we wanted any Vrapo, which is the wood, that is vsually carried from these parts to Trinidad in Canoas, and is there sold to the French for trade: he offered, if we would hying our ship neere his port, to put in her lading thereof. But because most of our calke was not yron-bound, and in making stowage-way to remooue it, would haue bene the losse of our Sider and other drinke; I therefore referred the taking of any quantitie to fitter opportunitie: thinking it sufficient at this time, to haue only my boats lading therof: which afterwards in extremitie of foule weather, befoze we could get aboard our ship, wee were enforced in a darke night to heaue all our boord: thinking our selues happy, to haue recovered thither at seven dayes ende, with safetie of life onely. All which time wee could no where set foote on shore, but rested day and night wet and weather beaten in our couertlesse boate, which was sometimes ready to sinke vnder vs. For wee had in this place without comparisson moze raine, wind, and gustes, then else where at any time. To bee brieue, my men became weake and sicke, and if wee had stayed any longer time out, I doubt whether the greatest part of vs had euer come aboard againe. I afterwards vnderstood by my Indian pilot, that this weather is for most part of the yeeze vsuall, neere the Island Oncairie, which lyeth North from the riuer Capurwacka some fife leagues into the sea: and that they hold opinion how this Island is kept by some euil spirit: for they verily beleene, that to sleepe in the day time neere it (except it be after much drinke) is present death. The only season wherein little raine doth fall there, is (as I gathered by their speech, they diuiding all times by their Moones) at our Winter Solstice. The mother-wind of this coast is for the most part to the Northward of the East, except when the Sunne is on this side of the Equinoctiall, for then it often beares Southerly, but most in the night. This our guid is of the Laos, who doe almarke themselves, thereby to bee knowne from other nations after this maner. With the tooch of a small beaust like a Rat, they race some their faces, some their bodies, after diuers formes, as if it were with the scratch of a pin, the print of which rasure can neuer bee done away againe during life. When he had sometime conuersed with our Indians, that went from England with vs, hee became willing to see our countrey. His sufficiencie, trustinesse, and knowledge is such, that if the pretended voyage for Guiana doe take place, you shall (I doubt not) find him many wayes able to steere your Lordship in your designs and purposes. For besides his precise knowledge of all the coast, and of the Indian townes and dwellings, he speaketh all their languages, was bred in Guiana, is a swayne brother to Putima, who slewe the Spaniards in their returne from Manoa, can direct vs to many golde mines, and in nothing will vnder take moze, then hee assuredly will perfoyme.

To the Westward this Bay hath many good roads vnder small Islands, whereof the greatest named Gowateri, is inhabited by the Shebaios: and besides the plenty of foule, fish, fruits, wilde porcs and deere, which are there to be had, where Caiane fallies into the sea, (for it standeth in the mouthes of Wia and Caiane) it yeeldes safe and good harbour in foure and five fathome for ships of great burthen. On all that coast we found not any like it: wee therefore honoured this place by the name of Port Howard. The road vnder Triangle Islands, which are the Westmost from

Spain wood.

Unseasonable weather about the Isle of Oncairie.

How the nation of the Laos marke themselves, to be knowne from other people.

Port Howard otherwise called Gowateri.

from the rest and stand in five degrees, which haue also store of fish, foule, deere, and Iuanas, is good, but not comparable with this other, where in all windes and weather, shippes, though they be many, may all ride securely. The hills and high lands are limits to this bay on each side: for to the Eastward beyond it appeare none at all, and to the Westward of mount Hobbeigh very few. Where the mountaines faile, there Brasill wood is no farther to bee sought for: but in all parts cotton, pepper, silke, and Balsamum trees doe grow in abundance. The rootes of the herbe Wiapassa are here most plentifull: I finde them in taste nothing different from good ginger, and in operation very medicinable against the sicke and headach. These riuers, as also others neerer Raleana, doe all fall out of the plaines of this empire ouer rocks, as the riuier Caroli doeth into Raleana: and in most places within the utmost hedge of woods, the land within is plaine, voyd of trees, and beareth short grasse like Arramaiaries countrey.

Nert adioyning vnto these, are the riuers Cunanamma, Vracco, Mawari, Mawarparo, Amonna, Marawini, Oncowi, Wiawiami, Aramatappo, Camaiwini, Shurinama, Shurama, Cupanamma, Inana, Guritini, Winitwari, Berbice, Wapari, Maicaiwini, Mahawaica, Wappari, Lemdrare, Dessekebe, Caopui, Pawrooma, Moruga, Waini, Barima, Amacur, Aratoori, Raleana. From Cape Cecyl to Raleana, the coast trendeth two hundred leagues nert hand West-northwest. In this varietie of goodly riuers, Amonna amongst the rest poynteth himselfe into the sea in a large and deepe chanell: his swiftnesse suffereth no barre, nor refuseth any shipping of what burthen soeuer they be: within his mouth for good and hopefull respectes is port Burley placed. The inhabitants that dwell Eastward, doe neuer passe lower then Berbice to trade. Aboue Curitini in the woods they gather great quantities of hony. Farther to the Eastward then Dessekebe, no Spaniard euer trauelled. In which respect, and that no sea-card that I haue seene at any time, doth in any sort neere a truely, describe this coast: I thought the libertie of imposing English names to certaine places of note, of right to belong vnto our labours; the rather because occasion thereby offereth it selfe gratefully to acknowledge the honour due vnto them that haue beene, and I hope will still continue fauourers of this enterprize. The Indians to shew the worthinesse of Dessekebe (for it is very large and full of Islands in the mouth) doe call it the brother of Orenoque. It lyeth Southerly into the land, and from the mouth of it vnto the head, they passe in twentie dayes: then taking their prouision they carrie it on their shoulders one dayes iourney: after wards they retorne for their Canoas, and beare them likewise to the side of a lake, which the Iaos call Roponowini, the Charibes, Parime: which is of such bignesse, that they know no difference between it & the maine sea. There be infinite numbers of Canoas in this lake, and (as I suppose) it is no other then that, whereon Manoa standeth: In this riuier, which we now call Deuoricia, the Spaniards doe intend to build them a towne. In Moruga it was, that they hunted Wareo and his people, about halfe a yere since. Arramaiarie, who was so great credit by ouerthrowing the Tiucinas of Amana, and making free the passage of that riuier (but now againe liueth in disgrace, by reason that the Charibes of Guanipa haue killed most of his followers, and burnt his townes) was present with them, and tooke away many of the women of that place. Arracuri, another Indian of the nation of the Arwaccas inhabiting in Barima, was likewise present, and conducted the Spaniards to all the Indian dwellings. They were not of Anthonie de Berreo his companie, that followed this chase, but were the Spaniards of Margarita, and the Caraccas, with whom * Santiago forsaking his gouernour Berreo, ioynd himselfe. For which fact he now lyeth in fetters at Trinidad, euery day expecting sentence of death. The occasion hereof grew as followeth.

When Berreo, hauing lost his men, was left with Fasshardo at Cumana all alone, as forlorne, and neuer likely to compasse his intended conquest of Guiana: the gouernours of the Caraccas and Margarita consulting together, sent with all speede into Spaine, to aduertise their king, that Berreo was utterly vnable to follow this enterprize, that he had giuen it ouer, and did now sojorne in his old dayes at Fasshardo his house, minding nothing else but his solace, and recreation. They farther declared, of how great importance this matter was: and that an English gentleman of such reckoning, as they named your lordship to be, hauing bene in Guiana, and vnderstanding so much of the state thereof, and the nations therunto adioyning, as Topiawarie, being both olde and wise, could informe you of, who also in confirmation of friendship, had giuen you his onely sonne, to whome the inheritance of the countrey did belong after him: there was no other likelihood; but that you, who aduentured so farre, and in such sort as you did, onely to see, and knowe a certaintie, would leaue nothing vnattempted to possesse so rich a countrey, and without all doubt would retorne presently. That meane time, you had left this aged Sire aliue, to bee a blocke in their way, to whom after his decease, this enterprize by patent did belong, and to bee a weake aduersarie

From Cape Cecyl to Raleana 200. leagues.

Dessekebe called The brother of Orenoque.

The great lake whereon Manoa or El Dorado standeth. In September.

This Spaniard vnderstandeth the Guianian language, and is reputed a very sufficient man.

adversarie against your selfe, whom at all times you knew easily how to distresse: and that therefore it might be behoofefull for his maiestie to reuoke Berreo his grant, and to vse their seruice, who were readie and willing without any delay to undertake the charge. These newes being at large amplified and deliuered to the king: Domingo de Vera, Berreo his Camp-master, who was sent into Spaine, five moneths befoze your arriual at Trinidad, with a sufficient quantitie of gold gotten out of Guiana, to leuie and furnish 500. men, hauing gotten knowledge of this practise, so solicited this cause in Berreo his behalfe, that present order was giuen for the victualling and manning of tenne ships to be sent to Berreo: and farther, this gold boze such waight, that the king commanded other 18. of his ships to stop at Trinidad, and not to follow their other directions, befoze they saw that place secured from enemies.

Francis Sparrow
taken prisoner.

Berreo supposing that these gouernours in sending with such speede into Spaine, meant him no good: to approue his care and constancie, and that he neuer would preelde vnder the burthen of his aduerser fortune; giuing no time or breath to his aduersaries nor himselfe; returned forthwith to Carapana his port, onely with fiftene men, being the scattered remnant of those whom you lately dispossessed of Trinidad. These gouernours followed him, and assuring themselves of present imploymment from their king, preoccupating the time of their directions to bee returned from Spaine, entered Guiana with their men, with full determination to murder Berreo, and to dispatch all his company. They indeed killed two or thre, but Berreo fledde towarde Caroli, where hee stayed hoping for succour from his sonne Antonie de Ximenes, to come downe the riuer from Nucuio Reyno de Granada. The Margaritanes with their accomplices busied themselves, some in searching the countrey, others in purueying of victuals out of the riuers that doe lie Eastward, of which number these were, that entred into Moruga with twentie Canoas. Santiago passed by into Topiawaries countrey, and there tooke Francis Sparrowe sir George Gifford his man prisoner, who with plenty of gold ransomed his life, and is now abiding in Cumana. This done, they all returned to Trinidad, and beganne to builde their towne there, when unhappily to their small comfort the eight and twentie sayles arriued, and tooke Santiago prisoner. The other Actozs in this Enterlude vanished, and in Canoas recovered Margarica and Cumana againe. Eightene of the said ships leauing all things in good order, departed from Trinidad to follow their others directions: ten doe yet remaine fortifying at Conquerabia, and expecting our comming.

This particular relation I had from an Indian, seruant to Berreo, that could speake Spanish, whom I tooke in the riuer. He is of the nation of the Iaos, and from a child bred by with Berreo. I gaue him trade to buy him a Canoa to returne into his countrey, and so left him glad, that hee had met with vs.

Now the Indians of Moruga being chased from their dwellings, doe seeke by all meanes possible to accorde all the nations in one, so to inuade the Arwaccas who were guides to the Spaniards, in shewing their townes, and betraying them. For they are fully perswaded, that by ouerthrowing these Arwaccas, who serue the Spaniards (for a great part of this nation doth also hate, or not know them) out of their territories, and Trinidad, the Spaniards for want of bread, will bee inforced to seeke habitation farther off, or at the least in time consume and be wastled.

They anker
within Raleana,
or Orenoque.

The 6. day of Aprill we came to an anker within the mouth of the riuer Raleana, hauing spent twentie and thre dayes in discouerie vpon this coast. The chanell of this riuer hath five or seuen fathome depth, nine or ten miles off at sea, the barre lyeth farther out, and at low water hath not full two fathome. It highes not aboue five foote, except at a spring tyde. Wee ankered in ten fathome the first night: the next morning twelue Canoas came vnto vs, furnished and provided of victuals after their maner for the warres. Their Captaines names were Anwara, and Aparwa. These Cassiques, when the Spaniards made the last inrode in those parts, were in the inland amongst the Iwarewakeri their neighbours, by which occasion hauing lost some of their wiues (for notwithstanding their profession of Christianitie, some of these Spaniards keepe ten or twelue women, thinking themselves wel and surely blessed, howsoeuer they liue, if their towne and houses be religiously crossed) they kept together 30. Canoas, hoping at our comming, which they had now long expected to recouer this losse vpon them and the Arwaccas, who in their absence had done this wrong. They shewed me this their purpose, & required to be toynd in league of friendship with vs against our enemies. When of them I had learned so much of the present estate of the countrey, as they did know: they demanded whether we had brought no more forces with vs, but onely one ship: I answered them as befoze I did the others, that wee now came only to trade, not knowing vntil this present that any Spaniards were in Guiana; that vpon our returne our whole fleete will hasten to set forwarde, and that in the meane time, wee would

Spanish Pa-
ganisme.

now

now visite our friendes, and helpe them so farre as wee could in any thing that wee should finde needefull presently to bee done. After long discourse (for their chiefe man stayed with mee all night) when hee had caused mee to spit in my right hand, with many other ceremonies which they vse in confirming friendship, hee went to the shoare, and one of his Canoas hee sent to bring forwardes the other twentie: one other hee caused to goe by the riuer before vs, to bring intelligence. Then calling together the chiefe of his companie, they made small fyres, and sitting in their Hamacas, or Indian beddes, each one sorted himselfe with his companion, recounting amongst themselves the worthiest deedes, and deaths of their Ancestours, execrating their enemies most despitefully, and magnifying their friendes with all titles of prayles and honour, that may bee deuised. Thus they sate talking, and taking Tabacco some two houres, and vntill their pipes bee all spent (for by them they measure the time of this their solemne conference) no man must interrupt, or disturbe them in any sort: for this is their religion, and prayers, which they now celebrated, keeping a precise fast one whole day, in honour of the great Princes of the North, their Patronesse and defender. Their Canoas being made ready, they accompanied vs, and in their way shewed vs, where the shoalbes of the riuer doe lye. By this Captaine I learned that Muchikeri is the name of the Countrey where Macureguera is the first towne of the Empire of Guiana, that lyeth towardes Raleana, is seated in a fayre and exceeding large plaine, belowe the high mountaines, that beare Northwesterly from it, that it is but three dayes iourney distant from Carapana his Porte, and that Manoa is but sixe dayes farther. That they themselves doe passe in three dayes into the Countrey of the Iwarewakeri by the Riuer Amacur, which though it bee not the directest, yet it is the readiest way to Macureguera, for that which leadech to Carapana his dwelling, is in some places difficult, and mountainous. That a nation of clothed people, called Cassanari, doe dwell not farre from the place, where the Riuer doeth first take the name of Orenoque, and that farre within, they border vpon a Sea of salt water, named Parime. That a great Riuer, called Macurwini, passeth through their Countrey into Orenoque. That Manoa standeth twentie dayes iourney from the mouth Wiapoco: sireeteene dayes from Barima, thirteene dayes from Amacur, and tenne dayes from Aratoori. That the best way vnto it, is not by Macureguera. That of all others the Charibes that dwell high by in Orenoque, knowe most of the inlande, and of those nations, and they speake no other language, then such as Iohn your Interpreter doeth well vnderstand. Hee certified mee of the headlesse men, and that their mouthes in their breastes are exceeding wide. The name of their nation in the Charibes language is Chiparemai, and the Guianians call them EwJapanomos. What I haue heard of a sorte of people more monstrous, I omit to mention, because it is no matter of difficultie to get one of them, and the report other wise will appeare fabulous. Lastly hee tolde mee of an inland Riuer, named Cawrooma, adioyning to Aratoori, and that the Quepyn mountaines, where Carapana dwelleth, are hardly accessible. That the Amapagotos haue images of gold of incredible bignesse, and great store of unmanned horses of the Caracas breed: and they dwell five dayes iourney by the Riuer about Caroli. Wee with our flecte of Canoas were now not farre from Carapanas Porte, when our intelligencer returned and informed vs that tenne Spaniards were lately gone with much trade to Barima, where these Indians dwelt, to buy Cassai bread; and that within one day two other Canoas of Spaniards were appointed to come by the Riuer Amana, to Carapana his Porte.

guage.

A sudden assault
of the Spaniards
by the
Indians.

Upon this occasion they tooke counsell, and in the ende desired to returne to their houses, least the Spaniards finding them from home, and imagining that they did purposely absent themselves, shoulde take away their wiues and spoyle their dwellings. They farther resolved if it were possible to cut them off: which after wardes they did performe. For when they were dispersed in their houses seeking Cassai, suddenly at one time, in all places they were assaulted, and not one of them escaped. Carapana, whose hand was in laying this plot, sent vs this newes, as wee returned downe the Riuer. The two other Canoas that came from Trinidad by Amana, notwithstanding that wee kept a league before the shippe with our boates, sawe the shippe before wee had sight of them, and presently with all speede went to Berreo to aduertize him of our comming. Hee forthwith dispatched two or three messengers to Trinidad. One of his Canoas mette with our spie, whome the Indians of Barima had left to goe with vs: they rifled him of his victuals, gaue him kniues, and dismissed him.

In eight dayes sayling still before a winde, wee arrived at Topiawaries Porte, in all which time no Indian that wee knewe came abourd vs. For the time of our returne promised at your Lordshippes departure from thence being expired; they in dispaire severed themselves amongst

A Rancheria of
village plan-
ted by the
Spaniards at
a Port of
Topiawary.

the other nations. Here the Spaniards haue seated their Rancheria of some twentie or thirtie houses. The high rockie Island, that lyeth in the midst of the Riuer, against the mouth of Caroli, is their Forte or refuge, when they misdoubt safetie in their Towne, or hauing notice of any practise against them: but now leauing both Towne and Island, they ioynd them selues altogether, and retiring to the mouth of the Riuer Caroli, placed there a secret ambush, to defend the passage to those mines, from whence your Dare and white stones were taken the last yeere: Wee all not without griefe to see our selues thus defeated, and our hungry hopes made voyde, were witnesses of this their remooue. As we rood at an ancor within musket shot of their Towne, an Indian came vnto vs with leane cheekes, thynne haire, and a squint eye, to informe vs that they were very strong, that Berreo his sonne was with him, that they had but two small pinnisses at Trinidad, which they dayly looked for to come vp the Riuer, and lastly, to view our shippe well, and our prouision, but especially to learne whether Gualtero, Topiawarie his sonne were with vs.

This Informers very countenance gaue him to bee suspected, and therefore partlie by threatening, partlie by promise of rewarde wee wonne him to confesse the truth. Which hee did, assuring vs that Berreo had not full fiftie five men with him, whereof twentie came lately from Trinidad, twentie from Nueuo Reyno, and the rest hee brought with him about sixe moneths since, when hee fledde from Carapana his Porte, and was driven with his small companie to keepe the aforesaide Island neere Caroli. And that though nowe his number is thus increased, yet dareth hee not aduenture at any time to leaue the fast woodes, and to goe but halfe a league from his holde into the plaines. That some fewe of the Arwaccas are abiding with him. That hee dayly looketh for his sonne from Nueuo Reyno, for his Campe-master from Trinidad, and for horses from the Caraccas. That Topiawarie is dead: the Indians of that coast all fledde, and dispersed, excepting the sonne of one Curmatoi, and another woman of account, whome the Spaniards holde prisoners, for consenting to the death of their nine men, and the holy Fryer in Morekito his time. This Curmatoi is fledde towardes Guanipa, and is a man of speciall note amongst the Indians. That Iwiakanarie Gualtero his neere kinsman, hath helde the Countrey to his vse, by his fathers appointment, euer since your being in the Riuer. That there are tenne ships, and many Spaniards at Trinidad. That the Indians our friends did feare, least you with your company were all slaine, and your shippes sunke at Cumanà (for so the Spaniards noryed it amongst them,) that some of Gualtero his friends with Putijma, were in the mountaines not farre from the hill Aio. And that Berreo had sent for sixe peeces of ordnance, which he meant to plant, where they might best command the Riuer.

When wee had stayed here two dayes, considering that where no hope was left of doing good, to abide there in harmes way doing nothing, would be bootlesse: I resolved to seeke Putijma in the mountaines: and turning downe the Riuer with the force of the streame some twentie miles in sixe houres: the next morning with ten shot I went ashore, intending if the Indians should thinke themselves too weake, with our helpe to displant the Spaniards: to set some of them on worke, for hatchets and kniues to retorne vs golde graines, and white stones from such places, as they should be directed vnto. When wee came to the place of their vsuall abode, wee sawe that they lately had bene there, but could speake with none of them. It may be that feare, which is easie of beliefe, perswaded them that we were Spaniards. Gilbert my Pilot here offered to bring vs either to the myne of white stones neere Winicapora, or else to a gold myne, which Putijma had shewed him being but one dayes iourney ouerland, from the place where we now stayed at an ancor. I sawe farre off the mountaine adioyning to this gold myne, and hauing measured their pathes neere the same place this last yeere, could not iudge it to bee fiftene miles from vs. I doe well remember howe comming that way with Putijma the yeere before, he pointed to this same mountaine making signes to haue me goe with him thither. I vnderstood his signes and marked the place, but mistooke his meaning, imagining that he would haue shewed mee the ouerfall of the Riuer Curwara from the mountaines. My Indian shewed me in what sort without digging they gather the gold in the sand of a small riuer, named Macawini, that springeth and falleth from the rockes, where this myne is. And farther tolde me, that hee was with Putijma, at what time Morekito was to be executed by the Spaniards, and that then the chiefe of Morekito his friends were in consultation, to shewe this myne vnto them if so they might redeeme their Captaines life: but vpon better aduise, supposing them in this case to bee implacable, and that this might prouoe a meane to loose not onely their king, but their Countrey also: they haue to this day concealed it from them, being of all others the richest, and most plentifull. The aged sort to keepe this from common knowledge, haue deuised a fable of a dangerous Dragon that haunteth this place

Topiawarie his
sonne.

The common
lives of the
Spaniards.

place and deuoureth all that come neere it. But our Indian, if when we returne, we doe bring store of strong wine (which they loue beyond measure) with it will vnder take so to charme this Dragon, that he shall doe vs no harme.

I, that for this ende came from home, and in this iourney had taken much more paines to lesse purpose, would very gladly from this mountaine haue taken so good a prooffe to witnes my being in the Countrey: but withall considering that not one Indian of our knowne friends came vnto vs: that Don Iuan the cousin of Guakero, who liueth here a reuolt from the Spaniard, was now in election to bee chiefe commander of all the Indian forces in these partes, cannot in pollicie, for Guakero his sake, whose inheritance hee sought to vnrpe, bee a fast friend vnto vs: that the Spaniardes abiding in Winicapora (for there were trinne) might well before wee could doe any thing, and returne, cause some others of Berreo his men to ioyne with them, in the way to intercept vs: and forthinkning withall, that there being no meanes, but our selues, to make knowne our discouerie, if wee returned not; in our misfortune the hope of following this voyage would bee buried: but besides all this, and the respect of such spalls, as the Spaniardes kept to obserue our dooings, foreknowing that if the enemye should by our lingring, stop our passage, which in one or two places of aduantage, fewe of them might easilie doe: it would bee a question howe with our shippe to get out of the Riuer, except first wee could remooue them: I thought it best (all other possibilities set apart) to seeke in time to bee free from the hazard of the aforesaid euill passages.

Whilist wee were searching at the shoare for the Indians, my Barge tooke a Canoa, with three men in her: the one a seruant to Berreo, (as before is mentioned) the other two marchants of Cassau. They had a letter sent from the Gouvernour to bee conueied to Trinidad, which I receiued. There was also a great hatchet, and twentie kniues, wherewith this Indian seruant should buy a Canoa, and hire Indians to cary her by the Riuer towarde Nucuo Reyno. This Canoa forsooth with foure other were to bee sent to bring downe Berreo his sonne with all his forces, which nowe haue bene, I thinke, full three peeres in preparing. If five such boates bee sufficient to conuoy him, his men and all their prouision: it may seeme, hee cometh with no great strength.

The small forces of Ximenes.

This seruant, as hee was a man of especiall trust, and neere Berreo: so appeared hee to haue some insight in his proceedings. He shewed mee that the Indians, who with these kniues should be hired, were to passe by so high, as where some of the Cassanari doe dwell in small villages. That Berreo his purpose was, when they came thither to leaue them there, and make them officers ouer the other Indians: and in their places some of the Cassanari should returne, who likewise should be made Iustices and Constables ouer them of Guiana: that from Trinidad he meant to remoue most of the olde inhabitants, that would be tractable; and interpose them amongst the Cassanarians of Guiana, and the Guianians of the Cassanari. That the Arwaccas should wholly possesse Trinidad, and the riuer side of Raleana. That they already were prouided of threescore Negros, to worke the mynes in these places. And that by this meanes Berreo hoped to keepe these seuerall nations in mutual enmitie each against other, all to serue his turne, and neuer to become strong, or likely to ioyne themselves against him. He farther shewed me, that Topiawary, soone after our departure from the riuer, fledde into the mountaines, carying Hugh Godwyn with him, and leauing a Substitute in his Countrey, as aforesayde: and that the next newes they heard of him was, that hee was dead, and the English boy eaten by a Tyger. That the Spaniardes beleue neither the one nor the other. That about the ende of Iune, when the Riuer shall bee impassable, the tenne shippes shall depart from Trinidad. And that Berreo euer since his comming to Guiana, hath spent his time altogether in purueying of victuals, whereof there is such scarcitie, by reason that the Indians forsaking their houses, haue not this halfe peere planted any of their grounds, so that the Spaniardes are enforced to seeke their bread farre off, and content themselves to liue with litle.

This transplanting of Indians is worthy of consideration.

In sayling by the Riuer, wee passed by Toparimacko his Port, which in one place is very shoalde, the chanell lying close aboard the shoare. Wee returned therefore another way by the maine riuer on the South side: this branch wee found large, deepe, and without danger. When wee were come neere Carapana his Port, hee sent five or sixe seuerall Canoas, promising this day and the next, that hee would come and speake with vs. Thus wee lingred sixe or seuen dayes, but hee came not. In the ende hee sent one of his aged followers, to certifie vs, that hee was sicke, olde, and weake: that the wayes neere his dwelling are not easie: and that therefore he desired vs to holde him excused for not comming. This olde man dilated vnto vs, that Carapana in hope of our returne, hath euer since your Loshippes being in that Countrey, kept the

The Port of Toparimacko.

The porte of Carapana.

mountaines, where the Spaniards can hardly any way inforce him; that they haue taken from him and his people many of their wiues, because they refused to furnish them weekly with a certaine proportion of bread and victuals: that Don Iuan otherwise called Eparacano hath the commandement of all his subiects, excepting onely a choise garde of men sufficient to keepe the place hee nowe dwelleth in. That it repenteth him of his ambition, euer to haue sought by the Spaniards meanes, to haue enlarged his Countreys and people. For true it is that from the beginning hee was a Lorde of no other then ordinarie power amongst them, untill hee had entered into friendship with Berreo: for then the Indians on all sides left some their habitations, and manie their commanders to become his subiectes, that they might haue the priuiledge to trade with the Spaniards for hatchets and knives, which are iewels of great price amongst them: that hee nowe saue no other choise, but that the Indians must, if they will doe well, without farther dissembling of their necessitie, either entertaine vs their friends, or else giue place to the Spaniards their enemies. For the plenty of golde that is in this Countrey, heeing nowe knowne and discovered, there is no possibilitie for them to keepe it: on the one side they coulde feeble no greater miserie, nor feare more extremitie, then they were sure to finde, if the Spaniards preuailed, who perforce doe take all things from them, vsing them as their slaues, to rime, to rowe, to bee their guides, to carry their burthens, and that which is worst of all, to bee content, for safetie of their liues, to leaue their women, if a Spaniard chance but to set his eye on any of them to fancie her: on the other side they could hope for, nor desire no better state and vsage, then her Maiesties gracious gouernment, and Princely vertues doe promise, and assure vnto them. For, sayde he, the other yeere, when wee fledde into the mountaines, and measured your doings by the Spaniards in like case, we made no other account, but that your Commander being able, as hee was, would doubtlesse haue persecuted vs to the vttermost, as the onely maintainers and suppoztors of your enemies, and would at the least, if hee could not reach vs, take our Townes, and make vs ransome our wiues and children: wee found it farre otherwise, and that none of your well gouerned companie durst offer any of vs wrong or violence, no not by stealth, when vnknowne they might haue done it. We then beleueing it to bee true, that your grand Captaine reported of his Princessse, tooke this for a good prooofe of her royall commandement and wisdom, that had framed her subiectes to such obedience, and of your happinesse, that inioyed the benefite thereof: that Carapana weighing the good and friendly course of our proceedings, doeth humbly craue of her Maiestie for himselfe and his people, that with the rest of the Indians, which wholly depende on her Princely regarde towards them, hee also may inioy her fauourable protection: that hee doeth this, not as a man left vnto himselfe and forsaken by the Spaniards, but as one that knoweth their iniustice, hateth their cruelties, and taketh it for his best choise, vnto to disclaime their friendship. It may bee pertinent (as surely it is a thing worth the noting) to consider howe this president of your moderation and good order, which to vs seemeth a matter but of small, and ordinarie respect, hath both alienated their heartes altogether from the Spaniard, and stirred vp in them true loue and admiration thereof. For as gouernement is the onely bond of common societie: so to men lawlesse, that each one to another are, Omnes hoc iure molesti, quo fortes: To men, I say, that liue in dayly tumultes, feares, doubttes, suspitions, barbarous cruelties, neuer sleeping secure, but alwayes either drunke, or practising one anothers death: to such men as these bee, who wanting discipline, iustice and good order to confirme them in a quiet and peaceable course of liuing, knowing not where to finde it: the sence and sweetenesse thereof is as the dewe of Hermon: it is as the Harmonie of a well tuned Instrument: to bee briebe, it carrieth in it selfe not onely a due and worthy commendation; but is auayleable without stroke striking to gaine a kingdome. For the Indians in all partes within and neere Guiana, doe offer their seruice, and promise to prouide victuall, and what else their countrey yeeldeth, desiring onely that some force of men may remaine with them, to deliuer them from oppression and tyrannie. And nowe by generall consent (though hatchets and knives bee the onely things of request and vlesfull vnto them) they haue agreed by no meanes to trade with the Spaniard for any thing.

Carapana a
great Lord
bordering vpon
on Guiana cra-
ueth her Maie-
sties protec-
tion.

Farther this old man shewed mee, whence most of their golde commeth, which is formed in so many fashions: whence their Spleene-stones, & others of al sorts are to be had in plenty: where golde is to bee gathered in the sandes of their riuers: from what partes the Spaniards, both by trade, & otherwise, haue retuned much gold. This he vttered with Carapana his consent (I doubt not) hoping thereby to induce vs to retorne againe. For contrarie to their lawe of secrecie, which

which in this case they doe all generally obserue, sharply punishing the breakers thereof, as enemies vnto their native Countrey: I found this man no whit scrupulous, but very free and libe-
rall of speech in all things.

And because we might knowe, that wee should not want handes or helpe, in this or any other
our enterprises, if perhaps wee should finde cause to passe vp to the head of this River: hee decla-
red that the Spaniards haue no Indians to trust vnto but some of the Arwaccas, which since
they were not many, could bee but of small force: That the Charibes of Guanipa, the Ciawan-
nas amongst the Tiuituas, the Shebaicos, Iaos, Amaipagotos, Cassipagotos, Purpagotos, Sami-
pagotos, Serowos, Etraiguinams, Cassamari, with the rest of the nations faire and neere,
were all ready, on what side soeuer the Spaniards shall stirre, to fight against them: that the
Pariagotos, through whose countrey they must first passe, are alone sufficient to encounter them,
such is the strength of their countrey, and the valure of the men. The Indians holde opinion,
that they are notable forcerers, and invulnerable. In the mountaines where they dwell, white
stones are found of such hardnesse, that by no arte or meanes they can bee pierced; they imagine
that these Pariagotos become invulnerable, by eating these stones. The fable omitted, happily
they may prooue good Diamonds.

Then he shewed howe the Iwarewakeri haue nourished grasse in all places, where passage is,
these three yeeres, and that it is at this present so high, as some of the trees, which they meane
to burne, so soone as the Spaniard shall bee within danger thereof. Lastly, hee shewed mee
that Wariarimagoto the Emperours chiefe Captaine for those partes, hath gathered together
many thousandes of the Epuremei, to keepe the borders of the Empire; and that hee lay now on
the South side of the mountaines, some one dayes iourney or little more from the Spaniards.
To be short, hee certified mee, that they all were resolu'd not to seeke vpon them (for indeede they
feare their shot) but to defend their owne, and to expect our coming. In the meane time they
take opportunities, when they finde any of them straggling or deuinded from their strength, by li-
tle and little to lessen their number.

Wariarimagoto
one of the
Emperour of
Guiana his
chiefe Cap-
taines by in
armes against
the Spaniards.

The place where wee were at ancor was but one dayes iourney from Carapana: I therefore
made motion to this Captaine to stay with two or three of his company aboard the shippe, and to
cause his men to bring mee with my Interpreter to Carapana his dwelling: hee answered mee
that it were not good so to doe, least perhaps some Spie might informe the Spaniards thereof,
whereby danger would growe to Carapana. If or they haue many times vs'd many meanes to
reconcile him vnto them: but hee from time to time hath delyed with them, neither professing
himselfe their enemy, nor in ought shewing them any friendship. Nowe (sayde hee) if the
Spaniards shall by any meanes come to knowledge, that you haue conferred together, they
will take this occasion to persecute him with all extremitie, as their open enemy, whom they now
neglect, or at the least feare not, as being an harmelesse old man. And for this cause only hath Ca-
rapana forborne to come vnto you.

By this I perceiued, that to stay longer for him (though gladly I could haue bene content
to spend one seuenights more to speake with him) would bee purposelesse. Wherefore hauing as-
sured so many of the Indians as at any time came vnto vs, of our speedie returne, promising them
plentie of knives, beades, and hatchets, if they would reuerie their Cassari, and prouide store
of their pieces of golde for vs: I desired this Captaine to bee a meanes that our friends of Tri-
nidad might vnderstand of our being in the River and that wee meane to relieue them so soone,
as conueniently might bee. Hee promised in Carapana his behalfe, that this should not bee
forgotten. One of the Captaines of the Cyawannas, who doe now dwell in the River Ara-
wawo, neere Trinidad, vnderooke also without fayle to ascertaine them thereof. It was the
more carefull herein, because so many ships being heere, I doubted least they would take order
that no Indian should speake with vs. For so indeede it fell out.

This Captaine of the Cyawannas came likewise to ioyne with vs, and had prouided fif-
teene Canoas for that purpose. Their dwelling was lately in Macureo, where the Spani-
ards one night stealing on them, killed twentie of their men, and burne their houses, because
they refused to trade with them for certaine images of golde made with many beades which
they had gotten out of Guiana. I sent a present of Iron to Carapana, and then set
sayle.

In turning downe the river wee spent eight dayes. In many places where the channell lyeth
wee found twentie fathome depth: where it is shallowest, wee had two fathome and a halfe, and
that but in one or two places. Of the worthinesse of this River, because I cannot say ynough, I
will

The chanel of
Raleana, or O-
renoque very
large & good.
They meete
with their
Pinnelle.

will speake nothing. Wee haue presumed to call it by the name of Raleana, because your selfe was the first of our nation that ever entred the same, and I thinke it nothing inferiour to Amazones, which is best knowne by the name of Orellana, the first discoverer thereof. By turning onely, without helpe of oares to passe so long away in so short a time, against the winde, may sufficiently prooue, that the chanel is very large, good, and likely to second our hopes in all that wee can desire. Without the mouth of this Riuer, our Pinnelle, the Discoverer, whome wee lost neere the coast of England, came vnto vs. Shee fell with this land somewhat to the Southwarde of Cape Cecyl, and had spent three weekes and odde dayes in ranging alongst the coast, when shee mette with vs. William Downe the Master informed mee that they entred, and searched these foure riuers. In Wiapoco they sayled so farre, vntill the rockes stopped their passage. In Caiane they went up one dayes iourney. In Cunanama they found many inhabitantes. Curitini was the last Riuer they had bene in. Whence, hauing no other meanes to finde Raleana, they were inforced to borrow a Pilot against his will: whom afterwards I would haue returned with reward to his contentment; but he would not.

A good cause.

Our English that to steale the first blessing of an vntreated place, will perhaps secretly hasten thither, may bee beholding to mee for this caueat, if they take notice thereof. They may bee assured, that this people, as they no way sought our harme, but vsed our men with all kindnesse: so are they impatient of such a wrong, as to haue any of their people perforce taken from them, and will doubtlesse seeke reuenge. The example of the like practise vpon the coast of Guinie, in the yeere 1566, and againe at Dominica, where Alderman Wais his shippe hardly escaped being taken, may serue for our warning in like case to looke for no good, before they bee satisfied for this iniury.

The Isle of
Tabago.

When wee had taken aboard vs such victuals as were in the Pinnelle: wee set fire in her, (for her Rudder could serue her to no longer vse) and stopping the floodes, plyed to windwarde with the ebbe neere the shoare, vntill wee were sixteene leagues to the Eastwarde of the Riuer's mouth, and then standing off to Sea, wee fell in twentie foure houres sayling with Punta de Galera the Northeastermost part of Trinidad. But hauing Tabaco-Island in sight, wee first went thither. This Island is plentifull of all things, and a very good soyle. It is not now inhabited, because the Charibes of Dominica are euill neighbours vnto it. They of Trinidad haue a meaning and purpose to flie thither, when no longer they can keepe Trinidad. Their onely doubt is, that when they are seated there, the Spaniard will seeke to possesse it also. The Governour of Margarita went lately in a Pinnelle to vewe this Island. Gilbert my Pilot who sometime liued there, noteth it for the best and fruitfullest ground that hee knoweth.

Post danges
from Canibals.

Thence wee returned to Punta de Galera and anchored in tenne fathome vnder the North side of the Island some five or sixe miles from the sayde point. The flood-tyde striketh alongst the coast to the Eastward very strongly. Wee discharged a peece of ordinance, and afterwards went to the shoore in our boat: but no Indian came vnto vs. I would haue sent Iohn of Trinidad to procure some of them to speake with vs: but he was altogether unwilling, alleaging that their dwellings were farre within the mountaines, and that hee knewe no part of that side of the Island. From this place we set sayle for Santa Lucia, but fell with Granata, which wee found not inhabited. Saint Vincene we hardly recovered, by turning vnder the lee of the island. The Tabaco of this place is good: but the Indians being Canibals, promising vs store, and delaying vs from day to day, sought onely oportunitie to betray, take, and eate vs, as lately they had deuoured the whole companie of a French shippe. This their treacherie being by one of their slaues reuealed, from thenceforth they did all forbare to come vnto vs. To sit downe on their lowe stools, when they by offering such ease, will seeme to shewe curtesie, abodeth death to strangers, that shall trust them. At Matalino or Martinino we found not any inhabitants. Lastly, wee came to Dominica, where we could get no good Tabaco. But hauing intelligence of a Spanish shippe, that was taking in of fresh water, at the North-west side of the Island, wee wayned anchored to seeke him. Wee discrying vs, stole away by night. The Indians of this place haue determined to remooue, and loyne with them of Guanipa, against the Spaniards, who lately dispeopled one of their Islands, and at our being there one of their Canoas returned from Guanipa, and certified vs, that the tenne Spanish shippes at Trinidad doe ride, some of them at Conquerabia, the rest at the small Islands neere the disemboging place. Wherefore we steered North and by East, taking the directest course to shorten our way homewards.

Thus

Thus haue I emptied your purse, spending my time and trauell in following your lordships directions for the full discouerie of this coast, and the riuers thereof. Concerning the not making of a voyage for your priuate profite, I pretend nothing. Sozie I am, that where I sought no excuse, by the Spaniards being there I found my defect remedied. And for mine owne part, I doe protest, that if the consideration of the publique good that may ensue, had not ouerpoysed all other hopes and desires: I would rather haue aduentured by such small and weake meanes as I had, to doe well with danger, then to returne onely with safetie. Nowe although in a cause not doubtfull, my allegation is no way needfull: yet because the weightinesse thereof, and the expectation of others, seemeth of due and right to claime something to bee sayde by mee, whome your especiall trust and fauour hath credited and graced with this employment: Pardon it (I beseech your honour) if, where my lampe had oyle, it borrow light also; and my speech, which is altogether vsfauorie, season it selfe with some of the leauen of your owne discourse touching this discouerie. The particular relation of some certaine things I haue referred, as properly belonging to your selfe, who onely, as knowing most, can make best vse thereof. So much in generall is here touched, as (I hope) may serue to refresh the memorie of this worthe enterprise in those whome it may concerne, and testifie your care and expence in following the same: that in a second age, when in time truely shall haue credite, and men wondering at the riches, and strength of this place (which nature it selfe hath maruelously fortified, as her chiefe treasure-house) shall mourne and sigh to holde idle cicles, whilst others reape and gather in this harvest, it bee not sayde, that Sir Walter Raleigh was of all men liuing in his dayes, most industrious in seeking, most fortunate in attaining to the fulnesse of an inestimable publique good: if, knowing that for enuie and priuate respectes, his labours were lessened, his informations mistrusted, his proffers not regarded, and the due honour of his deserts imparted to others; If (I say) seeing, knowing and bearing all this, hee with patience had persisted in so good a way in doing his Princeesse, and countrey service; and had but perfected his first discouerie by sending a shippe or two for that purpose: for then surely all lets and doubts being remooued, and so large a kingdome, so exceeding rich, so plentiful of all things, as this by his discourse appeared to bee, being offered: no deuises and vaine surmises could haue taken place, no illusions could haue preuailed: it had bene blindness and deafenesse in those, that being neere her Maiestie doe spend their dayes in seruing the common weale, not to see, and knowe in so weightie a matter: it had bene malicious obstinacie, impotencie of minde, and more then treason to the common wealth, the matter standing onely vpon acceptance, to seeke either to foreshowe so fit an occasion, or forsake so generall a blessing. This (if) is nowe cut off through a singular and incomparable temper, in ouercomming euill with good.

This your seconde discouerie hath not onely founde a free and open entrance into Raleana, which the Naturals call Orenoque: but moreouer yeeldeth choysie of fourtie seuerall great riuers (the lesser I do not reckon) being for the most part with small vessels nauigable for our marchants & others, that do now finde little profit in setting forth for reprisall, to exercise trade in. To such as shall be willing to aduenture in search of them, I could propose some hope of gold mines, and certaine assurance of peeces of made golde, of Spleene-stones, Kidney-stones, and others of better estimate. But because our beleefe seemeth to bee mated in these greater matters, and a certaintie of smaller profits is the readiest inducement to quicken our weake hopes; I not going so farre as mine owne eyes might warrant mee, doe onely promise in the aforesayd riuers Brazil-wood, honey, cotton, Balsamum, and drugs to helpe to defray charges: and further, because without a beginning there can bee no continuance of these benefites vnto our countrey to any that shall be the first undertakers hereof, I am gladly content to giue such light and knowledge, as by conference with the Indians I haue attained vnto.

By selfe, and the remaine of my fewe yeeres, I haue bequeathed wholly to Raleana, and all my thoughts lye onely in that action. The prosecuting whereof is in it selfe iust, profitable, and necessarie. Just, because it is intended for the defence of harmlesse people, who fearing chardome and oppression, desire to protect themselves and their countrey vnder her Maiesties tuition: Profitable, as may bee gathered not onely by many Spanish letters intercepted, but also by the proofes mentioned in the discourse of the first discouerie, and since that, by the Indians owne voluntarie relations: and lastly, by the prouision that the Spaniards doe make to acquite vs thereof. Necessary it is, as being the onely helpe to put a bitte in the mouth of the vnhyndeled Spaniards; the onely way to enter into his treasure of Nueuo Reyno, and Peru; the onely meanes to animate the wronged Indians, with our assistance to seeke reuenge for the extreme murders and cruelties,

cruelties, which they haue endured, and to ruinate his naked cities in all those parts of the Iu-land, whose foundations haue beene layd in the blood of their parents and ancestors.

The forces that the Spaniards hath already sent to Trinidad, to fortifie there, and keepe the passage of this riuer, are an euident argument that the king feareth and doubteth the sequelle of this discoverie. For can it bee a small matter? Or hath hee so waste employment for his men and shipping, that vpon no ground, hee would send eight and twentie shippes, to keepe vs onely from Tabacco? For what els that good is can Trinidad yeelde vs? No doubtlesse, if the returne of Berreo his Campe-masser with tenne of these shippes bee compared with precedent aduertisements concerning him: it will appeare more then probable, that the Guiana-golde waged these men and shipping: and that they are now more carefull to obtaine this place, then to keepe others, which they haue already gotten, which note, except in matters of extraordinarie account, is not incident to their policie and proceedings. Again, it cannot bee thought that either it was senselesse madnesse in the gouernours of Margarita, and the Caracas, to bring their states and liues in question, by seeking, contrarie to their kings order, to enter Guiana, and kill Berreo with his followers: or else the abundance of pearle in Magarita, and the golde mines in the Caracas, seeming matters of small account: Guiana onely was in their iudgement, rich, plentifull, and able of it selfe to redeeme their trespassse and offence, howe great soeuer it should bee.

The sundry attemptes and ouerthrowes of the Spaniards being men of power, and honourable place, in labouring threescore and thre yeeres and bywardes, to enlarge the kingdome of Spaine with this mightie and great empire, doe plainly shewe, that they long time sought a path, where in one moneth a high way was found: that the losse of their liues witnesseth their desires, and the worthinesse of the thing, where to vs the easinesse of obtaining discredite th the greatnes of the attempt: and that if now at the last they doe preuaile, they must holde by tyrannie that which they get by the sword; where then our returne nothing by the Indians is more wished for, nothing expected more earnestly.

Those objections, which haue beene made by many seeming wise, and the impediments likely to arise, as they haue supposed, are best answered by the vnrerequed witness of thole mens actions. Some haue termed these discoveries fables, and fantasies, as if there had beene no such land or territorie: others allowing both of the place, and that such a kingdome or countrey is discovered, make conclusion, that if it had beene so rich as wee haue supposed, that no doubt the king of Spaine would by this time haue possessed it. But if they consider that the Spanish nation hath already conquered the two empires of Mexico and Peru, with so many other kingdoms and prouinces: wee may very well answer, that his power is not infinite, and that hee hath done well for the time. And yet it is manifest, that this very empire hath beene by all those seuerall Spaniards (the catalogue of whose names is by it selfe hereunto annexed) at sundry times undertaken, and neuer performed. Howbeit, the world hath reason to admire their constancie, and their great labours, and wee may well blush at our owne idle, despairfull, and loytering dispositions, that can finde abilitie in another barren, and sterued nation, to possesse so much of the worlde, and can doe nothing but frame arguments against our selues, as unfit and powerlesse to possesse one prouince already discovered, and of which our nation hath assurance of the peoples loue, and that all the Chieftaines and principals haue bowed their obedience to her Maiestie; the navigation being withall so short, dangerlesse, and free from infectious sicknesses. If doubt of perills might moderate the mindes of our men once mooued with steadfast hope, that golde shall bee the reward of their trauels: it may easily bee perceiued, that all those lets and hinderances that can any way bee alleaged, or wrested so much, as but to touch vs, doe deeply and neerely concerne the Spanish king, and in a manner violently withhold him from that, which hee notwithstanding carrieth with successe, whilst wee out of leason do affect the bare stile, to be named men stayed and circumspect in our proceedings. It is reported, that Calanus the Indian threw downe before Alexander the great, a drie leare peece of leather, & then put his foot on one of the endes of it: the leather being trode downe at that side, & so on all parte else. By this the wise man did shewe vnto him a figure and similitude of his kingdome, which being exceeding large, must of necessity in all other parts, excepting the place of the kings residence be alwayes full of strifes, tumults and insurrections. The end afterwards confirmed, that this empire consisting of sundry nations, could not keepe it selfe from dissolution. No potentate liuing hath, or can haue so faithfull and incorrupt counsellors, as bee the examples and histories of for-past times and ages. Wee may therefore bee bolde to thinke that the Gouernours of the Spanish affaires should

should minde it, that their kings lustfull desire, and ambitious thoughts to establish ouer all Europe one lawe, one Lord, one religion, are built and erected on a dangerous vngrounded resolution: Considering that many of the neighbour kingdomes being of equall force in men, or greater then hee can make, are settled in a long continued estate, are entire within themselves, and hate to heare the voyce of a stranger. It is not unlikely that they in this case should lay before their king the fatall destinies of many worthies, that haue bene constrained for wante of sufficient numbers of their naturall subiects, after many peeres spent in the warres, to retire to their owne countreys, and haue bene glad peaceably to holde their owne Signiories at home, resigning all that vnto others, which they haue gotten abroad by hard aduenture, and much effusion of blood. The King of Spaine cannot but discern, that his spacious empires and kingdomes being so many, and so farre diuided one from another, are like the members of a monstrous bodie, tyed together with cables onely. For take away the traffique of vnnecessarie commodities transported out of Spaine: those huge countreys of the Indies hauing no common linke of affinitie, lawe, language, or religion, and being of themselves able to maintaine themselves without forreine commerce, are not so simple, as not to knowe their owne strength, and to finde, that they doe rather possesse Spaniards, then that they are possessed by them. Hee cannot bee ignorant that Spaine it selfe is on all sides environed with many puissant enemies, mightie and great princes, who knowing it to bee rich without men, confident without reason, proud and aduenturous without meanes sufficient; may happily confederate to chastise him, as an insolent intruder, and disturber of all quietnesse; and going no further then Spaine it selfe, may euen there shake the foundation of his long contrived deuises, and in one acte redeeme the time, controll his aspiring humors, and breake the bandes in sunder that import seruitude, and subuersion to all the dominions of Christendome. Again, his counsell may well informe him, that to dispeople and disable himselfe at home, in hope to obtaine Guiana, being a countrey strong of it selfe, and defended with infinite multitudes of Indian enemies, being rich, and by the inhabitants offered vnto the English: his contempt towardes vs would seeme so intollerable and despighfull, as might bee sufficient to prouoke vs; though otherwise wee had no such inclination; if hee vnprouided of able helpees to effect it, should rest himselfe on a carelesse presumption, that wee cannot, wee dare not, wee will not stirre in a matter that promisseth vs so great benefite, and may so highly offend him. Hee may bee perswaded, that to leaue no other succour or safetie to his nakednesse, but the olde stale practise of spreading rumours, and giuing out false intelligences of preparations to inuade England, thereby to keepe vs at home; or els of hyring and suborning some Machauellian vnder hande by secret conueyance, to stop the course of our proceedings; or lastly, of procuring some wilde outlaw to disquiet our tranquillitie; is but a poore, weake, and vncertaine stay to vpholde his estate by. And yet setting such like vnties aside: what can bee imagined likely to hinder vs from preuailing in Guiana, rather then him, whose disaduantage is to bee embroyled with the selfe same, and manifolde more impediments, then can any way bee supposed, with good cause to impeach, or diuorce vs fro so profitable an attempt: All this notwithstanding, if the Spanissh king not being able to dissemble his desire, or beare the losse of this one kingdom; putting himselfe out of his strength at home, and exposing his people to the hazard of all casualties abroad, bee resolved, whatsoever shall happen, not to relinquish Guiana, but to keepe this one yron more in the fire, on no other assurance, but a peremptorie disbaire of preuention: If hee appeare so eagerly bent for Guiana, as if it were enacted for a lawe amongst themselves, Viis & modis to thrust for it, and not to heare, conceiue, or beleue any thing, that may dissuade or deterre from the conquest thereof: it then appertaineth vnto vs, not to inforce those obiections against our selues, which hee with lesse reason reiecteth as frivoulous; since by howe much the more earnest hee is in following this purpose, by so much the lesse cause haue wee to bee diuerted from it. To such as shall bee willing further to wade in this argument; for vntities sake, I doe propose onely this bare assertion: that England and Guiana conioyned, are stronger, and more easily defended, then if England alone should repose her selfe on her owne force, and powerfullnesse. The reasons that might bee inferred to prooue this neede no rationall discourse: they are all intimated in the onely example of Spaine it selfe; which without the Indies is but a purse without money, or a painted sheath without a dagger. In summe: it seemeth vnto me, that whereas the difficultie of performing this enterpryse hath bene produced for a discouragement: it were a dull conceite of strange weakenes in our selues, to distrust our own power so much, or at least, our owne hearts and courages; as valewing the Spanissh nation to be omnipotent; or peelding that the poore Portugall hath that mastering spirit and conquering industrie,

about

aboue vs; as to bee able to seate himselſe amongst the many mightie princes of the East Indies, to frontire China, to holde in subiection The Philippinas, Zeilan, Calcut, Goa, Ormus, Mozambique, and the rest; the nauigation being so tedious and full of perill: to suffer our selues to bee put backe for worthlesse cyphers, out of place, without account. All which Regions being nowe also by the late conquest of Portugall, entituled to the Spanishe king: to whom the Colonies of those parts doe yet generally refuse to sweare fealtie and allegiance: and the care depending on him, not onely in gouerning them in the East, so farre off; but also of ordering and strengthening of those disunited, scattered, & ill guarded empires and prouinces in the West. It might very well bee alleaged to the layde Spanishe king, that it were moze wisdome for him to assure and fortifie some part of those already gotten, then to begin the conquest of Guiana, so farre separate from the rest of his Indies: in which hee hath had so many misfortunes, and against whom the naturall people are so impetuously bent, and opposed: were it not, that it exceedeth all the rest in abundance of gold, and other riches. The case then so standing, is it not meere wretchednesse in vs, to spend our time, breake our sleepe, and waste our braines, in contriuing a cauilling false title to defraude a neighbour of halfe an acre of lande: whereas here whole shires of fruitfull rich ground, lying now waste for want of people, do prostitute themselues vnto vs, like a faire and beautifull woman, in the pride and floure of desired yeeres?

If wee doe but consider, howe unhappily Berreo his affaires, with his assistants haue of late yeeres, in our owne knowledge succeeded: who can say, if the hand of the Almighty be not against them, and that hee hath a worke in this place, in stead of Papistrie, to make the sincere light of his Gospell to shine on this people? The effecting whereof shall bee a royall crowne of euerlasting remembrance to all other blessings, that from the beginning the Lorde hath plentifully powred on our dread Soueraigne, in an eminent and supreme degree of all perfection. If the Castilians, pretending a religious care of planting Christianitie in those partes, haue in their doings preached nought els but auarice, rapine, blood, death, and destruction to those naked, & sheeplike creatures of God; erecting statues and trophees of victorie vnto themselues, in the slaughters of millions of innocents: doeth not the crie of the poore succourlesse ascend vnto the heauens? Hath God forgotten to bee gracious to the workemanship of his owne hands? Or shall not his iudgements in a day of visitation by the ministerie of his chosen seruant, come on these bloodthirstie butchers, like raine into a fleece of wooll? Aliquando manifesta; aliquando occulta; semper iusta sunt Dei iudicia.

Her Maiestie.

To leaue this digression, It is fit onely for a prince to begin, and ende this worke: the maintenance and ordering thereof requireth soueraigne power, authoritie and commaundement. The riuer of Raleana giueth open and free passage, any provision that the Spaniard can make to the contrary notwithstanding, (for once yeerely the landes neere the riuer be all drowned) to conuey men, horse, munition, and victuall for any power of men, that shall be sent thither.

I doe speake it on my soules health, as the best testimonie, that I can in any cause peelee to auerre a trueth, that hauing nowe the second time bene in this countrey, and with the helpes of time and leasure well aduised my selfe vpon all circumstances to bee thought on; I can discern no sufficient impediment to the contrary, but that with a competent number of men, her Maiestie may to her and her successors enioy this rich and great empire: and hauing once planted there, may for euer (by the fauour of God) holde and keepe it, Contra Iudæos & Gentes. Subiects, I doubt not, may through her Maiesties gracious sufferance, ioyning their strength together, inuade, spoyle, and ouerrunne it, returning with golde and great riches. But what good of perpetuall can followe thereof? Or who can hope that they will take any other course then such, as tendeth to a priuate and present benefite; considering that an Empire once obtained, is of congruities, howe, and wheresoeuer the charge shall growe, to bee annexed vnto the crowne? The riches of this place are not fit for any priuate estate: no question, they will rather prooue sufficient to crosse and counteruade the Spaniard his proceedings in all partes of Christendome, where his money maketh way to his ambition.

If the necessitie of following this enterprise doth nothing vrge vs, because in some case better a mischief, then an inconuenience: let the conueniencie thereof somewhat moue vs, in respect both of so many Gentlemen, souldiers, and younger brothers, who, if for want of employment they doe not die like cloped cattell in ranke easefulness: are enforced for maintenance take sometimes to take shamefull and vnlawfull courses: and in respect of so many handicraftsmen hauing able bodies, that doe liue in cleanness of teeth and pouertie. To sacrifice the children of Beha vnto the common weale, is not to defile the lande with blood, because the lawe of God doeth not pro-
bite

hibite it, and the execution of iustice requireth it to bee so: but yet if the waterboughes, that sucke and feede on the iuice, and nourishment that the fruitesfull branches should liue by, are to bee cut downe from the tree, and not regarded: luckie and prosperous bee that right hande, that shall plant and possesse a soyle, where they may fructifie, increase, and growe to good: this honourable and blessed bee the memorie of so charitable a deede, from one generation to another.

To conclude, your lordship hath payd for the discoverie and search, both in your owne person, and since by mee. You haue framed it, and moulded it readie for her Maestie, to set on her seale. If either enuie or ignorance, or other deuise frustrate the rest, the good which shall growe to our enemies, and the losse which will come to her Maestie and this kingdome, will after a fewee yeeres shewe it selfe. Wee haue more people, more shippes, and better meanes, and yet doe nothing. The Spanish king hath had so sweete a taste of the riches thereof, as notwithstanding that hee is lord of so many empires and kingdomes already, notwithstanding his enterprises of France and Flanders, notwithstanding that hee attended this yeere a home inuasion: yet hee sent twentie eight saile to Trinidad, whereof tenne were for that place and Guiana, and had some other shippes ready at Cadiz, if the same had not beene by my Lordes her Maesties Generals and your lordship set on fire.

In one worde; The time serueth, the like occasion seldome happeneth in many ages, the former repeated considerations doe all ioyntly together importune vs; now, or neuer to make our selues rich, our posteritie happie, our Prince euery way stronger then our enemies, and to establish our Countrey in a state flourishing and peaceable. Let not then such an indignitie rest on vs, as to depraue so notable an enterprise with false rumors, and vaine suppositions, to sleepe in so serious a matter, and renouncing the honour, strength, wealth, and soueraigntie of so famous a conquest, to leaue all vnto the Spaniard.

A Table of the names of the Riuers, Nations, Townes, and
Casiques or Captaines that in this second voyage were discovered.

	Riuers.	Nations.	Townes.	Captains.
1	Arowari great.	Arwaos, Pararweas, Charibes.		
2	Iwaripoco very great.	Mapurwa- nas. Iaos.		
3	Maipari great.	Arricarri.		
4	Caipurogh great.	Arricurri.		
5	Arcooa great.	Marowan- nas, Chari- bes.		
6	Wiapoco great.	Coono- racki, Wacacoia, Wariseaco, Charibes.		
7	Wanari.	Charibes.		
8	Capurwacka great.	Charibes.		
9	Cawo great.	Iaos.	Icoomana.	Wareo.
10	Wia great.	Maworia, Charib. Wiaco, Ch.	Paramimo- na, great.	Mashwipo.

1 These are enemies to the Iaos, their money is of white and greene stones. They speake the Tinitiuas language: so likewise doe the nation of the Aricarri, who haue greater store of those moneyes then any others.

2 Here it was as it seemeth, that Vincent Pinçon the Spaniard had his Emeralbs. In one of these two riuers certain Frenchmē that suffred shipwrack some 2. or 3. yerres since, doe liue.

3. 4. 5. These with the other two seeme to bee branches of the great riuer of Amazonas. When wee first fell with land, wee were by y Indians reported, but 1. dayes iourney from the greatest riuer

riuer, that is on that coast.

6 The first mountaines y appeare within lande, doe lie on the East side of this riuer. From the mouth thereof, the inhabitants doe passe with their canoas in 20. dayes to the salte lake, where Manoa standeth. The water hath many Cataracts like Caroli, but that they are of greater distance one frō another: where it falles into the sea, hills do inclose it on both sides.

10 The freshest shoots out into the sea, with great force: the sea doth here sometimes campe high, and breake, as if it were full of rocks: but in prooffe it is nothing els but the pride & force of the tydes. In this bay, & round about, so far as the mountaines do extend there is great store of Brasill wood, some of it bearing farre darker colour then other some. Here are also many sortes of other good woods.

14 These speake the language of the Indias of Dominica. They are but few, but very cruel to their enemies. For they bind, and eat them aliue peecemeale. This torment is not comparable to the deadly paine that cometh of hurts, or woundes, made by those arrowes that are inuenomed wth the iuice of y herbe Wapoto. These Indias because they eate them whome they kill, vse no poyson. The sea coast is nowhere populous, for they haue much wasted themselves

themselves, in mutuall warres.
But now in all parts so farre as
Orenoque, they liue in league
and peace.

21. Neere the head of this
riuer, Capeleppo falleth out of
the plaines, and runneth into the
Sea with Curitini. Some of
the Guianians liue in this riuer.

29. This riuer, as also most
of the rest, is not nauigable a-
boue five dayes iourney by rea-
son of rockes. It is tenne dayes
iourney to the head, where the
Guianians do dwell: hony, yarne
or cotton, silke, Balsamum, and
Brasil-beds are here to bee had
in plentie, and so all the coast a-
longst Eastward. Some ima-
ges of golde, spleenestones, and
others may bee gotten on this
coast, but they doe somewhat ex-
traordinarily esteeme of them,
because euery where they are
current money. They get their
Poones, & other pieces of golde
by exchange, taking for each one
of their greater Canoas, one
piece or image of golde, with
three heades, and after that rate
for their lesser Canoas, they re-
ceiue pieces of golde of lesse va-
lue. One hatchet is the ordina-
rie price for a Canoa. They
haue euery where diuers sorts
of drugs, gummes, and rootes,
which I doubt not by farther
trial, will be found medicinable.

*So called af-
ter the name
of the right ho-
nourable the
Earle of Essex.

Names of poisoned hearbets.

Ourari. ¶ Apareepo.
Carassi. ¶ Parapara.

Hearbes good against poyson.

Turara. ¶ Wapo.
Cutarapama. ¶ Macatto.

The 29. day of June we ar-
riued in Portland roade, hauing
spent five moneths in going,
laying, and returning.

Here follow the names of those worthie Spaniards that haue sought to discover and conquer *Guiana*: Extracted out of the writings of *Iuan de Castellanos* clerigo, who compiled the booke intituled, *Primera parte de las Elegias de varones ilustres de Indias*.

The river of Amana, by which Sir Walter Raleigh first entred, called by Diego de Ordaz Viapari: And by Barth. de Casas Iulia-Pari.

The enterprize of *Guiana* was undertaken by Diego de Ordaz of the kingdome of Leon, in the yeere 1531. Hee was one of the captaines of Cortes in the conquest of Mexico. This Ordaz made his entrance by the river of Amana, by which wee entred, and spent fiftie dayes before hee came to the river of Orenoque, which we past in fiftene. Hee named the river by which hee entred, Viapari; which name it still retaineth in the Spanish descriptions. It lyeth South from Trinidad some five leagues. He transported out of Spaine a thousand souldiers. He dyed afterwards at sea in returning for Spaine.

2 Iuan Corteso arrived at the river of Amazonas or Orellana with three hundred men: Hee marched by into the countrey. But neither hee nor any of his companie did returne againe.

3 Gaspar de Sylva, with his two brothers, departed from Teneriff, accompanied with two hundred men to assist Diego de Ordaz. They sought El Dorado by the river of Amazonas: but staying there a short time, they fell downe to Trinidad, where they all three were buried.

4 Iuan Gonzales set saile from Trinidad to discover *Guiana*. He reposed himselfe more on the faith of his guides, then on his small number of men. Hee by triall founde the confines of *Guiana*, so farre as hee entred, to be populous, plentifull of victuall, and rich in golde. Upon such proofes as hee brought with him, to make good his report, many others adventured to follow his steps.

5. 6 Philip de Vren, & after him Pedro de Limpas, who both successiueley commanded the *Almaines*, were leaders in this action. Limpas was slaine by an Indian Casique named Porima.

7 Ieronimo de Ortal undertooke it by the way of Maracapana. After great travell and his substance all spent, he dyed on the sudden at S. Domingo.

8. 9 Ximenes, brother of Don Ximenes de Quesida the Adelantado, and Pedro de Orsua were both at sundry times in the same conquest.

10 Father Iala, a Friar, taking with him onely one companion, and some Indian guides passed into the prouinces of *Guiana*. Hee returned with good intelligence, and brought with him Eagles, idols, and other iewels of golde, An. 1560. Hee assayed the second time to passe in like manner, but was slaine by the Indians.

11 Hernandez de Serpa also undertooke it. The Indians of Cumanawgoto killed him, and defeated his armie.

12 Afterwardes, Diego de Vargas, and his sonne Don Iuan followed this enterprize, and at their first setting out, were slaine by the Indians.

13 Caceres undertooke this discovery from Nuevo Reyno de Granada. Hee came no neerer to it then Matachines, which borders vpon the sayd kingdome of Granada. Hee rested there and peopled that place.

14 It was also attempted by Alonso de Herera, at two severall times. Hee endured great miserie, but neuer entred one league into the countrey. Hee sought it by Viapari or Amana, and was at last slaine by a nation of Indians called Xaguas.

15 It was also undertaken by Antonio Sedenno, with whom Herrera and Augustine Delgado ioyned in the conquest of Trinidad, against Bawcunar a famous king of that place. He passed by Maracapana in the yeere 1536 to discover El Dorado with 500 chosen men. In this iourney hee got much gold, and tooke many Indian prisoners, whom hee manacled in yreus; and many of them dyed as they were led in the way. The Tigers being fished on those dead carkeilles, assaulted the Spaniards, who with much trouble hardly defended themselves from them. Sedenno was buried within the precinct of the empire neere the head of the river Tinados. Most of his people perished likewise.

16 Augustine Delgado searched the countrey to the Southward of Cumanawgoto with 53. footemen, and three horsemen. The waies that were then betweene the Indians of the vale, and those of the mountaines, serued well for his purpose. By which occasion he found means to passe so farre, untill he came to an Indian Casique, named Garamental, who entertained him with all kindnesse, and gaue him for a present some rich iewels of golde, sixe selimly pages, tenne young slaues, and three nymphes very beautifull, which bare the names of three prouinces from whence they were sent to Garamental chiefe commander of all that countrey. Their names were Guan-

ba Goroguané, and Maïararé. These provinces are of an excellent temperature, very healthfull, and have an admirable influence in producing faire women. The Spaniards afterwards requite the manifold curtesies that they receiued in that countrey, tooke and carried away, besides all the golde that they could get, all the Indians that they could lay holde on: they conueyed them in pions to Cubagua, and sold them for slaves. Delgado afterwards was shot in the eye by an Indian: of which hurt he died.

17 Diego de Losada succeeded in his brothers place. Hee had many more men; who in the ende wasted themselves in mutinies: those that liued returned to Cubagua.

18 Reynoso undertooke this iourney: but hauing endured exceeding troubles, in the discomfort of his minde, he gaue it ouer, and was buried in Hispaniola.

19 Pedro de Orsua, in the yeere 1560. fought it with 400. Spaniards by the riuer of Orellana. Hee imbarqued his men in the countrey of the Morjones. As they passed downe the riuer, they found Syriamom trees. His men murdered him, and afterward the sayde rebels beheaded lady Anes his wife, who forsooke not her lord in all his trauels vnto death.

20 Frier Francis Montefino was in the province of Maracapaná with 100. souldiers bound for Guiana, whē Lopez Aguirri the tyrant made insurrection in all those parts of the Indies, that became of this intended iourney is not expessed.

In this discoverie of Guiana, you may reade both of Orellana, who discovered the riuer of Amazonas An. 1542. and of Berreo, with others that haue trode this maze, and lost themselves in seeking to finde this countrey.

An aduertisement to the Reader.

IN this Breviarye, the names onely are comprised of such, as being led with the generall fame of *Guiana*, haue indeuoured to discover and possesse it. The whole histories are long and cannot suddenly be translated or englished at large, as we in these Elegies finde them. It may perhaps seeme strange and incredible, that so many caualleros should all faile in this one attempt, since in many parts of the *Indies*, far smaller numbers in shorter time haue performed as great matters, and subdued mighty kingdomes: I haue therefore thought it good here to alleage those reasons, which by circumstance may bee gathered to haue bene chiefe impediments to the Spaniard in this intended search and conquest.

The first may bee the remotenesse or distance of their places of *Rendenous*, from *El Dorado*: which appeare to be foure, *Nueno Reyno*, the mouth of *Amazones* or *Orellana*, *Cubagua* or the coast of the *Caracas*, and *Trinidad*.

1 From *Moiobamba*, where *Orellana* hath his head-spring, to his mouth, the Spaniards account it 2000. leagues. *Raleana* riseth neere the said mountaines in *Moiobamba*, & tributeth his waters to the sea, not farre from the other: *Guiana* is enuironed with these 2 freshwater-seas, where their distance is greatest from their risings, and is besides guarded with impassable mountaines which inclose and defend it on all parts, excepting *Topiawaries* countrey. It is no maruel then, if the vigor, heart, & life of those Spaniards, who sought it frō *Nueno Reyno*, were allayed & spent, before they came neere to it, in those long, desolate & vncomfortable wayes.

2 From *Cubagua* to seeke it by sea in vessels of any burthen, is a worke of far greater labour, then to saile directly from *Spaine*. And to passe ouer land is a matter of great difficultie, by reason that the Indian nations inhabiting betweene the coast of The *Caracas* and *Guiana*, being wearied and harried with the daily incursions of the Spaniards, haue now turned their abused patience into furie, refusing to suffer any forces of men to be led through their countreys. For the Spaniards traueilling in those parts, when they found not gold answerable to their expectation, ouerlaid them with cruelties, tyrannie, and thraldome: forbearing neither men, women, friends, nor foes. Which maner of dealing, though in some part it satisfied their desire of present profit; yet hath it otherwise done them much harme, in hardening and driuing those nations to desperate resolutions.

3 From the mouth of *Orellana* to seeke entrance with any number of men, & to bore a hole through the mountaines is all one. Neither finde wee, that any seeking it that way, haue at any time boasted of their gaines or pleasurable iourneys.

4 From *Trinidad*, as the course is shortest, so doeth it promise best likelyhood of successe. Howbeit, impossible it is with any vessell of ordinarie burthen by that way to recouer the riuer of *Raleana*.

The second. The Spaniards haue bene so farre from helping and furthering one another, or admitting partners or coadiutors in the *Guiana*-cause, that amongst so many attempts, from

the beginning to the last, I cannot find any one, when they were otherwise likeliest to preuaile, free from discords, mutinies, and cruell murders amongst themselves.

Thirdly. The Spaniards in this place haue mist that aduantage, which elsewhere hath seedeed themselves in all their conquestes: namely, the dissentions and mutuall warres of the Indians. Which of what force it is, may be gathered by the example *Aranco* in *Chil.* For the Indians of that one prouince containing in circuit not aboue 20. leagues, haue maintained warres aboue these 30. yeeres against all the Spaniards, and in despite of them haue kept their owne countrey, oftentimes discomfiting their enemies in many set battels, burning and destroying some of their strongest townes. The chiefe reason whereof I take to bee, because no Indian nation was enemy vnto them. And howsoever the Spaniards vaunt of their redoubted exploits in the *Indies*: yet doe their owne writings in effect testifie, that without the ayde of the Indians diuided among themselves, *Mexico*, *Pern*, and the rest, had neuer beene Spanish.

Lasty. I can impute it to no cause so rightly, as immediatly to the diuine prouidence: for by him princes raigne. And in my beleefe (except we will looke to bee warned by miracle from heauen) wee neede no further assurances, then wee already haue to perswade our selues, that it hath pleased God of his infinite goodnesse, in his will and purpose to appoint and reserue this empire for vs.

The third voyage set forth by sir *Walter Raleigh* to *Guiana*, with a pinnesse called *The Wattle*, in the yeere 1596. Written by *M. Thomas Massham* a gentleman of the companie.

Vpon Thursday the 14. of October 1596. we set saile from Limehouse vpon the riuer of Thames, and through much contrarietie of winds and other accidents, we made it the 27. of December, before we could get out of Waimouth. The 25. of Januarie in the morning we came to the North side of the Island of Grand Canaria, where we hoped to haue gotten a boate to serue vs vpon the coast of Guiana, but the winde was so great, that we could not lanch our shalope: so we past along by the roade and the towne, and at length saw a boate lying on shoare, which being too bigge for vs, wee ripped by, and wooded our selues with her. That day wee descried a saile, which at length wee found to be a flieboate of Dartmouth, of 200. tunnes, bound to the Island of Mayo for sale. Wee fell in consort with her, and that night stode for the Southermost part of the Island there to water, where wee stayed all the next day, and watered at the Southsouthwest part thereof. That night wee weyed and stode away together Southsoutheast, and South and by East, purposing by their perswasion to goe for the riuer Doro. The 28. of Januarie wee made the furthermost part of Barbarie; and this morning we met with *B. Benjamin* Wood with his flete of 3 sailes bound for the straights of Magellan & China, to wit, *The Beare*, *The Whelpe*, and *The Benjamin*: who told vs that there was no good to be done in the riuer Doro. Whereupon we stode along with them for Cape Blanco, vnto which we came vpon Sunday night next following. And vpon Monday morning the first of Februarie, we saw two ships in a landie bay: so wee stirred in with them, which were Frenchmen bound for the West Indies, and put all into the bay, where wee refreshed our selues with fish, in which there was infinite store, and stayed there vntill Thursday the 5. at which time wee stode by with the Cape againe, where rode the Frenchman and his pinnesse, who put forth right afore vs, and another Frenchman and his carauel well-manned: So all we 5. English came to an anker by them, where after kinde greeting with many shots out of euery ship both English and French, all our capitaines were invited to a feast aboard the French admirall: where after great cheere and kinde entertainment, it was concluded on all handes to take the Isle of Fogo, if God would giue vs leaue.

B. Benjamin
Wood bound for
The South sea,
Cape Blanco.

The Island
of Sal.

The same day we all weyed and stode along for the Isle of Sal, vnto which we came the 8. of Februarie, and ankered altogether at a bay in the West part thereof: in which Island wee had good store of goates and fresh fish. There is no man dwelling vpon the Island that we could see. Wee could finde no fresh water vpon it, but one standing puddle of bad water: it hath foure great mountaines vpon the 4. corners of it. Here the Frenchmen (as it seemeth being overcome with drinke, hauing bene aboard our Generall at a feast) being on shoare, one of the gentlemen of their companie was slaine, and their chiefe captaine sorely wounded: by reason whereof, and of the setting together of a pinnesse which they were about, the French admirall and the carauel stayed behind. So wee in the *Wattle*, and the other 6. ships weyed the 10. of Februarie, and stode away for the Isle of Maio.

Mayo. This night the other two French shippes that came from Sal with vs (as it seemeth of purpose, because their comforts were not with them) lost vs. The next morning wee sawe Maio. So wee and the flieboate of Dartmouth compassed the Northermost part of the Island, and master Benjamin Wood in the China-fleete, the Southermost, and came all to an anker together at the Southwest part thereof: where rode five sayles of Flemmings lading salte; who had brought their hozles and cartes, and wheele-barrowes, and planks for their barrowes to runne vpon. Here is abundance of salte in this Island made by Gods hande without mans labour. These tolde vs that there were thirtie sayles more, which fell to leeward of Fogo, who, as I heard since, beat it vp with much adoe, & came thither also for salte. This trade may bee very beneficiall to England, considering the dearness of salte. Of goates on this Island there is such store, as is incredible, but to those that haue seene them: and it is a wonder howe they liue one by the other, the ground being stonie and barren. It is thought that there are dwelling in it some twentie Mountainers, which got one of the Flemmings men stragling; and God knoweth what they did with him: for they sawe him no more. This Island is somewhat lowe and round, hauing no great mountaines vpon it.

36 sayles of
Flemmings
at Maio for salt.

Here ended our determination concerning the inuading of Fogo. And here wee left the flieboate of Dartmouth lading salte, and the China-fleete to refresh themselves with goates, who as I haue heard since had at the village (from whence the Mountainers were fledde into the furthest partes of the Island and rocks) great store of dyed goates which they carried along with them: which were like to bee a great helpe vnto them in their long voyage. So vpon Saturday the 12 of Februarie at night wee set saile and stood for the coast of Wiana, which wee were bound for.

Vpon Sunday the twentieth of Februarie wee came into the maine current that setteth from the Cape of Buena Esperança along the coast of Brasil, and so toward the West Indies, for the most part setting away North-west.

The Tuesday night following, whereas before our course was West-south-west, wee stood away West and by South: by reason whereof, and of the current that set vs to the Northward, wee were the next day by noone twentie minutes further to the Northward then the day before. So that then wee lay away South-west, because wee were loath to fall to the Northward of our place intended: which if wee should bee put to leeward of, there was small hope left to recouer it.

By Thursday wee were within ont degree of the Equinoctiall line: therefore this day wee halled away West and by South, and West among. This night wee sounded, but had no ground at 90 fathoms.

The next day in the morning the colour of the water began to change, and to bee more white, so wee made another sound and had ground at thirtie fathoms, but saw no lande, and in the afternoon wee halled away West-north-west, North-west, and North-north-west. In the night wee sounded diuers times, and had twelue, ten, and nine fathoms water.

All Saturday wee had a thick red water, and had seuen and eight fathoms both day and night, and vpon Sunday morning by day being the seuen and twentieth of Februarie, wee made the lande which appeared lowe, and trended neereft as wee fell with it, South and by East, North and by West about two degrees toward the North. Right on head of vs was a Cape or headland, so that had wee bene shot a little further into the bay, the winde being more Northerly, wee should hardly haue doubled it off. For with much adoe making many boozes, and stopping euery tyde, it was the Tuesday following before wee cleered our selues of the bay, and recouered the Cape. Nowe the lande trended North-west and by North, and Southeast and by South. And still wee were faine to anker euery tyde sometimes in foure fathoms, and sometimes in three, as farre as wee could see land. So about night wee sawe Cape Cecil: and after some two houres came to an anker. Betwene these two Capes the lande lyeth lowe and euery.

Vpon Wednesday morning, hauing the winde large at East-northeast, wee layd it away vpon a board into the bay of Wiapoucou and came to an anker in the riuers mouth in two fathoms: ouer the barre there is little water, as 6 and 7 foote, and lesse in many places. And this riuier of Wiapoucou standeth almost in 4 degrees to the Northward of the line.

The next morning wee weyed, and standing in with our pinnelle by night, wee got some eight leagues by the riuier. This day sometimes wee had but 5 foote water and drew 7 foot, but being soft oaze we went cleere: and a little before wee came to anker, wee were on ground vpon a rocke, but with some trouble and labour wee got off and had no hurt.

Vpon Friday the 4 of March towards night wee came to the falles. The next day D. Leonard Berrie our captaine, the Master, my selfe and some 5 more, went through the woods, and spent all the day in searching the head of the falles, but could not finde it: for though wee passed by

Cape Cecil in
3 degrees and
a halfe.

many, yet were there more still one above the other. So that finding no Indians in this river to buy victuals of, neither any kind of thing that might intice vs to come to so short allowance, as we must haue done, if wee had spent any long time here, finding it ouer hard to passe the falles, wee fell downe the river againe, and by Friday the 11 of March wee cleared our selues of the river and bay. This river from the mouth to the falles is some 16 leagues, in many places a mile ouer, but for the most part halfe a mile. There are many Islands in it: as are also in most of the rivers vpon the coast. This night wee ankered against Cawo in two fathoms; whereinto wee thought to haue put with our pinnesse: but found the water so shoald, and the sea so growen, that neither with our shippe nor shallope wee durst goe in.

Cawo.
On Saturday by noone wee came to anker vnder one of the 7 Islands: vpon which going on shoare wee found neither man nor beast, but great store of yellow plumbes which are good to eate.

The 7 Islands.
Upon Sunday after dinner our Master William Dowle and 6 more went off with our boat to a towne called Aramatto; where they found many inhabitants, and brought victuals and some Tabacco with them, and one Indian named Caprima, who lying aboard all night, the next day being Monday the 14 of March went with our Captaine into Wias, and there traded with the Caribes for such things as they had. And afterward they of Aramatto came off with their canoas to vs, and wee went on shoare to them: and from thence our Captaine sent a canoa with seu-

Aramatto a great towne.
The Caribes of Wias tractable people.
uen men, which had euery one of them a knife to goe backe to the river of Cawo, and to tell Ricimo captaine of that place, that because wee coulde not come to him, wee would stay at Chiana for him, whither wee intreated him to come to vs. So vpon Thursday the 17 wee stood in for Chiana, and came to an anker without in the bay in 3 fathoms that night: and had the Caribes comming continually to vs with their canoas, which brought vs great store of victuals and some Tabacco, shewing themselves very kinde and louing, and came all from their townes, and dwelt on shoare by vs untill Ricimo came: at whose comming they returned all by to their townes againe, which was vpon the Sunday following. All this day we feasted him and his traine, and the next day we traffiqued with them for such things as they brought, which was principally tabacco.

Chiana a river and bay.
After that they had made knowne their mindes of the desire that they had to haue the English come and kill the Spaniards, and to dwell in Orenoque and in the countrey, they departed with their 3 canoas the next day. And wee with the helpe of the Caribes of Chiana, hauing by their meanes from the shoare watered, because the rivers mouth was salte, departed out of the bay the Thursday following, & passing by Maccrea, Couroura, and Manamanora, by reason of shoalds, rockes, and great windes, being a lee shoare; and for want of a good shalope, wee came to an anker the next day being good Friday in five fathoms neere The Triangle Islands called The Careres. And vpon Saturday standing to the Westward of the towne Comanamo: from whence and from the other townes in that bay, which are some 6 or 7, wee had canoas come off to vs as before with such things as they had themselves in vse, with parrots, monkeys, and cotton-wooll, and flaxe. From whence wee departed vpon Sunday following the 28 of March 1597.

The Careres.
Mawaco.
And passing by the rivers of Euracco and Amano, which openeth but a small river, and is shoald off, wee came to Marawinne the next day: And finding a chanell of three, foure, and five fathoms, wee stood into the river: and the same day came to an anker some 2 leagues in against the mouth of Coohepwinne, which river goeth into Amano. Into which, (vnderstanding that there were Arwaccas dwelling) this night we sent our boat and came to a towne called Marrac one league in: And finding the people something pleasant, hauing drunke much that day, being as it seemed a festiuall day with them, yet were they very fearefull and ready to run away at the first sight of vs, hauing seldome seene any Christian before. But assoone as Henry our Indian interpreter had tolde them what wee were, and our intent, they came to vs and vsed vs kindly, and brought vs victuals and other things. And the next day their captaine Mawewiron came out into Marawinne, with diuers canoas, & traded with vs, and wee went in againe to them on shore, who made very much of vs, and carried vs from house to house, and made vs eate and drinke in euery house which wee came in. And the next day following being the last of March, hauing the captaine of Marrack with vs, wee weyed and stood into the river, and about two of the clocke in the afternoone came to an anker some eight leagues within the river, a little short of a towne called Quiparia, the people whereof are Caribes: who, when they sawe vs come toward their towne with our boate, began all to runne into the woods, untill the captaine of Marrac which was with vs in the boate, leaped ouerboard and swamme on shoare vnto them, and tolde them that wee were Englishmen, and came in friendship to trade with them.

Quiparia a towne of the Caribes.
Upon whose report they came before night five or seuen canoas aboard vs, yet very fearefull, because

because there was neuer either shippe or Christian scene in that riuer before. The first of Aprill, wee weighed againe, and stood in to the next towne called Macirria: where comming to anker, there came a canoa from Amano to vs, with great store of victuals, which canoa wee bought: and because wee mette with some sholes, we were loath to goe any farther with our Pinnele: so there wee moored her, and the next day at three of the clocke in the afternoone, eleven of vs (Master Monax hauing the gouernment of the action, by the Captaines appointment) with Mawerrou, Henry, and William of Cawo, in the canoa which we bought, went in to the riuer farther to search it so farre as wee could, and that night gatte some five leagues from our shippe. And betwene two villages, Awodwaier and Mapeributo, we tooke vp our lodging in the woods. The third of Aprill, betimes in the morning, we tooke our course still vnto the riuer, and in the afternoone came to one house where wee found many Indians, where wee hired another canoa and foure Indians, into the which I went, and one more of our men, and this night gat twelue leagues farther, and as before, lodged among the wilde beastes.

On Thursday the fourth of Aprill, wee came to the falles of this riuer about two in the afternoone; and hauing shotte vp some of the rockes, wee went on shore vpon an island, and there conferred of our farther proceeding. And inquiring of the Indians that wee hired for our Pilots of the last house, whether the falles were passable or not: their first answer was, that they had nothing to eate: but wee being loath to loose so much labour, and the sight of that vpper rich countrey, which wee desired, told them that they should haue victuals of vs (though God knoweth wee had none for our selues); who seeing vs so importunate, sayde farther, that the rockes would kill the canoas: which they sayde because indeed they had no victuals: which by some was taken for sufficient to proceede no farther, and so wee left off, and onely stayed some two houres vpon the island, and with the swiftnesse of the current, fell that night downe 10 leagues againe. Though I for mine owne part offered in that small canoa that I was in, being so leake, that my selfe did nothing but laue out the water, to lead them the way, and if they sawe any danger to mee, they might chuse whether they would come into it or not themselves.

If for seeing the countrey aboue was rich as wee were informed, that their bowes were handled with golde, (being men of an extraordinarie stature for talnes) wee should haue taken the more paines, and haue faced the harder, vntill wee had gotten vp in the countrey which wee sawe with our eyes: for though wee had not victuals in any sort to cary vs vp, yet the woods doe yeld fruites and the palmito trees afforde meate, whereby wee might haue made shift to liue, vntill wee had come to the inhabitants, by whome we might both bee refreshed with victuals, and also haue reaped that, which might haue done vs good as long as wee had liued.

But to returne to the rest of our voyage: the day after wee went from the falles wee came to our shippe, which was the fifth of Aprill 1597. On Wednesday wee fell with our Pinnele to Quiparia againe: where we brought her on ground right before the town, and trimmed her with the pitch of the countrey: and vntill wee had done, kept a corps du guard, night and day on shore, which was vpon Saturday following the ninth of Aprill. All the while we were there we had an house of the Caribes, and were kindly vsed of them, and had victuals, and euery thing we needed of them.

And so taking our leaue on Tuesday being the twelfth of Aprill, wee came to the mouth of Cusse-winne, where the Arwaccas of Marrac and of the riuer had prouided and brought to vs such infinite store of potatoes, and Guiney-wheate, that the steward sayd wee had no stowage for them; and so they were turned backe, and wee by that meanes came to shorter allowance home ward bound, then (if there had bene any good care) wee needed to haue done.

On Fryday the fifteneeth of Aprill, wee put forth of Marawinne, which is some foure leagues ouer, and within one league and an halfe for the most part broad; full of islands, and diuers small riuers running into it: and it is betwene forty and fifty leagues, from the mouth to the falles, and lyeth for the most part South South-west vp, altering some 3 poynts, being almost streight. And standing along to the Westward, this night we tryed with our mayne coatle and bonnet. On Saturday night we came to an anker, in three fathomes against Sewramo. On Sunday morning we thought to haue gone into Cuppanamo: but sending off our boat & finding vncertaine sounding, sometime 3 fathomes and presently 9 foote, we stood along to Coritine and came into it vpon the Monday being the 18 of Aprill: and the next night wee came to anker against Warrawalle in 10 fathoms. On Wednesday the Indians of the towne hauing hunted a Doe, shee tooke soyle & came neer our ship, and putting off with our boat we tooke her, being like vnto our doe in England, not altogether so fat, but very good flesh and great bodied. In this riuer we met a Barke called

Macirria a towne.

A rich countrey.

Some hands led with golde.

Pitch to trim ships.

called the Iohn of London captaine Leigh being in her. And being both fallen downe within some five leagues of the mouth of the river, vpon intelligence that one Marracon, (whom wee brought along with vs) gaue vs; namely that the river Desekebe, in which he dwelt (and wherein there were some three hundred Spaniards, which for the most part now are destroyed and dead) doeth lead so farre into the countrey, that it cometh within a dayes iourney of the lake called Perima, whereupon Manoa is supposed to stand; and that this river of Coritine doeth meete with Desekebe vpon the land: by meanes whereof wee make account to goe vpon into the countrey, and to haue discovered a passage vnto that rich citie. So hauing concluded both shippes, we stood vpon into the river againe, and comming to Warawalle the 24 of Aprill there our shippes roade vntill we went vpon to Mawranamo to speake with Marracon, to know the trueth of these things: whom when we had found, he verified al that before he had spoken: Master Monax being the man that of Leonard of Cawe tooke all the intelligence: who being brought vpon with Antonie Berreo could some Spanish and Marracons language also. And besides wee our selues by signes, and drawing the two rivers on the ground, and the meeting of them aloft, did perceiue as much. Now comming downe with our boates the sixe and twentieth of Aprill we went vpon with our ships to Mawranamo, where wee moored them, and taking some twentie out of both, vpon Thursday the eight and twentieth in the afternoone with two shallops and two Canaas, in one of which Henry the Indian was and some twentie Indians more, wee went vpon the river; and by night getting some three leagues farther wee lodged in the woods, and the next morning wee with our boate and the two Canaas went into a small river called Tapuere, to a towne called Macharibi, thinking to haue had Casau and other victuals, which they were altogether vnprouided of, by reason that they make no more ready then serueth themselves from hand to mouth, liuing in this towne for the most part by fish. By meanes of going into this river, though wee rowed very hard, it was noone before wee ouertooke the bigger shallop, wherein both the Captaines were. This night we came to a towne called Vaperon, where wee stayed all Saturday and the night following, for Casau: whereof they baked good store for vs being but a fewe left in the towne. For not a moneth before wee came thither, the Waccawacs that dwell about the falles came downe to the towne, and slewe some tenne of them, and many of the rest fled away, so that wee found most of the houses empty. Upon Sunday morning being May day, wee went from this place, and by night gotte some twelue leagues beyond, and being past all townes wee lodged as before in the woods, and the next day came to the falles of the river; vpon some of which falles we shotte with our boates, and going vpon a rocke there came some nine canaas by the river to vs, and would haue gone vpon with vs to kill the Waccawayans, because they had killed some of them, as before is said. Whereupon the Captaines and Master Monax tooke aduise: and because nowe they had learned, as they sayde, that five dayes iourney farther there was a fall not passable, and that by this meanes they should make the Waccawayans their enemies, which would turne to our great hurt, when Sir Walter Raleigh should come thither, hauing occasion to be this river, where wee were informed was good store of golde, they resolved to returne, though I peeled diuers reasons to the contrary. So vpon Tuesday night, we came backe to Vaperon, where we lodged.

And vpon Wednesday the fourth of May, wee came to our shippes: where it was reported that the Spaniards were gone out of Desekebe, which was not so: but as it seemed in policie by them giuen out to make our men, that wee left in our shippes more carelesse, that they might the easier haue surpris'd them in our absence. The next night wee had newes brought vs to Mawranamo, where we yet roade, that there were tenne canaas of Spaniards in the mouth of Coritine; and fearing lest they had intended to come to vs in the night, we fitted all our gunnes and muskets, and kept good watch to prevent them of their purpose; who, as it was afterwarde tolde vs, went along the coast to buy bread and other victuals for them in Orenoque, Marowgo and Desekebe. Upon Fryday the sixth of May we weighed and made downe the river, and vpon Sunday the eighth we gat cleare of it.

This river is much like vnto Marawynne in bredth, and about fiftie leagues from the mouth to the first falles, full of Ilandes as the other: in which three rivers, Mano, Tapuere, and Tabuebbi, otherwise Tapuelli: with sixe Townes, Warrawalle, Mawranamo, Maapuer, Maccharibi, Yohoron, and Vaperon. And so clerking our selues of this coast, wee tooke our course to the Ilands of the West Indies.

Now I thinke it not amisse to speak something of this countrey. And first touching the climate; though it stand within the Tropick, and something neere to the Equinoctial, so that the Sunne is twise a yeere ouer their heads & neuer far from them, yet is it temperate ynough in those partes.

For

For besides that wee lost not a man vpon the coast, one that was sicke before hee came there, was nothing sicker for being there, but came homesafe, thanks be to God. And for mine owne part, I was neuer better in body in all my life, and in like sort sared it with the rest of the company: for indeed it is not so extreame hote as many imagine. The people in all the lower parts of the countrey goe naked, both men and women, being of seuerall languages, very tractable, and ingenious, and very louing and kinde to Englishmen generally; as by experience we found, and vpon our owne knowledge doe report. In the vpper countreys they goe appavelled, being, as it seemeth, of a more ciuill disposition, hauing great store of golde, as we are certainly informed by the lower Indians, of whom we had some golde, which they brought and bought in the high countrey of Wiana, being able to buy no more, because they wanted the things which now wee haue left among them. They keepe no order of marriage: but haue as many wiues as they can buy, or win by force of their enemies, which principally is the cause of all their warres. For bread there is infinite store of casau, which is as good bread as a man need to eate, and better then we can carry any thither. We spent not a bit of our owne all the while we were vpon the coast. It is made of a root so called; which they take and scrape, and crush all the iuyce out, being poison; and when it is drie it is as fine floure as our white meale maketh: which dry as it is, without any moisture, they strew vpon a round stone, hauing a still fire vnder it, and so it congealeth to a cake; and when it commeth new off, it eateth like to our new white bread. Besides there is great store of Guiny-Wheat (whereof they make passing good drinke) which after it is once sowed, if you cut off the eare, on the same stalk groweth another.

Great store of golde in Wiana.

Passing good drinke made of maiz.

For victuals, wee either did not, or at least needed not to haue spent any of our owne: for there is great store of as good fish in the riuers, as any is in the world. Great store of fowle, of diuers sorts. Tortoise-flesh plentifull, and Tortoises egges innumerable. Deere, swine, conies, hares, cockes and heernes, with potatoes more then wee could spend. Besides, all kinde of fruits, at all times of the yeere: and the rarest fruits of the world, the pine, the plantain, with infinite other variable and pleasant, growing to their handes, without planting or dressing. For commodities, though wee had but small time to search, because wee spent so much time in searching the riuers: yet wee haue brought examples of some, which the countrey yeeldeth in great plenty: as a kinde of long hempe like unto Steele hempe, fine cotton wooll, which the trees yeeld great store of; and wherewith the women make a fine threed, which will make excellent good sustians or stockings. Great store of pitch, diuers sorts of sweet gummies, & West Indian pepper, balsamum, parrots and monkies. Besides diuers other commodities, which in good time may be found out to the benefit of our countrey, and profit of the aduenturers, who as yet hauing ventured much, haue gained little.

The commodities of Wiana.

Now leauing the riuer of Coritine, passing by Saint Vincent, Santa Lucia, and Matalina, we came to Dominica vpon the Friday following, being the thirteenth of May, hauing lost the barke that came out with vs the Wednesday before. Upon Sunday morning, the fifteenth of May, we came to Guadalupe, where wee watered at the Souther part of the Island, and hauing done by night, we set saile, and stood away to the Northward, but were becalmed all night, and untill tenne of the clocke on Monday night: at which time hauing a faire gale at East, and after at Southeast, we passed along in the sight of Monserate, Antigua, and Barbuda. Upon the ninth of June, being Thursday, we made the Islands of Flores and Coruo: and the eight and twentieth of June we made the Lisart, and that night came all safe to Plymouth, blessed be God.

Then lost captaine Leigh in the ship of London.

Betweene the Isle of Barbuda in the West Indies and England we had three mighty stormes, many calmes, and some contrary windes. And vpon the foureteenth of June 1597, there being diuers whales playing about our pinnelle, one of them crossed our stemme, and going vnder, rubbed her backe against our keele: but by none of all these we sustained any losse. Thanks be to him that gouerneth all things.

Written by Master
Thomas Masham,

CERTAINE

CERTAIN BRIEF TESTIMONIES CONCERNING the mightie Riuer of *Amazones* or *Orellana*, and of the most wonderfull downefall or cataract of waters at the head thereof, named by the Spaniards *El Pongo*: together with ſome mention of the rich and ſtately Empire of *Dorado*, called by Sir *Walter Raleigh* and the natural Inhabitants *Gniana*, and of the golden countrey of *Paytiti* neere adioyning, with other memorable matters: Taken out of *Iosephus de Acoſta* his naturall and morall Hiſtorie of the *Weſt Indies*.

The firſt Teſtimonie out of *Iosephus de Acoſta*, lib.2. cap.6.

When we intreat of Rivers, that which ſome men call the riuer of *Amazones*, others *Marannon*, others the riuer of *Orellana*, doeth iuſtly put to ſilence all the reſt, whereunto our Spaniards haue gone and ſayled. And I ſtand in doubt, whether I may call it a riuer or a ſea. This riuer runneth from the mountaines of *Piru*, from which it gathereth infinite ſtope of waters, of raine, and riuers, which runneth along, gathering it ſelfe together, and paſſing through the great fieldes and plaines of *Paytiti*, of *Dorado*, and of the *Amazones*, and falleth at length into the Ocean ſea, and encreth into it almoſt ouer againſt the Iſles of *Margarita* and *Trinidad*. But it groweth ſo broad, eſpecially towards the mouth, that it maketh in the middeſt many and great Iſles: and that which ſeemeth incredible, ſayling in the middle chanel of the riuer, men can ſee nothing but the ſkie and the riuer, although men ſay that there are hilles neere the bankes thereof, which can not be kenned, through the greatneſſe of the Riuer. Wee vnderſtood by very good meanes the wonderfull bredth and largeneſſe of this Riuer, which iuſtly may be called the Emperour of Riuers, to wit by a brother of our companie, which being a boy was there, & ſayled it wholly through, being perſonally preſent in all the ſucceſſes of that ſtrange enterance, which *Pedro de Orſua* made, and in the mutinies and perillous conſpiracies of that wicked *Diego de Aguirre*, out of all which troubles and dangers the Lord deliuered him, to make him one of our ſocietie.

The ſecond Teſtimonie out of *Iosephus de Acoſta*, lib.3. cap.20.

El Pongo.

Among all the riuers not onely of the *Weſt Indies* but alſo of the whole world, the chief is the Riuer of *Marannon* or of the *Amazones*, whereof I haue ſpoken in the ſecond booke. The Spaniards haue diuers times ſayled along this riuer, with determination to diſcouer countreies, which, according to report, are of great riches, eſpecially that which they call *Dorado*, and *Paytiti*. The *Adelantado* or admirall *Iuan de Salinas* made a very notable entrance, although to ſmall proſite. It hath a ſalt or fall of water which they call *El Pongo*, which is one of the moſt dangerous places in the world: for being reſtrained betweene two exceeding hie deuided mountaines, it maketh a fall of terrible depth, where the water with the great deſcent maketh ſuch whirlepooles that it ſeemeth impoſſible but that it ſhould ſinke it ſelfe there into the ground. For all this the boldneſſe of men hath attempted to paſſe the ſaid *El Pongo* for the greedineſſe to come to that ſo famous renowned *Dorado*. They ſuffered themſelues to be carped from aloft, being throwne downe headlong with the furie of the riuer, and ſitting ſaſt in their Canoas or boats in which they ſayled, although they were ouerturned in the fall, and they and their Canoas ſuncke downe to the bottome, yet they roſe vp againe aboue the water, and at length with their hands and force gat out of the whirlepooles. The whole army in a manner eſcaped, ſauing a very fewe which were drowned: and which I moſt maruel at, they handled the matter ſo well, that they loſt not their victuals and powder which they carped with them. In their returne (for after great trauels and dangers they returned that way againe) they clymed vp ouer one of thoſe aforeſaide exceeding high mountaines, creeping vp vpon their handes and feete.

Captaine *Pedro de Orſua* made another enterance by the ſelfe ſame riuer, and after hee was ſlaine by a mutinie of his people, other captaines followed the diſcouerie, by the arme that falleth into the North Sea. One of our companie told me (who while he was a ſecular man was in al that expedition) that they entred by the Riuer almoſt an hundred leagues with the tydes, and that when the freſh water & the ſalt meeteth, which is either almoſt vnder or very neere the Equinoſial line, the riuer is 70 leagues broad, a thing incredible, and which exceedeth the bredth of the Mediterranean ſea. Howbeit other in their deſcriptions make it not paſt 25 or 30 leagues broad at the mouth.

The

The third Testimonie out of Iosephus de Acoſta, lib. 3. cap. 25.

It that part of America, whereof the coasts be thoroughly known, the greater part of the Inland is not known, which is that which falleth betwene Piru and Brasil, and there are diuers opinions of some, which say, that it is all sunken land full of lakes and bogges, and of others, which affirme that there are great and flourishing kingdomes there, and there they place the Countrey of Paytiti, and Dorado, and great Emperours, and say, that there are wonderfull things there. I heard of one of our companie my selfe, a man of credite, that hee had seene great townes, and high wayes as broad and as much beaten, as the wayes betwene Salamanca and Validolid: and this was when the great entrance of discouerie was made by the great riuer of the Amazonas or Marannon by Pedro de Orſua, and afterwarde by others that succeded him: and they supposing that Dorado which they sought, was farther vp in the countrey, did not inhabite there, and afterwarde returned without discouering Dorado (which they neuer found) and without that great prouince which they left.

A short description of the riuer of Marannon or Amazonas, and the

Countries thereabout, as also of the sea of Fresh-water, taken out of an ancient Discourse of all the Portes, Creekes, and Hauens of the West Indies, Written by Martin Fernandez de Enciſa, and dedicated to Charles the Emperour, Anno 1518.

Marannon lyeth in seven degrees and an halfe Northward of the Equinoctial, it is a great riuer, and hath more then fifteene leagues in bredth eight leagues within the land. It hath many islands, and in this riuer within the land fortie leagues there is neere to the sayde riuer a mountaine, wherenpon growe trees of Incense, the trees be of a good height, & the boughs thereof be like to Plum-trees, and the Incense doeth hang at them, as the yce doeth at the tiles of a house in the winter season when it doeth freeze. In this riuer were taken foure Indians in a small boat, called in the Indian language a Canoa, that came downe by the riuer, and there were taken from them two stones of Emeralds, the one of them being as great as a mans hand. They sayd that so many dayes iourney going upward by the riuer, they found a rocke of that stone. Likewise there were taken from them two loaves made of flour, which were like to cakes of Sope, and it seemed that they were kneaded with the licour of Balsamum. All this coast from the Cape of S. Austine vnto Marannon is a cleare coast & deep, but neer to the riuer are certaine sholds towardes the East part. And by the West part the riuer is deepe, and it hath a good entrie. From this riuer Marannon, vnto the riuer which is called The sea of fresh water, are 25 leagues: this riuer hath 40 leagues of bredth at the mouth, and carrieth such abundance of water that it entreteth more then 20 leagues into the Sea, and minglet not it selfe with the salt water: this bredth goeth 25 leagues within the land, and after it is deuided into partes, the one going towards the Southeast, and the other towards the Southwell. That which goeth towards the Southeast is very deepe and of much water, and hath a chanel half a league of bredth, that a Carack may goe up through it: & the tydes be so swift, that the ships haue need of good cables. The riuer of this port is very good, and there haue bene some that haue entred 50 leagues within it, & haue seene no mountaines. The Indians of this countrey haue their lips made full of small holes in 4 parts, & through those holes be put small rings, and likewise at their eares: & if any man aske of the where they had their gold, they answer, that going up by the riuer so many dayes iourney, they found certaine mountaines that had much of it, and from those mountaines they brought it when they would haue it, but they made no great account of it, for they neither buy nor sell, and amongst them is nothing but change. In this countrey they eate bread of rootes, and Maiz, and they eate certaine rootes which they call Aies and Baracas, but the Baracas bee better then the other rootes, and being rawe they haue a smell of Chestnuts: they are to be eaten roasted. These Indians doe make wine of the fruit of Date-trees, which fruit is yellow in colour, and is as great as a little Doves egge, and being in season is good to be eaten, and of it proceedeth good wine, and is preserved for a long time. These kinde of people do make their houses with vpper roomes, and they sleepe in them, as also at their habitation is in the vpper roomes, and that which is belowe, they leaue open: and also they vse certaine mantels of cotten wooll, and these they tie at the endes with ropes, and the one ende of the rope they make fast to one part of the house, and the other ende to the other part of the house: and in these they lye, which bee their beddes, and these kinde of beds bee used in all India, and there is not in any part of India any chambers that the people do vse to lodge in aloft from the ground, nor they make any hie roomes, but only in this part of India: & in al other places they make their houses without any loftes or chambers, and they couer their houses with the leaues of date-trees

trees, and of grasse. And from this fresh water-sea vnto Paria, the coast lyeth West North-west, and is so full of shoals that the ships cannot come neer to the land. There are fro this riuer to Paria 250 leagues. In this fresh water sea, the tydes do ebbe & flow as much as they do in Britayne, and it standeth in 6 degrees and a halfe. Paria standeth on the other side of the Equinoctial toward the North, in seven degrees: In Paria the sea floweth but little, and from Paria towards the West, the sea doth not flow. From the entry of the gulf of Paria vnto the Cape that lyeth towards the West, are 35 leagues, and fro thence the coast turneth towardes the Northeast other 35 leagues, & from thence the coast turneth toward the West. Before this gulf standeth the Island of Trinidad, and towards the West doeth appeare the gulf of Paria like to halfe a round circle, after the fashion of a Diameter, and at the end of this circle is the entry in of Paria, & at this entry there is betweene the land and the Island 8 leagues, and on the other side there is but litle space betweene the Island and the land, but it is deepe, and hath a good entry: this Island of Trinidad hath in length 25 leagues, and as many in bredth, and standeth in eight degrees, and is inhabited of many people, and as yet not vnder subiection. Here the Indians do vse to shoote with bowes, and arrowes which are of a fathome in length, made of reeds, which grow in that Countrey, and at the end of them is artificially ioynd a piece of wood very strong, vnto the which piece of wood at the end of it, they put a bone of a fish, in place of an arrow head: these kinde of bones bee harder then Diamonds, and euery one of them be three or foure fingers long, & they are taken out of a fish that hath three of these bones, one vpon the backe, another vnder euery wing: but that which groweth vpon the backe is the strongest and the greatest. In this Island the people saith that there groweth golde: and in this Island and in Paria growe reedes so great, that they make staues of them and carry of them into Spaine. Likewise there bee Popiniapes very great and gentle, and some of them haue their foreheads yellow, and this sort do quickly learne to speak, and speak much. There be likewise in the gulf of Paria pearles, although not many, but very good and great.

CERTAIN VOYAGES NAVIGATIONS AND
Traffiques both ancient and of late, to diuers places vpon the
coast of Brasil: together with a Ruttier for all that coast, and two intercepted let-
ters which reueale many secrets of the state of that Countrey: the rest of our Voyages
to Brasil which haue bene either intended or performed to the Riuer of Plate, the
streight of Magellan, the South sea, or farther that way, being reserved
for the generall heades next insuing.

A brieue relatiō of two sundry voyages made by the worshipful *M. William Hau-*
kins of Plimmouth, father to Sir *John Haukins* knight, late Treasurer of her Maiesties Nauie,
in the yeere 1530 and 1532.

Loe *M. William Haukins* of Plimmouth, a man for his wisdome, valure, experience, and skill in sea causes much esteemed, and beloued of *R. Henry the 8.* and being one of the principall Sea-captaines in the West parts of England in his time, not contented with the short voyages commonly then made onely to the knowne coasts of Europe, armed out a tall and goodly shippe of his owne of the burthen of 250 tunnes, called the *Paule* of Plimmouth, wherewith he made three

long and famous voyages vnto the coast of Brasil, a thing in those dayes very rare, especially to our Nation. In the course of which voyages he touched at the riuer of Sestos vpon the coast of Guinea, where hee traffiqued with the Negros, and tooke of them Elephants teeth, and other commodities which that place yeeldeth: and so arriuing on the coast of Brasil, he vied there such discretion, and behaued himself so wisely with those sauage people, that he grew into great familiarity and friendship with them. In so much that in his second voyage, one of the sauage kings of the countrey of Brasil, was contented to take ship with him, and to be transported hither into England: whereunto *M. Haukins* agreed, leauing behinde in the Countrey as a pledge for his safetie and returne againe, one *Martin Cockeram* of Plimmouth. This Brasilian king being arriued, was brought vp to London and presented to *R. Henry the 8.* lying as then at White-hall: at the sight of whom the King and all the Nobilitie did not a litle maruaile, and not without cause: for in his cheekes were holes made according to their sauage maner, and therein small bones were planted, standing an inch out from the said holes, which in his owne Countrey was reputed for a great brauerie. He had also another hole in his nether lip, wherein was set a precious stone about the bignes of a pease: All his apparel, behauiour, and gesture, were very strange to the beholders.

The second
 voyage of *M.*
William Hau-
kins to Brasil.
 A king of Brasil
 brought into
 England.

Hauing

Having remained here the space almost of a whole yeere, and the king with his sight fully satisfied, M. Hawkins according to his promise and appointment, purposed to conuey him againe into his countrey: but it fell out in the way, that by change of aire and alteration of diet, the said Sa- uage king died at sea, which was feared would turne to the losse of the life of Martin Cockeram his pledge. Neuerthelesse, the Sauages bring fully perswaded of the honest dealing of our men with their prince, restored againe the said pledge, without any harme to him, or any man of the com- pany: which pledge of theirs they brought home againe into England, with their ship straight, and furnished with the commodities of the countrey. Which Martin Cockeram, by the witnessse of Sir Iohn Hawkins, being an officer in the towne of Plimmouth, was living within these few peeres.

An ancient voyage of M. Robert Reniger and M. Thomas Borey to
Brasil in the yeere of our Lord 1540.

I have bene certainly informed by M. Anthony Garrard an ancient and worshipfull marchant of the citie of London, that this commodious and gainefull voyage to Bra- sil was ordinarily and usually frequented by M. Robert Reniger, M. Thomas Bo- rey, and diuers other substantial and wealthe marchants of Southampton, about 60, peeres past, that is to say in the yeere 1540.

A voyage of one Pudsey to Baya in Brasil anno 1542.

Also the worshipfull M. Edward Cotton of Southampton Esquire gaue mee more particularly to vnderstand, how that one Pudsey of Southampton, a man of good skill and resolution in marine causes, made a voyage in like maner 62. peeres agoe to Baya de todos los Santos the principall towne of all Brasil, and the seate of the Portu- gal vice-roy and of the bishop, and that he built a fort not farre distant from that place, in the fore- said yeere 1542.

A fort built in
Brasil by the
English.

A letter written to M. Richard Staper by Iohn Whithal from Santos
in Brasil, the 26. of Iune 1578.

Worshipfull sir, and welbeloued friend M. Staper, I haue me most heartily com- mended vnto you, wishing your health euen as mine owne.

These few words may bee to let you vnderstand, that whereas I wrote vnto you not many dayes past by the way of Lisbon, howe that I determined to bee with you very shortly, it is in this countrey offered mee to marry, and to take my choice of three or foure: so that I am about three dayes agoe consoorted with an Italian gentleman to marry with his daughter within these foure dayes. This my friend and fa- ther in law Signor Ioffo Dore is borne in the citie of Genua in Italy: his kindred is well knowne amongst the Italians in London: also hee hath but onely this childe which is his daughter, which hee hath thought better bestowed vpon mee then on any Portugal in all the countrey, and doeth giue with her in marriage to me part of an Ingenio which he hath, that doeth make euery yeere a thousand rones of sugar. This my marriage will be worth to me two thousand duckets, little more or lesse. Also Signor Ioffo Dore my father in lawe doeth intende to put into my handes the whole Ingenio with firtie or seuentie slaues, and thereof to make me factor for vs both. I giue my li- uing Lord thanks for placing me in such honour and plentifulnesse of all things.

Also certaine dayes past I talked with the Prouedor and the Captaine, and they haue certified me, that they haue discovered certaine Mines of silver and gold, and looke euery day for Masters to come to open the said Mines: which when they be opened will enrich this countrey very much. This place is called S. Vincent, and is distant from you two thousand leagues, and in 24. degrees of latitude on the South side of the Equinodial line, & almost vnder the Tropike of Capricorne. A countrey it is very healthfull without sicknesse.

Moreouer, I haue talked with the Captaine and Prouedor, and my father in law, who rule all this countrey, for to haue a ship with goods to come from London hither, which haue promised mee to giue mee licence, saying that nowe I am free denizen of this countrey. To cause a ship to come hither with such commodities as would serue this countrey, would come to great gaine, God sending in safety the profite and gaine. In such wares and commodities as you may ship hi- ther from London is for euery one commodity deliuered here thye for one, and then after the pro- ceeds may be employed in white sugar at foure hundred reis the rone.

Mines of gold
and silver
newly disco-
uered at S.
Vincent.

The voyage to
S. Vincent worth
three for one
outward only.

Nnn

I meane

I meane also to haue a friend in London to sende mee a ship of 60. or 70. tunnes, little more or lesse, with such commodities as I shall giue aduise for. This voyage is as good as any Peru-voyage. If you and Master Osborne will deale here, I will deale with you before any other, because of our old friendly friendship in time past. If you haue any stomacke thereto, in the Name of God do you espie out a fine barke of seuentie or eightie tunnes, and send her hither with a Portugal Pilot to this port of S. Vincent in Brasil, bordering vpon the borders of Peru.

Also I herewith write vnto you in what forme and maner you shall furnish this voyage both in commodities and otherwise.

In what maner a voyage to S. Vincent with a ship of 70. or 80. tunnes is to made.

First you must lade in the said ship certaine Hampshire and Deuonshire karsies: for the which you must let her depart from London in October, and to touch in the Canaries, and there to make sale of the saide karsies, and with the proceed thereof to lade fiftene tunnes of wines that be perfect and good, and sixe dozen of Cordouan skinnes of these colours, to wit, orange tawne, yellow, red, and very fine black. I thinke you shall not finde such colours there. Therefore you must cause them that shall go vpon this voyage, to take saffron with them, to cause the same skinnes to bee put into the saide colours. Also I thinke you shall finde oyles there. Three hogheads of sweete oyle for this voyage are very necessary, or a hundred & fiftie iarres of oyle. Also in London you may lade in the said ship these parcels of commodities or wares, as followeth:

In primis, Foure peeces of hollands of middle sort.

Item, One peece of fine holland.

Foure hundred elles of osenbriges very fine.

Foure dozen of sizors of all sorts.

Sixteene kintals of pitch of the Canaries.

Twentie dozen of great knives which be made in fardles, of a low price.

Foure dozen of a small sort.

Sixe peeces of bayes of the lowest sort.

One very fine peece of bayes.

Foure hundred elles of Manchester-cottons, most blacke, greene, some yellow.

Eight or tenne dozen of hats, the one halfe trimmed with tassels, the other plaine, with the bands of Cypresse.

Sixe dozen of course shirts.

Three dozen of doublets of canuas.

Three dozen of doublets of stitched canuas.

One peece of fine Millan-fustian barrell.

Sixe dozen of locks for doores and chests.

Sixe thousand of all maner of fish hooks.

Foure dozen reames of paper.

Two dozen of glasses of diuers sorts.

Two dozen of Venice glasses, the one halfe great, the other middle sort.

Two dozen of mantles of frize, of the lowest price that can be.

Three dozen of frize gownes.

Foure hundred pound of tinne of the vse of Portugall, most small dishes and trenchers.

Foure pound of lilke of all colours.

Twentie pound of spices, cloues, cinamom, pepper, and saffron.

Two kintals of white sope.

Three pound of threed, white, blacke, and blew.

Three pound of fine white threed.

Item, halfe a dozen of Noztherne karsies of diuers colours.

Foure sorting clothes, blew, red, yellow, and green.

Sixe Noztherne dozens of diuers colours.

One fine blew cloth of eight pound.

One fine stamell of tenne or twelue pound.

One fine sheeps coloured cloth of twelue pound.

One fine blacke karsie. } } One fine stamell karsie.

Sixe yards of blacke veluet.

Three barrells of nailes for chests.

Two barrells of nailes for ships and barks.

Sixe kintals of Docom.

Two dozen of veluet girdles without hangers.

Four

Four yards of taffata red, blacke, and blew, with some Greene.
Two dozen of leather girdles.
Six dozen of axes, hatchets, and small billes to cut wood.
Four males of gitterne strings.
Four hundred or five hundred elles of some linnen cloth that is of a low price to make
shirts and sheets.
Four tunne of pyon.

These be such sort of wares as I would you should send. If you meane to deale, or send any ship
hither, haue you no doubt, but by the helpe of God I shall put all things in good order according
to your contentment and profit: for my father in lawe with the Captaine and Prouedor doe rule
this countrey.

My father in lawe & I shal (God willing) make a good quantitie of sugar euery yeere, which sug-
gar we intend to ship for London from henceforth, if we can get such a trustie & good friend as you
to deale with vs in this matter. I pray you presently after the receit of this my letter to write mee
answere thereof, & send your letter to M. Holderto Lisbon, & he wil conuey it to me out of hand.

Besides the premilles send six yards of skarlet, parchment lace of diuers colours.
Six yards of crimosin veluet.
Six yards of crimosin satten.
Twelue yards of fine puke blacke.

Here in this countrey in stead of Iohn Whichall they haue called me Iohn Leitoan: so that Iohn Leitoan,
they haue used this name so long time, that at this present there is no remedie but it must remaine
so. When you write vnto me, let the superscription be vnto Iohn Leitoan.

Thus I commit you with all yours to the holy Ghost for euer.

If you send this ship, I would haue you giue order that she touch in no part of the coast of Gui-
nie nor any other coast, but to come directly hither to the port of S. Vincent, and from the Cana-
ries let her be dispatched in my name, to wit, Iohn Leitoan.

Also a dozen of shirts for my wearing let be sent, if you send the ship.
Item, six or eight pieces of sayes for mantles for women, which is the most necessary
thing that can be sent.

By your assured friend Iohn Whichall.

A copie of the letters of the Aduenturers for Brasill sent to Iohn
Whichall dwelling in Santos, by the Minion of London. Anno 1580. the 24.
of October in London.

M After Whichall, as vnacquainted wee commend vs vnto you, &c. vnderstanding
by your friends, M. Iohn Bird, M. Robert Walkaden, and your brother Iames
Whichall of certaine letters that they haue receiued of yours frō Santos, which
wee haue seene and read, wherein from time to time you doe require, and desire
them to send a good ship to Santos, with such wares and commodities as you did
write for, whereby you did not onely promise that they should haue good inter-
tainment, but also should sell the saide commodities to make three of one outward at the least in
euery thing, and that for to relade their ship backe, they should haue of the best, finest, & whitest drie
sugars 32. pound of our weight for a ducker at the most. The premilles considered, with the great
credit that they and we doe giue to your writing & promise, haue caused vs, whose names be here-
under written, to toyne our selues in company together, & to be at great charges purposely to send
this good ship the Minion of London, not onely with such marchandizes as you wrote for, but al-
so with as many other things as we thought might any wayes pleasure you, or profit the countrey.
And we craue of you, that we and our factozs may haue so much credite of you, as we haue in you
and of your letters, which is to beleue vs that we haue taken this voyage vpon vs, with no other
minde or purpose, then to deale faithfully and truly in the trade by sea and land, so as you shall not
onely haue cause to reioyce, and deserue thanks for our comming, but also you wil procure the ma-
gistrates there to be bound, as they vse in Galicia, that we may be preserved and defended from all
reppisals and inbargments of princes or subiects for any causes or matters whatsoever, whereby
wee may bee encouraged by them, giuing vs this securitie of good intertainment, to continue the
trade peerele henceforth: and for our parts we promise vpon our credits and fidelities, to committe
no outrage at the sea nor land, nor suffer any to be done in our company that we may let, but rather
to defend and protect all other such peaceable marchants as we are, with their ships and goods.

And to the ende that you and others shall know that wee meane as we say, we haue giuen order to our factours to giue you good hostages for your assurance of our good fidelities: and further we haue sent a testimoniall of our owne true meaning in writing vnder the seales of this honourable Citie of London, which we wil not discredite by our behauiours for all the treasure that you haue: and so we haue written to your magistrates of your port, and others in Spanish, the copy whereof we send you herewith enclosed in English. And if the time should fall out so contrary to our expectations, that there should not be fine white sugar sufficient to lade our said ship in due time at Santos, then we pray you direct our factours where they may goe with the shippe in safetie to supply their want, and helpe them to a good sure Pilot for that purpose, and write your letters to your friends where the best sugar is made in their fauors, and helpe our factours to haue a testimoniall from Santos, that they and you traded together friendly, and so departed in good and perfect amitie, and shew them that the iust cause of our coming is to trade as marchants peaceably, and not as Pirats to commit any offence to one or other.

Also we pray you, if there be any store of ware, or salt-peeter, whereby the price there may yeeld vs as much profit as the white sugars at a ducket the roue, or any other commodity of like profite, then to procure that we may lade it without danger of lawe, be it oare of golde or siluer or whatsoeuer else.

Wee haue sent you copper cauldrons for your Ingenios, with iron and all other necessities for your purpose, and artificers to set the same: and as wee haue at your request bene at great charges in sending these men, so we pray you let vs haue lawful fauour in like courtesie to further all our causes. And if any of our Hariners or passengers in any respect of displeasure against their company, or in hope of preferment of marriage or otherwise would procure to tary and dwell there, and leaue his charge and office, that then you will bee a meane to the Iustice that such fugitiues should bee sent aboord the ship as prisoners: for as you know, without our men wee cannot hying home our ship.

Wee haue giuen order to our factours to vse your counsell and helpe in their affaires, and to gratifie you for the same as to your courtesie and faithfull friendship shall appertaine to your good liking: and in the meane time for a token of our good willes towards you, we haue sent you a shelled of walnut tree, with the canopy, balens, curtaines, and gilt knops. And if there be any commodity else that may pleasure you or your friends, wee haue giuen order that they shall haue the refusing of it befoze any other, giuing for it as it is worth.

And thus to conclude, promising to perfoyme all the foresaide things on our parts in euery condition, we commit you to God, who euer preferue you with all his blessings.

Your louing friends
 Christopher Hodsdon.
 Anthonic Garrard.
 Thomas Bramlic.
 Iohn Bird. } } William Elkin,

*M. Stephen Hare
 was Captaine
 in this voyage.*

Certaine notes of the voyage to Brasill with the Minion of London,
 aforesaid, in the yere 1580. written by *Thomas Grigs* Purser of the said ship.

Ye thirde day of Nouember in the yeere abovesaid we departed in the Minion of London from Harwich, from which time no great thing worth the knowledge or regard of others happened until the 22. of December the next moneth, which day for our owne learning & vse wee obserued the setting of the Sunne, which was West south west, we then being vnder the line Equinoctiall, where we found the aire very temperate, and the winde for the most part Southeast and East Southeast. The same day we also obserued the rising of the moone, being one day after the full, which rose at East northeast.

*The yle of S.
 Sebastian.*

The first land that wee fell with vpon the coast of Brasill was the yland of S. Sebastian, where we arrived the 14. day of Ianuary in the yeere 1581.

The 16. day Thomas Babington, and others in our pinnesse, went a shoare to Guaybea, where they met with Iohn Whitchall his father and mother in lawe, who hauing receiued letters from thence to be deliuered at Santos, came aboord, and then we weped and set saile, and the 28. day we arrived at the yland of Santa Catelina, neere the entrance of Santos.

*The yle of S.
 Catelina.*

Our course from S. Sebastian was Southwest and by West, and betwixt the Southwest and by West, and West south west.

This

This pland of Santa Catalina seemeth at the first to be a part of the pland of Girybia. Wee ankered at nine fathome blacke osie ground.

Upon the pland there grow many Palmito-trees, but no fresh water is there to be found.

The third day of February we arriued before the towne of Santos, and were there well receiued and intertaind of the Captaine, the kings officers, and all the people.

They arriue
at Santos.

The fourth day we tooke into our ship a beefe aliue, which serued for the victualling of the ship, and the refreshing of our men, and to make vs the merrier at Shrouetide.

The eight day we deliuered to M. Iohn Whishall a bedstead with the appurtenances, which were sent to him from our marchants of London.

The 18. day the captaine of Santos came aboard our ship, by whom we had knowledge of foure great French ships of warre, that had bene at the riuer of Ienero, which there tooke three Canoas, but were dyuen from thence by their castles & forts, and were looked for here at Santos. Whereupon the Captaine requested vs to lend them some armour and artillery, and we lent them twentie caliuers, and two barrells of powder.

The 19. day our skiffe which we had sent to Alcatrazas, and had bene away five dayes, came againe, and brought good store of great and good fish, and tolde vs that there was good store of fish to be taken there by the hooke, and as much wood as we would haue of the Palmito-tree.

The ple of Al-
catrazas of
Pelicanes.

The 20. day at night Nicholas Gale, one of our company, fell ouer our shippes side, and was drowned in the port of Santos before the towne, where our ship rode at anker.

The 22. day two of the Canoas which the Frenchmen tooke in the riuer of Ienero, returned to Santos, and reported that the foure French ships were past to the southwards, as they thought, for the Straighes of Magellan, and so into the South sea.

The 23. day the aforesaide Nicholas Gale, who fell ouerboard two dayes before, was found againe, and taken vp three miles from our ship, and our company went to his buriall in the Church at Santos.

This day the Captaine and Iustices of Santos wished vs to tary in their road till the last of Aprill, for they had sent a barke of Santos to Baya at the kings charges, to know whether we should haue trade there or no, and this barke could not returne before that time.

About this time there arriued at Fernambuck a shippe from Portugall, which brought newes that the Islands, Indies, and Portugall it selfe was molested and troubled by the Spaniards, and that the Portugales had both English and Frenchmen to Lisbone to defend them against Spaine.

The 25. day wee sent two of our men, namely Thomas Michael and Simon Thorne to Baya in a barke that went thither from Santos.

The two and twentie day of Aprill our Master and Thomas Babington hauing some talke and conference with the Padres of Santos, they (our men being ready to go to the Riuer of Ienero) tolde them, that they were sorry for our banishment from the Church, and that the Ministrador had writen from Rio de Ienero, that forasmuch as these twentie yeres or more the English nation had denied the Church of Rome and her proceedings, therefore the Ministrador commanded that none of vs should come to their Church: the Padres willed vs herein to haue patience, and to take it in good part, and promised to stand our friends in their word and writing, both to the Ministrador and to the bishop at Baya, and further requested all our English company to haue no ill opinion of them.

The 28. of Aprill we laded sugars into our ship.

The 21. of May we tooke in fresh victuals from Santos.

The 10. day of June wee gratified one Iosto Thorno, dwelling in Santos, with some of our English victuals, and intertaind him in good sort in our ship, and this day wee were promised to haue a Pilot at Santos to cary vs to Baya.

The 11. day we went to fish, to make prouision for our ship and men, and from that time till the eighteenth day wee set water, and cut wood for our fire, and trimmed our ship of the harmes and leakes which the woymes had made in her while wee ridde at the pland of S. Sebastian, and in the meane time we departed from before the towne of Santos. Our Master sent his skiffe from the barre of Santos, thinking to haue brought Thomas Babington and William Euet with the Pilot, which wee had carried for three dayes: and as the skiffe was going, William Euet being by the Riuer side, called to our pinnesse, and sent a letter to our Master, which Thomas Babington had writen, wherein were no newes, but that the Ministrador was arriued at Santos from the Riuer of Ienero, and would speake with our Master, but he willed that whatsoeuer Thomas Babington did write, no credit should be giuen to it. And further he wished vs presently to depart for Sant Sebastian, and there to dispatch our businesse, and then to sende backe for Babington and himselfe

Their lading

Hare.

Their departure from Santos.

himselfe to Guaybea, where he (if he were well) would giue his attendance to come aboard.

As we rid two leagues a sea-bord the barre of Santos, wee broke a cable in the open sea, which happened the 15. day of this moneth.

We arrived at S. Sebastian the 15. day, and there shifted our ballast, and had in stones, and haled our ship a ground to stop our leakes, & caried our caske a shoare to be hooped for water, which indeed might better haue bene done in Santos, before the Ministrador came thither: yet we finished all things pertaining to our ship, by the 22. of this moneth, at S. Sebastian.

The first day of Iuly Thomas Babington came aboard with William Euer, in our pinnesse, and the rest of our men that went for them: but there was no Pilot brought according to promise to carry vs to Baya.

The things that we obserued and noted in the time of our being at Santos, were these.

All such wares and marchandizes as owe no custome in Brasill, their vse is, to set a price vpon the same, how they shalbe sold: which is done by the magistrates of the towne, according to the ordinances of their king.

But for all such marchandizes as do owe custome there, the marchants are to sell them according as they may, to the greatest profit and aduantage that they can.

Some part of Peru but 12. dayes journey from Santos.

Concerning the prouince of Peru, wee learned that one part of it by land & water is but twelue dayes journey from the towne of Santos, and from thence it may be about foure or fife dayes journey by water to the maine riuer of Plate.

From the head of the riuer of Plate, and from their chiefe towne there, they doe trade and traffique by land into Peru by waggons, and horses or mules.

The saide riuer of Plate is so full of sands and dangers, and the fresh so fierce sometimes, that no shipping dares to deale with it, small barks to their knowledge may go by it, and not els.

The Portugales forbidden to vse their Mines of treasure in these parts.

The Portugales here cannot bee suffered to vse their Mines of treasure in these parts, vpon paine of death, the contrary being commanded by the king and the Vice-roy, who is as their king in place of authoritie.

About twentie leagues from Santos there is a certaine kinde of wilde Sauages, lying in the mountaines, which are in friendship with the Portugales, and they haue continuall warres with certaine other Sauages that dwell towards the borders of Peru, which is distant from Santos about 400. or 500. leagues. Those Sauages of Peru haue store of gold and siluer, but they knowe not the vse of it.

Looke what Sauages of their enemies they take, they sell them to the Portugales for knives, combs, axes or hatchets, and other trifles: they will sell one for a pennie-knife to a Portugal, and after two yeeres they are worth twentie or thirtie buckets to the Portugal.

This people haue also continuall warres with the Spaniards: and this was tolde vs by one of those Sauages, which hath dwelt among the Portugales these seuen yeeres, with his master called Sennor Manoel Veloso. And this fellowe would willingly haue come with vs for England.

The yle of Alcatrazas or Pelicanes, dangerous for rocks.

There are certaine rockes that lie off betweene the yle of Alcatrazas and S. Sebastian, about two leagues, which are to be taken heed of, which a farre off in faire weather shewe like the sailes of ships.

There are other rocks that lie off S. Carolina also fife leagues to the East and by South into the sea off the pland.

At our comming by to Santos we found foure fadome and a halfe water in the shallowest place, and the like we found within a league after we were departed from S. Carolina, little more or lesse, but after you haue runne in the depth of foure fadome and a halfe, about a mile or lesse, then you shall haue it deeper againe more and more.

Before the towne of Santos we rode in eight and tenne fadome water.

A letter of Francis Suares to his brother Diego Suares dwelling in Lisbon, written from the riuer of Ienero in Brasill in Iune 1596. concerning the exceeding rich trade newly begunne betweene that place and Peru, by the way of the riuer of Plate, with small barks of 30. and 40. tunnes.

Sir, we set saile from Lisbon the fourth of April 1596. and arrived here in this riuer of Ienero the twentie seuenth of Iune next ensuing. And the same day the Viscaiores did visit our ship with great ioy, thinking that those commodities which wee brought with vs, had bene for the marchants of this countrey: but it prooued to the contrary.

The

The pilot brought with him in the sayd shippe two pipes of wine which were taken from him, and solde by the Iustice for foure and twenty reals euery gallon. But I solde mine for two and thirty and sixe and thirty reals the gallon. If I had brought any great store of wine, I should haue made a great gaine of it: for I should haue gotten eight reals for one.

Wine solde as
an excellent
rate.

The next day in the morning wee went all on shore, and gaue God thanks for our prosperous voyage, and good successe which he had sent vs. And because the gouernour of this countrey was gone from this Towne to another house of his, three leagues vp into the riuer beyond the place where we rode at anker, I desired the capitaine of our shippe after dinner, that we might take the shippe boat, and goe to the place where the gouernour did lie. And so going by the riuer, we met with a canoa which was comming downe the riuer, and going aboard our shippe; which canoa was laden with fresh victuals, and in the same was one Portugall, which met vs, and tolde vs that the gouernour of that capitaine shippe had sent vs a present, which we receiued very thankfully, and sent it aboard. And we went by the riuer, to the place where the gouernour did dwell; and comming to the place where we landed, hard by the the riuers side, the gouernour came thither and receiued vs very courteously. So we remained at his house two dayes, talking of many matters of Portugall: then we departed from him, and came downe the riuer.

Three dayes after, I hired a ware-house by my selfe, and landed my commodities. And now I am selling them as fast as I can; and sell them very well, and to great profit: for I haue solde all our hats. I would I had brought forty or fifty dozen, by reason of the great utterance of them by into Peru, and into the new kingdome of Granada, by the way of the riuer of Place. For here is passage euery three or foure moneths with barks of thirty and forty tunnes a piece, which are laden with sugars, rice, cassataes, hats, and other kindes of commodities of this countrey, which are caried by the sayd riuer of Place in the sayd barks, and thence are conueyed by into Peru. And these barks are but tenne or twelue dayes going by the sayd riuer to Peru. And within foure and five moneths after, the sayd barks come downe this riuer againe laden with reals of plate, and bying downe from those places no other commodities but treasure. It is a woonderfull thing to beholde the great gaine and profit which is gotten in this riuer and in this countrey. I am ashamed to write it, fearing that I shall not be beleued. For the imployment of one hundred ducats in Spaine, being brought hither, will yeeld twelue hundred and fiftene hundred ducats profit. This trade hath bene vsed but within this yeere. For wee can goe by to the mines of Potosi, which are the best and the richest mines in all Peru. If the merchants of Spaine and Portugall did know this trade, they would not send nor venture so much merchandise to Cartagena as they doe. For by this riuer is a great deale the neerer way, and the easier to go to Peru. For the Peruleros or merchants of Peru, which dwell there, come downe to this harbour and riuer of Ienero, and bying with them fiftene thousand and twentie thousand ducats in reals of plate and gold, and imploy it heere in this riuer in commodities: and when heere are no commodities to be had for money in this place, then these merchants of Peru are constrained to go to Baia and Fernambuc, and there to imploy their money. I would I had brought good store of silks, and not these kinde of commodities which I did bying. For heere is more profit to be had a great deale then in the voyage of Angola. For heere with five hundred ducats in five moneths space a man may get five thousand ducats. And this is no fable, but most true, and a great deale more then I can expresse. For a rapier which doeth cost in Spaine foure and twenty and sixe and twenty reals, is solde heere for forty and fifty ducats: a bydle for a horse is solde for fiftene ducats: a Locke of a dooze and the key is solde for ten ducats: a pound of beniamin is solde for fiftene ducats: a yard of veluet is solde for twenty and five and twenty ducats: cassataes are solde for sixe and seven ducats the bare: an ounce of mulke is solde for forty ducats: and all kinde of commodities after this rate. So one thousand ducats of Spanish commodities will gaine tenne thousand ducats. Thus I hope in God to make more profit and gaine this voyage, then in two voyages to Angola: for I haue solde most of my hats for two buckets and a halfe and for three ducats. The rest I will cary to Angola, to helpe to sell the rest of my commodities, which I cannot sell in this riuer. And I haue solde an hundred cubits of broad cloth for five hundred and five hundred and fifty and five hundred reys the cubit. If I would haue solde all my cloth for ready money tolde downe for foure hundred and fifty and five hundred reys, the merchants would haue bought it all of me: but I would sell no more, because I meant to erchange it in Angola for Negros. Howbeit with ready money in hand in Angola a man shall buy better Negros, and better cheape. The capitaine of our ship solde all his cloth for ready money for foure hundred & fifty reys the cubit, and thought that he had made a good market: but he hath deceiued himselfe. I solde six broad clothes for five hundred and fifty reys the cubit: and I was offered thirty thousand reys for a cloth. Vineger is

solde for two and thirty, and five and thirty, and forty reals a iarre, by reason there is great store of limmons and oranges in the countrey: but in Angola it is more woorth. Olives are solde for halfe a reall a piece: wherefore I hope to sell the hogthead for twenty thousand reys. In cassates and veluets there will be gotten two hundred and fifty and three hundred for one hundred. If I had brought great store, I could have solde it all at this rate. I have already gotten good store of reals of plate: for it is tolde mee that money is a good commodity in Angola. But I must imploy some in meale, which is in the grinding. All the rest of my money I will send you by billes of exchange, and some part I will imploy in sugars: for I have sent order to Baia for that purpose. For from this place there is no shipping that doth go that way. So these letters I do send by the way of Fernambuc, and have directed them to my cousin: for I do determine to settle my selfe here in this countrey. There is come downe from Peru, by this riuer of Plate, a merchant called Alonso Ramires, and he hath brought downe with him ten or twelve thousand ducats in reals of plate, and is come downe to this place to build him a ship to returne into Spaine: and there is come in his company a bishop. And thus Iesus Christ send you long health.

Your louing brother Francis Snares.

The well gouerned and prosperous voyage of M. James Lancaster, begun with three ships and a galley-frigat from London in October 1594, and intended for *Fernambuck*, the port-towne of *Olinda* in *Brasil*. In which voyage (besides the taking of nine and twenty ships and frigats) he surprized the sayd port-towne, being strongly fortified and manned; and held possession thereof thirty dayes together (notwithstanding many bolde assaults of the enemy both by land and water) and also providently defeated their dangerous and almost inuitable fire-works. Heere he found the *cargazon* or freight of a rich East Indian carack; which together with great abundance of sugars, *Brasil*-wood, and cotton he brought from thence; lading therewith fifteene sailes of tall ships and barks.

In September 1594 the worshipfull M. Iohn Wats, alderman, M. Paul Banning, alderman, & others of worship in the city of London, victualled three good ships; to wit, *The Consent*, of the burthen of 240 tunnes or thereabout, *The Salomon*, of 170 tunnes, and *The Virgin*, of 60 tunnes: and appointed for commanders in this voyage, M. James Lancaster of London, gentleman, admirall of the fleet, M. Edmund Barker of London, viceadmirall, and M. Iohn Audely of Poplar neere London, rereadmirall, hauing in their sayd ships to the number of 275 men and boyes.

Being fully furnished with all needfull prouision, wee departed from Blackwall in October following, keeping our owne coast, vntill we came into the West countrey, where we met with such gulls and stormes, that the *Salomon* spending her mast at the Range of Dartmouth, put into harbour; but by the earnest care and industry of the generall and others hauing charge, she was shortly againe prouided. Which done, hauing a pleasant gale for our purpose, we put forth from Dartmouth the last of Nouember following. But contrary to our expectation, not fifty leagues from our owne coast, we lost the *Salomon* and the *Virgin*, by a storme of contrary winde that fell vpon vs: yet being alone, in hope to meet them about the Canaries or Cape Blank, we kept on our course to the Canaries, but could heare no tidings of our consozts; which greatly grieved vs.

Thence we went, bearing for the isle of *Tenerif*, where in the morning early we had sight of a saile, which being becalmed vnder the shore, was toying with their boat ahead, hauing one other at her sterne. For this saile we manned our boat, appointing our men wel for fight, if need should require. The Spaniards seeing our boat come, entered theirs, and leauing the ship, sought to saue themselves by flight: but our men pursued them so fast, that they boozed them, and brought them with their shippe to our Generall. This ship was laden with 80 tunnes of Canary-wine, which came not vnto vs before it was welcome. We kept and manned it, plying that day, and the next night thereabout. The very next morning we had sight of one other; to whome in like maner wee sent our boat: but their gunner made a shot at her, and strooke off a proper young mans arme; yet we inforced her to yeeld, and found 40 tunnes of wine in her. The Spaniards hauing their free passage, and an acquittance for the deliury of their wines, were all set on shore vpon *Tenerif*, making a quicke returne of their long voyage intended into the West Indies.

Hence we departed toward Cape Blank; and before wee came thither, we met againe with the *Virgin* our rereadmirall, whose men tolde vs for very truethe, that the *Salomon* was returned for England; inforced so to doe, by spending her mast the second time. Which when our men vnder-

of wine taken.

food, they were all in a maze, not knowing what to doe, and saying among themselves that their force was but small when all our strength were together, and now we had lost the one halfe of our strength, we were not able to performe the voyage: and therefore some of them came to the captain, asking him what he would now do, seeing the Salomon was lost, the one halfe of our strength, giuing him counsell to beare vp for the West Indies, and proue there to make his voyage, because his first plat for want of strength was cleane overthrowen. The captaine hearing this new novelty, as not vnacquainted with the variable pretenses of mariners, made them this answer: Sirs, I made knowne to you all at my comming out of England what I pretended, and that I meant to go for Fernambuck, and although at the present we want one of our ships, yet (God willing) I meane to go forward, not doubting but to meet her at the appointed places, which are either at Cape Blank or the islands of Cape Verde: for I am assured that M. Barker the captaine is so resolute to performe this voyage, that his mast being repaired, he will not faile to meet vs, & it were no wisdom for vs to diuert our course, till we haue sought him at those places where our appointed meeting is: for the diuerting of courses is the overthrow of most of our actions. And I hope you will be all contented herewith: for to go any other course then I haue determined, (by Gods helpe) I will not be drawn vnto. With these reasons and many others shewed, they rested all satisfied: and at our comming to Cape Blank (God be praised) we met with the Salomon with no small ioy to vs all; and there she had taken of Spaniards and Portugals 24 saile of ships and carauels, fisher-men, and had taken out of them such necessaries as she had need of. Of these ships our captaine tooke foure along with him, with another that he had taken himselfe, meaning to imploy them as occasion should serue. At this place he vnderstood of one of the pilots of those ships, that one of the caracks that came out of the East Indies, was cast away in the rode of Fernambuck, and that all her goods were layd vpon the Arracife which is the lower towne. Of these newes we were all glad, and reioyced much; for our hopes were very good, seeing such a booty before vs.

Four & twenty
sailes of ships
& of carauels
taken by the
Salomon.

Of this good company and happy successe we were all ioyful, and had great hope of the blessing of God in performance of our intended voyage, and so after some parle & making frolike for ioy of our meeting one with the other (praising God for all) we plied for Maio: where comming to anchor, our generall & the rest of the captaines went ashore to view the place where we might in best safety set our gally-frigate together; which frame wee brought from England of purpose to land men in the country of Brasil. Here we discharged our great prize of wine, and set her on fire: but before our comming thither, you shall vnderstand we had sight of foure sailes, which was captaine Venner in his ship the Peregrine, and a proper Biskaine which he tooke at Cape Blank, the Welcome of Plymouth & her pinnelle: all which stood with vs. But they seeing our flags, not expecting such good fellows as we, did beare from vs all they might; which our people tooke very vnkindly, that being all friends, they would neither enquire, nor tell vs any newes of our friends, but without making any shew of kindness would so depart. As before I haue said, the choice being made for the place to build the gally-frigate, ashore it was brought, where the carpenters applied their worke, still cheered vnto it by the generals good gifts bestowed among them, and kind vslage of the rest of the commanders, not without great care of the captaine for the safety of them all, by keeping good watch: yet one negligent fellow, which had no knowledge of the country, straying from his company, was by the Portugals taken, & very kindly vslad, and brought againe vnto vs: for which good the generall rewarded them well with gifts very acceptable, which they tooke as kindly. While wee were thus busily imployed about the foresayd galley, we descried at sea foure sailes, which we had good hope would haue proued Indies men, or some to haue brought vs what wee looked for: but they proued captaine Venner with his fleet, as aforesayd, who, seeing vs at anchor, anchored also; where spending some time, and being acquainted with our generals determination for landing, consoled with vs, & their bills, according to the maner of the sea, were made and signed on either part, we to haue three parts, & he the fourth, of all that should be taken, whereby our strength was increased, to all our comforts. Three weeks or thereabouts we staid in this place before the gally was finished; which done, putting men into her, and fitting her with oares, hauing foureterne banks on a side, a mast and saile, the commandement of her was committed vnto M. Wats, an honest skillfull mariner.

Maio,
30 gally-frigate
carried out of
England in pic-
ces.

The gally-
frigate
set by.

From thence we put againe to sea, and went for the ile Braua, where we watered: which done, we made no long stay after, but bent our course as directly as we could for the place, making our first sail with the land to the Southward of Cape S. Augustine; from whence wee plied still to our desired port of Fernambuck, and did so much, that about midnight we came before the harbour; where some plied vp and downe, holding that the best policy, to forbear the entring till day might giue them light, the harborow being hard, and therefore the more perillous. Our ships
being

March.

being in safety well arrived, God was praised: and the generall in his boat went from ship to ship, willing them to make ready such men as they could spare, with muskets, pikes, billes, bowes, arrows, and what weapons they had to follow him. Himsele, with 80 men from his owne ship, embarked himsele in the galley, which carried in her prow a good sacar, and two murdering pieces.

Our admirall spent all the night in giuing directions to euery ship to haue their men ready shipped in their boats, for he intended to enter the harborow at the breake of day, & to leaue his ships without, till he had gotten the fort and the towne: for he would not aduenture the ships in, till the harborow was gotten. Also he prouided five ships, which he brought from Cape Blank, and put men in them as many as could conueniently saile them, and no more, giuing them charge to enter the harborow with his boats: for at the entrance of the harborow rode three great Holland ships, which our admirall doubted would impeach his going in; and therefore he gaue order to the men of these five small ships, which were not aboue 60 tonnes a piece, if the Hollanders did offer any resistance, to run aboord of them, & to set their owne ships on fire, and scape in their boats, which they had for the same purpose, that by this meanes they might not impeach our entrance. But when the morning was come, we were fallen aboue halfe a mile downe to the northward, below the harborow, which was a great inconuenience vnto vs: so that before wee could get by againe, the ebbe was come vpon vs, and thereby we were forced to houer before the harborow till two of the clocke in the afternoone, in the sight of all the towne. In this meane time, our ships rode before the fort without the harborow, about a demy-coluering shot off: in the which time passed many shot betweene the fort and the ships, and especially betweene the admirals ship and them: but no great harme was done on either part. All this while our admirall kept the men ready houering in the galley & the boats. The Hollanders that rode in the mouth of the harborow, seeing our resolution, layd out haulsers, and wound themselves out of the way of vs. Our admirall was very ioyfull, & gaue great incouragement to all his men: for, to passe these three great Hollanders, he held it the greatest danger of all. About 12 of the clocke the gouernour of the towne sent a Portugall aboord the admirals ship, to know what he would haue, and wherefore he came. He returned him this answer: That he wanted the caracks goods; and for them he came, and them he would haue, and that he should shortly see. In this procelle of time, the townes-men and inhabitants which saw so much shipping, & perceived vs to be enemies, gathered themselves together, three or foure ensignes of men, esteemed to the number of some six hundred at the least. These came to the fort or plat-forme lying ouer against the entry of the harborow, and there attended our landing: but before our admirall set forward with his boats, he gaue expresse order to all that had charge of gouerning the boats or galley, to run them with such violence against the shore, that they should be all cast away without recovery, and not one man to stay in them, whereby our men might haue no manner of retreat to trust vnto, but onely to God and their weapons.

Now was the time come of the flood, being about two of the clocke in the afternoone, when our admirall set forward, and entered the harborow with the small galley, and all the rest of the boats following him, the Hollanders that rode in the mouth of the harborow, nothing impeached him: but now the fort began to play with their ordinance vpon the galley and the boats; and one of their shot tooke away a great piece of our ensigne out of the galley. But our saile being set, it was no time for vs to make any stay, but with all the force we could we ranne the galley vpon the shore right vnder the fort, within a coits cast of it, with such violence, that we brake her backe; and she suncke presently: for there where we landed, went a breach of the sea, which presently cast her away. The boats comming after did the like. At our arriual, those in the fort had laden all their ordinance, being seuen pieces of brasse, to discharge them vpon vs at our landing; which indeed they did: for our admirall leaping into the water, all the rest following him, off came these pieces of ordinance: but almighty God be praised, they in the fort, with feare to see vs land in their faces, had piked their ordinance so sterpe downewards with their mouthes, that they shot all their shot in the sand, although, as I sayd before, it was not aboue a coits cast at the most betweene the place wee landed and the face of the fort: so that they onely shot off one of our mens armes, without doing any more hurt; which was to vs a great blessing of God: for if those ordinances had bene well leuelled, a great number of vs had lost our liues at that instant. Our admirall seeing this, cried out, incouraging his men, Upon them, vpon them; all (by Gods helpe) is ours: and they therewith ran to the fort with all violence. Those foure ensignes of men that were set to defend our landing, seeing this resolution, began to go backe, and retire into certeine bushes that were by the same fort; and being followed, fledde thowoe a certeine daze which was drie, being then but the beginning of the tide: and so abandoned the fort, and left it with their ordinance to vs. This day of our arriual was their Good-friday, when by custome they vsually whippe themselves:

The fort of
Fernambuck
taken.

selues: but God sent vs now for a generall scourge to them all, whereby that labour among them might be well spared. The fort being taken with all their ordinance, the admirall waied to the ships, willing them to wey and come in; which they did with all speed, himsele taking order in leauing certeine men in keeping the sayd fort, and placed the ordinance toward the high towne, from whence hee suspected the greatest danger; and putting his men in order, marched toward the low towne, which was about some foureteene score from the fort: in which towne lay all their merchandize and other goods. Approching to the towne, he entered the same, the people imbar- king themselues in carauels & boats, with all the expedition they could. The base towne, of about an hundred houses, being thus taken, we found in it great store of merchandizes of all sorts: as Brasil-wood, sugars, Calico-cloth, pepper, cynamon, cloues, mase, nutmegs, with diuers other good things, to the great comfort of vs all. The admirall went vp and downe the towne, and placed at the South end of the same captaine Venner and his company, himsele and his company in the midst of the towne, and captaine Barker and captaine Addy at the other end of the towne, giuing great charge, that no man vpon paine of great punishment and losse of his shares, should breake vp or enter into any ware-houle, without order and direction from the admirall. And this commandement was as well kept as euer any was kept, where so great spoile and bootie was found: for it was not known in all the time of our being there, that any disorder was committed, or any lodge or ware-houle broken open, or any spoile was made, or pillaging of any thing; which is a note much to be obserued in such an action: for common mariners and souldiers are much gi- uen to pillaging and spoiling, making greater account of the same then of their shares.

Order being put in all things, we kept a very sure watch this first night, and the morning being come, our admirall and captaine Venner, with the rest of the captaines, went about the towne, and gaue order for the fortifying of it with all expedition: so that within two dayes it was surrounded with posts & planks, all that part of the towne next the maine land, at least nine foot high; for (God be thanked) we found provision in the towne, sufficient store for it. Now it is to be vnderstood, that this towne is enuironed on the one part by the sea, and on the backside by a riuer that runneth behinde it; so that to come to it by land, you must enter it by a small narrow passage not aboute for- ty paces ouer at an high water. At this passage we built a fort, and planted in it five pieces of or- dinance, which we tooke out of the first fort we wan at our comming in to the harborow. Now we hauing the towne in possession, our admirall sent for the Hollanders by his chyrurgian, which had bene brought vp in that countrey, a man knowing their conditions, and sober and discreet of his owne carriage. At his first comming aboard of them, they seemed to stand vpon their owne guard and defence, for they were three great and strong ships: but he vled himsele so, that they at the last willed him to come into the greatest of their ships, which was about 450 tunnes. Then he declared to them our intent of comming thither, and that they should be there as sure from a- ny shew of violence or iniury offered them, as if they were in their owne houses, and if they should thinke so good, his admirall would fraight the for England, if they would be content with fraighe reasonable, and as they should agree, and it should be at their owne choise whether to go or not, he would not force them, vnlesse it were to their benefit and good liking. Although this people were somewhat stubburne at the first, as that nation is in these causes, yet being satisfied with good words and good dealing they came aland, & after conference had with the admirall, they were so satisfied, that they went thow with a fraight; and then we toynd with them, & they with vs, and they serued vs as truly & as faithfully as our owne people did, both at watch and ward, by sea and all other seruices. Within two dayes after our comming in, about midnight, a great number of Portugals and Indians with them, came downe vpon vs with a very great cry and noise; but God be thanked, we were ready for them: for our admirall supposing some such assault, had provided all our muskets with haile-shot, which did so gaule both the Indians and the Portugals, that they made them presently retreat. And this is to be noted, that there was both the horse and his rider slaine both with one of these shot. Our men followed them some five or sixe score, but no further. We lost in this conflict but onely one man, but had diuers hurt. What was lost of their part, we could not tell, for they had before day, after our retreat, caried away all their dead. Within three or foure dayes after our comming in appeared before the harborow 3 ships & 2 pinnelles, the pin- nesses being somewhat nere, discried our flags, and one of them came in, which was a French pin- nelle, declaring all the rest to be French bottoms; which our admirall willed should come in: and so they did. These were Frenchmen of war, and came thither for purchase. The captaines came aland, and were welcomed; amongst whom was one captaine Iohn Noyer of Diepe, that the yere before had taken in our admirall at the island of Mona in the West Indies, where his ship was cast away, comming out of the East Indies. To this man our admirall offered great kindnes, and per-

formed it, & was not vngratefull for his former benefite shewed vnto him. This captaine desired of our admirall to bestow vpon him his ships lading of Fernambuc-wood, which he granted him, and also his pinnesse, and more, gaue him a carauel of about 50 tuns, & bid him lade her with wood also; which with other benefites he gratefully receiued. To the other two captaines he granted their loadings of wood, the one captaine being of Diepe, the other of Rochel. The captaine of Diepe confessed that he met Abraham Cocke certein moneths before, & being distressed for want of water, gaue him some, & went with him to a watering place where he had water enough, and so departed from him, saying that his men were very weake. The comming in of these ships did much strengthen vs; for our admirall appointed both these French and the Flemings to keepe watch vpon the river by night with their boats, euery boat hauing in her 12 men at the least, and the boats well provided. This was for feare of fired ships or barks to come downe, which our admirall had great care vnto, and caused our ships to ride by cables and haulters, at all aduantages to shun them, if by that meanes they should attempt to put vs out of the harborow; giuing commandement to vs that watched in the towne, that what fires soeuer we should espy or see, not one man to start from his watch or quarter, vnlesse we were by himselfe commanded to the contrary. Now this order put in all things, and hauing viewed all the goods in the towne, and thinking our selues sufficient-ly fortified, we began to vnlade our ships, which came as full laden in as they went forth, but not with so good merchandize. And this order was taken about the vnlading of them, and also the lading of goods out of the towne: our men were diuided into halues, and the one halfe wrought one day, and the other halfe the other day; alwayes those that wrought not kept the watch with their furniture in their hands and about them, and none slept far off or wandred from his colours, and those that wrought had all their weapons in good order set & placed by them, so that at an instant euery one knew where to go to his furniture: and this was very carefully looked vnto.

The third day after our comming in, came down from the higher towne, which might be about foure miles off vpon a hill, three or foure of the principall gentlemen of the countrey, and sayd that from the bishop, themselves, & the rest, they would haue some conference with our admirall. This newes being brought to the admirall, he hung downe his head for a small season; and when he had mused a while, he answered, I must go aboord of the Flemings vpon busines that importeth me, and therefore let them stay if they will: and so he went & sate there with the Flemings from nine of the clocke till two at the afternoone. In this space diuers messengers went to the admirall, to come away; for these gentlemen sayd. To whom he gaue this answer: Are they not gone yet? And about two of the clocke he came aland, and then they tolde him they were departed. Many of the better sort of our men maruelled, and thought much, because he would not vouchsafe to come and haue conference with such men of account as they seemed to be. But the admirall made them this answer, Sirs, I haue bene brought vp among this people, I haue liued among them as a gentleman, serued with them as a souldier, and liued among them as a merchant, so that I should haue some vnderstanding of their demeanors and nature; and I know when they cannot preuaile with the sword by force, then they deale with their deceiueable tongues; for faith and truth they haue none, neither will vs any, vnlesse it be to their owne aduantage. And this I giue you warning, that if you giue them parle, they will betray vs; and for my part, of all nations in the world, it would grieue me most to be ouertaken by this nation & the Spaniards: and I am glad it was my fortune to pay them with one of their owne fetches, for I warrant you they vnderstand me better then you thinke they do. And with this I pray you be satisfied; I hope it is for all our goods: for what shall we gaine by parle, when (by the helpe of God) we haue gotten already that we came for, should we venture that we haue gotten with our swords, to see if they can take it from vs by words and policy? there were no wisdom in so doing. You know what it hath cost vs, and how many men lie wounded that be not yet hole of this other nights hurts: and therefore from henceforth I giue this commission, that if any be taken, he be sent away with this order, although he come as a friend, that if either he or any other approach vs from henceforth, he shalbe hanged out of hand: and other course then this I will not take with them. Which course was followed; for within 3 or 4 dayes after it was performed by two taken in the night: and after that we were neuer troubled with spies; and although diuers slaues came running from their men to vs, by which we vnderstood much of their working & pretences, yet the admirall would enterteine few of them.

In this meane time that we began to worke, the Portugals with the country people were not idle, for seeing vs so busie, about five nights after our comming in, they priuily in the night cast vp a trench in the sands about a sacar shot from our ships, minding there to plant ordnance, which would haue offended our ships greatly; & they would not haue bene able to haue rode there to take in their lading, which now began to go aboord of them. The admirall hearing this, about 3 of the clocke

clocke in the after noone marshalled our men, and he and all the rest of the capitaines marched toward them. The Portugals & Indians perceiuing our comming, began to withdraw themselves within the trench, meaning (as it should appeare) to fight it out there: but we made no stand, neither did it behoue vs, but presently approached the trenches with our muskets & pikes, afore their trenches were thorowly finished: so that by Gods helpe we entered the. And the Portugals & Indians left the place, & left vnto vs 4 good peeces of brasse ordnance, with powder and shot & diuers other necessaries, and among the rest 5 final carts of that countrey, which to vs were moze worth then al the rest we tooke, for the lading of our goods from the towne to the waters side: for without them we could not haue told what to haue done, much of our goods being so heauie, that without carts we were not able to weyld them: all these things we brought awy & destroyed al those platforms that they had made, and then we had rest with them for certaine dayes, in which we went forward, deuinding our marchandize with capitaine Venner according to our consort, and went daily lading them aboard, euery ships company according as their turnes fell out, but only the three dutch ships: for the goods being put into their boats their owne companies laded themselves. And this farther good chance or blessing of God we had to helpe vs, that assoone as we had taken our cartes, the next morning came in a ship with some 60 Negros, 10 Portugall women, and 40 Portugals: the women and the Negros we turned out of the towne, but the Portugals our Admirall kept to draw the carts when they were laden, which to vs was a very great ease. For the countrey is very hote and ill for our nation to take any great trauell in.

In this towne there is no fresh water to be had, and therefore we were euery 5 or 6 dayes compelled to passe ouer the riuer into the maine land to get fresh water, which after the first or second time the Portugals kept and would haue defended our watering, so that we were driuen to water of force, and at seuerall times some of our men were hurt, and onely two or three slaine, and with this danger we were forced to get our water.

And as they molested vs in our watering, so they slept not in other deuises, but put in practise to burne our ships or remoue them out of the harbour. For within some 20 dayes after our comming in, they had prepared 5 Carauels and filled them with such things as would best take fire and burne: these they brought within a mile or little moze of our ships, and there set them on fire, for neerer they could not well come because of our watch of boates, for, as is aboue said, the Admirall had alwaies 6 boates that kept watch aboue halfe a mile from the ships for feare of such ex-ploytes as these, which was the cause they could not fire them so neere the ships as they would haue done. But these fired Carauels had the ride with them, and also the little winde that blew was in their fauour, which caused them to come downe the streame the faster: which our boats per-ceiuing made to them with as much expedition as conueniently they could, but the ride and wind both seruing them, they approached toward the ships with greater expedition. Our men in the towne began to be in some feare of them, yet no man moued or started fro his quarter moze then if there had bene nothing to doe. Also the masters and such as were aboard, were somewhat amased to see 5 so great fires to be comming downe among their ships, but they prepared for to cleere them of it, as well as they could, being provided afore hande & iudging that some such stratagems would be there vsed, the riuer being very fit therfore. But (God be thanked) who was alwaies with vs & our best defence in this voyage, by whose assistance we performed this so great an attempt with so small forces. Our companie in the boats so played the men when they saw the fires come neere our ships, that casting grapnels with yron chaines on them, as euery boat had one for that purpose, some they towed aground, and some they brought to a bitter or anker, where they rode till all their force was burned out, & so we were deliuered by Gods helpe from this fearefull danger. Which in some 6 nights after this, which might be about the 26 day after our comming in & abode there, about 11 of the clocke at night, came driuing downe other 3 great raftes burning with the hugest fires that I haue seene. These were exceeding dangerous, for when our men approached the, thin-king to clasp their grapnels vpon them, as they had done vpon the Carauels the night before, they were prevented: for there stooke out of the raftes many poles which kept them from the body of the raftes, that they could not come to throw their grapnels into the: & yet they had this inconuenience worse then al the rest which most troubled vs. There stooke out among the poles certaine hollow trunks filled with such provision of fire-works that they ceased not still (as the fire came downe to those trunks to set the on fire) to spout out such sparkles, that our boats hauing powder in them for our mens vse, durst not for feare of fying themselves with their owne powder come neere those sparkles of the raftes, but seeing them to driue neerer & neerer our ships, they wet certain clothes and laid vpon their flakkes and bandelers and so ventured vpon them, & with their grapnels tooke holde of them, and so towed them on ground, where they stooke fast & were not burnt out the next day

day in the morning. Diuerſe logs and timbers came dꝛiuing along by our ſhips, and burning, but with our boats we eaſily defended them. And thus (God be prayd) we eſcaped the ſecond fires. A third firing was prepared, as a Negro gaue vs to vnderſtand, but this we prevented by our departure. For this third firing were very great preparations; and we were credibly informed of certaintie, that this firing ſhould be ſuch as we ſhould neuer be able to prevent, and aſſuredly theſe fires be dangerous things and not to be prevented vpon the ſudden, unleſſe it be afore prepared for and foreſeene. For when it cometh vpon the ſudden and vnlooke for, and vnprovided for, it bringeth men into a great amazement and at their wits ende. And therefore let all men riding in riuers in their enemies countrey be ſure to looke to be provided befoꝛe hand, for againſt fire there is no reſiſtance without preparation.

Alſo it is a practice in theſe hot countreys, where there be ſuch expert ſwimmers, to cut the cables of ſhips: and one night it was practiced to cut the Admirals cable, and yet the boate rode by the cable with two men in her to watch all the night, and the twoy onely was cut, but not the cable: but after that night, ſeeing then our good watch, they neuer after attempted it.

While all theſe things paſſed, our ſhips (God be thanked) throꝛow the induſtry of our gouernours, and diligent labour of our men, began to be wholly laden, and all the beſt marchandize conueyed aboard our ſhips, ſo that our Admirall ment to depart that night, which was the 31 day after our entrance, or elſe on the next day at the fartheſt, and ſo warning was giuen to all men to make themſelues readie. Our Admiral being aboard his ſhip y ſame morning, eſpyed in the ſands right againſt the place where the ſhips rode, that there was a ſmall banke of ſand newly caſt vp, vnder which he perceiued now and then ſome people to be: preſently he tooke his boat and went to the towne and called all the Captaines together, declaring that the enemies were about ſome pretence right againſt the ſhips, conſulting whether it were beſt to ſally out & ſee what they were doing, or depart that euening according to the former determination. The Admirall was of opinion to depart that night, ſaying it was but folly to ſeek warres ſince we had no neede to doe it: other affirmed, it were good to ſee what they did, leaſt the winde might be contrarie and the ſhips not get out, and ſo our enemies may build vpon vs to our great diſaduantage. Well, ſaid the Admirall, the matter is not great, for there can be no danger in this ſally, for where they worke it is within ſhalke ſhot of the ſhips, and if any power ſhould come againſt you, the ſhips may play vpon them with 40 peeces of ordinance at the leaſt, ſo that a bird cannot paſſe there but he muſt be ſlaine. I am ſomewhat vnwilling you ſhould go, for I haue not bene well theſe two dayes, and I am not ſtrong to march vpon thoſe heauie ſands: they answered all at once, you ſhall not neede to trouble your ſelfe for this ſeruiſe, for you ſee it is nothing and of no danger, being ſo neere the ſhips, doubt you not we will accompliſh this ſeruiſe well ynough, and returne againe within this houre. The Admirall answered: the danger cannot be great, but yet you ſhall goe out ſtrong for feare of the worſt. And ſo the Admirall marched them 275 men French and Engliſh, which were vnder the conduct of Edmund Barker, captaine Barker of Plimmouth, Viceadmirall to captaine Venner, captaine Addy, and the three French captaines all going out together, and they were to march vpon a narrow peece of ground to the place whether they were ſent vnto: in the broadest place betwixt the ſea and the water on the other ſide, it is not about a ſtones caſt, for it is a bank of ſand lying betwene the riuer & the ſea, ſo they needed not to feare any comming on their backs or on their ſides, and befoꝛe them could no man come, but he muſt paſſe by all the ſhips which no company of men were able to do without preſent death. The Admirall commanded them at their departure to go no further then the place he ſent them to, and ſo he himſelfe went aboard the ſhips and made readie all the ordinance for feare of the worſt, not knowing what might iſſue, although he ſaw no danger might follow. Thus we marched quietly till we came to the place we were ſent vnto, being right ouer againſt the ſhips: out of which place came ſome dozen ſhot, which ſeeing vs come, diſcharged and ran their wayes with ſuch as were working within the ſaid platfoꝛme. So that we came into it and perceiued they had begunne to lay planks to plant ordinance vpon. Our Admiral commanded, if there were any ſuch thing, to burne the planks & returne in againe, which we might haue done without hurting of any mans finger: but our leaders were not content to haue performed the ſeruiſe committed them in charge, but would needes expreſſy & againſt their order march on further to fight with certaine Enſignes almoſt a mile off, cleane out of the reach of the ordinance of all our ſhips, & where lay the ſtrength of the whole countrey. When our men began to draw neere thoſe Enſignes of men, the Enſignes ſeemed to retire with great ſpeed, which our men followed with ſuch great haſt that ſome outrunning other ſome, our order was broken, and thoſe enſignes retyred theſelues into the force of the whole countrey, ſo that our ſoꝛmoſt men were in the miſt of their enemies yet they were aſware, which were ſlaine yet the reſt

could

could come to succour them. The enemies encouraged by this, came also vpon the rest, which presently began to retire, & the enemies followed them til they came within the reach of the ordinance of our ship, where they were beaten off and left their pursuit. In this conflict were slaine capitaine Barker capitaine of the Salomon, capitaine Cotton y Admirals Lieutenant, capitaine Iohn Noyer a french capitaine of Diepe, and another french capitaine of Rochel, with 99. Iohn Barker & other to the number of 35: for these were the foremost and hottest in the pursuit of the Ensignes aforesaid, and by their forwardnes came all to perishe. At our returne into the towne the Admirall came to vs much bewailing the death of so many good men as were lost, wondering what we ment to passe the expresse order that was giuen vs. With this losse our men were much danted, but our Admirall began againe to encourage them, declaring that the fortune of the warres was sometimes to win and sometimes to loose. And therewithall he wished euery man to prepare & make himselfe readie: for that night (God willing) he would depart. For all our ships were readie and laden, and he would not stay any further fortune. The evening being come, the ships began to wey & go forth of the harbour, and God be thanked of his goodnesse toward vs who sent vs a faire wind to go forth withall, so that by 11 of the clocke in the night we were all forth in safety. The enemies perceiuing our departing, planted a peece or two of ordinance, and shot at vs in the night, but did vs no harme. We were at our conning forth 15 sailes, that is, 3 sailes of Hollanders, the one of 450 tunnes, the other of 350 tunnes, and the third of 300 tunnes, foure sailes of french & one ship which the Admirall gaue the french Captain, 3 sailes of Captain Venners fleet of Plimmouth, and 4 sailes of our Admirals fleete, all these were laden with marchandizes, and that of good worth. We stayed in this harbour to passe all this businesse but onely 31 dayes, and in this time we were occupied with skirmishes and attempts of the enemy 11. times; in all which skirmishes we had the better, onely this last excepted. To God be the honour and praise of all. The whole fleete being out in safety, the next day in the morning the Admirall gaue order to the whole fleete to saile toward Peraniew a harbour lying some 40 leagues to the Northward of Fernambucke, and there to take in fresh water and to refresh themselves: and to make prouision for refreshing, our Admirall had sent thither some 6 daies before two French men in a smal pinnesse, which Frenchmen he had prouided from Diepe before his conning out of England for that purpose. For both these two spake the Indians language very perfectly: for at this port of Peraniew and an other called Poraju some 6 leagues to the Northward the Frenchmen haue had trade for Brazil-wood, and haue laden from thence by the Indians meanes, who haue set it for them some 20 leagues into the country vpon their backs, 3 or 4 ships euery yere. Thus we all sailed toward Peraniew, at which place we arriued in the night, so that we were forced to lie off & on with a stiffe gale of wind, in which we lost the most part of our fleete, & they not knowing this coast put off to the sea, and so went directly for England. Our Admirall and some 4 saile more with him put into the harborow of Peraniew, and there watered and refreshed himselfe very well, with hens, conies, hares and potatos, with other things, which the two Frenchmen had partly prouided before his conning: this is a very good harborow where ships may ride and refresh very well. But, as I am giuen to vnderstand since our conning from thence, the Portugals haue attempted the place and doe inhabite it, and haue put the french from their accustomed trade. Here hauing watered and refreshed our selues, we put to the sea, plying after the rest of our fleete which were gone before, which we neuer heard of till our arriual in England at The downes in the moneth of Iuly, where we vnderstood the rest of our consoyts to be passed by for London, Capitaine Venner & his fleete to be at Plimmouth, and the French ships to be safe arriued at Diepe, which to vs was very great comfort. At our setting saile from The downes, according as the custome is, finding the Queenes ships there, we saluted them with certaine ordinance. The Gunner being carelesse, as they are many times of their powder, in discharging certain pieces in y gunner room, set a barrel of powder on fire, which tooke fire in y gunner room, blew vp the Admirals caben, slew the gunner with 2 others outright, & hurt 20 more, of which 4 or 5 died. This powder made such a smoke in the ship with the fire that burnt in the gunner room among all the fire workes, that no man at the first wist what to doe: but recalling backe their feare, they began to cast water into the gunner room in such abundance (for the Queenes ships now & also the other ships that were in our company came presently to our helpe) that (God be praised) we put out the fire & saued all, & no great harme was done to the goods. By this may be seene that there is no sure safety of things in this world. For now we made account to be out of all danger, where behold a greater came vpon vs, then we suffered all the whole voyage. But the almightie be prayled for ever, which deliuered vs out of this and many other in this voyage. Our fire being well put out, and we taking in fresh men (God be prayled) we came to Blacke-wall in safety.

Peranieu 40.
leagues north-
ward of Fer-
nambuck.

Peranieu a very
good harbour.

A speciall letter written from *Feliciano Cieça de Carualsho* the Governour of *Paraiua* in the most Northerne part of *Brasil*, 1597. to *Philip* the second king of *Spaine*, answering his desire touching the conquest of *Rio Grande*, with the relation of the besieging of the castle of *Cabodelo* by the Frenchmen, and of the discouerie of a rich siluer mine and diuerse other important matters.

The king of Spaines resolution to proceed in the discouerie & conquest of *Rio Grande*.

Receiued your Maiesties letter bearing date the ninth of November 1596. whereby I vnderstande that your Maiestie doth determine to proceede in the discouerie and conquest of *Rio Grande*, according to the relation which was sent your Maiestie by *Don Francisco de Sousa*, Governour generall of this Realme of *Brasilia*: together with a copie of a letter, which your Maiestie sent vnto vs, bearing date the two and twentieth of March 1596. Moreover I receiued another letter from your Maiestie bearing date the 15 of March 1597. Both which letters were to one effect. It may please your Maiestie to vnderstand that there are diuerse Gentlemen in these countreys of as good abilitie as my selfe, which seeke to liue at home onely for their ease and pleasure, and are not wont to hazard nor venture their bodies, liues, and goods so often times in your Maiesties seruice as I haue done and commonly doe; and can keepe their goods and riches, and not spend nor wast them as I haue done, and dayly doe so wilfully: yet neuerthelesse being spent in your Maiesties seruice, I am very glad thereof. For I and they are alwayes readie at your Maiesties commandement.

The Captaine-ship of *Paraiua* standeth in five degr. 45 min. of Southerly latitude.

And as concerning your Maiesties commandement in commanding me that I should put to my helping hand in the conquest of *Rio Grande*: although this Captaine-ship of *Paraiua* and countrey where I doe gouerne doth want abilitie for that purpose, yet neuerthelesse your Maiestie shall alwayes finde me readie to doe your Maiestie the best seruice I can: for it is very well known how forward I haue bene alwayes and am in this conquest, and still doe put to my helping hand, as partly your Maiestie doth vnderstand by a letter which I wrote to your Maiestie by my sonne, bearing date the 19 of March 1596 wherein your Maiestie may vnderstand what good seruice I haue already done therein, and alwayes will be readie to my power to doe the like in furthering of the said enterprise.

The castle of *Cabodelo* besieged by the French.

It may please your Maiestie to vnderstand that the thirde of July there was brought vnto me a Frenchman a prisoner, who presented himselfe vnto me. And I examining of him, he tolde me that he came running away from certaine French ships men of warre, which came vpon this coast: and he tolde me that he had serued your Maiestie in the warres of France. Like wise he tolde me that he left me seuen great ships Frenchmen of warre riding at an anker in *Rio Grande*, and that there were 13 french ships of warre more, which had giuen battery to the Castle of *Cabodelo*, and landed 350 soldiers all in white armour, and the battery continued from Friday vntill the Sunday following both by sea and land, and great store of Frenchmen were slaine, and two Captaines of the French. On our side the Captaine of the castle was slaine, and other two Portugals hurt: other harme they had none. There were but twentie Portugals in the castle, and five pieces of ordinance. They ment to haue kept the castle, and to haue traded with the Indian people. So seeing they could not take the castle, they hoysed sayles, and went from thence to *Rio Grande*: and being altogether they are in number 20 saile at an anker in *Rio Grande*. And some of them determine after they be new trimmed and dyest, and haue taken in fresh victuals, and stayed there vntill Easter, then to depart from thence to the *Honduras*, and so to burne and spoyle some to wies thereabout.

The garison of *Fernambuck*.

I certified *Manuel Mascarenhas* of these informations by my letters, requesting him to send me with all expedition those souldiers which were in garison in *Fernambuck* to ayde me, and to defende this Captaine-ship from the enemye. But the Friers of The Couent would not consent therunto, nor suffer them to be sent vnto me. So I was forced to make shift with those souldiers only which I had in my gouernment and tooke them with me, and marched to the place where the enemies were entrenched, and vpon Whitsunday in the euening about thre of the clocke, hauing in my company a Negro of the countrey of *Petiguar*, which was our guide, he brought vs where the enemies campe was; and presently I did assault them, and slew great store of them, burning the villages and countrey of those rebels, which did ioine with the Frenchmen, and tooke many of them prisoners. So they told me that there were ten great french ships of warre which were at an anker in *Rio Grande*.

The countrey of *Petiguar* res belletly against the Portugals

A rich siluer mine found at *Copaoba* within five dayes journey of *Paraiua*.

Likewise I was informed, that there is a frenchman called *Daurmigaz*, which hath discovered and found great store of siluer in a place called *Copaoba*. The siluer hath bene tried and melted, it is very good and fine siluer, and there is great quantitie. The man which told me of this hath bene

beene in the mine, and hath seene it tried and melted, And I haue bene my selfe once in the place: it is but 6 dayes iourney from this Captaine ship.

Furthermoze this Frenchman told me that one Monsieur Misa a french Captaine, and a kinsman of the gouernour and Viceadmirall of Diepe in Normandie, had one of his armes strooken off at the siege of the castle of Cabodelo; who is departed from Rio Grande, with determination to come backe hither againe the next yeere in the moneth of Januarie following, and to inhabite in this countrey of Paraiba, which is 20 leagues from Fernambuck, because of the great store of silver, which they haue already found here.

Moreouer I am enformed that a noble man of France called The earle of Villa Dorca doth intend to come vpon this coast with a great flete from Rochel. It were good that your Maiestie would send into France to knowe the certaintie thereof.

The Frenchman likewise told me that all the Canibals of Periguar haue ioynd themselves in companie with certaine Frenchmen, which were cast away in two ships vpon this coast. The one of these ships which were cast away was one Rifoles, and the other ship was this mans. And those Frenchmen which came vpon this coast did ioyne themselves with those Canibals which did reuell, and did diuide themselves into two squadrons. So I sent presently to Manuel Mascarenhas that he should send me aide and munition. But he sent me word againe, that he had none to spare, and that he did purpose with all speede to goe himselfe to Rio Grande; and that he was not able to furnish himselfe so well as he could wish, nor to bring his souldiers into the field, for lacke of shot, powder, and other munition, which he did want.

All the Canibals of Periguar ioyne with the Frenchmen against the Portugals.

Whereupon once more the 29 of July I with my souldiers marched to the enemies campe, and there ioyning battell with the Indian rebels, which were ioynd with the Frenchmen that were their leaders, I did set vpon them, and slew great store of them, and tooke fourteene of them prisoners. They doe report the very same newes, which the other Frenchmen did tell me as touching the ships which were in the harbour of Rio Grande; and how their pretence was to haue come and haue taken vs, and spoiled the countrey.

But now being put to flight and hauing receiued the ouerthrow, they can get no victuals to victuall their shippes: which hath bene the cause that they are mightily hindered in their intent, and dare not come any more to attempt vs. And the Indians are so dismayed, that in haste they will haue no more helpe nor aide of the Frenchmen. So by these meanes of necessitie the Indians must submit themselves vnto vs, considering they are quite spoiled and ouerthrowen for a long time. Likewise they haue enformed me touching the silver mines which are found, that it is most true. For those french shippes which were in Rio Grande haue laden great store of the ore. Wherefore I certified Manuel de Mascarenhas of the Frenchmens newes, and howe euery thing did stand; wishing him to make readie foure ships and three hundred souldiers, and so to take the harbour of Rio Grande, being now cleared and voyde of the enemy: and to search out the situation of the place, and where were best to fortifie and to build some fortes for the defence of this riuer, where neede shall require. Whereunto Mascarenhas sent me word, that when he went himselfe, and found it true which hath bene reported touching the silver mines, that then he would send both men and ships. Therefore your Maiestie must giue order, that the rest of the Gouernours shall ayde and assist me in these warres: otherwise of my selfe I am not able to doe more then I haue already done in defending of this countrey against our enemies which are many.

French ships laden with great store of silver ore.

It may please your Maiestie to be aduertised, that from time to time I haue written vnto Don Francisco de Sousa Gouernour general of this realme, who is in Baia, as concerning these Frenchmen of warre: but he will not answere me to any purpose, because I do write vnto him for such things as I doe want, which are shot, powder, men, and munition requisite for your Maiesties seruice & safeguard of this captaine ship. For here are neither shot, powder, nor any thing els to defend vs from our enemies; nor any that wil put to their helping hands for the defence of this countrey, & the seruice of your Maiestie. And therefore it were needfull that your Maiestie should commit the charge and gouernment into the hands of Diego Sierua, with expresse charge that all the captaines & commanders vpon paine of death obey him and be readie at all times to aide and assist him in your seruice. Otherwise this countrey cannot be kept and maintained, hauing so great warres continually as we haue, and are troubled withall. For this Diego Sierua is a very good souldier, and hath good experience; and is fit to gouerne this countrey. Your Highnesse is also to send him Commission with expresse comandement to follow these wars; otherwise this countrey cannot be kept, but daily they will reuell. For here are none that will serue your Maiestie so iustly as he will do: who wil haue a great care in any thing which shal concerne your Maiesties seruice

touching

touching the estate of this countrey. For the Gouvernour Sousa doth spend your Maiesties treasure in building his owne Ingenios or sugar-milles.

The conquest
of Rio Grande.

Two Forts to
be builded at
Cabodelo.

The countrey
of Paraiua in
danger dayly
to be lost.

The warres
of Periguar.

A new captain
appointed in
Cabodelo.

A great con-
trouersie tou-
ching the go-
uernment of
the Indian
townes.

The towne of
S. Augustine.

And those Captaines which your Maiestie intendeth to send hither must bring with them shot, powder, and all kind of weapons, furniture, and munition for the defence and safegarde of this countrey, and for the conquest of Rio Grande. For there is no kind of munition in al this countrey to be had, if occasion should serue. It were also good that your Maiestie should send order for the building of a couple of Forts or Castles at Cabodelo, for they be very needefull for the defence of the enemy, which dayly doth warre against this Captainship. For that man which shall gouerne this countrey, if he be no more fortunate then I haue bene hitherto, shall not misse one time or another, but he shall loose all the countrey. If Don Francisco de Sousa had sent mee those two hundred and fiftie souldiers which I did send for, which were in garison in the castle of Arrecife, which doe nothing but spend your Maiesties victuals and treasure, and had not sent them to Baiha, where there was no neede, these warres of Periguar had bene ended long ago, and had saued your Maiesty a great deale of charges which you had spent in following of this conquest of Rio Grande. I haue chosen one Captaine Iohn de Maras Cardoso to be Gouvernour of Cabodelo, who is a very sufficient man.

Furthermore, it may please your Maiestie to vnderstand, that the chiefeest Friers of this Monasterie of S. Antonie haue complained on me to the lord Gouvernour generall, and haue caused great strife and debate betwene him and me touching the gouernment and rule of these Indian townes. For the Friers would command and gouerne both the Indians and their townes as well in Ecclesiasticall as Tempozall causes, as touching the punishment of the bodies of such as are offenders. But I haue resisted them in your Maiesties name, and haue alleaged, that none but your Maiestie must rule and gouerne them and their countrey, and that the townes appertaine to your Maiestie, and not vnto the Friers. But the Gouvernour hath written a letter vnto me, signifying that he hath pronounced a sentence against me in the Friers behalfe, which is this. The King our master hath sent a decree and certaine statutes touching the good gouernment and orders to be executed and kept in those Indian townes: and that vpon sight hereof I shall presently banish all the *Mamelukes* and white men which dwell in any of those Indian townes with all speede, and that none of them from hence forward shall enter into the said villages, without commandement and consent of the said Friers. So this sentence was presented vnto me by the Reuerend father Custodio, Prior of Sant Anton of Brasil, with a further postscript of the Gouvernour importing these words: I doe likewise charge and commaund you the Gouvernour of Paraiua, that presently vpon sight hereof you shall restore those villages and houses which you haue burned and destroyed in the last warres, and likewise the towne of S. Augustine, and that you shall build them againe at your owne proper cost and charges: for the Friers alleage that these townes were giuen them, by a decree sent them from Pope Pius Quintus, that the said Friers should gouerne and rule them.

On the other side I haue pronounced another sentence against the said Friers in your Maiesties name, and for your Maiestie, alleaging that those townes, villages, and subiects appertaine and belong vnto your Maiestie, and that in tempozall causes I am to punish those offenders, which shall rebell against your Maiestie: and as touching ecclesiasticall causes that the Vicar of this Cathedral church shall rule, gouerne and instruct them in the Christian religion. So we both haue appealed vnto your Maiestie herein, and your Maiestie may peruse all our writings, and then determine that which shall be best and most profitable for your Maiesties seruice and enlargement of your crowne. For through these bzoyles the inhabitants of this Paraiua forsake their houses & dwelling places, and so doe some of the Friers, because they cannot be suffered to rule & gouerne.

Also the Indians haue complained against me, because I haue burned their villages in this last rebellion. Wherefore if your Maiestie doe not send some order for this countrey and see into these cases, it will breed great dissention and rebellion among vs, and we shall be readie to cut one anothers throat before it be long.

Thus I thought good, according to my humble bounden dutie, and for the seruice of your Maiestie and quietnesse of this realme, to certifie your Maiestie the truth of the whole matter: hoping in short time that your Maiestie will send some good order to qualifie these bzoyles: for there is great hatred and malice among vs. Iesus Christ preserve and keepe the royall person of your Maiestie with long health, as it pleaseth him. From the Captainship of Paraiua this present 20 of August, 1597.

Feliciano Cieça de Carualho.

A spe-

A special note concerning the currents of the sea betweene the Cape of Buena Esperança and the coast of Brasilia, giuen by a French Pilot to Sir Iohn Yorke knight, before Sebastian Cabote; which pilot had frequented the coasts of Brasilia eigheteene voyages.

Memorandum, that from Cabo de buena Esperança vnto Brasilia the Sunne hath the like dominion ouer the tides there, as the Moone hath ouer our tides here. And that whensoever the Sunne is in any of these signes he gouerneth the tides as followeth.

The Sunne being in $\left. \begin{array}{l} \text{Taurus} \\ \text{Gemini} \\ \text{Cancer} \end{array} \right\}$ the tide hath his course North-west.

The Sunne being in $\left. \begin{array}{l} \text{Leo} \\ \text{Virgo} \\ \text{Libra} \end{array} \right\}$ no current.

The Sunne being in $\left. \begin{array}{l} \text{Scorpio} \\ \text{Sagittarius} \\ \text{Capricorne} \end{array} \right\}$ the tide hath his course Southeast.

The Sunne being in $\left. \begin{array}{l} \text{Aquarius} \\ \text{Pisces} \\ \text{Aries} \end{array} \right\}$ no current.

A ruttier or course to be kept for him that will sayle from Cabo Verde to the coast of Brasil, and all along the coast of Brasil vnto the riuer of Plate: and namely first from Cabo Verde to Fernambuck,

The ship that goeth from Cabo Verde to Brasil, must goe Southsoutheast: and when she is with in 5, or 6 degrees of the Equinoctial she must go South-east and by South. And if she haue the ternados, that is thundrings and lightnings, then thou must go altogether South, or that way and by that boord that doth profit thee most. And take this for aduise, that hauing the general winds, if the wind be at South or Southeast, then go South-west, or westsouthwest.

And if the winde be South, then goe South-west, and by this way but little, for it is not a way for thy profit, because the more thou goest this way, the more will be thy trouble, because thou mayest not come neerer the coaste of Guinea then 60 or 70 leagues vnto the shoale called Os baixos de Santa Anna. And being this distance from the same, thou shalt cast about the other way towards Brasil, and the wind will be large.

Thou shalt vnderstand that the ship that keepeth this course to Fernambuck, and goeth in October or after, and chanceth to goe to windward of the Isle of Fernando de Loronha, when thou comest to 8 degrees, or 8 and 1/2, then thou shalt go West and beare with the land. Thou must take this for a warning, that if going West in 8 degrees thou see land, then looke to the Northward, and thou shalt see certaine white cliffes. Then I aduise thee that thou goe well to the Southward. And this is to bee vnderstoode from October forward, for then the time is most subiect to North-east and Eastnorth-east winds. And if thou find thy selfe in the sayd height aboue mentioned, and seest cliffes, and seest a Cape to the Southward, and seest no more land to the South, then make accompt that thou art at Capiguuari: and from thence to Fernambuck thou hast five leagues, and hast a good port.

Thou shalt take this for a warning, that if in 8 degrees and a halfe thou see land lying all flat, thou mayest goe neerer it, and be bold till thou come in tenn or twelue sadomes: And then thou shalt see a great grosse land along the sea-coast which is called Capicagua: And being East and West with this land, and, as I haue sayd, in tenn or twelue sadomes water; and the time being from October to Februarie, then thou needest not to feare any thing: but looke to the South and thou shalt see the cape of S. Augustine: and looke to the North and thou shalt see a point, and to the Southeast a point called Puna de Olinda, where Aponiquay standeth. And the land from the cape to the point called Puna de Olinda lieth North and South.

He that will sayle to Brasil, must not come within 60 or 70 leagues of the coast of Guinea.

Of Southerly latitude.

I advise thee that if thou be East and West with the cape of Saint Augustine, thou shalt see within the land an high hill, having as it were a saddle upon it like to a camel: And thou shalt see to the Southwards three hilles along the sea, and then presently thou shalt see the coaste to lie North-east and South-west.

The height of
cape of S. Augu-
stine, of Olinda,
& Fernambuck.

Thou shalt understand that from this cape of Saint Augustine, to the towne of Olinda, thou hast nine leagues to the North. And this cape standeth in eight degrees and two third parts, and Olinda standeth in eight degrees and a quarter, and Fernambuck standeth in eight degrees. And this course is to be understood to be observed and kept, if thou depart from Lisbon in October or November.

In what
height thou
shalt seeke land
that depart fro
Lisbon in Fe-
bruary or
March.

Take this advise, that if thou depart in February or March from Lisbon, then thou shalt goe to beare with the land in nine degrees, because that from March forwards raigue most commonly Southeast and Southwest windes. And if by this height and course thou bring thy selfe nigh to the shore, feare not to bring thy ship into 18 or 20 fadomes, for all the coast is cleane: and there are no more dangers, but such as the sea doth breake upon.

How to know
the cape of S.
Augustine.

And if after thy fall with the land thou have occasion to goe to the Northward, and so going seekest certaine sholdes, doubt not to come for the North, and thou shalt see the cape of Saint Augustine, which lyeth as it were sloaping to the seaward, and hath as it were a Whales head, and hath upon it a round hill, with many hilles round about it. And if thou come along the sea coast much about the depth above mentioned, thou shalt see a little Island called Saint Alexio: And from this Island to the cape of Saint Augustine are foure leagues, and it standeth in eight degrees and three quarters.

Isle de Santo
Alexio.

The course that a man must keepe to the bay called *A Bahia de Todos os Santos*, that is to say, The bay of all Saints, which lieth on the fore- sayd coast of *Brasil*.

The height of
Bahia de Todos
os Santos in 13
degrees and
one third part.

If thou goe for Bahia de Todos os Santos, thou must keepe the course which I have already set downe, and shalt observe the time from March forwards, as also from October forwards. Thou shalt understand that the Bahia de Todos os Santos standeth in 13 degrees and $\frac{1}{2}$: and if thou goe in October or after October, then goe to fall with the land in 12 degrees or 12 and a halfe.

The situation
of the Isle of
Tapaon.

And take this for a warning, that when thou seekest a white land, and long bankes of white sand, which shew much like linnen cloth when it is in whiting, then thou must go along from the North to the South untill this white land doe end: and thou needest not to feare to goe along the coast, for there are no sholdes. Before thou be cleane past the white land or white sands, thou shalt have sight of an Island that standeth along the bay, I say on the Northside of the bay, which is called Tapaon: and here the land lieth West and by South.

When a man
may beare in
with Bahia.

When thou art so farre shot as Tapaon, thou shalt see a certaine great tree which is round, and standeth neere the sea upon the very point of the entrance into Bahia on the Northside.

And marke well that if thou looke to the Southward, and seekest no white grounds such as I wrote of before, but that they be all behind thee to the Northward: then when thou seekest none to the Southward, thou mayest bee hold to beare in with Bahia. And if when thou goest into Bahia to the North-west, and seekest the sea to breake, feare nothing: for it is the breach of a certaine banke, whereon thou shalt have alwayes 5 or 6 fadomes water: and this be sure of.

The distance of
O morro de San
Paulo fro Bahia.

Thou shalt understand that if thou come for this place from March to the end of April, I would with thee not to fall to the Southward of 13 degrees and a halfe. And falling with the land, and not seeing the white sands, thou shalt strive to goe to the Northward. And seeing the land in 13 degrees and a halfe, thou shalt have sight of an hill along the sea: And if thou be nigh the land, and cannot make it certaine what land it is: thou shalt marke if it bee a round high hill along the sea, that it is O morro de San Paulo, or, The hill of Saint Paul: and it lieth blacke and bare on the top. And from thence to Bahia is tenne leagues.

Rio de Tinsare
a very good
river.

And here along this hill on the North-west side there is a great river called Tinsare: and it is a very good river. And in the entrance of Bahia there are sixe or seven fadomes water in the channell. And I advise thee that being in the height of 13 degrees and a halfe, thou come not neere the land, for it hath a bay very dangerous.

A dangerous
bay in 13 de-
grees and a
halfe.

And if thou goe from Bahia to Fernambuck, then I advise thee that thou take good heede of the coast on the North-east and Southwest, and thou shalt goe East, if the winde will suffer thee to goe East: and so goe thirtie or forty leagues off to the sea.

I ad-

I aduise thee that thou beare not in with the land of Fernambuck, but in the height of 9 or 10 degrees, because that in 11 degrees thou shalt fall with the bay called A Enscada de Vazabaris. Also if thou come from Portugal and fallest with the land in eleuen degrees, beare not in with it, neither come nere it, for thou mayest hurt thy selfe in so doing: but thou shalt hume it, and goe to the Southward. For if thou lie to the North thou shalt bring thy selfe into some trouble.

The height of the bay called A Enscada de Vazabaris.

This Bay of All Saints standeth in thirteene degrees. And from thence to Fernambuck thou hast a hundred leagues: and the coast lyeth Northeast and Southwest. And from thence to Rio das Ilhas, that is, the riuer of the Islands the coast runneth Northeast and Southwest, I meane taking a quarter of the North and South.

Baia de todos Santos in 13 degrees.

The course for *Baia das Ilhas*, that is, The bay of the Islands, which lie on the sayd coast of *Brasil*, & the marks for the finding of them.

If thou goe for *Baia das Ilhas* thou must looke for it in fiftene degrees lacking a quarter.

Baia das Ilhas lieth in 15 degrees lacking a quarter.

If thou be minded as I sayd to goe for these Isles, if it bee from March forward, thou shalt fall with the land in 15 degrees and a halfe, and though it be in 15 degrees and $\frac{1}{2}$, it is all the better.

And if thou haue sight of certaine high hilles, that seeme to reach to the skie, these hilles are called As Serras Raiemores. Then hauing sight of these hilles, thou shalt goe along the coast; and feare nothing, for there are no holdes along to the North. And when thou seest the Islands, thou mayest make account they be these which thou seekest, for there are no other on al this coast, and thou shalt see a round hil along the sea. Thou shalt vnderstand that on the North side of this hill is the going in of the riuer. But if it chance that thou finde thy selfe in a time that will not suffer thee to goe in, then goe along the Islands giuing them a breadth off. And thou mayest well come to an anko? hard aboord them, for all is cleane ground. And thou shalt finde eight or nine fadomes, and from thence thou mayest goe into the riuer hard aboord the shore. And if it chance that thou goe from the North to the South all along the great Island, thou must keepe thy selfe from the land: and when thou hast brought it Eastnortheast, then thou mayest anko? two cables length from the shore: for all is cleane ground.

A round hill.

If thou chance to arriue on this coast in the time of the Northeast windes, thou shalt seeke to fall with the land in foureteene degrees. And if thou see a lowe land, thou mayest make account it is the land called Ciemana, and then thou shalt see Mangues: And also thou shalt come along this coast to the South: and when thou seest an ende of the low land, then thou shalt finde an high land along the sea like the other that I haue made mention of before, that is, all sandie along the sea coast.

In what height a man must fall with this place in time of the Northeast winds. Ciemana. Mangues.

And thou must vnderstand, that where the high land beginneth, there is a little riuer called Rio das Contas, but enter not into it: it hath for a marke to be knowen by as it were a white mouth. And from thence to the Islands thou hast nine leagues. And at the ende of this high land to the Southward of it thou shalt find a great bay within the land, & then thou shalt looke to the West-Southwest, and shalt see another high land, which lieth as it were in the midst of the bay, and thou shalt there see certaine white houses which are the Ingenios or houses wherein they make sugar of Lucas Giraldo. From thence thou shalt see the Isles being so farre shorte as Rio de Contas. And thou shalt see within the land a round hill which is like Monte de laude, and it hath another copple on the South side.

The white sugar houses of Lucas Giraldo.

The course to sayle to *Porto Seguro*, that is to say, The safe haven, lying on the foresayd coast of *Brasil*, & the markes to know the same by.

If thou goe for *Porto Seguro* and goest in the time of the Southeast windes, which is from March forwards, I aduise thee that thou fall not in more degrees then sixteen and a halfe, because of the holdes called Os baixos dos Abrolhos, which are very dangerous, and stretch very farre into the sea. And also going West from them, that thou keepe thy lead going and be often sounding. And if thou chance to see the land, and an high hill and long wichall, much like to The pike, it is the hill that is called Monte Pasqual. And from thence thou must goe to the North, and when thou hast brought it Southwest of thee, then thou mayest beare with the land, but with great care to looke about thee.

To ankoide Os baixos dos Abrolhos.

Monte Pasqual.

Marke when thou seest the land and comest to see a red cliffe, then looke to the Southward, and

The place of
comming to
an ankoꝝ de-
foze Porto Seg-
uro, which stand-
eth in 16 deg.
& one third.

16 degrees.

A dangerous
riuer in 16 de-
grees.

Baixos de Santo
Antonio.

and thou shalt see a great smooth coast along the sea, and then on the North side thou shalt de-
scribe Porto Seguro. And going along the coast thou shalt see the towne of Porto Seguro standing
vpon the toppe of an hill; which hill is a white rocke: and on the North side of the sayd rocke
there is a very hie land. I aduise thee that when thou art East and West with the sayd land, I
meane with this rocke, that then thou looke to the Northward, and thou shalt see certaine rocks
lying two leagues off into the sea, whereon the sea doth breake, and to the Southward of them
thou mayest come to an ankoꝝ against the towne, and hast a good place to ride in thirteene fadomes
in sight of the towne.

And if it be thy chance to arrive in the time of the Northeast winds, and comest in the height
of fiftene degrees and two third parts, and seest not certaine hilles, then thou must goe along the
coast being in 16 degrees, and vnder the first hie land that thou shalt describe, thou shalt see certaine
sandie bays along the sea coast: And if thou haue sight of a riuer in this height, put not thy selfe
into it, neither beare with the land, for it hath many sholdes. And off them lie certaine sunken
grounds, called Os Baixos de Santo Antonio. And from hence to the Southward lyeth Por-
to Seguro.

I aduise thee that going along the coast to the Southward, and seeing such sholdes, and the
sea to breake vpon them, as the other which I last spake of, thou shalt runne along them a sea
boord of them: and when thou art at the end of them, then the towne will beare West of thee: and
then thou mayest goe to thine ankoꝝing place as is abovesayd, giuing these sholds a good birth.

The course to the hauen named *Baia do Spirito Santo*, that is to
say, The bay of the holy Ghost, lying on the sayd coast of *Brasil*, and the
markes thereof.

Thou shalt vnderstand that the ship that goeth for Spirito Santo, when it hath doubled
the sholdes called Os Baixos dos Abrolhos, and hath brought it selfe in 20 or 19 de-
grees and a halfe, then it may hall with the land in 18 or 19 degrees and a halfe, and
in twentie. And the sayd shippe must goe in this height, because on this coast there
are no Monçoins.

Monçoins are
certaine set
winds with
which the
rides set.
Markes on the
North side of
Spirito Santo.

The situation
of la Sierra de
Mestre Aluato.
Rio dos Reyes
magos.

If thou chance to come in the height of 19 degrees; and seest lowe land to the Northwest off
thee, then thou art on the North side of Spirito Santo, and thou mayest make accompt that it is the
land lying ouer Criqueare, and ouer the riuer called Rio dolce, that is the riuer of sweete or fresh
water. If thou come along the land thou shalt find certaine high hilles: but trust not the first that
thou seest only. For besides the rest thou shalt see a round hie hill which is at the capes end, which
is called la Sierra de mestre Aluato. Take heede that going for this land thou looke to the North
and thou shalt see a riuer called Rio dos Reyes Magos: that is, The riuer of the three kings.
And comming to the Southward thou shalt see presently the mouth of the bay to open. At the end
of this hill on the South side, thou hast a point of a rocke, which is called A punta do Tubaron.
And on the South side of the bay it hath two or three blacke hie hilles, and in the midst of the
bay thou shalt goe in westward.

I aduise thee that in going in thou take heede of a sholde which lieth in the mouth of the bay:
thou must leaue it to the Southward of thee, and then ple to double a certaine Island which lieth
within, and thou must leaue it to the Northward of thee: and when it beareth on the North or
Northeast, thou mayest come to an ankoꝝ: for all is cleane ground.

A Sierra de Gua-
riparim in 20
degrees.
A Sierra de Pero
Cam.

A Ilha de Re-
pouso.

Spirito Santo
standeth in 20
degrees.

And if thou chance to come by this course, and fallest in 20 degrees, and seest many hilles, and
one among the rest very high and craggie: it is called A Sierra de Guariparim, that is, the hill of
Guariparim, and seest another hill on the North side, which is called A Sierra de Pero Cam: both
these lie on the South side of Spirito Santo. And from these hills thou shalt see a little hill named
Guaipel. And when thou seest these hilles, thou shalt see three little Islands together, lying to
the Southward: And then from these thou shalt see another rockie, bare, and round Island: and
to the land off this Island thou shalt see a great bay. If thou wilt thou mayest ankoꝝ here safely.
And if thou wilt go in, thou shalt bring thy selfe East and West with the hill, and so thou mayest
go in. And thou shalt leaue a lowe land to the North of thee, which is called A Ilha de Repouso,
that is, the Isle of rest: and this Isle lieth along the coast: and thou mayest be bold to ride betwixt
it and the maine, giuing it a breadth off.

From these three Islands to Spirito Santo are 12 leagues: and running Northwards to come
to Spirito Santo, thou shalt see another Island, and shalt go a sea boord of it, and by & by the mouth
of the bay will open toward thee. And this bay standeth in 20 degrees.

The

The course from the bay de Spirito Santo to the bay of S. Vincent, and the marks thereof. Also the course from Saint Vincent to the riuer of Plate.

Sailing from Spirito Santo for Saint Vincent, thou mayest goe along the coast, keeping seven or eight leagues off, and must goe to seeke Cabo Frio, that is, The cold cape. And as thou comest toward Cabo Frio, thou hast a very great bay called Bahia de Salvador, that is, The bay of our Sauour. And from thence thou hast twelue leagues to Cabo Frio.

And before thou comest to Cabo Frio, thou hast two small Islands. Thou mayest go safely either a sea boord of them, or else betweene them. Thou shalt understand that Cabo Frio hath as it were an Island in the midst of the face of the cape, that doth cut off the cape. Thou mayest ride safely on the West side thereof; for all is cleane ground.

Understand that Cabo Frio standeth in 23 degrees: and from it to Rio de Ienero are twelue leagues. And this riuer of Ienero hath in the mouth thereof 3 or 4 Islands. And if thou wilt go into this riuer de Ienero, thou mayest well goe in betweene two Islands which stand in the entrance of the riuer on the South side: neere vnto this riuer there is a great hill seeming to bee a man with long haire.

And take this for aduise, that if thou be in the height of this riuer, thou shalt see certaine high hills within the land, which be like vnto organs. And when thou seest these organs, then make accompt thou art right against the riuer: and coming neere the land thou shalt see a certaine Island very round, which lieth to the Southward, and is hie and bare in the top. Thou must know that the mouth of this riuer standeth in 23 degrees and one third part. And from this riuer to Angra, that is to say, The open haven, thou hast 15 leagues. Goe not neere the land there, except necessitie compell thee.

I aduise thee, that from this riuer that I spake of, I meane from the entrance thereof, thou must goe Westsouthwest, and Southwest, and West and by South. And thou shalt see a great Island called Isla de San Sebastiano, and to the Southward thereof another small Island very high, called the Island of Alcatrazas, that is to say, The Island of Pellicanes: but come not neere it, for it hath dangerous shoals. And from hence thou mayest go West, and so thou shalt fall right with the mouth of Saint Vincent, and thou shalt see an Island. And if thou meane to goe into Saint Vincent thou must leaue this Island to the Westward. And understand that Saint Vincent lieth in foure and twentie degrees. And when thou art in the mouth of this bay, or art neere the mouth of it, then thou shalt see many other Islands, and one among the rest to the seaward. And hauing these sightes, thou hast the best markes that bee for these Islands, that I haue told thee of: and this Island lieth Northwest and Southeast with the mouth of S. Vincent.

The course from Saint Vincent to the riuer of Plate.

From S. Vincent to Cananea thou hast 40 leagues: and the coast lieth Northeast and by East, and Southwest and by West. From Cananea to the riuer of Saint Francisco are fiftene leagues, and the coast lieth Northeast and Southwest. There is a little Island, which hath as it were two bayes, and a good rode, and is in 26 degrees and a quarter, and towards the maine it is hie and craggie.

From San Francisco to Boca de Ouerniron are 26 leagues, and the coast lieth North & South. Also thou must marke that the riuer of San Francisco hath a great entrance, and 3 small Islands, and to seaward it hath a good road; and the maine is high and craggie.

From this Boca de Ouerniron to Ilha de Aruoredo thou hast no great markes be obserued: but this Boca is a very great bay, and this bay is deepe within the Island, and is a good road, and hath many Islands, and standeth in 28 degrees. And to the North of this Island vnder the point there is a good road: and there is no other road hereabout but this, and it is vnder the Island.

From hence thou shalt haue sight of the Isle called Santa Catharina, which is a great Island about eight or nine leagues long, and lieth North and South. And hard by euen with this Island is Porto de Patos, which standeth in 29 degrees. And from Porto de Patos to Porto de Don Roderigo are ten or eleuen leagues: and the coast lieth North and South. And from Porto de Don Roderigo to Laguna are 5 leagues. And this is a good harbour for all winds, except the North-east wind.

From the Laguna to the riuer called Rio de Martin de Sousa are 42 leagues. And the coast is something high, & lieth Northeast & by North, & Southwest & by South: and it hath an Island 2 leagues

leagues into the sea, where ships may ride well. And from the riuer of Martin de Soula to Rio de San Pedro are 52 leagues, and the coast lieth North-east and South-west.

From this riuer of San Pedro there lieth a point of land a good league off and more, and it lieth on the South-west side of the port. And from thence to Cabo de Santa Maria are 42 leagues: and the coast lieth North-east and South-west, and all is lowe land.

Also on the Southeast side of Cabo de Santa Maria there lieth an Isle two leagues off into the sea, and it hath a good harbourough betwixt it and the maine. And note that the maine is lowe land.

The cape of Santa Maria standeth in 35 degrees, and at the point thereof it hath an Island a league into the sea.

Hereafter followeth a Ruttier from the sayd riuer of Plate to the Streight of Magelane.

The cape of Santa Maria is in 35 degrees. From thence to the Cape de Santo Antonio, which is on the other side of the riuer, are 30 leagues North-northeast, & South-southwest. And this is the broadest place of the riuer. And this cape is in 36 degrees and a halfe, and it is a blacke grosse land. And thou must marke that at 25 leagues a seaboard the mouth of the riuer there lie certaine sands, which be called Baixos de los Castellanos.

Baixos de los Castellanos.

He that falleth with the cape of Santa Maria must take good heede to go Southeast untill hee be in 36 degrees, and from thence South-southeast untill 36 degrees and a halfe, giuing the sayd sholes de los Castellanos a breadth: and also taking heede of the flats of the cape. And when hee findeth 40 or 45 fadomes, and ruffet sand, then he must goe South-west and by South, untill hee be in 40 degrees: where hee shall find great store of weedes, which come from the coast, and a man may go 20 leagues from the shore in this sounding.

Cabo de Arenas Gordas.

Rio de S. Anna.

From the Cape de Santo Antonio to the Cape de Arenas Gordas are eight & forty leagues, and the coast lieth North-east and South-west, and by East, and by West: and in the first eightene leagues is the riuer called Rio de Santa Anna, which hath at the entrance certaine flats and sholes, giue them a good breadth, and come not nigh them by much, but keepe thy selfe in forty fadomes to goe surely.

Cape de S. André

From the cape de Arenas Gordas to the cape of Sant André are one and thirty leagues: it lieth North-east and by East, and South-west by West: I meane when thou art in the middest with an equall distance from them both. And between both the capes are many bayes and riuers, but all full of sandie sholes.

Baia Anegada.

From the cape of Sant Andres to the bay called Anegada, that is, The sunken bay, are 30 leagues East-northeast, and West-southwest. It standeth in 40 degrees, rather lesse then more.

Punta de Tierra Llana.

Baia sin fondo.

From the bay called Baia Anegada to The point of the plaine land are 25 leagues North-northeast, and South-southwest. This point lieth in 41 degrees and a halfe. And from this point to Baia sin fondo, that is to say, The bottomlesse bay, are 35 leagues East-northeast, and West-southwest. This bay standeth in 42 degrees and a halfe, rather lesse then more.

Cabo redondo, Puerto de los leones.

And from Baia sin fondo to Cabo Redondo, & Puerto de los leones, are 37 leagues North-northeast and South-southwest, somewhat to the North and South. And if thou meane to go out from thence with a compasse about after the maner of a halfe circle or an arch, so thou mayest passe through the Baia sin fondo along the shore: for there is water enough.

Puerto de los leones in 44 degrees & better. Take good heede of these little rocks.

Note that from the riuer of Plate to this place is neuer a good harbour for great shipping.

Cabo de Matas.

Rio de Camarones.

From this place to Puerto de los leones the coast is cleane, and a man may come nigh vnto the land: And it is a lowe land with white cliffes. This harbour is in 44 degrees. And as a man goeth thither, after hee be in 43 degrees or more, hee must haue a care to looke out for certaine small rockes which lie neere the land, and lie North of the harbour.

Cabo redondo in 45 degrees & a halfe large.

From this harbour to Cabo de Matas, or The cape of shrubs, are 30 leagues North & South, halfe a point to the East and to the West: and betwixt them there is a great bay very long: And to the North-west 18 leagues from Cabo redondo is a riuer lying East and West: and it is called Rio de Camarones, or, The riuer of shrimps. You shall know when you fall with this riuer, by seeing many white spots vpon the water, and they are small shrimps.

From this riuer to Cabo redondo the coast lieth North-west and by North, and Southeast and by South. This cape is in 45 degrees and a halfe large.

From this sayd cape to Cabo Blanco and Barancas Blancas that is to say, to The white cape and

and white clifses are 32 leagues lying North and by East and South and by West: and they stand in 47 degrees.

Cabo Blanco
and Blancas
Blancas in 47
degrees.

From this Cape the coast lyeth towards the North side Northwest about 3 leagues all full of white clifses steepe up: and the last cliffe is the biggest both in length and height, and the weth to be the saile of a ship when it is under saile. These white clifses are 6 in number. And this Cape hath in the face thereof a certaine round land that the weth to be an Island as farre off: and it hath certaine poynts of rockes hard by it. And two cables length from the land is 25 fathomes water. About these white clifses the land is plaine and euen: and it hath certaine woods. There is much people in the countrey: of whom I wish thee to take good heed.

People to be
taken heed of.

From this Cape the land lyeth North and South; which is the first fall of the Cape: and in the face thereof it hath a poynt of rocks, which shewe themselves. And on the South side of this Cape is a good harbour and road, and there is a Bay in the midst.

A good har-
bour.

From Cabo Blanco to Puerto de San Julian are 37 leagues, and the coast lyeth North and by East and South and by West. This harbour of S. Julian hath in the entrance certaine high hilles, which as farre off seeme to be towers. On the South part of the entrance the channell is deepest in the midst: and thou must borrow neerer the North side then to the South. Within the harbour are two Islands: thou must come to an anker hard to them. This haven lyeth in 49 degrees. And betwene Cabo Blanco and this harbour are the Islands of Ascension, and they be eight.

The port of
Saint Julian.

From this said harbour to the hill of S. Yues are 35 leagues: the coast lyeth Northeast & Southwest: it is a low land and euen and hath onely one hill, and it is a plaine from one part to the other, and hath certaine clifses to seaward, and to the Southward, and to the South side it hath certaine little copples: it standeth in 50 degrees large.

Ilhas de Ascen-
sion.
Morro de Santo
Yues, in 50 de-
grees large.

From the hill of S. Yues to Rio de Cruz are 8 leagues, Northeast and Southwest: and on the North side of the riuer it hath a very high land, and in the toppe it is plaine and lyeth two leagues broad, layd out along North and South, and the downefall on both sides hath as it were saddles. This Cape hath many poynts of rockes lying 4 leagues into the sea: and when thou hast sight of this land, it is good for thee to keepe from it a good bredch off. And going from thence thou mayest runne in sight of the land in 25 fathoms.

Rio de Cruz.

From Rio de Cruz to Rio de Galegos are 25 leagues, Northeast and Southwest: and it standeth in 52 degrees and $\frac{1}{2}$ of a degree. It hath a certaine high land: and in the highest of the layd land it is plaine, and to the Northeast it is a pike by, and hath certaine white clifses: and on the toppe and something downewarpe it is blacke: at the foote of this high land to the Eastward thereof it hath certaine steps like a ladder: and to the sea it hath a sharpe poynt that lyeth into this Cape almost halfe a league. To the Southward of this Cape where the ladder is, there is a little Bay, which is the entrance of Rio de Galegos, it ebberth and floweth here 12 fathomes. A man must haue a great care how he goeth in here for the cause abovesaid: but he must keepe himselfe out and not anker in it.

Rio de Galegos
and the marks
thereof.

From Rio de Galegos to the Streits of Magelan the coast lyeth Northnorthwest & Southeast 8 leagues unto Cabo de la virgin Maria, which is the entrance into the Streit: and 4 leagues before a man come to this Cape there are white clifses with certaine blacke spots in them; and they be caused with the falling downe of the water. Here is water inough, and thou mayest come to an anker hard aboord the shoze, and hast a good defence for a Southwest wind. And the Cape it selfe is the highest land of all, and is like to Cape Saint Vincent in Spaine: and it hath on the East side a ledge of rockes, and a poynt of land, with diuers sands which shewe themselves at a lowe water: thou must take great heed here and giue them a good bredch halfe a league or a quarter of a league off, until thou bring the Cape Westnorthwest, and then thou mayest stirre away Southwest. And when thou comest to the lower land and into renne or twelve fathoms, then art thou ouer against la Purificacion. And halfe a league within the land the citie of Nombre de Iesus was builded, East and West with the layd Cape right against a cliffe, which cometh from the layd Cape, and goeth within the Streits. This Cape standeth in 52 degrees last.

In the mouth
of Rio de Gale-
gos it ebberth
and floweth
12 fathomes.

Cabo de la vir-
gin Maria.

And this is to be taken for a warning, that he that cometh neere this Cape, and passerth by it as I haue said with the wind at Northeast, or any other wind off the sea inclining to the Southeast, must not come to anker, but presently be sure to passe by; because in Sommer this place is much subiect to Southwest winds, which blow right in: and they put a man from his tackle, & make him to loose his voyage. And from March forwards there blow fauourable winds from the sea to goe from this Cape to enter into the Streits, from this said Cape the Streits go in to the Northwest 14 leagues: and the channell watheth narrower and narrower unto the first Streit which runneth

Rincones.
La Ciudad del Don Philippe which is now utterly ruined.

Eastnortheast and Westsouthwest. And coming out of the mouth thereof a man must keepe himselfe a poynt to the Northward, because there be rocks and shoals. And if you see beds of weeds, take heed of them, and keepe off from them: and after you be past this Streight you must sitte Westsouthwest 8 leagues vnto Cabo de San Gregorio, which is a high white cliffe, and is a good road for any wind from the North-west to the Southwest. But men must beware and not trust the Indians of this Cape: for they be subtil and will betray a man.

From this Cape beginneth the second Streite which is called Nuestra Sennora de Gracia, and lyeth Eastnortheast and Westsouthwest 3 leagues. And coming out of this Streite thou shalt see 3 little Islands, lying West off this Streite: thou mayest go betwene them, for there is no danger: provided alwayes that thou keepe well off from the bayes on both sides, lest thou bee imbayed. And from these Islands thou must keepe for wards in the chanel Westsouthwest two leagues: and then the coast lyeth North and South vnto 53 degrees and a halfe, vnto a place called Punta de Santa Anna: and to the North-west thereof in a corner or nooke (which is one of the rincones or nookes) was the towne builded called La Ciudad del Don Philippe. Thou must come to an anker to the Northward thereof, after thou art past the castle and a great tree.

TWO VOYAGES OF CERTAINE ENGLISHMEN to the riuer of *Plate* situate in 35 degrees of Southerly latitude: together with an exact Rutier and description thereof, and of all the maine branches, so farre as they are nauigable with small barkes. By which riuer the Spaniards of late yeeres haue frequented an exceeding rich trade to and from *Pern*, and the mines of *Potosi*, as also to *Chili*, and other places.

A report of a voyage of two Englishmen in the company of *Sebastian Cabota*, intended for the *Malucos* by the Streights of *Magellan*, but performed onely to the riuer of *Plate* in April 1527. Taken out of the information of *M. Robert Thorne* to Doctor *Ley* Ambassadour for King *Henry* the eight, to *Charles* the Emperour, touching the discouery of the *Malucos* by the North.

This was the fleet wherein Cabot discouered the riuer of *Plate*, 1526. Two Englishmen went with Cabot in this discouery.

In a flete of three ships and a carauell that went from this citie of *Siuil* armed by the merchants of it, which departed in Aprill last past, I and my partner haue one thousand foure hundred duckets that wee employed in the sayd fleet, principally for that two Englishmen, friends of mine, which are somewhat learned in *Cosmographie*, should goe in the same ships, to bring me certaine relation of the situation of the countrey, and to be expert in the nauigation of those seas, and there to haue informations of many other things, and aduise that I desire to know especially. Seeing in those quarters are ships and mariners of that countrey, and cardes by which they saile, though much unlike ours: that they should procure to haue the sayd cardes, and learne how they vnderstand them, and especially to know what nauigation they haue for those Islands Northwards, and North-eastward.

The Islands of the *Malucos*. The new found Islands discovered by the English.

For if from the said Islands the sea doth extend without interposition of land to saile from the North point to the North-east point one thousand seven hundred or one thousand eight hundred leagues, they should come to The new found Islands that we discovered, & so we should be neerer to the said *Spicerie* by almost 200 leagues then the Emperour, or the king of *Portugall* are.

An extract out of the discourse of one *Lopez Vaz* a *Portugal*, touching the fight of *M. Fenton* with the Spanish ships, with a report of the proceeding of *M. John Drake* after his departing from him to the riuer of *Plate*.

Upon the relation of *Pedro Sarmiento* concerning the streits of *Magellan*, that they might be fortified, and for that the king heard, that there were ships in England preparing for the same streits, he commanded *Diego Flores de Valdes* a noble man of Spaine, to passe thither with 23 ships, and 3500 men to stoppe the passage of the Englishmen.

There went in this fleet the gouernour of *Chili*, with 500 olde souldiers that came out of *Flanders*: but this was the unhappiest fleet of ships that euer went out of Spaine: for before they came from the coast of Spaine a storme tooke them, and cast away five of the fleets

fleete, and in them about 800 men, and the rest came into Cadiz. But the king sent them word that they should proceede: and so there went out on the voyage 16 of the shippes, for two more of their fleete were much spoiled by the storme which they had.

In these threene shippes, Pedro Sarmiento was sent to bee gouernour in the straites, and had assigned vnto him 500 men to stay there with him, and hee carried with him all kinde of Artificers to make him fortis, and other necessaries, with great store of ordnance and other munition.

This fleete because it was late, did winter on the coast of Brasil, in the riuer of Ienero: and from thence they went when the winter was past, and about the height of 42 degrees they had a sudden storme, so that Diego Flores beat it vp and downe 22 dayes, in which time hee lost one of the best ships he had, which had in her 300 men, and 20 women, that went to inhabit the Streits: and in this ship also was most part of the munition which should haue bene left in the Streits, so in the end the storme grew to bee so great, that the ships were not able to endure it any longer, but were put backe vnto an Island, called Santa Catalina: and there he found a barke wherein were some fryers going for the riuer of Plate: which friers told him of two great English ships, and a pinnelle, which had taken them, but tooke nothing from them, nor did them any harme, but onely asked them for the king of Spaines ships.

Whereupon Diego Flores knowing that these English ships would goe for the Streits, determined to goe thither, although it was in the moneth of February, and choosing 10 ships of the 15 that were left, hee left two ships which were not in case to goe to sea at the Island, and into the other three ships which were old, and shaken with the storme hee put all the women, and sicke men in all the fleete, and sent them to the riuer of Ienero, and he with the other 10 returned againe for the Streits.

The three ships in which the sicke men and women were, went to Brasil, and there they found within the port of S. Vincent the two ships before mentioned.

They would haue had the English men to haue gone out of the harbour, and thereupon they fell to fight, and because that these three ships were weake with the storme, and the men that they had were the worst in all the fleete, the Englishmen easily put them to the worst, and sunke one of them, and might haue sunke another, if the Englishmen would: but they minded not the destruction of any man: for that is the greatest vertue that can be in a man, that when hee may doe hurt, yet he will not doe it. So the Englishmen went from this port to Spirito Santo, where they had victuals for their merchandise, and so they went backe for England, without doing of any harme in the Countrey.

The cause why these English shippes vnder the conduct of M. Fenton went not to the streits, I know not: but some say that they were put backe by foule weather: other some say that it was for feare of the kings ships.

But the pinnelle of these two ships went from them, in which was Captaine Iohn Drake: the cause why they parted I know not, but the pinnelle came into the riuer of Plate, and within fittie leagues of Seale Island, not farre from the place where the Earle of Cumberlands shippes did take in fresh water, shee was cast away vpon a ledge of rockes: but the men were saued in their boat, which were in number 18, who went ashore on the North side, and went a dayes iourney into the land, and met with the Sauages, which are no men-eaters, but take all the Christians that they can, and make them slaues.

But the Englishmen fought with them, and the Sauages slew 5 of them, and tooke 13 aliue, which were with the Sauages about 15 moneths. But the Master of the pinnelle, whose name was Richard Faireweather being not willing to indure the misery that hee was in, and hauing knowledge that there was a towne of Christians on the other side of the riuer, he in a night called Iohn Drake, and another yong man which was with them, and tooke a very little Canoa, which had but two oares, & so passed to the other side of the riuer, which is about 19 leagues broad, and were three dayes before they could get ouer without meat: and comming to land, they hit vpon an high way that went towards the Christians: and seeing the footing of horses, they followed it, and at last came to an house where there was corne sowed, and there they met with Indians seruants vnto the Spaniards, which gaue them meate, and clothes to couer them, for they were all naked, and one of the Indians went to the towne, and told them of the Englishmen: so the Captaine sent foure horsemen, who brought them to the towne behind them.

This Captaine clothed them, and prouided lodging for them, and Iohn Drake dined at the Captaines table, and they were all very well intreated, the Captaine purposing to send them for Spaine. But the Viceroy of Peru hauing newes hereof, sent for them, and so Iohn Drake was

Five ships of this fleete call away on the coast of Spaine.

This fleete wintered in the riuer of Ienero.

M. Fenton took these friers.

A fight betwixt our 2 English ships & three Spanish ships

They victual at Spirito Santo.

Iohn Drake proceedeth on to the riuer of Plate.

Richard Faireweather remaps neth in the riuer of Plate.

Iohn Drake sent to the Viceroy of Peru.

sent to him, but the other two were kept there, because they were married in the countrey, so that I know no more of their affaires.

Upon this coming of the Englishmen, there were prepared 50 horsemen to goe ouer the riuer to seeke the rest of the Englishmen, and also certaine Spaniards that were among the sauage people, but I amnot certaine, whether they went forward or not.

A ruttier which declareth the situation of the coast of Brasil from the Isle of Santa Catelina vnto the mouth of the riuer of Plata, and all along vp within the sayd riuer, and what armes and mouthes it hath to enter into it, as farre as it is nauigable with small barks.

The Isle of
Santa Catelina,
Rio Grande.

From the Isle of Santa Catelina, (which is in 28 degrees of Southerly latitude) vnto Rio Grande is fortie leagues. This riuer by another name is called Ygai. The Island of Santa Catelina is six leagues in length: it hath two small Islands on the North side betweene the maine land and it: and on the South side it hath a shoald of rockes, which lyeth hidden very neere vnto the poynt of the Isle. You are to passe betweene the firme land and the poynt of the Isle.

Puerto de Biaza,
or Laguna.

From Santa Catelina to the hauen of Biaza, which by another name is called la Laguna, are twelue leagues: it is a good hauen within: but you must stay the full sea to enter into it, because it hath shoalbes in the mouth, and it may be knowne by a small Island which lyeth a league into the sea which is called La Isla de Reparo, that is, The Island of succour or defence, and you must ride there to search the chanell.

Isla de reparo.

Rio Grande.

From this harbour vnto the riuer before named there is no hauen for a ship to harbour it selfe. And Rio Grande hath many shoals in the mouth thereof. It is a riuer that none but very small shippes can enter into. And this riuer diuideth the countrey of the people called Carios from other nations which are called Guauacs. And from this riuer vnto the entrance of the mouth of the riuer of Plata it is all a plaine land, and very low: you must saile all along two or three leagues into the sea from the shore, vntill you come to certaine Islands which lye twelue leagues from the mouth of the riuer of Plata.

Certaine Islands 12,
leagues distant from the
mouth of the
riuer of Plata,
which are 3
in number.

From Rio Grande vnto these Islands are 68 leagues. And from these Islands vnto the Cape of Saint Marie the coast runneth Northeast and Southwest, somewhat inclining a poynt to the South. The Islands are three, and may be knowne as you come from the sea by two poynts, which shew like the eares of a conie: you may ride betwene them and the maine.

The Cape of
S. Marie.
An Island a
league and halfe
from Cape Saint
Marie.

From Rio Grande to the Cape of Saint Marie are 80 leagues: and the Cape may be knowne by one Island which lyeth from it a league and an halfe into the sea. You may saile betwene the maine and that Island, because there is about 8 or 9 fathoms water. The Cape of Saint Mary standeth in 35 degrees of Southerly latitude.

Isla de Lobos.
The way to
enter into the
riuer of Plata.
Rio de Solis 10
leagues within
the Cape.
Los tres Mogotes
3 leagues.
Saint Grauiel
8 leagues.

The Cape of Santa Maria vpon the poynt thereof hath a little hill which standeth ouer against the Isle of Seales. From this coast of Santa Maria you must coast along the land alway on the North shore, and along the same are certaine Bapes. From the Cape vnto the riuer of Solis are tenne leagues, the coast runneth East and West. There standeth an Island ouer against the mouth thereof. From this riuer of Solis vnto Los tres Mogotes which are on the maine land is three leagues. And from Los Mogotes vnto the Isles of Saint Grauiel are other 8 or 9 leagues more: all this distance runneth East and West. These are five small Islands: to ride here you must keepe somewhat neere the maine within an harquebuz shot halfe a league before you come at the Islands, and straightway you shall see a crosse standing on the said land, and there is an harbour for some winds.

Rio de S. Iuan
3 leagues.

From Saint Grauiel vnto the riuer of Sant Iuan going along the same coast, I say on the North shore, are three leagues: it is very well knowne by the broken cliffe which it hath, which is a white hill. The entrance into this riuer is very dangerous; because it is shallow, and none but very small shippes can enter into the same: the entrance thereof is on the West side very neere the land, great Carackes may ride within the harbour. From this riuer vnto the Isle of Martin Garcia are three leagues: it is one Island alone, and you must saile along the coast on the North shore: and after you be come vnto the Island, I say, ouer against the same, you shall haue three fathoms water, and on the West side it hath a little creeke where you may ride.

The Isle of
Martin Garcia
3 leagues.

Rio de Buenos
Aires on the
south side of the
riuer of Plata.

He that desireth to crosse ouer the riuer of Plata vnto the riuer de Buenos Aires from the Isles of Saint Grauiel, must shape his course Southwest: and the cut ouer is sixteene leagues and vpon his arrivall on the South shore of the riuer, hee must seeke a chanell of three fathomes water,

water, and strait he must goe along the coast vntill hee come to a broken cliffe and a popnt like vnto the firme land, which is distant from this chanell three or foure leagues: and when thou seest this broken cliffe, keepe thee a league from it. Here vpon this riuer of Buenos Aëres was the first Colonie that Don Pedro de Mendoza planted. This riuer lieth very much hidden: because it is not seene, it is very shallow at a low sea, wherefoze you must come in with the first of the flood.

From the Isle of Martin Garcia vnto certaine small Islands which are called the Isles of Saint Lazarus is two leagues, these are shoals: and to goe thither you must goe hard aboord the maine, for there goeth the chanell: all this is to be passed on the North shoze, and with small barks, and with good heede.

From the Isle of Martin Garcia to the mouthes of the riuer are eight leagues in passing along on this shoze to seeke one of the mouthes of the riuer Parana, as it is hereafter described. But you had need first to harbour in a bay, which is in the very cliffe of Barranca, and you must stay for the full sea. And if you fall into the mouth of the riuer which is called Vruay, you must leaue it on the right hand, I say on the North side. And forthwith leauing the said mouth forward toward the West, you may enter into the first mouth although it seeme narrow; or rather you may enter into any of the mouthes: for all of them meete together in Parana, which is the maine riuer.

And hee that desireth to goe from the Isle of Martin Garcia to the riuer of Palmas, which is the best of all these armes, or mouthes to speake more properly, is to shape his course to the West, and comming ouer to the other shoze, and sayling along the coast Northnorthwest hee shall discover the mouth of this riuer of Palmas: and hee must enter hard by Los Tuncales, which lye on the South side: and after ward within is very deepe sounding. All these mouthes of this riuer which are 5, are full of shoals towards the East about the space of two leagues. And if the course of the water were not swift there, you could not enter into them, as I haue already sayd, and you must passe all along with much heede and foresight.

And if peradventure you haue passed Cape Saint Marie and are come ouer to Cape Blanco, consider it, that it is so euen and smooth a land, that you can scarcely discern it a league from the maine, vnlesse it be a very cleare day: and after this sort the coast lieth low vnto the riuer de Buenos Aëres. And from thence the coast lyeth somewhat high vnto the entrance of the riuer de Palmas: all the coast runneth as I sayd before. And all along this coast are naughey people, which eate those which they kill, and many Tygers.

From the Isle of Martin Garcia vnto Sant Saluador is nine or tenne leagues. This is an Island which standeth two leagues within the first mouth: where Sebastian Cabota tooke possession. And this countrey is very well peopled by a people called Carios; and you must beware of all these people: for they are your deadly enemies. The most Southerly mouth of Parana called Rio de Palmas is sixteene leagues long, and it hath many turnings, and many palme or date-trees growing neere it, whereupon it is called The riuer of palme trees: and forthwith it entrench into the riuer Parana, as soone as these sixteene leagues are finished. All the other armes containe likewise sixteene leagues in length, sauing one small or narrow arme, which is called The riuer de los Beguaes: for this containeth forty leagues in length. From this you must enter by the mouth of the riuer of Palmas vnto Santo Spirito, the way is fiftie leagues: you are to passe still along the cliffes. As you enter on the left hand which is on the West shoze by this riuer there are many Isles, lakes and small riuers, and many Indians which are your enemies.

From Santo Spirito vnto a people which are called Los Tenbuis is fiftie leagues. This is by the narrow arme whereby they passe into the riuer Parana: it is the more because it is the longer way. From the Tenbuis by this narrow arme vnto the Quiloacas, which is another nation, are twentie leagues; and all by this riuer is great store of people.

From the Quiloacas, to a place where the Spaniards now haue builded a towne, are fiftie leagues. From this towne vnto the people called Los Mequareras is twentie leagues. Here are many shoals which continue thirtie leagues. All these thirtie leagues are sunken landes: where are many Isles, flats, and nations, which are our enemies.

From the Mequareras vnto the people called Mepenes are these thirtie leagues. And from hence begin the coasts of the firme land vnto the mouth of the riuer Paraguai; sauing that there are eight leagues more of sunken ground.

From the Mepenes vnto the mouth of the riuer of Paraguai are thirtie leagues: it is a riuer that cannot be mistaken although it hath many armes and Islands and dangers, it hath a marke two leagues beneath the mouth on the East side, to wit, an high land, where are 7 points, which we call the 7 currents: and immediately about these currents there is an Island as you passe by the

river ouer against the poynt aforesaid standeth the mouth of Paraguai. This mouth is very plaine to be found, in seeking whereof a man cannot be deceived. From this mouth the river of Parana is diuided, which is a very great river: and it goeth vnto the towne of Piquiri, which is an hundred and seuentie leagues: and it runneth all this space North and South, and in the way are many flats and shoals; and great store of people, which are a bad nation, although they bee diuided. From the place where these two rivers are diuided, that is to say, from the mouth of Paraguai are sixtie leagues vnto the citie of Assumption. This is a good river, and better to sayle then all the rest of the rivers, which are in this countrey. And from this towne to Los Xarac are 200. leagues, very well inhabited with people of diuers nations, which serue the Spaniards.

THE TWO FAMOUS VOYAGES HAPPILY
performed round about the world, by Sir Francis Drake, and M. Thomas Candish Esquire, together with the rest of our English voyages intended for the South Sea, the kingdomes of *Chili*, *Pern*, the backe side of *Nueva Espanna*, the *Malucos*, the *Philippinas*, the mightie Empire of *China*, though not so happily performed as the two former: Whereunto are annexed certaine rare obseruations touching the present state of *China*, and the kingdome of *Coray*, lately inuaded by *Quabacondono* the last Monarch of the 66. principedomes of *Iapan*.

The famous voyage of Sir Francis Drake into the South sea, and therehence about the whole Globe of the earth, begun in the yeere of our Lord, 1577.

On the 15. day of Nouember, in the yeere of our Lord 1577. M. Francis Drake, with a flecte of fine ships and barkes, and to the number of 164. men, gentlemen and sailers, departed from Plimmouth, giuing out his pretended voyage for Alexandria: but the wind falling contrary, hee was forced the next morning to put into Falmouth hauen in Cornewall, where such and so terrible a tempest tooke vs, as few men haue seene the like, and was in deed so belement, that all our ships were like to haue gone to wracke: but it pleased God to preserue vs from that extremitie, and to afflicte vs onely for that present with these two particu-

lars: The mast of our Admirall which was the Pellican, was cut ouer boord for the safegard of the ship, and the Marigold was driuen ashore, and somewhat bruised: for the repairing of which damages wee returned againe to Plimmouth, and hauing recovered those harmes, and brought the ships againe to good state, we set forth the second time from Plimmouth, and set saile the 13. day of December following.

The 15. day of the same moneth we fell with the Cape Cantin, vpon the coast of Barbarie, and coasting along, the 27. day we found an Island called Mogador, lying one mile distant from the maine, betweene which Island and the maine, we found a very good and safe harbour for our ships to ride in, as also very good entrance, and voyde of any danger.

On this Island our Generall erected a pinnesse, whereof he brought out of England with him foure already framed. While these things were in doing, there came to the waters side some of the inhabitants of the countrey, shewing forth their flags of truce, which being seene of our Generall, hee sent his ships boate to the shore, to know what they would: they being willing to come aboord our men left there one man of our company for a pledge, and brought two of theirs aboord, our ship, which by signes shewed our General, that the next day they would bring some provision, as sheepe, capons and hennes, and such like: whereupon our Generall bestowed amongst them some linnen cloth and shooes, and a iaveling, which they very ioyfully receiued, and departed for that time.

The next morning they failed not to come againe to the waters side, and our Generall againe setting out our boate, one of our men leaping ouer rathly ashore, and offering friendly to imbrace them, they set violent hands on him, offering a dagger to his throte if hee had made any resistance, and so laying him on a horse, caried him away: so that a man cannot be too circumspect and warie of himselfe among such miscreants.

Our pinnesse being finished, wee departed from this place the 30. and last day of December, and

The Isle of Mogador on the coast of Barbarie.

and coasting along the shore, wee did descie, not contrary to our expectation, certaine Canters which were Spanish fishermen, to whom we gaue chase and tooke three of them, and proceeding further we met with 3. Carauels and tooke them also.

The 17. day of Ianuary we arrived at Cape Blanco, where we found a ship riding at ancho, within the Cape, and but two simple Partners in her, which ship we tooke and caried her further into the harbour, where we remained 4. dayes, and in that space our General mustered, and trayned his men on land in warlike maner, to make them fit for all occasions.

In this place we tooke of the fishermen such necessaries as wee wanted, and they could yeeld vs, and leauing heere one of our litle barkes called the Benedict, wee tooke with vs one of theirs which they called Canters, being of the burden of 40. tunnes or thereabouts.

All these things being finished, wee departed this harbour the 22. of Ianuarie, carping along with vs one of the Portugall Carauels which was bound to the Islands of Cape Verde for salt, wheredof good store is made in one of those Islands.

The master or Pilot of that Carauel did aduertise our Generall that vpon one of those Islands called Mayo, there was great store of dyed Cabritos, which a few inhabitants there dwelling did peereply make ready for such of the kings Ships as did there touch, being bound for his countrey of Brasile or elsewhere. Wee fell with this Island the 27. of Ianuary, but the Inhabitants would in no case traffique with vs, being thereof forbidden by the kings Edict: yet the next day our Generall sent to view the Island, and the likelihoodes that might be there of prouision of victuals, about three score and two men vnder the conduct and gouernment of Master Winter and Master Doughtie, and marching towards the chiefe place of habitation in this Island (as by the Portugall wee were informed) hauing traualled to the mountaines the space of three miles, and arriuing there somewhat before the day brake, we arrested our selues to see day before vs, which appearing, we found the inhabitants to be fled: but the place, by reason that it was manured, wee found to be more fruitfull then the other part, especially the valleys among the hills.

Here we gaue our selues a litle refreshing, as by very ripe and sweete grapes, which the fruitfulness of the earth at that season of the yeere yeelded vs: and that season being with vs the depth of Winter, it may seeme strange that those fruites were then there growing: but the reason thereof is this, because they being betweene the Tropike and the Equinoctiall, the Summe passeth twise in the yeere through their Zenith ouer their heads, by meanes whereof they haue two Summers, & being so neere the heate of the line, they neuer lose the heate of the Sunne so much, but the fruites haue their increas and continuance in the midst of Winter. The Island is wonderfully storied with goates and wilde hennes, and it hath salt also without labour, save onely that the people gather it into heapes, which continually in great quantitie is increased vpon the sands by the flowing of the sea, and the receiuing heate of the Sunne kerning the same, so that of the increas thereof they keepe a continuall traffique with their neighbours.

Amongst other things we found here a kind of fruit called Cocos, which because it is not commonly knowen with vs in England, I thought good to make some description of it.

The tree beareth no leaues nor branches, but at the very top the fruit groweth in clusters, hard at the top of the stemme of the tree, as big euery seuerall fruite as a mans head: but hauing taken off the vtermost barke, which you shall find to be very full of strings or sinowes, as I may terme them, you shall come to a hard shell which may holde of quantitie in liquoz a pint commonly, or some a quart, and some lesse: within that shell of the thicknesse of halfe an inch good, you shall haue a kinde of hard substance and very white, no lesse good and sweete then almonds: within that againe a certaine cleare liquoz, which being drunke, you shall not onely finde it very delicate and sweete, but most comfortable and cordiall.

After wee had satisfied our selues with some of these fruites, wee marched further into the Island, and saw great store of * Cabritos alieue, which were so chased by the inhabitants, that wee could doe no good towards our prouision, but they had layde out as it were to stoppe our mouthes withall, certaine olde dyed Cabritos, which being but ill, and small and few, wee made no account of.

Being returned to our ships, our Generall departed hence the 31. of this moneth, and sayled by the Island of S. Iago, but farre enough from the danger of the inhabitants, who shot and discharged at vs three peeces, but they all fell short of vs, and did vs no harme. The Island is fayre and large, and as it seemeth, rich and fruitfull, and inhabited by the Portugals, but the mountaines and high places of the Island are sayd to be possessed by the Boozes, who hauing bin slaues to the Portugals, to ease themselves, made escape to the desert places of the Island, where they abode with great strength.

Portugall Pi-
lot taken.

The Isle of
Fogo.

Being before this Island, we espied two ships under sayle, to the one of which wee gave chase, and in the end boorded her with a ship-boat without resistance, which we found to be a good prize, and she yielded unto vs good store of wine: which prize our General committed to the custodie of Master Doughtie, and retaining the Pilot, sent the rest away with his Pinnele, giving them a Butte of wine and some victuals, and their wearing clothes, and so they departed.

The same night wee came with the Island called by the Portugals, Ilha del fogo, that is, the burning Island: in the Northside whereof is a consuming fire, the matter is sayde to be of Sulphure, but notwithstanding it is like to bee a commodious Island, because the Portugals haue buile, and doe inhabite there.

Upon the South side thereof lyeth a most pleasant and sweete Island, the trees whereof are alwayes greene and faire to looke vpon, in respect whereof they call it Ilha Braua, that is, the hyane Island. From the bankes thereof into the sea doe run in many places reasonable streames of fresh waters easie to be come by, but there was no conuenient roade for our ships: for such was the depth, that no ground could bee had for anchoring, and it is reported, that ground was neuer found in that place, so that the tops of Fogo burne not so high in the ayre, but the rootes of Braua are quenched as low in the sea.

Being departed from these Islands, we dreyd towards the line, where wee were becalmed the space of 3. weekes, but yet subiect to diuers great stormes, terrible lightnings and much thunder: but with this miserie we had the commoditie of great store of fish, as Dolphins, Bonitos, and flying fishes, whereof some fell into our shippes, wherehence they could not rise againe for want of moisture, for when their wings are drye, they cannot flie.

April.
33. Degrees.

From the first day of our departure from the Islands of Cape Verde, wee sayled 54. dayes without sight of land, and the first land that we fell with was the coast of Brasil, which we saw the first of April in þ height of 33. degrees towards the pole Antarticke, and being discovered at sea by the inhabitants of the countrey, they made vpon the coast great fires for a sacrifice (as we learned) to the deuils, about which they vse confutations, making heapes of sande and other ceremonies, that when any ship shall goe about to stay vpon their coast, not onely sands may be gathered together in shoals in euery place, but also that stormes and tempests may arise, to the casting away of ships and men, whereof (as it is reported) there haue bene diuers experiments.

The Cape of
Ioy.

The seuench day in a mightie great storme both of lightning, rayne and thunder, wee lost the Canter which we called the Christopher: but the eleuenth day after, by our Generals great care in dispersing his ships, we found her againe, and the place where we met, our Generall called the Cape of Ioy, where euery ship tooke in some water. Here we found a good temperature and sweete ayre, a very faire and pleasant countrey with an exceeding fruitfull soyle, where were great store of large and mightie Deere, but we came not to the sight of any people: but traueiling further into the countrey, we perceiued the footing of people in the clay-ground, shewing that they were men of great stature. Being returned to our ships, we wayed anchor, and ranne somewhat further, and harboured our selues betweene a rocke and the maine, where by meanes of the rocke that brake the force of the sea, we rid very safe, and vpon this rocke we killed for our prouision certaine sea-wolues, commonly called with vs Seales.

Their entrance
into the riuer
of Plate.

Abundance of
Seales.

From hence we went our course to 36. degrees, and entred the great riuer of Plate, and ranne into 54. and 53. fadomes and a halfe of fresh water, where wee filled our water by the ships sides: but our Generall finding here no good harborough, as he thought he should, bare out againe to sea the 27. of April, and in bearing out we lost sight of our flieboate wherein master Doughtie was, but we sayling along, found a fayre and reasonable good Bay wherein were many, and the same profitable Islands, one whereof had so many Seales, as would at the least haue laden all our Shippes, and the rest of the Islands are as it were laden with foules which is wonderfull to see, and they of diuers sortes. It is a place very plentifull of victuals, and hath in it no want of fresh water.

Our Generall after certaine dayes of his abode in this place, being on shore in an Island, the people of the countrey shewed themselves vnto him, leaping and dauncing, and entred into trafficke with him, but they would not receiue any thing at any mans hands, but the same must be cast vpon the ground. They are of cleane, comely, and strong bodie, swift on foote, and seeme to be very active.

May.

The eighteenth day of May our Generall thought it needfull to haue a care of such Ships as were absent, and therefore endeavouring to seeke the flieboate wherein master Doughtie was, we espied her againe the next day: and whereas certaine of our ships were sent to discover the coast and to search an harbour, the Maygold and the Canter being imployed in that businesse, came vnto

unto vs and gaue vs vnderstanding of a safe harbour that they had found, where with all our ships bare, and entred it, where we watered and made new prouision of victuals, as by Seales, whereof we flew to the number of 200, or 300, in the space of an houre.

Here our Generall in the Admirall rid close aboord the Flie-boate, and tooke out of her all the prouision of victuals and what els was in her, and haling her to the Lande, set fire to her, and so burnt her to saue the iron worke: which being a doing, there came downe of the countrey certaine of the people naked, sauing only about their waste the skinne of some beast with the furre or haire on, and something also wreathed on their heads: their faces were painted with diuers colours, and some of them had on their heads the similitude of hoznes, euery man his bow which was an ell in length, and a couple of arrowes. They were very agill people and quitke to deliuer, and seemed not to be ignorant in the feates of warres, as by their order of ranging a few men, might appeare. These people would not of a long time receiue any thing at our handes; yet at length our Generall being ashore, and they dauncing after their accustomed maner about him, and hee once turning his backe towards them, one leapt suddenly to him, and tooke his cap with his golde band off his head, and ran a litle distance from him and shared it with his fellow, the cap to the one, and the band to the other.

The Flie-boate
cast off and
burnt.

The people of
the countrey.

Having dispatched all our businesse in this place, wee departed and set sayle, and immediatly vpon our setting forth we lost our Canter which was absent three or foure dayes: but when our General had her againe, he tooke out the necessaries, and so gaue her ouer neere to the Cape of Good hope.

The cape of
Good hope.

The next day after being the twentieth of Iune, wee harboured our selues againe in a very good harbour, called by Magellan Port S. Iulian, where we found a gibbet standing vpon the maine, which we supposed to be the place where Magellan did execution vpon some of his disobedient and rebellious company.

Iune.
Port S. Iulian.

The two and twentieth day our Generall went ashore to the maine, and in his companie, Iohn Thomas, and Robert Winterhie, Oliuer the Master gunner, Iohn Brewer, Thomas Hood, and Thomas Drake, and entering on land, they presently met with two or three of the countrey people, and Robert Winterhie hauing in his hands a bowe and arrowes, went about to make a shoote of pleasure, and in his draught his bowstring brake, which the rude Sauages taking as a token of warre, began to bend the force of their bowes against our company, and droue them to their shifts very narrowly.

In this Port our Generall began to enquire diligently of the actions of M. Thomas Doughtie, and found them not to be such as he looked for, but tending rather to contention or mutinie, or some other disorder, whereby (without redresse) the successe of the voyage might greatly haue bene hazarded: whereupon the company was called together and made acquainted with the particulars of the cause, which were found partly by master Doughties owne confession, and partly by the euidence of the fact, to be true: which when our Generall saw, although his priuate affection to M. Doughtie (as hee then in the presence of vs all sacredly protested) was great, yet the care he had of the state of the voyage, of the expectation of her Maiestie, and of the honour of his countrey did moze touch him, (as indeede it ought) then the priuate respect of one man: so that the cause being thoroughly heard, and all things done in good order as neere as might be to the course of our lawes in England, it was concluded that M. Doughtie should receiue punishment according to the qualitie of the offence: and he seeing no remedie but patience for himselfe, desired before his death to receiue the Communion, which he did at the hands of M. Fletcher our Minister, and our Generall himselfe accompanied him in that holy action: which being done, and the place of execution made ready, hee hauing embraced our Generall and taken his leaue of all the companie, with prayer for the Queenes maiestie and our realme, in quiet sort laid his head to the blocke, where he ended his life. This being done, our Generall made diuers speeches to the whole company, perswading vs to vnitie, obedience, loue, and regard of our voyage; and for the better confirmation thereof, willed euery man the next Sunday following to prepare himselfe to receiue the Communion, as Christian bretherzen and friends ought to doe, which was done in very reuerent sort, and so with good contentment euery man went about his businesse.

M. Thomas
Doughtie
executed.

The 17. day of August we departed the port of S. Iulian, & the 20. day we fell with the streight or fret of Magellan going into the South sea, at the Cape or headland whereof we found the bodie of a dead man, whole flesh was cleane consumed.

August.
The streight
of Magellan.

The 21. day we entred The streight, which we found to haue many turnings, and as it were shuttings vp, as if there were no passage at all, by meanes whereof we had the wind often against vs, so that some of the flecte recouering a Cape or point of land, others should be forced to turne backe

backe againe, and to come to an anchor where they could.

In this streight there be many faire harbors, with store of fresh water, but yet they lacke their best commoditie: for the water is there of such depth, that no man shal find ground to anchor in, except it bee in some narrow river or corner, or betweene some rocks, so that if any extreme blasts or contrary winds do come (whereinto the place is much subject) it carieth with it no small danger.

The land on both sides is very huge & mountainous, the lower mountains whereof, although they be monstrous and wonderfull to looke vpon for their height, yet there are others which in height exceede them in a strange maner, reaching themselves aboue their fellows so high, that betweene them did appeare three regions of cloudes.

These mountaines are couered with snow: at both the Southerly and Easterly partes of the streight there are Islands, among which the sea hath his indraught into the streights, euen as it hath in the maine entrance of the freat.

This streight is extreme cold, with frost and snow continually; the trees seeme to stoope with the burden of the weather, and yet are greene continually, and many good and sweete herbes doe very plentifully grow and increase vnder them.

The bredth of the streight is in some place a league, in some other places 2. leagues, and three leagues, and in some other 4. leagues, but the narrowest place hath a league ouer.

The 24. of August we arrived at an Island in the streights, where we found great store of foule which could not flie, of the bignesse of geese, whereof we killed in lesse then one day 3000. and victualled our selues thoroughly therewith.

The bredth of the streights of Magellan.

Abundance of foule in the streight.

September.

The 6. day of September we entred the South sea at the Cape or head shore.

The seventh day wee were driuen by a great storme from the entering into the South sea two hundred leagues and odd in longitude, and one degree to the Southward of the Streight: in which height, and so many leagues to the Westward, the fifteenth day of September fell out the Eclipse of the Moone at the houre of sixe of the clocke at night: but neither did the Eclipticall conflict of the Moone impayze our state, nor her clearing againe amend vs a whit, but the accustomed Eclipse of the Sea continued in his force, wee being darkened moze then the Moone seven fold.

From the Bay (which we called The Bay of seuering of friends) wee were driuen backe to the Southward of the streights in 57. degrees and a terce: in which height we came to an anchor among the Islands, hauing there fresh and very good water, with herbes of singular vertue. Not farre from hence we entred another Bay, where wee found people both men and women in their Canoes, naked, and ranging from one Island to another to seeke their meat, who entred traffique with vs for such things as they had.

57. Degrees and a terce of Southerly latitude. Boreo writeth that another hath found this place all Islands.

We returning hence Northward againe, found the 3. of October three Islands, in one of which was such plentie of birdes as is scant credible to report.

W. Winter was paraded and returned.

The 8. day of October we lost sight of one of our Consorts wherein W. Winter was, who as then we supposed was put by a storme into the streights againe, which at our returne home wee found to be true, and he not perished, as some of our company feared.

The trending of the coast of Chili.

Thus being come into the height of The streights againe, we ran, supposing the coast of Chili to lie as the generall Maps haue described it, namely North-west, which we found to lie and trend to the North-east and Eastwards, whereby it appeareth that this part of Chili hath not bene truely hitherto discovered, or at the least not truely reported for the space of 12. degrees at the least, being set downe either of purpose to deceiue, or of ignorant coniecture.

The Isle la Mocha in 38. degrees and 30. minutes.

We continuing our course, fell the 29. of Nouember with an Island called la Mocha, where we cast anchor, and our Generall hopping out our boate, went with ten of our company to shore, where wee found people, whom the cruell and extreme dealings of the Spaniards haue forced for their owne safetie and libertie to flee from the maine, and to fortifie themselves in this Island. We being on land, the people came downe to vs to the water side with thew of great courtesie, bringing to vs potatoes, rootes, and two very fat sheepe, which our Generall receiued and gaue them other things for them, and had promise to haue water there: but the next day repaying againe to the shore, and sending two men aland with barrels to fill water, the people taking them for Spaniards (to whom they vse to thew no fauour if they take them) layde violent hands on them, and as we thinke, slew them.

Our Generall seeing this, stayed here no longer, but wayed anchor, and set saile towards the coast of Chili, and drawing towards it, we mette neere to the shore an Indian in a Canoe, who thinking vs to haue bene Spaniards, came to vs and tolde vs, that at a place called S. Iago, there was a great Spanish ship laden from the kingdome of Peru: for which good newes our Generall gaue

gaue him diuers trifles, wherof he was glad, and went along with vs and brought vs to the place, which is called the port of Valparizo.

When we came thither, we found indeede the ship riding at anker, hauing in her eight Spaniards and three Negros, who thinking vs to haue bene Spaniards and their friends, welcommed vs with a drumme, and made ready a Bottija of wine of Chili to drinke to vs: but as soone as we were entred, one of our company called Thomas Moone began to lay about him, and strooke one of the Spaniards, and sayd vnto him, Abaxo Perro, that is in English, Goe downe dogge. One of these Spaniards seeing persons of that quality in those seas, all to crossed, and blessed himselfe: but to be short, wee stowed them vnder hatches all saue one Spaniard, who suddenly and desperately leapt ouer boord into the sea, and swamme ashore to the towne of S. Iago, to giue them warning of our arrivall.

They of the towne being not aboue 9. households, presently fled away and abandoned the towne. Our Generall manned his boate, and the Spanish ships boate, and went to the Towne, and being come to it, we rifled it, and came to a small chappell which wee entred, and found therein a silver chalice, two cruets, and one altar-cloth, the spoyle whereof our Generall gaue to M. Fletcher his minister.

We found also in this towne a warehouse storied with wine of Chili, and many boords of Cedar-wood, all which wine we brought away with vs, and certaine of the boords to burne for fire-wood: and so being come aboord, wee departed the Hauen, hauing first set all the Spaniards on land, sauing one John Griego a Greeke boyne, whom our Generall caried with him for his Pilot to bring him into the hauen of Lima.

When we were at sea, our Generall rifled the ship, and found in her good store of the wine of Chili, and 25000. pezoes of very pure and fine gold of Baldiua, amounting in value to 37000. ducats of Spanish money, and aboue. So going on our course, wee arriued next at a place called Coquimbo, where our Generall sent 14. of his men on land to fetch water: but they were espied by the Spaniards, who came with 300. horsemen and 200. footemen, and slew one of our men with a piece, the rest came aboord in safetie, and the Spaniards departed: wee went on shore againe, and buried our man, and the Spaniards came downe againe with a flag of truce, but we set sayle and would not trust them.

From hence we went to a certaine port called Tarapaza, where being landed, we found by the Sea side a Spaniard lying asleepe, who had lying by him 13. barres of silver, which weighed 4000. ducats Spanish; we tooke the silver, and left the man.

Not farre from hence going on land for fresh water, we met with a Spaniard and an Indian boy drining 8. Llamas or sheepe of Peru which are as big as asses; euery of which sheepe had on his backe 2. bags of leather, each bagge containing 50. li. weight of fine silver: so that bringing both the sheepe and their burthen to the ships, we found in all the bags 800. weight of silver.

Here hence we sailed to a place called Arica, and being entred the port, we found there three small barkes which we rifled, and found in one of them 57 wedges of silver, each of them weighing about 20 pound weight, and euery of these wedges were of the fashion and bignesse of a brick-bat. In all these 3. barkes we found not one person: for they mistrusting no strangers, were all gone aland to the Towne, which consisteth of about twentie houses, which we would haue ransacked if our company had bene better and more in number. But our Generall contented with the spoyle of the ships, left the Towne and put off againe to sea and set sayle for Lima, and by the way met with a small barke, which he boorded, and found in her good store of linnen cloth, whereof taking some quantitie, he let her goe.

To Lima we came the 13. day of February, and being entred the hauen, we found there about twelue sayle of ships lying fast moored at an anker, hauing all their sayles caried on shore; for the masters and marchants were here most secure, hauing neuer bene assaulted by enemies, and at this time feared the approach of none such as we were. Our generall rifled these ships, and found in one of them a chest full of royals of plate, and good store of silkes and linnen cloth, and tooke the chest into his owne ship, and good store of the silkes and linnen. In which ship hee had newes of another ship called the Cacafuego which was gone towards Paiza, and that the same shippe was laden with treasure: whereupon we staid no longer here, but cutting all the cables of the shippes in the hauen, we let them drine whither they would, either to sea or to the shore, and with all speed we followed the Cacafuego toward Paiza, thinking there to haue found her; but before wee arriued there, she was gone from thence towards Panama, whom our Generall still pursued, and by the way met with a barke laden with ropes and tackle for ships, which hee boorded and searched, and found in her 80. li. weight of golde, and a crucifixe of gold with goodly great Emeraunds set in it

The port of Valparizo in 33. degrees 40. minutes. Wine of Chili.

The towne of S. Iago taken.

Wine of Chili.

John Griego a Pilot taken.

Gold of Baldiua. Coquimbo in 29. degrees 30. minutes.

Tarapaza.

Arica in 18. degrees 30. min.

Lima in 11. degrees 50. minutes.

it which he tooke, and some of the cordage also for his owne ship.

The rich ship
called the Ca-
cafuego taken.

From hence we departed, still following the Cacafuego, and our Generall promised our company, that whosoever could first descrite her, should have his chaine of gold for his good newes. It fortuned that Iohn Drake going by into the top, descried her about three of the clocke, and about five of the clocke we came to her and boarded her, and shotte at her three peeces of ordnance, and strake downe her Mizen, and being entered, we found in her great riches, as iewels and precious stones, thirtene chests full of royals of plate, foure score pound weight of golde, and five and twentie tunne of siluer. The place where we tooke this prize, was called Cape de San Francisco, about 150. leagues from Panama.

Cape de San
Francisco in 1.
degrees to the
North.

The Pilots name of this Shippe was Francisco, and amongst other plate that our Generall found in this ship, he found two very faire guilt bowles of siluer, which were the Pilots: to whom our Generall sayd: Senior Pilot, you haue here two siluer cups, but I must needs haue one of them: which the Pilot because hee could not other wise chuse, peeled vnto, and gaue the other to the Steward of our Generals ships.

When this Pilot departed from vs, his boy sayde thus vnto our Generall: Captaine, our ship shall be called no more the Cacafuego, but the Cacaplata, and your shippe shall bee called the Cacafuego: which pretty speech of the Pilots boy ministred matter of laughter to vs, both then and long after.

China silks, and
Porcellan.

When our Generall had done what hee would with this Cacafuego, hee cast her off, and wee went on our course still towards the West, and not long after met with a ship laden with linnen cloth and fine China-dishes of white earth, and great store of China-silks, of all which things wee tooke as we list.

Guatulo.

The owner himselfe of this ship was in her, who was a Spanish Gentleman, from whom our Generall tooke a fawlcen of golde, with a great Emeraud in the breast thereof, and the Pilot of the ship he tooke also with him, and so cast the ship off.

This Pilot brought vs to the hauen of Guatulo, the towne whereof, as he told vs, had but 17. Spaniards in it. As soone as we were entred this hauen, wee landed, and went presently to the towne, and to the Towne-house, where we found a Judge sitting in iudgement, being associate with three other officers, vpon three Negros that had conspired the burning of the Towne: both which Judges & prisoners we tooke, and brought them a shipboard, and caused the chiefe Judge to write his letter to the Towne, to command all the Townesmen to auoid, that we might safely water there. Which being done, and they departed, we ransaked the Towne, and in one house we found a pot of the quantitie of a bushell, full of reals of plate, which we brought to our ship.

And here one Thomas Moone one of our company, tooke a Spanish Gentleman as hee was flying out of the towne, and searching him, he found a chaine of golde about him, and other iewels, which he tooke, and so let him goe.

The Portugall
Pilot set on
land.
The Island
of Canno.

At this place our General among other Spaniards, set ashore his Portugall Pilot, which hee tooke at the Islands of Cape Verde, out of a ship of S. Mary port of Portugall: and hauing set them ashore, we departed hence, and sailed to the Island of Canno, where our Generall landed, and brought to shore his owne ship, and discharged her, mended, and graued her, and furnished our ship with water and wood sufficiently.

A ship with a
gouernour for
the Islands of
Philippinas.

And while wee were here, we espied a shippe, and set saile after her, and tooke her, and found in her two Pilots, and a Spanish Gouernour, going for the Islands of the Philippinas: wee searched the shippe, and tooke some of her marchandizes, and so let her goe. Our Generall at this place and time, thinking himselfe both in respect of his priuate iniuries receiued from the Spaniards, as also of their contempts and indignities offered to our countrey and Prince in generall, sufficiently satisfied, and reuenged: and supposing that her Maestie at his returne would rest contented with this seruice, purposed to continue no longer vpon the Spanish coasts, but began to consider and to consult of the best way for his Countrey.

We thought it not good to returne by the Streights, for two speciall causes: the one, lest the Spaniards should there waite, and attend for him in great number and strength, whose hands, hee being left but one ship, could not possibly escape. The other cause was the dangerous situation of the mouth of the Streights in the South sea, where continuall stormes reigning and blustering, as he found by experience, besides the shoals and sands vpon the coast, he thought it not a good course to aduenture that way: he resolued therefore to auoyde these hazards, to goe forward to the Isles of the Malucos, and therehence to saile the course of the Portugals by the Cape of Buena Esperança.

Vpon this resolution, hee beganne to thinke of his best way to the Malucos, and finding him-
selfe

Selfe where he now was becalmed, he said that of necessitie hee must be forced to take a Spanish course, namely to sayle some what Northerly to get a winde. Wee therefore set saile, and sayled 600. leagues at the least for a good winde, and thus much we sailed from the 16. of April, till the 3. of June.

The 5. day of June, being in 43. degrees towards the pole Arctike, we found the ayre so colde, that our men being grievously pinched with the same, complained of the extremitie thereof, and the further we went the more the colde increased upon vs. Whereupon we thought it best for that time to seeke the land, and did so, finding it not mountainous, but low plaine land, till wee came within 38. degrees towards the line. In which height it pleased God to send vs into a faire and good Baye, with a good winde to enter the same.

In this Baye wee anchored, and the people of the Countrey having their houses close by the waters side, shewed themselves unto vs, and sent a present to our Generall.

When they came unto vs, they greatly wondered at the things that wee brought, but our Generall (according to his naturall and accustomed humanitie) courteously intreated them, and liberally bestowed on them necessary things to cover their nakednesse, whereupon they supposed vs to be gods, and would not be perswaded to the contrary: the presents which they sent to our Generall, were feathers, and calles of net-worke.

Their houses are digged round about with earth, and haue from the uttermost brimmes of the circle, cliffs of wood set upon them, ioyning close together at the toppe like a spire steeple, which by reason of that closenesse are very warme.

Their beds is the ground with rushes strowed on it, and lying about the house, haue the fire in the midst. The men go naked, the women take bulrushes, and kembe them after the manner of hempe, and thereof make their loose garments, which being knit about their middles, hang down about their hippes, having also about their shoulders a skinne of Deere, with the haire upon it. These women are very obedient and serviceable to their husbands.

After they were departed from vs, they came and visited vs the second time, and brought with them feathers and bags of Tabacco for presents: And when they came to the top of the hill (at the bottome whereof we had pitched our tents) they staid themselves: where one appointed for speaker wearied himselfe with making a long oration, which done, they left their bowes upon the hill, and came downe with their presents.

In the meane time the women remaining on the hill, tormented themselves lamentably, tearing their flesh from their cheekes, whereby we perceived that they were about a sacrifice. In the meane time our Generall with his company went to prayer, and to reading of the Scriptures, at which exercise they were attentive, & seemed greatly to be affected with it: but when they were come unto vs, they restored againe unto vs those things which before we bestowed upon them.

The newes of our being there being spread through the Countrey, the people that inhabited round about came downe, and amongst them the King himselfe, a man of a goodly stature, & comely personage, with many other tall and warlike men: before whose comming were sent two Ambassadors to our Generall, to signifie that their King was comming, in doing of which message, their speech was continued about halfe an houre. This ended, they by signes requested our Generall to send some thing by their hand to their King, as a token that his comming might be in peace: wherein our Generall having satisfied them, they returned with glad tidings to their King, who marched to vs with a princely maiestie, the people crying continually after their manner, and as they drew neere unto vs, so did they stride to behaue themselves in their actions with comelinesse.

In the fore-front was a man of a goodly personage, who bare the scepter or mace before the King, whereupon hanged two crownes, a lesse and a bigger, with three chaines of a marueilous length: the crownes were made of knit worke wrought artificially with fethers of diuers colours: the chaines were made of a bonie substance, and few be the persons among them that are admitted to weare them: and of that number also the persons are limited, as some ten, some 12. &c. Next unto him which bare the scepter, was the King himselfe, with his Guard about his person, clad with Conie skins, & other skins: after them followed the naked comon sort of people, every one having his face painted, some with white, some with blacke, and other colours, & having in their hands one thing or another for a present, not so much as their children, but they also brought their presents.

In the meane time our Generall gathered his men together, and marched within his fenced place, making against their approaching, a very warre-like shew. They being trooped together in their order, and a generall salutation being made, there was presently a generall silence. Then he that bare the scepter before the King, being informed by another, whom they assigned to that office, with a manly and lustie voyce proclaymed that which the other spake to him in secrete,

June.
Sir Francis Drake sayled on the backside of America to 43. degrees of southerly latitude. 38. Degrees. A description of the people and Countrey of Noua Albion.

A long oration

Chaines like those of Canada.

continuing halfe an houre: which ended, and a generall Amen as it were giuen, the King with the whole number of men and women (the children excepted) came downe without any weapon, who descending to the foore of the hill, set themselves in order.

The King res-
signes his
crowne and
kingdome to
Sir Francis
Drake.

In coming towards our bulwarks and tents, the scepter-bearer began a song, obseruing his measures in a daunce, and that with a stately countenance, whom the King with his Guard, and euery degree of persons following, did in like manner sing and daunce, sauing onely the women, which daunced & kept silence. The General permitted them to enter within our bulwarke, where they continued their song and daunce a reasonable time. When they had satisfied themselves, they made signes to our General to sit downe, to whom the King, and diuers others made seuerall orations, or rather supplications, that hee would take their prouince and kingdome into his hand, and become their King, making signes that they would resigne vnto him their right and title of the whole land, and become his subiects. In which, to perswade vs the better, the King and the rest, with one consent, and with great reuerence, ioyfully singing a song, did set the crowne vpon his head, enriched his necke with all their chaines, and offered vnto him many other things, honouring him by the name of Hioh, adding thereunto as it seemed, a signe of triumph: which thing our General thought not meete to reject, because he knew not what honour and profit it might be to our Countrey. Wherefore in the name, and to the vse of her Maestie, he tooke the scepter, crowne, and dignitie of the said Countrey into his hands, wishing that the riches & treasure thereof might so conveniently be transported to the enriching of her kingdom at home, as it aboundeth in y same.

The like they
did in Hioh-
loa.

The common sorte of people leauing the King and his Guard with our General, scattered themselves together with their sacrifices among our people, taking a diligent viewe of euery person: and such as pleased their fancie, (which were the yongest) they inclosing them about, freed their sacrifices vnto them with lamentable weeping, scratching, and tearing the flesh from their faces with their nailes, whereof issued abundance of blood. But wee vsed signes to them of disliking this, and stayed their hands from force, and directed them upwards to the liuing God, whom onely they ought to worship. They shewed vnto vs their wounds, and craued helpe of them at our hands, whereupon we gaue them lotions, plaisters, and oymments agreeing to the state of their griefes, beseeching God to cure their diseases. Euery third day they brought their sacrifices vnto vs, vntill they vnderstood our meaning, that we had no pleasure in them: yet they could not be long absent from vs, but dayly frequented our company to the houre of our departure, which departure seemed so grieuous vnto them, that their ioy was turned into sorrow. They incited vs, that being absent we would remember them, and by stealth prouided a sacrifice, which we misliked.

Great herdes
of Deere.

Our necessarie businesse being ended, our General with his company trauailed by into the Countrey to their villages, where we found herdes of Deere by 1000. in a company, being most large, and fat of body.

Abundance of
strange conies.

We found the whole Countrey to bee a warren of a strange kinde of Conies, their bodies in hignesse as be the Barbary Conies, their heads as the heads of ours, the feete of a Miant, and the taile of a Rat being of great length: vnder her chinne is on either side a bag, into the which she gathereth her meate, when she hath filled her bellie abroad. The people eat their bodies, and make great accompt of their skinner, for their Kings coate was made of them.

Noua Albion.

Our General called this Countrey Noua Albion, and that for two causes: the one in respect of the white bankes and cliffes, which lie towards the sea: and the other, because it might haue some affinitie with our Countrey in name, which sometime was so called.

Gold and sil-
uer in the earth
of Noua Albion.

There is no part of earth heere to bee taken by, wherein there is not some probable shew of gold or silver.

Their depar-
ture.
October.
Certaine Is-
lands in 8. de-
grees.
Strange Ca-
noas, like those
of Iaua.

At our departure hence our General set by a monument of our being there, as also of her Maesties right and title to the same, namely a plate, nailed vpon a faire great poste, whereupon was ingrauen her Maesties name, the day and yeere of our arriual there, with the free giuing by of the prouince and people into her Maesties hands, together with her highnesse picture and armes, in a peece of six pence of current English money vnder the plate, whereunder was also writtten the name of our General.

It seemeth that the Spaniards hitherto had neuer bene in this part of the Countrey, neither did euer discover the land by many degrees, to the Southwards of this place.

After we had set saile from hence, wee continued without sight of land till the 13. day of October following, which day in the morning wee fell with certaine Islands 8. degrees to the Northward of the line, from which Islands came a great number of Canoas, hauing in some of them 4. in some 6. and in some also 14. men, bringing with them cocos, and other fruites. Their Canoas were

were hollow within, and cut with great arte and cunning, being very smooth within and without, and bearing a glasse as if it were a hohne daintily burnished, hauing a prow, and a sterne of one sort, yeelding inward circle-wise, being of a great height, and full of certaine white shels for a bzauerie, and on each side of them lie out two peces of timber about a yarde and a halfe long, more or lesse, according to the smalnesse, or bignesse of the boate.

This people haue the nether part of their eares cut into a round circle, hanging downe very lowe vpon their cheekes, whereon they hang things of a reasonable weight. The nailes of their hands are an ynche long, their teeth are as blacke as pitch, and they renew them often, by eating of an herbe with a kinde of powder, which they alwayes carrie about them in a cane for the same purpose.

Leaving this Island the night after we fell with it, the 18. of October, we lighted vpon diuers Islands.

others, some whereof made a great shew of Inhabitants.

We continued our course by the Islands of Tagulada, Zelon, and Zewarra, being friends to the Portugals, the first whereof hath growing in it great store of Cinnamom.

The 14. of Nouember we fell with the Islands of Maluco, which day at night (hauing directed our course to runne with Tydore) in coasting along the Island of Mityr, belonging to the King of Ternate, his Deputie or Vice-king seeing vs at sea, came with his Canoa to vs without all feare, and came aboard, and after some conference with our Generall, willed him in any wise to runne in with Ternate, and not with Tydore, assuring him that the King would bee glad of his comming, and would be ready to doe what he would require, for which purpose he himselfe would that night be with the King, and tell him the newes, with whom if he once dealt, hee should finde that as he was a King, so his word should stand: adding further, that if he went to Tydore before he came to Ternate, the King would haue nothing to doe with vs, because hee held the Portugall as his enemy: whereupon our General resolved to runne with Ternate, where the next morning early we came to anchoz, at which time our Generall sent a messenger to the king with a velvet cloke for a present, and token of his comming to be in peace, and that he required nothing but traffique and exchange of marchandize, whereof he had good store, in such things as he wanted.

In the meane time the Vice-king had bene with the king according to his promise, signifying vnto him what good things he might receiue from vs by traffique: whereby the King was moued with great liking towards vs, and sent to our Generall with spectall message, that hee should haue what things he needed, and would require with peace and friendship, and moreover that hee would yeeld himselfe, and the right of his Island to bee at the pleasure and commandement of so famous a Prince as we serued. In token whereof he sent to our Generall a signet, and within short time after came in his owne person, with boates, and Canoas to our ship, to bring her into a better and safer roade then she was in at that present.

In the meane time, our Generals messenger beeing come to the Court, was met by certaine noble personages with great solemnitie, and brought to the King, at whose hands hee was most friendly and graciously intertaind.

The King purposing to come to our ship, sent before 4. great and large Canoas, in euery one whereof were certaine of his greatest states that were about him, attired in white lawne of cloth of Calicut, hauing ouer their heads from the one ende of the Canoa to the other, a couering of thinne perfumed mats, bozne vp with a frame made of reedes for the same vse, vnder which euery one did sit in his order according to his dignitie, to keepe him from the heate of the Sunne, diuers of whom beeing of good age and grauitie, did make an ancient and fatherly shew. There were also diuers yong and comely men attired in white, as were the others: the rest were souldiers, which stood in comely order round about on both sides, without whom sate the rowers in certaine galleries, which being thzee on a side all along the Canoas, did lie off from the side thereof thzee or foure yardes, one being orderly builded lower then another, in euery of which galleries were the number of 4. score rowers.

These Canoas were furnished with warlike munition, euery man for the most part hauing his sword and target, with his dagger, beside other weapons, as launces, caliuers, darts, bowes and arrowes: also euery Canoa had a small cast base mounted at the least one full yarde vpon a stocke set vpright.

Thus comming neere our shippe, in order they rowed about vs, one after another, and passing by, did their homage with great solemnitie, the great personages beginning w great grauitie and fatherly countenances, signifying that the king had sent them to conduct our ship into a better roade.

Soone after the King himselfe repaired, accompanied with 6. graue and ancient persons, who did their obeisance with maruellous humilitie. The king was a man of tall stature, and seemed to

The Isle of Ternate.

The king of Ternate offereth himselfe and his kingdome to the seruice of the Queene of England.

The great and strange Canoa of the King of Ternate.

The King of Ternate came to visite Sir Francis Drake.

be much delighted with the sound of our musicke, to whom as also to his nobilitie, our Generall gaue presents, wherewith they were passing well contented.

Sagu a kinde of
meale.

At length the King craued leaue of our Generall to depart, promising the next day to come aboard, and in the meane time to send vs such victuals, as were necessarie for our prouision: so that the same night we receiued of them meale, which they call Sagu, made of the tops of certaine trees, casting in the mouth like some curds, but melterch like sugar, whereof they make certaine cakes, which may be kept the space of ten yeeres, and yet then good to be eaten. We had of them store of rice, hennies, vnperfect and liquid sugar, sugar canes, and a fruite which they call Figo, with store of cloues.

A castle in Ternate.

The King hauing promised to come aboard, brake his promise, but sent his brother to make his excuse, and to intreate our Generall to come on shoare, offering himselfe payne aboard for his safe returne. Whereunto our Generall consented not, vpon mislike conceiued of the breach of his promise, the whole company also vnterly refusing it. But to satisfie him, our General sent certaine of his Gentlemen to the Court, to accompany the Kings brother, reseruing the Vice-king for their safe returne. They were receiued of another brother of the kings, and other states, and were conducted with great honour to the Castle. The place that they were brought vnto, was a large and faire house, where were at the least 1000. persons assembled.

Romanes and
Turks Ligiers
in Ternate.
The maiestie
of the King.

The King being yet absent, there sate in their places 60. graue personages, all which were said to be of the kings Counsel. There were besides 4. graue persons, apparelled all in red, downe to the ground, and attired on their heads like the Turkes, and these were said to be Romanes, and Ligiers there to keepe conincual traffike with the people of Ternate. There were also 2. Turks Ligiers in this place, and one Italian. The king at last came in guarded with 12. launces couered ouer with a rich canopy, with embossed gold. Our men accompanied with one of their Captaines called Moro, rising to meete him, he graciously did welcome, and intertaine them. He was attired after the maner of the Countrey, but more sumptuously then the rest. From his waste downe to the ground, was all cloth of golde, and the same very rich: his legges were bare, but on his feete were a paire of shoes, made of Cordouan skinne. In the attire of his head were finely wreathed hoopen rings of gold, and about his necke he had a chaine of perfect golde, the links whereof were great, and one folde double. On his fingers hee had five very faire iewels, and sitting in his chair of estate, at his right hand stood a page with a fanne in his hand, breatching and gathering the ayre to the King. The fanne was in length two foote, and in bredth one foote, set with 8. saphyres, richly imbrodered, and knit to a staffe 3. foote in length, by the which the Page did hold, and mooue it. Our Gentlemen hauing deliuered their message, and receiued order accordingly, were licensed to depart, being safely conducted backe againe by one of the kings Counsell.

Ternate the
chiefest of the
Maluco-illes.

This Island is the chiefest of all the Islands of Maluco, and the King hereof is King of 70. Islands besides. The king with his people are Moores in religion, obseruing certaine new Moores, with fastings: during which fasts, they neither eat nor drinke in the day, but in the night.

A little Island
to the South-
ward of Ce-
lebes.

After that our Gentlemen were returned, and that we had heere by the fauour of the king receiued all necessary things that the place could yeeld vs: our General considering the great distance, and how farre he was yet off from his Countrey, thought it not best here to linger the time any longer, but waying his anchors, set out of the Island, and sayled to a certaine little Island to the Southwards of Celebes, where we graued our ship, and continued there in that and other busineses 26. dayes. This Island is througly growen with wood of a large and high growth, very straight and without boughes, saue onely in the head or top, whose leaues are not much differing from our brome in England. Amongst these trees night by night, throug the whole land, did shew themselves an infinite swarme of fiery wormes flying in the ayre, whose bodies beeing no bigger then our common English flies, make such a shew and light, as if euery twigge or tree had bene a burning candle. In this place breedeth also wonderfull store of Bats, as bigge as large hennies: of Crayfishes also heere wanted no plentie, and they of exceeding bignesse, one whereof was sufficient for 4. hungry stomacks at a dinner, beeing also very good, and restoring meate, whereof we had experience: and they digge themselves holes in the earth like Conies.

Fierp worms.

Bats.

Crayfishes.

Januarie the
anno 1579.

When we had ended our businesse here, we waited, and set saile to runne for the Malucos: but hauing at that time a bad winde, and being amongst the Islands, with much difficultie wee recoined to the Northward of the Island of Celebes, where by reason of contrary winds not able to continue our course to runne Westwards, we were inforced to alter the same to the Southward againe, finding that course also to be very hard and dangerous for vs, by reason of infinite shoals which lie off, and among the Islands: whereof wee had too much triall to the hazard and danger of our shippe and liues. For of all other dayes vpon the 9. of Januarie, in the yeere 1579. wee came

ranne suddenly vpon a rocke, where we sticke fast from 8. of the clocke at night, till 4. of the clocke in the afternoone the next day, being indeede out of all hope to escape the danger: but our Generall as hee had alwayes hitherto shewed himselfe couragious, and of a good confidence in the mercie and protection of God: so now he continued in the same, and lest he should seeme to perish wilfully, both he, and we did our best in deuour to saue our selues; which it pleased God so to blesse, that in the ende we cleared our selues most happily of the danger.

We lighted our ship vpon the rockes of 3. tunne of cloues, 8. peeces of ordnance, and certayne meale and beanes: and then the winde (as it were in a moment by the speciall grace of God) changing from the Starreboord to the larboord of the ship, we hoisted our sailes, and the happy gale droue our ship off the rocke into the sea againe, to the no little comfort of all our hearts, for which we gaue God such prayle and thanks, as so great a benefite required.

The 8. of Februarie following, wee fell with the fruitfull Island of Barateue, hauing in the meane time suffered many dangers by windes and shoals. The people of this Island are comely in body and stature, and of a ciuill behauiour, iust in dealing, and courteous to strangers, whereof we had the experience sundry wayes, they being most glad of our presence, and very ready to relieue our wants in those things which their Countrey did yeelde. The men goe naked, salting their heads and priuities, euery man hauing something or other hanging at their eares. Their women are couered from the middle downe to the foote, wearing a great number of bracelets vpon their armes, for some had 8. vpon each arme, being made some of bone, some of horne, and some of brasse, the lightest whereof by our estimation waited two ounces apeece.

With this people linnen-cloth is good marchandize, and of good request, whereof they make rolls for their heads, and girdles to weare about them.

Their Island is both rich and fruitfull: rich in golde, silver, copper, and sulphur, wherein they seeme skilfull and expert, not onely to trie the same, but in working it also artificially into any forme and fashion that please them.

Their fruits be diuers and plentiful, as nutmegs, ginger, long pepper, lemmotis, cucumbers, cocos, figs, sagu, with diuers other sorts: and among all the rest, wee had one fruite, in bignesse, forme, and huske, like a Bay berry, hard of substance, and pleasant of taste, which being sodden, becometh soft, and is a most good and wholesome victuall, whereof we tooke reasonable store, as we did also of the other fruits and spices: so that to confesse a trueth, since the time that we first set out of our owne Countrey of England, we happened vpon no place (Ternate onely excepted) where in we found more comforts and better meanes of refreshing.

At our departure from Barateue, we set our course for Iaua maior, where arriuing, we found great courtesie, and honourable entertainment. This Island is gouerned by 5. Kings, whom they call Raiah: as Raiah Donaw, and Raiah Mang Bange, and Raiah Cabuccapollo, which liue as hauing one spirite, and one minde.

Of these five we had foure a shipboord at once, and two or three often. They are wonderfully delighted in coloured clothes, as red and Greene: their vpper parts of their bodies are naked, saue their heads, whereupon they weare a Turkish roll, as do the Maluccians: from the middle downward they weare a pintado of lilke, trailing vpon the ground, in colour as they best like.

The Maluccians hate that their women should bee seene of strangers: but these offer them of high courtesie, yea the kings themselves.

The people are of goodly stature, and warlike, well prouided of swords and targets, with daggers, all being of their owne worke, and most artificially done, both in tempering their mettall, as also in the forme, whereof we bought reasonable store.

They haue an house in euery village for their common assembly: euery day they meete twise, men, women, and children, bringing with them such victuals as they thinke good, some fruites, some rice boiled, some hennes roasted, some sagu, hauing a table made 3. foote from the ground, whereon they set their meate, that euery person sitting at the table may eate, one reioysing in the company of another.

They boile their rice in an earthen pot, made in forme of a sugar loafe, being full of holes, as our pots which we water our gardens withall, and it is open at the great ende, wherein they put their rice drie, without any moisture. In the meane time they haue ready another great earthen pot, set fast in a fornace, boiling full of water, whereinto they put their pot with rice, by such measure, that they swelling become soft at the first, and by their swelling stopping the holes of the pot, admit no more water to enter, but the more they are boiled, the harder and more firme substance they become, so that in the end they are a firme & good bread, of the which with oyle, butter, sugar, and other spices, they make diuers sorts of meates very pleasant of taste, and nourishing to nature.

The French
pocks.

The French pocks is here very common to all, and they helpe themselves, sitting naked from
ten to two in the Sunne, whereby the venomous humour is drawen out. Not long before our de-
parture, they tolde vs, that not farre off there were such great Ships as ours, wishing vs to be-
ware: vpon this our Captaine would stay no longer.

The Cape of
Buena Esperanza
not so dange-
rous as the
Portugals
haue giuen
out.

From Iaua Maior we sailed for the cape of Good Hope, which was the first land we fell with-
all: neither did we touch with it, or any other land, vntill we came to Sierra Leona, vpon the coast
of Guinea: notwithstanding we ranne hard aboord the Cape, finding the report of the Portugals
to be most false, who affirme, that it is the most dangerous Cape of the world, neuer without in-
tolerable stormes and present danger to trauallers, which come nere the same.

This Cape is a most stately thing, and the fairest Cape we saw in the whole circumference of
the earth, and we passed by it the 18. of June.

Sierra Leona.
Differ-trees.

From thence we continued our course to Sierra Leona, on the coast of Guinea, where we arri-
ued the 22. of July, and found necessarie prouisions, great store of Elephants, Differs vpon trees
of one kinde, spawning and increasing infinitely, the Differ suffering no budde to grow. We de-
parted thence the 24. day.

We arrived in England the third of Nouember 1580. being the third yeere of our departure.

1579.

The relation of a Voyage made by a Pilot called *Nuno da Silua* for
the Vice-roy of new *Spaine*, the 20. of May, in the yere of our Lord 1579. in
the citie of *Mexico*, from whence it was sent to the Vice-roy of the *Portugall-Indies*:
wherein is set downe the course and actions passed in the Voyage of *Sir Francis Drake*
that tooke the aforesayd *Nuno da Silua* at *S. Iago* one of the Islands of *Cabo Verde*, and
caried him along with him through the Streights of *Magellan*, to the Hauen of *Guatules*
in new *Spaine*, where he let him goe againe.

*N*uno da Silua borne in Porto, a Citizen and inhabitant of *Guaia*, saith, that hee
departed out of his house in the beginning of *Nouember* in the yeere of our
Lord 1577. taking his course to *Cabo Verde*, or The greene Cape, where
he anchored with his Shippe close by the Hauen of the Island of *Sant Iago*,
one of the *Islandes* of *Cabo Verde* aforesayde, being the nineteenth of
Januarye

January in the yeere of our Lord 1578. And lying there, there came five ships, which seemed to be Englishmen, whereof the Admirall boorded his ship, and by force with his men tooke him out of his ship, bringing him in the boate aboard the Admirals shippe, leauing some of his best men aboard his ship: and although the fortresse of the Island shot foure or five times at them, yet they hurt not the Englishmen: who hauing done, set saile from thence to the Island of Braua, taking with them the ship of the sayd Nunoda Silua: being there, they filled certaine vessels with fresh water: from thence holding their course inward to sea, hauing first with a boat set the men of Nunoda Siluas ship on land, onely keeping Nunoda Silua in his ship, as also his ship with the wines that were therein. And Nunoda Silua saith, the cause why they kept him on boord was, because they knew him to bee a pilot for the coast of Brasilia, that hee might bring them to such places in those countreys as had fresh water.

Being put off from the Island of Braua, they helde their course to the land of Brasilia, which they descried vpon the first of Aprill, vnder the height of thirtie degrees: and without landing or taking in fresh water, they helde on their course to Rio de la Plata, that is, The riuer of siluer, lying vnder five and thirtie degrees, little more or lesse: where they went on land, and prouided themselves of fresh water.

Rio de Plata.

From thence they helde on their course till they came vnder nine and thirtie degrees, where they ankered: and being there, they left two of their five shippes behinde them, and sailed but foure in companie (that of Nunoda Silua being one) till they came to the Bay called Baya de las Illas, that is, The Bay of the Islands, lying vnder nine and fortie degrees, where it is sayde, that Magellan lay and wintered there with his shippe, when hee first discovered the Streight, which now holbeth his name. Into this Bay the twentieth of June they entred, and there ankered so close to the land, that they might send to it with a harquebuse shot: and there they sawe the land to bee inhabited with Indians, that were apparellled with skimmes, with their legges from the knees downeward, and their armes from the elbows downeward naked, all the rest of their bodies being clothed, with bowes and arrowes in their handes, being subtil, great, and well formed people, and strong and high of stature: where five of the Englishmen went on land to fetch fresh water, and before they lept on land, foure of the Indians came vnto their boate, to whome the Englishmen gaue bread and wine: and when the Indians had well eaten and drunke, they departed thence: and going somewhat farre from them, one of the Indians cryed to them, and sayde: Magallanes, Esta he minha Terra, that is, Magallanes, this is my countrey: and because the Englishmen followed them, it seemed the Indians fledde upward into the land, and being somewhat farre off, they turned backe againe, and with their arrowes shewe two of the English shippers, one being an Englishman, the other a Netherlander: the rest came backe againe and saued themselves in the boate, wherewith they presently put off from the shoare. Here they stayed till the seuenteenth of August, vpon the which day they set saile, running along by the coast about a league and a halfe from the land, (for there it is all faire and good ground, at twentie, and five and twentie fathome deepe) and were about foure or five dayes before they came to the mouth or entrie of the Streight: but because the wind was contrary, they stayed till the 24 of August before they entred.

Bay de las Illas.

The entrie or mouth of the Streight is about a league broad, on both sides being bare and flatte land: on the North side they sawe Indians making great fires, but on the South side they sawe no people stirring. The foure and twentieth day aforesayd, they beganne to enter into the Streight, with an Eastnortheast wind. This Streight may bee about an hundred and tenne leagues long, and in bredth a league. About the entrie of the Streight, and halfe way into it, it runneth right forth without any windings or turnings: and from thence about eight or tenne leagues towards the ende, it hath some bouces and windings, among the which there is one so great a hooke or headland, that it seemed to runne into the other land: and there it is lesse then a league broad from one land to the other: and from thence forward it runneth straight out againe: And although you finde some crookings, yet they are nothing to speake of. The issue of the Streight lieth Westward, and about eight or tenne leagues before you come to the ende, then the Streight beginneth to bee broader, and it is all high land to the ende thereof, after you are eight leagues within the Streight, for the first eight leagues after you enter is low flat land, as I sayd before: and in the entrie of the Streight you find the streame to runne from the South Sea to the North Sea.

The description
on of The Arctis
of Magellan.

And after they began to saile in with the Eastnortheast wind, being entred they passed along without any let or hinderance either of wind or weather: and because the high land on both sides lay covered with snow, and that all the Streight is faire and cleare, they helde their course a harquebuse

harquebuse-shot in length from off the North side, hauing nine and tenne fathome depth, with good ground, as I said before, where (if neede require) a man may anker: the hilles on both sides being full of trees, some of the hilles and trees reaching downe to the sea side in some places hauing plaine and euen land: and there they sawe not any great riuers, but some small riuers that issued out of the risses and breaches of the land: and in the countrey where the great Cape or crooking is, on the South side they sawe certaine Indian fishermen in their Canoes or skiffs, being such as they saw first on the North side, but more people they saw not on the South side.

Being out of the Streight on the other side, vpon the first of September of the aforesaid yeere, they held their course Northwest for the space of three dayes, and the third day they had a North-east wind, that by force draue them Westsouthwest, which course they held for the space of ten or twelue dayes with few sailes vp: and because the wind began to be very great, they tooke in all their sailes, and lay byrning till the last of September.

This was the
Elizabeth 9.
John Winters
ship.

The 24 day of the same moneth hauing lost the sight of one of their shippes which was about an hundred tunne, then againe they hoised saile because the winde came better, holding their course Northeast for the space of seuen dayes, and at the ende of the sayde seuen dayes, they had the sight of certayne Islands, which they made towards for to anker by them, but the weather would not permit them: and being there, the wind fell Northwest: whereupon they sailed West-southwest.

They were di-
uen unto 57.
degrees of sou-
therly latitude.

The next day they lost the sight of another ship of their company, for it was very foule weather, so that in the ende the Admirals shippe was left alone, for the ship of Nuno da Silua was left in the Bay where they wintered before they entered into the Streights: and with this foule weather they ranne till they were vnder seuen and fiftie degrees, where they entered into a haven of an Island, and ankered about the length of the shot of a great piece from the land, at twentie fathome deepe, where they stayed three or foure dayes, and the wind comming Southward, they weped anker, holding their course Northward for the space of two daies, and then they espied a small inhabited Island, where being arriued, they strooke sailes, and hoised out their boate, and there they tooke many birds and Seales.

The Isle of
Mocha in 38.
deg. 30. min.

The next day they set saile againe, holding their course Northnortheast, and North, to another Island lying five or six leagues from the firme land, on the North side of the Streight, where they ankered about a quarter of a league from the land, in twelue fathome water. This Island is small and lowe land, and full of Indians, the Island being altogether possessed and inhabited by them, where they hopped out their boate, wherein the Admirall and twelue Englishmen entered, going to fetch fresh water, and to seeke for victuals: and being landed vpon the Island, the Indians in exchange of other things, brought two Spanish sheepe, and a little Haiz or rootes whereof they make bread, and because it was late, they returned againe vnto their ship, without doing any other thing for that day.

Sir Francis
Drake wound-
ed.

The next day the said Captaine with the aforesaid twelue men being harquebussiers, rowed to land againe, and set two of their company on shore with their vessels to fetch fresh water, and by the place where they should fill their water there lay certaine Indians secretly hidden, that fell vpon the two Englishmen and tooke them: which they in the boat perceiuing, went out to helpe them, but they were so assailed with stones & arrowes, that all or the most part of them were hurt, the Captaine himselfe being wounded with an arrow on the face, and with another arrow in the head, whereby they were constrained to turne backe againe, without once hurting any of the Indians, and yet they came so neere the boate, that they tooke foure of their oares from them. This done, they set saile againe, running along the coast with a South winde, sailing so for the space of five dayes, passing by the haven called Sant Iago, and put into another haven, and there they tooke an Indian that lay fishing in a Canoe, giuing him linnen and butchers chopping knives, with other trifles, and not long after there came another Indian aboard their shippe called Felipe, and he spake Spanish, he gaue the English Captaine notice of a certaine shippe that lay in the haven of Sant Iago, which they had left five leagues behind them: with that intelligence the Indian being their guide, the next day they set saile and went to the aforesaid haven of S. Iago, and entering therein, they tooke the said shippe, wherein they found a thousand seuen hundred and 70 Botijas or Spanish pots full of wine, and other things: which hauing done, they lept on land, where they rooke certaine sakes with meale, with whatsoeuer they could find; they tooke likewise the ornaments and the reliques out of the Church, where with they departed from thence, taking the aforesaid shippe, with two men (that they found in her) with them, and so departed from that haven, which lyeth vnder 32 degrees and a halfe, running along by the coast till they came vnder one and thirtie, and thirtie degrees: which was the place where they had

The haven
of S. Iago in 32.
degrees and
a halfe.

appointed

appointed to meete, and there to stay for ech other, if by tempest or foule weather they chanced to be separated, and so loose eche others company.

And comming vnder thirtie degrees, they found a very good haven, whereinto they entred, and ankered at five fathome deepe, the shot of a great peece from the land, which was right ouer against a river, where theyooke in fire pipes of fresh water: and to defend them that fetched the water, they set twelue men vpon the land, and being busied in filling of their water, they espied a company of men comming towards them, whereof halfe of them were Spaniards, being about two hundred and fifty horsemen, and as many footemen, but they had no sooner espied them, but they presently entred into the boat, and escaped away, loosing but one man.

The same night they set saile againe with both their ships, running along the coast about ten leagues farther, where theyooke in some fresh water, but because they perceiued certaine horsemen, they departed without lading any more water.

From thence they followed on their course along the coast for the space of 30 leagues, where they entred into a desert or vnhabited haven: yet they went not on land, for euery day they saw people vpon the shore, & there they made out a small pinnesse, the peece whereof they brought ready framed out of England, and hauing prepared it, they launched it into the water, wherein the Captaine with fiftene men entred with the chiefe boatesman called Iohn the Greeke, (being Master of the ship which they had taken in the haven of S. Iago,) wherewith they went to see if they could find the two shippes that they had lost by stormie weather, as I sayd before: and likewise thinking to goe on land to fill certaine vessels with fresh water, they durst not venture, for they saw people on all sides of the shore: so that in the ende they returned againe without hearing of the other ships: being there, theyooke all the ordinance out of their ship, and new dressed and rigged her: which done, they put a small peece of ordinance into the pinnesse, wherewith they set saile againe, following on their course.

Hauing sailed thirteene dayes, they came to an Island lying about the shotte of a bafe from the land, where they ankered, and there they found foure Indian fishermen in two Canoas, who told them that on the firme land they might haue fresh water, but they vnderstanding that there was not much, and that it was somewhat within the land, would not spend any time about it, but set saile againe, leauing the fishermen with their Canoas, following on their course along by the shore.

The next day being somewhat further, they espied certaine Indian fishermen that were vpon the land in their houses, which the English captaine perceiuing, presently entred into his pinnesse, and rowed on land, where heooke three of the said fishermen, taking with him halfe of the fish that lay packed vpon the shore ready to be laden, with the which Indians and booty, they came on boord againe.

The next day following, they saw a barke laden with fish, that belonged to the Spaniards, with foure Indians in it. This barke with the Indians and the fish theyooke, and bound the Spanish ship to their sterne, and so drowe it after them, leauing the said Indians within it, who by night vnbound the barke, and secretly made away with barke and fish, and were no more seene. The next day the Captaine went into the pinnesse, and because he saw certaine houses vpon the shore, he made thither, and being on land, he found two men in them, one whereof heooke, leauing the other behind, and there he found three thousand pesos of silver, (euery peso being the value of a ryall of eight,) and seven Indian sheepe, and hennes, &ooke al whatsoeuer they found: wherewith they departed from thence, following on their course. And two dayes after they came to the haven called Arica, where they found two ships, the one laden with goods and Spanish wares, out of the which theyooke only two hundred Botijas, or Spanish pots with wine, and out of the other seven and thirty barres of silver, which are peece of ten or twelue pound eche barre, and thinking to leape on shore (with two barks that they found in the said haven, with about seven and thirty harquebuses and bowes) they perceiued on the land certaine horsemen comming towards them, whereupon they left off their pretence, andooke with them a Negro that they found in the barks, with whom they returned aboard.

The next day in the morning they burnt the ship, that was laden with the Spanish wares, andooke the other with them, passing forward with it on their course, the Captaine sailing along the shore with his pinnesse, and the ship keeping about a league from him to seaward, to seeke for a ship whereof they had intelligence: and hauing in that maner sailed about five and forty leagues, they found the ship that lay at anker in a haven, who about two houres before had bene aduertised of an English pirate or sea-rouer, and had discharged eight hundred barres of silver out of her, and hidden it on the land, which silver belonged to the king of Spaine, of the which silver the English.

Englishmen had receiued some intelligence, but they durst not go on land, because there were many Indians and Spaniards that stood to guard it, and they found nothing in the ship but three pipes of water: the ship they tooke with them; and being about a league in the sea, they hoysed up all her sailes and let her drine, doing the like with the ship that they had taken in Arica, as also the other of Sant Iago, which likewise they let drine, following on their course with their owne ship, and the pinnesse.

Calao de Lyma.

Being seven or eight leagues from the haven of Calao de Lyma, they espied three ships, and hooyding one of them, they tooke three men out of her, and so held on their course towards Calao de Lyma, where they entred, being about two or three houtes within night, sailing in betweene all the ships that lay there, being seuentene in number: and being among the ships, they asked for the ship that had laden the siluer, but when answer was made them, that the siluer was layd on land, they cut the cables of the ships, and the masts of two of the great ships, and so left them. At the same time there arriued a ship from Panama laden with wares and merchandise of Spaine, that ankered close by the English ship, which was, while the English Captaine sought in the other ships for the siluer. As soone as the ship of Panama had ankered, there came a boat from the shoze to search it: but because it was in the night, they let it alone till morning, and coming to the English ship, they asked what ship it was: whereupon one of the Spanish prisoners (by the English Captaines commandement) answered and said it was the ship of Michael Angelo, that came from Chili: which they of the boat hearing, sent a man on boord, who climbing by, lighted upon one of the great peeces, wherewith he was afraid, and presently stept backe againe into the boat (because the shippes that lay there, and that sailed in those countreys, vsed to carry no great shot) and therewith they were abashed, and made from it: which the ship of Panama hearing, that was newly come in, shee iudged it to be a rouer, and therewith cutting her cables, shee put to sea, which the Englishmen perceiuing, shipped certaine men in their pinnesse, and followed her: and being hard by her, they badde her strike, which they of the ship refused to doe, and with a harquebuse shot killed one of the Englishmen, wherewith they turned againe into their shippe, and presently set saile, following after the ship, which not long after they overtooke: which they of the shippe perceiuing, hoysed out their boate, and leaping into it, rowed to the land, leaving the shippe with all the goods, which the Englishmen presently tooke, and with her sayled on their course.

The next day they saw a boat with sailes making towards them, where by they presently mistrusted it to be a spie, and not long after they perceiued two great ships coming towards them, which made the English thinke they came to fight with them, whereupon they let the shippe of Panama drine, thereth leaving Iohn the Greecke, with the two men that they had taken the same day that they entred into the Calao de Lyma, as I sayde before, and presently hoysed all their sailes, and sailed forward, not once setting eye againe vpon the aforesayde ships, for they made towards the ship of Panama, which the Englishmen let drine. From thence they sailed againe along the coast, following on their course: and hauing sailed certaine dayes, they met a frigate that went towards Lyma, laden with wares and merchandises of the countrey, from whence the Englishmen tooke a lampe and a fountaine of siluer, and asked the pilote being a Spaniard, if they met not with a ship, that they vnderstood should be laden with siluer, but the one pilote saide he met her not, and the other said he saw her about three dayes before. This frigate came not to the ship, but to the pinnesse, wherein the Captaine sailed, for the pinnesse ranne close by the shoze, and the ship kept a league and a halfe from the lande: whereupon they let the frigate goe, following on their course.

Payta.

Two dayes after they came to the haven called Payta, where they found a ship laden with Spanish wares, which the pinnesse booyed, and tooke without any resistance: for as soone as the Spaniards perceiued the Englishmen, they presently made to land with their boate, and two of them lept into the sea, none staying in the shippe, but the Master, Pilote, and some Negros, out of the which shippe the Englishmen tooke the pilote, and all the bread, hennies, and a hogge, and so sailed forward with the ship: but being about two harquebuse shot to seaward, they let it goe againe, not taking any thing out of it, and asking after the ship which they sought for, they told them that about two dayes before she departed from that place, wherewith they followed on their course, and before night they met with a ship of Panama, which they presently booyed, but tooke nothing from her but onely a Negro, and so left it, holding on their course.

The next day being the first of Februarie, they met another ship that sailed to Panama, laden with fish and other victuals, and fortie barres of siluer, and some gold, but I know not how much, which they tooke, and sent the passengers (with two friers that were in her) in a boate to land.

The

The next day they hanged a man of the ship, because hee would not confesse two place of golde that he had taken, which after they found about him: which done, they let the ship drif, following on their course.

The first of March towards noone, they espied the ship laden with silver, being about foure leagues to seaward from them: and because the English ship was somewhat heauie before, whereby it sailed not as they would haue it, they tooke a company of Botijas or Spanish pots for the better: and the shippe that sayled towards Panama made towards the English shippe to know what shee was, thinking it to bee one of the shippes that vled to saile along the coastes, and to traffique in the countrey: and being hard by her, the English Captaine badde them strike, but the other refusing to doe it, with a great peece hee shotte her mast ouerboord, and hauing wounded the Master with an arrowe, the shippe presently yeeldeo, which they tooke, and sayled with her further into the sea, all that night and the next day and night, making all the way they could.

The third day being out of sight of the land, they beganne to search the ship, and to lade the goods out of her into their ship, which was a thousand three hundred barres or peeces of silver, and foureteene chestes with ryals of eight, and with gold: but what quantitie it was I know not, onely the passengers sayd that there was great store, and that three hundred barres of the silver belonged to the king, the rest belonged to certaine merchants. That done, they let the ship with the men saile on their course, putting the three pilotes in her that they brought with them, so that as then they had none but their owne men aboard, being the first of March, and from thence they held their course towards the land of Nicaragua.

Nicaragua.

The thirteenth of March, either the day before or after, in the morning they descried land, not being very high, being a small Island two leagues from the firme land, and there they found a small Bay, wherein they ankered at fife fathome deepe close by the land, and there they stayed till the twentieth day. Upon the which day there passed a Frigate close by the Island, which with their pinnelle they followed, and taking her, brought her to the English ship, which frigate was laden with Salsaperilla, and Botijas or pots with butter and hony, and with other things. The English Captaine went on boord, and cast the Salsaperilla on the land, leauing all the rest of the wares in the frigate, and then he put all his peeces into the frigate, that so he might lay his ship on shore, to new calke and trimme her, which continued till the three and twentieth of March. Which done, and hauing made prouision of wood and fresh water, they held on their course along by the coast, sayling Westward, taking the sayd frigate and her men with them, and hauing sailed two dayes, they tooke their men out of her, and set them in the pinnelle, among the which were foure sailers, that meant to sayle to Panama, and from thence to China, whereof one they tooke, with the letters and patents that hee had about him, among the which were the letters of the king of Spaine, sent to the gouernour of the Philipinas, as also the sea-cards wherewith they should make their voyage, and direct themselves in their course.

The Island of Canno. The first sight of Nueua Espanna.

They calke and trimme their ship at the Ile of Canno ouer against Nicaragua.

Sea-charts of the South sea taken.

And so sailing vntill the first of Aprill, about euening they discovered a shippe that held two leagues to seaward from the land: and before the next day in the morning they were hard by her, and suddenly fell vpon her while her men slept, and presently made the men enter into their ship, among the which was one Don Francisco Xarate. Which done, they followed on their course with the sayd ship, out of the which they tooke certaine packes and other wares, but I know not what it was. They likewise tooke a Negro out of it, and three dayes after they both let the ship and men goe whether they would, setting therein the two saylers that should goe for China, which they had taken in the frigate, keeping onely one sailer to shew them where they should find fresh water, to the which ende they tooke the emptie vessels with them to fill with water, and so kept on their course to the haue of Guatulco, where they put in, being vpon Monday the thirteenth of Aprill, and hauing ankered, they stayed there till the five and twentieth of Aprill: and about three or foure houres within the night, they set sayle, holding their course Westward, and an houre or two before they let Nuno da Silva goe, putting him into another ship, that lay in the haue of Guatulco.

They arrive at Guatulco. Aprill 13. Still now.

Nuno da Silva set on land.

From thence forward the Englishmen passed on their voyage, to the Islands of Malucos, and from thence they passed by the Cape de Buena Esperança, and so to England, as it is well known, so that this is onely the description of the voyage that they made, while the said pilote Nuno da Silva was with them.

Hereafter followeth the copie of a letter written by sir Francis Drake (being in the South sea

sea of New Spaine, in his ship called The Pellican or the golden Hinde with the ship of *Sant Iohn de Anton*, which hee had taken) to his companions in the other shippes that were of his company, and by foule weather separated from him, as I said befoze: The contents wherof were these:

Master *Winter*, if it please God that you should chance to meete with this ship of *Sant Iohn de Anton*, I pray you vse him well, according to my word and promise giuen vnto them; and if you want any thing that is in this ship of *Sant Iohn de Anton*, I pray you pay them double the value for it, which I will satisfie againe, and command your men not to doe her any hurt: and what composition or agreement we haue made, at my returne into *England* I will by Gods helpe perfourme, although I am in doubt that this letter will neuer come to your hands: notwithstanding I am the man I haue promised to be: Beseeching God, the Sauour of all the world, to haue vs in his keeping, to whom onely I giue all honour, praise and glory. What I haue written, is not only to you *M. Winter*, but also to *M. Thomas*, *M. Charles*, *M. Canbe*, and *M. Anthonie*, with all our other good friendes, whom I commit to the tuition of him that with his blood redeemed vs, and am in good hope, that we shal be in no more trouble, but that he will helpe vs in aduersitie, desiring you for the Passion of Christ, if you fall into any danger, that you will not despaire of Gods mercy, for hee will defend you and preferue you from all danger, and bring vs to our desired haven, to whom be all honour, glory, and praise for euer and euer. Amen. Your sorowfull Captaine, whose heart is heauy for you: *Francis Drake.*

The voyage of *M. Iohn Winter* into the South sea by the Streight of *Magellan*, in consort with *M. Francis Drake*, begun in the yeere 1577. By which Streight also he returned safely into *England* the second of Iune 1579. contrary to the false reports of the Spaniards which gaue out, that the said passage was not passeable: Written by *Edward Cliffe* Mariner.

In the yeere of our Lord 1577. the 19. of September there went out of the riuer of *Thamis* ouer the lands ende one good and newe ship called the *Elizabeth*, of 80 tunnes in burthen: in company wherof went also a small pinnesse being 12 tunnes in burthen called the *Benedict*. The sayd ship with her pinnesse arriued at *Plimmouth*: in which haven were three ships more, one called the *Pellican* in burthen 120. tunnes, being Admirall of the flecte: a barke called the *Marigold* in burthen thirty tunnes, with a flieboat of 50 tunnes. These ships had in them 164 men, and were victualled and furnished with all kind of necessary provision to make a voyage into the South sea. Wee set sayle the 15 of November, but were put into *Falmouth* by contrary winds: and afterward were constrained to put backe againe to *Plimmouth* to repaire the great hurt which diuers of our flecte had sustained in that tempest: and at length the 13 of December wee set forward from thence vpon our voyage.

Then set for-
ward from
Plimmouth the
13. of Decem-
ber.
Cape Cantin.
Alaphi.

Mogador an
Island on the
coast of Barbary.

The five and twentie of December we had sight of *Cape Cantin*: this Cape lyeth in the latitude of 32. degrees and 30. minutes vpon the coast of *Barbarie*, neere to a towne called *Alaphi*. The land all along this coast is hie and great mountaines. Sayling from the sayd Cape South-southwest about 18 leagues, wee found a litle Island called *Mogador* an English mile distant from the maine, we sent our boate to sound the depth, and at the returne thereof we vnderstood by our men that the haven was without danger, hauing five fathomes of water fast by the rocks entering in vpon the poput of the Island: wherefore wee entered in with our whole flecte the 27 of December. The Doozes that were on the maine seeing our ships ride there, came from the mountaines to beholde vs: whom our Generall *M. Francis Drake* elpying, shewed to them a white flagge in token of friendship, and sent his boate to shoze with one of our men, which not long befoze had bene captiue in the countrey, and partly vnderstood their language, to talke with them. When the boate came to shoze, the sayd man went on land to them: to whom they shewed many tokens of friendship, casting vp their eyes to heauen, and after looking towne vpon the ground, as though they had swozne by heauen and earth, promising peace. That done two of them came aboard to our Generall, and our man stayed on shoze for a pledge.

These two Doozes, after they had made good cheere, and received certaine gifts of our Generall went to shoze againe, and our man came aboard also. But the craftie flaures hauing deuised to betrap vs, came the next day along the sea side with certaine camels as though they had brought some merchandize to traffique with vs: to whom our General sent certaine of our men in the boate to learne what they had brought, giuing charge that none of them should gee on land. But the boate

boate being neere the shore one of our men more hastie then wise leapt to shore; whom the Moores immediately tooke by force, and setting him on horsebacke caried him away into the mountaines, so that we saw him no more after that time. In the meane time wee set vp a Pinnelle in the island, whereof wee brought 4 loose out of England: which being finished, the last of December wee weighed, and came out of the North part of the island, the same way that wee came in: for the South chanel is dangerous, hauing but 8 foote at low water, and is full of rockes. This island standeth in 31 degrees 1 of latitude, being one league in circuite, not inhabited; and hath infinite number of doues vpon it.

Four loose
Pinnelles
brought out of
England.
Mogador in 31
degrees and
an halfe.

At Sea wee met with a contrary winde, so that wee beate off and on, till the 4 of Januarie 1578, at which time a more fauourable winde began to blowe at Northeast, and then wee set our course Southsouthwest, till on the 7 of Januarie wee came as high as Cape de Guer, which standeth in 30 degrees of latitude. Here our new Pinnelle tooke 3 Spanissh fisher-boates, called Cantars. From thence wee ran Southwest and Southsouthwest, carying the sayd Cantars along with vs, till the 10 of the sayd moneth, at which time wee found our selues in 27 degrees 4 min. being 10 leagues Westsouthwest from Cape Bojador, which lieth on the maine land of Africa. From thence we ran South and by West, untill the 13 day at noone, at which time wee had sight of Rio del Oro, where our Pinnelle tooke a Portugall carauel. The 15, the Marigold took a carauel about Cape de las Barbas. And thence we ran along the coast being low sandie land, till wee arrived at Cape Blanco. This Cape sheweth it selfe like the corner of a wall vpright from the water, to them which come from the Northwardes: where the North pole is eleuated 20 degrees 30 min. And the Crociers being the guards of the South pole, be raised 9 degrees 30 min. The said Crociers be 4 starres, representing the foyme of a crosse, and be 30 degrees in latitude from the South pole: and the lowest starre of the sayd Crociers is to be taken, when it is directly vnder the hypermost; and being so taken as many degrees as it wanteth of 30, so many you are to the Northwardes of the Equinoctial: and as many degrees as be more then 30, so many degrees you are to the Southwardes of the Equinoctial. And if you finde it to be iust 30 then you be directly vnder the line.

Cape de Guer in
30 degrees.

Cape Bojador in
27 degrees, 4.
min.

Cape de las
Barbas.
Cape Blanco in
20 degrees,
30. min.

Within the sayd Cape Blanco wee tooke one ship more, all the men being fled away, saue two. We brought this ship with all the rest which wee had taken before, into our harbour, 5 leagues within the Cape, where we washed and trimmed our ships, and went to sea againe the 22 of Januarie, leauing all the Spaniards there with their ships, sauing one Cantar, for which our Generall gaue them the Benedict. In which course wee ran continually to the Southwest, untill the 26 day, when wee found the North pole rayled 15 degrees 15 min. hauing the winde Northeast or Eastnortheast, which is common on that coast. For it doeth blow for the most part continually from the shore: and we kept the sayd course, untill wee came neere the island Bonauilla, within 2 leagues off the shore; so that wee haled off againe Northwest, the space of one houre, and then ran Southwest againe, till day light the 27 of Januarie: from which time wee ran Southsouthwest, untill 3 of the clocke in the afternoone, at which time we approached neere the island of Mayo, being high and hilly land, sauing that the North part of the island stretcheth out it selfe, a league into the sea very lowe. Wee came to anker vnder the West part of this island the 28 day of Januarie, and stayed there untill the 30 of the same. During which time, our General appointed M. John Winter and M. Thomas Doughtie, to goe ouer to the East part of the island with 70 men, to get some fresh victuals. And as wee marched through the island, about the middelt thereof, we found one house hauing a garden belonging to it, in which wee found ripe grapes, also ripe gourds, and melons, in the most dead time of our Winter. Wee found also a tree which beareth the fruite Cocos, which is bigger then a mans head, hauing within the ytter coate, which is about 3 inches thicke, a certaine nut as bigge as two fists, and hath within a white substance, cleauing fast to the shell, which is halfe an inch thick, very pleasant to taste, and within that a certaine hollownesse or voyde place, wherein is contained a pure and pleasant water in taste, and as some thinke, maruelous comfortable. As we passed through this island the inhabitants fledde into the mountaines, so that we could haue no talke with them.

The isle of
Maio.

Ripe grapes
in Januarie.

The Cocos
tree.

But we vnderstood by the Portugals which came with vs, that they were but seruants to those of S. Iago, to keepe their cattell and goates, which bee very plentiful in this island: but we found them so wilde, that we could take none sauing some yong kiddes; wherefore wee returned backe againe to our shippes. The Portugals had salted their Welles neere to the sea, so that we could not water.

Then our Generall commanded euery man aboard: afterward we weighed, and ranne ouer to Sant Iago the same night, being 10 leagues distant from thence: which seemed to bee a fruitfull

island and well peopled. For wee sawe 3 towne on the shore: two of which stode at vs, as we passed along. Our General made a shot at one of them againe. And sailing along the shore, at the South part of the island, wee tooke a Portugal Shippe laden with wine and other commodities. This island hath 15 degrees in latitude.

The isle of Fogo,

Braua,

Nonnez de Silua.

From hence wee ran Southsouthwest to the isle of Fogo, so called, because it casteth continually flames of fire and smoake out of the top thereof, all the whole island being one high mountaine. Two leagues West from the isle of Fogo, is another island called Braua, where the sea is about 120 fathomes deepe neere to the shore, so that we could not anker for the depth of the sea, by reason whereof we were constrained to depart without water. Here the Generall discharged the Portugals, giuing unto them our Pinnette which we built at Mogador: with wine, breade, and fish, and so dismissed them the first of Februarie, taking one of there companie along with him, called Nonnez de Silua. The 2 of Februarie wee set off from Braua, and directed our course South-southeast, running so untill the 9 of Februarie, being within 4 degrees of the Equinoctial: at which time, wee had the ayre troubled with thunder and lightning, notwithstanding calme with extreme heate, and diuers times great showes of raine.

Flying fishes.

Continuall raine at certaine seasons neere the Equinoctial.

Land in 31 degrees, 30 min. to the South of the Equinoctial.

Cape Sant Marie at the mouth of the Riuer of Place.

Cape of Hope in 47 degrees.

The 17 day wee were right under the line, which is the most seruent place of the burnt Zone: where in the middelt of Februarie we sustained such heat, with often thunder and lightnings, that wee did sweate for the most part continually, as though wee had bene in a stoue, or hote house. Here we saw flying fishes in great abundance, some a foote long, some lesse. Their fynnes where with they flye be as long as their bodies. They be greatly pursued by the Dolphin and Bonitoes, whom as soone as the flying fishes espye, immediately they mount out of the sea in great numbers, and fly as long as their fynnes continue moyst: and when they bee dry, they fall downe into the sea againe. And here is to bee noted, that after we came within 4 degrees of the Equinoctial, untill we were so much past it, no day did passe without great store of raine.

From hence wee directed our course towards the Southsouthwest untill the 5 of Aprill: at which time, wee had a very sweet smell from the land. The same day at noone wee sounded, and found the sea to be 32 fathomes deepe, the ground being soft oaze: and shortly after we had but 28 fathomes, being 31 degrees and 30 min. beyond the Equinoctial, towards the South pole: and wee had sight of the land about 3 of the clocke in the afternoone the same day. This land is very lowe neere the sea, and his mountaines by within the countrie.

From hence we ran towards the Southsouthwest, untill the 14 of Aprill; when wee found a little island, lying neere the maine land of Cape Sant Marie, by which is the enterance into the riuer of Place, being in 35 degrees of Southerly latitude. From this island wee ran 7 or 8 leagues along the maine, where we came to an anker under a Cape, which our General called Cape Ioy. Here euery ship tooke in fresh water. Then we departed, and ran about 15 leagues towards the Westsouthwest, where we found a deepe bay. In the bottome of this bay is a long rocke, not far from the maine: which rocke so breaketh the force of the sea, that shippes may ride commodiously under the same for Southerly windes. Vntill the 19 of Aprill, and roade there untill the 20 day at night. Here wee killed some seales. And from thence wee ran about 10 leagues, where we found the water very much troubled and fresh, and wee ran in so farre that we had but 3 fathomes water. Here wee tooke in fresh water, and ranne ouer to the Southward, and fell with the land which lyeth on the South part of the riuer of Place, the 27 day. This land lyeth Southsouthwest and Northnortheast, and is hold 3 or 4 leagues into the sea. Here our fly-boat lost our companie in the night.

From hence we ran toward the Southwest, hauing much foule weather and contrary windes, untill the 12 of May: and then wee sounded and had 28 fathomes, with blacke sande and small stones, and had sight of the land the same morning about 10 of the clocke. This land is 47 degrees in latitude. Our Generall named this land, Cape Hope. We came to anker there, about 3 leagues from the shore the same night. The next morning our General, went to the maine in a boate: by meanes whereof hee had bene in great danger, if the Marigold had not weighed, and ran in with the shore, and so tooke up the boate and men: for there arose such foule weather, with a chicke myst and a Southeast winde, that they were not able to recover their shippes againe which rode without: which were forced to weigh and runne to sea. The Prize weighed the 13 at night, and ran to the Southwards: the other stayed untill the 14 in the morning and then ran to sea, not being able to ride.

In the meane time while the Marigold rode under the shore, our Generall with certaine of his men went on land, where they sawe two naked men, sauing that they had a certaine skinne wrapt about their shoulders and robes upon their heades. To whom our General shewed a white cloth, in

in signe of friendship, who with certaine gestures of their bodies and handes, shewed the like to him againe, speaking likewise and making a noyle, which our men could not vnderstand, but they would in no case come neere our men. Our Generall went the next day to the same place againe: but hee had no sight of the foresaid maro or any other. Howbeit hee found certaine fowles, as Ditches, and other sea fowles, which the sayd men had newly killed, and laid them on an heape together, as though they had done that for our men of purpose. There was also a certaine bagge with litle stones of diuers colours, which together with the victuals our Generall brought aboard, and then weighed, and came to sea the 15 of the sayd moneth: where all the rest of the fleet mette with him, saue the Prize, and the fly-boat. The 16 day wee ran into a bay to the Southwardes of Cape Hope, where we roade at that night. The next morning our Generall weighed, & ran with- out the cape to the Northwardes, & sent the Elizabeth towards the South to looke for the Prize: leaving the Marigold and the Canter to search if in the bay they could finde any fit harbor for our ships. The same day being the 14 of May, our Generall met with the fly-boat (which lost vs the 27 of April) and brought her into saide bay. The 18 in the morning we had word from the ships, that they had found a safe harbour and we weighed and ran in, the same day being Whitsunday. The Elizabeth weighed & put forth againe to sea, the 20 day, to looke for the Prize, and not finding her came in the next day. In the meane time our Generall discharged the fly-boat, and ran her vpon the maine, where we broke her vp for fire-wood. In the meane while there came about 30 of the countrey people downe to the sea side: and when they were within 100 pases of our men, they set themselves in array very orderly casting their companie into the forme of a ring, euery man ha- uing his bow and arrowes: who when they had pight a staffe on the ground, with certaine glasses, beads, and other trifles, returned backe. Then the countrey people came and tooke them and after- ward approached neerer to our men, shewing themselves very pleasant, insomuch that M. Winter daunced with them. They were exceedingly delighted with the sound of the trumpet, and vialles. They be of a meane stature, well limmed, and of a dusky, tawnye, or browne colour. Some of them hauing their faces spotted with diuers colours, as red, white, and blacke. Their apparel is a cer- taine kttune wherein they wrap themselves, not reaching so low as to couer their priuy members, all the rest of their bodies be naked, sauing that they weare certaine rouses vpon their heads, whose ends hang ouer their shoulders. Euery one beareth his bow, being an ell in length, and arrowes made of reeds, hauing heads, framed very strangely & cunningly of a flint stone. They be much gi- uen to mirth and iollity, and are very sly, and ready to steale any thing that comes within their reach: for one of them snatched our Generals cap from his head (as he stouped) being of skarlet with a golden band: yet he would suffer no man to hurt any of them. They eate rawe flesh, for we found seales bones, the raw flesh whercof they had gnawen with their teeth like dogs. In this bay we watered, and victualed with seales: for there is such plentie that we slew about 200 in the space of one houre vpon a litle island.

Ditches and sea fowles.

The description of certaine Sauiages.

The port of Sant Julian.

Two of our men slaine by the Paragons.

The 3 of June we departed from thence, and being at sea we were put backe againe to Cape Hope, where we discharged our Canter and let her float in the sea. Afterward wee ran to the 50 degree of the South pole, where wee met with the winde Southerly, and so turned backe againe to the Northward. And as we ran along the shore, we met with our Prize the 19 of June, which we lost the 13 of May. The day following we found a harbour, into the which we entred with all our fleet the same day. This port is 49 degrees and an halfe in latitude, and I suppose it to be the same which Magellan named Port S. Julian: for we found a gybbet on an hill, wherupon they were exe- cuted that did conspire against Magellan, and certaine bones also of their dead bodies. The 22 of this moneth our Generall going to shore vpon the maine with 7 or 8 of his men, met with 3 of the Paragons hauing bowes and arrowes, who came neere to our mē making them signes to depart. Whereupon a gentleman being there present, and hauing a bowe and arrowes, made a shot to the end to shew them the force our bowes, with the which shot his string broke: wherupon the Para- gons presumed to encounter them, directing their arrowes first at our M. Gunner, who had a ca- liuer ready bent to shot at them but it would not take fire: and as he leuelled his peece one of them shot him through the brest, and out at the backe, wherewith he fell downe starke dead. Also the gen- tleman that shot the arrow was so wounded that hee dyed the 2 day after and with the other was buried in a litle island lying in the said port. Our men left the slaine man on shore till night, and then fetched him in a boat. In the meane time the Paragons had stript him of all his clothes, and blewed his body laying his clothes vnder his head, and so left him vntouched, sauing that they had stucke the English arrow in his left eye. These men be of no such stature as the Spaniards re- port, being but of the height of English men: for I haue seene men in England taller then I could see any of them. But peradventure the Spaniard did not thinke that any English men would haue

come thither so soone to haue dispyoued them in this & diuers others of their notorious lies: & here-
fore they presumed more boldly to abuse the world. The last of June M. Thomas Doughie was
brought to his answere, was accused, and conuicted of certaine articles, and by M. Drake condemn-
ed. He was beheaded the 2 of July 1578, whole body was buried in the said island, neere to them
which were slaine. We wintered in this port 2 moneths, during which time we had such weather
as is commonly in England in the depth of winter, or rather colder. After we had trimmed vp our
ships, and made prouision of fewell and fresh water, we departed thence with 3 ships the 17 of Au-
gust about noone. And the 20 of the said moneth we seized Cape Victorie, by the which Cape is
the way into the South sea, called The streights of Magellan, the first discoverer thereof. We
found the mouth of the streights to be 52 degrees: Southward of Equinoctial. In this streight,
we found the sea to haue no such current as some do imagine, (following the course of the primum
mobile from East to West) but to eb and flow as ordinarily as bys other coasts, rising 5 fathoms
vp right. The flood riseth out of the East ocean, and stretcheth it selfe so far into the streights, that
it meeteth the flood of the South sea neere about the midst of the streights, where it bendeth like
an elbow, tending to the West-north-west into the South Sea, whereas the East part from the
mouth of the streights to this elbow lyeth South-west and by West, or South-west to 53 de-
grees and 1/2, 30 leagues within the streights there be 3 islands. To the greatest our general gaue
the name of Elizabeth: to the 2 Bartholomew, because we found it on S. Bartholomews day: the
3 he named S. Georges island. Here we staid one day & victualled our selues with a kinde of foule
which is plentiful in that isle, and whole flesh is not farre unlike a fat goose here in England: they
haue no wings, but short pmeons which serue their turne in swimming. Their colour is somewhat
blacke mixt with white spots vnder their belly, and about their necke. They walke so vp right, that
a farre off a man would take them to be litle children. If a man approch any thing neere them, they
run into holes in the ground (which be not very deepe) whereof the island is full. So that to take
them, we had stauies with hookes fast to the ends, wherewith some of our men pulled them out, and
others being ready with cudgels did knocke them on the head, for they bite so cruellie with their
crooked bills, that none of vs was able to handle them aloue. The land on both parts is very high:
but especially toward the South sea, monstrous high hills and craggy rocks do exalt themselves,
whose tops be all hoary with snowe, in the moneths of August, September, and October. Not-
withstanding the lower partes of the hills are replenished and beautified with impenetrable
thicke woods of strange and vnkown trees, flourishing all the yere long. Here we made prouisi-
on of fewel and fresh water, and passed by Cape Desado into the South sea the 6 of September.
And running along towards the North-west about 70 leagues, the winde turned directly against
vs, with great extremitie of foule weather, as raine, haille, snow, and thicke fogs which continued so
more the 3 weekes, that we could beare no saile, at which time we were driven 57 degr. to the South
pole. The 15 of September the moone was there eclipsed, & began to be darkned presently after
the setting of the sunne, about 6 of the clocke at night, being then Equinoctial vernal in that coun-
tre. The said eclipse happened the 16 day in the morning before one of the clocke in England,
which is about fixe houres difference, agreeing to one quarter of the world, from the Meridian of
England towards the West. The last of September being a very foule night, and the seas fore
growne, we lost the Marigold, the Generals shippe and the Elizabeth running to the East ward
to get the shore, whereof we had sight, the 7 of October, falling into a very dangerous bay full of
rocks: and there we lost company of M. Drake the same night. The next day very hardly esca-
ping the danger of the rocks, we put into the streights againe, where we ankered in an open bay
for the space of 2 dayes, and made great fires on the shore, to the end that if M. Drake should come
into the streights, hee might finde vs. After wee went into a sound, where we staid for the space
of 3 weekes, and named it The port of Health, for the most part of our men being very sicke with
long watching, wet, cold and cuill diet did here (God be thanked) wonderfully recouer their health
in short space. Here we had very great muscles (some being 20 inches long) very pleasant meate,
and many of them full of seed-pearles.

We came out of this harbour the first of Nouember, giuing ouer our voyage by M. Winters
compulsion: full fore against the mariners minds who alleged, he stood in dispaire, as well to haue
winds to serue his turne for Peru, as also of M. Drakes safetie. So we came backe againe through
the streights to S. Georges Island, where we tooke of the foules before named, and after departed.

And thus wee passed by Cape Victorie out of the streights the 11 of Nouember, directing our
course to the North-east, till the last of this moneth. What time wee arrived at an island which
lyeth at the mouth of the riuer of Plac. Upon this island there is such an infinite number of seales,
as may seeme incredible to any man that hath not bene there, some of them being 16 score long.

not fearing the presence of men: for the most of our men were upon the island, for the space of 15 dayes to set up a Pinnele, during which time the seales would come and slepe by them, and rather resist our men, then give place, vntill morall blowes forced them to yeelde.

When our Pinnele was built, we went to another island, where wee did water, and after ward departed the first of Januarie 1579, and ran towards the North till the 20 of the said moneth, and then we arrived at an island which lieth on the coast of Brasil, neere to a towne called Sant Vincent inhabited by the Portugals. The sayd towne lyeth 24 degrees Southwarde, almost vnder the Tropicke of Capricorne. Here, by reason of foule weather we lost our Pinnele, and 8 men in her, and neuer saw them since. Here also our ship was in great danger, by the meanes of a strong current, which had almost cast vs vpon the shore before wee were aware, insomuch that we were constrained to anker in the open sea, and brake our cable and lost an anker, and presently let fall another anker; in weighing whereof our men were sore spoiled. For the capitan raine about so violently with the rising of the shippe in the sea, that it threw the men from the barres, and brake out the braines of one man; one other had his legge broken, and diuers others were sore hurt. At last wee gotte vpon our anker and set sayle, and ran into a place called Tanay, where we roade vnder an island and tooke in wood and water.

Sant Vincent in Brasil in 24 degrees.

as dangerous current.

Tanay a place in Brasil.

And while we staid here, there came 3 Portugals aboard vs in a canoa, to knowe what wee would haue, or of what countrey we were. To whom our Captaine made answer: that we were Englishmen, and had brought commodities for their countrey, if they would trafficke with vs: whereat they greatly marvelled. For they saide that they neuer heard of any English ship to haue bene in that countrey before; and so they went to land againe, hauing one of our men with them to speake with the Gouvernour of the towne, and we kept one of them for a pledge. Shortly after there came another canoa aboard vs with one Portugall and al the rest naked men of the countrey: of whom wee had two small Oren, one yong Hogge, with certaine hennes: also some cytrons, limons, oranges, and other fruites of the countrey. For the which our Captaine gaue to them, linen cloth, combes, knives, and other trifles. In the meane time the Gouvernour of the towne, sent word that we should haue nothing, vntill we would bring our shippe into the hauen. Whereunto our Captaine would in no case consent: for all their practise was to haue gotten vs within their banger, neuertheles we came somewhat neere the towne with our ship, as though wee would haue gone in; but we neuer meant it.

Here we tooke in our man; and set the Portugall pledge on land. After that we went to an island called the isle of Sant Sebastian; where wee tooke fish. Here the Portugals had betrayed vs, if a Brasilian one of their slaues had not bene. For he stole from them, & shewed vnto vs by signes, that the Portugals were conning with their canoas to take vs, as it fell out in deed: for the next morning they shewed themselves with 12 or 16 canoas, some of them hauing 40 men in them. The same night two of our men ran away with our boat to the Portugals. And thus wee came away from thence toward our owne countrey the 17 of March: and had sight of the Cape of Sant Augustine, lying in 8 degrees to the Southward of the line. After that we had sight of an island lying within 3 degrees of the Equinoctial, called the isle of Fernando de Loronha. We crossed the Equinoctial the 13 of April, and had sight of the North starre the 19 of the sayd moneth.

The isle of Sant Sebastian, about the Tropicke of Capricorne.

Cape Sant Augustine.

The isle of Fernando de Loronha.

The sea of Weedes, neere the Tropicke of Cancer.

Their arrivall at Ilfoord-combe in Devonshire.

The 1, 2, 3, 4, and 5 of May, wee sayled through the sea of Weedes, about the space of 100 leagues, being vnder the Tropicke of Cancer. From whence wee kept our course towards the North-east, vntill wee had the pole rayled 47 degrees. The 22 of May we raine Eastnortheast.

The 29 we sounded and had 70 fathomes with white oaze; hauing the North pole rayled 51 degrees. The 30 of May we had sight of S. Iues on the North side of Corne-wall, and the 2 of June 1579 we arrived at Ilfoord-combe in Devon-shire.

And thus after our manifold troubles and great dangers in hauing passed The streights of Magellan into the South Sea with our Generall M. Francis Drake, and hauing bene driven with him downe to the Southerly latitude of 57 degrees, and afterward passing backe by the same streights againe, it pleased God to bring vs safe into our owne native countrey to enioy the presence of our deare friendes and kinsfolkes, to whom bee prayse, honour, and glory, for euer and euer. Amen.

EDWARD CLIFFE,

Mariner.

Rrr 3

Instructions

Instructions giuen by the right honourable the Lordes of the Counsell, to M. Edward Fenton Esquire, for the order to be obserued in the voyage recommended to him for the East Indies and Cathay, Aprill 9. 1582.

I Item you shall enter as Captaine Generall, into the charge and gouernment of these shippes, viz. the Beare Gallion, the Edward Bonauenture, the Barke Francis, and the small Frigate or Pinuelle.

2 Item you shall appoint for the furnishing of the vessels in the whole, to the number of 200 able persons, accompting in that number the Gentlemen and their men, the Ministers, Chirurgians, Factors, &c. which sayd number is no way to be exceeded, whereof as many as may be, to be sea-men; and shal distribute them into euery vessel, as by aduise here before your going shal be thought meete: Provided that you shall not receiue vnder your charge and gouernement, any disorderd or mutinous person, but that vpon knowledge had, you shall remooue him before your departure hence, or by the way as soone as you can conueniently auoide him, and receiue better in his place.

3 Item, for the more and better circumspect execution, and determination in any waightie causes incident in this voyage, we will that you shall take vnto you for assistants, Captaine Hawkins, captain Ward, M. Nicholas Parker, M. Maddox, M. Walker, M. Euans, Randolph Shaw, Matthew Talboys, with whom you shall consult and conferre in all causes, matters, and actions of importance, not provided for in these instructions touching this seruice now in hand. And in all such matters, so handled, argued, and debated, wee thinke that conuenient alwayes to be executed, which you shall thinke meetest with the assent also of any 4 of them, the matter hauing bene debated, and so assented vnto, in the presence of your said assistants. And in case that such conference and debating the opinions of the aforesaid Assistants be found in effect any way to differ, then it is thought meete, that all such matters so argued vpon, shall rest to bee put in execution in such sort as you shal thinke most meetest, hauing the assent of any 4 of them, as aforesaid. And if any of these Assistants shal die, then the number of the one halfe of the Suruiours to ioynewith the General captaine for consent in all things aforesaid.

4 Of all which your assemblies and consultations, for the matters aforesaid, we thinke it very conuenient, that a particular and true note should be kept, for which cause we appoint master Maddox minister, and if he should decease, then the General with halfe the Assistants Suruiours, to name one to keepe a booke of all such matters as shall bee brought in consultation, and of all such reasons as shall be propounded by any person, either on the one side, or on the other: what was resolved on, and by whose consent, who dissented there from, and for what causes. In which book he shall in the beginning of the note of euery such assembly, set downe particularly the day, and the place, if it may be, the names of the persons then present, and vpon what occasion the sayd consultation was appointed or holden, and shall haue to euery acte, the handes of the General, and of all, or so many of the said Assistants as will subscribe: which booke the said master Maddox, or the other vpon his decease appointed in his place shall keepe secrete, and in good order to bee exhibited vnto vs, at your returne home.

5 Item, if there happen any person or persons imployed in this seruice, of what calling or condition, hee or they shall be, should conspire, or attempt priuately or publikely, any treason, mutinie, or other discord, either touching the taking away of your owne life, or any other of authoritie vnder you, whereby her Maesties seruice in this voyage might bee ouerthrowne, or impugned: we will therefore, that vpon iust prooffe made of any such treason, mutinie, or any other discord attempted as aforesaid, the same shalbe punished by you, or your Lieutenante according to the qualitie and enormitie of the fact. Provided alwayes, and it shall not bee lawfull neither for you, nor for your Lieutenante to proceede to the punishment of any person by losse of life or lim, vnlesse the partie shall be iudged to haue deserued it by the rest of your Assistants, as is before exprest, or at the least by foure of them. And that which shall concerne life to be by the verdict of twelue men of the company employed in this voyage, to be impanelled for that purpose, with the obseruation of the forme of our countrey lawes in that behalfe, as neere as you may. Provided, if it shall not appeare, that the forbearing of the execution by death, shall minister cause to increase the facte of the offender, then it were better to conuince the partie of his facte, by the othes of 12 indifferent persons, and to commit him to hard imprisonment, vntill the returne. And aswell of the factes committed by any, as also of the prooffe thereof, and of the opinions of you, and your Assistants, and the manner of the punishment, the Register shall make a particular and true note, in the booke of your consultation, as is before appointed.

6 Item, you shall not remooue Captaine William Hawkins your lieutenant, master Captaine Luke Ward your viceadmiral, or captaine of the Edward Bonaventure, nor captaine Carlile from his charge by land, whom we will not to refuse any such seruice as shall be appointed to him by the Generall and the counsell, nor any captaine of other vessels from their charges, but vpon iust cause duly prooued, and by consent of your Assistants, or of foure of them at the least.

Mr. Carlile by
on occasion
was not in
this voyage.

7 Item, for the succession of the Generall, gouernour of this whole voyage, if it should please God to take him away, it is thought meete that there should bee the names of such Gentlemen secretly set downe to succede in his place one after the other, which are seuerally written in parchment, included in bals of ware, sealed with her Maiesties signet, put into two coffers locked with three seuerall locks, wherof one key is to bee in the custodie of captaine Luke Ward, the other of William Hawkins, the third of master Maddox the Minister, and the same two coffers to bee put into two seuerall shippes, videlicet, the one coffer in the Gallion, in the custodie of the Generall, the other in the Edward Bonaventure in the custodie of the Viceadmirall: the same two coffers vpon any such casualltie of the Generals death by consent of the Assistants which shall ouerlieue, to bee opened, and the partie therein named to succede in the place, who shall thereupon take vpon him the charge in the said voyage according to these instructions, in such sort as if they had bene specially directed vnto him, and the rest of the companie so to take and repute him in every respect, as they will answer to the contrary. But if it shall so fall out, (as we hope it will) that there shall bee no such neede, but that the Generall doe continue still, then shall you at your returne deliuer backe the sayd coffers and bals of ware sealed in such sort as they be, without opening them, vntill it be in the case aforesayd.

8 You shall make a iust and true inuentorie in every ship and vessell appointed for this voyage of all the tackle, munition, and furniture belonging to them at their setting forth hence, and of all the provisions whatsoeuer, and one copie thereof vnder your hand, and vnder the hands of your Viceadmirall and lieutenant, to be deliuered to the Earle of Leicester, and the other to the gouernour of the companie for them before your departure hence, and the like to bee done at your returne home of all things then remaining in the sayd ships and vessels, with a true certificate how and by what meanes any parcell of the same shall haue bene spent or lost.

The gouern-
our of this
companie.

9 Item, you shall vse all diligence possible to depart from Southampton with your sayd ships and vessels before the last of this present moneth of Aprill, and so goe on your course by Cape de buena Esperanza, not passing by the streight of Magellan either going or returning, except vpon great occasion incident, that shall bee thought otherwise good to you, by the aduise and consent of your sayd Assistants or foure of them at the least.

They are im-
posed to go
by the Cape
of Buena Espe-
ranza.

10 Item, you shall not passe to the Northward of the 40 degree of latitude at the most, but shall take your right course to the Isles of the Malucos for the better discovery of the Northwest passage, if without hinderance of your trade, & within the same degree you can get any knowledge touching that passage, wherof you shall do wel to be inquisitiue, as occasion in this sort may serue.

11 Item, you shall haue speciall regard after your departure from the coast of England, so to order your course, as that your ships and vessels lose not one another, but keepe companie together both outward and homeward. And lest if they happen to seuer the one from the other by tempest or otherwise, it shall not bee amisse that you appoint to the Captaines and Masters certaine places, wherein you will stay certaine dayes. And euery ship passing aforesaid, and not knowing what is become of the other ships, to leaue vpon euery Promontorie or Cape a token to stand in sight, with a writing lapped in leade to declare the day of their passage. And if any wilfulnesse or negligence in this behalfe shall appeare in any person or persons that shall haue charge of any of the ships or vessels aforesayd, or if they or any of them shall doe otherwise then to them appertaineth, you shall punish such offenders sharply to the example of others.

12 Item, we do straightly enioine you, and consequently all the rest employed in this voyage in any wise, and as you and they will answer the contrary at your comming home by the lawes of this realme, that neither going, carrying abroad, nor returning, you doe spoyle or take any thing from any of the Queenes Maiesties friends or allies, or any Christians, without paying iustly for the same, nor that you vse any manner of violence or force against any such, except in your owne defence, if you shall be set vpon, or otherwise be forced for your owne safegard to do it.

13 Item, wee will that you deale altogether in this voyage like good and honest merchants, traffiquing and exchanging ware for ware, with all courtesie to the nations you shall deale with, as well Ethniks as others, and for that cause you shall instruct all those that shall goe with you, that whensoever you or any of you shall happen to come in any place to conference with the people of those parts, that in all your doings and theirs, you and they so behaue your selues towards the

the sayd people, as may rather procure their friendship and good liking toward you by courtesie, then to moue them to offence or mistaking, and especially you shall haue great care of the performance of your word and promise to them.

Strange
people to be
brought home.

14 Item wee will, that by the aduise of your Assistants, in places where you and they shall thinke most fit, you lettle if you can a beginning of a further trade to bee had hereafter: and from such places doe bring ouer with you some fewe men and women if you may, and doe also leaue some one or two, or more, as to you and your Assistants shall seeme conuenient of our nation with them for pledges, and to learne the tongue and secrets of the countreys, hauing diligent care that in deliuering and taking of hostages, you deliuer not personages of more value then you receiue, but rather deliuer meane persons vnder colour of men of value, as the Infidels do for the most part vse. Provided that you stay not longer to make continuance of further trade, then shall be expedient for good exchange of the wares presently carried with you.

15 Item you shall haue care, and giue generall warning, that no person of what calling soeuer hee be, shall take vp, or keepe to himselfe or his priuate vse, any stone, pearle, golde, silver, or other matter of commoditie to be had or found in places where you shall come, but hee the said person so seized of such stone, pearle, golde, silver, or other matter of commoditie, shall with all speede, or so soone as he can, detect the same, and make deliuerie thereof to your selfe, or you Viceadmirall, or Lieutenant, and the Factor appointed for this voyage, vpon paine of forfeiture of all the recompense he is to haue for his seruice in this voyage by share or otherwise: and further to receiue such punishment, as to you & your Assistants, or the more part of them shal seeme good, and otherwise to be punished here at his returne, if according to the qualitie of his offence it shalbe thought needfull.

16 Item, if the Captaines, Marchants or any other, shall haue any apparell, iewels, chaines, armour, or any other thing whatsoever, which may bee desired in countreys where they shall traffique, that it shall not bee lawfull for them or any of them to traffique, or sell any thing thereof for their priuate accompt: but the same shall bee prized by the most part of those that shall bee in commission in the places where the same may be so required, rated at such value, as it may bee reasonably worth in England, and then solde to the profite of the whole voyage, and to goe as in aduventure for those to whom it doeth appertaine.

17 Item you your selfe shall in the Gallion keepe one booke, and the Factor appointed for the same shipp another, wherein shall bee a iust accompt kept, aswell of the marchandise carried hence, as of those you shall bring home. And aswell at your setting forth, as from time to time, as exchange shalbe made, you shall set your hand to their booke, and they theirs to yours, and the like order shal you see that the Captaine and the Factor in the Edward Bonauenture shall vse in their ship, and the other Captaines and Factors in each other vessell.

18 Item you shall giue straight order to restraime, that none shall make any charts or descriptions of the sayd voyage, but such as shall bee deputed by you the Generall, which sayd charts and descriptions, wee thinke meete that you the Generall shall take into your hands at your returne to this our coast of England, leauing with them no copie, and to present them vnto vs at your returne: the like to be done if they finde any charts or maps in those countreys.

19 Item you shall at your returne so direct your course, that all the ships vnder your government may come home together, and arriue here in the riuer of Thames, if it may conueniently be. And wheresoever in this Realme you, or any of the shippes shall arriue, you shall giue speciall and straight order, that no person of what condition soeuer he be, shall unlade, or bring on land, or forth of the vessels in which he came, any part or parcel of marchandise, or matter of commoditie brought in any of the sayd vessels, vntill we being certified of your or their arriuall, shall giue further order and direction therein, vnder the penalties and forfeitures expessed in the fifteenth article, against such as shall retaine any thing to their priuate vse, as in the sayd article is further expessed.

20 Item, to the intent that all such persons as shall go with you in this voyage, may better vnderstand what they ought to do, and what to auoid, wee thinke it requisite, that aswell out of these, as otherwise with the aduise of your Assistants and Masters of the ships, you shall cause some conuenient order to bee set downe in writing for their better government both at sea and land, if they shall happen to goe on lande any where: and the same to bee openly read and made knownen vnto them, to the intent they may vnderstand how to behaue themselves, and vpon any fault committed, not to haue any excuse to pretend ignorance, and so to auoid such punishment as it is requisite to haue ministred for the keeping of them in good order.

21 And to the end God may blesse this voyage with happie and prosperous successe, you shall haue an expectall care to see that reuerence and respect bee had to the Ministers appointed to accompany you in this voyage, as appertaineth to their place and calling, and to see such good order

as by them shall be set downe for reformation of life and maners, duely obeyed and perfourmed, by causing the transgressours and contemners of the same to be severely punished, and the Ministers to remooue sometime from one vessell to another.

22 Provided alwayes, that the whole direction and government of the people, life and limme excepted, as in the first article, and the course of this voyage, shall bee wholly at your disposition, except in the course by the Streight of Magellan, either outward or homeward, and in your passage by the Northward of 40 degrees in latitude, wherein you shall follow directions set downe in the nine and ten articles, as also in the displacing of the Captaine of the *Edward Bonaventure*, and other captaines, wherein you shall followe the order appointed in the first article: Provided that wee meane not by this article to derogate any thing from the authoritie of your assistants established in the third article, or in any other article of these instructions.

23 Item, in all occasions and enterprises that may fall out to bee vpon the lande, wee will that Captaine Carlile shall haue the generall and chiefe charge thereof.

24 And finally wee require you and euery of you to haue a due regard to the obseruation and accomplishment of these our instructions, and of all such other things, as may any kind of way tend to the furtherance and benefite of this seruice committed to your charge.

*M. Carlile by
on occasion
was not in
this voyage.*

The voyage intended towards China, wherein M. Edward Fenton was appointed Generall: Written by M. Luke Ward his Viceadmiral, and Captaine of the *Edward Bonaventure*, begun Anno Dom. 1582.

The second of April I departed with the *Edward Bonaventure* from Blackwall, and the 19 of the same arrived in Nettle roade at Hampton, where I found riding the Gallion *Leicester*: and so remaining there till the first of May, wee set saile thence in the forenoone, being of vs in the whole flecte foure saile.

1 The Gallion *Leicester* of 400 tunnes Admirall, whereof was Generall Captaine Edward Fenton, and William Hawkins the ponger lieutenant Generall in her, and Christopher Hall, Master.

2 The *Edward Bonaventure* of 300 tunnes Viceadmirall, whereof was Captaine Luke Ward, and Thomas Perrie Master.

3 The *Francis* of fortye tunnes, whereof was Captaine Iohn Drake, and William Markam Master.

4 The *Elizabeth* of fiftie tunnes, whereof was Captaine Thomas Skeuington and Ralph Crane Master.

We spent by meanes partly of businesse, and partly of contrary windes, the moneth of May vpon the coast, and then leauing the land wee put off to sea, and proceeded on our voyage intended by the grace of God for China: untill the moneth of August following, nothing fell out much worthy the knowledge of the worlde, which is not common to all nauigants, but about the beginning of August aforesayd, being somewhat neere the coast of Guinie, vpon the shooting off a peece and the putting out of a flag in the Admirall, I went on boord, and M. Walker, M. Shaw, M. Gessreis, our Master & Pilot with me, where the generall counsel was assembled to consider of two points, viz.

The first, whether it were necessarie to water presently or not, which was thought very needful of all men, and so concluded.

The second, where the best and aptest place was to water in, which was thought of the greater number to be at Sierra leona on the coast of Guinie, which was also concluded, and by the Master and Pilots agreed to goe hence Southeast, which determined, wee returned aboord.

The 3 day wee went Southeast and Eastsoutheast, till sixe a clocke at night that wee sawe the lande of Guinie, which bare Northeast of vs about 12 leagues off, which scene, wee sounded, and had no ground: then went I and our Master and Pilot aboord the Admirall, and after many debates concluded to run in Northeast by East, and at eleuen at night wee came aboord againe, and went all night Northeast by East.

The 4 at eight a clocke in the forenoone wee were within 2 leagues of the lande, which bare off vs Northeast, which rose like a hill full of woods, and on each side low land: wee being perswaded by our pilots that it was the entrance into Sierra leona, went in Northeast untill wee were within an halfe league of the shoar, and had brought the South point Southeast by East off vs. At eleuen a clocke finding it a bay and not Sierra leona, wee brought our tacks aboord, and stood along West by North and West larboord tacked.

In this time our Admirals pinnesse rowed in, and went on land vpon the South side of the bay,

and

and the Elizabeths boate with her. They found houses of boughes, and in one of the houses the tongue of a beast, and a bullocks tongue fresh-killed; also a lake with plenty of fresh water, and fresh water-fish in it had by the sea side: they found drie pomegranates, and peare like nuts, with other unknownen fruites under the trees. The Elizabeth ranne in, and brought the South point South by West of her, and ankered within Faulcon shot of the shore in seven fathoms deepe, where they tooke fish with hookes, while hee stayed for the boates.

The 4 all the after noone wee ran along the coast (which lyeth North-west and by North, and Southeast by South) West, and within a point one way or the other, seeing the lande under our lee three or foure leagues off, and all night likewise.

They arrive in
the river of Si-
erra leona.

The 9 at thre a clock in the morning our Admirall shot off a peece, and at foure wee weped and went hence North-east. At five in the morning wee saw the land along, and the Island which wee saw the night before, and diuers other Islands about it, & so ran in North-east until we had brought our selues thwart of the river, and then ran in East about five at night, being a league within the river. Our Admirall shot off a peece, and there wee ankered in eight fathoms sand. Being at anker, I manned our boate and would haue gone aboard the Admirall, but could not, the flood was bent so strong, and she rode halfe a mile beneath vs in the tyde, but we had no tyde.

Trees hung
with opsters.

The 10 in the morning at five a clocke I sent our skiffe with our pilot in her to find a roade, and a watering place: in the meane time at sixe a clocke we set saile with our ship, and being calme wee towed with our boat until ten, and then ankered a mile short of the watering place. After dinner I went on land with my skiffe to finde timber to fith our make, and searching along the shore we found a good watering place: and further seeking in the wood, which all the countrey is full of, and of diuers sorts, wee found Limmon trees full of fruites: also trees growing by the water side with the stalkes hung full of opsters and great periwinkles, and crabs amongst them: wee found drie pomegranates with many other fruites unknownen to vs. In the meane time our Admirall and the Edward with the barkes, hauing a gale at West, set saile, and ran up and ankered in the rode before the accustomed watering place.

Their trafique
here with the
Portugals.

The 22 day certaine Portugals which had bene with vs before, came down and brought some other Portugals and Negros with them in a shippe boate, wherein they brought vs 80 mewe of rice, 500 and odd weight of Elephants teeth, and a Negro boy, which boy they gaue the Generall, and the rice and teeth for the Elizabeth, which wee solde them with all her tackle and sailes, hauing neede of the rice, because our meale which wee brought out of England was decayed and naught, whereof wee had into the Edward 30 bushels, which is a mewe and a halfe: the Francis had 5 bushels, and the Gallion had the rest. And wee had 200 weight of Elephants teeth, and the Gallion 300 and a halfe, and sixe pound. During this time we sent our skiffe with the Admiralls pinnesse up the river to meete with a Gundall, which the Portugals had sent for fresh victuals for vs: who not finding her, returned at night: All this day I with M. Walker remained aboard with the Admirall, and after their dinner and supper wee ended our businesse, and returned aboard, hauing had many good speeches with the Portugals.

Sickness by
eating some
fruit in Gui-
nea.

The 26 day being Sunday, Captaine Hawkins, M. Maddox, M. Hall, M. Bannister, Captaine Drake, M. Euans, M. Hooke, and others came aboard and heard the Sermon, and dined with me: after dinner wee went on shoare to the lower point where we followed the footing of an Elephant, but saw him not, and so spent the time to and fro till supper time, and then came aboard, and supped together, which done, each man departed to his abode.

This night I was very sicke, (and so were all they that were on shoare with mee,) with eating of a fruite of the countrey, which wee found on trees, like nuts: whereof some did eate scire, some fine, some sixe, and more, but wee vomitted and scoured vpon it without reason.

The 27 day in the afternoone the olde Greeke Francisco came aboard to me, with request that hee might haue the Francis boate to goe up for his owne boate which was not come downe, with whom I talked of this Countrey and Countrey-people, until five of the clocke at night that the flood was come, and then I went aboard to the Admirall, and got his consent, and sent themselves in her: viz. Ferdinando the Portugall Master, and his Negro: In the meane time I sent foure of my men to watch in the Elizabeth all night.

The 28 day in the morning at foure a clocke I sent my skiffe with the Admiralls pinnesse down to the West point to fith, who came aboard againe at one in the afternoone, and brought as much fish as all our companies could eate.

The Portugals
presents.

During the time that our boates were a fishing, came downe the river a canoa and the Portugals former boate, with hennies, oranges, plantans, which they presented the Generall and mee with: and also the rest of the rice due to vs for the payment of the Elizabeth. For the partitions whereof

whereof I went aboard the Admirall, where I dined. After dinner M. Evans began to barter away certaine of the ships commodities with the Negros, without acquainting the Generall or any other untill hee had done, wherof grew more wordes then profite, as by the bookes of merchandise appeareth. Which done I came aboard, and had two of the Portugals to supper with mee. About two of the clocke in the morning we had a Ternado, and much raine.

The 29 about 4 a clocke in the morning, I in my skiffe, and Captaine Parker in his pinnesse, went downe to the West point, and there wee landed with 11 men in all well furnished, and searched the woods, plaines and plashe, after an Elephant, finding the haunt, footing, and soyle of many newly done, yet wee saw none of them. Wee saw hoggs, goates or fatwines, and diuers sorts of fowles very wilde: and hauing traualled about 2 leagues, about noone wee returned to the point, where wee landed, and met our boates which had bene at sea, and taken plentie of good fish: there wee refreshed our selues with such victuals as wee had, and came aboard our seuerall ships, where I found the Portugals and Negros, who had dined, and after supped aboard with mee.

The 2 of September we set saile at five of the clock in the morning, & went out West betweene 7 and 10 fathom, with a pretie gale at East til 8, then it waxed calme, wee being shot out of the harbour a league and a halfe. It continued calme this day till one in the afternoone, and then it blew by at Westsouthwest a good gale, so wee stood off Northnorthwest, and Northwest till 5 in the afternoone, then wee ankered in 12 fathom, being 6 leagues off the point West by North.

The 3 day about eight a clocke in the forenoone, the Generall came aboard to mee, complaining that his maine crosse-trees were broken, and therefore determined to goe into Sierra leona againe when the winde blew: at 12 at noone wee set saile, and went in Eastsoutheast, and South-east, and Southsoutheast, being carried to the Northward with the flood. And at 7 at night wee ankered in eight fathom three leagues off the entrance, Westnorthwest.

The 12 day came downe the riuer a boate with three other Portugals, with whom the Generall bargained, to let them haue 3 barrells of salt for 5 barrells of rice, and after that rate to exchange for 40 barrells, which hee acquainted mee with: afterwards I dined among the Portugals with him: after dinner I went on shoare to the ouen, and to the carpenters. After I had bene on shoare and seene the worke there, I returned aboard, & there supped with mee the Generall, M. Maddox, Captaine Hawkins, and seuen Portugals: after supper each man returned to his place.

The 13 in the afternoone, the Portugals came againe aboard me, and brake their fast with me: after I sent by them by the riuer in my skiffe 12 barrells of salt, and gaue them a bottell of wine for one of the sauage Queenes.

The 15 after dinner, the Master, M. Walker, and I, accompanied with 12 other travelled ouer a great deale of ground to finde some cattell, but found none: and comming home thorow the Oyster bay, I found of my company and of the Admirals together roasting of oysters: and going from them, Thomas Russell one of my companie sawe a strange fish named Vclif, which had fought with a crocodile, and being hurt came neere the shoare, where hee waded in, and by the taile drew him a lande, and there slewe him, and sent the Generall the hinder halfe of him: the head-part I kept, in whose nose is a bone of two foot long like a sword, with three and twentie pycks of a lide, sharpe and strange: The bodie wee did eate, and it was like a Sharke.

The 30 and last day of September the Francis cooke came aboard about seuen a clocke in the forenoone from fishing with my net, and brought among other fish, a Sea-calse (as wee called it) with haire and lymptis, and barnacles vpon him, being seuen foote long, foure foote nine inches about: which to see I sent for the Generall, and such as pleased to come see it out of the Admirall, who came and brought with him M. Maddox, Captaine Hawkins, Captaine Parker, and most part of his companie, who hauing viewed the beast, which was ougly being aliue, it being flayed, opened, and dressed, proued an excellent, faire, and good meate, broyled, roasted, sodde and baked, and sufficed all our companies for that day.

The first day of October in the morning, wee tooke in to make by our full complement of rice twentie barrells for the twelue barrells of salt, deliuered the Portugall Lewis Henriques before.

The 2 day about five a clocke in the morning, wee set saile hauing little winde: the Captaine with the Master, and other of their companie of the Portugals came aboard me, complaining that the carsey by them receiued for the foure Negros of the Generall, was not sufficient for their payment, whereupon I gaue them scarlet caps, and other things to their content, who finding themselves well pleased, departed away in the Gundall, and we hauing little winde, got downe thwart of the fishing bay, and there came to anker about nine a clocke the same forenoone.

The third day about two a clocke in the morning wee set saile, and went hence South-west by West till two in the afternoone then being little wind: at five wee ankered six leagues East-south-east

M. Evans one of our marchants.

They search the countrey.

They returned to Sierra leona againe.

Traffique with 3 other Portugals, viz. 1 Lewis Henriques a dweller here about 20 peeres. 2 Matthew Fernandes Captaine. 3 Pedro Vaz pilot.

They enter by to search the countrey.

A twojndly killed.

A strange fish taken.

east of the Southermost part of the land in fifteene fathom, and there wee rode till eight a clocke at night, and set saile with a stiffe gale at Northeast, which sometime blew, and sometime was little winde, and so continued all night.

The first day of November in the forenoone, wee tooke in our maine saile to mend it: in the meane time, the Admirall came by by vs, and desiring mee with my Master, and M. Blackcoller to come aboard to him about certaine conference, hee sent his boate to vs, where by him was propounded, whether it were best for vs to stand on with the coast of Brasil as wee did, or else to stand about starboord tacked to the Eastwards: whereupon diuers of their charts and reckonings were shewed: by some it appeared, wee were a hundred and fifteene leagues, by some a hundred and fiftie leagues, by some a hundred and fortie leagues, and some a great deale further short of Brasil, next hand Northeast of vs: but all agreed to bee within twentie minutes of the line, some to the North, some to the South of the line.

After many debatements, it was agreed by most consent to stand on for the coast of Brasil, except the wind changed, and there to doe, as weather should compell vs. In this consultation, wee had speeches of courses, and places of meeting, if by misfortune wee should bee separated, wherein was no full order concluded, but that we should speake every night with the Admirall, if wee conveniently might, and so to appoint our course from time to time, if wee lost companie, to stay fifteene dayes in the riuer of Plate, and from thence to go for the streights, and there to ride, and water, and trimme our ships.

The 12 in the afternoone M. Maddox, M. Hall, M. Bannister, and others came aboard to visite M. Walker. After a time of abode with him, they returned to the gallion all againe, except M. Maddox, who remained with M. Walker here aboard.

This night M. Maddox and I, behelde many constellations in the firmament, and set downe certaine newe starres raised to the Southwards. All day and night wee went South, and South by East among.

The seuenteenth day in the afternoone wee shot off three peeces of ordinance in honour of our Queenes Maestie. This day after dinner came master Maddox, and Captaine Drake with others to take their leaue of master Walker, as I with all my company had done before, supposing him past hope of recouerie. At foure of the clocke, finding our selues in nineteene degrees to the Southwards of the line, and cleare of the shoals called by vs Powles, wee went hence South-southwest all night following.

The 18 day being Sunday, after dinner the Generall, M. Maddox, Captaine Parker, and many other came aboard, and visited M. Walker: which done, they dranke, and departed aboard againe. All this day and night, we went our course South-west by South, with a franke gale.

The 19 day about noone, the Sun was in our Zenith, being declined to the Southwards 21 degrees, and 33 minutes, where wee found the aire fresh and temperate, as in England in June when a fresh gale of winde doeth blow in the heate of the day, but the evening, the night, and the morning are more fresh and colder here, then it is in England either in June or Iulie.

The first of December, about fixe of the clocke in the morning, wee sawe lande on the coast of Brasil, in the height of 28 degrees or thereabouts, which bare Northwest, and was eight leagues from vs very high land. Wee stood in with it, being much winde, and coming neere, found diuers Islands: and seeing the Francis would not come roome nor run ahead vs, wee stood in with the shore, and sounded in 30 fathom oaze three leagues off the lande, bearing from the Westnorth-west to the Northnorthwest of vs, and so stood still till it shoaldd orderly into seven fathoms, within a mile of a headland: then perceiuing a breach ouer our bowe, and no hope of a good harbour, in that place, wee bare vp roome, and our Admirall after vs, whom wee hailed: then hee tolde vs hee would seeke harbour to leeward, requiring me to go ahead. Then seeing the barke was asterne, I hoisted out my kisse, and set her masse and saile, taking her ging, and Tobias one of my Masters mates with mee, and ranne before the shippe, sounding in 15 fathom saire sand, leauing a ledge of rockes alee-aboord of vs: so the ships and the barke looffed vp vnder a headland, and ankered in eight fathom, halfe a mile off the lande, hauing brought the headland which lyeth in 27 degrees 50 minutes Southsoutheast off them, and the North land Northeast off them.

I stood on with the kisse, hoping to finde a better harbour to leeward three leagues, but it prooued not so: wherefore I returned, and in my way aboard I met with a rocke in the sea, where we landed, and killed good store of fowle, and after I went aboard the Admirall, where I presented him with fowle, and returned aboard to supper.

In this time our boates had bene aland, and found water, ballaste, and two decayed houses, as they told me, and our men aboard hooked fresh-fish. This night wee rode quietly.

19 degrees of

lands.

The latitude
of 27 degrees,
50 minutes.

The

The second, being Sunday, our masters moored our ships further into the bay. We brought the South point Southeast off vs, and the North land Northeast: and so rid.

After dinner captaine Parker, with my boat, and company, went a land, and there placed pipes, and made three wells. In the meane time, I accompanied with M. Hawkins, M. Maddox, M. Cotton, and diuers of mine owne people, landed farther within the bay, and found two riuers of fresh water, and a good fishing place. Presently I sent aboard for my net; with which at one draught we drew 600 great mullets; and 5 great basses; the like draught was neuer seene with so small a net: with which we went aboard, giuing to the admirall 240, to the Francis 80, and the rest our company spent, and gaue almighty God thanks for his great goodnesse.

All this while was captaine Parker and others gone into the land, and fired the woods; which burned extremely.

The third day in the morning our carpenter calked without board, and the master and others tooke by all the merchandize in the steare sheets to the keele, and there put downe a boate losing of stone; and seeing the merchandize well conditioned, stowed the same againe. In the meane time, myselfe, and others in our boats, scraped off the wormes, and washed the rudder, and part of one side of our ship.

After dinner, the master, pilot, and I, went ashore, and obserued the Sunne at noone, which being past, with our net we drew plenty of diuers sorts of fishes, and went from that bay to the watering place: from thence, aboard the generall, which had taken physicke, and gaue them and the Francis fish for their companies, and so went aboard, where our company had romaged afore-mast; so that this afternoone we tooke in two boats more lading of stones afore-mast.

The first day in the morning, before fire of the clocke, we saw a saile which went towards the Southwards, the admirall not hauing knowledge thereof. I went aboard, and certified him; who appointed me to goe and bring her in, and to take captaine Parker and some of the gallions men into the Francis, and the admirals skiffe with vs: so we gaue her chase, and tooke her five leagues to the leewards of the place we rode in. Then not being able to fetch the rode againe, we ankered in the sea. I intending to come away in the pinnelle, and leaue the Francis, and the prize together, being ready to depart, the winde blew at South a stout gale, and raue; so that about fire of the clocke, we ankered in the rode, where our ships rid.

After we had taken them, and that captaine Parker and I were aboard, we had much talke with them before they came to the ships; and being ankered there, the chiefe men were caried aboard the general, which was a gentleman, named Don Francisco de Torre Vedra, nephew to the gouernour of the riuer of Plate, named Don John de Torre Vedra.

We found an Englishman, named Richard Carter borne in Limehouse, who had bene out of England foure and twenty yerres, and hath bene nere twelue yerres dwelling in the riuer of Plate, at a towne named Ascension, three hundred leagues by in the riuer, whither they were now determined to goe inhabit, hauing two women, and two yong childe, seven friers, the rest boyes, and sailers, to the number of one and twenty persons.

The olde frier was had in great reuerence among the rest: insomuch that they called him the Holy father. He was abiding in no place; but as visitour he went visiting from monastery to monastery.

The substance of all the speeches was, that the Spanish fleet was before the Streights of Magellan, as they thought; for they were departed five weeks past from the riuer of Ienero, where they had bene seven moneths to refresh and winter, and that these were not of that company; but came out of Spaine the 26 of May 1582 in a barke of fourescore tun, and fourescore persons, of purpose for the riuer of Plate. The friers bring eightene in number, could not agree, and their barke was a ground at Spirito Santo, like to be lost: therefore the olde frier bought this small barke of 46 tun, at a port named Spirito Santo, in Brasill; and so diuided themselves: and coming from thence, lost company at sea: but they thought they were before at the riuer of Plate. After his speeches, I went and appointed (by the generals order) men to remaine aboard the prize with captaine Parker, and brought one of the Portugals sailes away with me, and came aboard, where I found that our men had filled water all day.

The 7 day in the morning the generall sent for me; where he shewed me and M. Maddox certaine articles which the friers and mariners Spaniards were examined of; which tended altogether to the knowledge of the Spanish fleets intent, and of the meanes whereby we might be discovered by the way of the riuer of Plate by land to Peru. In this time came the rest: after whose coming it was debated, whether it were best to take the boat & people with vs or not. Which was not determined; but referred till further examination.

30 bay.

Wells made by our men.

An exceeding great draught of fish.

The woods set on fire by our men.

30 saile seen and taken.

Richard Carter an Englishman taken in the prize.

The number of 21 in the prize.

Then was it determined to passe by the streights, notwithstanding the Spaniards were there, but not to set by force, nor to build pinnelle, but water, and so thorow.

The Spanish
barke dissim-
led.

The eight day afore noone M. Walker and I went aboard the admirall to dinner, where was determined to discharge the Spanish barke, named Our lady of pity, and all the men, except Richard Carter the English man, and Iohn Pinto a Portugall, which dwelled at the riuer of Plac. After dinner, the generall appointed mee and captaine Hawkins to see them all set aboard their ship, and to receiue from them certaine necessaries, which willingly they imparted with vs, and to leaue them satisfied. Which done, I returned aboard.

The 9 day, being Sunday, in the morning, I sent M. Shaw and M. Gessries aboard the admirall, to peruse the Spaniards letters; wherein they found the estate of the fleet which was in the streights of Magellan, as by the note thereof appeareth.

Spanish pre-
sents.

About ten of the clocke the generall, M. Maddox, captaine Hawkins, and captaine Parker, came aboard of me. The generall began to reprocure my quarter master for grudging of victuall for the Francis. Which was answered: and he well satisfied. Then sent I for the olde frier and Don Francisco; who all dined with me: and after dinner, the Spaniards hauing receiued the canoa, which was suncke, aland, and stones to ballast them, which my boat caried them, and all other things to their liking and content, they departed from me. The generall also departed, and his company, who being gone, I diuided the sugar and ginger among my people, which the Spaniards gaue vs: and after spent the day in ordinary businesse.

The 10 day in the morning, our skiffe went a fishing, wherof we eat as much to supper as serued the company: the rest we salted for store, and to proue if they would take salt or not.

Things found
in the island.

The 11 day, betimes in the morning, our skiffe went againe to fish, and tooke great plentie. About seuen of the clocke I went aland, taking with me the master, and others of our best men, to the number of 22 persons, & trauelled to the place where our people before had found many great iars of earth, and decayed habitations of the Indians, and trees, being dead and withered, of sweet wood. From that place we saw ouer the tops of a narrow wood, a faire plaine, which at the request of the master and the rest, I went with them to see. We passed thorow a thicke and perillous wood, before we came to the supposed plaine: and when we came to it, we found the lowest part thereof higher then any of our heads, and so mossy vnder foot, that we slipped to the knees many steps, which so wearied vs, that for my part, I was very sicke, and so halted aboard, leauing the master with 15 men, which cut a tree of sweet wood, and brought many pieces thereof aboard.

They leave the
harbour in 27
degrees and
50 min.

About 3 afternoone, M. Walker and many of our men being ashore, the winde came faire, and we layed out a warpe to the Northeast, and began to winde ahead. After we layed out another warpe with a bend, and wound to the plat, and so rid by it with one anker all night.

The 12 day about five a clocke in the morning, we set saile, and as we ran out betwixt the ledge of rocks and the maine, in eight fadome water, as we were cattring our anker, the cattrope, stopper, and all bzake; so that we were glad to let slip all the cable, and cast off our boat and skiffe to wey the same. After we had stood out a good way, the admirall was vnder saile: then cast we about and went roome with the admirall which weaued vs, who sent in his pinnelle and the Francis to helpe out our boats; so by the helpe of the admirals pinnelle, with her saile, we had our boat the sooner, and about 12 a clocke at noone had taken in the anker, cable, our long boat, skiffe, & all, and put out all our sailes bearing after the admirall, which went hence South by east. About sixe a clocke at night, being thicke weather, we lost sight of the land, being foure leagues off or thereabout. All night it was but little winde: yet went we our course South by west.

The 13 day about seuen afore noon, the wind blew at Southsoutheast, & was very foggy; with which gale we stood in larboord tacked West, till ten a clocke the same forenoone. Then had we sight of the land ahead, all along (for it waied cleere weather) it sheweth a farre off like white cliffes, but is all sandy hilles, and bayes along the sea side. At one a clocke after noone we were in 16 fadome water, and within halfe a league of the shore, where we saw seuerall fires made by the Indians to giue warning to the other people within the land, as we supposed. Then we cast about, and stood off Southeast by east till midnight, that the winde came large: then went we our course South by west till next morning.

The 14 day we went our course South by west, hauing sight of the land at sixe a clocke in the morning about seuen leagues off: and so went till sixe at night, that wee saw land againe seuen leagues off West, and the winde shifted to the South. Then we cast about, and stood off Eastsoutheast at seuen at night for a while: then came by the winde at Northwest, and blew agood.

The 15 day in the morning, the admirall was ahead, as farre as we could almost see her, by whose default I know not; and being little winde, we could not get to her till foure of the clocke after

after noone : then we hayled her , and stood in betweene the Southsouthwest and the Southwest till fire at night, that the winde was variable, and foule weather. Then we cast about, and sounded in 23 fadome soft oaze, and stood off a while North-east; and presently cast about againe, and went South by East larboord tacked, and Southsoutheast among all night : finding at foure in the morning 15 fadome sand.

The 20 day, about ten a clocke afore noone, we went aboard the admirall; viz. M. Walker, the master, the pilot, the two merchants, and my selfe, being directed so to doe by the Generall. Upon our comming the generall was going to dinner, where wee also dined with him. Having dined, the generall called vs his assistants into his cabbin, and there deliuered to vs in writing two demands, to be by vs considered vpon, and he to haue our opinions therein.

The effects of the demands were these.

1 Whether it was best for vs to aduenture our selues to passe the streights of Magellan or not; considering the force of the enemy, which we knew to be there before vs: and also that our determination was there to set by our pinnelle, make yron hoops, carene our ships, and do all our necessary businesse for the full accomplishment of our voyage.

2 If that course were not thought best, which way were meetest for vs to take.

To the first we were of opinion, that it were good to heare the opinions of captaine Hawkins, captaine Drake, and the two pilots, which had passed the streights, and knew the harbours, and likeliest places to be fortified, and inhabited or not, who were called, & the three matters with them. Their opinions were as diuers as their names; & as much differed, as before this time they were wont vsually to doe: onely they all agreed in this one point, that it was impossible for vs to passe the streights without seeing, and incountring with the ships, although the fortification of the land did not annoy vs: which being long and thorowly debated, and their opinions with the three matters demanded, which accorded not scant any one with other, they were dismissed.

Then the generall receiued the opinions of vs his assistants, beginning with the yongest in authoritie first: which when he had heard them all ouer, and being set downe in writing vnder our hands, he tooke deliberation till after supper to giue his determination.

When we had all supped, then he sent for vs downe into his cabbin, and deliuered in writing his determination, (which was) to victuall, and furnish our selues on this coast, before he proceeded any further; and named two places, The riuer of Plate, or S. Vincent, to be chosen.

For the better deciphering of the riuer of Plate, & the commodities thereof, was called before vs, Richard Carter, which doth dwell there; who could not assure vs of any wine, except we could stay foure moneths for it: but other victuals plenty. The riuer is shoale and dangerous, the road seven leagues from any towne, or place of commodity: which considered, with the trechery that might from thence be vsed, into the streights by sea, and into Peru by land, we all concluded to go to S. Vincent, which place is inhabited with Portugals, and where in honest sort we might conveniently haue all our businesse done.

With this resolution we tooke our leaues about eight a clocke at night, & being come aboard, presently bare vp, and went roome, hauing all the day before beat by the winde larboord-tacked Eastsoutheast till at night: after it was a little winde all night, we went North next hand.

The 21 day, after seruite, I declared vnto my company the intent of our returne to the port of S. Vincent, where with they were well satisfied, being before doubtfull that we should not proceed, but returne without performance of our voyage. It continued calme all day till six at night, then we went Northwest by west till eight at night, and then we cast about, and stood off East-southeast, and East by south all night with a good gale.

The 22 day in the morning we missed the Francis, which by all presumption went roome in the beginning of the night.

The 25 day, being Christmasse day, it was little winde in the forenoone till ten a clocke; then it blew a fresh gale, with which wee went our course Northnortheast. In the afternoone it was lesse wind: yet went we our course North by east, and Northnortheast, and North, and North by west, till midnight. Then being in shoaled water, wee cast about, and lay Southsoutheast, and Southeast by south, an houre; and seeing our admirall came not after vs, we cast about backe againe, and presently met him: so we went both together next hand Southsoutheast all the rest of the night. This afternoone we saw the skim of fishes so thicke in the sea, that it seemed a water troubled with trampling of horses; which was thicke, and limy: for we had taken by some of it.

The 17 day of January, about seuen a clocke, the master, M. Blacoller, and I went in our skiffe, and rowed, and sounded round about an ile, and found 16 fadoms within a stones cast hard aboard the shoze, and faire ground: after we landed, and found nothing but woods and bushes,

Small map of the South Atlantic showing the route of the expedition.

Richard Carter the Englishman taken in the prize, carried along with them.

They returned in the latitude of 33.

John Drake the Francis went to the riuer of Plate, where his ship was cast away, but the men got to land, and lived 15 moneths among the Salvages.

Infinite number of fish.

29 small island
to which our me
called Faulcon
isle.

and strange woymes: we saw a faulcon, and one other small bird, and therefore named it Faulcon ile: it is a mile about, with a rocke on the East side, which lieth close to it, and it is in sight without danger. After we came aboord, and dined; at two a clocke we set saile with winde South-east, and ran in North-east a while, till the winde scant: then we went in North-north-east, till we were in seven fadome and a halfe of water, within a league of shore: then we cast about, and stood off South-south-east all night, till five a clocke the next morning.

The 18 day about thzee a clocke, afoze day, we saw our admirall againe, and kept her company till day.

Citron Isle,

The 19 day, being within a league of the Citron ile, about eight a clocke afoze noone, we went aboord the general, viz. M. Walker, the master, the pilot, and my selfe, reioycing of our good meeting, who tolde me of their euill road, where they lost an anker, a cable, and a haulser, and how the day before, their pinnelle was ashore on the same island, and found fowle, and water there, whither now they had sent their boat and pinnelle for more water, where I know they had small store.

I also taking captaine Parker, the master, and M. Wilks with me, went ashore, and trauelled to the top of the ile, which is wooded, and high grasse, but euill water, and little on it, but poong fowle plenty, and dangerous comming to them. By this time (I hauing let the isles, and headlands about in sight with a compasse) came a small gale at South-south-east; then our admirall shot off a piece for the boats, and hence I went, and dined aboord with him, and came after aboord, and went in North-north-east and North-east till morning: at which time wee were within a league of the isle, entering before S. Vincent, but knew not how much water was upon the barre to go out.

Their arrivall
at S. Vincent,

Three canoes of
Portugals &
Indians.

The 20 day in the morning, being calme, the generals pinnelle came in to the shore, with intent to sound the entrance, but seeing thzee canoes, with ech at the least twenty men, whereof the greater part were naked Indians, which rowed, the rest Portugals, they returned aboord againe. The canoes came with a flag of truce within, calling of our ship, and we shewed them the like, asking what we were, and of what nation: at length one Portugall went aboord the admirall, by whom the generall sent a letter to the gouernour, crauing a pilot to bring in our ship of courtesie, and to haue traffique. About noone, hauing the winde at South, we bare in North-west, and so to the North-east, as the chanell trended: but comming into seven fadome water, we ankered, vntill our boats had sounded the barre. During which time, I went aboord the admirall, to conferre with him about our proceedings.

After I had stayed a while aboord the admirall, the generall came aboord with me, where we published vnto all my company very good rules for their behauiour and profit, to their great satisfaction: after he went downe into my cabbin, where with all his assistants he conferred of diuers particulars of our voyage: by which time the boat being returned from sounding, we departed, and set saile; following our skiffes, and with our ships got within the barre into seven fadome: then being becalmed, we ankered againe before a sandy bay, wherein stands a castle and houses: we rid within musket shot of it: and ankered about foure a clocke afternoone.

21 castle.

Then went I forwards with my skiffe vnto a further point, sounding along. Before my returne, the generall had sent for me to supper; and thither I went: but being ready to sit downe, there came out vs a canoa, wherein were ten Indians and two Christians; the one an ancient Genouois, the other a Portugall; who came aboord, and there receiued a small banket, declaring their comming was to vnderstand our intents, and what we sought: who being satisfied, departed with a farewell of thzee great pieces from ech ship.

which dwells
at Santos,
hath married
this Ioseph Dorys
daughter.

The 21 day about thzee a clocke afternoone, came a canoa, with the old Genouois named Ioseph Dory, a Fleming named Paul Badeues, and Steuen Repose a Portugall, and brought a letter from the gouernour, and withall, answere of feare and doubtes of vs, &c. After many speeches and requests, a banket was made them, and the generall in his pinnelle with his muslicke, & trumpets; and I in my skiffe with trumpets, drum and fife, and taboz and pipe, accompanied them a mile by the riuer: at going off, we saluted them with a volley of thzee great pieces out of ech ship: and after vs came captaine Parker with the admirals long boat, and certeine shot in the same, to attend on the generall.

Santos.

The 22 day betimes in the morning, I went aboord the admirall to conferre about the sending of some token and present to the gouernour, which was by all the assistants determined to send him thzee yards of fine skarlet, & thzee yards of fine murrey-cloth; and to Ioseph Dory the old Genouois, Steuen Repose the Portugall, and to Paul Badeues the Fleming, ech of them thzee yards of fine blacke cloth, which our merchants went by to Santos withall in the admirals skiffe, about nine a clocke afozenoone.

Also this forenoone, we being minded to goe by higher with our ships into harbour, I aduised them

them to goe view the place, and found the road before we went up; which we did: where were found the place both unconuenient, and the road woofle: and so we returned, and left the first determination. This day we tooke downe our main-tops, and top-mast, and all the shrouds,

About two a clocke after noone our merchants returned with their presents, not hauing bene at the towne, because Steven Repose by the way met them on the riuer, and aduised them to stay vntill there had bene word sent to the gouernour, who was vnwilling to speake with them yet, but shortly would send their answer.

The rest of this forenoone we spent in communication about the appointing of a purser for the Edward. Also we signed an assent for comming to this place: about which thing grew foule speeches betweene the generall and his lieutenant, after the olde custome,

Then went wee to supper: and being at supper, certaine Indians came aboard, and brought the generall a strange crow, and potatos, and sugar canes, to whom he gaue looking glasses, great pinns, and biscuit: and so we departed, being late. Also this afternoone I ran ouer towards S. Vincent, and sounded the bay a league ouer, and found the chanell and flats, and returned aboard againe within two houres, hauing a good gale of winde.

The 23 day our skiffe went ashore to fish, and tooke pretty store: we sent our main-top ashore to be mended, and many of our men to wash their clothes; also I went my selfe with them aland, to take order that no man should any wayes offend the Indians. In the meane time the generall with all the rest of the chiefest gentlemen, came ashore, and viewed the place, and appointed out the fittest roome to set vp our smithes forge, and ouens to bake our biscuit, and place for our coopers to trim our water cask.

The 24 day at foure of the clocke, before day, we heard one call for a boat on the North shore, to whom I sent my skiffe, who brought aboard one named Iohn Whitehall, an English man, which is married here in this place, and with him two of his Indians; whom I entertained vntill I sent word to the generall to prepare himselfe to receiue him: in which time he and I talked of many seuerall particulars.

About five a clocke I conueyed him aboard the admirall: there he discovered vnto vs what had bene done at the towne, as fortification, and sending their wiues away, &c. aduising vs to receiue no more delapes, but to come vp presently before the towne with our ships.

About ten a clocke came a canoa, and brought downe Ioseph Dory and Steven Repose, who tolde vs that on Saturday the gouernour would meet our generall, and talke with him, praying vs in the meane time to vse our ordinary businesse of cooperage, carpenters worke, filling water, fishing, and washing, &c. but not to set vp forge, nor ouen, vntill speech had with the gouernour. After this answer, we dined together aboard the gallion: after dinner we left the messengers sitting in the cabbin, and went vpon the poope; where the generall demanded the aduice of his assistants, whether it were not best to stay these men while we had them or not, or whether it were best to go vp with our ships to the towne or no.

Whereunto ech man paused to make answer: wherefore I deliuered my opinion; which was, that we were forbidden to vse violence to any nation for trade.

Secondly, I considered that diuers of our nation, worshipfull merchants, and now aduenturers in this voyage, had set out the Minion hither, and begun a trade, which with our forcible dealing might be spoiled, and our nation brought in harred.

Lastly, that with force we were not like to attaine so much commodity, as we were in possibility to haue with courtesie.

Whereupon all was concluded, and they suffered to passe away: to whom the generall gaue the three cloake-clothes, to Ioseph Dory, to Paul Baudese, and to Steven Repose, to ech of them one, which were before cut out for them: and so friendly we and they departed about two a clocke after noone.

About foure of the clocke this afternoone we saw three saile of ships come bearing in about the point, which alsoone as they saw vs, ankered vpon the barre, and put themselves in readinesse, sending from one ship to another with their boats, and blowing off their ordinance, meaning to take vs: and we before night, getting our men and other necessaries from the shore, which were busse on land, armed our ships to defend our selues. Then went I aboard the admirall to know what he meant to do: who determined to set his watch in warlike sort; and so he did: for after the trumpets and drum had sounded, he shot off a great piece, as they before had done; and presently the viceadmirall shot at me, whom I answered with another, and so ceased. We then set vp our main-top, and top-mast, rigged before eleuen of the clocke the same night. In the meane while they let slip their ankers and cables, and came driuing and towing with their boats in vpon vs,

meaning to haue boorded vs: and being neere our admirall, he halled them; who refused to tell of whence they were, thinking by spending of time to get aboord of him: to whom I called still to beware, and to shoot at them in time. At length he let flie at them, yet was glad to let an anker and cable slip to auoid them: then came they all driuing downe chwart my haulse, so that I was faine to let slip an anker and cable to shun the gallion. All this while the ordnance and small shot plyed of all parts, and I was faine to send the gallion my skiffe with a haulser to ride by, for shee was loose, and with the flood draue by within me. Then was the viceadmirall on my broad side, who was well payed before, yet I left not galling of him, til I thought our powder spent in vaine to shoot at him, he was so tozne, and broken downe by vs. About foure of the clocke it rained so fast, that we could scant discerne one the other, the Moone being gone downe, yet rid the admirall, and the rereadmirall, but a litle ahead of vs: during which time, we paused, and made ready all our munition.

The 25 day, by day-light, we saw the viceadmirall sunke hard by vs, so that his yards which were hoisted acrosse, and his tops, and that ouer head, was aboue water: most of their men were gotten away in their boats, sauing about fourtie persons which hung in the shrowds, and coppes, whom I aduised our generall to send for away, and had made ready, and well manned our pinnesses; but being vpon the way going, the generall called them backe, and would not suffer them to goe. There were three of their boats also going for them from their ships; at whom I shot, and made them to retire, and leaue them vpon the shrowds. At length our generall sent for two of the men away: which his pinnesse brought to him; the one was heaued ouer boord, because he was soze hurt, not like to liue; and he was a Parillian; the other was a Greeke, borne in Zante, boat-swaine of the viceadmirall: the rest of the men, some swam away vpon rafts, some were drowned, and some remained still hanging on her. By this time it was faire day-light, and I called to our generall to wey, and driue downe to them, who required mee to goe first and anker on their quarter, and he would follow, and anker on their bowes. I weyed, and went downe, and ankered by them; yet not so nere as I meant, for the ebbe put me off to the Northwards. There rid I alone, spending shot at them, and they both at me, foure houres, before our admirals anker would come by: during which time, I had some spoile done; but when our admirall came, he had her part, and eased me very well.

At length our admirall began to warpe away, and being come without me, set saile, and began to stand out into the sea: I went aboord of him to know his pleasure. Who determined to get out of shot; but could not, because the winde scanted on them. The Edward before she could get by her ankers, endured many more shot, after the gallion was further off a good way then she, and sometime the gallion had two or three. Thus we ended about two of the clocke after noone: the rest of this day and part of the night, we spent in mending, sitting, and putting our ordnance and furniture in order for the next morning, thinking they would haue bene with vs.

The 26 day in the morning we could not see them, because they were gone by the riuer: wee manned our boats and pinnesses, and weyed two ankers and one cable, that they let slip the night before: as our men were weying the third anker, the bwoy-rope brake, and so we lost that anker. Our admirall had an anker of twelue hundred, and a good cable of eleuen inches, and we had an anker about fife hundred, with a piece of a basse cable, and bwoy-rope nothing worth.

After dinner I went aboord the admirall, to confer with him, who determined to go off to sea, and thither I caried Sennor Pinto to interpret the Indian language, with an Indian named Peter, which fled from the bay where we rid in a canoa, and brought with him a Spaniards caliuier, flaske, and touchpore, to goe with vs, whom our admirals boat met, and brought him aboord to the admirall. Hee tolde vs that the Spaniards had brought many dead men on land, and buried them, and also landed many hurt men in their bay, and that there were certeine Spaniards gone ouer thozow the woods to looke after vs. Then the Generall, captaine Hawkins, and master Maddox came aboord of mee to biewe my hurt men, and harmes of my shippe, both men, shippe, and tackle; and I also went aboord him to peruse his hurts, who had but one man, a sailer, slaine.

The 28 day in the morning died Lancelot Ashe, of a hurt; who departed very goodly. This day we stood to the Northwards: and in getting in our ankers and skiffe, we were put 3 leagues to leeward of Fiddle ile, but the gallion rid still.

The 29 day in the morning, seeing my selfe put to sea from the admirall, I assembled master Walker, master Shawe, master Ieffries, the master, the masters mate, and the pilot, to whom I shewed that I was desirous to goe backe to seeke our admirall, whereunto the master, pilot, and masters mate answered directly, that wee could not fetch the ile where wee left them,

them, and to meete them in going backe it was very vnlikely and to vs dangerous many wayes, as well for falling into the laps of the Spaniards, as to be put on a lee shoare: whereupon all the rest aduised me to stand off into the sea, whereunto I assented, remembering withal, that time spent consumed victuall, and howe long wee had beaten vp and downe in the same bay before, to get in with calmes and contrary windes.

Thus wee concluded that M. Walker should set downe each mans opinion, and wee set to our handes, and from henceforth hee to keepe a Register of all our proceeding, as M. Maddox did aboard the Admirall.

The first day of February, wee went East by South, and East Southeast with a stoute gale: and went the same course the 3. 4. and 5. dayes following.

The 5. day about 10. a clocke in the forenoone M. Walker died, who had bene weake and sicke of the bloodie fluxe 6. dayes, wee tooke a view of his things, and pyried them, and beaueed him ouerboard, and shot a peece for his knell.

M. Walker the
Preacher died.

The 14. day I called into my cabbin the two marchants, the Master and the Pilot, shewing them our wants of victuals and other necessaries: whereupon they and I concluded, that it was best for vs to returne to our countrey, with as litle losse of time and expence of victuals as might be, being without hope of reliefe vpon this coast, and yet to keepe the coast of Brasil to friend for feare of extremitie.

The 17. day in the morning hauing much raine, wee saued about two tunne of water, of which we were very glad.

The 18. day I obserued the variation of the compasse, which varied one point, and a halfe to the Southwards, by our ordinary compasse of London.

Variation of
the Compasse.

The second day of March the Master, Pilot, & I agreed to fetch the yle of Fernando Loronha. From the 3. day to the 10. day we went West, and by South, and ran in for the shoare.

The 10. day we saw the land, which was sandie hilles with woods on it.

The 11. day seeking to goe a shoare, wee sawe foure men, which weaueed to vs with a white shirt, and we weaueed to them with a flagge of cruce: At length one of them swamme to our boats side, and there lay in the Sea talking with vs, almost an houre: in the ende, being partly perswaded by Pinto, who talked with them in the Indian tongue, and partly entised with such trifles as I shewed him, hee came into our Skiffe, and called to his companions on shoare, who came aboard swimming: wee deliuered them certaine barricos to fetch vs them full of fresh water: after, there came downe 40. Indians, boyes, women, and men, and with them a French boy, but the former Indians deceiued vs of our barricos. Whereupon Pinto and Russell swamme a shoare to seeke water, but found none.

The same day wee sailed to a place where boats might land, & I went a land in my Skiffe, and found the Indians, and Frenchman which were with mee the day before, and they brought our three barricos full of fresh water: for which I rewarded them with some trifles. In the meane time our boat went ashore, and our men with some of the Indians brought vs twentie barricos more of fresh water, and I my selfe went to shoare and brought 23. hemmes of India.

The 12. day betimes in the morning, wee manned our boat and Skiffe, and tooke some trifling things to shoare, and barricos: at our first arriuall the rude Indians flocked together, wading to the Skiffe wherein I was, begging, and wondering about vs: First I caused them to fetch 27. barricos of water, whom I rewarded with small bells, &c. In the meane time they brought hens to me, wading to the Skiffe, for I kept my selfe alwayes afloat, and for their hens I gaue them a knife, and a smal looking glasse. All this while M. Blackcoller our Pilot, Thomas Russel, Marke Thawghis were still on shoare, and would not carry aboard: In the ende, fearing some treacherie, because all the Indians were slipped on shoare from mee, I called our men away, and suddenly they layed handes on our men ashore, and with their bowes shot thicke at vs in the boats, and waded into the water to vs, laying handes on our Skiffe, yet God of his mercie deliuered vs from their hands, with the losse of five men slaine, and others hurt.

Creation of the
Indians.

Thus we got aboard with 40. hens, ducks, turkies, and parrats, and three hogtheads of water: and I carried a Frenchman aboard with mee, named Iaques Humfrey, who was by chance in the boat with me when this fray began.

Iaques Humfrey
a Frenchman
saueed.

The 17. day we tooke three sharks in the morning.

From that day to the first of April, wee went our course, sometime with raine, and sometime with variable windes, & so til the 4. of April: which day we saw 4. birds with long tailed, which hovered about the ship, and in the afternoone we saw and tooke vp many weedes which braue thicke in the sea, which we iudged to be giuen with the East windes from the ples of Cape verde.

From this day till the 11. day we went our course sometime Northeast, sometime Northwest according to the winds: upon this 11. day George Coxe one of our Carpenters, hauing the night before broken by the hold, and stolne wine, and drunken himselfe drunke, being taken in the roome, leapt ouerboard out of the beake head, and so drowned himselfe.

The 12. day wee spied our foremast to be perished in the lownes, and durst not beare our fore-top saile vpon it, but went hence with our sailes next hand, North all day and night.

From hence to the 20. day we went Northeast and by North. This day I obserued the variation of the compasse: and I noted that the South point of the compasse caried more then halfe a point to the Westwards.

The 25. day of May wee went betweene the East northeast, and the Northeast with a small gale till fise a clocke in the afternoone: then had we sight of land, which rose ragged to the Northwards like broken land, we being about fise leagues off: that yle bare Northeast by North of vs, and the Northmost part bare North by East of vs, with a rocke a sea boord: we then sounded, and had fiftie and fise fadome grey sand, and maze great store in it: so wee stood in Northeast till eight a clocke, and then behelde it againe being within foure leagues of it, bearing as before, but wee coulde not make it, for some thought it to bee the foreland of Fontenay, some iudged it the yle of Vllant: then we sounded againe in 55. fadome browne sand, and little maze in it: at eight a clocke at night we went about, and stood off South south west one watch, then the wind shynked to the South west, that we coulde lye but South south west fire glasses, so that at thre a clocke wee cast about, and lay North west fire glasses, and North north west a watch being then eight a clocke the next day.

The 26. day wee lay as nigh as wee coulde betweene the North and the North northeast, and saw the same land againe, and made it to bee the foreland of Fontenay, and the ragges to bee the Seames, which bare now East Northeast of vs: and wee stood on till tenne a clocke, then being within two leagues of the rockes and lesse, wee cast about and stood off South west, because wee coulde not double the uttermost rockes: when we were about we draue to the Southwards very fast, for the ebbe set vs West south west, and being spring tides, it hoysed vs a pace to leeward, for the space of one houre: then with the flood which was come, we draue againe to windwards: at twelue at noone it was calme till 6. afternoone, then wee stood about larboord tacked, South south west one watch, then at midnight wee cast about and stood ouer North till foure afozennoone.

The 27. day hauing brought the land East southeast of vs, we made it to be Sylly being before deceiued, and went hence East by North to double Grimsbie, leauing The bishop and his clearks to the South westwards, which we before tooke to be The Seames.

At 7. a clocke in the afternoone we sawe the lands end of England, which bare East by North off vs, and is 7. leagues off from Sylly.

The 29. day at fise a clocke beforenoone we had brought the Ramhead North of vs, and were within a league of it, and went in Northeast next hand, being thicke and foggie, and little winde: so that at eleuen a clocke we got in within the yland, and there by mistaking of a sounding, our ship came aground betweene the yle and the maine, and there sate till 4. a clocke in the afternoone that it was halfe flood.

The 30. day about 9. a clocke, with much adoe I furnished away P. Ieffries, M. Symberbe, and William Towreson with letters, after dined at M. Blacollers, and made many salutations with diuers gentlemen.

The 31. I wrought aboard all day, and put our ship, and things in order: Afternoone I hauing pitie of some poore men of Milbrooke, which were robbed the night before by a pirate named Purser, which rid in Cawson bay, I consented to goe out with the Edward in company of a small shippe which they had furnished to bee their Master, so about fise of the clocke in the afternoone, came a hundred men of theirs aboard of mee: About twelue a clocke wee set saile, and by thre afoze day wee were gotten to the windwards of him, then hee set saile, and went hence to the Eastwards, and outsailed vs, because our consozt would not come neere him: after a small chale which we gaue him to no effect, wee returned into our old road, and there moored the ship about nine of the clocke in the forenoone, and hence went all the Milbrooke men againe ashore from mee. And thus I ended a troublesome voyage.

The

The voyage set out by the right honourable the Earle of Cumberland, in the yere 1586. intended for *The South sea*, but performed no farther then the latitude of 44. degrees to the South of the *Equinoctial*, Written by M. John Sarra coll marchant in the same voyage.

On the 26. day of June, in the yere 1586, and in the 28. yere of the Queenes maiesties raigne, wee departed from Grauesend in two ships; the Admirall called The red dragon, and the other The barke Clifford, the one of the burden of 260. tunnes, with 130. men, and the other of the burden of 130. tunnes, with 70. men: the Captaine of the Admirall was M. Robert Wichrington, Of the vice-admirall M. Christopher Lister, both being furnished out at the costs and charges of the right honorable the Erle of Cumberland, hauing for their masters two byethren, the one John Anthonie, and the other William Anthonie.

The 24. of July wee came into the sound of Plimmouth, and being there constrained by Westerly winds, to stay till the 17. of August, wee then departed with another ship also for our Rear-admirall called the Roc, whereof M. Hawes was Captaine, and a fine pinnelle also called the Dorothie, which was sir Walter Raleighs. The foure being out in the sea, met the 20. of August, with 16. sailes of hulkes in the Sleue, who named themselves to bee men of Hamborough, laden and come from Lisbone. Our Admirall hailed their Admirall with courteous wordes, willing him to strike his sailes, and to come aboord to him onely to know some newes of the countrey, but hee refused to do so, onely strooke his flag &ooke it in. The vice-admiral of the hulkes being a head, would neither strike flagge nor saile, but passed on without budging, whereupon our Admirall lent him a piece of Ordnance, which they repayed double, so that we grew to some little quarrel, whereupon one of the sternmost hulkes, being as I suppose more afrayde then hurt, strooke amaine, our Admirall being neere him, laid him aboord, and entred with certaine of his men, how many I know not, for that we were giuing chase to the Undermost men, thinking our Admirall would haue come vp againe to vs, to haue made them all to haue strooke: but the weather growing to be very thicke and foggie, with small raine, he came not vp but kept with another of the hulkes which Captaine Hawes had boarded and kept all night, and tooke out of her some prouision that that they best liked. They learned of the men that were in the hulke, that there were 7. hulkes laden in Lisbone with Spaniards goods, and because their lading was very rich, they were determined to go about Ireland, and so they let her goe againe like a goole with a broken wing.

The next day after being the 21. day, wee espied 5. sailes more, which lay along to the Eastwards, but by reason of the night which then was neere at hand, wee could hardly come to them. Yet at last we hailed one of the biggest of them, & they tolde vs that they were al of Hamborough: but another saide hee was of Denmarke, so that in deede they knew neither what to say, nor what to do. Our Admirall being more desirous to follow his course, then to linger by chaling the hulkes, called vs from pursuing them with his trumpet, and a piece of Ordnance, or els wee would haue seene what they had bene, and wherewith they had bene laden.

The 22. day because of contrary winde wee put into Dartmouth all 4. of vs, and taried there seuen dayes.

The 29. we departed thence and put out to Sea, and began our voyage, thinking at the first to haue runne along the coast of Spaine, to see if wee could haue mette with some good prize to haue sent home to my Lord: but our Captaine thought it not the best course at the last, but rather kept off in the sea from the coast. And vpon Saturday the 17. of September wee fell with the coast of Barbarie, and the 18. hailed in with the roade of Santa Cruz. The 21. day wee fell with one of the ylands of the Canaries, called Forteuentura. In running alongst this yland, we espied vpon a hill by the water side, one wauiug with a white flagge, whereupon wee manned both our boates, and sent them towards the shoare, to vnderstand what newes. They found them to bee two ragged knaues and one horseman, and they tolde vs that Lanzarota was taken, and spoyled in August by the Turkes: when we saw they had nothing else to say, we left them, and proceeded on our course, and fell againe with the coast of Barbarie.

The 25. day of September about 10. of the clocke we fell with Rio del Oro, standing iust vnder our Tropike: we anchored in the mouth of it in 8. fadom, the entrance of it is about 2. leagues ouer. And the next day our Captaine with the boate searched the riuer, and found it to be as broad 14. or 15. leagues by, as at the entrie of it, but found no towne nor habitation, saying that there came downe two poore men, and one of them spake good Spanish, and told our Captaine, that certayne Frenchmen vsed to come thither, and laded some oxe hides, and goats hides, but other com-

Lanzarota

a halfe.

Trade of the
Frenchmen in
Rio del Oro,
modest

moditie there was none. We departed thence the 27 day, & the last day of the moneth being calme we went aboard our General, & there consented to goe for Sierra Leona, to wood and water. From thence till the 10. of October wee were much becalmed with extreeme hot weather, much lightning, and great stoe of raine. This 10. day we sounded, finding a great current as we supposed by the rippling water, which after wee found to bee an ordinary tide, the flood setting to the North-west, and the ebb Southeast, and here we had but 18. fathome water, and no lande to bee seene: it was on the Southermost part of the shoules that lie in about 11. degrees, but halling South off againe, it presently deeped vnto 50. fathome, and after halling Southeast and by East, and East southeast, we sounded, but had no ground in 120. fathome.

Sierra Leona.

The 21. of October wee fell with land vpon the coast of Guinea, in the height of 8. degrees, a very high land, but of no great length: it was the high land ouer Sierra Leona. Wee were in to the land, and found neere the shoare moze water then in the offing: at the Northen end of the high land we ankered about a mile, and somewhat moze from the shoare in 11. fathome. To goe into the harbor of Sierra Leona we did boztow vpon the South side, hauing no ground in 10. fathome, halfe a mile from the shoare.

Vpon the Northside of this harbour is very shoale water, but on the Southside no feare, moze then is to be seene.

A towne of the Negros.

The 23. day being Sunday wee came to an anker in the bay of fresh water, and going ashore with our boate, wee spake with a Portugal, who tolde vs that not farre off there were Negros inhabiting, and that in giuing to the king a Botija of wine, and some linnen cloth, hee would suffer vs to water and wood at our pleasure. But our Captaines thinking it not good to giue any thing for that which they might take freely, landed, and certaine of our men with them, whereupon the Portugall and the Negros ranne all away into the woods. Then wee returned againe into our boates, and presently went and landed in another place, thinking to haue fetcht a walke, and so to come to our boates againe. But wandering through a little wood, we were suddenly and vnawares vpon a towne of the Negros, whereupon they strooke by their drumme, giuing withall a great shout, and off went their arrowes as thicke as haile. Wee were in number about 30. casualties, and 20. with our weapons, which wee also let flie into the woods among them, and what hurt we did, we know not.

A strange monster.

Then wee returned to our boates, and tooke wood and water at our pleasure, and reasonable stoe of fish, and amongst the rest we halled vp a great foule monster, whose head and backe were so hard, that no sword could enter it: but being thrust in vnder the belly in diuers places, and much wounded, hee bowed a sword in his mouth, as a man would do a girdle of leather about his hande, and likewise the ppon of a boare speare. He was in length about nine foote, and had nothing in his belly, but a certaine quantitie of small stones, to the value of a portell.

Another great and fine towne of the Negros.

The fourth of Nouember wee went on shore to a towne of the Negros, which stood on the Southeast side of the harbour, about a Sacar shot from the roade, which we found to be but lately built: it was of about two hundred houses, and walled about with mightie great trees, and stakes so thicke, that a rat could hardly get in or out. But as it chanced, wee came directly vpon a port which was not shut vp, where we entred with such fiercenesse, that the people fled all out of the towne, which we found to be finely built after their fashion, and the streetes of it so intricate, that it was difficult for vs to finde the way out, that we came in at. Wee found their houses and streets so finely and cleanly kept, that it was an admiration to vs all, for that neither in the houses nor streets was so much dust to bee found, as would fill an egge shell. Wee found little in their houses, except some matts, goards, and some earthen pots. Our men at their departure set the towne on fire, and it was burnt (for the most part of it) in a quarter of an houre, the houses being couered with reed and straw.

A towne burnt.

Rice in stacks.

After this wee searched the countrey about it, where wee found in diuers plaines good stoe of rice in stacks, which our men did beate out, and brought a bozt in the hulke, to the quantitie of 14. or 15. tunnes in both our ships.

Isles.

The 17. day of Nouember wee departed from Sierra Leona, directing our course for the Straights of Magellan. In this harbour diuers of our men fell sicke of a diseale in the belly, which for the time was extreeme, but (God bee thanked) it was but of small continuance. Wee founde also in diuers places of the woods, images set vpon pinnes, with diuers things before them, as eggs, meale, rice, round shot of stones, and diuers other things, such as the barbarous people had to offer by.

When we came neere to the Line, wee found it nothing so hot as it is at Sierra Leona, by reason of the great winde and raine.

About

About the 24. day of November one or two of our men died, and others also were sicke of a Calentura.

The second day of January we had a little sight of land, being about the height of 28. degrees to the Southward of the Line.

The 4. day wee fell with the shoare high and bold, being in 30. degrees, and a terse, little more or lesse. All of it to the Northward was a high land, but to the Southward it did presently faile, and was a very low land, and all sandie. About five leagues from the shoare wee sounden, and had about fiftene or sixteene fathome water, and blacke sandie oze. We thought to haue gone to the shoare, and to haue watered, but we could not discerne any good harbour, and therefore we cast off to seaward againe.

They fall with
an high land
in 30. degrees

The 12. day wee found our selues in 32. degrees and 27. minutes. From the day of the Natiuitie of Christ, till the 13. day of this moneth, although the Sunne was very neere vnto vs, yet we found no want of winds but variable as in England, & not so hot but that a mans shoulders might well digest a frize gowne, and his bellie the best Christmas cheere in England, yet wee for our parts had no want, but such as might content honest men.

The tenth day being about 8. leagues from the shoare, and a little short of the Riuer of Plate, it was my good happe to espie a saile, which was a small Portugal bound for the Riuer to a towne called Santa Fee: and from thence by horse and carts, the marchants, and part of their goods were to bee transported into Peru. This shippe being about the burthen of 45. or 50. tunnes, wee tooke that day about thre of the clocke, wherein there was for Master or Pilote an Englishman called Abraham Cocke bozne in Lee. We examined him and the rest concerning the state of the Riuer, and they told vs that there were in the Riuer five townes, some of 70. households, and some of more. The first towne was about 50. leagues by the Riuer called Buencs Ayres, the rest some 40. some 50. leagues one from another, so that the yppermost towne called Tucaman is 230. leagues from the entrance of the Riuer. In these townes is great store of cozne, cattell, wine, and sundry fruits, but no money of gold or siluer: they make a certaine kinde of slight cloth, which they giue in trucke of sugar, rice, Parmalade, and Sucker, which were the commodities that this shippe had.

A Portugal ship
taken, wherein
was for Pilot
Abraham Cocke
an English-
man, left there
before by the
Minion of Lon-
don 1587.

Five townes
vpon the riuer
of Plate,

They had aboard also 45. Negros, whereof euery one in Peru peeldeth 400. duckets a piece, and besides these, there were as passengers in her, two Portugal women and a child.

The 11. day wee espied another saile, which was the consort of this Portugall, and to him also we gaue chase, and tooke him the same day: hee was of the burthen of the other, and had in him good store of sugar, Parmalade, and Succats, with diuers other things, which we noted downe our booke. In this ship also we found about 35. Negro women, and foure or five friers, of which one was an Irish man, of the age of thre or foure and twentie yeeres, and two Portugal women also, which were bozne in the riuer of Ienero. Both these ships were bought in Brasil, by a yong man which was Factor for the bishop of Tucaman, and the friers were sent for by that bishop to possesse a new Monasterie, which the bishop was then a building. The hookes, beads, and pictures in her, cost (as one of the Portugals confessed) about 1000. duckats.

Another Portu-
gal ship ta-
ken.

An Irish frier
taken.

The bishop of
Tucaman in
the riuer of
Plate.

The netues of
Sp. Iohn Drake.

Richard Faire-
weather.

Of these ships we learned, that M. Iohn Drake, who went in consort with M. Fenton, had his Barke cast away a little short of the Riuer of Plate, where they were taken captiues by the Sa- uages, all sauings them which were slaine in the taking: the Sauages kept them for a time, and vled them very hardly, yet at the last Iohn Drake and Richard Faireweather, and two or thre more of their company with them got a Canoa, and escaped, and came to the first towne of the Spaniards. Faireweather is married in one of the townes, but Iohn Drake was carried to Tucaman by the Pilot of this ship, and was liuing, and in good health the last yeere. Concerning this voy- age of the Portugals they tolde vs that it was the thirde voyage that was made into the Riuer of Plate these 30. yeeres.

The 12. of January wee came to Seale pland, and the 14. day to the Greene pland, where go- ing in we found hard aboard the maine 8. fathome, 7. and 6. and neuer lesse then five fathome. There lies a ledge of rocks in the faire way, betwixt the pland and the maine, so that you must bee sure to hozrow hard aboard the maine, and leaue the ledge on the larbord side.

Seale- pland
and Gree-
pland.

One of the Portugals which wee caried along with vs in our shippe seemed to bee a man of ex- perience, and I entred into speach with him concerning the state of the Riuer: hee tolde mee that the towne of Buencs Ayres is from the Greene pland about leuentie leagues, standing on the Southside of the Riuer, and from thence to Santa Fee is 100. leagues, standing on the same side also. At which towne their shippes doe discharge all their goods into small Barkes, which rowe and towe by the Riuer to another towne called Ascension, which is from Santa Fee 150. leagues,

Buencs Ayres

Santa Fee.

leagues, where the boats discharge on shoare, and so passe all the goods by caris and hoxses to Tucaman, which is in Peru.

The towne of Ascension stands in a very fertile place, reaping corne twice in the yeere, with abundance of wine, cattell, and fruits. In the townes of Ascension and Tucaman a rapier of 20. rials of plate is worth 30. duckats, a bore of Parmalade 20. duckats; a looking glasse a foote o-uer is worth 30. li. pictures in tables of 14. inches, 30. and 40. li. a piece.

The 16. day wee went from Greene yland to the watering place, which is about a league to the Westward, where wee tooke in about 18. tunnes of water, and the 22. day came againe to Seale yland to make prouision of Seales, where a storme arose, which put vs in some danger, by the breaking of our anckers and cables, and the winde blew so colde, that wee much marueiled at it, considering the height of the place. I must needes in this place finde fault with our selues and the whole company, that riding in this Riuer 16. dayes, the chanell was not sounded, nor the way made perfect.

The 29. day wee tooke into our ship one Miles Philips, which was left in the West Indies by M. Hawkins.

The first of February I tooke the Sunne in 38. degrees. And the 3. day of I tooke it againe and found it to be in 41. degrees.

The 7. day of February our Captaine master Lister being in one of the prizes, boyled ouer boord his Gundelo, and went aboord the Admirall, and being there they sent their Gundelo aboord vs, for our Master, master Collins, and my selfe, & at our comming we were called into the Captaines cabbin, where were set in counsell for matters touching the state of our voyage, these men whose names are vnder written.

Master Robert Wichrington Captaine of the Admirall.

Master Christopher Lister Captaine of The barke Clifford.

John Anthonie, Master of the Admirall.

Thomas Hood Pilot for the Streights.

William Anthonie, Master of the barke Clifford.

David Collins. } Tristram Gennings.

Master William Wichrington.

Master Beumond Wichrington.

Master Wafnes. } Master Norton.

Master Wilkes. } Master Harris.

Thomas Anthonie.

Nicholas Porter.

The master Gunner :

And Alexander Gundie, his mate.

John Sarracol.

This company being all assembled together, the Master of the Admiral declared that the cause of our assembly was to determine after good aduice, what course or way were best and most likely to all mens iudgements to be taken. First for the good preferment of my Lords voyage, then the health of our men, and lastly the safegard of our shippes, and further shewed his minde to vs all in these wordes, as neere as I could cary them away.

My masters, my Lords determination touching this our voyage is not vnknown vnto you all, hauing appointed it to be made, and by the grace of God to be performed by vs for the South sea. But for as much as wee doe all see the time of the yeere to bee farre spent, as also the windes to hang contrary, the weather drabes on colder and colder, the nights longer and longer, our bread so consumed that we haue not left about two moneths bil ket, our drinke in a maner all spent, so that we haue nothing but water, which in so cold a countrey as the Streights, if we should get in, and bee forced there to winter, would no doubt be a great weakening to our men, and a hazard of the ouerthrow of the voyage: These things considered, both our Captaine, Master Hood, and I, doe rather thinke it good for the wealth of our voyage, the health of our men, and safetie of our ships, to goe roome with the coast of Brasill, where by Gods grace wee shall well victuall our selues, both with wine which is our greatest want, and other necessities.

Besides, it is giuen vs here to understand by the Portugals which we haue taken, that there is no doubt, but that by Gods helpe and our endeuour, wee shall bee able to take the towne of Baya, at our pleasure, which if wee doe put in practice, and doe not perforce it, being some what aduised by them, they offer to loose their liues. And hauing by this meanes victualled our selues,

we

wee may there spend vpon the coast some three or foure moneths, except in the meane time wee may happen vpon some good thing to content my Lord, and to purchase our owne credits: otherwise, wee may take the Spring of the yeere, and so proceede, according to my lords directions. And assure your selues (by the assistance of God) wee will not retorne without such benefite by this voyage, as may rebound to my lords profite, and the honour of our countrey. Nowe if there bee any of you that can giue better course and aduise, then this which I haue deliuered, let him speake, and wee will not onely heare him, but thanke him for his counsell, and followe it.

To this speech of M. Anthony, M. Lister our captaine answered in this sort: M. Withrington, & M. Anthony both, you know, that the last words that my lord had with vs in such a chamber were, that in any case we should follow our voyage only for the South sea, except by the way, we might perchance meete with such a purchase, as that wee might retorne with 6000 pounds: and therefore I see no safetie, howe wee may dare offer to goe backe againe, being so neere the Streights as we are: for my part I neither dare nor wil consent vnto it, except we be further forced, then yet wee are. My accompt is this, that he that dieth for this yeere is excused for the next, and I rather choose death, then to retorne in disgrace with my lord.

A resolute and
worthy speech
of captaine
Lister.

Hereunto both the captaine and master of the Admirall replied that they were all of that mind: yet notwithstanding, that in going roome the voyage was in better possibilitie to bee performed, then in wintering either in the Streights, or at Port S. Iulian, all things considered. And so agreeing, and concluding all in one, they were determined presently to beare vp.

The next day being the 8 of February, there fell out many and diuers speeches on each part concerning the altering of our course, some would continue for the Streights, and other some would not. Whereupon a viewe was taken in both ships of victuals, and reasonable store was found for both companies: and the winde withall comming to the North, we determined to take out of the prizes the best necessities that were in them, and so cast them off, and to plie for the Streights.

All this time wee held on our course, and the 15 day wee found our selues in the height of 44 degrees, but then the winde came to the South, with much raine, wind, cold, and other vntemperate weather, continuing in that sort five or sixe dayes, in which time we hulled backe againe into the height of 42 degrees.

They retorne
being in the la-
titude of 44
degrees.

Sunday being the 20 of February, our Admirall being something to the leeward of vs, and the storme somewhat ceased, put aboord his flag in the mizen shrouds, as a token that hee would speake with vs, and thereupon wee bare roome with him, and hauing halled one another, captaine Withrington shewed the disposition of all his company, which was rather to goe roome with the coast of Brasil, then to lie after that sort in the sea with foule weather, and contrary winds. Our captaine on the other side shewed the contrary disposition of his men, and company, willing notwithstanding to proceede: but in the ende, both the shippes fell asunder, and our captaine sayd, Seeing then there is no remedie, I must be content, though against my will.

The 21 day the weather grew faire, and the wind good at the South for the Streights, yet our Admirall bare roome still, we supposing hee would haue taken the benefit of the time: whereupon our whole company began to thinke of the inconueniences that would arise by deuiding our selues, and losing our Admirall, being very willing to continue their course, and yet not without the company of the Admirall. And then wee began to cast about after him, and at the last bare with him, and he tolde vs, that vpon a second viewe of the victuals, hee found their store so slender, and their want so great, that there was no remedie for them but to seeke some meanes to be relieved, which was the onely cause that hee bare Northward. This speech made vs of the barke to enter into a new consultation: and we found many of our men weake, and all our calli- uers not seruiceable, and the Smiths that should mend them to be in the Admirall. We considered also, that by breaking of company, eche ship should be the more weakened: wee continued in this consultation til the foure and twentieth day, and in all that time found master captaine Lister most desirous to accomplish, and to fulfill the voyage, and not willing in any case to turne his ship, but that the desire which we all had to continue in consort with our Admirall, made vs to thinke well of his company, and in fine, an agreement and conclusion was thus made on all sides, to follow the Admirall, without any more talke of the Streights till the Spring.

A final resolu-
tion to retorne

The 10 day of March, it fell out so vnfortunatly, that Samuel Teller our Masters mate, fell ouerboord, and so perished, we being not able by any meanes to recouer him.

The eight and twentieth day being in the height of one and twenty degrees, wee espied a saile, which wee iudged came out of the Streights, and had rich lading, but the night being at hand,

hand, we lost her very unluckily, and the next day could haue no sight of her.

The first day of April we fel with the land of Brasilia, in the height, as I iudge, of sixteen degrees and a tierce, and our Captaine went then aboard the Admirall, where they concluded to sende the pinnelle and our boate on shore for fresh water, because wee stood in neede of it, which did so with eightene good men, and three or foure tunne of water caske. They were from vs till the eighth day in the morning, at which time we espied them againe, and that day we came all together into the roade of Camana, where there came a Canoa aboard vs, and one of the chiefest Portugals that belonged to the place. Here wee tooke in beefes, hogs, water and wood at our pleasure, hauing almost no man able to resist vs, but some of our Portugals stole from vs in the Canoa.

The rode of
Camana.

They come in
to the riuer of
Baya.

The 11 day wee entred into the hauen of Baya, where wee were receiued at the point comming in, with two great pieces of Ordnance, which discharged bullets at vs five times a piece, but they lost shot and powder, and did vs no harme. After wee had passed the point, wee halled in for the roade as close as the wind would permit vs, but could not come so neere as we desired, and therefore we came to an anchor a faire birch off the towne, not without great store of shotte from thence, but yet our harme was none at all for ought they could doe.

At our comming in, wee found in the road eight ships and one carauel, of the which one was a hulke or double flieboat of the burden of two hundred and fifty tunnes, hauing in her 24 pieces of good Ordnance: shee with the rest of the ships, together with the towne, gaue vs shot, and shot, but not one touched so much as any of our sayles. And least wee should seeme in the meane time to be idle, we repayed for euery shot of theirs, two or three sometimes at the ships and the towne together.

The next day at night wee thought to haue halled in with the ships, and to haue fetched out some of them: but the wind blew then off the shore, so that wee could not possiblly doe it. And againe the next day at night we concluded to goe with our owne two boates, and two other boats of the countrey which we had taken before, which went with carauel-sayles, into the roade, and accordingly performed the same, notwithstanding the shot of the enemy. The Moone did shine, and gaue very good lighe, and in we went with our carauels and boates, and the shot came about our eares as thicke as haile: but the Portugals and the rest perceiuing vs no whit at all to shrinke or be dismayed, forsooke their ships, & began to prouide to saue themselves, some with their boats, some by swimming, and so wee entred the ships with a great howte, and found few to resist vs: but yet the shore not being a cables length from vs, they did so plie both their great and small Ordnance at vs, that it much annoyed vs: But yet for all that we made light of their shot, and our men of the barke Clifford entred the Admirall and Viceadmirall, and our Admirals men entred two other ships of the like burden, and presently euery one cut the cables in the haule, and so by the helpe of God in despite of them all, wee brought away foure of them. The least whereof was of the burthen of 130 tunnes.

They take 4
ships out of
the harbour of
Baya, notwith-
standing the
shot of the ene-
mie.

A hulke of
Flushing.

In this boile the hulke shotte at vs many times, but did no hurt at all: but at the last comming by the hulke towing our new prizes, we halled them and demanded whence they were, they answered vs of Flushing, and then we commanded him to wey anchor, and to come after vs: And not daring to refuse it, he did so, and brought with him a carauel with fortie or fifty butts of wine in her, and another small barke which had little or nothing in her: and rode by vs as one of our company, and was a ship of the burden of two hundred and fifty tunnes. Our hard happe was to find no great matter, either of marchandize or victuals in these ships, sauing in one of them we found foure butts of wine, in another two, in another one, and some fish, and all the rest of their lading was on shore.

All this was done vpon Easter eue, and we gaue thanks to God, that we had sped so well: and that very night there came a boate from the towne, with a Dutch merchant, and one Portugall, to offer some ransom for the ships, as they sayd, but as I iudge rather to espie our strength: we kept them that night aboard, and the next day we sent them to our Admirall.

The next day being Easter day arose a very great storme, insomuch that our carauel which we first tooke brake from vs, and one of our new prizes also, by meanes of the breaking of her cable, slipt away: whereupon, although the winde was great, and the sea troublesome, yet wee sent certaine of our men in our boat, to recouer them if they might, but we feare, that the rage of the weather hath caused vs to leese both our men and prizes.

In the midst of this storme, our two Spaniards which wee tooke in the riuer of Plate, seeing vs all busie about our prizes, beganne to thinke howe they might escape our hands, and suddenly slipt both out of one of the cabins windowes, and by swimming got a spoare, a thing which

which seemed to vs impossible, considering the outrage of the weather.

This storme continued long, and prevented vs of making our intended attempt against the towne, hauing as much to doe as possibly we might, in keeping our ships and prizes from running ashore, and falling into the hands of those that stood gaping greedily for our ruine.

The 19 day the storme being a little ceased, wee all weyed and came to an Island that lyeth next North-west from the bay, and the twentieth day we went on shore, and our carpenters set by our pinnesse.

The 23 day the people of the countrey came downe amaine vpon vs, and beset vs round, and shot at vs with their bowes and arrowes, but in short time wee caused them to retire, and many of them were caried away by the helpe of their fellowes, although wee had some of our men hurt with some of their arrowes.

The 24 day we receiued out of the carauel twelue butts of wine, and foure barrels of oyle, and halfe a quarter.

The 26 of April our pinnesse was lanchd: and the same day came downe vnto vs a great number of Portugals and Indians, with whom we skirmished the space of two houres to their cost.

The second day of May the Admirals boate went a shore with 14 men to fill water, and presently being on shore, they were intrapped with two or thre hundred Indians which assaulted the, and slew one or two of our men, but the rest escaped notwithstanding the number of the enemy, and came safe againe with water to the ship. We suffered this losse by meere negligence, & want of circumspection.

The 5 day the captaine of the Admiral himselfe tooke a small barke, his owne little carauel, our pinnesse and the Dutchmans boate, and at night went on shore to get victuals, amongst the bullocks which were in the fields: and in the morning they were gone so farre, that they were out of sight. Which being perceiued by the enemy, they presently made ready their galley for Admiral, with foure carauels, with as many men in them as possibly could thrust in & stand one by another: and they bare ouer with the North shore to meete with our pinnesse and boats: whereupon our men fell into great danger, although M. Lister our captaine dissuaded M. Wichrington from that attempt, by laying before him the danger both of himselfe and vs also, being so far one from the other. But being once gone, there was no remedie but they were to abide whatsoever might happen: we in the barke Clifford, although wee were weakely left, yet perceiuing the Galley to make after our men, weyed and pursued the galley, as nerre the shore as we could conveniently come for want of water: the hulke also weyed and came after vs to follow the enemy, but the enemy with his oares got sight of our pinnesse and boats before wee could, and bare directly with them: which being espied of our men, and they seeing no way to auoide them, made themselves ready (notwithstanding the great odds) to fight it out like men, and to liue and die together. The course that they tooke for their best aduantage vpon the sudden, was this: they went all into the pinnesse, and made fast the Dutchmans boate to one side, and the small carauel to the other side, and so waited the comming of the enemy, giuing them first of all a piece of Ordnance for their welcome, which they presently repaid againe with a piece out of the prow of the galley, and presently after, with thre or foure small brasse pieces, charged with haile shot, and so giuing a mighty shoute, came all aboord together, crying, entrad, entrad: but our men receiued them so hotely, with small shot and pikes, that they killed them like dogs. And thus they continued aboord them almost a quarter of an hour, thinking to haue deuoured our men, pinnesse and all. And surely to mans iudgement, no other thing was likely in regard of their great number, and the fewnes of our men, and they at the first thought all was their owne: but God, who is the giuer of all victories, so blessed our small company, and so strengthened their armes and mindes to fight, that the enemy hauing receiued a mighty foyle, was glad to ride himselfe from their handes: and whereas at their entrance, wee esteemed them to bee no lesse then betwixt two hundred and thre hundred men in the galley, we could scarce perceiue twenty men at their departure stand on their legs, but the greater part of them was slaine, many deadly wounded, their oares broken, & the departed from our men, hanging vpon one side, (as a Sow that hath lost her left eare) with the number of dead and wounded men that lay one vpon another. And whereas their comming aboard was in a great brauado, with drumme, shouting, and crying, they departed without either noise of drumme or speech.

We lost in this conflict of our men, thre onely, which were Alexander the Master Gunners mate, Laurence Gambrel a proper yong man of Hampton, and another that was master Benmans man. Some also were hurt with the arrowes of the enemy, but the wounds were curable: and thus it pleased Almighty God, of his great goodnes, to giue victory to 50 or 60 English-

in galley as
Baya.

in marvellous
defeat of the
Portugals by
a few of our
men.

men, againſt ſire or ſeven hundred Portugals and Indians, for which we ceaſed not to giue ſuch dutifull thanks to his Maieſtie, as ſo miraculous a victorie required.

Now touching the purpoſe of our men, who made that attempt for freſh victuals, their labour was nothing loſt, but in deſpice of the enemy they brought to our ſhips 16 or 17 pong bullockes, which was to our great comforts and refreshing. As for vs that were in our ſhip, we could not come neere them by two miles, or more, to giue them any aid, yet we ſuppoſe that the countenance of our ſhips was an encouragement to our men, and ſome manner of feare to the enemy.

Now whereas our opinion concerning the number of the Portugals and Indians, which were ſlaine, as aforeſayd, was grounded at that time vpon our probable coniecture, not being able otherwiſe to come to the knowledge thereof: you ſhall vnderſtand that the next night after the fight, there came aboard vs two Indians vpon a Gyngetho, who were runne away from their maſters, and they told vs for a very good truth, that the gallie went out from the towne with foure hundred men in her, but there came not backe to the towne againe alieue about thirty of them all: and I amongſt the reſt being deſirous to know of one of them, what the newes was at the towne, he answered me with great laughter: *Todo eſta cacado en Tierra.*

About 260
Portugals &
Indians ſlain.

The twelfth day I was ſent for to come aboard the admirall, about the hulke: where vpon the complaint of the Dutchmen, maſter Wichrington entred into bond to them for the payment of their freight, but how my lord would like that bond of debt at our returne, I knowe not. I gaue him my aduiſe and counſell to get his bond againe into his hands.

The thirteenth day our captaine ſent out of our ſhip certaine victuals vnto the Admirall, as one butte of dight riſe, two cheſts of cleane riſe, one barrell of oate-meale, one barrell of peafon, and one barrell of oile, becauſe they were ſomewhat ſcanted of victuals, and we at this time were to haue out of the Admirall our part of ſire and twenty cheſts of ſine ſugar, and more, of eight cheſts, and ſire cheſts that were taken in the Bay of Todos Santos, at the Ingenios, more of one hundred and thirty hats, and other diuers pillages, which were taken in the prizes, and at the ſhoze.

The foureteenth day being Monday, it was concluded amongſt vs all, not to leaue the towne of Baya ſo, but notwithstanding the time that they had to ſtrengthen themſelues and the towne, yet to giue an attempt for the winning of it: and therefore wee prouided our pinnelles, carauels, and boates for the enterpriſe: and as we were departing from our ſhippes, the winde turned directly contrary to our courſe, ſo that our determination for that time was broken, and wee returned againe to our ſhips: and to ſay the truth, if the weather and winde had ſerued, our attempt had bene very deſperate, conſidering the number of Portugals and Indians which were then gathered together, to the number of ſeven or eight thouſand, and their artillery vpon the ſhoze, playing vpon vs: but neuertheleſſe we had proceeded, if the winds had ſauoured vs.

The 16 day we went to certaine Ingenios of the Portugals, where we found the people fled and we entred their houſes without reſiſtance. We found in their purging houſe 1000 pots of ſugar, ſome halfe purged, ſome a quarter, and ſome newly put into the pots: ſo that euery man tooke his pot of ſugar for their prouiſion, and ſet all the reſt on fire.

The 17 day wee all weyed to goe to another Ingenio, to ſee if wee could find there better ſugar, and in the way we met with a prize, which was a carauel, which wee found vniuing with the weather, and entred her, and had in her onely three Faulcons of yron, which our pinnelle brought away, and ſet the ſhip on fire. Dalaſmor in the ſmall prize ran ſo farre in, that hee brought his ſhip on ground, where ſhee lay three or foure houres, till ſuch time as there came from the towne ſine carauels full of men, which being perceiued of vs, our captaine with our men went to him to ayde him. The carauels came within Faulcon ſhot of vs, but durſt come no neerer, leſt they might haue caſted of the like banket, that they receiued the laſt time. About halfe flood came the galley againe, and three carauels more, but before they came, the barke was a floate, and ſet ſayle: and then they all went to gard their Ingenios, which we had purpoſed to viſit: but the night comming on, perſwaded vs to the contrary.

They returne
againe to Baya.

The 19 day we ſet ſayle to goe into the roade of Baya againe, with our pinnelles, and a flag of cruce, to ſee if we could recouer our foure men, which remained alieue of thoſe ten, that periſhed in our boate, of whom we ſpake before, which foure were vnforgunately fallen into their hands: but they at our approaching neere the towne, ſhot at vs, and wee as ready as they, gaue them in all 27 ſhot, and ſo ankoyed a little from the towne, to ſee what they would doe.

The 20 day riding ſtill before the towne, our Admirall ſent a Negro aſhoze, with letters from the Portugals, that wee had priſoners aboard: the effect of which letters was, that if we might haue our men releaſed and deliuered vs, they ſhould haue theirs from our ſhips.

The

The next day in the morning, in stead of their bloody flagge, they put by two white flagges, and sent a Gingacho off to vs with two Indians, with letters of answere from the Gouvernour: but they would not consent in any case that we should haue our men, and willed their Portugals to take their captiuitie patiently, for they would not reueeme them: a motion they made in their letters, to buy againe one of their prizes, which we had taken out of the rode: but our admirall answered them, no, seeing they detained our men, wee would keepe both their men, and ships too. The same euening we weyed, and came out of the hauen, halfe a league to seaward.

The 22 we set saile to sea, and the 23 came to an Island twelue leagues to the Southward of Baya, to wood, and water.

The 24 day being aboord with our pinnesses, we met with a Canoa, wherein was one Portugall, and five Indians: we shot at the Canoa, and killed an Indian, and tooke the Portugall, and one of the Indians, and brought them aboord our shippes: we there examined them, and the Portugall confessed that there was a shippe laden with meale, and other victuals, bound for Fernambuck, but put into a creeke, because she durst not goe along the coast, hearing of our shippes. Whereupon we manned both our pinnesses, and tooke the Portugall with vs, to goe and seeke the same ship, but that night we could not find her.

The 26 day we went againe, and found her, being halled by into a creeke, where a man would haue thought a shippe boate could not haue entred: wee found her inuene laden with meale principally: but she had also in her fourteene chests of sugar, of which two were in powder, and twelue in loaves. This ship was of the burden of one hundred and twenty tunnes, and a new ship, this being the first voyage that euer she made, and as the Portugall confessed, shee was freighted for Fernambuck, but the men of Baya hauing great want of bread, bought both the ship and her lading, and so thought to stay her in this creeke, till we were gone off the coast: but it was our good hap to disappoint their pretense, and to fetch her from thence, where they thought her as safe as if she had bene at Lisbon.

The 28 day we deuided the meale amongst vs, according to the want of euery ship.

The 30 day, 16 or 17 Dutchmen went with their boate from the hulke to shoare, to fill water: and vpon a sudden they were assaulted with fifty or sixty Portugals, and so many more Indians armed with shot and other weapons, and they slew their Master and Purser, and the rest were hurt, but yet escaped with their liues: a good warning for vs to bee circumspect, and carefull in our landing.

The last day of May wee cast off one of our prizes, which wee called the George, and our Admirall and the hulke tooke the men and other necessaries out of her, into them. The same day the Portugals which had hurt the Dutchmen came to the shoare, and dared vs to come on land: whereupon wee went into our pinnesses with sfortie shot: but the cowardly villanes ranne all away to the hills, from the water side: but master Lister with nine men followed them, and they fled still before them, and durst not stay their appoach: so they came backe againe, and wee filled water quietly, and at our pleasure.

The third day of June our captaine master Lister, hauing a great desire for the performance of this voyage, according to my Lords direction, went to our admirall, and requested him to giue him five butts of wine, one barrell of oile, three or foure barrells of flesh, and to haue Thomas Hood and seuen or eight seamen for some of our landmen, and by Gods help, he with the barke Clifford, would alone proceede for the South sea: but the admirall mightily withstood his motion, and would grant no iote of his particular requests.

The 7 of June, hauing no vse at all of our prizes, we burnt one, and cast off another, and filled our owne ships with the necessaries of them.

The 8 day wee put off to sea, but yet with much adoe came againe to our ankozing place, because of the weather.

The 10 day the admirall sent for vs to come aboord him, and being come, hee opened a Carde before all the company, and tolde vs that my lords voyage for the South sea was ouerthrowen for want of able men, and victuals, and that therefore hee thought it best to plie for some of the Islands of the West India, or the Açores, to see if they could meete with some good purchase, that might satistie my lord. These wordes were taken heauily of all the company, and no man would answere him, but kept silence, for very grieve to see my lords hope thus deceiued, and his great expenses and costs cast away. The common sort seeing no other remedie, were contented to returne as well as he.

The 16 day wee espied a sayle, whereupon our pinnesse, and Dalamor gaue her chase, and put her ashore vpon the Island, where the men forlooke her, and ran away with such things as they

An Island 12 leagues to the South of Baya,

A new Portugall ship taken in a creeke,

A good warning for vs to be circumspect in landing.

June.

An offer of captaine Lister to go with his one ship ouer for the South sea.

Another pinnelle taken.

July.
They returned Northward.

could conveniently carie: our pinnelle boorded her, and found little in her: they tooke out of her nine chests of sugar, and one hogge, and 35 pieces of pewter, and so left her upon the sands.

From this time forward we began to plie Northwards, and the first of July fell with the land againe, where we fished, and found reasonable good floze. I tooke the latitude that day, and found our selues in 10 degrees and 22 minutes.

The 7 day we determined to fall with Fernambuck, and we came so neere it, that Dalamor (as he told vs) espied some of the ships that were in the harbour: yet notwithstanding we all fell to leeward of the riuer, & could not alter that, by any meanes recover the height of it againe: but we ceased not on all parts to endeouour the best we could, & oftentimes lost company for a day or two, one of another, but there was no remedie, but patience, for to Fernambuck we could not come, hauing so much ouershot it to the Northward, and the wind keeping at the South and Southwest.

Fernambuck in the Southern latitude of 7 deg. 50 min.

The 20 day I tooke the Sunne in 5 degrees 50 minutes, which was 2 degrees to the Northward of Fernambuck, and the further wee went, the more untowardly did the rest of our ships worke, either to come into haue, or to keepe company one with another. And truely I suppose, that by reason of the forward course of the Admirall, he meant of purpose to lose vs: for I know not how the neerer we endeouored to be to him, the further off would he beare from vs, and wee seeing that, kept on our owne course, and lookt to our selues as well as we could.

The 24 day our whole company was called together to consultation, for our best course: some would goe for the West India, some directly North for England: and in conclusion, the greater part was bent to plie for our owne countrey, considering our necessities of victuals, and fresh water, and yet if any place were offered vs in the way, not to omit it, to seeke to fill water.

At lowe tide in 3 degrees & 49 minutes.

The 26 day in the morning, we espied a lowe Island, but we lost it againe, and could descrie it no more. This day we found our selues in 3 degrees and 49 minutes.

The 27 day we searched what water we had left vs, and found but nine butts onely, so that our captaine allowed but a pinte of water for a man a day, to preserue it as much as might be, where with euery man was content, and we were then in number fiftie men and boyes.

August.

The hulke of Flushing burnt with all the men by negligence.

The first of August we found our selues 5 degrees to the Northward of the line, all which moneth we continued our course homeward, without touching any where: toward the end whereof, a sorrowfull accident fell out in our hulke, which being deuised from vs in a calme, fell asire by some great negligence, and perished by that meanes in the seas, wee being not able any wayes to helpe the ship, or to saue the men.

The 4 day of September, we had brought our selues into the height of 41 degrees & 20 minutes, somewhat to the Northwards of the Islands of the Azores: and thus bulking vp and downe with contrary winds, the 29 of the same moneth, we reached the coast of England, and so made an end of the voyage.

A discourse of the West Indies and South sea written by *Lopez*

Vaz a Portugal, borne in the citie of *Elnas*, continued vnto the yere 1587. Wherein among diuers rare things not hitherto deliuered by any other writer, certaine voyages of our Englishmen are truely reported: which was intercepted with the author thereof at the riuer of *Plate*, by Captaine *Withrington* and Captaine *Christopher Lister*, in the flecte set forth by the right Honorable the Erle of *Cumberland* for the South sea in the yere 1586.

This voyage was made in the yere 1572.

FFrancis Drake an Englishman being on the sea, and hauing knowledge of the small strength of the towne of *Nombre de Dios*, came into the harborough on a night with foure pinnelles, and landed an hundred and fifty men: and leauing one halfe of his men with a trumpet in a fort which was there, hee with the rest entred the towne without doing any harme till hee came at the market place: and there his company discharging their callievers, and sounding their trumpets (which made a great noyse in the towne) were answered by their fellows in the forte, who discharged and sounded in like manner. This attempt put the townesmen in such extreme feare, that leauing their houses, they fled into the mountaines, and there bethought themselves what the matter should be in the towne, remaining as men amazed at so sudden an alarme. But the Spaniards being men for the most part of good discretion loyned foureteene or fiftene of them together with their pieces, to see who was in the towne: and getting to a corner of the market-place they discovered the Englishmen, and perceiuing that they were but a few, discharged their pieces at them; and their fortune was such, that they slew the trumpetter, and shot the captaine (whose name

name was Francis Drake) into the legge: who feeling himselfe hurt retired toward the Fort, where he had left the rest of his men: but they in the Fort sounded their trumpet, and being not answered againe, and hearing the calievers discharged in the towne, thought that their fellowes in the towne had bene slaine, and thereupon fled to their Pinnelles. Now Francis Drake (whom his men carried because of his hurt) when he came to the fort where he left his men and saw them fled, he and the rest of his company were in so great feare, that leaving their furniture behinde them, and putting off their hose, they swamme & waded all to their Pinnelles, and departed forth of the harbour, so that if the Spaniards had followed them, they might have slaine them all. Thus Captaine Drake did no more harme at Nombre de Dios, neither was there in this skirmish any more then one Spaniard slaine, and of the Englishmen onely their Trumpetter, whom they left behind with his trumpet in his hand.

From hence the coast lieth all along till you come to Cartagena. Betweene Nombre de Dios and Cartagena is a great sound or gulfe, where the first Spaniards that ever dwelt vpon the firme land built and inhabited the towne of Dariene: howbeit they abode not long there, because of the vnholofomenesse of the place.

But Captaine Drake being discontent with the repulse that the men of Nombre de Dios gaue him, went with his Pinnelles into the said bay or sound of Dariene, where hauing conference with certaine Negros which were ranne away from their masters of Panamá and Nombre de Dios, he was informed that at the very same time many mules were coming from Panamá to Nombre de Dios laden with gold and siluer. Upon this newes Francis Drake taking with him an hundred shot, and the said Negros, stayed in the way till the treasure came by, accompanied and guarded onely by those that vpon the mules, who mistrusted nothing at all. When captaine Drake met with them, he tooke away their golde: but the siluer he left behinde, because he could not carrie it ouer the mountaines. And two dayes after this he went to The house of crosses called by the Spaniards Venta de Cruzes, where all the merchants leaue their goods, where hee flew fire or seuen of the marchants, but found neither gold nor siluer, but great store of marchandise: and so he fired the said house, with all the goods, which were iudged to be worth aboue two hundred thousand ducats. Thus not finding golde in this house to satisfie his minde, hee burned the marchants goods, and forthwith recovered his Pinnelles: where fortune so fauoured his proceedings, that he had not bene aboord halfe an houre, but there came to the sea side aboue three hundred souldiers, which were sent of purpose to take him: but God suffered him to escape their hands, to be a farther plague vnto the Spaniards.

Venta de cruzes.

Also another Englishman named Iohn Oxenham hearing what spople Captaine Drake had done vpon that coast, made a voyage thither to enterprize the like. His ship was of burthen about an hundred and twentie tunnes, and he was accompanied with seuentie persons: he had conference also with the foresaid Negros, but being aduertized that the treasure was conducted by souldiers, he determined with himselfe to doe that which neuer any man before durst vndertake to doe. For being most resolute of his purpose, and not looking nor forecasting what danger might ensue of this bold enterprize, he landed his men in the same place where Captaine Drake was, and halling his ship to shore, cut downe boughes of trees, and couered his ship with them, and hid vp his great ordnance in the ground. Thus leaving not one man in his ship, he tooke two small peeces of ordnance, and his calievers, and good store of victuals, with all other necessaries for his intended voyage. And he went with the Negros aboue twelue leagues vp into the maine land, vnto a riuer that runneth into the South sea: and by this riuer in a wood he cut downe timber, and built a Pinnelle, which was 45 foote long by the keele: which Pinnelle being finished, he went downe the riuer and passed into the South sea, carrying five Negros with him for his guides, and he arriued at the Island of Pearles being 25 leagues distant from Panamá. This Island lieth in the South sea, as they saile from Peru to Panamá, and here he stayed ten dayes, before he could take any shipping, but at length there came a small barke from a place called Quico in Peru: this barke he tooke, and found in her 60000 pezos of golde, with much wine and beards, and not being content with this, he stayed a long while, before he would sende away his prize or any of his men. Shortly after he tooke another barke that came from Lima, wherein he found 100000 pezos of siluer in barres, which being all aboord his Pinnelle, he shaped his course toward the riuer from whence he came: but before his departure he landed on the foresaid Island to finde pearles, and went to a small towne of the Island inhabited by Negros for the same purpose; where finding but small store, he returned to his Pinnelle, and coming neere vnto the riuer he sent away his two prizes, and with his Pinnelle entered by the riuer. The Negros of the Island of perles, so soone as the Englishmen were departed, posted in their Canoas to Panamá, to signifie vnto

Iohn Oxenham
anno 1575.

A riuer running into the South sea.

unto the Gouvernour what they had done. Whereupon the Gouvernour within two dayes after sent out foure barkes and an hundred souldiers, and Negros to rowe, the captaine of which souldiers was called Iuan de Ortega; who went first to the Island of pearles, & there had knowledge which way the Englishmen did take, and in pursuing them he met with the two prizes taken by the Englishmen, which tolde him that they were gone by the riuer. But when he was come to the enterance of the riuer, he knew not which way to take, because the riuer ranne into the sea by three mouthes, and not all at one. Therefore being determined with himselfe to passe by the greatest of the three, he saw comming downe with the streame many feathers of hens out of one of the lesser mouthes: which mouth he entered, and sayling foure dayes by the same, hee descried the Englishmens pinnelle lying vpon the land, and comming to boord her, they found in her no more but five Englishmen, of which they killed one, and the other 4 fled, & hauing thoroughly ransacked the said pinnelle, they could finde nought in her, but victuals. The Spaniards seeing this, determined to seeke out the Englishmen by land, and leauing about twentie men to keepe their barks they marched with eightie shot vp into the countrey, and halfe a league from the riuer they found a little house made with boughes, where the Englishmen had left all their treasure; which the Spaniards tooke and carried backe to their barkes, meaning not to follow the Englishmen any further: but the English captaine with all his men, and about 200 Negros followed the Spaniards vnto the riuers side, and set vpon them with great fury: howbeit the Spaniards lying behind the bushes did easily put the English to flight, and they tooke seuen of them alieue, and slew eleuen and five Negros: so the Spaniards returned with the losse of two men and five or six hurt. Then they asked those Englishmen which they had taken prisoners, why they departed not with their treasure, hauing fifteene dayes libertie: They answered, that their captaine had commanded them to carry all that golde and siluer vnto the place where their ship was, and they were agreed to carry it, although they made three or foure iourneys, for he promised to giue them part of the treasure beside their wages, but the mariners would needes haue it by and by; whereat the captaine being angry, because they put so small trust in his word, would not suffer his saylers to carrie it, but said he would get Negros to serue his turne, and so these were the Negros aforesaid, whom he had brought to carry away the golde and siluer: but by the way he met with the five Englishmen which fled from the pinnelle, who told him of the Spaniards; and then he made friends with all his men, and got the Negros to take his part: but hauing the ouerthrow, and his best men being slaine and taken prisoners, he thought to haue returned to his ship, and so to haue gone for England. The Spanish captaine hauing heard this discourse of the English prisoners, buried the dead bodies, embarking all things, and with the Englishmen and their pinnelle returned backe vnto Panamá. Thus was the Englishmens voyage ouerthrowen.

Now so soone as the the foure barkes and the pinnelle were arrived at Panamá, the Gouvernour of that place sent a messenger ouerland to Nombre de Dios, to aduertise the townesmen, where the Englishmens ship lay: whereupon they of Nombre de Dios manned out foure ships and went into the bay of Dariene where the Englishmen had left their ship, which they tooke away with them to Nombre de Dios, with all her ordinance; so that the poore Englishmen were left in the mountaines very naked and destitute of all comfort: for the Spaniards had taken out of the foresaid house of boughes all their tooles & other necessaries, so that they could by no meanes haue any succour: whereas otherwise they might haue builded another pinnelle, and provided better for themselves to haue returned for their owne countrey.

These newes comming to the eares of the Viceroy of Peru, he thought it not conuenient to suffer those fiftie Englishmen which were yet alieue, to continue in the mountaines among the said Negros. Wherefore he sent a seruant of his called Diego de Frees with 150 shot to seeke them, who at length found them making of Canoas to take some one small barke or other that sayled to and againe in the North sea, whereby they might the better shift for themselves: but before they had finished their pretended worke, the Spanish souldiers set vpon them, and tooke fifteene of them that were sicke: but the rest fled, whom the Spaniards pursued among the mountaines, and in the end the Negros betrayed them, and they were all taken and carried to Panamá. Where the Iustice asked the English captaine, whether he had the Ducenes license, or the license of any other Prince or Lord: And he answered that he had none, but that he came of his owne proper motion. Which being knowne to the Iustice, the Captaine and his companie were condemned and were all put to death at Panamá, sauing the Captaine himselfe, the Master, and the Pilot, and five boyes, which were caried to Lima, where the Captaine and the two other men were executed, but the boyes are yet liuing.

Warre made
against the
Negros.

The king of Spaine hauing intelligence of these matters, sent 300 men of warre against those Negros

Negros who had assisted the Englishmen, which Negros before were slaves unto the Spaniards, and (as is aforesaid) fled from their masters into those mountaines, and so ioyned themselves to the Englishmen, thinking by that meanes to be reuenged of the Spaniards crueltie.

At the first comming of these three hundred souldiers they tooke many of the Negros, and did great iustice on them according to the qualitie of their offences. But after a season the Negros grew wise and wary, and prevented the Spaniards so, that none of them could be taken. Whereof the king being aduertised by his Captaines, as also how the countrey was full of mountaines and riuers, and very vnhealthfull, insomuch that his souldiers died, he wrote vnto his said Captaines to make an agreement with those Negros, to the ende the countrey might be in quiet. And so they came to agreement with the Captaines of the Negros, and all was appeased. Afterward the Negros inhabiting two places which the Spaniards allotted vnto them, the kings pardon was proclaimed vnto all those which before the day of the proclamation thereof had runne from their Masters, vpon condition that from that day forward, whatsoeuer other fugitiue Negros should resort vnto them, they should returne them home either dead or alive, if not, that they should pay for them. Upon these conditions, and to make all quiet in the mountaines, all things were concluded and agreed vpon. So that now the Negros dwell in great townes, where they haue Spaniards for their teachers, and a Spaniard for their Iudge, and with this they holde themselves very well contented, and are obedient vnto their rulers.

The Spaniards since they conquered those parts haue seene many Frenchmen on that coast, Frenchmen. but neuer any Englishmen in that place, saue those two onely which I haue before mentioned. And although the Frenchmen haue come strong, yet durst they neuer put foot on shore as the English did. But the king of Spaine hearing that Englishmen as well as Frenchmen beganne to haunt that coast, caused two gallies to be made and well appointed, to keepe the coast. The first yeere that they were made they tooke sixe or seuen French ships. So soone as this was knowne there fled fewe English or French men of warre to come on the coast, vntill this yeere 1586. when as the aforesaid Francis Drake came with a strong flecte of about foure and twentie ships, and did such harme as is well knowne vnto all Chriftendome. But (God sparing the king of Spaine life) hee will sufficiently prouide to keepe his subiectes from the inuasions of other Nations.

Seven french ships taken by the gallies.
Sir Francis Drakes voyage to S. Iago, Sant Domingo, Cartagena, And S. Augustine.

Cartagena.

Now to go forward with our begunne discourse, the next towne vpon this coast beyond Nombre de Dios is Cartagena: it standeth in a more healthfull place, and is a greater towne then the other, bordering vpon a better countrey, which aboundeth with plentie of victuals, and hauing a very good port for the harbour of ships: and it is called Cartagena, because it resemblith very much the citie of Cartagena in Spaine. It containeth aboue foure hundred households. It is very rich by reason of the ships staying there, when they goe or come from Spaine. And if the ships chance to winter before they goe home into Spaine, then they lie at Cartagena. Also it is greatly enriched by the marchandize, which is there discharged to be carryed to the new kingdome of Granada, from which kingdome much golde is brought vnto Cartagena. This new kingdome of Granada is two hundred leagues within the land: neither can they trauele from Cartagena to this kingdome by land, because of the mountaines and standing waters, which lie in the way, so that they are faine to carry their goods by a riuer called The great riuer of Magdalena. They can goe with their barkes but two hundred leagues by this riuer: for although it be large and very deepe, yet there runneth so swift a current, that the barkes are constrained to discharge their goods at a place in the riuer called Branco de Malambo, into small canoes which rowe close by the shores side. In this riuer are great abundance of Crocodiles, so huge and terrible to behold, that such as neuer sawe them before are very fearefull at the first sight of them, for if a man chance to put his hand or foote into the water, they will streightway catch at them. In some places this riuer is very vnhealthfull and full of noysome wormes; but the first place thereupon which the Spaniards doe inhabite called Mompo is exceeding healthfull. The countrey adjoining vpon this riuer they call The new kingdome of Granada, because the captaine called Cesada which first conquered the same, and inhabited there, was borne at Granada in Spaine: for it is the vse of the Spanish captaines, when they haue conquered any Province of the Indies, to call it after the name of the place where they themselves were borne. This new kingdome of Granada is very fruitfull, and bringeth forth much corne & other victuals, and hath many golde-mines, and great quantitie of emeralds, wherof they send so many into Spaine, that now they are become little worth: but before these countreys were found, they were in great estimation. There are also dwelling many of the Indian people so meeke and gentle of nature, that they are called flies. This land is very plaine and holsome, and the inhabitants are giuen to peace.

Nuevo reyno de Granada.

Rio grande della Magdalena.

Branco de Malambo.

Mompox.

From

Popayan.

From this kingdome they trauell to another countrey called La gouernacion de Popayan; it is rich of golde, and withall very fruitfull, but fuller of mountaines then the new kingdome of Granada, and hath fewer Indians dwelling in it, but those that are there are full of courage and very valiant, which caused the Spaniards to make great warre before they could ouercome them. In this prouince there are 13 townes of Spaniards, and in The new kingdome of Granada there are nine townes of Spaniards.

Quito.

From this countrey of Popayan they trauell along till they come to the first inhabitants of Peru dwelling in a towne which ioyneeth vpon the South sea called Quito. This towne I will leaue any further to speake of till I come particularly to intreate of Peru. Onely I haue spoken of the two foresaid prouinces, to the intent you might know, that there is a passage by land from Cartagena to Peru, which is about fife hundred leagues through; so that besides the two hundred leagues which they goe by the riuer, the other three hundred leagues is a countrey well inhabited and without danger to trauell in, inasmuch that oftentimes postes are sent too and fro. But because it is so long a iourney, marchantes vse not to trauell that way, but when they are enforced so to doe. If any forren Nation should become Lordes of the South sea, the king of Spaine might haue his treasure conueyed vnto this towne of Cartagena from Peru, and so into Spaine. For in times past there being a rebellion in Peru made by the Spaniards against their king, he sent his power to suppress them through these prouinces. This I write onely for that I knowe some Englishmen haue thought, that in taking the South sea, or Panamá or Nombre de Dios from the king of Spaine, his treasure of Peru could not be conueyed vnto him, and that the king could not succour Peru, if it wanted helpe. Nowbeit I doe here most certainly assure you, that there be many wayes to Peru.

A passage ouer land from Cartagena to Peru.

Santa Martha.

But now I will returne to my former discourse. Upon the seacoast of Tierra firma Eastward from Cartagena standeth a little towne called Santa Martha, betweene which towne and Cartagena the mightie riuer of Magdalen before named fallerth into the sea with such a strong current, that by reason thereof it is knowne 20 leagues from the shore. Santa Martha is a very pooze towne, because it hath often bene robbed by the Frenchmen, and hath no trade but with a fewe Indians that dwell thereabout. Here beginneth that wonderfull long ridge of high mountaines couered with Snow, which streatching through many countreys, runneth along the kingdomes of Peru and Chili, and continueth to the very straights of Magellan. These mountaines are seene with snow vpon their tops aboue thirtie leagues into the sea. At the foote of these wilde mountaines there is a valley called Tagrona, which is the richest place that is knowne thereabout: but because the countrey adioyning is so mountainous, and the inhabitants so many and of so good a courage, shooting popsoned arrowes which are present death to such as are wounded with the same; therefore it lyeth as yet unconquered, notwithstanding it hath cost many Spanish captaines their liues.

A mightie ridge of mountaines.

The rich valley of Tagrona.

Rio de Hacha, Cabo de la Vela.

Passing along the coast of Tierra firma to the East of Santa Martha, there is an other small towne of about an hundred houses called Rio de Hacha. This towne is somewhat rich by reason of the pearles which they get there. Also they haue a trade with the Indians for some small quantitie of golde. From hence they goe along the coast to Cabo de la Vela, which because it is of the same propertie with Rio de Hacha before mentioned, I omit to speake of it. Upon this coast there is a lake or gulfe which openeth into the sea, at the mouth whereof they gather great store of pearles. Beyond this place there is another pooze towne, which hath bene of seuen times bene spoiled by the Frenchmen. From hence there lyeth an high way to the new kingdome of Granada, but it is about seuen hundred leagues in length, this way is trauelled very seldom, because the Indians will vsually set vpon the traouellers. More by into the land the countrey lyeth plaine, and there is some golde, and a fewe townes inhabited with Spaniards, whereof I haue had but small notice, and therefore I let them passe. The next place of any account is the Island of Margarita, where there are but fewe Spaniards inhabitant.

Great store of pearles.

The Ile of Margarita.

This Island of Margarita is very small, and lyeth foure leagues from the maine lande: it hath heretofore bene very rich of golde and pearles, and so would haue continued till this present day, had it not bene spoiled by men of warre, because it standeth so farre from the maine land, notwithstanding they yet gather good store of pearles. Upon this Island are bred better horses and mules then in any other part of the Indies, therefore they carry them from hence to Peru, albeit they haue great store of horses in Peru, but not so good. And because we haue begunne to speake of the Island of Margarita, you are to vnderstand, that to the North of the foresaid coast of Tierra firma lie aboue seuentie Islands being all very little, except Cuba, Hispaniola, and Boriquen, or Sant Iuan de Puerto rico, which Ile of Boriquen, although it bee not very great,

Excellent horses and mules.

More then 70. Islands.

yet

yet is it inhabited by the Spaniards. The other smaller Ilands haue bene inhabited by the Indians, and haue had good store of gold, pearles, and emeraldes; but the Spaniards haue destroyed most of those Indians from off the earth, and in many of those Ilands there is nothing of any value, wherefore I haue small cause to increase any further of them. But Hispaniola is an Iland of great bignesse, and hath bene very full of people, and abounded with mines of golde and with pearles, but now all is wasted away. It was at the Spaniards first coming thither, as full of inhabitants as any place of that bignesse in the whole world; yet now there are none left; for they were men of so hard a heart, that they murdered themselves rather then they would serue the Spaniards: for being men vnder so small ciuill gouernement as they were, neuer was there any people knowen of so resolute and desperate mindes: for oftentimes a great number of them being together ouer night, they should be found all dead before the morning: such extreme hate did this brutish people beare against the Spaniards, that they chose rather to die the death, then to indure their insolencies. It happened on a time, that a Spaniard calling certaine Indians to worke in the mines (which labour of all others did most grieue them) they, rather then they would goe, offered to lay violent hands on themselves: which the Spaniard perceiuing sayd vnto them: seeing you will hang your selues rather then goe and worke, I likewise will hang my selfe and will beare you company, because I will make you worke in an other world: but the Indians hearing this, replied, we will willingly worke with you here, to the intent you may not goe with vs into another world: so vniuersally were they of the Spaniards companie. So that of all the inhabitantes of this Iland there were none that escaped death, save onely these few, which came to passe by the meanes of this one Spaniarde, otherwise they would haue hanged themselves also. Some of these people are yet liuing, but very few. This Iland of Hispaniola is for the most part called The Ile of Sant Domingo, because the chiefe citie thereof is so called, which was the first citie in all the West Indies that was inhabited. There are in this citie aboue eight hundred fire-houles of good building inhabited by Gentlemen of great wealth. This Iland is vnehealthfull, for it raineth here the most part of the yeere. The riches that now this Iland affordeth are sugar (for here are many Ingenios or sugar-houles) and great store of hides by reason of the abundance of cattell; there are copper mines also, which is the cause that they haue such store of copper-money, for their gold mines be all exhausted, and the golde which they haue cometh from other places. This Iland being (as is beforelaide) destitute of the first inhabitants, and the Spaniards lacking men to worke in their Ingenios, and to looke vnto their cattell, they were forced to bring Negros thither out of Guinea, where they haue so increased, that the Iland is now as full of them, as it was of the naturall inhabitantes; so that the Spaniards carrie Negros from this Iland to the maine lande and there sell them. The chiefe victuall that they haue in this Iland, is a kinde of roote called Iuca, which being eatent as it cometh new out of the ground is present death: but first they boyle it and after presse it, and the liquoz that is strained therefrom is deadly poyson: howbeit this roote being pressed so dry, that there remaineth no moisture in it, they mingle and temper the same with water and so make cakes thereof, which are very sauory & good to eat, & this is all the bread which they haue in those Ilands. There go from hence yere into Spaine 7 or 8 ships at the least full freighted with sugar & hides.

Neere vnto Hispaniola lyeth another greater Iland called Cuba, it is like vnto Hispaniola, although there is not so much sugar. The principall towne of this Ilande is called Hauana, which hath an excellent harborough belonging therunto. The townesmen are very rich by reason of the fleetes that come from Nueva Espanna, and Tierra firma which touch there; for the safeguarde of which fleetes and of the towne it selfe there is a castle built neere the said harborough kept with Spanish souldiers; neither is there any castle or souldiers in all the Ilands but onely here. There is also another Iland inhabited with Spaniards called Boriquen or Sancto Iuan de Puerto rico. It is but little, yet euery way as plentifull as the other two are; and therefore I omit to speake thereof.

El Dorado.

Pedro de Orzua.

by it was long before the riches in and about this riuer were knowne, untill such time as the kingdome of Peru was conquered: at which time a Captaine called Gonsalo Pizarro passing thorough the countrey of Peru came at length into a lande which they named La Canela, because there groweth great store of Sinamome, but not altogether so good as that which cometh from the East Indies. The sayd Captaine proceeding farther into the countrey came at length to a mightie riuer, where he sawe the countrey people rowing in their Canoas, and bringing golde to buy and sell with the Spaniards. Captaine Pizarro seeing this, was desirous to finde out the ende of this riuer, but he could not trauell by lande because of the high mountaines: wherefore he made a small Barke of Pinnesse to goe and discover from whence the saide Indians brought their golde, and sent in the saide Pinnesse a Captaine vnder him called Orellana, who with fiftie men went downe the riuer, but could not returne to their Generall Pizarro, because of the great current which was very strong against them, forcing them to passe along the riuer, and to enter into the Sea, and so they sayled on forwarde to the foresaide Ile of Margarita: but as they passed downe this riuer they found it well inhabited with Indians, which were possessed of great store of golde. These men with their Pinnesse were passing downe this riuer eight monethes, for the riuer lyeth very crooked, which maketh a long way by water, neither durst the Spaniards euer lande, because they sawe the countrey so full of people, but they tooke many Canoas, wherein they had great store of victuals, and some golde.

Now this Orellana comming vnto Margarita with these good newes and riches, determined not to returne vnto his Captaine Pizarro which sent him, but tooke his way from thence to the king of Spaine, and presented him with the golde that he brought out of the riuer: whereupon the king sent him with a flecte of shippes and sixe hundred men to inhabite the sayd riuer: but because of the great current and sholles that are therein, hee left the most part of his men and shippes, and with those that remained he went vnto certaine Ilandes hard by the riuer, and built him Pinnesses; but the countrey being very vnhealthfull, himselfe and many of his men dyed, and the residue went euery man which way pleased him best. The fame of this riuer was straightway spread through Spaine and Portugal, insomuch that a Gentleman of Portugall called Lewis de Melo asked license of Don Iuan the third, then king of Portugall to goe and conquer the sayd riuer: for from the mouth of this riuer to the mouth of the riuer of Plate, is that part of America which the kings of Portugall (according to the partition made betweene them and the kings of Spaine) doe holde: so that the king of Portugall hauing this riuer in his part gaue it to the saide Lewis de Melo to conquer: who taking tenne shippes and eight hundred men (among which many were gentlemen) and comming to the mouth of this riuer, lost all the said shippes sauing two, in one of the which two was Lewis de Melo himselfe: also the most part of the men that were in the shippes cast away were saued and got to the shore, and so went by lande to the Island of Margarita; from whence they were disperfed throughout all the Indies.

Thus these two flectes of shippes being so vnfortunatly cast away, neuer durst any Captaine afterward attempt by sea to conquer the sayde riuer. Howbeit from the kingdome of Nueva Granada before mentioned there haue gone two or thre Captaines by land to discover it, for a rumour went ouer all the countrey of the great riches contained in this riuer; whereupon the Spaniards named it El Dorado, that is to say, The golden riuer. It is thought that God will not haue this riuer to be knowne, for that one Captaine by lande had most of his people slaine by those of the countrey, and others for want of victuals returned. So that none of all these came to any plaine discovery, till a few yeeres past a Captaine of the countrey of Nauarre called Pedro de Orzua, who went from Peru almost the same way that Gonsalo Pizarro had before discovered, and was accompanied with about some seuen hundred Spaniards, it being a great maruell how he could get so many, amongst whom were many Gentlemen and old souldiers of Peru, who caused diuers mutinies and insurrections, as hereafter I will more at large declare, which mutinous souldiers were the cause of their captaines death. Howbeit with all these men captaine Pedro de Orzua came vnto head of the said riuer: but you must vnderstand, that this riuer is nourished not onely with the waters and freshets that come from the mountaines of Peru, but also by all the riuers betweene the Equinoctiall and sixteene degrees of Southerly latitude, which fall thereinto and cause it to be so great. Nowe at the head of this riuer the sayde Captaine Pedro de Orzua made fiftene Pinnesses with many Canoas, wherein he carried aboue two thousand Indians to helpe him, with many hoxles and other prouision, as meaning to inhabite there: for it was not possible for him to carry all his prouision by lande, because the mountaines be very great, there being also betweene them many small riuers which fall into this

this great river aboute twentie leagues out of the land. So this captaine hauing all his things in good order went downe the river with his whole company, and at length came from among the mountaines to a plaine countrey where the Indians dwelt; and there he held a counsell, determining in the same place to build a towne and to fortifie it very strongly, to the end he might leaue all his stuffe there, and such men as were not souldiers. And so they began to build the said towne, and wrought vpon it all the winter: where because it raineeth much, and withall is very hot, sicknesses and want of victuals began to preuaile amongst them, wherupon the souldiers fell a murmuring among themselves. If of comming out of Peru, which is one of the fruitfullst & richest countries of the world, they were moze inclined to haue their fill of bread and meat then to apply their bodies to labour: which was the cause that albeit the countrey in which they now were, was exceeding fruitfull, and that they saw with their eyes most euident apparances of golde, & also that by into the countrey it seemed to be much better; yet for all this they murmured & would needes returne for Peru from whence they came. In the company of these men there was a souldier of Biskay called Lopez de Agira, a very little man of bodie & lame of one of his legs, but very valiant and of good experience in the warres. This man hauing bene one of the principall mutiners in Peru, could not here giue ouer his old wont, but asked his fellow-souldiers, what they went to seeke for in those wild deserts whither they were brought: For (said he) if you seeke riches, there are enough in Peru, and there is bread, wine, fleshy, and faire women also; so that it were better to conquer that, and to take it out of the handes of the Spaniards, and that it were no hard enterprize, because all the souldiers and poore men of Peru would turne vnto them, and that that were a better course, then to goe and conquere the sauage people in those mountaines: so that once hauing the gouernment of Peru, the king of Spaine should be inforced to agree with them: if not (sayd he) we shall not lacke them that will succour vs, to haue the riches of Peru. By these perswasions he brought many souldiers to be of his minde, and conspired also with a young gentleman of Siuill called Don Fernando de Gusman (who was in loue with a young woman to which the captaine Pedro de Orzua had, and therefore did the sooner agree vnto the wicked intent of Agira) to murder the captaine. Who on a night being asleepe in his bed, the said conspirators and their faction entered into his bed-chamber, and there stabbed him with their daggers; which being done, they slew also all the Captaines that were his friends, and therewithall made a great out-cry saying, God saue the king, God saue the king: whereupon all the campe was in an vprore. Then Lopez de Agira made vnto the souldiers a long oration, and got them all to consent vnto him, some by force, and some because they durst not say to the contrary, and others of their good will; and so in the end they all agreed vnto his determined purpose. Then made they Fernando de Gusman their head, & Agira was made a captaine. This done, because the people should the better hold their opinion, he did as great a villany as euer any Spaniard committed: for he made an altar, wheron he and all the souldiers renounced their seruice vnto the king of Spaine, & so as people without a king, chose the said Don Fernando to be their king, and did homage vnto him. These matters being thus finished they consulted among themselves which should be the best way for them to goe to Peru? For they could not goe by the river, by which they came downe, in regarde of the strong current, and going backe ouerland they should be very weake for want of horsemen: wherefore they determined to goe downe the river. Then saide Lopez de Agira, that they would carry nothing with them but the pinnelles & souldiers which should fight, and that it were best to leaue behind them all the Indians which they brought from Peru, with the women and the sicke men. Whereunto the Generall Don Ferdinando would not agree, because he knew that when they were gone the people of the countrey would kill them all. Lopez de Agira hearing this, and longing to be chiefe gouernour himselfe, tooke vnto him 30 of his owne countrey-men of his disposition, and on the sudden slew Don Fernando, whom not many dayes before he had sworne to obey: & now by his subtil practises, being withall eloquent in his talke, he caused the souldiers to appoint himselfe their gouernour, & made them beleue that all the cruelties committed were for their saueguard: neither did the tyrannie of this wretched man here end. He was borne in Biskay a countrey neere vnto France, wherefore I beleue him rather to haue bene a Frenchman then a Spaniard, for that in the heart of a Spaniard could not be so much crueltie as this man shewed. Now being readie to goe his way, he determined not to carry with him any gentlemen or persons of qualitie, and therefore he slew all such persons; and then departing onely with the common souldiers, he left behind him all the Spanish women and sicke men, with all other creatures. If I should rehearse all the cruell murders of this wicked man one by one, I should be ouer tedious vnto you. Onely in fewe words I say, that this man proceeded downe the river, hauing with him onely foure hundred men: but before he passed the river,

Gusman slaine.

A new massacre.

and was come to Margarita, he had no more left but two hundred and thirty men, for the rest hee had put to death, and left on shore among the people of the countrey: all which tyranny he vsed, because he euer stood in feare of his life: for had he seene at any time but two souldiers talking together, he would straight suspect that they were conspiring of his death, and therefore he vsed the practises aboue saide. And he neuer went any way, but that hee had in his company thirtie Biscaines of his owne will and minde readie to execute his cruell purposes.

Great store of
gold in the ri-
uer of Maran-
non.

Amazones wo-
men which
helpe their hus-
bands in the
warres.

Good store of
golde.

Lopez de Agira
arriueth at
Margarita 1568.

As these souldiers with their Captaine came downe the riuer, they sawe many Canoas with golde in them passing too and fro, and people on both sides of the riuer, and in their passage many times they landed, and got good store of golde and victuals. Now also did they finde that to be true which Orellana had reported, namely that there were Amazones, that is to say, women that fight in the warres with bowes and arrowes: but these women fight to aide their husbands, and not by themselves alone without the companie of men, as Orellana reported. There were of these women vpon diuers partes of this riuer, who seeing the Spaniards fighting with their husbandes came in to succour them, and shewed themselves more valiant then their husbandes: for which cause it was named, The riuer of Amazones. The Spaniards intent was onely to passe downe the riuer, neither sought they at all to discover the Inland, and yet they tooke good store of golde, putting it into one of their Pinnelles, where Lopez de Agira himselfe was embarked, which Pinnelle at the mouth of the riuer was cast away, but he himselfe escaped, because he had not as yet fulfilled his bloodie minde. And when he was come to the Ilande of Margarita, the Gouvernour thereof supposing he had bene one of the kings loyall captaines, receiued him with pinnelles, and brought good store of victuals vnto him. But he putting the sayd Gouvernour immediately to death, landed on the Iland, and tooke it and two shippes that were there, and constrained likewise an hundred and fiftie men, which he there found, to goe with him, besides others that went voluntarily, carrying from thence good store of victuals, and many horses also. And then he returned to the maine land, saying, that with his small forces hee would subdue the whole Indias: imagining belike that all the olde souldiers and poore people, at the first sight of him, would turne to his side and take his part. Howbeit he was foulely deceived: for before he had marched two dayes iourney vp into the land, the Gouvernour of Nueva Granada came against him with a power of men: but Lopez de Agira hoping that other souldiers would haue iopned themselves vnto him, whereby his strength might haue bene the more, was quite frustrate of his expectation: for euen his owne men left him, and tooke part with the kings Captaine. Nowe seeing himselfe thus left destitute of his souldiers, and boide of all helpe, he committed a more vnnaturall bloodie act then euer Nero the tyrant did, for he murdered his owne daughter being but sixteen yeeres of age, which he had brought with him out of Peru: the cause why he killed her was, that she might not become a concubine to villaines, nor be called the daughter of a traitor: and these words he vsed vnto her, so soone as he had giuen her her deaths wound: but before he could finish this cruell act, the souldiers came vpon him, and cut him in pieces, also his daughter died of her wound in that place.

Great riches
hidden within
the riuer of Ma-
rannon.

The coast of
Brasil, whiche
was so called,
and by whom
it was at the
first discovered

Thus haue you heard the miserable ende of this bloodie caittife: in regarde of whose treacherous and mischieuous dealing the king would neuer since suffer this riuer to bee thoroughly discovered; so that the riches and treasure of the said riuer remaine vnknownen euen vntill this present day.

Now leauing to discourse any longer of this riuer of Marannon, all the coast betweene the saide riuer and the riuer of Plate, is called The coast of Brasill, taking that name from a kinde of wood in the same countrey, called Brasill-wood, whereof there is great store in those partes. This coast of Brasill was first discovered by Pedro Aluarez Cabral, in the second voyage which the king of Portugall caused to be made to the East Indies: and the foresayde Pedro Aluarez tooke possession of this land for the king of Portugall: whereupon the king Don Emanuel hearing newes thereof sent presently shippes to discover the whole countrey, and found it to be part of America otherwise called The West Indies: for which cause there grewe some controuersie betweene him and the king of Spaine: but being kinsmen and great friends one to another, they agreed in the end, that the king of Portugall shoulde holde all the countrey that he had discovered, the which was (as I haue said) from the riuer of Marannon to the riuer of Plate; albeit the Spaniards affirme, that it stretcheth no further then the Iland of Santa Catalina; whereupon there haue risen many controuersies betweene the Portugales and Spaniards, which haue cost many men their liues.

There came into the said riuer of Plate in the yeere 1587 two English shippes and a Pinnelle of the right Honourable the Earle of Cumberland, which were bound for the freights of Magellan,

gellao, and anchored ten leagues within the said river before a little Island lying hard by another called Seal-Island. On which Island the Captaine of one of the ships called Christopher Lister, and his whole company landing, found the king of Portugales armes grauen on a rocke by the sea side; which are thought to haue bene there engrauen by one Martin Alonso de Souza, who was sent by the king Don Emanuel to discover this coast. Therefore I thinke the Portugales haue reason for that which they alleage concerning the extension of the said coast of Brasil. Wherefore the king of Portugall gaue this land to diuerse of his gentlemen to inhabite. Most of the naturall inhabitants of this countrey are very rude, and goe starke naked both men and women, and are man-eaters; for which cause they make warres one against another to get men to eat; they are stout and good bow-men. The first place inhabited on this coast beyond the river of Marannon is called Fernambuck so named by the Indians, but in Portugall it is called Villa de Olinda. Before you come to this place there is a port called Paraiua, vnto which port not many yeeres past the Frenchmen hearing of the troubles which were then in Portugall resorted, and built there a fort; whereunto certaine French ships made yeerely voyages to lade Brasil-wood. But they of Fernambuck, with the helpe of the Spaniards, went and burnt five french shippes within the port, and tooke the fort it selfe, and the Frenchmen that were there fled part into the mountaines, and part of them were slaine; so that since that time the Spaniards haue inhabited there till this present. Nowe to returne to Fernambuck inhabited by a Portugall Captaine called Duarte Coelio, it is the greatest towne in all that coast, and hath about three thousand houses in it, with seuenie Ingenios for sugar, and great store of Brasil-wood and abundance of cotton, yet are they in great want of victuals: for all their victuals come either from Portugall or from some places vpon the coast of Brasil. The harbour of this towne is a barred harbour, and fit onely for small barkes: this place belongeth as yet vnto the sonne of Duarte Coelio. Beyond this towne lyeth the Cape of Saint Augustin, and next thereunto is the river of Saint Francisco, which is a great river. Betweene this river and Bayha it is all a wilderness inhabited with cruell saluages, for whomsoever they take they kill and eat him. The towne of Bayha belongeth to the king, and therefore the gouernour of all the coast keepeth his residence in the same, as also the bishop. It containeth 1000 houses, & 40 Ingenios for sugar, and hath much cotton, but no Brasil-wood at all. The sea runneth by into the countrey here 14 or 15 leagues, where they get some yeres good store of Amber-grieke. Here is great plentie of victuals, and although the countrey be hot, yet is it healthfull, & the aire wholesome. The next towne vpon the coast called As Ilhas, or The Isles, is but a small towne, containing not about 150 houses, and but three Ingenios for sugar. Most of the inhabitants are labouring men, which vse to carry victuals in their small barkes vnto Fernambuck: their Lord is called Lucas Giraldo.

The next place vnto this is called Puerto Seguro: it consisteth of 4 small townes, which containe not fit all about 300 houses. The inhabitants of this towne also liue by carrying of victuals along the coast; and the towne it selfe belongeth to the Duke de Auerio. Hard by this port begin the sholdes which they call Abrolhos; and these sholdes lie about 25 leagues into the sea.

The next habitation of Christians beyond these sholdes is Espirito Santo which consisteth of two townes, both of them containing about 300 houses: and they belong to a gentleman called Vasques Fernandes de Coutinho.

From hence you passe along the coast to the river of Ienero, which hath about three hundred houses. In this place the Frenchmen first inhabited, whose Captaine was called Monsieur de Villegagnon. The said Captaine made here a fort, and planted good ordinance thereon, and laded euery yeere great store of Brasil-wood from hence, and had great friendship with the saluage people, who did him good seruice, by reason whereof the Frenchmen reaped much benefit out of this countrey. But the king of Portugall sent out a power against the Frenchmen, who first tooke the french shippes by sea, and then landed and besieged the fort, and at length tooke it, and the Captaine thereof: vnto whom, because he was a gentle person, and neuer hurt the Portugales, they gaue thirtie thousand ducats for his ordinance, and for all other things that were in the fort, and so sent him for France. Since which time the Portugales haue inhabited this river. There are at this present onely two Ingenios, but great store of Brasil-wood, with plentie of victuals.

From this river of Ienero they passe along the coast to Saint Vincente, which hath 4 townes, the greatest whereof is called Santos, and consisteth of foure hundred houses, there are also three Ingenios. A fewe yeeres past there came two English ships into this harbour which were going for the Streights of Magellan. Who being in this port, there came thither three of the king of Spaines ships, and fought with the Englishmen, but the Englishmen sunke one of their

ships, and therefore the king commanded a fort to be made, to the ende that no English shippers that were bound for the freights of Magellan should victuall there, the which fort standeth on the mouth of the harbour. This countrey belongeth to a Gentleman called Martin Alonso de Souza: this is the last inhabited place vpon all the coast of Brasil. This coast of Brasil is very full of mountaines, and hath much raine falling vpon it, for which cause they cannot goe from towne to towne by land: all the habitations of this countrey are by the sea side. From Sant Vincente the coast is all mountainous, till you come to the Ile of Santa Catalina, and from this Island till you come euen to the straights of Magellan, the coast is very plaine and without woods.

Having proceeded thus farre, it will not be amisse to speake somewhat of the riuer of Plate, which is one of the greatest riuers in all the worlde: for at the mouth it is aboue fūie and twentie leagues from land to land: and the Spaniards haue gone by in it aboue fūie hundred leagues, and could not attaine to the head thereof. The first Spaniard that entered this riuer, and inhabited the same was called Solis, who passed by 100 leagues into it, and called it by the name of Rio de la Plata, that is to say, The riuer of siluer, because of the fine and cleare water that is in it, for I haue not heard of any siluer that euer was found there. The saide Solis returned into Spaine,

without any further search into this riuer: howbeit another Captaine called Sebastian Cabota went by this riuer 150 leagues, and built a fort, which fort standeth vntill this present: where leauing his ships, he went higher by the riuer in smal Pinneses, and all along as he went he found many Indians: but finding neither gold nor siluer, nor oughe else of any great value, he returned to his ships, and sayled for Spaine. Not many yeeres after a certaine Gentleman called Don Pedro de Mendoga furnished forth a great flecte of ships, wherein were shipped a thousand men, forty mares, and twentie hoxles, with all other creatures to inhabite this riuer: and coming thither he went by into the countrey to see what riches he could there finde, leauing all his stuffe,

cattle, and prouision at a place called Buenos Ayres, so named in regard of the freshnesse of the ayre, and the healthfulnesse of his men, during their abode there: this place was eightie leagues within the riuer, and here he landed first: at this place the riuer is aboue seuen leagues broad, and very low land on both sides without trees. This riuer is very often subiect to great and sudden stormes, so that with a storme this Don Pedro lost eight of his ships, and in the rest he returned for Spaine, saying to his men, that he would goe seeke victuals, and so left the greater part of them behinde. In his way homeward he died, and the poore men which he left behind him, for the most part of them died for hunger also, because in that place there were very few Indians, and therefore but small store of victuals, onely they liued by hunting of Deere, and by fishing. Of all the men that Don Pedro left behind him there were but two hundred remaining aliuie, who in the

ship-boates went higher by the riuer, leauing in the place called Buenos Ayres their mares and hoxles: but it is a wonder to see, that of thirty mares and seuen hoxles which the Spaniards left there, the increase in forty yeeres was so great, that the countrey is 20 leagues by full of hoxses: whereby a man may coniecture the goodnesse of the pasture, and the fruitfulnessse of the soile.

The Spaniards that went by this riuer passed three hundred leagues, and found the countrey full of Indians: who had great plenty of victuals, among whom the Spaniards dwelt as their friends, and the Indians bestowed their daughters in marriage vpon them, and so they dwelt altogether in one towne, which the Spaniards called La Ascension, and it standeth on the North side of the riuer. The foresaid Spaniards were twentie yeeres in this place, before any newes of their inhabiting vpon this riuer was brought into Spaine: but waring olde, and fearing that when they were dead, their sons which they had begotten in this countrey being very many, should liue without the knowledge of any other Christians; they determined among themselves to build a ship, and to sende newes into Spaine with letters vnto the king of all things that had passed among them, vpon that riuer. These newes being brought to the king, he sent three ships, with a Bishop and certaine Priests, and friers, and more men and women to inhabite, with all kind of cattell. When this succour was come, they inhabited in two places more on the North side of the riuer, and trauelled three hundred leagues beyond the Ascension; but finding neither gold nor siluer, they returned backe againe vnto the Ascension. The people are so multiplied in this citie, that now it is one of the greatest in all the Indias, and containeth aboue two thousand houses. The countrey adioyning is exceeding fruitfull, abounding with all kinds of victuals, & with sugar and cotton. From this citie of Ascension 150 leagues towards the mouth of the riuer standeth another towne which they call Santa Fe, on the South side of the said riuer, from which towne there lyeth an open high way leading into the land of Peru, so that when I come to intreat of Peru I will speake of this way, and declare who first found it. Also fūie yeeres past they haue inhabited anew the towne of Buenos Ayres on the South side of the riuer, to the end they might haue trade from the

the coast of Brasill, but their fortune was such, that the very first time they went to Brasill, and would haue returned againe to the riuer of Plate, they were taken by two ships of England that were going for the streights of Magellan.

The coast along from this riuer to the streights of Magellan hath not bene perfectly discovered, either by sea or lande, saving onely certaine portes which they haue found, sayling to the streights. Wherefore passing them ouer, I will here intreat of the saide streights, and declare who was the first finder of them, as likewise what was the cause why they were sought for. The Portugales therefore hauing first found and conquered the East Indies, and discovered the coast of China, with the Ilands of the Malucos, (all which places abound with gold, precious stones, silkes, and other rich commodities) and bringing home the foresaide riches in their ships into Portugall: there grew by this meanes great enuie betweene the Portugales and their neighbours the Spaniards; insomuch that the Councell of Spaine saide vnto the Emperour Charles the first being then their king, that the Portugales would be Lordes of all the riches of the worlde. Upon which wordes begaine a controuersie betweene the Emperour and the king of Portugall: but they being great friends before, and also kinsmen, agreed immediately to part the whole worlde betweene them, in such wise as I for my part could neuer vnderstand the certainty thereof. The worlde being thus diuided, a Portugall-gentleman called Fernando Magellanes bozne in a place of Portugall called Punta de la barte, being of a good house, & very well scene in cosmographie, and an excellent Pilot, as also being offended with Don Emanuel his Soueraigne, departed out of Portugall into Spaine, and affirmed to the Councell of Spaine, that the Isles of the Malucos were in that part of the worlde which was allotted to the king of Spaine, and that he would finde a shorter way thither then the Portugales tooke, and layed before them such infallible reasons, that the Councell giuing credite vnto his wordes sent him to sea with five ships and 400 men all very well appointed. With these five ships setting saile from S. Lucar, he came to the coast of Brasill, where at that time two places were inhabited by Portugales, and so sayling on along that coast he passed by the riuer of Plate, which riuer was discovered a little before by Solis. And notwithstanding many stormes, and great mutinies among his companie, he came at length vnto 48 degrees, to the Southwards of the riuer of Plate: where he found an harbour, which he named Puerto de Sant Iulian, and wintered there: and there also he hanged 5 men, and put on shoue a Priest, because they would haue made the company to stand against their captaine, and so to haue returned backe againe. But in the end hauing pacified his men, he put to sea, and within 5 dayes after he found the streights, which by him were so much desired: but before he entered the said streights there befell such a mutinie in one of his ships, that the same ship returned backe againe. And so himselfe with the other foure ships entering the streights, one of the said foure with all the men therein was cast away at the very enterance: which losse notwithstanding he proceeded on with the other three ships, and passing many troubles and dangers in this long discovery, ceased not to prosecute his intended voyage. This discovery was at the first thought very profitable vnto the Spaniards, but of late it hath prooued very hurtfull vnto them by meanes of certaine coasters which haue sayled the selfe same course. These streights stand in 53 degrees and a halfe of Southerly latitude. Also here is to be noted, that it is colder to the Southward of the line then to the Northward: in such wise, that in forty degrees to the Southward the colde is more sharpe, then in fiftie degrees to the North: experience doth alwaies shew the same; for it is as colde euen in the streights of Magellan, as it is in sixty degrees of Northerly latitude. Howbeit the colde is not the cause why nauigatoys frequent not the same, but the Westerly and Southerly winde, which blowe most furiously on that coast, and that oftentimes out of the very mouth of the streights, and so continue for the most part of the yeere. Also there runneth sometimes such a strong current, that if the winde and it goe all one way, the cables cannot holde, neither can the ship withstand the force thereof. For which cause, and also for that there is no harbour, till you be passed 30 leagues into the said streights, most part of the ships that haue gone thither haue indured many troubles before they could come to the streights, and being come to the mouth thereof they haue bene hindered by the current and winde, and so haue bene put backe againe. And to the end you may vnderstand the truth, I will declare vnto you all the shippes that haue past through the said streights, since Magellan first found them, vnto this present yeere of 1586, when I haue once ended my discourse of Magellan his owne voyage. Nowe you are by the way to vnderstande, that the North side of the enterance of these streights is plaine lande without any wood or trees: here are likewise some Indians though not many, yet are they very mightie men of bodie of ten or eleuen foot high, and good bow-men, but no man-eaters, neither haue they any victuals, but such as they get by hunting and fishing: they

they couer their bodies with the skinnes of beasts that they kill, to defend them from the colde: neither was there euer to this day any silver or golde found among them or in their countrey. These Streights (they say) extend in length from East to West about an hundred and twentie leagues. At the middle of these streights on the North side are many mountaines covered with snow, which mountaines stretch from thence along the frontiers of Chili, Peru, and Nueuo reino de Granada, euen vnto the shore of the North sea at Santa Martha, as I haue before signified. It is a wonder to behold the exceeding height of these mountaines, and the way which they continue couered with snow, for euen vnder the Equinoctiall line they haue as much snowe vpon their tops as in 52 degrees. Also it is worthy the remembrance, that all this countrey towarde the South sea is very fruitfull, and the people very discrete and gentle: but all the coast towardes Brasill vpon the North sea is pooze, whereas neuer yet was found any commoditie of account, and the people themselves are very cruell and saluage; for the will of God is, that good and ciuill men should inhabite fruitfull countries. And for the better understanding hereof you must note, that all the land lying betweene the said ridge of mountaines and the South sea is called by the names of Chili, Peru, and Nueuo reino de Granada, which are the best and richest countreys in all the world: and most part of the land from the said mountaines to the North sea is called Brasill, being a mountainous countrey, where as yet was neuer found either golde or silver. From the said mountaines in the middle of the streights the land riseth high, till you come to the end of the streights where you enter into the South sea, in which place next the South sea the streights are very dangerous, by reason of the sholdes & rocks that lie on the North side. Thus Magellan after he had entered the South sea, within 60 dayes came to the Isles of the Malucos, without touching at any land vntill he came thither: and so seeking there to lade his ships at an Island inhabited by Poozes, he was by them treacherously slaine. Now the Spaniards being too few for the managing of all three ships, because many of them were dead, partly with sickness, and partly with the hardnesse of the voyage, determined to abandon one of their said ships, and so manned the other two: which two being laden with spices and other riches knew not what course they were best to take: howbeit at length it was determined, that one of these two ships should go for Nueua Espanna, and the other for the cape of Buena Esperança, and so for Spaine. The ship that went for Spaine was called The Victorie, the Pilot whereof was a Biscain named Iuan Sebastian del Cano, to whom the king gaue great rewardes, and appointed him the globe for his armes, whereon was written: Primus omnium circumdedisti me: that is, thou art the first man that euer sayled about me.

And albeit this voyage was so long and troublesome as is before mentioned, yet many others haue attempted the same. And the next that sought to passe the said streights of Magellan were two ships of Genoa, which coming as farre as the mouth of the streights were by a mightie storme driuen backe againe, and one of them, whose master was called Pancaldo, put into the riuer of Plate, and was cast away about Buenos Acres, where to this day part of the said ship is to be seene, and some of the men are yet liuing in the riuer among the Spaniards: and the other ship returned to Genoa againe.

Also there was a bishop of Placencia in Spaine, who coueting riches, set forth a fleet of foure sailes, to passe the streights, and so to goe for the Malucos: and getting license of the Emperour he sent his said 4 ships toward the streights which had very faire windes till they came thither: but being entered 20 leagues within the streights, a storme of Westerly windes tooke them, & droue 3 of them on shore, & the fourth backe into the sea, which (the storme being past) returned into the streights to seeke for his consortes, & found many men going on the shores side, but the ships were beaten all to pieres. So they on land called vnto the ship; but the captaine thereof, considering that his ship was but little, & that he had but small store of victuals, would not go to them on shore, but proceeded on his voyage, & passed the streights. And because he was alone he would not saile to the Malucos, but went for the coast of Peru to the cite of Lima, where the ship remaineth vnto this day. The men of the other three ships, which were left in the streights being to the number of two hundred and fiftie (whose Captaine being kinsman to the bishop of Placencia was called Queros) were neuer heard of vntill this present day, it being fortie yeres since they were left there. A yere after this, certaine marchantes of the Groine in Galicia set forth other three ships, which ships also came to the streights mouth, where one of them was cast away with all the men, and the other two returned for Spaine.

Also I haue had intelligence of certaine Portugall ships, which being come to the mouth of the Streights lost two of their Pinnelles which they sent to discover the land, and then returned back. And after these, two French ships were sent from the riuer of Ienero by Monsieur de Villegagnon,

legagnon, but being come to the latitude of 45. degrees, they were driven backe by a storme of contrary winds. After all this the gouernour of Chili called Don Garcia de Mendoca sonne to the Marques of Cannette determining to discover the sayd Streights from the South sea, sent from Chili two ships vnder the conduct of a capitaine called Latherelio: but the danger to seeke these Streights by the South sea is more then by the North sea, because all the stormes of the North sea come from the land, but in the South sea all the windes and stormes come off the sea, and force the ships to run vpon the lee-shore, insomuch that the sayd two ships were cast away in fiftie degrees.

Two french ships sent for the Streights of Magellan.

The seeking of these Streights of Magellan is so dangerous, and the voyage so troublesome, that it seemeth a matter almost impossible to be performed, insomuch that for the space of thirty yeeres no man made account thereof; untill of late one Francis Drake an Englishman (of whom I haue before spoken) seeing hee could doe no good on the maine lande of the West Indies to benefit himselfe, because of the galleys of Cartagena that kept the coast, determined to seeke the Streights of Magellan, and to passe into the South sea. And so hauing provided two ships and thre pinnesses in England, he proceeded on his voyage, and comming to the Islands of Cape Verde tooke a Portugal shippe laden with wine, the Pilot whereof being a Portugal called Nuno da Sylua, hee caried along with him, who was a great helpe and furtherance vnto him in his voyage. And this which I shall here say, I had in writing of the Portugal pilot himselfe.

Sir Francis Drakes voyage about this world.

From the Islands of Cape Verde the sayd Francis Drake sailed vnto Port Sant Iulian, where he wintered: and there also hee put to death a gentleman of his company, because hee would haue returned home. This port I take to bee accursed, for that Magellan likewise put some to death there for the like offence.

The cause why Sir Francis Drake was beheaded.

This Francis Drake putting out of the sayd port, entered the Streights, and within twelue dayes gotte into the South sea. And two dayes after there arose such a storme of Westerly windes (which are vsuall in those parts) that he lost his pinnesse, and his Viceadmirall master John Winter was driven backe againe into the Streights, who passing many dangers returned home into England. But Francis Drake himselfe ranne with this storme into seuen and fiftie degrees of Southerly latitude, where hee found an Island with a good harborough, and fresh water, and stayed at the same Island two moneths to repayre his ships: and then, the weather being faire, he proceeded on his voyage, and came to the coast of Chili to an Island called La Mocha; where hee went on shore, and talked with the Indians: but when hee would haue returned vnto his boate they shotte their arrowes at him, and killed two of his men, and hee himselfe was wounded in the face.

Sir Francis Drake driven into 57 degrees of Southerly latitude.

La Mocha in 38 deg. 30 min. or ner against the prouince of Arauco. The towne of Concepcion, Valparizo.

Going from thence hee passed by the towne of Concepcion not knowing the place, and so to Valparizo which is the port of Sant Iago, where hee found a ship laden with a kind of victuals and wine, and had in her besides threescore thousand pesos of gold, euery peso being worth eight shillings sterling: and taking this ship with him hee went from thence to another port called Coquimbo: where seeing many cattell on the land, he sent presently some of his men with calleniers to kill of the sayd cattell: but being espied of the Spaniards that dwelt in the towne, they sent twelue horsemen to see what they were that killed their cattell, for they knew them not: and comming neere vnto them, the Englishmen fled to their boates, but the horsemen overtooke one of them who had a halbard in his hand, whom the Spaniards thought to haue taken: but hee with his halbard killing one of their horses was himselfe runne through with a lance, and so the Spaniards carried him dead with them into the towne. The next day the newes came to Sant Iago, that they were Englishmen, and how they had taken the shippe out of the harbour of Valparizo: whereupon they of Sant Iago sent a Post by land to giue warning vnto them of Peru. Howbeit by reason that the countrey betwene this place and Peru is not inhabited for the space of two hundred leagues, and many huge and colde mountaines couered with snowe lie in the way, the Poste was so long in perfourmance of this iourney, that capitaine Drake was vpon the coast of Peru a moneth before the sayd Poste came thither: neither could they send any newes by sea, because they were destitute of shipping.

The port of Coquimbo in 39 deg. 30 min.

Captaine Drake departing from Coquimbo sayled to another porte not inhabited, where he set vp a pinnesse. And going from thence, the next place where he touched was a porte vpon the coast of Peru called los Pescadores: and there hee landed, and in one of the fishermens houses found of a Spaniards thre thousand pesos of siluer in little barres.

Los Pescadores.

From hence he went to another port called Arica, which being the next towne to Chili that the Spaniards haue in all Peru, containeth an hundred houses: and this is the porte where they discharge

charge their merchandize that passe from Lima to Porosli, and to all other cities within the land, and likewise at this place they were wont to imbarke all the silver which they caried for Panamá. At this port of Arica he found a ship that had in her thirteene thousand pesos of silver, which having taken out, he burned the sayd ship, and after thought to have landed, but seeing both horsemen and footemen on shoze hee would not, but proceeded on his voyage. Since captaine Drake was at this porte they carie their silver by land to Lima, and lade no more treasure here, but onely discharge the merchants goods that come from Spaine hither. Also they have built a forte at this place for the better safety of the inhabitants, and have planted it with ten pieces of Ordnance, and every summer there lie in garison an hundred souldiers besides the townesmen. From hence he sayled to another porte called Chuli: in which porte was a ship that had three hundred thousand pesos of silver in barres: but they had sent horsemen from Arica to giue aduertizement of Drakes being on the coast, which newes came but two houres to the towne before his arriuall at the sayd porte: whereupon the Master of the shippe hauing no leisure to carie his silver on shoze, was forced to throwe it into the sea in fire sadome water, where his ship roade, and so to runne on shoze in the shippes boate. And captaine Drake comming aboard the ship was told by an Indian, that the Master had throwen the silver ouerboard. Wherefore seeing that newes began to run of him from towne to towne he stayed not here, but ran along the coast: and because he would haue no lets, he cast off the ship which he had taken at Sant Iago, with neuer a man in her, which ship was neuer heard of after. And so without staying any where he shaped his course for Lima, and comming to the harborough of Lima called El Callao, being two leagues distant from Lima it selfe, (for Lima standeth by into the land) hee arriued there one day, before the newes of him was brought to Lima, and found the men in the ships without suspicion. And as hee entered into the porte, there came in also a ship from Panamá laden with merchandize, and hee sent his pinnelle to take her: but the men forsaking the ship betooke them to their boate, and went on shoze: and as the Englishmen followed the boat, a Spaniard that was therein shot a piece, and slew one of captaine Drakes men in the pinnelle. Wherefore hee followed the boat no farther, but went with his pinnelle into the harbour among fouteene saile of ships that lay there, in all which ships there was not a man that had so much as a sword or a piece to molest him, wherefore hee did with lesse feare go from ship to ship, asking them if there were any ships gone for Panamá: for he knew wel, that the ships which goe for Panamá carie both silver & gold, neither sought he for any thing else, for there were marchandize enough for him in those ships, if hee had bene desirous to haue had the same. So they told him that three dayes past there was a ship gone for Panamá which caried all the merchants silver thither. Whereupon he presently set saile towards Panamá: for when hee came into this porte it was about midnight, so that the Spaniards could not see what ships he had. At last the newes came to Lima vnto the Viceroy of Peru, that there were enemies in the harbor, but they knew not what they were. Wherefore the Viceroy & all the people were in great feare, lest some Spaniards had made a mutinie, and put themselves in armes: and so the next morning himselfe accompanied with 2000 horsemen & footmen came from the citie down to the waters side, and finding some of the Englishmens arrowes that were shot at the boat, out of which their man was slain, they knew them to be Englishmen: and then they were all in quiet, seeing it was but one ship, for as yet the ship lay becalmed 3 dayes before the towne. Whereupon they forthwith provided 2 ships with 200 men in them, to boord captaine Drake or els to burne his ship; and after the ships went 2 small pinnelles, because that if any of the ships should be sunke, they might saue the men. But it was a day & a halfe before these things could be made ready, & in the end going forth they found 3 English ship still becalmed, & the calme was such, that the Spaniards could not come at them. The same night, the wind blowing afresh gale, the Spaniards returned into the harbour, and captaine Drake set forward to Panamá. The cause of the Spaniards returne was, for that they had no Ordnance, nor victuals to carry any longer out. Then the Viceroy caused fire pieces of Ordnance to be made, neither could hee make any more, in regard of the shortnesse of time: so with these pieces of Ordnance, and three shippes, and two hundred and fifty men in them hee sent after captaine Drake; who after hee had winde stayed no where, nor tooke any ships at all, nor withstanding hee met with many comming from Panamá laden with merchandize, but still hee inquired after the shippe that was gone to Panamá before him: of which ship he had sight about the cape of Sant Francisco, the Master wherof was a Biskaine, called Iuan de Anton: who seeing this ship of the Englishmens, thought that the Viceroy of Peru had sent him some message, and therefore strooke all his sailes: but so soone as hee might discerne the shippe somewhat better, hee would then saue haue gone his way, for hee knew that it was none of that coast, and then hee began to hoise his sailes, but could by no meanes get from Captaine Drake because

because hee was within the reach of his great Ordinance, for the Spaniards not hauing so much as a rapier to defend themselves, were soone constrained to yeelde. There were in this shippe a boue eight hundred and fifty thousand pesos of silver, and forty thousand pesos of gold, all which silver and golde was customed; but what store of treasure they had besides vncustomed I knowe not, for many times they cary almost as much more as they pay custome for; otherwise the king would take it from them, if they should be knowne to haue any great summe; wherefore every shippe carieth his bill of custome, that the king may see it. All this treasure that captaine Drake tooke was merchants and other mens goods, sauing one hundred and eighty thousand pesos of the kings. He had also out of this ship good store of victuals with other necessaries, which were to bee caried for Panamá, and was five dayes taking out of such things as hee needed. This done, he sayled from hence to the coast of Nueva Espanna without going to Panamá. Surely this was a great plague of God iustly inflicted vpon vs for our sinnes: for the taking of these ships is an especiall cause of all the dangerous warres that are likely to ensue betweene Spaine and England.

Read Nuno da Sylua concerning this treasure.

Now the ships that were sent by the Viceroy of Peru from Lima after Francis Drake, arrived at Cape Sant Francisco twenty dayes after hee had taken the foresayd shippe, and had intelligence by a ship comming from Panamá, which they met at the sayd cape, that Francis Drake had taken the ship with silver, and was not gone for Panamá. Whereupon the captaine of the three ships thinking that captaine Drake had bene gone for the Streights of Magellan, directed his course that way to seeke him.

Captaine Drake carried from the coast of Peru eight hundred sixty six thousand pesos of silver, which is as much as eight hundred sixty six quintals, at 100 pound weight the quintal, every quintal being worth one thousand and two hundred ducats of Spaine; all which summe amounteth to a million and thirtie nine thousand and two hundred ducats. Besides this silver hee caried away a hundred thousand pesos of gold, that is ten quintals, each quintal being valued at a thousand five hundred Spanish ducats, which last summe amounteth to an hundred and fifty thousand ducats: ouer and besides the treasure in the sayd ship which was vncustomed (the value whereof I cannot learne) consisting of pearles, precious stones, reals of plate, and other things of great worth.

With all this purchase he sayled toward Nueva Espanna; and at an Island lying before that coast called The Island of Cano hee discharged all things out of his shippe and graved her, and remained there ten dayes. From thence hee went along the coast of Nueva Espanna, where hee tooke certaine ships laden with spices, silkes, and veluets, but no golde nor silver, for there was none to bee had on this coast. And here at Guatulco he let on shore his Portugall pilot, which he tooke at one of the Islands of Cape Verde. But what course he kept from this coast till he came into England I know not of certainty, and therefore I will not meddle therewithall.

The Island of Cano.

The foresayd three ships which were sent in pursuit of captaine Drake, returned backe againe to Lima without doing of ought. All which notwithstanding, the Viceroy of Peru determined to send two ships to the Streights of Magellan, either to meete with captaine Drake there, or else to see if they could fortifie the sayd Streights against such ships as might afterward attempt to passe through the same. And albeit this was thought a most dangerous voyage, and impossible to be perfourmed, by reason of the shoals on that side of the Streights, yet sent he forth the two said ships. The Admirall being a ship of an hundred tunnes, and the other of eighty tunnes, & hauing one hundred and twenty men in them both, sayled from Lima vnder the conduct of Pedro Sarmiento, who was then accounted the best navigator in all Peru. These ships after their departure touching on the coast to take in victuals, were nine moneths before they came to the latitude of the Streights, and there were they encountered with a cruel storme: but Pedro Sarmiento being a man of good courage, bare in with the land in this storme, & in a night hee was put into the streits, not knowing how nor which way; and the other ship running farther into the sea, sayled to 58 degrees of Southerly latitude. The storme being past, this other shippe found many Islands neere vnto the main land, and so returned with faire weather all along the shore, neither could they find any other way to enter the Streights, but onely that which Magellan discovered: notwithstanding that others affirme the contrary, saying that the Streights be full of Islands to the Southwards: but they may be deceiued, for if there be any other Streight, it is beyond 58 degrees, and hath neuer bene seene of any man: for this ship was farthest to the Southwards of all that euer I heard of: for Francis Drake being driuen by tempest no farther then 57 degrees could not know so much as this other; which ship from hence returned backe to Lima. But Pedro Sarmiento entered the Streights, where his men falling into a mutinie would haue returned to Lima; where

Pedro Sarmiento sent from Lima to the Streights of Magellan.

58 degrees of Southerly latitude discovered to the South of the Streights.

Streights of
Magellan.

whereupon hanging one of them he proceeded on his voyage for Spaine. Where being arrived, he told the king that there were two narrow places in the Streights where he might build a forte, and that there was a very good countrey abounding with great store of riches and other necessities, and very well inhabited with Indians. Upon whose wordes, and for that there were more ships making ready in England to passe the sayd Streights, the king sent Diego Flores de Valdez with 23 ships and 3500 men, and a new gouernour to Chili with five hundred old souldiers newly come out of Flanders. These ships had the hardest hap of any that euer went out of Spaine since the Indias were first discovered: for that before they could get cleere of the coast of Spaine, a stormeooke them, and cast away five of them, and about eight hundred men, and the residue of the flecte put into Cadiz. Notwithstanding which hard successe, the king sent them word that they should proceede: and so they did with sixteene sailles only, for two other of their ships were so shaken with the storme, that they could not goe forth. In these sixteene saile of ships Pedro Sarmiento was sent to be gouernour in the streights: he carted with him all kind of artificers, to build fortis, and other necessities, with great store of Ordnance and munition. This flecte because it set late forth, wintered on the coast of Brasil in the riuer of Ienero. Winter being past, they set sayle from hence, and about the height of 42 degrees they had such a storme, that Diego Flores was faine to beate it by and downe about 23 dayes; in which storme was sunke one of his best ships, and in her three hundred men and twenty women that went to inhabite the streights, and most part of the munition that should haue bene left in the streights were all cast away. In the ende the storme grew so intollerable, that the ships not being able to endure it any longer were constrained to put backe againe vnto an Island called Santa Catelina: and there he found a barkie wherein were certaine friers going for the riuer of Plate, which friers told him of two great English ships and a pinnelle that had taken them, but tooke nothing from them, nor did them any harme, but onely asked them for the king of Spaines ships. Now Diego Flores supposing that these English ships would go to the streights, was himselfe determined to go to the streights also, though it was in the moneth of February: and choosing tenne shippes of the flecte that were left, he sent three of the residue that were old and shaken with the storme (wherein he put all the women and sicke men that were in the flecte) backe againe to the riuer of Ienero; leauing the other two shippes, which were not able to brooke the sea, at the foresayd Island; and so himselfe with the sayd ten ships returned againe for the streights.

Two English
ships vnder the
conduct of Mr.
Penton and Mr.
Luke Ward.

Espirito Santo.

John Drake.

Now the three ships wherein the sicke men and the women were embarked, came to the port of Sant Vincent: where finding the two foresayd English ships, and vrging them to auoide the harbour, the English entred combat with them: and by reason that these three ships were weakened with former tempests, and were manned with the refuse of all the Spanish flecte, the Englishmen easily put them to the worst, and sunke one of them, and might also haue sunke another, if they had bene so minded; but they desired not the destruction of any man: and doublesse it is the greatest valour that any man can shew, that when hee may doe hurte, he will not. Whereupon the Englishmen departed from this porte vnto Espirito Santo, where they had victuals for their merchandize: and so they returned home to England without doing any harme in the countrey. The cause why these English captaines went not to the streights I know not: some say, that they were put backe by foule weather, others suppose that it was for feare of the kings ships: but the pinnelle that belonged to these shippes wherein Iohn Drake went as captaine, departed from them: the cause why hee did so, is vnknewen: but this pinnelle entred the riuer of Plate, and within five leaguas of Seale-Island, not farre from the place where the Erle of Cumberland's ships tooke in fresh water, it was cast away vpon a ledge of rockes; but the men were all saued in the boate. Who being eightene in number went on shore vpon the Northside of the Island, and passing tenne dayes tourney vp into the lande, they met with certaine Saluage people, which are no man-eaters, but take all the Christians that they can get, and make them their slaues: howbeit the Englishmen fought with them, and being too fewe in number, five of them were slaine, and the other thirteene taken prisoners, who remained with the Saluages about fiftene moneths.

But the Master of the pinnelle called Richard Faireweather, being loth any longer to indure that miserie wherein hee was, and hauing knowledge of a towne of Christians on the other side of the riuer, called on a night Iohn Drake, and another poong man which was with them, and tooke a Canoa being very little, and hauing but two oares, and passed therewith on the other side of the riuer, which is full nine leagues broad; and being three dayes before they could get oner, they were much pined for lacke of meate. But comming to land, they hit vpon an high way that went to wards the Christians: and spying the footing of horses, they followed it, and at last came

to an house, neere vnto the which cozne was towed. And there they met with Indians that were seruants to the Spaniards, who gaue them foode, and clothes to couer them withall, for they were all naked. And one of the sayd Indians went to the towne, and caried newes of the Englishmen: whereupon the captaine of the towne sent out foure horsemen; which brought them to the towne behinde them, and the sayd captaine clothed them, and provided lodging for them, and Iohn Drake sate at the captaines owne table, and hee intreated them all very well, thinking to send them for Spaine. But the Viceroy of Peru hearing this newes sent for them, and they sent him Iohn Drake; but the other two they kept, because they were married in the countrey. Thus much concerning their affaires. Upon these newes also there were prepared fifty horsemen to goe ouer the riuer, both to seeke the rest of the Englishmen, and certaine Spaniards which were amongst those Saluage people; but I am not assured whether they went forward or no.

Nowe let vs returne to Diego Flores: who passing from the Island of Santa Catalina towards the streights of Magellan in the middle of February, and comming to the height of the riuer of Plate, sent the gouernour of Chili with three ships by the riuer to Buenos Ayres, that hee might from thence passe ouerland to Chili. Of these three ships two were lost, but the men and provisions were saued; and the third returned for Spaine. Then Diego Flores with the other seuen ships proceeded on to the latitude of 52. degrees, whereas the mouth of the Streights beginneth: but because it was the ende of March, which there is the latter ende of summer, the countrey was so full of snow, and withall there arose such a sudden storme, that he could not see Sarmiento and his men on shore, but was constrained the second time to returne vnto the riuer of Ienero vpon the coast of Brasil; where he heard newes of the English ships by the two Spanish ships that escaped from them. Upon which newes he left his lieutenant Diego de Ribera, and Pedro Sarmiento, that they might the next yeere returne for the streights. And so Diego Flores himselfe with foure ships which were yet remaining vnto him, and other foure which the king sent to succour him, set forth to seeke the Englishmen; but hauing runne along all the coast of Brasil hee could not finde them, because they were gone directly for England. Whereupon shaping his course vnto a port called Paraiua, and finding there five French ships, he burnt three and tooke two, and the fourth also which the Frenchmen had built, and put Spaniards therein, but the Frenchmen fledde into the mountaines to the Saluages. This done hee returned for Spaine.

In the meane season his Lieutenant Diego de Ribera, and Pedro Sarmiento had the next yeere so good fortune, that they arriued safely in the streights with all their ships, and set on shore foure hundred men: but because the ships boate could not land, being once laden, they ran that ship, which had all the victuals and munition in her, on shore in a bay, and as the water did ebbe they tooke all things out of her. This being done, Diego de Ribera left Sarmiento with foure hundred men, thirtie women, and a ship, with victuals for eight moneths: and with the other three shippes hee returned, hauing remained in the Streights but eight dayes. Nowe Pedro Sarmiento built a towne at the mouth of the Streights on the North side, placing therein an hundred and fiftie men: and from thence he went by land, and sent the ship further into the streights, and fiftie leagues within the Streights, at the narrowest place of all, where there is a very good porte, hee built another towne, which he named The towne of King Philip; and would also haue made a forte, and planted Ordnance for the defence of the Streights: but the snowe and Winter was so intollerable, that hee could not bring it to perfection. Whereupon taking about 25 mariners with him into the foresayd ship, hee sayd hee would goe see howe his other people did, and so hee sayled to the Streights mouth, vnto the towne which was first built; where hauing continued a day or two, he sayd that a storme put him from the Streights by force and brake his cables; but his men affirmed the contrary, that himselfe cut his cables (God knoweth the truth) and so he passed to the riuer of Ienero; and not finding there any succour come from the king, he sayled to Fernambuck, crauing ayde of the captaine to furnish him with victuals. And so the captaine presently freighted his ship with victuals and clothes for his people left in the Streights, and so sailed thitherward. But between Cape S. Augustin and Baya the wind came off the sea with such violence, that it forced the ship to run on shore; where Sarmiento had three of his men drowned, and he with the rest hardly escaped: and so this ship was lost with all the provision in her.

From thence hee passed by land to Baya where the gouernour of Brasil bought him a barke that lay in the harbour, lading the same with victuals and clothes for Sarmientos colonie. With this provision and diuers other necessities for his people hee tooke his voyage for the Streights, and comming to the height of foure and forty degrees, hee met on the sudden with such a furious storme

store, that he was forced to throw his freight overboard, and also to returne to the river of Iene-
ro. Where staying a whole yeere for succour from the king, there came not so much as a letter
from him. For the king was sore displeased at Pedro Sarmiento, because hee made him beleene
that the narrowest place of the Streights was but a mile over: and that it might bee fortified so
that a boate could not passe: whereas Diego de Ribera, and others certified the king, that it was
about a league broad, and that if a ship came with winde and current, all the Ordinance in the
world could not hurte it. Wherefore the king thought that Pedro Sarmiento had deceived him,
in making him to lose so many men, and so much charges to no effect. And the gouvernour of Baya
seeing that the king wrote not unto him, would giue him no more succour: so that Sarmiento
was constrained to make a voyage for Spaine in the same shippe, wherein hee last sayled toward
the Streights: and it is sayd that hee was taken in the way by Englishmen, and caried into
England. This Sarmiento hath caried the name to be the best Navigator in all Spaine, and that
hee hath sayled the furthest of all others. After all this the captaine of the river of Iene-ro sent a
small ship with victuals for the Streights, which was put backe also in fortie degrees. And
this is all the discovery of the Streights of Magellan, made as well by Spaniards as other na-
tions unto this present yeere 1586. It is foure yeeres since these poore and miserable Spani-
ards were left in the Streights, from which time there hath no succour gone unto them, so God
he knoweth whether they be dead or alive.

Thus according to my promise I haue declared unto you to the uttermost of my knowledge,
all things concerning the lodias, as farre as the very Streights of Magellan; thinking to haue
proceeded along the coast, as at the first; but that the doings of captaine Drake and other cap-
taines which attempted to passe the sayd Streights haue caused mee to bee the longer in this my
pretended worke. Howbeit now let vs proceede on forward from the Streights to the coast of
Chili: the distance betweene which two places no man hath trauelled by land, in regard of the
huge mountaines couered with snow that lie in the way: yea I may well say, that it hath not often
bene trauelled by sea; for that all the ships which haue passed that way haue at the least gone thirty
leagues off the shore, to auoide the shoals and many little Islands that lie neere the maine lands;
and therefore the inland of that coast remaineth as yet unknowne.

The first towne after you haue passed the Streights standeth on the coast of Chili, and is cal-
led Castro, being situate vpon the worst place of all the coast, for there is but small store of golde
with scarcitie of victuals, and a sharpe colde ayre. The harbour belonging to this towne is com-
passed about with so many sholdes, that it will serue but to receiue small barques onely. The next
towne to this is Baldia.

But before I passe any farther I will heere describe unto you the situation and quality of
Chili. This countrey stretcheth in length from North to South about two hundred leagues,
containing in breadth but five and twenty leagues at the most.

From the great ridge of mountaines lying to the East of Chili runne very many rivers into
the sea, which rivers are the cause of diuers valleys the fruitfulest in all the worlde, where
bread, wine, and other victuals mightily abound: and the sayd rivers also are very rich of golde.
But to declare in fewe wordes the excellencie of this prouince, I say that it might well bee cal-
led an earthly paradise, saue that it lacketh one onely commodity, and that is peace. It was first
discovered on this manner: the Spaniards hauing conquered the kingdome of Peru, (as I will
hereafter shewe unto you) found in the sayd kingdome great store of golde; and asking the In-
dians from whence it came, they answered, from Chili. Upon which newes Don Diego de
Almagro being one of the principall captaines that conquered Peru made a voyage with three
hundred horsemen toward Chili, being constrained in his way to goe ouer part of the snowy
mountaines, which way his Indian guides conducted him, to the ende that himselfe and all his
companie might die for colde. Howbeit the Spaniards, though they lost some of their horses,
came to the first towne of Chili called Copiapo being situate vpon the first plaine at the entrance
of the sayd prouince. But hauing newes that the Indians were risen against the Spaniards of
Peru and had inclosed them, hee returned backe without going any farther.

Nowe this captaine Don Diego de Almagro being slaine in the warres of Peru, another
called Don Pedro de Baldia marching into Chili with foure hundred horses, easily con-
quered that halfe of the countrey which was subiect to the kings of Peru. For knowing that
Peru, being the chiefe countrey of their Emperour, was overcome by the Spaniards, they al-
so immediately peeled their lande unto them. But the other halfe as it was the richest and
the fruitfulest part, so God had peopled it with the most valiant and furious people in all
America.

The

The prouince which they inhabite called El Estado de Arauco is but a small prouince about 20 leagues in length, and is gouerned by ten principall men of the countrey, out of which tenne they chuse the valiantest man for their generall in the warres. The kings of Peru in times past could neuer conquere this part of Chili, nor yet any other kings of the Indians. The weapons vsed by these people of Arauco are long pikes, halbarbs, bowes and arrowes: they also make them iacks of leale-skinnes, and head-pieces: in times past the heads of their halbarbs and pikes were of brasse, but now they haue gotten store of yron. They pitch their battels in maner like the Christians: for putting their pikemen in rankes, they place bowmen among them, and marshall their troups with discretion and great valour. Now the Spaniards comming vnto this prouince sent word vnto them by other Indians, saying that they were the children of God, and came to teach them the word of God, and that therefore they ought to yeelde themselves vnto them; if not, they would shoot fire among them and burne them. These people not fearing the great words of the Spaniards, but desiring to see that which they had heard reported, met them in the field, and fought a most cruell battell: but by reason of the Spaniards great ordinance and calluers, they were in the end put to flight. Now these Indians thinking verily that the Spaniards were the children of God, because of their great ordinance which made such a noise, and breathed out such flames of fire, yeilded themselves vnto them. So the Spaniards hauing diuided this prouince made the Indians to serue their turnes for getting of gold out of the mines, which they enioyed in such abundance, that hee which had least had 200000 pesos, but Captaine Baldiua himselfe had 300000 pesos by the yeere. The fame of these riches in the end was spread as farre as Spaine; from whence soone after resorted many Spaniards to the land of Chili, whom Captaine Baldiua caused to inhabite fire towne: to wit, Villa nueva de la Serena called in the Indian tongue Coquimbo; the second Sancto Iago which the Indians call Mapocha; the third La Concepcion called by the Indians Penco; the fourth La Imperial; the fift Baldiua; and the sixt La Villa Rica. Also he built a fort in the middle of all the land, wherein hee put ordinance and souldiers: howbeit all this their good successe continued not long: for the Indians in short time perceiuing that the Spaniards were but mortall men as well as they, determined to rebell against them: wherefore the first thing that they did, they carried grasse into the said fort for the Spaniards horses, and wood also for them to burne, among which grasse the Indians conueyed bowes and arrowes with great clubs. This done, fiftie of the Indians entered the fort, betooke themselves to their bowes, arrowes, and clubs, and stood in the gate of the said fort: from whence making a signe vnto other of their nation for helpe, they wanne the fort, and slewe all the Spaniards. The newes of this ouerthrow comming to the towne of Concepcion where Captaine Baldiua was, hee presently set forth with two hundred horsemen to seeke the Indians, taking no more men with him, because he was in haste. And in a plaine he met the Indians, who comming of purpose also to seeke him, and compassing him about, slew most part of his company, the rest escaping by the swiftnesse of their horses: but Baldiua hauing his horse slaine vnder him was taken aliue. Whom the Indians wished to be of a good courage, and to feare nothing; for the cause (said they) why we haue taken you, is to giue you gold ynough. And hauing made a great banquet for him, the last seruice of all was a cuppe full of melted gold, which the Indians forced him to drinke, saying, Now glut thy selfe with gold, and so they killed him. This Baldiua was a most valiant man, who had bene an olde souldier in the warres of Italy, and at the sacking of Rome.

El estado de Arauco.

Villa nueva de la Serena, La Concepcion, Sancto Iago, La Imperial, Baldiua, La Villa Rica, the first fire towne that were inhabited in Chili.

A stratagemme of the Indians of Chili against the Spaniards.

The death of Baldiua.

Upon this discomfiture the Spaniards choose for their Captaine one Pedro de Villa grande; who assembling all the Spaniards in Chili, and taking with him tenne peeces of ordinance, marched against those Indians; but with so badde successe, that he lost not onely the field and many of his men, but also those ten peeces of ordinance which hee brought. The Indians hauing thus gotten the victorie, went streight way against the towne of Concepcion, from whence the Spaniards fled for feare, and left the towne desolate. And in this maner were the Spaniards chased by the Indians out of the countrey of Arauco. But newes hereof being brought to the Marques of Cannete viceroy of Peru, hee sent his sonne Don Garcia de Mendoza against those Indians, with a great power of horsemen, and footmen, and store of Artillerie. This nobleman hauing subdued Chili againe, & slaine in diuers battels about 40000 Indians, and brought them the second time vnder the Spaniards subiection, newly erected the said fort that stood in the midst of the land, inhabited the towne of Concepcion againe, and built other towne for the Spaniards: and so leauing the land in peace, hee returned for Peru. But yet hee was cleane departed out of the land the Indians rebelled againe, but could not doe so much mischief as they did before, because the Spaniards tooke better heede vnto them. From that time vntill this present there hath

bene no peace at all: for notwithstanding many Captaines and souldiers haue done their vitermost, yet can they not bring that people wholly in subiection. And although the Spaniards haue in this prouince eleuen towne and two bishopricks, yet haue they little ynough to maintaine themselves, by reason of the warres; for they spend all the golde that the land yeeldeth in the maintenance of their souldiers: which would not bee so, if they had peace, for then they might worke in all their mines.

Thus hauing spoken somewhat of the situation of Chili, and of the troublesome conquest thereof, I will retorne to my former discourse where I left. Baldia therefore being of 150 houses hath twice bene burnt and spoiled by the Indians; so that now it is waken poore, but before the Indians sacked it, it was very rich: and it standeth by a riuer foure leagues from the sea. Passing from hence you come to the plaine countrey of Arauco being situate ouer against the Island La Mocha, on which Island the Indians that inhabite belong to the maine land.

Hauing passed this plaine of Arauco, the next towne of the Spaniards that you come vnto is La Concepcion which hath bene the greatest and the richest towne in all Chili; but by reason that the Indians haue burned the same foure times, it is now growen very poore, and hath small store of people: it containeth about some two hundred houses. And because it adioyneth vpon the plaine of Arauco, where these valiant Indians bee, therefore this towne is environed about with a strong wall, and hath a fort built hard by it: and here are 500 souldiers continually in garrison. Betweene this place and Valparizo, the Indians call the coast by the name of Mapocha. Sant Iago it selfe standing 25 leagues by into the countrey, is the principall towne of all Chili, and the seate of the gouernour; it consisteth of about 800 houses. The port of Valparizo whither the goods come from Lima by shipping, hath about twentie houses standing by it. The next towne neere the sea side beyond this is Coquimbo, which standeth two leagues by into the land, and containeth about 200 houses. Next vnto Coquimbo standeth a port-towne called Copiapo inhabited altogether by Indians which serue the Spaniards: and here a gentleman which is gouernour of the towne hath an Ingenio for sugar: at this place endeth the whole prouince of Chili. Here also the mountaines ioynting hard vpon the sea are the cause why all the land betweene Copiapo and Peru, containing 160 leagues, lyeth desolate.

The first towne on the coast of Peru called Atacama is inhabited by Indians which are slaues vnto the Spaniards. But before I passe any farther I will here also declare vnto you the first discoverie of Peru with other matters thereto belonging, and then will I retorne to the sea-coast againe: and to the ende you may vnderstand mee the better, I will begin with Panama. After that the Spaniards had inhabited the North side of this maine land, passing ouer the mountaines they discovered the South sea: where because they found Indian people with gold and pearles, they built a towne eightene leagues to the West of Nombre de Dios hard vpon the sea-side, and called it Panama. From hence they discovered along the coast of Nueva Espanna: and for that Nueva Espanna was at the same time inhabited by Spaniards, there beganne a trade from thence to Panama: but from Panama by sea to the coast of Peru they could not trade in a long time, because of the Southerly winds blowing on this coast almost all the yeere long, which are a hinderance to shippes sayling that way: and by land the passage was impossible, in regard of mountaines and riuers: yea it was fifteene yeeres before they passed the Island of Pearles, which is but twentie leagues from Panama. There were at this time in Panama two men, the one called Francisco Pizarro borne in the citie of Truxillo in Spaine, a valiant man, but withall poore: the other called Diego de Almagro was very rich. These men got a company vnto them, and prouided two Carauels to discover the coast of Peru: and hauing obtained licence of the gouernour of that place, Francisco Pizarro set forth with the two foresayd Carauels and 100 men, and Diego de Almagro stayed in Panama to send him victuals and other necessities. Now Francisco Pizarro sayling along the coast met with much contrary winds and raine, which put him to great trouble; and he began also after a while to lacke victuals, for hee was sailing of that in eight moneths which they now passe in fifteene dayes, and not knowing the right course hee ranne into euery riuer and bay that hee saw along the coast; which was the chiefe cause that hee stayed so long on his voyage: also thirtie of his company dyed by reason of the vnehealthfulnesse of the coast. At last hee came to an Island called by him Isla del Gallo, being situate from the maine land sixe leagues. From hence he sent one of his ships to Panama for a new supply of victuals & of men: which ship being departed, 40 of his men that remained behind made a mutiny, and passed by into the countrey, meaning to retorne by land to Panama, but in the way they all perished, for they were neuer heard of vntill this day. So that Francisco Pizarro was left vpon the said Island onely with thirtie men: who although he had his ship there in which he might haue returned,

returned, yet would he rather die then goe backe; and his 13 men also were of his opinion, notwithstanding that they had no other victuals, but such as they had from the maine land in the night season. Thus he continued nine moneths, before any succour was brought him from Panama: but in the end his ship returned with 40 men onely and victuals: whereupon hee prosecuted his voyage till he came to the first plaine countrey of Peru called Tumbes, where he found a fort made by the king of Peru against the Indians of the mountaines. Wherefore Picarro and his men were very glad in that they had found a people of so good understanding and discretion, being rich also in gold and silver and well apparelled. At this port of Tumbes hee tooke 30000 pesos of gold in trucke of marchandize: and hauing too few men to proceede any further hee carried two Indians with him to learne the language and returned backe for Panama. Upon this discouery Francisco Picarro thought it expedient to trauell into Spaine to craue of the king the conquest of this land. Whither being come, the king granted his request. And with the money which he carried ouer with him he hired a great number of men with a fleet of ships, and brought also along with him foure of his brethren very valiant and hardy men. And being come to Panama he straightway went on his voyage for Peru, being accompanied with his partner Diego de Almagro. They sailed first to the Island called Isla del Gallo; where Francisco Picarro and his brethren went on land, and left Diego de Almagro in the ships. And the whole number which afterward landed on the maine land were 60 horsemen and 120 footemen, with two great field-peeeces.

But before we proceede any farther, we thinke it not amisse to describe vnto you the situation of Peru, and the naturall disposition of the inhabitants: This countrey was called Peru by the Spaniards, of a riuer so named by the Indians, where they first came to the sight of gold. From which riuer standing vnder the line, till you come to Copiapo the first towne on the coast of Chili, stretcheth the land of Peru, for the space of eight hundred leagues: vpon five hundred whereof from Atacama to Tumbes did neuer drop of raine fall, since the flood of Noah: and yet is it the fruitfulllest land for all kind of victuals and other necessaries for the sustentation of mans life that is to be found in all the world besides. The reason why it raineth not in this land is because it being a plaine countrey and very narrow and low, situate betweene the Equinoctiall and the tropique of Capricorne, there runneth on the West frontier not aboute twentie leagues from the sea called Mar del Sur Eastward thereof, a mighty ridge of high mountaines covered with snow, the height of which mountaines so draweth the moisture of the cloudes vnto it selfe, that no raine falleth vpon the vallies of Peru. From these mountaines issue great store of riuers into the South sea, with the waters wherof drawen by certaine sluices and chanelles they moisten their vineyardes and corne-fields, and by this meanes the land is so exceeding fruitfull. Betweene these mountaines and the mountaines of Chili that stretch vnto the Streits of Magellan, lyeth a plaine of 60 leagues ouer, being so cold that it yeeldeth no Wheat, but good store of other victuals. This countrey of Peru is full of people well apparelled and of ciuill behauiour. It hath many mines of gold and moze of silver, as also great store of copper, and tinne-mines, with abundance of saltpeter, and of bymistone to make gun-powder. There are likewise cattell of all sorts, among which there is a beast in shape somewhat resembling a camel, but no bigger then a steere of a yeere olde; they serue to carry burthens, their flesh being good to eat, and their wooll apt for many purposes. This beast is accounted the most profitable of al others for the vse of man: howbeit the Spaniards since their first comming haue replenished this countrey with horses, kine, sheepe, and goates, and likewise with plentie of wheas. So that in fewe words this land hath abundance of riches and victuals, and is the healthfulllest place in the world. There were in times past kings of this land which were mightie Monarchs, whose dominions stretched 1200. leagues, and their lawes were very ciuill, saue that they were worshippers of the Sunne. At what time the Spaniards first entered this land there were two brethren of the blood royall which stroue who should haue the kingdome, the one called Guascar, and the other Atabalipa. Nowe Guascar had possession of all the mountaines and the lands within them: and Atabalipa was lord of all the sea coast, and of the valleys situate betweene the said mountaines and the sea. The Indians seeing the Spaniards at the first arrive vpon their shore called them Vera coche, which in their language signifieth, The some of the sea. Also Atabalipa the Indian prince sent vnto them to know what they did in his land, and what they sought for: the Spaniards made answer that they were the messengers of a great lord, and that they came to speake with the prince himselfe: who sent them word that they should come with a very good will; and so Atabalipa stayed for them at a citie called Caxamalca, being thirtie leagues distant from the sea side. Whither being come, they found the Indian prince sitting in a chariot of gold, carried vpon mens shoulders,

The cause why it raineth not in Peru.

Gold, silver, copper, tinne, salt-peter and bymistone. The sheepe of Peru called Llamas.

Atabalipa and Guascar two brethren contending for the empire of Peru.

and accompanied with about 60000 Indians all ready armed for the warres. Then the Spaniards tolde them that they were sent from an Emperour (vnto whom the Pope had giuen all that land) to conuert them vnto the Christian faith. Whereunto Atabalipa answered, that hee would gladly be friends with the Emperour, because he was so great a Monarch, but in no case with the Pope, because he gaue to another that which was none of his owne.

Now while they were thus in talke, the Spaniards discharging their two field-peeces, and their caluiers, set vpon the Indians, crying *Sant Iago*. The Indians hearing the noise of the ordinance and small shot, and seeing the fire, thought that flames of fire had bene come downe from heauen vpon them; whereupon they fledde, and left their prince as a bootie for the Spaniards. Whom they at the first intreated very gently, wishing him not to feare, for that their coming was onely to seeke for golde and siluer. During the time of Atabalipas imprisonment, his Captaines had slaine his brother Guascar, and had subdued all the mountaines and plaine countreys. Vpon which newes Atabalipa tolde the Spaniards, that if they would releafe him, he would giue them all that they should demanda. This communication hauing continued a whole day, at length a souldier named Soto sayd vnto Atabalipa; what wilt thou giue vs to set thee free? The prince answered, I will giue what soeuer you will demand. Whereunto the souldier replied, thou shalt giue vs this house full of gold and siluer thus high, lifting vp his sword, and making a stroke vpon the wall. And Atabalipa sayde, that if they would grant him respite to send into his kingdome, he would fulfill their demand. Whereat the Spaniards much maruelling, gaue him thre moneths time, but he had filled the house in two moneths and an halfe, a matter scarce credible, yet most true: for I know about twentie men that were there at that time, who all asseme, that it was about tenne millions of gold and siluer. Howbeit for all this they let not the prince goe, but thought that in killing of him they should become lords of the whole land, and so the Spaniards on a night strangled him. But God the righteous iudge seeing this villanous act, suffered none of those Spaniards to dye by the course of nature, but brought them to euill and shamefull ends.

Vpon the newes of these great riches there came store of people out of Spaine, and inhabited many places in this countrey. The king in recompence of the good seruices of the two foysayd partners, appoynted Diego de Almagro gouernour of halfe the land, and Francisco Pizarro of the other halfe, whom also hee made a Marques. But these two consorts in parting of a land belonging vnto other men, fell at variance and sharpe warre betweene themselves: and at length Pizarro hauing slaine Almagro got all the land into his owne hands. Howbeit this prosperitie of Pizarro continued not long: for a bastard-sonne of Diego de Almagro, to bee reuenged of his fathers death, slew Pizarro, for which acte he lost his head. In this controuersie betweene these two partners were slaine also two brothers of Pizarro, and the third was carried prisoner into Spaine and there dyed in prison: but the fourth called Goncaluo Pizarro rebelled with the whole countrey and became a cruell tyrant, vanquishing many of the Emperours Captaines in battell, and possessing the countrey in peace for two yeeres: howbeit being in the ende overcome hee lost his head like a traitour. And thus dyed they all an euill death that were causes of the death of that innocent king Atabalipa. And yet there are mutinies raised oftentimes by the Spaniards, but the Indians neuer rebelled, after they had once peace granted vnto them. The Indian people of this land are parted among the Spaniards, some being slaues vnto the gentlemen that conquered their land, other some to others, and the residue to the king: and these Indians pay eche man for his tribute seuen pezos of fine golde, which is about tenne ducats and a halfe. There are in this countrey about forty cities and townes inhabited by the Spaniards: also they haue here erected nine bishopps and one archbishopps.

Now after this countrey was fully conquered and brought in good order, certaine Spaniards being desirous to discouer the land on the other side of the snowy mountaines, found a very wholesome countrey and there inhabited. The sayd prouince situate behinde the mountaines is called The prouince of Tucuman, wherein are fise townes inhabited by the Spaniards, the last of them called Cordoua, from which towne vnto Santa Fee situate vpon the riuer of Plate it is seuentie leagues. This towne of Santa Fee was built in that place, to seeke a way to Peru by the riuer of Plate. And from hence downe the sayde riuer to Buenos Ayres are 120 leagues, and from Buenos Ayres vnto Seal-land you haue 40 leagues.

Now hauing put downe all that I know concerning the countrey of Peru, and of the way from the riuer of Plate vnto Tucuman, I will returne vnto Atacama the Southermost towne vpon the coast of Peru, where I left. From this towne of Atacama till you come to Arica, all the coast is inhabited by Indians subiect vnto the Spaniards. But since Captaine Drake was here they

they haue built towers by the sea side, whereon, seeing any saile that they doe mistrust, they presently make smokes, and so from tower to tower they warne all the countrey. Hauing before spoken of Arica all that I can, I will now proceed to the next port called Camana being a towne of Spaniards and containing about two hundred houses. Here they make store of wine, and haue abundance of figges and reilins. The next towne called Acari containeth about three hundred houses, and here is made the best and greatest store of wine in all Peru. From hence passing along the coast you come to El Calao the port of Lima consisting of about two hundred houses: and here was a strong fort built since Captaine Drake was vpon the coast. The citie of Lima standing two leagues within the land, and containing two thousand houses, is very rich, and of more trade then all the cities of Peru besides: and this citie is the seat of the viceroy, the archbishop, and the inquisition.

Next vnto this standeth a small towne of the Spaniards by the sea side called Santa: and next vnto Santa is another small towne of Christians called Cannete. From hence they saile vnto a rich citie called Truxillo, being one of the principall townes of Peru, and containing about five hundred houses. Then followeth Paica which hath to the number of two hundred houses. Leaving this towne they passe to Guaiacuil which standeth forty leagues by into a great bay or river, at the entrance of which river standeth Tumbes a towne of the Indians. All this coast along from Atacama to Tumbes it neuer raineth, as I haue before said: so that all the houses in their townes are not tyled, but couered with boudes to keepe off the heate of the Sunne, for they feare no raine at all. Guaiacuil is the first place where it raineth, and here they gather Salsaperilla. Here is also great store of timber, and at this place they build many shippes. Hence they saile along the coast to a small and poore towne called Puerto Viejo, which in times past hath bene rich with emeralds: but now since these stones in regard of their plenty are growen nothing worth, this towne likewise is waken very poore. Below this village standeth another called La Buena Ventura: but whosoever go thither must needs meet with euill fortune, the place it selfe is so waterish and vnhole some. Here abide not about 20 men, who serue onely to transport goods vnto a citie standing fiftie leagues within the maine, in a prouince called La gouernacion de Popaia. From Buena ventura and Popaia till you come to Panama there is no other towne, by reason of the high mountaines, the manifold rivers, and the vnhole somenelle of the countrey. In this place doe inhabite the Negros that runne from their masters, and vpon these mountaines was Oxnam the English Captaine and his men taken, as is before mentioned. Beyond these mountaines standeth the citie of Panama, being a rich place, by reason that all the treasure which cometh from Peru is brought thither, and it consisteth of about foure hundred houses. The coast running along betweene this city and Nueva Espanna is called Costarica.

Next vnto Costa rica, which is a mountainous and desolate place, lieth the coast of Nicaragua, being inhabited by the Spaniards, and hauing many good ports belonging to it, and is frequented with trade of merchandize: but hauing no knowledge of the situation thereof, nor of the townes therein contained, I surcease to speake any more of it.

A certaine viceroy of Nueva Espanna called Don Luis de Velasco caused certaine shippes to be built for the discovery of the Malucos and of the coast of China: which shippes in sayling thitherward found certaine Islands 80 leagues distant from the maine land, which the Spaniards, according to the name of their king, called The Philippinas: and hauing conquered one of these Islands called Manilla, inhabited with a barbarous kind of people, they built a fort and a towne thereupon, from whence they haue trade with the people of China. Vnto these Islands they haue foure great shippes that vsually trade, two of them continually going, and two comming: so that such spices and silkes as the Portugals bring home out of the East Indies, the very same doe the Spaniards bring from these Islands and from China, for Mexico the chiefe citie of Nueva Espanna. The principall port-townes of the coast of Nueva Espanna are Guatulco, and Acapulco.

All the viceroys and gouernours that the king of Spaine sendeth for Peru and Nueva Espanna haue a custome, for the obtaining of his fauour, to seeke and discover new countreys. But the greatest and most notable discoverie that hath bene from those parts now of late, was that of the Isles of Salomon, which were found in manner following. The Licenciado Castro being gouernour of Peru sent forth a flecte of shippes to discover certaine Islands in the South sea vpon the coast of Peru, appointing as Generall of the same flecte a kinsman of his called Aluares de Mendanio, and Pedro Sarmiento as lieutenant, and in the Viceadmirall went Pedro de Ortega. This flecte departing forth of the haven of Lima, and sayling 800 leagues Westward off the

A new rich trade for gold, cloues, ginger, and sinamon.

Why these Isles were called The Isles of Salomon.

the coast of Peru, found certaine Islands in eleuen degrees to the South of the Equinoctial inhabited with a kind of people of a yellow complexion, and all naked, whose weapons are bowes and arrowes, and darts. The beasts that they saw here were hogges and little dogges, and they found some hennies. Here also they found a muster of cloues, ginger, and sinamon, although the sinamon were not of the best; and here appeared vnto them likewise some shewe of golde. The first Island that the Spaniards discovered, they named Santa Izabella; and here they built a small pinnesse, with the which and with their ships boate they found out betwene nine and fiftene degrees of Southerly latitude eleuen great Islands being one with another of 80 leagues in compass. The greatest Island that they discovered was according vnto the first finder called Guadalcanal, on the coast whereof they sayled 150 leagues, before they could knowe whether it were an Island or part of the maine land: and yet they know not perfectly what to make of it, but thinke that it may be part of that continient which stretcheth to the Streights of Magellan; for they coasted it to eightene degrees and could not find the ende thereof. The gold that they found was vpon this Island or maine land of Guadalcanal, whereas they landed and tooke a towne, finding small graines of golde hanged by in the houses thereof. But because the Spaniards vnderstood not the language of the countrey, and also for that the Indians were very stout men, and fought continually against them, they could neuer learne from whence that gold came, nor yet what store was in the land.

These Indians vse to goe to sea in great Canoas that will carrie 100 men a piece, wherein they haue many conflicts one against another: howbeit vnto the Christians they could doe no great hurt; for that with a small pinnesse and two falcons a fewe may overcome 100 of them. At this place fouretee men mistrusting nothing, rowed to land, to take in fresh water, whome on the sudden certaine Indians in foure Canoas set vpon, tooke the ships boate, and slew all the men therein: wherefore a man cannot goe on shore too strong, nor yet be too wary in a strange land. Hereupon the Spaniards went on shore in their pinnesse, and burnt the towne, and in this towne they found the small graines of gold before mentioned. They were discovering of these Islands from one to another about fouretee moneths, at the ende of which time (because that vpon the coast where they were, the wind continuing still in one place; might bee an occasion of longer tarrying) they consulted which way to returne. Southward they durst not goe for feare of great tempests which are that way vsuall: wherefore sayling to the North of the line, they fell with the coast of Nueva Espanna; on which coast they met with such terrible stormes, that they were forced to cut their maine masts ouer-board, and to lye nine moneths beating it up and downe in the sea, before they could get into any harborow of the Christians. In which time by reason of euill gouernement, and for lacke of victuals and fresh water, most of the men in their Admirall dyed; for five whole dayes together they had neither water nor meate: but in the other ships they behaued themselves so well, that the greater part of them came safe vnto the land. He that passeth the Streights of Magellan, or saileth from the coast of Chili directly for the Malucos must needs runne in sight of some of these Islands before spoken of. At which Islands lying

so conveniently in the way to the Malucos you may furnish your selfe with plenty of victuals, as hogges, hennies, excellent almonds, potatos, sugar-canes, with diuers other sortes fit for the sustenance of man in great abundance. Also among these Islands you shall haue some quantity of gold, which the Indians will giue you in truck for other commodities. For the Spaniards in their discovery of these Islands not seeking nor being desirous of gold, brought home notwithstanding 40000 pezos with them, besides great store of cloues and ginger, and some sinamon also which is not so good as in other places. The discoverer of these Islands named them the Isles of Salomon, to the ende that the Spaniards supposing them to bee those Isles from whence Salomon fetched gold to adorne the temple at Ierusalem, might bee the more desirous to goe and inhabite the same. Now the same time when they thought to haue sent colonies vnto these Islands, Captaine Drake entered the South sea; whereupon commandement was giuen, that they should not be inhabited, to the ende that such Englishmen, and of other nations as passed the Streights of Magellan to goe to the Malucos might haue no succour there, but such as they got of the Indian people.

The

The admirable and prosperous Voyage of the worshipfull Master Thomas Candish of Trimley in the Countie of Suffolke Esquire, into the South sea, and from thence round about the circumference of the whole earth, begun in the yeere of our Lord 1586, and finished 1588. Written by Master Francis Pretty lately of Ey in Suffolke, a Gentleman employed in the same action.

He departed out of Plimmouth on Thursday the 21. of July 1586. with 3. sayles, to wit, The Desire a ship of 120. tunnes, The Content of 60 tunns, and the Hugh gallant a barke of 40. tunnes: in which small flecte were 123. persons of all sortes with all kinde of furniture and victuals sufficient for the space of two yeeres, at the charges of the worshipfull Master Thomas Candish of Trimley in the Countie of Suffolke Esquire, being our Generall.

On Tuesday the 26. of the same moneth, we were 45. leagues from Cape Finis terra, where wee mette with 5. sayles of Diskaynes coming from the Grande Bay in Newfound-land, as we supposed, which our Admirall shot at, and fought with them 3. houres, but wee tooke none of them by reason the night grew on.

5. Great Brit-
taine ships
fought withal.

The first of August wee came in sight of Forteventura, one of the Isles of the Canaries, about August ten of the clocke in the morning.

On Sunday being the 7. of August, we were gotten as high as Rio del oro on the coast of Bar- Rio del oro.
barie.

On Monday the 19. we fell with cape Blanco: but the winde blew so much at the North, that we could not get by where the Canters doe vse to ride and fish; therefore wee lay off 6. houres West South west, because of the land which lieth off the cape South west and by South.

Cape Blanco.

A dangerous
land.

The 15. day of the same moneth we were in the height of cape Verde by estimation 50. leagues off the same.

The 18. Sierra leona did beare East off vs, being 45. leagues from vs: and the same day the winde shifted to the North west, so that by the 20. day of the sayd moneth we were in 6. degrees to the Northward, from the Equinoctiall line.

The 23. we put roome for Sierra leona, and the 25. day wee fell with the point on the South side of Sierra leona, which Master Brewer knew very well, and went in before with the Content which was Vice-admirall: and we had no lesse then 5. fathoms water when we had least, and had for 14. leagues in South west all the way running into the harbour of Sierra leona 16. 14. 12. 10 and 8. fathoms of water.

Sierra leona.

The 26. of the said moneth we put into the harbour, and in going in we had by the Southermost point when we had least 5. fathoms water faire by the rocke as it lieth at the said point: and after we came, 2 or 3. cables length within the said rocke, we neuer had lesse then 10. fathoms, untill wee came by to the roade, which is about a league from the point, borrowing alwayes on the South side untill you come by to the watering place, in which Baye is the best roade: but you must ride farre into the Baye, because there run marvellous great tydes in the offin, and it floweth into the road next of any thing at a Southeast and by East moone.

It is out of England to this place 930. leagues: which wee ranne from the 21. of July to the 26. of this moneth of August.

On Saturday being the 27. day there came 2. Negros aboard our Admirall from the shore, and made signes unto our Generall that there was a Portugall ship by within the harbour: so the Hugh Gallant being the Rere-admirall went by 3 or 4. leagues, but for want of a Pilot they sought no farther: for the harbour runneth 3. or 4. leagues by more, and is of a marvellous breedth and very dangerous, as we learned after ward by a Portugall.

On Sunday the 28. the Generall sent some of his company on shore, and there as they played and daunced all the forenoone among the Negros, to the end to haue heard some good newes of the Portugall ship, toward their coming aboard they espied a Portugall which lay hid among the bushes, whom we tooke and brought away with vs the same night: and he tolde vs it was very dangerous going by with our haates for to seeke the ship that was at the towne. Whereupon wee went not to seeke her, because we knew he tolde vs the truth: for we bound him and made him fast, and so examined him. Also he tolde vs that his ship was there cast away, and that there were two more of his company among the Negros: the Portugalls name was Emmanuel, and was by his occupation a Calter, belonging to the Port of Portugall.

A Portugall
taken.

On Monday morning being the 29. day, our Generall landed with 70. men or thereabout, and went

Poysoned arrows.
The description of their towne.

went by to their towne, where we burnt 2. or 3. houses, and tooke what spoyle wee would, which was but litle, but al the people fled: and in our retiring aboord in a very litle plaine at their townes ende they shot their arrowes at vs out of the woodds, and hurt 3. or 4. of our men; their arrowes were poysoned, but yet none of our men miscarped at that time, thanked be God. Their towne is marvellous artificially builded with mudde walles, and built round, with their yards paled in and kept very cleane as well in their streetes as in their houses. These Negroes vse good obedience to their king, as one of our men sayd, which was with them in pawne for the Negroes which came first. There were in their towne by estimation about one hundred houses.

September.

The first of September there went many of our men on shore at the watering place, and did wash shirts very quietly all the day: and the second day they went againe, and the Negroes were in ambush round about the place: and the carpenter of the Admirall going into the wood to doe some speciall businesse, espied them by good fortune. But the Negroes rushed out vpon our men so suddenly, that in retiring to our boates, many of them were hurt: among whom one William Pickman a souldier was shot into the thigh, who plucking the arrow out, broke it, and left the head behinde; and he told the Chirurgions that he plucked out all the arrow, because he would not haue them lance his thigh: whereupon the poyson wrought so that night, that hee was marvellously swollen, and all his belly and priuie parts were as blacke as ynke, and the next morning he died, the peece of the arrow with the poyson being plucked out of his thigh.

Shamp of our men hurt by Negroes.

William Pickman death of a poysoned arrow.

This poyson is the mope of an herbe.
2. Buffes.
Their departure from Sierra leona.

The third day of the sayd moneth, diuers of our fleete went by 4. myles within the harbour with our boate, and caught great store of fish, and went on shore and tooke Limmons from the trees, and comming aboord againe, saw two Buffes.

The 6. day we departed from Sierra leona, and went out of the harbourough, and stayed one tide 3. leagues from the point of the mouth of the Harbourough in 6. fathoms, and it bloweth South South west.

The Isles of Madrabumba inhabited by Negroes.

On wednesday being the 7. of the same moneth wee departed from one of the Isles of Cape Verde, alias the Isles of Madrabumba, which is 10. leagues distant from the poynt of Sierra leona: and about five of the clocke the same night we anchored 2. miles off the Island in 6. fathoms water, and landed the same night, and found Plantans only vpon the Islande.

A towne.

The 8. day one of our boats went out & sounded round about the Island, & they passed through a sound at the west end of the Island, where they found 5. fathoms round about the Island, until they came vnto the very gutte of the sound, and then for a cast or two they had but 2. fathoms, and presently after, 6. fathoms, and so deeper and deeper. And at the East ende of the Island there was a towne, where Negroes doe vse at sometimes, as we perceiued by their prouision.

Fresh water.

There is no fresh water on all the South side, as we could perceiue, but on the North side three or foure very good places of fresh water: and all the whole Island is a wood, saue certaine litle places where their houses stand, which are inutrone round about with Plantan-trees, whereof the fruit is excellent meat. This place is subiect marvellous much to thunder, raine, and lightning in this moneth. I thinke the reason is, because the sunne is so neere the line Equinoctiall.

October.
Cape Frio in Brasile.

On saturday the tenth wee departed from the sayde Island about 3. of the clocke in the afternoon, the winde being at the South west.

November.
S. Sebastian's Island.

The last of October running West South west about 24. leagues from Cape Frio in Brasile, we fell with a great mountaine which had an high round knoppe on the top of it standing from it like a towne, with two litle Islands from it.

The river of Ienero.

The first of November wee went in betweene the Island of Saint Sebastian and the mayne land, and had our things on shore, and set by a Forge, and had our caske on shore: our coopers made hoopes, and so we remayned there until the 23. day of the same moneth: in which time we fitted our things, built our Winnesse, and filled our fresh water. And while our Winnesse was in building, there came a Canoa from the riuer of Ienero, meaning to goe to S. Vincent, wherein were five naked slaues of the Countrey people, which did rowe the Canoa, and one Portugal. And the Portugal knewe Christopher Hare Master of the Admirall, for that Master Hare had bene at Saint Vincent in the Minion of London in the peere 1581. And thinking to haue Iohn Whitchal the Englishman which dwelleth at Saint Vincent come vnto vs, which is twentie leagues from this Harbourough with some other, thereby to haue had some fresh victuals, we suffered the Portugal to goe with a letter vnto him, who promised to returne or send some answere within ten dayes, for that we told him we were Merchants, and would traffique with them: but we neuer receiued answere from him any more; and seeing that he came not according to appoyntment, our businesse being dispatched, wee weyed anchor, and set sayle from S. Sebastian on the 23. of November.

The 16. day of December we fell with the coast of America in 47. degrees; the land bearing West from vs about 6. leagues off: from which place we ran along the shore, untill we came into 48. degrees. It is a steepe beach all along.

The 17. day of December in the afternoone we entred into an Harbourogh, where our Admirall went in first: wherefoze our Generall named the said Harbourogh Port Desire: in which Harbourogh is an Island of two, where there is wonderful great store of Seales, and another Island of birds which are grey gulls. These Seales are of a wonderful great bignesse, huge, and monstrous of shape, and for the fore-part of their bodies cannot be compared to any thing better then to a lion: their head, and necke, and fore-parts of their bodies are full of rough haire: their feete are in manner of a finne, and in forme like unto a mans hand: they breed and cast euery moneth, giuing their yong milke, yet continually get they their liuing in the sea, and line altogether upon fish: their yong are marueilous good meate, and being boyled or roasted, are hardly to be knownen from lambe or mutton. The olde ones be of such bignesse and force, that it is as much as 4. men are able to doe to kill one of them with great cowle-staues: and hee must be beaten downe with striking on the head of him: for his body is of that bignesse that foure men could neuer kill him, but only on the head. For being shotte through the body with an Harquebuzze or a Musket, yet he will goe his way into the sea, and neuer care for it at the present. Also the fowles that were there, were very good meate, and great store of them: they haue burrowes in the ground like conies, for they cannot flie. They haue nothing but downe upon their pinions: they also fish and feede in the sea for their liuing, and breed on shore.

This Harbourogh is a very good place to trimme ships in, and to bring them on ground, and graue them in: for there ebberth and floweth much water: therfore wee graued and trimmed all our ships there.

The 24. of December being Christmas Euen, a man and a boy of the Rere-admirall went some foztie scoze from our ships unto a very faire greene valley at the foote of the mountaines, where was a litle pitte or well which our men had digged and made some 2. or 3. dayes before to get fresh water: for there was none in all the Harbourogh; and this was but backish: therfore this man and boy came thither to wash their linnen: and being in washing at the sayde Well, there were great store of Indians which were come downe, and found the sayd man and boy in washing. These Indians being diuided on eche side of the rockes, shotte at them with their arrowes and hurt them both, but they fledde presently, being about fiftie or threescoze, though our Generall followed them but with 16. or 20. men. The mans name which was hurt was Iohn Garge, the boyes name was Lutch: the man was shot cleane through the knee, the boy into the shoulder: either of them hauing very sore wounds. Their arrowes are made of litle canes, and their heads are of a flint stone, set into the cane very artificially: they sel dome or neuer see any Christians: they are as wilde as euer was a bucke or any other wilde beast: for wee followed them, and they ranne from vs as it had bene the wildest thing in the worlde. Wee tooke the measure of one of their feete, and it was 18. inches long. Their vse is when any of them dye, to bring him or them to the cliffes by the sea-side, and upon the toppe of them they burie them, and in their graues are buried with them their bowes and arrowes, and all their iewels which they haue in their life time, which are fine shelles which they finde by the sea side, which they cut and square after an artificiall manner; and all is layd vnder their heads. The graue is made all with great stones of great length and bignesse, being set all along full of the dead mans darts which he used when he was liuing. And they colour both their darts and their graues with a red colour which they vse in colotiring of themselves.

The 28. of December we departed out of the Port of Desire, and went to an Island which lieth 3. leagues to the Southward of it; where we trimmed our saued pengwins with salt for victual all that and the next day, and departed along the coast Southwest and by South.

The 30. day we fell with a rocke which lieth about 5. leagues from the land, much like unto Euellstone, which lieth off the sound of Plimouth, and we sounded, and had 8. fathoms rockie ground, within a mile thereof: the rocke bearing West Southwest. Wee went coasting along South Southwest, and found great store of Seales all along the coast. This rocke standeth in 48. degrees: to the Southward of the line.

The 2. day of Januarie wee fell with a very faire white Cape, which standeth in 51. degrees, Januare 1587 and had 7. fathoms water a league off the land.

The third day of the foresayd moneth we fell with another great white cape, which standeth in 52. degrees and 45. minutes: from which Cape there runneth a lowe beach about a league to the Southward, and this beach reacheth to the opening of the dangerous Streight of Magellan,

54. degrees.

Huskie Cone.

Elizabeth Bay.

The 6. day we put in for the Streights.

The 7. day betweene the mouth of the Streights and the narrowest place thereof, wee tooke a Spaniard whose name was Hernando, who was there with 23. Spaniards moze, which were all that remayned of foure hundred, which were left there three yeeres before in these streights of Magellan, all the rest being dead with famine. And the same day wee passed through the narrowest of the Streights, where the aforesayd Spaniard shewed vs the hull of a small Barke, which we iudged to be a Barke called The John Thomas. It is from the mouth of the streights unto the narrowest of the Streights 14. leagues, and the course lieth West and by North. The mouth of the streights standeth in 52. degrees.

From the narrowest of the Streights unto Pengwin Island is 10. leagues, and lyeth West South-west somewhat to the Southward, where wee anchored the 8. day, and killed and salted great store of Pengwins for victuals.

The ninth day wee departed from Pengwin Island, and ranne South South-west to King Philips citie which the Spaniards had built: which Towne or citie had foure Fortes, and euery Fort had in it one cast peece, which peeces were burped in the ground, the cariages were standing in their places vnburied: wee digged for them and had them all. They had contriued their Citie very well, and seated it in the best place of the Streights for wood and water: they had builded vp their Churches by themselves: they had Lawes very seuer among themselves, for they had erected a Gibet, whereon they had done execution vpon some of their company. It seemed vnto vs that their whole liuing for a great space was altogether vpon muskles and limps: for there was not any thing else to bee had, except some Deere which came out of the mountaines downe to the fresh riuers to drinke. These Spaniards which were there, were onely come to fortifie the Streights, to the ende that no other nation should haue passage through into the South sea sauing onely their owne: but as it appeared, it was not Gods will so to haue it. For during the time that they were there, which was two yeeres at the least, they could neuer haue any thing to growe or in any wise prosper. And on the other side the Indians oftentimes preyed vpon them, vntill their victuals grewe so short, (their store being spent which they had brought with them out of Spaine, and hauing no meanes to renew the same) that they dyed like dogges in their houses, and in their clothes, wherein we found them still at our comming, vntill that in the ende the towne being wonderfully tainted with the smell and the sauour of the dead people, the rest which remayned alieue were driuen to burie such things as they had there in their towne either for prouision or for furniture, and so to forsake the towne, and to goe along the sea-side, and seeke their victuals to preserue them from steruing, taking nothing with them, but euery man his harquebuz and his furniture that was able to cary it (for some were not able to cary them for weakenesse) and so liued for the space of a yeere and moze with rootes, leaues, and sometimes a foule which they might kill with their peece. To conclude, they were determined to haue traualled towards the riuer of Plate, only being left alieue 23. persons, whereof two were women, which were the remainder of 4. hundred. In this place we watered and woodded well and quietly. Our Generall named this towne Port famine: it standeth in 53. degrees by obseruation to the Southward.

The 14. day we departed from this place, and ran South South-west, and from thence South-west vnto Cape Froward 5. leagues West South-west, which Cape is the Southermost part of all the streights, and standeth in the latitude of 54. degrees. From which Cape we ran West and by North 5. leagues, and put into a bay or Coue on the South side, which we called Huskie-Coue, because there were great store of them: we ridde therein 6. dayes, the wind being still Westerly.

The 21. day of Januarie we departed from Huskie-coue, and went North-west and by West 10. leagues to a very faire landie Baye on the North side, which our Generall called Elizabeth Baye, and as wee ridde there that night, one of our men dyed which went in the Hugh Gallant, whose name was Grey, a Carpenter by his occupation, and was burped there in that Baye.

The 22. wee departed from Elizabeth Bay in the afternoone, and went about 2. leagues from that place, where there was a fresh water riuer, where our Generall went by with the ship-boate about three myles, which riuer hath very good and pleasant ground about it, and it is lowe and champion soyle, and so we saw none other ground els in all the Streights but that was craggie rocks and monstrous high hilles and mountaines. In this riuer are great store of Sauages which

which wee sawe, and had conference with them: They were men-eaters, and fedde altogether upon rawe flesh, and other filthie foode: which people had preyed upon some of the Spaniards before spoken of. For they had gotten knives and peeces of Rapiers to make darts of. They used all the meanes they could possibly to haue allured vs by farther into the riuer, of purpose to haue betrayed vs, which being espyed by our Generall, hee caused vs to shoote at them with our harquebuzes, whereby we killed many of them. So wee sayled from this riuer to the Channell of Saint Ierome, which is 2. leagues off.

The most horrible
with Sanages
that ever were
seen.

The Channell of
Saint Ierome.

From the riuer of Saint Ierome about thre or foure leagues, wee ranne West vnto a Cape which is on the North side: and from that Cape vnto the mouth of the Streights the course lyeth North-west and by West, and North-west. Betweene which place and the mouth of the Streights to the Southward we lay in Harbrough vntill the three and twentieth of February, by reason of contrary windes and most vile and filthie fowle weather, with such rayne and vehement stormie windes which came downe from the mountaines and high hilles, that they hazarded the best cables and anchors that we had for to holde, which if they had sayled, wee had bene in great danger to haue bene cast away, or at the least famished. For during this time, which was a full moneth, we fedde almost altogether vpon mussels, and limpets, and birds, or such as we could get on shore, seeking euery day for them, as the fowles of the ayre doe, where they can finde foode, in continuall raynie weather.

February
1587.

There is at euery myle or two myles ende an Harbrough on both sides of the land. And there are betweene the riuer of Saint Ierome and the mouth of the Streights going into the South sea about 34. leagues by estimation. So that the length of the whole Streights is about 90. leagues. And the said mouth of the Streights standeth in the same height that the entrance standeth in when we passe out of the North sea, which is about 52. degrees and 2. to the Southward of the line.

The Streights
of Magellan are
about 90.
leagues long.

February.
Ilands in the
South sea cal-
led Las Anega-
das.

March 1.
Extreme dan-
ger of the Hugh
Gallant by a
great leake.

The 24. day of February wee entered into the South sea: and on the South side of the going out of the Streights is a faire high Cape with a lowe point adioyning vnto it: and on the North side are 4. or 5. Ilands, which lye 6. leagues off the mayne, and much broken and sunken ground about them: by noone the same day wee had brought these Ilands East of vs 5. leagues off; the winde being Southerly.

The first of March a storme tooke vs at North, which night the ships lost the company of the Hugh Gallant, being in 49. and 45. leagues from the land. This storme continued 3. or 4. dayes, and for that time we in the Hugh Gallant being separated from the other 2. ships, looked euery houre to sinke, our barke was so leake, and our selues so disordered and weakened with freeing it of water, that we slept not in three dayes and three nights.

The 15. of March in the morning the Hugh Gallant came in betweene the Iland of S. Mary and the mayne, where she met with the Admiral and the Content, which had rid at the Iland called La Mocha 2. dayes, which standeth in the Southerly latitude of 38. degrees: at which place some of our men went on shore with the Vice-admirals boate, where the Indians fought with them with their bowes and arrowes, and were marueilous warie of their Caliuers. These Indians were enemies to the Spaniards, and belonged to a great place called Arauco, and tooke vs for Spaniards, as afterward we learned.

The Ile of Mo-
cha in 38. de-
grees not sub-
iect to the
Spaniards.

This place which is called Arauco is wonderfull rich, and full of golde mynes, and yet could it not be subdued at any time by the Spaniards, but they alwayes returned with the greatest losse of men. For these Indians are marueilous desperate and carelesse of their liues to liue at their owne libertie and freedome.

Arauco is the
richest place in
the South sea
for golde, and
is not subdued
by the Spaniards
as yet.

The 15. day after sayde in the afternoone wee weighed anchor, and ranne vnder the West side of Saint Marie Iland, where we ridde very well in 6. fathoms water, and very faire ground all that night.

Saint Marie I-
land in 37. de-
grees and 1.
terce, which
is subdued
to the Spaniards.

The 16. day our General went on shore himselfe with 70. or 80. men euery one with his furniture: there came downe to vs certaine Indians with two which were the principals of the Iland to welcome vs on shore, thinking we had bin Spaniards, for it is subdued by them: who brought vs vnto a place where the Spaniards had erected a Church with crosses & altars in it. And there were about this Church 2. or 3. store houses, which were full of wheate and barley ready threshed and made vp in cades of strawe to the quantitie of a bushel of cozne in euery cade. The wheate and barley was as faire, as cleane, and euery way as good as any we haue in England. There were also the like cades full of potato rootes, which were very good to eate, ready made by in the store houses for the Spaniards against they should come for their tribute. This Iland also yeeldeth many sorts of fruits, hogs, and hens. These Indians are held in such slavery by them, that they dare not

land made all
Christians.

eat a hen or an hogge themselves. But the Spaniards haue made them all in that Island Christians. Thus we fitted our selues here with corne as much as we would haue, and as many hogges as we had salt to powder them withall, and great store of hennies, with a number of bags of Potato rootes, and about 500. dyed dogge-fishes, and Guinie wheate, which is called Maiz. And hauing taken as much as we would haue, yet we left marueilous great store behind vs. Our General had the two principals of the Island aboord our shippe, and prouided great cheere for them, and made them merie with wine: and they in the ende perceiuing vs to bee no Spaniards, made signes, as neere as our Generall could perceiue, that if wee would goe ouer vnto the mayne land vnto Arauco, that there was much Golde, making vs signes, that we should haue great store of riches. But because we could not vnderstand them, our Generall made some haste, and within 2. or three dayes we furnished our selues.

Arauco rich in
golde.

The 18. day in the morning we departed from this place, and ran all that day Northnortheast about 10. leagues, and at night lay with a short sayle off and on the coast.

The Concep-
tion.

The 19. wee ranne in East Northeast with the land, and bare in with a place called The Conception, where wee anchored vnder an Island, and departed the next morning without going on land.

The 20. wee departed from The Conception, and went into a litle Baye which was sandie, where we saw fresh water and cattell, but we stayed not there.

Quintero standeth
in 33. de-
grees 50. mi-
nutes.

The 30. day we came into the Bay of Quintero, which standeth in 33. degrees & 50 minutes.

The said day presently after we were come vnto an afaire in the Bay, there was a Jeteherd or one that kept cattle which lay vpon the point of the hill asleepe, which when he awaked and had espied three shippes which were come into the Bay, befoze wee could get on shoze, he had caught an horse which was feeding by, and rode his way as fast as euer hee might: and our Generall with 30. shot with him went on shoze. He had not bene on land one houre, but there came 3. horsemen with bright swords to wards vs so hard as they might ride, vntill they came within some twentie or thirtie score of vs, and so stayed, and would come no neerer vnto vs: so our Generall sent vnto them a couple of our men with their shotte, and one Fernando, which was the Spaniard that wee had taken vp at the mouth of the Streights, which was one of the 400. that were sterued there. But the Spaniards would not suffer our men to come neere with their shot, but made signes that one of our men should come alone vnto them: so the said Fernando the Spaniard went vnto them, and our two men stood not farre from them. They had great conference, and in the end Fernando came backe from them, and told our Generall that he had parled with them for some victuals, who had promised as much as we would haue. Our General sent him backe againe with another message and another shotte with him: and being come neere vnto them, they would not suffer any more then one to approach them, whereupon our men let the Spaniard goe vnto them alone himselfe: who being some good distance from them, they stayed but a small time together, but that the said Fernando leaped vp behind one of them and rid away with them, for all his deepe and damnable othes which he had made continually to our general and all his company neuer to forsake him, but to die on his side befoze he would be false. Our Generall seeing how he was dealt withall, filled water all that day with good watch, and caried it aboord: and night being come, he determined the next day to send into the countrey to find their towne, and to haue taken the spoyle of it, and to haue fired it if they could haue found it.

The periurie
of a Spaniard.

Our men
march 7. or
8. miles into
their enemies
land.

The last of March Captaine Hauers went vp into the Countrey with 50. or 60. men with their shot and furniture with them, and we traualled 7. or 8. miles into the land: and as we were marching along, we espied a number of herdes of cattell, of kine and bullockes which were wonderfull wilde: we saw also great store of horses, mares, and coltes which were very wilde and vnhandled: there is also great store of hares and conies, and plenty of partridges and other wildfowles. The countrey is very fruitful with faire fresh riuers all along full of wilde foule of all sorts. Hauiing traualled so farre that we could goe no further for the monstrous high mountaines, we rested our selues at a very fayre fresh Riuer running in and alongst faire lowe medowes at the foote of the mountaines, where every man drunke of the Riuer, and refreshed themselves. Hauiing so done, we returned to our Ships the likest way that we thought their Towne should bee: so wee traualled all the day long, not seeing any man, but we mette with many wilde dogges: yet there were two hundred horsemen abroad that same day by meanes of the Spaniard which they had taken the day befoze from vs, who had tolde them that our force was but small, and that wee were wonderfull weake: who though they did espie vs that day, yet durst they not giue the on-sette vpon vs. For wee marched along in array, and obserued good order, whereby wee seemed a great number more then we were, vntill we came vnto our Ships that night againe.

The

The next day being the first of Aprill 1587, our men went on shoare to fill water at a pit which was a quarter of a mile from the waters side : and being earely hard at their businesse were in no readinesse. In which meane while there came pouring downe from the hilles almost 200 horsemen, and before our people could returne to the rockes from the watering place, twelue of them were cut off, part killed, and part taken prisoners, the rest were rescued by our souldiers which came from the rockes to meete with them, who being but fiftene of vs that had any weapons on shoare, yet we made the enimie retire in the end with losse of some foure and twentie of their men, after we had skirmished with them an houre.

24 Spaniards
slaine.

The names of our men that were slaine were these.

Thomas Lucas of London, souldier,
Richard Wheeler of London.
Robert Pitcher of Norfolke, souldier.
John Langston of Gloucestershire.
William Kingman of Dorsetshire, souldier.
William Hilles of Cornwall.

} Out of the
Admirall.

1 William Byet of Weymouth.
2 Laurence Gamesby, of Newcastle,

} Killed out of
the viceadm.

1 Henry Blackenals of Weymouth,
2 Williams Steuens of Plymmouth, gunner.
3 William Pitte, of Shereborne in Dorsetshire,
4 Humphrey Derricke of London.

} Killed out of
the Hugh
Gallant.

After the losse of these men, wee rid in the roade, and watered in despite of them with good watch and ward, untill the fift of the sayd moneth.

The fift day wee departed out of this bay of Quintero: and off from the bay there lyeth a little Island about a league distant, whereon there are great store of penguins and other fowles; whereof we tooke to serue our turnes, and sailed away North, and North and by West: for so lyeth the coast along in this place.

A little Island
full of penguins

The fiftenth wee came thwart of a place which is called Morro moreno, which standeth in 23 degrees; and is an excellent good harborough: and there is an Island which maketh it an harborough: and a ship may go in at either end of the Island: here we went with our Generall on shore to the number of 30 men: and at our going on shore vpon our landing, the Indians of the place came downe from the rockes to meete with vs, with fresh water and wood on their backs. They are in marvellous awe of the Spaniards, and very simple people, and liue marvellous sauagely: For they brought vs to their bidings about two miles from the harborough, where wee saw their women and lodging, which is nothing but the skin of some beast layd vpon the ground: and ouer them in stead of houses, is nothing but fure or sixe sticks layd across, which stand vpon two forkes with stickes on the ground and a fewe boughes layd on it. Their diet is raw fish, which stinketh most vilely. And when any of them die, they burie their bowes and arrowes with them, with their canoa and all that they haue: for wee opened one of their graues, and saw the order of them. Their canoas or boates are marvellous artificially made of two skinnes like vnto bladders, and are blown full at one ende with quilles: they haue two of these bladders blown full, which are sewen together and made fast with a sinew of some wild beast; which when they are in the water swell, so that they are as tight as may bee. They goe to sea in these boates, and catch very much fish with them, and pay much of it for tribute vnto the Spaniards: but they vse it marvellous heauily.

Morro moreno
in 23 degrees
and a halfe.

all boates.

Tribute payd
in fish.

The 23 in the morning we tooke a small barke which came out of Arica road, which wee kept and called The George: the men forooke it, and went away with their boate. Our admirals pinnesse followed the boate, the Hugh Gallants boate tooke the barke: our admirals pinnesse could not recover the boat before it got on shoare, but went along into the road of Arica, and layd aboard a great shippe of an hundredth tonnes riding in the road right afore the towne, but all the men and goods were gone out of it, onely the bare ship was left alone. They made three or foure very faire shots at the pinnesse as shee was comming in, but missed her very narrowly with a Division shot which they had in the fort. Whereupon wee came into the road with the admirall and the Hugh Gallant: but the Content which was viceadmirall was behinde out of sight: by meanes where-

of, and for want of her boate to land men withall wee landed not: other wise it wee had bene together, our Generall with the companie would resolutely haue landed to take the towne, whatsoeuer had come of it. The cause why the Content stayed behind was, that shee had found about 14 leagues to the Southward of Arica, in a place where the Spaniards had landed, a whole ships lading of botijas of wine of Castillia, whereof the sayd Content tooke into her as many as shee could conueniently carrie, and came after vs into the road of Arica the same day. By this time wee perceived that the towne had gathered all their power together, and also conueyed all their treasure away, and buried it before wee were come neere the towne: for they had heard of vs. Nowe because it was very populous with the ayde of one or two places by in the land, our Generall sawe there was no landing without losse of many men: wherefore hee gaue ouer that enterprise. While wee rid in the road they shot at vs, and our ships shot at them againe for euery shot two. Moreouer, our pinnesse went in hard almost to the shoare, and fetched out another barke which rid there in despyght of all their forces though they shot still at the pinnesse, which they could neuer hit. After these things our Generall sent a boate on shoare with a flag of truce to knowe if they would redeeme their great shippe or no; but they would not: for they had receiued speciall commandement from the viceroy from Lima, not to buy any shippe, nor to ransom any man by on paine of death. Our Generall did this in hope to haue redeemed some of our men, which were taken prisoners on shoare by the horsemen at Quintero, other wise hee would haue made them no offer of parley.

The 25 riding still in the said road, we spied a saile comming from the Southward, and our Generall sent out his pinnesse to meete her, with all our boates; but the towne made such signes from the hill with fires and tokens out of the watch-house, that before our pinnesse could get to them, they ran the barke on shoare two miles to the Southward of the towne; but they had small leasure to carrie any thing with them; but all the men skaped, among whom there were certaine friers: for wee sawe them in their friers weedes as they ran on shoare: many horsemen came from the towne to rescue them, and to carrie them away, other wise wee had landed and taken or killed them. So wee went aboard the barke as she lay sinke, and fetched out the pillage: but there was nothing in it of any value, and came aboard our shippes againe the same night: and the next morning wee set the great shippe on fire in the road, and sinke one of the barkes, and carried the other along with vs, and so departed from thence, and went away Northwest.

The 27 day wee tooke a small barke, which came from S. Iago neere vnto Quintero, where wee lost our men first. In this barke was one George a Greeke, a reasonable pilot for all the coast of Chili. They were sent to the citie of Lima with letters of aduise of vs, and of the losse of our men. There were also in the sayde barke one Flemming and three Spaniards: and they were all swayne and receiued the Sacrament before they came to sea by three or foure friers, that if wee should chance to meete them, they should throw those letters ouer boord: which, (as wee were giuing them chase with our pinnesse) before wee could fetch them by, they had accordingly thrown away. Yet our Generall wrought so with them, that they did confesse it: but hee was faine to cause them to bee tormented with their thumbes in a winch, and to continue them at seuerall times with extreme paine. Also hee made the old Flemming beleue that hee would hang him; and the rope being about his necke hee was pulled by a little from the hatches, and yet hee would not confesse, chusing rather to die, then hee would bee periured. In the end it was confessed by one of the Spaniards, whereupon wee burnt the barke, and carried the men with vs.

The third of May wee came into a bay where are three little townes, which are called Paracca, Chincha, and Pisca, where some of vs landed and tooke certaine houses, wherein was bread, wine, figs and hennies: but the sea went so high, that wee could not land at the best of the townes without sinking of our boats, and great hazard of vs all. This place standeth in thirteene degrees and to the Southward of the line.

The fift of May wee departed from this harbour, leaving the Content our viceadmirall within at an Island of seales, by which meanes at that time wee lost her companie.

The ninth wee gaue chase to a saile, namely, Our admirall, The Hugh Gallant, and The George which wee had taken before comming out of the roade of Arica; The Content which was our viceadmirall being still lost: but wee could not fetch it. The George made after it, but lost it that night.

The tenth day the Hugh Gallant (in which barke I Francis Pretie was) lost companie of our admirall.

The eleuenth we which were in the Hugh Gallant put into a bay which standeth in 12 degrees; in which bay wee found a riuer of fresh water about eight of the clocke at night, and though we were

were but of small force, and no more but one barke and 18 men in it, yet wee went on shoare to fill water; where hauing filled one boates lading, while our boate was in going aboord, two or three of our companie which were on shoare, as they were going a little from the watering place with their furniture about them, espied where there were foure or five hundred bagges of meale on an heape couered with a fewe reedes. So that night we filled water and tooke as much meale as wee thought good: which fell but well for vs that were then lost and stood in neede of victu-
als: and by breake of day in the morning wee came aboord, and there stayed and rode vntill the afternoone. In which meane time the towne seeing vs ride there still, brought downe much cat- tell to the sea side to haue intised vs to come on shoare: but wee sawe their intent, and weyed an- ker and departed the twelfth day.

400 bagges of
meale found.

The 13 day at night wee put into a bay which standeth in 9 degrees and $\frac{1}{2}$, where wee sawe hoysmen: and that night wee landed, namely, M. Bruer Captaine, my selfe Francis Perrie, Ar- thur Warford, Iohn Way Preacher, Iohn Newman, Andrew Wyght, William Gargefield, and Henry Hilliard. And we 8 onely, hauing euery man his harquebuse and his furniture about him, marched three quarters of a mile along the sea side, where wee found a boate of five or sixe tummes halde by drie on the shoare about a cables length from the water: and with extreme labour wee lanchd the barke; when it was on flote, Captaine Bruer and I went in, while the rest of our companie were fetching their things: but suddenly it was readie to sinke: And the Captaine and I stood by to the knees lading out water with our targets: but it sinke downe faster then wee were able to free it, insomuch as in the end wee had much adoe to saue our selues from drow- ning. When wee were out, wee stood in great feare that our owne boate wherein wee came on shoare was sinke: for wee could no where see it. Howbeit the Captaine commanded them to keepe it off, for feare of the great surge that went by the shoare. Yet in the end wee spied it, and went aboord by two and two, and were driuen to wade by to the arme-holes 60 paces into the sea before wee could get into the boate, by reason of the shoalnesse: and then departed the four-
teenth day in the morning.

Iohn Way a
preacher.

The 16 wee tooke with the Hugh Gallant, being but sixtene men of vs in it, a great shippe which came from Guaianil, which was called The Lewis, and was of the burthen of three hun- dred tunns, hauing foure and twentie men in it, wherein was pilot one Goncaluo de Ribas, whom wee carried along with vs, and a Negro called Emmanuel. The shippe was laden with nothing but timber and victuals: wherefore wee left her seuen leagues from the land very leake and ready to sinke in 7 degrees to the Southward of the line: wee sinke her boate and tooke away her fore-
saile and certaine victuals.

the ship of 300
tunnies taken

They met
their fleet a-
gaine.
Two rich
ships taken.
One shippe
worth 20000
pounds

The 17 of May wee met with our admirall againe, and all the rest of our fleet. They had ta- ken two ships, the one laden with sugar, molosses, maiz, Cordouan-skinnes, monte go de Por- co, many packes of pinrados, many Indian coates, and some marmalade, and 1000 heimes: and the other ship was laden with wheate-meale, and boxes of marmalade. One of these ships which had the chiefe marchandise in it, was worth twentie thousand pounds, if it had bene in England or in any other place of Christendome where wee might haue solde it. Wee filled all our ships with as much as wee could bestow of these goods: the rest wee burnt and the ships also; and set the men and women that were not killed on shoare.

The bay of
Paica in 5 de-
grees 4 min.

The 20 day in the morning wee came into the road of Paica, and being at an anker, our Gene- rall landed with sixtie or seuentie men, skirmished with them of the towne, and draue them all to flight to the top of the hill which is ouer the towne, except a few slaues and some other which were of the meaner sort, who were commanded by the gouernours to stay below in the towne, at a place which is in building for a fort, hauing with them a bloodie ensigne, being in number about one hundred men. Nowe as wee were rowing betweene the ships and the shoare, our gunner shot off a great peece out of one of the barkes, and the shot fel among them, and draue them to flie from the fort as fast as they might runne, who got them by vpon an hill, and from thence shot among vs with their small shot. After wee were landed and had taken the towne, wee ran vpon them, and chased them so fiercely vpon the hill, the space of an houre, that wee draue them in the ende away perforce, and being got vpon the hill, wee found where they had layd all their stiffe which they had brought out of the towne, and had hidden it there vpon the mountaines. We also found the quan-
tity of 25 pounds weight in siluer in pieces of eight rials, and abundance of household stiffe and
storehouses full of all kinde of wares: but our Generall would not suffer any man to carrie much cloth or apparell away, because they should not cloy themselves with burthens: for hee knew not whether our enemies were prouided with furniture according to the number of their men: for they were five men to one of vs: and wee had an English mile and an halfe to our ships. Thus

A great ship
burnt.

Great store of
cables made
in Puna.

wee came downe in safetie to the towne, which was very well builded, and marvellous cleane kept in every streefe, with a towne-house or Guild hall in the middelt, and had to the number of two hundred houses at the least in it. Wee set it on fire to the ground, and goods to the value of five or six thousand pounds: there was also a barke riding in the roade which wee set on fire, and departed directing our course to the Island of Puna.

The 25 day of May wee arrived at the Island of Puna, where is a very good harbour, where wee found a great shippe of the burthen of 250 tunnes riding at an anker with all her furniture, which was readie to bee haled on ground: for there is a speciall good place for that purpose. Wee sunke it, and went on shoare where the lord of the Island dwelt, which was by the waters side, who had a sumptuous house marvellous well contrived with very many singular good roomes and chambers in it: and out of every chamber was framed a gallerie with a stately prospect into the sea on the one side, and into the Island on the other side, with a marvellous great hall below, and a very great storehouse at the one ende of the hall, which was filled with botijas of pitch and balse to make cables withall: for the most part of the cables in the South sea are made upon that Island. This great Cacique doth make all the Indians upon the Island to worke and to drudge for him: and hee himselfe is an Indian borne, but is married to a marvellous faire woman which is a Spaniard, by reason of his pleasant habitation and of his great wealth.

This Spanisch woman his wife is honoured as a Queene in the Island, and neuer goeth on the ground upon her feete: but holdeth it too base a thing for her: But when her pleasure is to take the ayre, or to goe abroad, shee is alwayes carried in a shadowe like unto an horse-litter upon foure mens shoulders, with a velle or canopie ouer her for the sunne or the winde, hauing her gentlewomen still attending about her with a great troope of the best men of the Island with her. But both shee and the lord of the Island with all the Indians in the towne were newly fled out of the Island before wee could get to an anker, by reason wee were becalmed before wee could get in, and were gone ouer unto the maine lande, hauing carried away with them to the summe of 100000 crownes, which wee knew by a captaine of the Island an Indian, which was left there with some other upon the Island under him, whom wee had taken at sea as wee were comming into the roade, being in a balsa or canoa for a spie to see what wee were.

The 27 our General himselfe with certaine shot and some targettiers went ouer into the maine into the place where this foresayde Indian captaine which wee had taken had tolde vs that the Cacique, which was the lord of all the Island, was gone vnto, and had caried all his treasure with him: but at our comming to the place which wee went to lande at, wee found newly arrived there foure or five great balsas, which were laden with plantans, bags of meale, and many other kinds of victuals. Our Generall marvelled what they were and what they meant, asking the Indian guide and commanding him to speake the truth vpon his life: being then bound fast, hee answered being very much abashed, as well as our companie were, that hee neither knewe from whence they should come, nor who they should bee: for there was neuer a man in any one of the balsas: and because hee had tolde our Generall before, that it was an easie matter to take the sayd Cacique and all his treasure, and that there were but three or foure houses standing in a desert place and no resistance, and that if hee found it not so, hee should hang him. Again being demaunded to speake vpon his life what hee thought these Balsas should bee, hee answered that hee coulde not say from whence they should come, except it were to bring 60 souldiers, which hee did heare were to go to a place called Guaiquil, which was about 6 leagues from the saide yland, where two or three of the kings shippes were on the stocks in building, where are continually an hundred souldiers in garrisons who had heard of vs, and had sent for sixtie more for feare of burning of the shippes and towne. Our Generall not any whit discouraged either at the sight of the balsas vnlooke for, or for hearing of the threescore souldiers not vntill then spoken of, with a braue courage animating his companie in the exployte, went presently forward, being in the night in a most desert path in the woods, vntill such time as hee came to the place, where as it seemed, they had kept watch either at the waters side, or at the houses, or else at both, and were newly gone out of the houses, hauing so short warning, that they left the meate both biling and roasting at the fire and were fledde with their treasure with them, or else buried it vntill it could not bee found, being also in the night. Our companie tooke heines and such things as wee thought good, and came away.

The towne of
Guaiquil.

A little Island
neere vnto
Puna.

The 29 day of May our Generall went in the ship-boate into a little Island there by, whereas the sayd Cacique which was the lord of Puna had caused all the hangings of his chambers, which were of cordouan leather all guilded ouer, and painted very faire and rich, with all his household stuffe, and all the ships tackling which was riding in the roade at our comming in, with great store

of nailes, spikes of yron, and very many other things to be conueyed : all which wee found, and brought away what our Generall thought requisite for the ships businesse.

This Iland is very pleasant for all things requisite, and fruitful: but there are no mines of gold nor silver in it. There are at the least 200 houses in the towne about the Caciques pallace, and as many in one or two townes more vpon the Iland, which is almost as bigge as the Ile of Wight in England. There is planted on the one side of the Caciques house a faire garden, with all herbes growing in it, and at the lower end a well of fresh water, and round about it are trees set, whereon bombasin cotton groweth after this maner: The tops of the trees grow full of cods, out of which the cotton groweth, and in the cotton is a seede of the bignesse of a pease, and in euery codde there are seuen or eight of these seedes: and if the cotton bee not gathered when it is ripe, then these seedes fall from it, and spring againe.

The Ile of Puna is almost as big as the Ile of Wight. Cotton trees.

There are also in this garden fig-trees which beare continually, also poppions, melons, cucumbers, radishes, rosemarie and thyme, with many other herbes and fruits. At the other end of the house there is also another orchard, where grow oranges sweete and sower, limmons, pomegranates and lynes, with diuers other fruits.

An excellent orchard.

There is very good pasture ground in this Iland; and withall many horses, oxen, bullockes, sheepe very fat and faire, great store of goates which be very tame, and are vled continually to bee milked. They haue moreover abundance of pigeons, turkeys, and ducks of a marvellous bignesse.

There was also a very large and great church hard by the Caciques house, whither hee caused all the Indians in the Iland to come and heare masse: for he himselfe was made a Christian when he was married to the Spanissh woman before spoken of, and vpon his conuersion he caused the rest of his subiects to be Christened. In this church was an high altar with a crucifixe, and sixe belles hanging in the nether end thereof. We burnt the church and brought the belles away.

By this time wee had haled on ground our admirall, and had made her cleane, burnt her keele, pitched and tarred her, and had haled her on stote againe. And in the meane while continually kept watch and ward in the great house both night and day.

The second graving of their ships.

The second day of June in the morning, by and by after breake of day, euery one of the watch being gone abroad to seeke to fetch in victuals, some one way, some another, some for hennes, some for sheepe, some for goates, vpon the sudden there came down vpon vs an hundred Spanissh souldiers with muskets and an ensigne, which were landed on the other side of the Iland that night, and all the Indians of the Iland with them, euery one with weapons and their baggage after them: which was by meanes of a Negro, whose name was Emmanuel, which fled from vs at our first landing there. Thus being taken at aduantage we had the worst: for our companie was not past fiftene or twentie; whereof they had slaine one or two before they were come to the houses: yet we skirmished with them an houre and an halfe: at the last being sore ouercharged with multitudes, we were driuen down from the hill to the waters side, and there kept them play a while, until in the end Zacharie Saxie, who with his halberd had kept the way of the hill, and slaine a couple of them, as hee breathed himselfe being somewhat tired, had an honourable death and a short: for a shot strooke him to the heart: who feeling himselfe mortally wounded cryed to God for mercie, and fell downe presently dead. But soone after the enemye was driuen somewhat to retire from the bankes side to the greene: and in the ende our boate came and carried as many of our men away as could goe in her, which was in hazard of sinking while they hastened into it: And one of our men whose name was Robert Maddocke was shot through the head with his owne peece, being a snap-hance, as hee was hastning into the boate. But foure of vs were left behinde which the boate could not carrie: to wit, my selfe Francis Pretie, Thomas Andrewes, Steuen Gunner, and Richard Rose: which had our shot readie and retired our selues vnto a cliffe, untill the boate came againe, which was presently after they had carried the rest aboard. There were sixe and fortie of the enemies slaine by vs, whereof they had dragged some into bushes, and some into olde houses, which wee found afterward. Wee lost twelue men in maner following.

The first skie-mith with the Spaniards.

Zacharie Saxie slaine honorably.

Robert Maddocke slaine with his owne peece.

46 Spaniards and Indians slaine.

Slaine by the enemye.	1 Zacharie Saxie,	1 Henry Mawdley,	}
	2 Neales Johnson,	burnt.	
	3 William Geirgiffeld,	1 Edward the gunners man,	}
	4 Nicolas Hendie,	2 Ambrose the musician,	
	5 Henry Cooper,	1 Walter Tilliard,	}

ua Espanna.

Our Generall
entered two
miles into the
maine land
with 30 men.

The selfe same day being the second of June, we went on shoare againe with sixtie men, and had a fresh skirmish with the enemies, and draue them to retire, being an hundred Spaniards ser- uing with muskets, and two hundred Indians with bowes, arrowes and darts. This done, wee set fire on the towne and burnt it to the ground, hauing in it to the number of three hundred houses: and shortly after made hauocke of their fieldes, orchards and gardens, and burnt foure great ships moze which were in building on the stocks.

The third of June the Conent which was our viceadmirall was haled on ground, to graue at the same place in despyght of the Spaniards: and also our pinnesse which the Spaniards had bur- ned, was new trimmed.

The fift day of June wee departed out of the roade of Puna, where wee had remained eleuen dayes, and turned by for a place which is called Rio dolce, where wee watered: at which place also wee sunke our reereadmirall called The Hugh Gallant for want of men, being a barke of for- tie tunnes.

The tenth day of the same moneth wee set the Indians on shoare, which we had taken before in a balla as we were comming into the road of Puna.

The eleuenth day wee departed from the sayd Rio dolce.

The twelfth of June wee doubled the Equinoctial line, and continued our course Northward all that moneth.

The first of Iulie wee had sight of the coast of Nueva Espanna, being foure leagues distant from land in the latitude of ten degrees to the Northward of the line.

The ninth of Iulie wee tooke a new ship of the burthen of 120 tunnes, wherein was one Mi- chael Sancius, whom our Generall tooke to serue his turne to water along the coast: for hee was one of the best coasters in the South sea. This Michael Sancius was a Breuchsal, borne in Mar- seils, and was the first man that tolde vs newes of the great ship called The Santa Anna, which wee afterward tooke comming from the Philippinas.

There were sixe men moze in this new shippe: we tooke her sailes, her ropes, and fire-wood, to serue our turnes, set her on fire, and kept the men.

The tenth we tooke another barke which was going with aduise of vs and our ships all along the coast, as Michael Sancius tolde vs: but all the companie that were in the barke were fledde on shoare. None of both these ships had any goods in them. For they came both from Sonsonate in the prouince of Guatemala; the new shippe, for feare we should haue taken her in the road, and the barke, to carrie newes of vs along the coast; which barke also wee set on fire.

The 26 day of Iulie wee came to an anker at 10 fathoms in the riuer of Copalica, where wee made account to water. And the same night wee departed with 30 men in the pinnesse, and reuerd to Aguatulco, which is but two leagues from the aforesayd riuer; and standeth in 15 degrees 40 minutes to the Northward of the Equinoctial line.

The 27 in the morning by the breake of day wee came into the roade of Aguatulco, where wee found a barke of 50 tunnes, which was come from Sonsonate laden with cacaos and anile which they had there landed: and the men were all fled on shoare. Wee landed there, and burnt their towne, with the church and custome house which was very faire and large: in which house were 600 bags of anile to dye cloth; euery bag whereof was worth 40 crownes, and 400 bags of ca- caos; euery bag whereof is worth ten crownes. These cacaos goe among them for meate and money. For 150 of them are in value one rial of plate in ready payment. They are very like unto an almond, but are nothing so pleasant in taste: they eat them, and make drinke of them. This the owner of the shippe tolde vs. I found in this towne before wee burnt it, a flasket full of boxes of balme. After we had spoyled and burnt the towne, wherein there were some hundred houses, the owner of the shippe came downe out of the hilles with a flag of truce vnto vs, which before with the rest of all the townesmen was run away at our first comming; and at length came aboard our pinnesse vpon Captaine Hauers worde of safe returne. Wee carried him to the riuer of Copalica where our shippes rode: and when hee came to our Generall, hee caused him to bee set on shoare in safetie the same night, because hee came vpon the captaines word.

The 28 day we set saile from Copalica, because the sea was so great there, that wee could not fill water, and ran the same night into the roade of Aguatulco.

The 29 our Generall landed and went on shoare with thirtie men two miles into the woods, where wee tooke a Mestizo, whose name was Michael de Truxillo, who was customer of that towne, and wee found with him two chambers full of his stuffe: wee brought him and his stuffe aboard. And whereas I say he was a Mestizo, it is to be understood that a Mestizo is one which hath a Spaniard to his father and an Indian to his mother.

The

The second day of August, we had watered, and examined the said Mestizo, and set him on shore againe and departed from the port of Aguatulco the same night, which standeth as I sayd before in 15 degrees and 40 minutes to the Northward of the lyne.

Our departure from Aguatulco.

Here wee ouerslipped the haven of Acapulco, from whence the Shippes are set forth for the Philippinas.

The foure and twentieth day of August, our Generall with 30 of vs went with the pinnesse into an haven called Puerto de Natiuidad, where wee had intelligence by Michael Sancius that there should bee a pinnesse, but before wee could get thither the sayde pinnesse was gone to fish for pearles 12 leagues farther, as we were informed by certaine Indians which we found there. We tooke a mullato in this place, in his bedde, which was sent with letters of aduise concerning vs along the coast, of Nueva Galicia, whose horse wee killed, tooke his letters, left him behinde, set fire on the houses, and burnt two of our shippes of 200 tonnes the piece, which were in building there on the stocks, and came about of our shippes againe.

Puerto de Natiuidad in 19 degrees.

The third poste of aduise taken.

Puerto de Natiuidad burnt. Two new shippes burnt.

The five and twentieth day of August, wee came into the bay of S. Iago, where wee watered at a fresh Riuer, along which riuer many plantans are growing: here is great abundance of fresh fish. Weere also certaine of our companie dragged for pearles and caught some quantitie.

The riuer of S. Iago. Pearles taken.

The second of September wee departed from S. Iago at foure of the clocke in the evening. This bay of S. Iago standeth in nineteene degrees and eightene minutes to the Northward of the lyne.

The 3 of September wee arrived in a little bay a league to the Westwarde off Port de Natiuidad called Malacca, which is a very good place to ride in: and the same day about twelue of the clocke our Generall landed with thirtie men or there about, and went by to a towne of Indians which was two leagues from the road, which towne is called Acatlan: there were in it about 20 or 30 houses and a Church, which we defaced and came about againe the same night. All the people were fled out of the towne at the sight of vs.

The bay of Malacca. The towne of Acatlan burnt.

The fourth of September, wee departed from the roade of Malacca, and sailed along the coast.

The roade of Chacalla.

The 8 we came to the roade of Chacalla, in which bay there are two little houses by the waters side. This bay is 18 leagues from the Cape de los Corrientes.

The 9 in the morning our Generall sent by Captaine Hauers with fortie men of vs before day, and Michael Sancius being our guide, wee went into a place about two leagues by into the countrey in a most villanous desert path through the woods and wilderness; and in the ende we came to a place where wee tooke three householders with their wiues and children and some Indians, one carpenter which was a Spaniard, and a Portugall, wee bound them all and made them to come to the sea side with vs.

Our Generall made their wiues to fetch vs Plantans, Lymmonds, and Oranges, Pineapples and other fruites whereof they had abundance, and so let their husbandes depart, except Sembrano the Spanish Carpenter, and Diego the Portugall; and the tenth day wee departed the roade.

The twelfth day wee arrived at a little Island called the Isle of S. Andrewe, on which there is great store of fowle and wood: where wee dyed and salted as many of the fowles as we thought good: wee also killed there abundance of seales, and Iguanos which are a kinde of Serpents, with foure feete, and a long sharpe tayle, strange to them which haue not seene them; but they are very good meate. Wee ridde here untill the seuenteenth day, at which time wee departed.

The isle of S. Andrewe.

Iguanos good meate.

The 24 day wee arrived in the roade of Massatlan, which standeth in 23 degrees; just under the Tropicke of Cancer: It is a very great riuer within, but is barred at the mouth: and vpon the North side of the barre without, is good fresh water: but there is very euill filling of it; because at a lowe water it is shoald halfe a mile off the shoare. There is great store of fresh fish in that bay: and good fruites by into the countrey, whereof wee had some, though not without danger.

Massatlan in 23 degrees, and an halfe.

The seven and twentieth day of September, wee departed from the roade of Massatlan and ran to an island which is a league to the Northward the sayd Massatlan; where wee trimmed our ships and new built our pinnesse: and there is a little island a quarter of a league from it, on which are seales; where a Spanish prisoner, whose name was Domingo, being sent to wash shirtes with one of our me to keep him, made a scape, & swam to the maine, which was an English mile distant: at which place we had seen 30 or 40 Spaniards & Indians, which were horsemen, and kept watch there,

An island a league Northwards of Massatlan.

The escape of one Domingo, a Spaniard.

Chiamerla,

there, which came from a towne called Chiamerla, which was 11 leagues vp into the countrey, as Michael Sanius told vs. We found vpon the island where we trimmed our pinnelle, fresh water by the assistance of God in that our great neede by digging two or three foote deepe in the sande, where no water nor signe of water was before to be perceiued. Otherwise we had gon backe 20 or 30 leagues to water: which might haue bene occasion that we might haue missed our prey wee had long wayted for. But God raysed one Flores a Spaniard, which was also a prisoner with vs, to make a motion to digge in the sands. Now our Generall hauing had experience ones before of the like, commanded to put his motion in practise, and in digging three foote deepe wee found very good and fresh water. So we watered our ships, and might haue filled a thousand tunnes more, if we had would.

Fresh water
at 2 or 3 foote
deepe in the
sand.

We stayed in this island untill the 9 day of October, at which time we departed at night for the cape of S. Lucar, which is on the West side of the point of California.

The cape of S.
Lucar on the
point of Cali-
fornia.
Aguada Segura.

The 14 of October we fell with the cape of S. Lucar, which cape is very like the Needles at the isle of Wight; and within the said cape is a great bay called by the Spaniards Aguada Segura: into which bay falleth a faire fresh riuer, about which many Indians vse to keepe: wee watered in the riuer and lay off and on from the saide cape of S. Lucar untill the fourth of Nouember, and had the windes hanging still Westerly.

California in 23
degrees and
two thirds.

The 4 of Nouember the Desire and the Content, wherein were the number of Eng-
lishmen onely lining, beating vp and downe vpon the headland of California, which standeth in 23 degrees and $\frac{2}{3}$ to the Northward, betwene seuen and 8 of the clocke in the morning one of the company of our Admirall which was the trumpeter of the ship going vp into the top espied a sayle bearing in from the sea with the cape; whereupon hee cryed out with no small ioy to himselfe and the whole company. A sayle, A sayle, with which cheerefull word the master of the ship and diuers others of the company went also vp into the maine top, who perceiuing the speech to be very true gaue information vnto our Generall of these happy newes, who was no lesse glad then the cause required: whereupon he gaue in charge presently vnto the whole company to put all things in readines, which being performed we gaue the chase some 3 or 4 houres, standing with our best aduantage and working for the winde. In the afternoone we gat vp vnto them, giuing them the broad side with our great ordinance and a vollee of small shot, and presently layed the ship aboard, whereof the king of Spaine was owner, which was Admiral of the south sea, called the S. Anna, & thought to be 700 tunnes in burthen. Now as we were ready on their ships side to enter her, being not past 50 or 60 men at the vttermost in our ship, we perceiued that the Captaine of the said ship had made fights fore and after, and layd their sailes close on their poope, their mid ship, with their fore castle, and hauing not one man to be seene, stood close vnder their fights, with lances, iauelings, rapiers, & targets, & an innumerable sort of great stones, which they threw ouerboord vpon our heads and into our ship so fast and being so many of them, that they put vs off the shippe againe, with the losse of 2 of our men which were slaine, & with the hurting of 4 or 5. But for al this we new trimmed our sailes, and fitted euery man his furniture, and gaue them a fresh encounter with our great ordinance and also with our small shot, raking them through and through, to the killing and maiming of many of their men. Their Captaine still like a valiant man with his company stood very stoutely vnto his close fights, not yeelding as yet: Our General encouraging his men a fresh with the whole noyse of trumpets gaue them the third encounter with our great ordinance and all our small shot to the great discomforting of our enemies raking them through in diuers places, killing and spoiling many of their men. They being thus discomforted and spoiled, and their shippe being in hazard of sinking by reason of the great shot which were made, wherof some were vnder water, within 5 or 6 houres fight set out a flagge of truce and parled for mercy, desiring our Generall to saue their liues and to take their goods, and that they would presently yeeld. Our Generall of his goodnes promised them mercy, and willed them to strike their sayles, and to hoyle out their boate and to come aboard: which newes they were ful glad to heare of, and presently strooke their sailes, hoysed their boat out, and one of their cheife marchants came aboard vnto our Generall: and falling downe vpon his knees, offered to haue kissed our Generals feete, and craued mercie: our General most graciously pardoned both him and the rest vpon promise of their true dealing with him and his company concerning such riches as were in the shippe: and sent for the Captaine and their Pilote, who at their comming vsed the like due tie and reuerence as the former did. The General of his great mercy & humanitie, promised their liues and good vsage. The sayd Captaine and Pilote presently certified the Generall what goods they had within boord, to wit, an hundred and 22 thousand pezos of golde: and the rest of the riches that the ship was laden with, was in silkes, sattens, damasks, with muske & diuers other marchandise, and great store of al manner of victuals

The fight be-
tweene the

with the choyse of many conserues of all sortes for to eate, and of sundry sorts of very good wines. These things being made knowne to the Generall by the aforesaide Captaine and Pilote, they were commanded to stay aboord the Desire, and on the 6 day of November following wee went into an harbour which is called by the Spaniards, Aguada Segura, or Puerto Seguro.

The marchant
dile in the
great ship.

Here the whole company of the Spaniards, both of men and women to the number of 190 persons were set on shore: where they had a fayre river of fresh water, with great store of fresh fish, foule, and wood, and also many hares and conies vpon the maine land. Our generall also gaue them great store of victuals, of garuanos, peason, and some wine. Also they had all the sailes of their shippe to make them tents on shore, with licence to take such store of planks as should bee sufficient to make them a barge. Then we fell to hysling in of our goods, sharing of the treasure, and allotting to euery man his portion. In deuision whereof the eight of this moneth, many of the company fell into a mutinie against our Generall, especially those which were in the Content, which neuerthelesse were after a sort pacified for the time.

nerall.

On the 17 day of November, which is the day of the happy Coronation of her Maiestie, our Generall commanded all his ordinance to be shot off, with the small shot both in his owne shippe where himselfe went, and also in the Content, which was our Vice-admirall. This being done, the same night we had many fireworkes and more ordinance discharged, to the great admiration of all the Spaniards which were there: for the most part of them had neuer seene the like before.

This ended, our Generall discharged the Captaine, gaue him a royall reward, with prouision for his defence against the Indians and his company, both of swords, targets, pieces, shot, and powder to his great contentment: but before his departure, he tooke out of this great shippe two yong lads borne in Iapon, which could both wright and reade their owne language, the eldest being about 20 yeeres olde was named Christopher, the other was called Cosmus, about 17 yeeres of age, both of very good capacitie. He tooke also with him out of their ship, 3 boyes borne in the illes of Manilla, the one about 15, the other about 13, and the yongest about 9 yeeres old. The name of the eldest was Alphonso, the second Anthony de Dasi, the third remaineth with the right honourable the Countesse of Essex. He also tooke from them, one Nicholas Roderigo a Portugall, who hath not onely bene in Canton and other parts of China, but also in the islands of Iapon being a countrey most rich in siluer mynes, and hath also bene in the Philippinas.

Nicholas Roderi
go, a Portugall

Wee tooke also from them a Spaniard whose name was Thomas de Ersola, which was a very good Pilote from Acapulco and the coast of Nueva Espanna vnto the islands of Ladrones, where the Spaniards doe put in to water, sayling betweene Acapulco and the Philippinas: in which illes of Ladrones, they finde fresh water, plantans, and potato rootes: howbeit the people be very rude and heathens. The 19 day of November aforesaid, about 3 of the clock in the afternoone, our Generall caused the kings shippe to be set on fire, which hauing to the quantitie of 500 tunnes of goods in her we saw burnt vnto the water, and then gaue them a piece of ordinance and set sayle ioyally homewardest towards England with a fayre winde, which by this time was come about to Eastnortheast: and night growing neere, we left the Content a sterne of vs, which was not as yet come out of the road. And here thinking he would haue ouertaken vs, we lost her companie and neuer saw her after. Wee were sayling from this haven of Aguada Segura in California vnto the illes of Ladrones the rest of November, and all December, and so forth vntil the 3 of Januarie 1588, with a faire winde for the space 45 dayes: and we esteemed it to be between 17 and 18 hundred leagues. The 3 day of January by five of the clocke in the morning wee had sight of one of the islands of Ladrones called the island of Guana, standing in 13 degrees: toward the North, and sayling with a gentle gale before the winde, by 1 or 2 of the clocke in the afternoone, wee were come by within 2 leagues of the island, where we met with 60 or 70 sailes of canoas full of Sauages, who came off to sea vnto vs, and brought with them in their boates plantans, cocos, potato rootes, and fresh fish, which they had caught at sea, and helde them by vnto vs for to truck or exchange with vs, which when we perceiued, we made fast little pieces of old iron vpon small cords and fishing lines, and so bered the iron vnto their canoas, and they caught hold of them and tooke off the iron, and in exchange of it they would make fast vnto the same line either a potato roote, or a bundle of plantans, which we haled in: and thus our company exchanged with them vntil they had satisfied themselves with as much as did content them: yet we could not be rid of them. For afterward they were so thicke about the ship, that it stemmed & brake 1 or 2 of their canoas: but the men saued themselves being in euery canoa 4, 6, or 8 persons all naked & excellent swimmers and diuers. They are of a tawny colour & marvellous fat, & bigger ordinarily of stature the most part of our men in England, wearing their haire marvellous long: yet some of them haue it made vp and tyed with a knot on the crowne, & some with 2 knots, much like vnto their

their images which wee saw them haue carued in wood, and standing in the head of their boates like vnto the images of the deuill. Their canoas were as artificially made as any that euer wee had seene: considering they were made and contriued without any edge-toole. They are not a boue haife a yard in bredth and in length some leuen or eight paces, and their heades and sternes are both alike: they are made out with raftes of canes and reedes on the starreboord side, with maste and sayle: their sayle is made of mattes of sedges, square or triangle wise: and they saile as well right against the winde, as before the winde: These Sauages followed vs so long, that we could not be ridde of them: vntill in the end our General commanded some halfe dozen harquebuzes to be made ready, and himselfe strooke one of them and the rest shot at them: but they were so parr and nimble, that we could not discern whether they were killed or no, because they could fall backward into the sea, and preuent vs by diuing.

The 14 day of January lying at hull with our ship all the middle watch, from 12 at night vntill foure in the morning, by the breake of day wee fell with an headland of the illes of the Philippinas, which is called Cabo del Spirito Santo which is of very great bignes and length, high land in the midst of it, and very low land as the Cape lyeth East and West, trending farre into the sea to the westward. This cape or island is distant from the ile of Guana, one of the Ladrones, 310 leagues. We were in sayling of this course eleuen dayes with skant windes and some foule weather, bearing no sayle two or thre nights. This island standeth in 13 degrees, and is a place much peopled with heathen people, and all woodie through the whole land: and it is short of the chiefeest island of the Philippinas called Manilla about 60 leagues. Manilla is well planted and inhabited with Spaniards to the number of fixe or seuen hundred persons: which dwell in a towne walled, which hath 3 or 4 small blocke houses, part made of wood, and part of stone beeing in deede of no great strength: they haue one or two small Gallies belong to the towne. It is a very rich place of golde and many other commodities; and they haue peereless trafficke from Acapulco in Nueva Espanna, and also 20 or 30 shippes from China and from the Sangueles, which bring them many sorts of marchandise. The merchants of China and the Sangueles are part Moores and part heathen people. They bring great store of gold with them, which they trafficke and exchange for silver, and giue waight for waight. These Sangueles are men of marueilous capacite in deuising and making all maner of things, especially in all handie craftes and sciences: and euery one is so expert, perfect, and skillfull in his facultie, as fewe or no Christians are able to goe beyond them in that which they take in hand. For drawing & imbroidering vpon latten, silke, or lawne, either beaste, fowle, fish or worime, for liuelines and perfectnes, both in silke, silver, gold, & pearle, they excell. Also the 14 day at night wee entred the streights betweene the island of Luçon, & the island of Camlaia.

The fifteenth of January wee fell with an island called Capul, and had betwixt the sayd island and another island but an narrow passage, and a marueilous rippling of a very great tyde with a ledge of rockes lying off the poynt of the island of Capul: and no danger but water ynough a fayre bredth off: and within the point a fayre bay and a very good harborough in foure fathomes water hard aboord the shore within a cables length. About 10 of the clocke in the morning wee came to an anker.

Our shippe was no sooner come to an anker, but presently there came a canoa rowling aboord vs; wherein was one of the chief Caciques of the island, whereof there be seuen, who supposing that we were Spaniards, brought vs potato rootes, which they call camotas, and greene cocos, in exchange whereof we gaue his company pieces of linnen to the quantitie of a yard for foure Cocos, and as much linnen for a basket of potato rootes of a quart in quantitie; which rootes are very good meat, and excellent sweete either roasted or boyled.

This Caciques skinn was carued and cut with sundry and many strakes and deuises all ouer his body. We kept him still aboord and caused him to send those men which brought him aboord backe to the island to cause the rest of the principals to come aboord: who were no sooner gone on shore, but presently the people of the island came downe with their cocos and potato rootes, and the rest of the principals likewise came aboord and brought with them hennes and hogges: and they used the same order with vs which they doe with the Spaniards. For they tooke for euery hog (which they call Balboye) eight rials of plate, and for euery henne or cocke one riall of plate. Thus we rode at anker all that day, doing nothing but buying rootes, cocos, hennes, hogges, and such things as they brought, refreshing our selues marueilously well.

The same day at night beeing the fifteenth of January 1588, Nicolas Roderigo the Portugall, whom wee tooke out of the great Sanea Anna at the Cape of California, desired to speake with our General in secret: which when our General vnderstood, he sent for him, & asked him what he had to say vnto him. The Portugall made him this answer, that although he had offered his wor-
ship

ship heretofore, yet now hee had vowed his faith and true seruice vnto him, and in respect thereof he neither could nor would conceale such treason as was in working against him and his company: and that was this. That the Spaniard which was taken out of the great lane Anne for a Pilote, whole name was Thomas de Ersola, had written a letter, and secretly sealed it and locked it by in his chest, meaning to conuey it by the inhabitants of this island to Manilla, the contents whereof were: That there had bene two English ships along the coast of *Chili*, *Pern*, *Nueva Espana*, and *Nueva Galicia*, and that they had taken many shippes and marchandize in them, and burnt diuers townes, and spoiled all that ever they could come vnto, and that they had taken the kings ship which came from Manilla and all his treasure, with all the marchandize that was therein; and had set all the people on shore, taking himselfe away perforce. Therefore he willed them that they should make strong their bulwarks with their two Gallies, and all such provision as they could possibly make. He farther signified, that wee were riding at an island called *Capul*, which was at the end of the island of *Manilla*, being but one shippe with small force in it, and that the other ship, as he supposed, was gone for the North-west passage, standing in 55 degrees: and that if they could vse any meanes to surprize vs being there at an anchor, they should dispatch it: for our force was but small, and our men but weake, and that the place where we roade was but 50 leagues from them. Otherwise if they let vs escape, within fewe yeeres they must make account to haue their towne besieged and sacked with an armie of English. This information being giuen, our Generall called for him, and charged him with these things, which at the first he utterly denyed: but in the ende, the matter being made manifest and knowne of certaintie by especiall tryall and proofes, the next morning our General willed that he should be hanged: which was accordingly performed the 16 of January.

The treason of the Spaniard Pilote revealed.

The copy of the Spaniard Pilotes letter to the gouernour of Manilla, which was found in his chest, and translated by Timothy Shotton

Capul adioyning vpon the South side of Manilla. The shortest west passage, 50 leagues from Manilla.

The Spaniard Pilote hanged for his treachery.

The manner of the people of Capul.

We roade for the space of nine dayes about this island of *Capul*, where we had diuerse kindes of fresh victuals, with excellent fresh water in euery bay, and great store of wood. The people of this island go almost all naked and are tawny of colour. The men weare onely a stroope about their waistes, of some kinde of linnen of their owne weauing, which is made of plantain leaues, and another stroope comming from their backe vnder their twistes, which couereth their priuie parts, and is made fast to their girdles at their nauels.

These people vse a strange kinde of order among them, which is this. Euery man and man-child among them hath a nayle of Tyne thrust quite through the head of his priuie part, being split in the lower ende and riuerted, and on the head of the nayle is as it were a crowne: which is driuen through their priuities when they be yong, and the place groweth vp againe, without any great paine to the child: and they take this nayle out and in, as occasion serueth: and for the truth thereof we our selues haue taken one of these nailles from a soone of one of the kings which was of the age of 10 yeeres, who did weare the same in his priuie member.

A strange thing.

This custome was granted at the request of the women of the countrey, who finding their men to be giuen to the foule sinne of Sodomie, desired some remedie against that mischiefe, and obtained this before named of the magistrates. Whereouer all the males are circumcised, hauing the foreskinne of their flesh cut away. These people wholly worship the deuill, and often times haue conference with him, which appeareth vnto them in most ugly and monstrous shape.

Circumcision.

On the 23 day of January, our Generall M. Thomas Candish caused al the principals of this island, and of an hundred islands more, which he had made to pay tribute vnto him (which tribute was in hogges, hennes, potatoes and cocos), to appeare before him, and made himselfe and his company knowne vnto them, that they were English men, and enemies to the Spaniardes: and thereupon spreade his Ensigne and sounded by the drummes, which they much maruelled at: to conclude, they promised both themselves and all the islands thereabout to ayde him, whensoever hee should come againe to overcome the Spaniardes. Also our Generall gaue them, in token that wee were enemies to the Spaniardes, money backe againe for all their tribute which they had payed: which they tooke marvellous friendly, and rowed about our shippe to shewe vs pleasure marvellous swiftly: at the last our generall caused a saker to be shot off, whereat they wondered, and with great contentment tooke their leaues of vs.

The inhabitants of Capul with all the islands adioyning, promise to ayde the English against the Spaniardes

The next day being the twentieth foure of Januarie, wee sette sayle aboute fixe of the clock in the morning, and ran along the coast of the island of *Manilla*, shaping our course North-west betweene the isle of *Manilla*, and the isle of *Masbat*.

Our departure from the island of Capul. The isle of Masbat.

The 28 day in the morning about 7 of the clocke, riding at an anchor betwixt 2 islands, wee spied a Frigate vnder her two coarles, comming out betweene 2 other islands, which as we imagined came fro *Manilla*, sayling close aboord the shore along the maine island of *Panama*: we chased this Frigate along the shore, & gat very fast vpon it, until in the end we came so neere that it stood in to the shore

shore close by a winde, vntill shee was becalmed and was driuen to stricke her sayle, and banked by with her oares: wherevpon we came vnto an anker with our ship, a league and an halfe from the place where the frigate rowed in; and manned our boat with halfe a dozen shot and as many men with swords, which did row the boat: thus we made after the frigate which had hoysed saile and ran into a riuer, which we could not find. But as we rowed along the shore, our boate came in to very shallow water, where many weares and sticks were set by in diuers places in the sea, from whence 2 or 3 canoas came forth, whereof one made somewhat neere vnto vs, with 3 or 4 Indians in it: we called vnto them; but they would not come neerer vnto vs, but rowed from vs: whom wee durst not followe too farre for feare of bringing our selues too much to the leeward of our ship. Here, as we looked about vs, we espied another Balsa or canoa of a great bignes which they which were in her, did set along as we do usually set a barge with long stanes or poles, which was builded by with great canes, and below hard by the water made to row with oares; wherein were about 5 or 6 Indians and one Spaniard: nowe as wee were come almost at the Balsa, wee ran a ground with our boate; but one or two of our men leaped ouer-boord and freed it againe presently, and keeping thwarte her head, we layed her aboord and tooke in to vs the Spaniard, but the Indians leaped into the sea and diued and rofe farre off againe from vs. Presently vpon the taking of this canoa, there shewed vpon the sand a band of souldiers marching with an ensigne hauing a red Crosse like the flagge of England, which were about 50 or 60 Spaniardes, which were lately come from Manilla to that towne which is called Ragaun in a Barke to fetch a new shippe of the kings, which was building in a riuer within the bay, and stayed there but for certain yrons that did serue for the rudder of the said ship, which they looked for euery day.

This band of men shot at vs from the shore with their muskets, but byt none of vs, and wee shot at them againe: they also manned a frigate and sent it out after our boat to haue taken vs, but we with saile and oares went from them: and when they perceiued that they could not fetch vs, but that they must come within danger of the ordinance of our ship, they stood in with the shore againe and landed their men, and presently sent their frigate about the point, but whether we knew not. So we came aboard with this one Spaniard, which was neither souldier nor sayler, but one that was come among the rest from Manilla, and had bene in the hospitall there a long time before, and was a very simple soule, and such a one as could and were to very little that hee was asked, concerning the state of the countrey. Here wee roade at anker all that night, and perceiued that the Spaniards had disperfed their band into 2 or 3 parts, and kept great watch in seueral steedes with fires and shooting off their pieces. This island hath much plaine ground in it in many places, and many fayre and straight trees do grow vpon it, fit for to make excellent good mastes for all sorts of ships. There are also mynes of very fine gold in it which are in the custodie of the Indians. And to the South-ward of this place, there is another very great island, which is not subdued by the Spaniards, nor any other nation. The people which inhabite it are all Negros; and the island is called the island of Negros: and is almost as bigge as England, standing in 9 degrees: the most part of it seemeth to be very lowe land, and by all likelihood is very fruitfull.

The 29 day of Ianuary aboute fixe of the clocke is the morning we set saile, sending our boate before vntill it was two of the clock in the afternoone, passing all this time as it were through a straight betwixt the said 2 islands of Panama, and the island of Negros, and about 16 leagues off we espied a fayre opening, trending South-west and by South, at which time our boate came aboard, and our Generall sent commendations to the Spanish captaine which wee came from the euening before by the Spaniard which we tooke, and willed him to prouide good store of gold: for he meant for to see him with his company at Manilla within fewe yeeres, and that he did but want a bigger boate to haue landed his men, or else hee would haue seene him then: and so caused him to be set on shore.

The 8 day of February by 8 of the clocke in the morning we espied an island neere Gilolo, called Batochina, which standeth in one degree from the Equinoctial line Northward.

The 14 day of February we fell with 11 or 12 very small islands, lying very low and flat, full of trees, and passed by some islands which be simcke and haue the dry sands lying in the maine sea. These islands neere the Malucoes, stand in 3 degrees and 10 min. to the South-ward of the lyne.

On the 17 day, one Iohn Gameford a Cooper dyed, which had bene sicke of an olde disease a long time. The 20 day wee fell with certaine other islands which had many small islands among them, standing 4 degrees to the South-ward of the lyne. On the 21 day of February, being Ashwednesday Captaine Hauers dyed of a most feruent and pestilent ague, which held him furiously some 7 or 8 dayes, to the no small grieve of our Generall and of all the rest of the company, who caused two Falcons and one Sacre to be shot off, with all the small shotte in the ship, who

who after he was shrowded in a sheete and a prayer sayd, was heued ouer boord with great lamentation of vs all. Whereafter, presently after his death my selfe with diuers others in the ship fell marueilously sicke, and so continued in very great paine for the space of three weekes or a moneth by reason of the extreeme heat and vntemperatnesse of the Climate.

The first day of March hauing passed through the Straights of Iaua minor and Iaua maior, March 1588. we came to an anker under the Southwest parts of Iaua maior: where wee espied certaine of the people which were fishing by the sea side in a bay which was vnder the pland. Then our Generall taking into the ship-boate certaine of his company, and a Negro which could speake the Morisco tongue, which hee had taken out of the great S. Anna, made toward those fishers, which hauing espied our boat ranne on shoare into the wood for feare of our men: but our Generall caused his Negro to call vnto them: who no sooner heard him call, but presently one of them came out to the shoare side and made answere. Our Generall by the Negro enquired of him for fresh water, which they found, and caused the fisher to goe to the King and to certifie him of a shippe that was come to haue trafique for victuals, and for diamants, pearles, or any other riche iewels that hee had: for which hee should haue either golde or other marchandise in exchange. The fisher answered that we should haue all maner of victuals that wee would request. Thus the boat came aboard againe. Within a while after wee went about to furnish our shippe thoroughly with wood and water.

Our arrival at Iaua maior.

Postscript

A King of Iaua his Secretary.

Niper wine.

Cloues, pepper, sugar, and many other commodities in Iaua maior.

A fine of 10. of the Kings canoes.

Two Portuguese in Iaua.

About the eighth of March two or three Canoas came from the towne vnto vs with egges, hennes, fresh fish, oranges, and lymes, and brought worde wee should haue had victuals more plentifully, but that they were so farre to bee brought to vs where wee ridde. Which when our Generall heard hee weighed anker and stood in neerer for the towne: and as wee were vnder saile wee mette with one of the kings canoas comming towarde vs: whereupon wee shoke the shippe in the winde and stayed for the canoa vntill it came aboard of vs, and stood into the bay which was hard by and came to an anker. In this canoa was the Kings Secretarie, who had on his head a piece of died linen cloth folded by like vnto a Turkes Tuliban: he was all naked saying about his waste, his breast was carued with the broade arrowe vpon it; hee went barefooted: he had an interpretour with him, which was a Mestizo, that is, halfe an Indian and halfe a Portugall, who could speake very good Portugale. This Secretarie signified vnto our Generall that he had brought him an hogge, hennes, egges, fresh fish, sugar-canes and wine: (which wine was as strong as any aquavita, and as cleare as any rocke water:) he tolde him farther that hee would bring victuals so sufficiently for him, as hee and his company would request, and that within the space of foure dayes. Our Generall vsed him singularly well, banquetted him most royally with the choyce of many and sundry conserues, wines both sweete and other, and caused his Musicians to make him musicke. This done our Generall tolde him that hee and his company were Englishmen; and that wee had bene at China and had had trafique there with them, and that wee were come thither to discover, and purposed to goe to Malaca. The people of Iaua tolde our Generall that there were certaine Portugals in the pland which lay there as Factors continually to trafique with them, to buy Negros, cloues, pepper, sugar, and many other commodities. This Secretarie of the King with his interpretour lay one night aboard our shippe. The same night, because they lay aboard, in the euening at the setting of the watch, our Generall commanded euery man in the shippe to prouide his harquebuz and his shotte, and so with shooting off 40. or 50. small shot and one Sacre, himselfe set the watch with them. This was no small maruelle vnto these heathen people, who had not commonly seene any shippe so furnished with men and Ordnance. The next morning wee dismissed the Secretarie and his interpretour with all humilitie.

The fourth day after, which was the 12. of March, according to their appointment came the Kings canoas; but the winde being somewhat skant they could not get aboard that night, but put into a bay vnder the pland vntill the next day, and presently after the breake of day there came to the number of 9. or 10. of the Kings canoas so deeply laden with victuals as they could swim, with two great liue oxen, halfe a skoe of wonderfull great and fat hogges, a number of hennes which were aliue, drakes, geese, egges, plantans, sugar canes, sugar in plates, cocos, sweet oranges and lowze, lymes, great store of wine and aquavita, salt to season victuals withall, and almost all maner of victuals else, with diuers of the Kings officers which were there. Among all the rest of the people in one of these canoas came two Portugales, which were of middle stature, and men of marueilous proper personage; they were each of them in a loose tarkin, and hose, which came downe from the waste to the ancle, because of the vse of the Countrey, and partly because it was Lent, and a time for doing of their penance, (for they accompt it as a thing

of great dislike among these heathens to weare either hose or shoes on their feete:) they had on each of them a very faire and a white lawne shirt, with falling bands on the same, very decently, onely their bare legs excepted. These Portugales were no small ioy vnto our Generall and all the rest of our company: For we had not seene any Christian that was our friend of a yeere and an halfe before. Our Generall vsed and increated them singularly well, with banquetts and musicke: They told vs that they were no lesse glad to see vs, then wee to see them, and enquired of the estate of their countrey, and what was become of Don Antonio their King, and whether hee were liuing or no: for that they had not of long time bene in Portugall, and that the Spaniards had alwayes brought them worde that hee was dead. Then our Generall satisfied them in euery demaund; Assuring them, that their King was aliue, and in England, and had honourable allowance of our Queene, and that there was warre betweene Spaine and England, and that we were come vnder the King of Portugall into the South sea, and had warred vpon the Spaniards there, and had fired, spoiled and sunke all the ships along the coast that we could meete withall, to the number of eightheene or twentie sailes. With this report they were sufficiently satisfied.

On the other side they declared vnto vs the state of the pland of Iaua. First the plentifulnes and great choise and store of victuals of all sorts, & of all maner of fruits as before is set downe: Then the great and rich marchandize which are there to be had. Then they described the properties and nature of the people as followeth. The name of the King of that part of the pland was Raia Bolamboam, who was a man had in great maiestie and feare among them. The common people may not bargain, sell, or exchange any thing with any other nation, without speciall licence from their king: and if any so doe, it is present death for him. The King himselfe is a man of great peeres, and hath an hundred wiues, his sonne hath fiftie. The custome of the countrey is, that whensoever the king doeth die, they take the body so dead and burne it and prelerue the ashes of him, and within fide dayes next after, the wiues of the said king so dead, according to the custome and vse of their countrey, euery one of them goe together to a place appointed, and the chiefe of the women, which was neereft vnto him in accompt, hath a ball in her hand, and throweth it from her, and to the place where the ball resteth, thither they goe all, and turne their faces to the Eastward, and euery one with a dagger in their hand, (which dagger they call a Crise, and is as sharpe as a rasor) stab themselues to the heart, and with their hands all to bee-bath themselues in their owne blood, and falling groueling on their faces so ende their dayes. This thing is as true as it seemeth to any hearer to be strang.

The men of themselues be very politique and subtile, and singularly valiant, being naked men, in any action they vnder take, and wonderfully at commandement and feare of their king. For example: if their king command them to vnder take any exploit, be it neuer so dangerous or desperate, they dare not nor will not refuse it, though they die euery man in the execution of the same. For hee will cut off the heads of euery one of them which retorne aliue without bringing of their purpose to passe: which is such a thing among them, as it maketh them the most valiant people in all the Southeast parts of the world: for they neuer feare any death. For being in fight with any nation, if any of them feeleth himselfe hurt with launce or sword, he will willingly runne himselfe vpon the weapon quite through his body to procure his death the more speedily, and in this desperate sort ende his dayes, or ouercome his enemy. Moreover, although the men be tawny of colour and go continually naked, yet their women be faire of complexion and go more apparelled.

After they had thus described the state of the pland, and the orders and facions of the people; they tolde vs farther, that if their king Don Antonio would come vnto them, they would warrant him to haue all the Malucos at commandement, besides China, Sangles, and the ples of the Philippinas, and that hee might be assured to haue all the Indians on his side that are in the countrey. After we had fully contented these Portugals, and the people of Iaua which brought vs victuals in their Canoas, they tooke their leaues of vs with promise of all good entertainment at our returnes, and our Generall gaue them three great pieces of Ordnance at their departing. Thus the next day being the 16. of March we set saile towards the Cape of good hope, called by the Portugals Cabo de buena Esperança on the Southermost coast of Africa.

The rest of March and all the moneth of April wee spent in traueling that mightie and vaste Sea, betweene the yle of Iaua and the maine of Africa, obseruing the heauens, the Crofiers or South-pole, the other starres, the fowles, which are markes vnto the Sea men of faire weather, foule weather, approaching of lands or ylands, the winds, the tempests, the raines & thunders, with the alterations of tides and currents.

The 10. day of May we had a storme at the West, and it blew so hard that it was as much as the ship could stirre close by vnder the wind: and the storme continued all that day and all that night.

The

The next day being the 11. of May in the morning one of the company went into the top, and espied land bearing North, and North and by West off vs, & about noone wee espied land to beate West off vs, which as we did imagine was the cape of Buena Esperança, whereof indeed we were short some 40. or 50. leagues: and by reason of the skantnesse of the winde we stood along to the Southeast untill midnight, at which time the winde came faire, and we haled along Westward.

The 12. and 13. dayes we were becalmed, and the sky was very hazie and thicke until the 14. day at three of the clocke in the afternoone, at which time the sky cleared, and we espied the land againe which was the cape called Cabo Falso, which is short of the Cape de Buena Esperança 40 or 50 leagues. This Cape is very easie to be knowne. For there are right ouer it three very high hills standing but a smal way one off another, and the hiest standeth in the middle, and the ground is much lower by the seaside. The Cape of Good hope beareth West and by South from the said Cabo Falso.

Cabo Falso.

The 16. day of May about 4. of the clocke in the afternoone the winde came by at East a very stiffe gale, which helde until it was Saturday with as much winde as euer the ship could goe before: at which time by sixe of the clocke in the morning wee espied the promontorie or headland, called the Cape de Buena Esperança, which is a reasonable hie land, & at the Westermost point a litle off the maine do shew two hammocks, the one vpon the other, and three other hammocks lying further off into the sea, yet so low land betweene and adioyning vnto the sea.

They double the Cape de Buena Speranza

This cape of Buena Esperança is set down and accompted for two thousand leagues from the pland of Iaua in the Portugall sea carts: but it is not so much almost by an hundred and fiftie leagues, as we found by the running of our ship. We were in running of these eightene hundred and fiftie leagues iust nine weekes.

From Iaua to the Cape of Buena Speranza is but 1850. leagues. June 1588.

The eighth day of June by breake of day we fel in sight of the pland of S. Helena, seven or eight leagues short of it, hauing but a small gale of winde, or almost none at all: inso much as we could not get vnto it that day, but stood off and on all that night.

The next day being the 9. of June hauing a pretie easie gale of wind we stood in with the shore, our boat being sent away before to make the harborough; and about one of the clocke in the afternoon we came vnto an anker in 12. fathoms water two or three cables length from the shore, in a very faire and smooth bay vnder the North west side of the pland.

They anker at the pland of S. Helena the 9. of June.

This pland is very high land, and lieth in the maine sea standing as it were in the middle of the sea betweene the maine land of Africa, and the maine of Brasilia and the coast of Guinea: And is in 15. degrees and 48. minutes to the Southward of the Equinoctiall line, and is distant from the Cape of Buena Esperança betweene 5. and 6. hundred leagues.

S. Helena is in the latitude of 15. degrees 48. min. to the Southward.

The same day about two or three of the clocke in the afternoone wee went on shore, where wee found a marueilous faire & pleasant valley, wherein diuers handsome buildings and houses were set vp, and especially one which was a Church, which was tyled & whited on the outside very faire, and made with a porch, and within the Church at the vypper end was set an altar, whereon stood a very large table set in a frame hauing in it the picture of our Sauour CHRIST vpon the Crosse and the image of our Lady playing, with diuers other histories curiously painted in the same. The sides of the Church were all hanged with stained clothes hauing many deuises drawn in them.

There are two houses adioyning to the Church, on each side one, which serue for kitchins to dresse meate in, with necessary roomes and houses of office: the coverings of the saide houses are made flat, whereon is planted a very faire vine, and through both the saide houses runneth a very good and holsome streame of fresh water.

There is also right ouer against the saide Church a faire causey made by with stones reaching vnto a valley by the seaside, in which valley is planted a garden, wherein grow great store of pompons and melons: And vpon the saide causey is a frame erected whereon hange two bells where with they ring to Masse; and hard vnto it is a Crosse set by, which is squared, framed and made very artificially of free stone, whereon is carued in cyphers what time it was builded, which was in the yere of our Lord 1571.

This valley is the fairest and largest lowe plot in all the pland, and it is marueilous sweete and pleasant, and planted in euery place either with fruite trees, or with herbes. There are fig trees, which beate fruit continually, & marueilous plentifully: for ou euery tree you shal haue blossoms, greene figs, and ripe figs, all at ones: and it is so all the yere long: the reason is that the pland standeth so neere the Sunne. There be also great store of lymon trees, orange trees, pomegranate trees, pomecitron trees, date trees, which beate fruite as the fig trees do, and are planted carefully and very artificially with very pleasant walkes vnder and betweene them, and the saide walkes bee ouershadowed with the leaues of the trees: and in euery voyde place is planted parceleys,

The great store of diuers excellent fruits in S. Helena.

sozell, basil, fenell, annis seede, mustard seede, radishes, and many speciall good hearbes: and the fresh water brooke runneth through diuers places of this orchard, and may with very small paines be made to water any one tree in the valley.

This fresh water streame commeth from the tops of the mountaines, and falleth from the cliffe into the valley the height of a cable, and hath many armes out of it, which refresh the whole pland, and almost euery tree in it. The pland is altogether high mountaines and steepe valleis, except it be in the tops of some hilles, and downe below in some of the valleis, where marueilous store of all these kinds of fruits before spoken of do grow: there is greater store growing in the tops of the mountaines then below in the valleis: but it is wonderfull laboursome and also dangerous traueiling by vnto them and downe againe, by reason of the height and steepe nesse of the hilles.

Abundance of
partridges in
S. Helena,

There is also vpon this pland great store of partridges, which are very tame, not making any great hast to flie away though one come very neere them, but onely to runne away, and get by into the steepe cliffes: we killed some of them with a fowling piece. They differ very much from our partridges which are in England both in bignesse and also in colour. For they be within a litle as bigge as an henne, and are of an ashe colour, and liue in couies twelue, sirteene, and twentie together: you cannot go ten or twelue score but you shall see or spring one or two coues at the least.

Great store of
felants,

There are likewise no lesse store of felants in the pland, which are also marueilous bigge and fat, surpassing those which are in our countrey in bignesse and in numbers of a company. They differ not very much in colour from the partridges before spoken of.

Turkies in
great quan-
tities,

We found inozerouer in this place great store of Guinie cocks, which we call Turkies, of colour blacke and white, with red heads: they are much about the same bignesse which ours be of in England: their egges be white, and as bigge as a Turkies egge.

Exceeding
numbers of
goats,

There are in this pland thousands of goates, which the Spaniards call Cabricos, which are very wilde: you shall see one or two hundred of them together, and sometimes you may beholde them going in a flocke almost a mile long. Some of them, (whether it be the nature of the breed of them, or of the country I wot not) are as big as an asse, with a maine like an horse and a beard hanging downe to the very ground: they wil cline by the cliffes which are so steepe that a man would thinke it a thing impossible for any liuing thing to goe there. We tooke and killed many of them for all their swiftnesse: for there be thousands of them vpon the mountaines.

Plentie of
swine,

Here are in like maner great store of swine which be very wilde and very fat, and of a marueilous bignes: they keepe altogether vpon the mountaines, and will very seldeome abide any man to come neere them, except it be by meere chance when they be found asleepe, or otherwise, according to their kinde, be taken laped in the mire.

We found in the houses at our comming 3. slaues which were Negros, & one which was bozne in the pland of Iaua, which tolde vs that the East Indian fleete, which were in number 5. sailes, the least whereof were in burchen 8. or 900. tunnes, all laden with spices and Calicut cloth, with store of treasure and very rich stones and pearles, were gone from the saide pland of S. Helena but 20. dayes before we came thither.

This pland hath bene found of long time by the Portugals, and hath bene altogether planted by them, for their refreshing as they come from the East Indies. And when they come they haue all things plentiful for their reliefe, by reason that they suffer none to inhabit there that might spend by the fruit of the pland, except some very few sicke persons in their company, which they stand in doubt will not liue vntill they come home, whom they leaue there to refresh themselves, and take away the peere following with the other fleete if they liue so long. They touch here rather in their comming home from the East Indies, then at their going thither, because they are thoroughly furnished with corne when they set out of Portugal, but are but meanelly victualled at their comming from the Indies, where there groweth little corne.

Our departure
from S. Helena,

The 20. day of Iune hauing taken in wood & water and refreshed our selues with such things as we found there, and made cleane our ship, we set saile about 8. of the clocke in the night toward England. At our setting saile wee had the winde at Southeast, and we haled away North west and by West. The winde is commonly off the shore at this pland of S. Helena.

July 1588.

On wednesday being the thirde day of July we went away North west the winde being still at Southeast: at which time we were in 1. degree and 48. minuts to the Southward of the Equinoctial line.

The twelfth day of the said moneth of July it was very little winde, and toward night it was calme and blew no winde at all, and so continued vntill it was monday being the 15. day of July.

On Wednesday the 17. day of the abousaid moneth wee had the winde skant at West north west. Wee found the wind continually to blow at East, and North east, and East north east after we

we were in 3. or 4. degrees to the Northward; and it altered not untill we came betweene 30. and 40. degrees to the Northward of the Equinodial Line.

On Wednesday the 21. day of August the wind came by at Southwest a faire gale: by which day at noone we were in 38. degrees of Northerly latitude.

On Friday in the morning being the 23. day of August, at foure of the clocke we haled East, and East and by South for the Northermost ylands of the Acores.

On Saturday the 24. day of the said moneth by 5. of the clocke in the morning we fel in sight of the two ylands of Flores and Coruo standing in 39. degrees and 1. and sailed away Northeast.

Coruo and Flores, two ylands of the Azores.

The third of September we met with a Flemish hulke which came from Lisbon, & declared vnto vs the ouerthrowing of the Spanish fleet, to the singular reioycing and comfort of vs all.

The 9. of September, after a terrible tempest which caried away most part of our sailes, by the mercifull fauour of the Almighty we recouered our long wished port of Plimmouth in England, from whence we set forth at the beginning of our voyage.

CERTEINE RARE AND SPECIAL NOTES

most properly belonging to the voyage of M. Thomas Candish next before described; concerning the heights, soundings, lyings of lands, distances of places, the variation of the Compasse, the iust length of time spent in sayling betweene diuers places, and their abode in them, as also the places of their harbour and anckering, and the depths of the same, with the obseruation of the windes on seuerall coastes:

Written by M. Thomas Fuller of Ipswich, who was Master in *The desire* of M. Thomas Candish in his foresaid prosperous voyage about the world.

A note of the heights of certaine places on the coast of Barbarie.

Inprimis Cape Cantin standeth in the latitude of	32. degr. 4. min.
Item the yland of Mogador standeth in	31. degr. 30. min.
Item Cape d'oro standeth in	30. degr. 20. min.
Item the ylands of the Canaries about	28. degr.
Item Cape Bojador standeth in	27. degr. 30. min.
Item Cape Verde standeth in	14. degr. 30. min.
Item the Cape of Sierra Liona in	8. degr.
Item an yland called Ilha Verde in	7. degr. 30. min.

A note of the heights of certaine places from the coast of Brasill to the South sea.

Inprimis Cape Frio standeth in the latitude of	23. degr. 30. min.
Item the yland of S. Sebastian in	24. degr.
Item Port desire standeth in	47. degr. 50. min.
Item Seales bay standeth in	48. degr. 20. min.
Item Port S. Iulian standeth in	50. degr.
Item The white riuer standeth in	50. degr. 30. min.
Item Cape Ioy standeth in	52. degr. 40. min.
Item Port famine within the Straights of Magellan standeth in	53. degr. 50. min.
Item Cape froward within the Straights of Magellan standeth in	54. degr. 15. min.
Item Cape desire in the entring into the South sea standeth in	53. degr. 10. min.

A note of the heights of certaine places on the coast of Chili and Peru in the South sea.

Inprimis the yland of Mocha standeth in the latitude of	38. degr. 30. min.
Item the yland of S. Mary in	37. degr. 15. min.
Item the bay of *Valpares in	33. degr. 40. min. *Valparizo.
Item the bay of Quintero in	33. degr. 20. min.
Item Coquimbo in	29. degr. 30. min.
Item Morro moreno in	23. degr. 20. min.
Item Arica standeth in	18. degr. 30. min.
Item the bay of Pisca standeth in	13. degr. 30. min.
Item the bay of Lima standeth in	11. degr. 50. min.

Item Santos standeth in	9. degr.	20. min.
Item the bay of Cherrepe in	6. degr.	30. min.
Item the bay of Paica, in	5. degr.	4. min.
Item the yland of Puna, in	2. degr.	50. min.
Item Cape Sant Francisco to the North of the Equinoctiall, in	1. degr.	

A note of the height of certaine places to the Northwards of the
Equinoctiall line, on the coast of *New Spaine.*

Inprimis, Panama standeth in the latitude of	9. degrees,
Item the yland called Isla de Canoas, in	9. degr. 10. min.
Item Cape Blanco, in	10. degr. 10. min.
Item Rio Lexo, in	12. degr. 40. min.
* <i>De Guatulo.</i> Item *Aguatulco, in	15. degr. 50. min.
Item Acapulco, in	17. degr. 20. min.
Item Sant Iago, in	18. degr. 50. min.
Item Cape de los Corrientes, in	20. degr. 30. min.
Item the bay of Xalisco, in	21. degr. 30. min.
* <i>De tres Marias.</i> Item the ylands of the *Maries, in	21. degr. 20. min.
Item the yland of Saint Andrew, in	22. degr.
Item the ylands of Ciametlan, in	23. degr. 40. min.
Item, that the Cape of Santa Clara on the point of California is in	23. degrees.

A note of the heights of certaine places beginning from the ylands
of the *Ladrones* and passing by the *Philippinas*, the *Malucos*, *Iaua minor*,
Iaua maior, the Cape of *Bona Sperança*, and the yle of *Santa Helena*.

Inprimis, one of the ylands of the <i>Ladrones</i> called Guana standeth in	13. degr.	50. min.
Item Cape De Spirito Santo on the yle of Luçon standeth in	13. degr.	
Item the yland of Capul in	12. degr.	30. min.
Item that the yland of Seboyon standeth in	12. degr.	
* <i>De Panama.</i> Item that the Easterly end of the yland of *Pannay is in	11. degr.	
Item that the opening betweene the South head of Pannay and the South head of Isla de los Negros is in	10. degr.	10. min.
Item that the South-head of Isla de los Negros is in	9. degr.	10. min.
Item that the North-head of the yland Mindanao is in	7. degr.	50. min.
Item the South-head of Mindanao called Cape Cannel is in	6. degr.	40. min.
Item the Cape of Batochina is in		10. min.
*Item that 12. small ylands stand in	3. degr.	
Item the latitude of two other ylands is in	4. degr.	10. min.
Item the Westerly head of Iaua minor is toward the South in	8. degr.	30. min.
Item the Easterly head of Iaua maior is toward the South in	8. degr.	20. min.
Item Malaca standeth to the Northward in	2. degr.	
Item Cape Falso on the promontory of Africa, standeth in	34. degr.	20. min.
Item the Cape of Bona Sperança standeth in	34. degr.	40. min.
Item the yland of Santa Helena standeth in	15. degr.	40. min.
Item the Cape of S. Augustine standeth Southward in	8. degr.	40. min.

Soundings on the coast of *Barbarie* from Rio del Oro vnto
Cape Blanco.

Inprimis about 3. leagues off Rio del Oro you shall haue very faire shoul ding, fine white sand 18. fathoms, and so alongst vnto Cape Blanco two or three leagues off the shore you shall haue 18. and 20. fathoms. And when you come within one league of the Cape you shall haue twelue or thirteene fathoms, browne sand, very faire shoul ding. And if you will hall in with Cape Blanco, beware you come not within seven or eight fathoms of the Cape: for there lyeth a sand off the Cape.

Also about 7. or eight leagues off the Cape lyeth a long shoul next hand Southwest and by South off the Cape.

Soundings

Soundings on the coast of *Guiny*.

Item, Going unto Sierra Leona, hauing the cape Eastnortheast off you, 7 leagues off, you shall haue 22 fadome broken sand. And halling in you shall finde very faire shoalving. You may be bold to boztow on the Southermost shoze: but take heed of a rocke that lieth in the faire way a good birth off the shoze, but there is no feare of it: for it lieth aboue the water, and is distant two miles off the South shoze.

Item, You may be bolde to boztow hard by the rocke; for on the North side going in there lieth one long sand which runneth Southeast and Northwest, and lieth distant from the South shoze 2 leagues. And you shall anker in 14 or 15 fadoms hard by the shoze.

Also going unto the island called Illha Verde, the which island lieth 10 leagues to the Southward of Sierra Leona, the course is Southsouthwest, and Northnortheast: and you shall haue betweene them 9 or 10 fadome. And if you will anker at the sayd island, you shall haue 5 or 6 fadome hard by the shoze.

Also you must haue especiall care of a great current that setteth alongst the coast of Guiny to the Eastward.

Item, And if you be bound unto the Southwards, you must go Westsouthwest off, for feare of the shoald that is called Madera Bomba, the which shoald is to the Southwards of the island.

Soundings on the coast of *Brasil*.

Item, Unto the Northwards of Cape Frio, the cape bearing southwest off you, about 17 or 18 leagues off, you shall haue 45 fadoms streamp ground: and running Southwest, you shall finde 32 fadoms blacke sand: and then running Westsouthwest into a deepe bay, which lieth tenne leagues to the Northwards of the cape, you shall haue 22 fadoms oaze: that depth you shall haue all alongst, except you be farre into the bay; and then you shall haue 16 fadoms all oazie.

Item, To the Northwards of Cape Frio, about 6 or 7 leagues, you shall haue many small islands.

Item, To the Northwards of the cape 6 leagues, you shall haue two small islands one mile distant the one from the other, and they are distant from the maine five leagues. And betweene those islands and the cape you shall haue very many islands hard aboord the maine.

Item, The cape bearing West of you two leagues off, you shall haue 55 fadoms oaze. Also you shall know when you are shot about the cape unto the Southwards, by deeping of the water.

Also if you will go for S. Sebastian from the cape, you must go West and South, and Westsouthwest among. And the distance from the cape unto S. Sebastian is 50 leagues. And being shot into the bay any thing nere the shoze, you shall haue 24 fadoms all oazie.

And halling in for S. Sebastian, you shall know it by two little islands which be round: and those islands lie from the island of S. Sebastian next hand East and by South; and are distant the one from the other about foure leagues.

Also off the Southermost end of S. Sebastian, there lieth one island about 6 leagues off; which island is called the Alcatrazza, and there lie foure little islands about it. Also you may know it by the trending of the land unto the Southwards.

Item, If you will go in at the Northermost end of S. Sebastian, you must take heed of a sand that lieth on the Northeast part of the island: but you may be bolde to boztow on the island: for the sand lieth off the maine side. Also you may anker on the Northermost part of the island in tenne fadoms; and the maine is distant from you where you shall ride two leagues off.

Item, If you will come in at the Southermost end of the island of S. Sebastian, your course from the Alcatrazza is Southwest & Northeast, and their distance is 6 leagues the one from the other.

Item, Unto the Southwards of the riuer Plaze, being in the latitude of 45 degrees and 60 leagues off the maine, you shall haue shoalving in 60 fadoms or 65 fadoms oazie sand: and then halling in for the shoze Westsouthwest 16 leagues, you shall haue 50 fadoms oaze, and you shall haue faire shoalving all along.

Item, In the latitude of 47; you shall see about one mile in length, not passing one league off the shoze, a ledge of broken ground, but no danger. Also you shall haue very faire shoalving all along the coast; and the land lying South and North vntill you come unto port Desire, which standeth in 48 degrees.

Item, If you will go into port Desire, on the North side there lieth one ledge of rocks about a league distant from the shoze. Also on the North side at the mouth of the harborow, there lie a couple of rocks, which are at halfe flood vnder water: but be bolde to boztow on the Southermost

most shoze; for there is no danger: and you shall haue no lesse then 6 fadoms water at a low water, the harborow lying East and West. Also you may know the harborow by one litle island that lieth Southeast off the mouth of the harborow, and it is distant 4 leagues. Furthermore you may know the harborow by an high rocke that standeth on the South side; and this rocke is very much like a watch tower. Also if you be any thing in, you may anker in 5 fadoms at a low water.

Item, It floweth there South and North, and higheth at spring tides 3 fadoms and an halfe water; and in the offing the flood setteth to the Northward.

Item, In the latitude of 48 degrees 50 minuts you shall haue 44 fadoms blacke sand about 5 leagues off: and about 3 leagues off you shall haue 25 fadoms, and great shingle stones.

Item, in the latitude of 49 degrees $\frac{1}{2}$ you shall haue sounding in 38 fadoms oazie sand.

Item, In the latitude of 51 degrees 10 minuts you shall haue soundings 4 leagues from the shoze in 44 fadoms small blacke stones.

Soundings within the entrance of the Streights.

Item, About 2 leagues from the Northmost shoze you shall haue 38 fadoms blacke sand, and all along you shall haue deepe water, not lesse then 18 or 20 fadoms in the faire way.

Soundings on the coast of *Chili* in the South sea.

Item, In the latitude of 36 degrees you shall haue soundings in 12 fadoms, 2 miles from the land, browne sand.

Item, In the latitude of 35 degrees, you shall haue soundings one league off from the land in 10 fadoms white sand.

Soundings on the coast of *New Spaine* in the South sea.

Item, In the latitude of 14 degrees to the North of the line, you shall haue soundings 4 leagues from the land in 30 fadoms, browne sand.

Item, From the latitude of 14 degrees vnto the latitude of 15 degrees, you shall haue faire shoalving 3 leagues from the land.

Soundings on the coast of *Africa* vnto the Eastward of the cape of *Buena Esperança* 40 leagues.

Item, To the Eastwards of the cape of Buena Esperança 40 leagues, in the latitude of 34 degrees and 10 minuts, 8 leagues from the land, you shall haue 65 fadome, and browne sand.

A note of the lying of the land vnto the Southward of *Port Desire*.

IN primis, Seales bay standeth vnto the Southwards of Port Desire 12 leagues Southsouthwest. Furthermore, vnto the Southwards of Seales bay 3 leagues, you shall haue very low land. Also more vnto the Southwards of Seales bay 7 leagues, in the heighth of 48 degrees 40 minuts, you shall see a rocke 5 leagues off the shoze, the land lying Southwest and by South.

Item, In the latitude of 49 degrees $\frac{1}{2}$, you shall see a small flat Island, about a league and an halfe off the shoze, the land lying Southwest and by South. Furthermore, from the latitude of 49 degrees $\frac{1}{2}$ vnto the latitude of 50 degrees, the land lieth South and by West, and is high land.

Item, From the latitude of 50 degrees vnto the latitude of 50 degrees 40 minuts, the land lieth Southwest and by South. Furthermore, from the latitude of 50 degrees 40 minuts vnto the latitude of 52 degrees 17 minuts, the land lieth South and by West, North and by East.

Item, In the sayd latitude of 52 degrees 17 minuts, there goeth in an harborow, which is to be knowen by a long beache that lieth on the South side of the harborow. Moreover, the sayd harborow standeth 12 leagues vnto the Northwards of Cape Ioy. Furthermore, from the latitude of 52 degrees 17 minuts vnto the latitude of 52 degrees 40 minuts (in which heighth standeth Cape Ioy) the land lieth Southsoutheast, and Northnorthwest.

Item, Comming from the Northwards, you shall see before you come to Cape Ioy, a very long beach, about the length of 8 leagues, being 5 leagues short of the cape vnto the Northwards. Also vnto the Southwards of the cape, you shall see another beach, about a league long, adioyning hard vnder the cape; about which beach is the entrance of the Streights of Magellan, the which Straights are in breadth five leagues ouer, from the cape vnto the South shoze, lying South and by East.

Item,

Item, From Cape Ioy, being the entrance of the streight of Magellan, unto the first narrow passage of the sayd streight; the course is West and by North, and East and by South, and are distant 18 leagues; the land being in breadth from the one side to the other one league.

Item, From the first narrow unto the second narrow passage, the course is West & by South, and East and by North; and the distance is 12 leagues: and in breadth the one side is from the other about two leagues over.

Item, From the second narrow unto the islands that be called Elizabeth, Bartholomew, and Penguin islands, the distance is 5 leagues, and the course is Southwest and Northeast: the islands being distant a league and an halfe the one from the other.

Item, From the sayd islands unto Port Famine is 16 leagues: the course is Southsouthwest, and Northnortheast. Moreover, from Port Famine unto Cape Froward, the course is South and by West, and North and by East: and they are distant 8 leagues asunder.

Item, From Cape Froward unto S. Ieromes river, is 16 leagues: the course is Northwest and Southeast. Also from S. Ieromes river unto the bittermost land on the South side, the which is called Cabo Deseado, the course is Northwest & somewhat to the Northward, and are distant 30 leagues. So the whole length of the streight of Magellan is 105 leagues.

A note of the lying of the lands in the South sea.

IN primis, There stand in the latitude of 52 degrees and 50 minutes, three or foure islands, about 8 leagues from Cabo Deseado: the course is Northnorthwest, and Southsoutheast. And those islands stand in the mouth of the streight of Magellan, at the going into the South sea.

Item, From the latitude of 52 degrees 50 minutes, unto the latitude of 51 degrees, the land lieth Northnortheast, and Southsouthwest.

Item, From the latitude of 50 degrees unto the latitude of 38 degrees and 30 minutes, the land lieth Northeast and by North, Southwest and by South.

Item, From the latitude of 38 degrees 30 minutes unto the latitude of 37 degrees 14 minutes, the land lieth North and South.

Item, From the island of S. Marie, being in the latitude of 37 degrees 14 min. unto the height of 36 degrees 14 minutes, in which height standeth The bay of Conception, the course is North-east and Southwest, and the distance 12 leagues.

Item, From the latitude of 36 degrees 40 minutes unto the latitude of 35 degrees 20 minutes, the land lieth Northeast and by North, Southwest and by South.

Item, From the latitude of 35 degrees 20 minutes unto the latitude of 33 degrees 30 minutes, the land lieth Northnortheast, and Southsouthwest.

Item, In the latitude of 34 degrees you shall see about five miles off from the shore a banke of sand, on the which you shall haue but shoald water.

Item, From the latitude of 33 degrees 20 minutes unto the latitude of 29 degrees 20 minutes, the land lieth Northnortheast, and Southsouthwest.

Item, From the latitude of 29 degrees 20 minutes unto the latitude of 27 degrees 40 minutes, the land lieth Northnortheast, and Southsouthwest.

Item, In the latitude of 29 degrees 20 minutes, there lie two islands distant 4 leagues asunder, and about one league from the maine.

Item, From the latitude of 27 degrees 40 minutes unto the latitude of 23 degrees 30 minutes, the land lieth North and by East, South and by West.

Item, From the latitude of 25 degrees unto the latitude of 23 degrees and 30 minutes, the land is very high.

Item, From the latitude of 23 degrees unto the latitude of 22 degrees, the land lieth North-northeast, and Southsouthwest.

Item, From the latitude of 22 degrees unto the latitude of 18 degrees and 30 minutes, the land lieth North and by East, South and by West.

Item, From the latitude of 18 degrees 30 minutes, unto the latitude of 18 degrees, the land lieth Northwest and by West, Southeast and by East.

Item, From the latitude of 18 degrees unto the latitude of 13 degrees 30 minutes, the land lieth Northwest and Southeast: in which height there lie two or three islands, which islands lie off a place where are two townes called Paraca, and Pisca.

Item, From the latitude of 13 degrees 30 minutes, unto the latitude of 11 degrees 50 minutes, the land lieth Northnorthwest, and Southsoutheast.

Item, From the latitude of 6 degrees, unto the latitude of 5 degrees, the land lieth North-west and by West, Southeast and by East.

Item, From the latitude of 5 degrees unto the latitude of 4 degrees, the land lieth North-west and Southeast: in which height of 4 degrees standeth Cape Blanco.

Item, From the latitude of 4 degrees unto the latitude of 2 degrees 50 minutes (in which latitude of 2 degrees 50 minutes standeth the island of Puna) the course is Northeast and Southwest.

A note of the distance betweene certaine places on the coasts of Chili and Peru.

Leagues 25.

IN primis, From the island of Mocha unto the island of S. Mary, the course is North and South, and the distance is 25 leagues.

Leagues 12.

Item, From the island of S. Mary unto the bay of Conception, the course is Northeast and Southwest, and the distance is 12 leagues.

Leagues 80.

Item, From the bay of Conception unto the port of Valparaiso, the course is North-northeast and South-southwest, and the distance is 80 leagues.

Leagues 7.

Item, From the port of Valparaiso unto the bay of Quintero, the course is Northeast and by North, and Southwest and South, and the distance is 7 leagues. In which bay of Quintero there lieth one small island.

Leagues 72.

Item, From the bay of Quintero unto the bay of Coquimbo, the course is North-northeast, and South-southwest, and the distance is 72 leagues: in which height stand two islands.

Leagues 55.

Item, From the bay of Coquimbo unto the bay of Copiapo, the course is North-northeast and South-southwest, and the distance is 55 leagues: in which height standeth one island.

Leagues 70.

Item, From the bay of Copiapo unto the bay of Morro moreno, the course is North-northeast and South-southwest, and the distance is 70 leagues.

Leagues 90.

Item, From the bay of Morro moreno, unto the bay of Arica, the course is North & by East, South & by West, and the distance is 90 leagues: in which bay of Arica standeth one small island.

Leagues 120.

Item, From the bay of Arica unto the bay of Parraca, the course is North-west and Southeast, and the distance is 120 leagues: in which bay of Parraca stand three or foure islands.

Leagues 35.

Item, From the bay of Parraca unto the bay of Lima, the course is North-west and by North, Southeast and by South, and the distance is 35 leagues: in the bay of Lima is one island.

Leagues 90.

Item, From the bay of Lima unto the bay of Cherrepe, the course is North & by West, South and by East, and the distance is 90 leagues.

Leagues 45.

Item, From the bay of Cherrepe unto the bay of Paica it is 45 leagues, the course is 20 leagues West-northwest unto two islands that be called The islands of Lobos, and from thence unto the bay of Paica it is 25 leagues, the course is North and by East.

Leagues 25.

Item, From Paica unto Cape Blanco, the course is North and by West, South and by East, and the distance is 25 leagues.

Leagues 25.

Item, From Cape Blanco unto the island of Puna, the course is East-northeast and West-southwest, and the distance is 25 leagues: and you shall see one island that is called Santa Clara, which standeth 10 leagues to the Southward of Puna.

Leagues in all are 751.

A note of certaine places vnto the Northwards of the Line.

Leagues 60.

IN primis, From Cape Blanco unto Cape S. Laurence, the course is North & by East, South and by West, and the distance 60 leagues.

Leagues 40.

Item, From Cape S. Lorenzo unto Cape S. Francisco, the course is North & by East, South and by West, and the distance is 40 leagues.

Leagues 160.

Item, From Cape S. Francisco unto the cape that is called Cape Blanco, which cape is on the coast of New Spaine, the course is North-northeast and South-southwest, and the distance is 160 leagues: and you shall haue a great current that setteth out of the bay of Panama; and the sayd current setteth South out.

Leagues 8.

Item, From Cape Blanco unto the Port de Veles, the course is Northeast and Southwest, and the distance 8 leagues.

Leagues 17.

Item, From the Port de Veles unto the port of S. Iohn, the course is North-west and South-east, and the distance is 17 leagues.

Item,

Item, From the port of S. Iohn vnto Rio Lexo, the course is North-west, and Southeast, and the distance is 40 leagues.

Leagues 40

Item, From Rio Lexo vnto the gulfe of Fonsecco, the course is West-north-west, and East-southeast, and they are distant 14 leagues.

Leagues 14

Item, In the mouth of Rio Lexo there lieth one island, and you must goe in on the North-west part of that island; on the which island you may be bolde for to borrow on: and you must goe from that island Southeast by.

Item, That in the gulfe of Fonsecco you shall haue lying ten islands, whereof thre be peopled with Indians, whereon you may haue water, wood, and salt.

Item, On the West side of the gulfe of Fonsecco there is one towne of Indians, which is called Mapal, in which towne there is great store of beemes.

Item, From the riuer Lexo vnto the bay of Sonsonate, the course is East and West, and the distance is 60 leagues.

Leagues 60

Item, From the bay of Sonsonate vnto the port of Aguatulco, the course is North-west and by West, Southeast and by East, and the distance 160 leagues.

Leagues 160

Item, From the bay of Coppeleto vnto the port of Aguatulco it is 2 leagues, the course is West and by North, East and by South.

Leagues 2

Item, From the port of Aguatulco vnto the port of Angeles, the course is East and West, and they are distant 12 leagues.

Leagues 12

Item, From the port of Aguatulco vnto the port of Acapulco, the course is West & by North, East and by South, and the distance is 78 leagues.

Leagues 78

Item, From the port of Acapulco vnto the port of S. Iago, the course is West and by North, East and by South, and the distance is 80 leagues.

Leagues 80

Item, From the port of S. Iago vnto the port of Natiuidad, the course is East and West, and the distance is 7 leagues.

Leagues 7

Item, From the port of Natiuidad vnto port of the islands of Chiametla, the course is East and West, and the distance is 10 leagues.

Leagues 10

Item, From the islands of Chiametla vnto Cape de los Corrientes, the course is North-west and by West, Southeast and by East, and the distance is 30 leagues.

Leagues 30

Item, From the Cape de los Corrientes vnto the bay of Xalisco, the course is North-north-east, and South-south-west, and the distance is 18 leagues.

Leagues 18

Item, From the bay of Xalisco vnto the port of Chiametlan, the course is North-north-east and South-south-west, and the distance is 30 leagues.

Leagues 30

Item, From the Cape de los Corrientes vnto the islands called Las tres Marias, the course is North-west and Southeast, and the distance is 20 leagues.

Leagues 20

Item, From the Cape de los Corrientes vnto the cape of Santa Clara on the point of California, the course is West-north-west, and East-southeast, and the distance is 108 leagues.

Leagues 108

A note from the coast of America vnto the Westwards.

Item, From the cape of Santa Clara vnto the islands of The Ladrones, the course is West and by South, East and by North, and the distance betweene them is 1850 leagues.

Leagues 1850

Item, That the Southernmost island of the Ladrones standeth in the latitude of 12 degrees and 10 minuts, and from thence vnto the Northernmost island, the course is North-north-east & South-south-west, and the distance betweene them is 200 leagues: and the said Northernmost island standeth in 21 degrees 10 minuts.

Item, From one of the islands of the Ladrones, which standeth in the latitude of 13 degrees and 50 minuts, which island is called * Guahaima, vnto the Cape de Spirito Santo, which cape is vpon one of the islands of the Philippinas, the course is West and to the Southwards, and the distance is 320 leagues.

Di. Guana.

Leagues 320

Item, From the cape of Spirito Santo vnto the mouth of the entrance of the Streights of the Philippinas, the course is West and by North, East and by South, and the distance is 15 leagues.

Leagues 15

Item, From the mouth of the Streights vnto the island of Capul, the course is South-west and by West 6 leagues.

Leagues 6

Item, From the island of Capul vnto the North head of the island called Masbat, the course is North-west and Southeast, and the distance betweene them is 15 leagues.

Leagues 15

Item, From the North head of the island called Masbat vnto the island called Seboion, the course is West-south-west and East-north-east, and the distance betweene them is 15 leagues.

Leagues 15

Leagues in all 2414

A note

A note of our course kept from the island *Seboion* vnto the Southwards.

- Leagues 22.** Item, From the island of *Seboion* vnto the East end of the island called *Pannay*, the course is Southeast and by South, Northwest and by West, and the distance is 22 leagues.
- Item, That off the Easter end of the island of *Pannay* there lie certeine small islands, vnto the number of 12 or more, and you shall haue shoald water among them.
- Leagues 18.** Item, From the Easter end of *Pannay* vnto a bay that is called *The bay of Lago grande*, on the same island, the course is Westsouthwest, and Eastnortheast, and the distance is 18 leagues.
- Leagues 6.** Item, From the bay of *Lago grande* vnto the island that is called *Ysla de los Negros*, is the distance of 6 leagues Southeast and Northwest.
- Item, From the bay of *Lago grande* vnto three small islands that stand in the latitude of 10 degrees, the course is South and by West 12 leagues. Furthermore, from those three islands vnto the Westernmost end of *Ysla de los Negros*, the course is Southwest and Northeast 10 leagues, where we were cleere of the islands of the *Philippinas*.
- Leagues 30.** Item, From the South end of *Ysla de los Negros* vnto the North head of the island called *Mindanao*, the course is South and North, and the distance is 30 leagues.
- Leagues 26.** Item, From the North end of *Mindanao* vnto the South head of the sayd island, which is called *Cape Cannal*, the course is South and by West, North and by East, and the distance is 26 leagues.
- Leagues 12.** Item, From the cape of *Cannal* betweene the South and the Westsouthwest about 10 or 12 leagues off you shall haue great store of small islands, about the number of 24 or more.
- Leagues 100.** Item, From the cape of *Cannal* vnto the cape of *Barochina*, the course is Southsouthwest, and Northnortheast, and the distance is 100 leagues, and betweene them setteth a great current vnto the Eastward.
- Leagues 220.** Item, From the cape of *Barochina* vnto the West head of *Iaua minor*, the course is Southwest and by South, Northeast and by North, and the distance betweene them is 220 leagues.
- Leagues 18.** Item, From the West end of *Iaua minor* vnto the East end of *Iaua maior*, the course is West and by North, and East & by South, and the distance betweene them is 18 leagues: in the which course there lieth one island betweene them, which island is in length 14 leagues.
- Leagues 1800.** Item, From the East end of *Iaua maior* vnto the cape of *Buena Esperança*, the course is West and by South, and Westsouthwest, and the distance betweene them is 1800 leagues.
- Leagues 30.** Item, That *Cape Falso* standeth 30 leagues to the Eastward of *Cape de Buena Esperança*, & off the sayd *Cape Falso* you shall haue shoalading 20 leagues off in 80 or 90 fadoms, & the course is from *Cape Falso* vnto the cape of *Buena Esperança* Westnorthwest and Eastsoutheast.
- Leagues in all are 2292.**

A note of the distance and course from the cape of *Buena Esperança* vnto the Northwards.

- Leagues 600.** Item, From the cape of *Buena Esperança* vnto the island of *Santa Helena*, the course is North-west, and Northwest and by West, and the distance betweene them is 600 leagues.
- Leagues 1200.** Item, From the island of *Santa Helena* vnto the island of *Flores*, the course betweene them is Northnorthwest, and Northwest and by North, and the distance betweene them is 1200 leagues.
- Item, From the island of *Flores* vnto the lands end of *England*, the course is betweene the Eastnortheast, and the Northeast and by East, and the distance betweene them is foure hundred and fifty leagues.

A note of the variation of our Compasse.

- I**N primis, The variation of our compasse on the coast of *New Spaine* in the South sea in the latitude of 12 degrees, was one point to the Eastwards.
- Item, the variation of our compasse betweene the cape of *California* and the islands of the *Philippinas*, was one point and an halfe vnto the Eastward, that was, that the North did stand North and by East, and halfe a point vnto the East.
- Item, The variation of our compasse betweene the islands of *Maluco* and the cape of *Buena Esperança*, was two points and an halfe at the most to the Westward, that was, that the North-northeast was our North.

A note

A note of our time spent in sailing betweene certeine places out
of England, 1586.

IN primis, We were sailing betweene England and the coast of Guinea from the 21 day of July unto the 26 day of August unto the haven called Sierra leona, where we watered and stayed untill the 6 day of September.

Of our abode
tenne dayes,
where we
watered.

Item, We departed from the coast of Guinea for the coast of Brasil the 10 day of September, and wee had sight of the coast of Brasil the 26 day of October, being five leagues to the Northwards of Cape Frio: and from thence wee were sailing unto the island of S. Sebastian untill the 31 and last day of October, where we watered and set by our pinnesse: and we anchored on the Northwest part of the island in tenne fadoms, and stayed there untill the 23 day of November.

Of our abode
four & twenty
dayes, where
we watered.

Item, The 23 day of November we departed from the island of Sane Sebastian, keeping our course South and by West unto the port that is called Port Desire, where we arrived the 17 day of December; in which port we graued our shippe: and we stayed there untill the 28 day of December, where we anchored in 5 fadoms.

Of our abode
eleven dayes,
where we gra-
ued our ships.

Item, The eight and twentieth day of December wee departed from the Port of Desire toward the Streight of Magellan, where wee arrived the third day of January: and wee remained in the Streights untill the foure and twentieth day of February; where we watered in many places on the South side, hauing the winde all that while betweene the Westsouthwest and the Northwest.

Of our abode
two & fiftie
dayes, where
we watered.

Item, We departed out of the Streights the 24 day of February toward the island of Mocha, which island we had sight of the 14 day of March.

Item, The 14 day of March at night we anchored in the bay of Marroccos; where we rode in 9 fadoms water.

Item, The 15 day of March we anchored in the island of Saint Marie, on the North part of the island in eight fadoms water, blacke sand, where we stayed foure dayes.

Of our abode
four dayes.

Item, The 19 day of March we departed from the island of Saint Marie, and the same day we anchored in the bay of Conception, where we stayed untill the next day: and there we rode in ten fadoms water, shingle stones.

Item, The 20 day of March we departed from the bay of Conception, and the thirtieth day of March we arrived in the bay of Quintero, where we watered: and there the first day of April we had twelue of our men slaine, being on land for water: and we stayed there five dayes: and we anchored in 7 fadoms water, white sand.

Of our abode
6 dayes, where
we watered.

Item, We departed from the bay of Quintero the 5 day of April, and we arrived at the bay of Arica the 24 day of April, and we anchored in 7 fadoms water.

Of our abode
three dayes.

Item, The 27 day of April we departed from the bay of Arica, and the third day of May we arrived in the bay of Pisca, and we anchored in 4 fadoms water in oaze.

Of our abode
two dayes.

Item, The 5 day of May we departed from the bay of Pisca, and the 12 day we anchored in the bay of Cherrepe, where we anchored in 7 fadoms water, in white sand.

Of our abode
five dayes.

Item, The 18 day of May we departed from the bay of Cherrepe, and the 20 day of May we arrived in the bay of Payta, where we anchored in 6 fadoms water.

Of our abode
one day.

Item, The 20 day of May we departed from the bay of Payta, and the 26 day of May we anchored at the island of Puna, and we anchored in 5 fadoms.

Item, From the island of Puna we departed the fourth day of June unto Rio dulce in the main, where we watered, and we anchored in 10 fadoms water, browne sand.

Of our abode
9 daies, where
we watered.

Item, The 12 day of June we departed from the place where we watered, being bound for the coast of New Spaine, and the 29 day of July wee arrived in the port of Aguatulco, where wee watered, and anchored in 6 fadoms water.

Of our abode
8 dayes, where
we watered.

Item, The 3 day of August we departed from the port of Aguatulco, and the 26 day of August we arrived at the port of S. Iago, where wee watered, and stayed there untill the second day of September, and anchored in 6 fadoms.

Of our abode
7 dayes, where
we watered.

Item, The 2 of September we departed from the port of S. Iago, and the 3 day of September we put into a port one league unto the Westwards of Natiuidad, where we anchored in 8 fadoms water.

Of our abode
one day.

Item, The 4 day of September wee departed from the port of Natiuidad, and the 7 day of September we put into the bay of Xalisco, where we anchored in 9 fadoms water, and the 10 day

Of our abode
three dayes.

of September we departed from the bay of Xalisco, and the 12 day of September we ankered at the island of S. Andrew, where we ankered in 17 fadoms water.

Of our abode
five dayes.

Item, The 17 day of September we departed from the island of S. Andrew, and the 24 day of September we put into the bay of Chiametlan, where we ankered in 8 fadoms water, and the 26 of September we departed from the bay of Chiametlan, and the 28 day wee ankered vnder the islands of Chiametlan in 4 fadoms.

Of our abode
2 dayes, where
we watered.

Item, The 9 day of October wee departed from the islands of Chiametlan, and crossing ouer the mouth of Mar vermejo, the 14 day of October we had sight of the cape of California.

Of our abode
twelue dayes,
where we wa-
tered.

Item, The 15 day of October we lay off the cape of S. Lucas, and the 4 day of Nouember we tooke the great and rich ship called Santa Anna, comming from the Philippinas: and the 5 day of Nouember we put into the port of S. Lucas, where we put all the people on shore, and burnt the Santa Anna: and we ankered in 12 fadoms water.

Of our abode
14 dayes,
where we wa-
tered.

Item, The 19 day of Nouember we departed from the port of S. Lucas, and the 3 day of Ianuary wee had sight of one of the islands of the Ladrones, which island is called The island of Iwana, standing in the latitude of 13 degrees and 50 minuts.

*Guaia.

Item, The 3 day of Ianuary we departed from the island of Iwana, and the 14 day of Ianuary we had sight of the cape of Spirito santo, and the same day we put into the Streights of the Philippinas: and the 15 day of Ianuary we ankered vnder the island of Capul, on the which island we watered and wooded.

Of our abode
nine dayes.

Item, The 24 of Ianuary we departed from the island of Capul, and the 28 day of Ianuary we arrived in the bay of Lago grande, which bay is in the island of Pannay, where there were Spaniards building of a new ship.

Spaniards
building of a
new ship in
the Philippi-
nas.

Item, The 29 of Ianuary wee departed from the bay of Lago grande, and the same day at night wee were cleere from the islands of the Philippinas, Haying our course towards the islands of Maluco.

Dayes 30.

Item, From the 29 day of Ianuary vnto the first day of March, we were nauigating between the West end of the island of Pannay and the West end of the island of Iaua minor.

Of our abode
eleuen dayes,
where we wa-
tered.

Item, The first day of March wee passed the Streights at the West head of the island of Iaua minor, and the 5 day of March we ankered in a bay at the West end of Iaua maior, where wee watered, and had great store of victuals from the towne of Polambo.

Iaua maior.
Dayes 56.
The cape of
Buena Espe-
rança.

Item, The 16 day of March wee departed from the island of Iaua maior, and the 11 day of May we had sight of the land 40 leagues vnto the Eastwards of the cape of Buena Esperança, the land being low land.

A note from the cape of Buena Esperança vnto the Northwards.

Of our abode
twelue dayes,
where we wa-
tered.

Item, The 21 day of May wee departed from the cape of Buena Esperança, and the 8 day of June we ankered on the North-west part of the island of Santa Helena, where we watered, and made our abode 12 dayes.

Dayes 14.

Item, The 20 day of June at night wee departed from the island of Santa Helena, and the 4 day of July we passed vnder the Equinoctiall line.

The space of
our nauigati-
on betweene
those lands
was threescore
& five dayes.

Item, The 20 day of June at night wee departed from the island of Santa Helena, and the 25 day of August in the morning wee had sight of the islands of Flores and Coruo in the latitude of 40 degrees.

Item, The 9 day of September 1588 wee arrived, after a long and terrible tempest, in the Narrow seas, in the haven of Plimmouth in safetie, by the gracious and most mercifull protection of the Almighty, to whom therefore be rendered immortall praise and thanksgiuing now and for ever. Amen.

A note of our ankering in those places where we arrived after our departure from England 1586.

Fadoms 10.

IN primis, Wee ankered in the harborow of Sierra leona in 10 fadoms water: and a North-west winde in that robe is the woozst that can blow.

Fadoms 6.

Item, You may anker vnder the island that is called Ilha Verde in 6 fadoms water: and the winde being at the West-north-west is the woozst winde that can blow.

Fadoms 10.

Item, You may anker vnder the island of S. Sebastian on the North-west part in 10 fadoms: and a West-south-west winde is the woozst winde.

Item,

Item, You may anker in Port Desire in 5 fadoms water, and a West and by South winde is the worst.

Item, You may anker vnder Cape Ioy without the mouth of the Streights of Magellan in 7 fadoms water.

Item, You may anker within the Straights of Magellan, untill you come vnto the first narrowing in 25 or 30 fadoms water, in the mid way of the Streights.

Item, You may anker in the second narrow of the Streights in 16 fadoms water.

Item, You may anker vnder Penguin island on which side you please in 6 or 7 fadoms water.

Item, You may anker in Port Famine in 5 or 6 fadoms water, and a Southsoutheast winde is the worst.

Item, You may anker in Muskecoue, which coue is on the South side, and is 7 leagues to the Southwards of Cape Froward, and you shall ride in 12 fadoms.

Item, You may anker in Elizabeth bay, which bay is on the North side of the Streights in 8 fadoms water.

Item, From Elizabeth bay vnto Cabo deleado, you may anker on both sides of the Streights in many places.

A note of our ankering after we were entred into the South sea.

IN primis, You may anker in the bay of Mocha in 7 or 8 fadoms water, and there a North-east winde is the worst.

Item, You may anker on the North side of S. Mary island in nine fadoms water: and there a Northnorthwest winde is the worst winde.

Item, You may anker in the bay of Concepcion vnder one small island in 9 fadoms water, and a Northnorthwest winde is the worst winde in that bay.

Item, You may anker in the bay of Quintero in 7 fadoms water, and a Northnorthwest winde is the worst winde.

Item, You may anker in the bay of Arica in 6 fadoms, and in that bay a Westnorthwest winde is the worst winde.

Item, You may anker in the bay of Pisca and Paraca in five fadoms: and in that bay a North-northwest winde is the worst.

Item, You may anker in the bay of Cherepe in 8 fadoms, and there from the North-west vnto the Southeast it is open.

Item, You may anker in the bay of Paica in 7 fadoms water: and there a Northnorth-east winde is the worst winde.

Item, You may anker on the North-east part of the island of Puna in 4 fadoms: and a North-east winde is the worst.

Item, You may anker at Rio dulce, where wee watered, vnto the Eastwards of the island of Puna in 10 fadoms.

A note of what depths we ankered in on the coast of New Spaine.

ITem, You may anker in the port of Aguatalco in five fadoms water: and a Southsouthwest winde is the worst.

Item, You may anker in the port of S. Iago in 6 fadoms water: and a Westsouthwest winde is the worst.

Item, You may anker in the port of Natiuidad in 8 fadoms water: and a Southeast winde is the worst.

Item, You may anker in the bay of Xalisco in 9 fadoms water: and a Westsouthwest winde is the worst.

Item, You may anker on the North-west part of the island of S. Andrew in 17 fadoms water.

Item, You may anker vnder the island of Chiametlan in 4 fadoms water: and a Southeast winde is the worst.

Item, You may anker in the port of S. Lucas on the Cape of California in 12 fadoms water: and a Southeast winde is the worst.

A note of what depths we ankered in, among the islands of the Philippines.

ITem, You may anker on the Southwest part of the island of Capul in 6 fadoms water: and a Westsouthwest winde is the worst.

Item, You may anker all along the South part of the island of Panna in shoald water, in the depth of 10 or 12 fadoms.

Item, You may anker in the bay of Lago grande in seven fadoms water, which bay is on the South side of the island of Panna.

Item, You may anker at the East end of Iaua maior in 16 fadoms water, and an East south-east winde is the woozst.

Item, You may anker on the North part of the island of Santa Helena in 12 fadoms water.

A note of our finding of the winds for the most part of our voyage 1586.

IN primis, From the 21 day of July vnto the 19 day of August we found the winde at Northnortheast, being in the latitude of 7 degrees.

Item, From the 19 day of August vnto the 28 day of September, wee found the wind for the most part betweene the West and the Southwest, being in 24 degrees.

Item, From the 28 day of September vnto the 30 day of October, we found the windes betweene the Northeast and the Eastnortheast.

Item, From the 30 of Nouember, from the island of S. Sebastian, vnto the 30 day of Nouember, we found the winde betweene the Southeast and the Southsoutheast, being in 36 degrees.

Item, From the 30 day of Nouember vnto the 6 day of December, we found the windes to be betweene the West and the Southwest.

Item, From the 6 day of December vnto the first day of January, we found the winds for the most part betweene the North and the Northeast, being then in the latitude of 52 degrees.

Item, From the first day of January vnto the 23 day of February, we found the windes to be betweene the Northwest and the Westsouthwest, wee being all that time in the Streighes of Magellan.

Item, From the 23 day of February vnto the first day of March, we found the winds to be betweene the South and the Southeast, being then in the South sea in the latitude of 48 degrees.

Item, From the first day of March vnto the 7 day of March, we found the winde to be at the North and the Northnortheast in the latitude of 43 degrees.

Item, From the 7 day of March vnto the 14 day of March, wee found the windes to be betweene the South and the Southwest, in the latitude of 37 degrees.

Item, From the 14 day of March vnto the 28 day of May, we found the winds to be betweene the South and the Southwest, in the latitude of 3 degrees to the South of the Line.

A note of the varying of our windes to the North of the Equinoctiall line on the coast of New Spaine.

Item, From the 28 day of May vnto the 5 day of July, we found the winds for the most part to be betweene the Southsoutheast, and the Southsouthwest, being in the latitude of 10 degrees to the Northward of the Line on the coast of New Spaine.

Item, From the 5 day of July vnto the 14 day of October, we found the windes for the most part to be at the Eastnortheast in the latitude of 23 degrees Northward, and almost vnder the tropicke of Cancer.

A note of the windes which we found betweene the coast of New Spaine and Islands of the Philippinas on the coast of Asia.

I^N the yeere of our Lord 1587 we departed from the cape of Santa Clara on the coast of California the 19 day of Nouember, and we found the winds to be betweene the East and the Eastnortheast, vntill the 29 day of January; departing then from the islands of the Philippinas, being in the latitude of 9 degrees.

Item, From the 29 day of January vnto the 19 day of March, wee found the windes for the most part betweene the Northnortheast and the Northwest, being then among the Islands of Maluco, in the latitude of 9 degrees.

Item, From the 19 day of March vnto the 20 day of May, wee found the windes for the most part betweene the South and the Eastsoutheast, being then betweene the Islands of Maluco, and the cape of Buena Esperança, in the latitude of 34 degrees to the South of the Line.

Item, From the 20 day of May vnto the 11 day of July, we found the winds for the most part betweene

betweene the South and the Southeast, being then betweene the cape of Buena Esperança, and and 15 degrees vnto the Southward of the line.

Item, from the 11 day of July vnto the 18 day of August, we found the winds for the most part betweene the Northeast and Eastnortheast, being then betweene the latitude of 15 degrees to the Southward of the line, and 38 degrees vnto the Northwards of the line.

A letter of M. Thomas Candish to the right honourable the Lord
Hunsdon, Lord Chamberlaine, one of her Maiesties most honourable
Priny Councell, touching the successe of his voyage about the world.

Right honourable, as your fauour heretofore hath bene most greatly extended to-
wards me, so I humbly desire a continuance thereof: and though there be no
meanes in me to deserue the same, yet the bettermost of my seruices shall not be
wanting, whensoever it shall please your honour to dispose thereof. I am hum-
bly to desire your honour to make known vnto her Maiesty the desire I haue
had to do her Maiesty seruice in the performance of this voyage. And as it hath
pleased God to giue her the victorie ouer part of her enemies, so I trust yer long to see her ouer-
throw them all. For the places of their wealth, whereby they haue mainteined and made their
warres, are now perfectly discovered: and if it please her Maiesty, with a very small power she
may take the spoile of them all. It hath pleased the Almighty to suffer mee to circumpasse the
whole globe of the world, entring in at the Streight of Magellan, and returning by the cape de
Buena Esperança. In which voyage I haue either discovered or brought certeine intelligence
of all the rich places of the world that euer were known or discovered by any Christian. I nau-
gated alongst the coast of Chili, Peru, and Nueua Espanna, where I made great spoiles: I burnt
and sunke 19 sailes of ships small and great. All the villages and townes that euer I landed at, I
burnt and spoiled: and had I not bene discouered vpon the coast, I had taken great quantitie of
treasure. The matter of most profit vnto me was a great ship of the kings which I tooke at Ca-
lifornia, which ship came from the Phillipinas, being one of the richest of merchandize that euer
passed those seas, as the kings register and merchants accounts did shew; for it did amount in va-
lue to * in Mexico to be solde. Which goods (for that my ships were not able to containe
the least part of them) I was inforced to set on fire. From the cape of California, being the utter-
most part of all Nueua Espanna, I nauigated to the Islands of the Phillipinas hard vpon the
coast of China; of which countrey I haue brought such intelligence as hath not bene heard of in
these parts. The stateliness and riches of which countrey I feare to make report of, least I
should not be credited: for if I had not known sufficiently the incomparable wealth of that
countrey, I should haue bene as incredulous thereof, as others will be that haue not had the like
experience. I sailed along the Islands of the Malucos, where among some of the heathen people
I was well intreated, where our countrey men may haue trade as freely as the Portugals, if they
will themselves. From thence I passed by the cape of Buena Esperança, and found out by the
way homeward the island of S. Helena, where the Portugals vse to relieue themselves: and from
that island God hath suffered me to returne into England. All which seruices with my selfe I
humbly prostrate at her Maiesties feet, desiring the Almighty long to continue her reigne among
vs: for at this day she is the most famous and victorior prince that liueth in the world.

Thus humbly desiring pardon of your honour for my tediousnesse, I leaue your lordship to the
cution of the Almighty. Plimmouth this ninth of September 1588.

Your honours most humble to command,

THOMAS CANDISH.

Certeine notes or references taken out of the large map of China,
brought home by M. Thomas Candish 1588.

The great kingdome of the Mogores is vpon the Northwell, and falleth vpon Ta-
nassar in beyond Malaca, and ioynech vpon Bengala: they are men of warre, and
vse no fight but on horsebacke: they go in their apparell like Portugals.

2 A city, wherein is captaine a Chinian, a man very deformed, hauing vnder
him many men of warre: he maketh warre both against the Tartarians and the
Mogores; lying betweene them: and lieth without the circuit of the wall.

AAAA 3

3 Certeine

3 Certaine hills, beyond which the Tartarians do inhabit, who here tofore were great friends with the Chinians, and now mainteine continuall warres against them, so great, that sometimes there are slaine in a battell 100000 of men adioyning upon Moscouie: and they haue in their warres all kinde of armour.

4 The prouince of Canlas hath 4 great cities, and 20 small cities, and 77 towne & castles: it containeth in length 55 leagues, it hath 362000 houses of great men that pay tribute, and 13900 men of warre: and hath 47000 horses, which are the kings, kept for his defence.

It is as colde
at Paquin as in
Flanders.

5 The great city of Paquin, where the king doth lie, hath belonging to it 8 great cities, and 18 small cities, with 118 towne and castles: it hath 418789 houses of great men, which pay tribute, it hath horsemen for the warre 258100. This city is in the latitude of 50 degrees to the Northwards, being there as colde as it is usually in Flanders.

6 The great city of Canton, wherein are many men of warre, to keepe that passage from the Tartars.

7 The prouince of Soychin hath 7 great cities, and 16 small, with 12 towne and castles, and one great city, to which many doe repaire to fight against the Tartars: it hath 17 leagues in length, and hath 164118 great houses, which pay tribute, and 96000 men of warre.

8 The prouince of Santo hath 6 great cities, and 14 small, with 90 towne and castles: it is 82 leagues long, and hath 77555 great houses, which pay tribute, 63808 horsemen, and 31000 footmen of warre.

9 The prouince of Oyman hath 7 great cities, and 13 small, and 90 towne and castles, being 470 leagues long, and 132958 great houses that pay tribute, 82800 men of warre. Out of this city commeth copper, quicke-silver, and blacke lead.

* At Quicheu,

10 The prouince of Cutchew hath 8 great cities, and 12 small, and 83 towne, which make armie to fight with the lawes, which do inhabit beyond Cauchinchina: it is 100 leagues broad, and hath 32920 horsemen and footmen, with 405670 great houses which pay tribute, wherof the men of warre are payed.

11 The prouince of Languyn hath 14 great cities, and 17 small, and 95 towne and castles: it is 120 leagues ouer, and hath 962818 great houses which pay tribute, it hath 208900 men of warre, wherof there are 52500 Tartar horsemen that take wages.

12 The prouince of Vquam hath 14 great cities, and 19 small, 150 towne and castles, and is 210 leagues broad, and 53161 houses that pay tribute, and 71600 men of warre.

13 The prouince of Som hath 7 great cities, and 11 small, and 105 towne and castles, and is 200 leagues broad, and hath houses that pay tribute 139567, and men of warre 345632.

14 The prouince of Essiran hath 11 great cities, and 75 small, and 80 towne and castles, and is 440 leagues broad, and hath great houses that doe pay tribute 1242135, and 339000 men of warre.

15 This lake lieth behinde Siam, and before Champa, and doth ioine with the Lappians, and from thence commeth all the water that serueth the kingdome of China: and the Indians & the Chinians doe report this lake to be the whole world, and so they paint the sea, the moone, and the starres within it.

16 The prouince of Canlay hath 13 cities, and a chiefe citie, and 73 towne and castles, and is 260 leagues broad, and hath great houses that pay tribute 1393629, and 12700 men of warre.

17 The prouince of Cuaula hath 12 great cities, 45 small, and 51 towne and castles: it is 260 leagues broad, and hath great houses that pay tribute 1306390, and men of warre both footmen and horsemen 100100.

18 The prouince of Vanam hath 14 great cities, and 36 small, and 34 towne and castles, and is 88 leagues broad, with 589296 great houses that pay tribute, and 15100 men of warre.

Garlions &
gaunt the Ja-
pons.

19 The prouince of Fuckin hath 8 great cities, and one principall city, and 54 towne and castles, and two great cities of garlison, to keepe watch upon the Japons, and is 200 leagues broad, and hath 5009532 great houses that pay tribute, and 4003225 men of the kings guard.

20 The prouince of Canton hath 40 great cities, and 7 small, and 77 towne and castles, and a city that putteth forth hundreds of ships for the keeping of Cauchinchina, and is 380 leagues in breadth, and hath 483383 great houses which pay tribute, and 39400 men of warre.

21 The port of Cauchinchina standeth in the latitude of sixteene degrees and a halfe to the Northward.

22 The citie Champa standeth in foureteene degrees to the Northwards of the Equinoctiall.

The prouince of Enam hath 7. great cities, and 13. small, and 90. townes and castles, and is 88. leagues broad, and hath 589296. great houses that pay tribute, and 15100. souldiers.

3 Horsemen 454528. 3 Footmen 74590573

The totall summe 7923785.

A brieue relation of a voyage of *The Delight* a ship of *Bristol* one of the consorts of M. *John Chidley* esquire and M. *Paul Wheele*, made vnto the Straight of *Magellan*: with diuers accidents that happened vnto the company, during their 6. weekes abode there: Begun in the yeere 1589. Written by *W. Magoths*.

The first of August 1589, the worshipfull M. John Chidley of Chidley in the countie of Devon esquire, with M. Paul Wheele and Captaine Andrew Mericke set forth from Plimmouth with three tall ships, the one called *The wilde man* of three hundred tunnes, wherein went for General the aforesaid M. John Chidley and Benjamin Wood as Master, the other called *The white Lion*, whereof M. Paul Wheele was captaine and John Ellis Master, of the burthen of 340. tunnes: the third *The delight* of Bristol, wherein went M. Andrew Merick as Captaine, and Robert Burnet Master, with two pinnesles of 14. or 15. tunnes a piece. The General in his ship had 180. persons: M. Paul Wheele had 140. in our owne ship we were 91. men and boyes. Our voyage was intended by the Straight of *Magellan* for the South Sea, and chiefly for the famous prouince of *Arauco* on the coast of *Chili*. We kept company together to the ples of the *Cannaries* and so forthward to *Cape Blanco* standing neere the Northerly latitude of 20. degrees on the coast of *Barbarie*, where some of our people went on shoare finding nothing to their content. Within 12. dayes after our departure from this place *The Delight*, wherein J. William Magoths was, lost the company of the other two great ships, and the two small pinnesles. Howbeit we constantly kept our course according to our directions along the coast of *Brasil*, and by the River of *Place*, without touching any where on land untill we came to *Port desire* in the latitude of 48. degrees to the Southward of the Equinoctial. Before we arrived at this place there died of our company by Gods visitation of sundry diseases 16. persons. Wee stayed in this harborough 17. dayes to graue our ship & refresh our wearied people, hoping here to haue met with our consorts: which fell out contrary to our expectations. During our abode in this place we found two little springs of fresh water, which were vpon the Northwesterly part of the land, & lighted vpon good store of seales both old and yong. From hence we sailed toward the Straight of *Magellan*, and entered the same about the first of January. And coming to *Penguin* pland within the Straight we tooke and salted certaine hogsheads of *Penguins*, which must be eaten with speed: for wee found them to be of no long continuance; we also furnished our selues with fresh water. And here at the last sending off our boat to the pland for the rest of our prouision, wee lost her and 15. men in her by force of foule weather; but what became of them we could not tel. Here also in this store we lost two anckers. From hence we passed farther into the Straight, and by *Port famine* we spake with a Spaniard, who told vs that he had liued in those parts 6. yeeres, and that he was one of the 400. men that were sent thither by the king of Spaine in the yere 1582. to fortifie and inhabit there, to hinder the passage of all strangers that way into the South sea. But that and the other Spanish colonie being both destroyed by famine, he said he had liued in an house by himselfe a long time, and relieved himselfe with his caloeuer untill our coming thither. Here we made a boat of the boards of our chests; which being finished wee sent 7. armed men in the same on land on the North shore, being wasted on land by the Sauages with certaine white skinned; who as soone as they came on shore were presently killed by an 100. of the wilde people in the sight of 2. of our men, which rowed them on shoare, which two onely escaped backe againe to vs with the boat. After this traiterous slaughter of our men, we fell backe againe with our ship to the Northeastward of *Port famine* to a certaine road, where we refreshed our selues with muskles, and tooke in water & wood. At this time wee tooke in the Spaniard aforesaid, and so sailed forward againe into the Straight. Wee passed 7. or 8. times 10. leagues Westward beyond *Cape Froward*, being still encountered with mightie Northwest winds. These winds and the current were so behement against vs, that they forced vs backe almost in two houres, as we were getting vp in 8. houres. Thus after wee had spent 6. weekes in the Straight struing against the furie of the elements, and hauing at sundry times partly by casualtie, and partly by sickness lost 38. of our bestmen, and 3. anckers, and now hauing but one ancker left vs, and small store of victuals, and, which was not the least mischiefe,

Chidley's voyage intended partly for Arauco in Chili, Cape Blanco.

The Delight lost the company of the rest of the fleet.

Port desire.

Two springs of fresh water found at Port desire.

They enter into the Straight of Magellan.

They loose 15. of their men by tempest.

A Spaniard taken at Port famine.

Seven of our men killed by the treason of the Sauages on the North shore.

They passed 7. or 8. times ten leagues Westward of Cape Froward.

**They retorne
homeward.**

**The yle of S.
Sebastian in 24.
degr. of south-
erly latitude
on the coast of
Brasil.**

**They land at
Monuille de
Hage 8. miles
West of Cher-
bourg.**

**The wracke of
the ship by the
malice of the
Normans.
They arrive
in England.**

diuers of our company raising dangerous mutinies: we consulted, though somewhat with the latest, for the safegard of our liues to returne while there was some small hope remayning: and so set saile out of The Streight homeward about the 14. of Februarie 1590. We returned backe againe by The riuer of Plate; and sailing neere the coast of Brasill we met with a Portugal ship of 80. tunnes, which rode at an anker vpon the coast, who as soone as she descried vs to chale her, incontinently weyed, & ran her selfe on ground betwene the yland of S. Sebastian and the maine land. But we for want of a good boat, and by reason of the foule weather, were neither able to boord her, nor to goe on shore. Thence in extreeme misery we shaped our course for the yles of Cape Verde, and so passing to the yles of The Açores, the Canaries being something out of our course; the first land that wee mette withall in our narrow sea was The yle of Alderney. And hauing now but five men of all our company left aliue, the Master and his two mates and chiefe Mariners being dead, wee ran in with Monuille de Hage eight miles to the West of Cherbourg in Normandie. Where the next day after our comming to an anker, hauing but one in all left, being the last of August 1590. by the foule weather that rose the anker came home, and our ship bzaue on the rocks: And the Normans which were commanded by the gouernour of Cherbourg (who came downe to vs that night) to haue layd out another anker for her, neglecting his commandement, suffered her miserably to be splitted, with desire to enrich themselves by her wracke. Within few dayes after this last mischance foure of vs being Englishmen departed from Cherbourg, and passed home for England in a barke of Weymouth, leauing the two strangers there behinde vs.

The names of vs sixe that returned of all our company were these.

- 1 William Magoths of Bristol.
- 2 Richard Bulth.
- 3 Iohn Reade.
- 4 Richard Hodgkins of Westburie neere Bristol.

The two strangers.

- 5 Gabriel Valerosa a Portugal.
- 6 Peter, a Briton.

A petition made by certaine of the company of the *Delight* of Bristol vnto the Master of the said ship *Robert Burnet*, one of the consorts of M. Chidley, being in the Streights of *Magellan* the 12. of Februarie 1589.

I haue thought good to shew vnto you (being our Master) our whole mindes and griefes in writing: that whereas our Captaine Matthew Hawlse, and Walter Streec doe beginne to take into the Captaines cabin this 12. of Febr. both bread and butter, (such as was put in for the prouision of the shippe and company) only to feed themselves, and a few others, which are of their melle: meaning thereby rather to serue vs, then to keepe vs strong and in health: And likewise vpon the same, hee hath taken into his cabin certaine furniture, as swords, calceuers and musquets: We therefore not well knowing their intents herein, except by certaine wordes cast out at vnwares, wee may coniecture, that your death, which God forbid, by them hath bene determiued: doe all most humbly desire you being our Master, and hauing charge of the shippe, and vs, this present voyage committed vnto you, to consider: First, that by Gods visitation wee haue lost 16. men, and that so much the rather because they were not allotted such necessary prouision, as was in the ship to be had. Also to consider the great losse of 15. of our men with our boat at Penguin-yland within the Streights of Magellan: and of 7. good and seruiceable men besides neere Port famine: and of thre anchors, and our Carpenter.ouer and besides all these calamities to consider how you haue (without all reason and conscience) bene overthwarted, disgraced, and outcountenanced by your mate Streec, and Matthew Hawlse: Also what danger you now are subiect vnto, your death hauing bene so often conspired, and what danger we should be in, if it were (which God forbid) effected. Furthermore, to weigh with your selfe the great want of many necessities in our ship: namely that we haue but 6. sailers, (besides your selfe and your mate Streec, whom wee dare not trust,) Also that wee haue but one anker, likewise the lacke of our boate and a Carpenter, of ropes, of pitch, treynails, bolts, and planks, and the want

of a skillfull Chirurgian. And whereas a biew being taken of our prouision there was found but five moneths victuals of bread, meale, greeces, and pease, and also but three moneths victuals of beefe, penguins and porke, three hogheads of wine, ten gallons of aquauitz (whereof the sicke men could not get any to relieue them,) foure hogheads of syder and 18. stiches of bacon, &c. the company hath but three stiches. Also the said Captaine Hawlse and Street haue taken and sealed vpon 17. pottes of butter, with certaine cheese, and an hoghead of bread at a time, and haue bene thereof possessed to their owne priuate vles: And haue not onely immoderately spent the companies prouision in butter, cheese, aquauitz, &c. but haue also consumed those sweete meates, which were layed vp in the shippe onely for the reliefe of sicke persons (themselves being healthy and sound, and withholding the said meates from others in their sicknesse) and euen at this time also (by reason of the small store of our prouision, wee being enforced to come to a shorter allowance) they the said Captaine Hawlse and your mate Street, doe finde themselves agriued at the very same allowance, wherewith other men are well contented. And although (besides our ordinarie allowance, and more then all the rest of the company) they onely haue their beakefasts permitted vnto them, yet they complaine that the company goeth about to famish them, whereas indeed they doe what lyeth in them to famish the company by feeding themselves fat, which doe no labour at all. These things being well weighed, you ought likewise to consider the long time that wee haue lien here in these Streights of Magellan, hauing bene at, and seuen or eight times, tenne leagues beyond Cape Froward, we haue had but a small gale of winde with vs: neither could wee come to an anchor, the water being so deepe: and (you know) the place is so dangerous, that wee were once embayed, and coulde scarce get out againe: And likewise, That fogges and mists are here already: Much more here will be, the winter and darke nights being at hand, & we hauing not so much as a boate to seeke out any roade to ride in, sauing a small weake boate made of mens chestes, in which it is not conuenient to goe on shoate in a foereine countrey, where wee must goe with force: and hauing but one anchor left vs, there is but little hope of life in vs, as you may sufficiently iudge, if wee should lose either the said anchor or our boate, and therefore wee dare not put the same in danger for feare of losing them. Also wee hauing lien here these five weekes and vppward, the winde hath continued in the North-west directly against our course, so that wee can no way hope to get through the Streights into the South sea this yeere, and if we could, yet our prouision is not sufficient, hauing spent so much thereof, in this our lingering abode. May wee haue scarcely victuals pough to cary vs home into England, if they bee not vled sparingly, and with very good gouernment. Therefore wee doe againe most humbly desire you to consider and haue regard vnto the premises, as you tender your owne safecie and the safetie of vs which remaine alieue, that wee may (by Gods helpe) retorne backe into England, rather then die here among wilde and sauage people: for if wee make any longer abode in this place, it will bee (without all doubt) to the vtter decay and losse, both of our selues, and of the shippe: and in returning backe, it may please God, that we may finde our fifteene men, and our boat at Penguin-land (although this bee contrary to the mindes of Matthew Hawlse, and your mate Street) and hauing found them, wee doe not despair in Gods mercie, but that in our retorne home-ward, hee will send vs purchase sufficient, if wee would ioyne our selues together in prayer, and loue one another. And thus doing (as wee shalbe bound) euen so wee will also heartily pray for the continuance of your good estate, and wel-fare, and for the length of your dayes, to the pleasure of Almighty God.

Lastly, wee doe most humbly beseech you to consider, that (after the losse of so many men, and all the casualties aforesaid, as we were taking in of water by Port Famine, our boate-swaine, the hooper, and William Magochs being on shoare) Matthew Hawlse did hallow to haue them in all the haste come on-board: saying therewithall these words: We that will come in this voyage, must not make any reckoning to leaue two or three men on shoare behinde him, whereas we had so lately lost all the foresaide men, hauing then but five sailers left vs on-board. Also the said Matthew Hawlse did cary a pistoll for the space of two dayes secretly vnder his gowne, intending therewithall to haue murdered Andrew Stoning, and William Combe, as by confession of Hawlse his man, William Martin, it is manifest: for the said William Martine reported vnto two of his friends, viz. Richard Hungate, and Emanuel Dornel, that he kneeled vpon his knees one whole houre before Matthew Hawlse in his owne cabin, desiring him, for Gods cause, not to kill either of them, especially because the said Stoning and Martin came both out of one towne. Also the said Hawlse, at our second time of watering in the place aforesaid, came into the Gunners roome to speake with you (your selfe with the master Gunner Thomas Browne, and his mate William Frier being then present) demanding of you, if he should send certaine men to Port famine being two leagues from the ship by land. Thomas Browne answered him presently, that he should send none

The Spaniards
taken in at
Port Famine.

none, for feare least the wind might arise, and by that meanes we should loose so many of our men more: to whom Matthew Hawlic replied that it was not material, for that he had made choyce of a company for the very same purpose, whose names were Emmanuel Dornel, Richard Hungate, Paul Carie, Iohn Davis, Gabriel Valerosa, a Portugall, and Peter a Britaine, and the Spaniards which we had taken in at the same place, at our first time of watering. And thus we end, desiring God to sende vs well into our native countrey. In witnesse whereof wee haue subscribed our names.

Thomas Browne, Gunner,
John Morrice, &c.

The last voyage of the worshipfull M. Thomas Candish esquire, intended for the *South sea*, the *Philippinas*, and the coast of *China*, with 3. tall ships, and two barks: Written by M. John Lane, a man of good obseruation, imployed in the same, and many other voyages.

We 26. of August 1591. wee departed from Plimmouth with 3. tall ships, and two barks, The Galeon wherein M. Candish went himselfe being Admirall, The Roebucke viceadmirall whereof M. Cocke was Captaine, The Desire Rere-admirall whereof was Captaine M. Iohn Davis (with whom and for whose sake I went this voyage) The Blacke pinnelle, and a barke of M. Adrian Gilbert, whereof M. Randolfe Cotton was Captaine.

Baya de Saluador.

A barke taken.

Cabo Frio.
Illa de Placencia.

Illa de S. Sebastian.

The towne of
Santos taken.

The 29. of Nouember wee fell with the bay of Saluador vpon the coast of Brasil 12. leagues on this side Cabo Frio, where wee were becalmed vntill the second of December: at which time wee tooke a small barke bound for the River of Plate with sugar, haberdash wares, and Negros. The Master of this barke brought vs vnto an yle called Placencia thirtie leagues West from Cabo Frio, where wee arrived the first of December, and rifled fire of seuen houses inhabited by Portugales. The 11. wee departed from this place, and the fourteenth we arrived at the yle of S. Sebastian: from whence M. Cocke and Captaine Davis presently departed with The Desire and the blacke pinnelle, for the taking of the towne of Santos. The 15. at euening we anchored at the barre of Santos, from whence we departed with our boates to the towne; and the next morning about nine of the clocke wee came to Santos, where being discovered, wee were enforced to land with 24. gentlemen, our long boat being farre a sterne, by which expedition wee tooke all the people of the towne at Masse both men and women, whom wee kept all that day in the Church as prisoners. The cause why master Candish desired to take this towne was to supply his great wants: For being in Santos, and hauing it in quiet possession, wee stood in assurance to supply all our needes in great abundance. But such was the negligence of our gouernour master Cocke, that the Indians were suffered to carry out of the towne whatsoeuer they would in open viewe, and no man did controule them: and the next day after wee had wonne the towne, our prisoners were all set at libertie, onely foure poore olde men were kept as paynes to supply our wants. Thus in three dayes the towne that was able to furnish such another Fleet with all kinde of necessities, was left vnto vs nakedly bare, without people and prouision.

The towne of
S. Vincent
burnt.

Eight or tenne dayes after master Candish himselfe came thither, where hee remained vntill the 22. of Ianuary, seeking by intreatie to haue that, whereof we were once possessed. But in conclusion wee departed out of the towne through extreme want of victuall, not being able any longer to liue there, and were glad to receiue a fewe canisters of Cassau meale; so that in euery condition wee went worse furnished from the towne, then when wee came vnto it. The 22. of Ianuary we departed from Santos, and burnt Sant Vincent to the ground. The 24. we set sail, shaping our course for the Streights of Magellan.

The seuenth of February we had a very great storme, and the eighth our fleet was separated by the fury of the tempest. Then our Captaine called vnto him the Master of our ship, whom hee found to be a very honest and sufficient man, and conferring with him he concluded to goe for Port Desire, which is in the Southerly latitude of 48. degrees; hoping that the Generall would come thither, because that in his first voyage he had found great reliefe there. For our Captaine could neuer get any direction what course to take in any such extremities, though many times hee had intreated for it, as often I haue heard him with grieue report. In sayling to this port by good chance we met with The Roe-bucke, wherein master Cocke had endured great extremities, and had lost his boate, and therefore desired our Captaine to keepe him company, for hee was in very desperate case. Our Captaine hoisted out his boate, and went aboard him to know his estate, and re-

turning

The last voy. of M. Th. Candish. Traffiques & Discoueries. 843

turning to be vs the hardnesse thereof, and desired the Master and all the company to be carefull in all their watches not to loose The Roe-bucke, and so wee both arrived at Port Desire the sixth of March.

They arrive at Port Desire.

The 16. of March The Blacke pinnesse came unto vs, but master Gilberts barke came not, but returned home to England, having their Captaine aboard the Roe-bucke without any provision more then the apparell that hee wore, who came from thence aboard our ship to remaine with our Captaine, by reason of the great friendship betwene them. The 18. the Galeon came into the road, and master Candish came into the harborough in a boat which he had made at sea; for his long boat and light-horseman were lost at sea, as also a pinnesse which he had built at Santos: and being aboard The Desire he tolde our Captaine of all his extremities, and spake most hardly of his company, and of diuers gentlemen that were with him, purposing no more to goe aboard his owne ship, but to stay in The Desire. We all sorrowed to heare such hard speeches of our good friends; but having spoken with the gentlemen of the Galeon wee found them faithfull, honest, and resolute in proceeding, although it pleased our Generall otherwise to conceive of them.

M. Adrian Gilberts barke returned for England.

A pinnesse built at Santos.

They fall with the Streights of Magellan.

The 20. of March we departed from Port Desire, master Candish being in The Desire with vs. The eighth of April 1592. wee fell with the Streights of Magellan, induring many furious stormes betwene Port Desire and the Streight. The 14. we passed through the first Streight. The 16. we passed the second Streight being ten leagues distant from the first. The 18. we doubled Cape Froward, which Cape lieth in 53. degrees and 1/2. The 21. wee were enforced by the fury of the weather to put into a small coue with our ships, 4. leagues from the said Cape, upon the South shoare, where wee remained until the 15. of May. In the which time wee indured extreeme stormes, with perpetual snow, where many of our men died with cursed famine, and miserable cold, not having wherewith to couer their bodie, nor to fill the bellies, but living by mushrooms, water, and weeds of the sea, with a small reliefe of the ships store in meale sometimes. And all the sicke men in the Galeon were most vnicaritably put a shote into the woods in the snowe, raine, and cold, when men of good health could scarcely indure it, where they ended their liues in the highest degree of misery, master Candish all this while being aboard the Desire. In these great extremities of snow and cold, doubting what the ende would be, he asked our Captaines opinion, because he was a man that had good experience of the Northwest parts, in his 3. severall discoveries that way, imployed by the marchants of London. Our Captaine tolde him, that this snowe was a matter of no long continuance, and gaue him sufficient reason for it, and that thereby hee could not much be prejudiced or hindered in his proceeding. Notwithstanding he called together all the company, and tolde them, that he purposed not to stay in the Streights, but to depart upon some other voyage, or else to returne againe for Brasil. But his resolution was to goe for the Cape of Buena Esperanca. The company answered, that if it pleased him, they did desire to stay Gods fauour for a winde, and to indure all hardnesse whatsoever, rather then to giue over the voyage, considering they had bene here but a smal time, and because they were within fourtie leagues of the South sea, it grieved them now to returne; notwithstanding what hee purposed, that they would performe. So hee concluded to goe for the Cape of Buena Esperanca, and to giue over this voyage. Then our Captaine, after master Candish was come aboard The Desire from talking with the company, tolde him, that if it pleased him to consider the great extremitie of his estate, the slenderesse of his provisions, with the weakenesse of his men, it was no course for him to proceed in that new enterprise: for if the rest of your shippes (said hee) bee furnished answerable to this, it is impossible to performe your determination: for wee haue no more sailes then mastes, no victuals, no ground-sackling, no corbage more then is ouer head, and among seuentie and five persons, there is but the Master alone that can order the shippe, and but foureteene saylers. The rest are gentlemen, seruicemen, and artificers. Therefore it will be a desperate case to take so hard an enterprise in hand. These perswasions did our Captaine not onely vse to master Candish, but also to master Cocke. In fine upon a petition deliuered in writing by the chiefe of the whole company, the Generall determined to depart out of The Streights of Magellan, and to returne againe for Santos in Brasil.

So the 15. of May wee set saile, the Generall then being in the Galeon. The eighteenth wee were free of the Streights, but at Cape Froward it was our hard hap to haue our boat sunke at our sterne in the night, and to be split and soze spoiled, and to loose all our oyes.

They returne from the Streights of Magellan.

The twentieth of May being thwart of Port Desire, in the night the Generall altered his course, as we suppose, by which occasion wee lost him: for in the euening he stood close by a winde to seaward, hauing the winde at Northnortheast, and wee standing the same way, the winde not altering, could not the next day see him: so that we then perswaded our selues, that hee was gone for

The occasion of losing the Generall.

for Port Desire to relieue himselfe, or that hee had sustained some mischance at Sea, and was gone thither to reinedy it. Whereupon our Captaine called the Generalls men vnto him, with the rest, and asked their opinion what was to bee done. Euery one sayde, that they thought that the Generall was gone for Port Desire. Then the Master being the Generalls man, and carefull of his masters seruice, as also of good iudgement in Sea-matters, tolde the company howe dangerous it was to goe for Port Desire, if wee shoulde there misse the Generall: for (saide hee) wee haue no boate to lande our selues, nor any cables nor anchorers that I dare trust in so quicke streames as are there: yet in all likelyhood concluding that the Generall was gone thither, wee stayed our course for Port Desire, and by chance mette with the Blacke pinnesse, which had likewise lost the flecte, being in very miserable case: so wee both concluded to seeke the Generall at Port Desire.

They come againe to Port Desire the 26. of May.

A quiet road.

A poole of fresh water on the South side of Port Desire.

Abundance of mulkies and smelts.

A dangerous muring.

The sixe and twentieth day of May we came to Port Desire, where not finding our Generall, as we hoped, being most slenderly victualled, without sailes, boate, oyes, nailes, cordage, and all other necessaries for our reliefe, wee were strooken into a deadly sorrow. But referring all to the prouidence and fatherly protection of the Almighty, wee entered the harbour, and by Gods fauour found a place of quiet roade, which before wee knewe not. Hauing moored our shippe with the pinnesses boate, wee landed vpon the South shore, where wee found a standing poole of fresh water, which by estimation might holde some tenne tunnes, whereby wee were greatly comforted. From this poole wee fet more then forty tunnes of water, and yet we left the poole as full as wee found it. And because at our first being in this harbour wee were at this place and found no water, we perswaded our selues that God had sent it for our reliefe. Also there were such extraordinary low ebbes as we had neuer seene, where by wee got mulkies in great plentie. Likewise God sent about our shippes great abundance of smelts, so that with hookes made of pinnes euery man caught as many as hee coulde eate: by which meanes wee preserved our ships victuals, and spent not any during the time of our abode here.

Our Captaine and Master falling into the consideration of our estate and dispatch to goe to the Generall, found our wants so great, as that in a moneth wee coulde not fitte our shippe to set saile. For wee must needes set vp a Smiths forge, to make boltes, spikes, and stayles, besides the repairing of our other wants. Whereupon they concluded it to bee their best course to take the pinnesse, and to furnish her with the best of the company, and to goe to the Generall with all expedition, leauing the shippe and the rest of the company vntill the Generalls returne: for hee had vowed to our Captaine, that hee would returne againe for the Streights, as hee had tolde vs. The Captaine and Master of the pinnesse being the Generalls men were well contented with the motion.

But the Generall hauing in our shippe two most pestilent fellowes, when they heard of this determination they utterly misliked it, and in secret dealt with the company of both shippes, vehemently perswading them, that our Captaine and Master would leaue them in the countrey to bee deuoured of the Canibals, and that they were mercilesse and without charitie: whereupon the whole company ioyned in secret with them in a night to murder our Captaine and Master, with my selfe, and all those which they thought were their friends. There were markes taken in his caben howe to kill him with mulkets through the shippes side, and bullets made of silver for the execution, if their other purposes shoulde faile. All agreed hereunto, except it were the boate-swaine of our shippe, who when hee knewe the matter, and the slender ground thereof, reuelled it vnto our Master, and so to the Captaine. Then the matter being called in question, those two most murderous fellowes were found out, whose names were Charles Parker and Edward Smith.

The Captaine being thus hardly beset in perill of famine, and in danger of murdering, was constrained to vse lenitie, and by courteous meanes to pacifie this furie, shewing, that to doe the Generall seruice, vnto whom he had vowed faith in this action, was the cause why hee purposed to goe vnto him in the pinnesse, considering, that the pinnesse was so necessary a thing for him, as that hee could not bee without her, because hee was fearefull of the shore in so great shippes. Whereupon all cried out with cursing and swearing, that the pinnesse shoulde not goe vntill the shippe went. Then the Captaine desired them to shewe themselves Christians, and not so blasphemously to behaue themselves, without regard or thanksgiuing to God for their great deliuerance, and present sustenance bestowed vpon them, alleaging many examples of Gods sharpe punishment for such ingratitude; and withall promised to doe any thing that might stand with their good liking. By which gentle speeches the matter was pacified, and the Captaine and Master at the request of the company were content to forgiue this great treachery of Parker and Smith, who after many admonitions concluded in these wordes: The Lord iudge betweene you and mee: which

which after came to a most sharpe reuenge euen by the punishment of the Almighty. Thus by a generall consent it was concluded not to depart, but there to stay for the Generalls returne. Then our Captaine and Master, seeing that they could not doe the Generall that seruice which they desired, made a motion to the companie, that they would lay downe vnder their handes the losing of the Generall, with the extremities wherein we then stood: whereunto they consented, and wrote vnder their handes as followeth.

The testimoniall of the companie of *The Desire* touching their losing of their Generall, which appeareth to haue beene vtterly against their meanings.

The 26 of August 1591 wee whose names bee here vnder written, with diuers others departed from Plimmouth vnder M. Thomas Candish our Generall, with 4 ships of his, to wit, The Galeon, The Robuck, The Desire, and The Black pinnesse, for the performance of a voyage into The South sea. The 19 of Nouember we fell with the bay of Saluador in Brasil. The 16 of December we tooke the towne of Santos, hoping there to reuictual our selues, but it fell not out to our contentment. The 24 of Ianuary we set saile from Santos, shaping our course for The Streights of Magellan. The 8 of Februarie by violent stormes the layde flecte was parted: The Robuck and The Desire arriued in Porte Desire the 6 of March. The 16 of March The Black pinnesse arriued there also: and the 18 of the same our admirall came into the roade; with whom we departed the 20 of March in poore and weake estate. The 8 of Aprill 1592 we entered The Streights of Magellan. The 21 of Aprill wee ankered beyond Cape Froward, within 40 leagues of The South sea, where wee rode vntill the 15 of May. In which time wee had great store of snowe, with some gustie weather, the wind continuing still at Westnorthwest against vs. In this time wee were inforced for the preserving of our victuals, to line the most part vpon muskles, our prouision was so slender, so that many of our men died in this hard extremitie. Then our General returned for Brasil there to winter, & to procure victuals for this voyage against the next yeere. So we departed The Streights the 15 of May. The 21 being thwart of Port Desire 30 leagues off the shoare, the wind then at Northeast and by North, at five of the clock at night lying Northeast, wee suddenly cast about lying Southeast and by South, and sometimes Southeast: the whole flecte following the admirall, our ship comming vnder his lee shot ahead him, and so framed saile fit to keepe companie. This night wee were seuered, by what occasion wee protest wee know not, whether we lost them or they vs. In the morning we only saw The Black pinnesse, then supposing that the admirall had ouerthot vs. All this day wee stood to the Eastwards, hoping to find him, because it was not likely, that he would stand to the shoare againe so suddenly. But missing him towards night, we stood to the shoareward, hoping by that course to finde him. The 22 of May at night we had a violent storme, with the wind at North-west, and wee were inforced to hull, not being able to beare saile, and this night we perished our maine tressetrees, so that wee could no more vse our maine top-saile, lying most dangerously in the sea. The pinnesse likewise receiued a great leake, so that wee were inforced to seeke the next shoare for our reliefe. And because famine was like to bee the best ende, wee desired to goe for Port Desire, hoping with seales and penguins to relieue our selues, and so to make shift to followe the Generall, or there to stay his comming from Brasil. The 24 of May wee had much winde at North. The 25 was calme, and the sea very lottie, so that our ship had dangerous foule weather. The 26 our fore-shrowdes brake, so that if wee had not beene neere the shoare, it had beene impossible for vs to get out of the sea. And now being here moored in Port Desire, our shrowdes are all rotten, not hauing a running rope whereto wee may trust, and being prouided onely of one shift of sailes all worne, our top-sailes not able to abide any streffe of weather, neither haue wee any pitch, tarre, or nallies, nor any store for the supplying of these wantes; and wee liue onely vpon seales and muskles, hauing but foure hogheads of porke within board, and meale three ounces for a man a day, with water for to drinke. And soasmuch as it hath pleased God to separate our flecte, and to bring vs into such hard extremities, that only now by his mere mercy we expect reliefe, though other wise we are hopelesse of comfort, yet because the wonderfull workes of God in his exceeding great fauour toward vs his creatures are farre beyond the scope of mans capacitie, therefore by him we hope to haue deliuerance in this our deepe distresse. Also soasmuch as those vpon whom God will bestow the fauour of life, with returne home to their countrey, may not onely themselves remaine blamelesse, but also manifest the truethe of our actions, wee haue thought good in Christian charitie to lay downe vnder our handes the truethe of all our proceedings euen till the time of this our distresse.

The manner how they lost their Generall.

846 The English Voyages, The last voy. of M. Th. Candish.

Given in Port Desire the 2 of June 1592. Beseeching the almightie God of his mercie to deli-
uer vs from this miserie, how or when it shall please his diuine Paternitie.

Port Desire a
bounding with
seales and pen-
guins.

They depart
the second time
from Port De-
sire for The
Streights of
Magellan.

Certaine Isles
never before
discovered fifty
leagues north-
east off The
Streights.

The first and
second Streight
Cape Froward.
Saluage cooue.

After they had deliuered this relation vnto our captaine vnder their handes, then wee began to
trauell for our liues, and wee built vp a smiths forge, and made a colepit, and burnt coles, and
there wee made nasses, boltes, and spikes, others made ropes of a peece of our cable, and the rest
gathered muskles, and tooke smeltes for the whole companie. Thre leagues from this harbo-
rough there is an Isle with foure small Isles about it, where there are great abundance of seales,
and at the time of the yeere the penguins come thither in great plentie to breede. Wee concluded
with the pinnelle, that she should sometimes goe thither to fetch seales for vs; vpon which condi-
on wee would share our victuals with her man for man; whereunto the whole companie agreed.
So wee parted our poore store, and thee laboured to fetch vs seales to eate, wherewith wee liued
when smeltes and muskles failed: for in the nepe streames wee could get no muskles. Thus in
most miserable calamitie wee remained untill the sixt of August, still keeping watch vpon the hills
to looke for our Generall, and so great was our vexation and anguish of soule, as I thinke neuer
flesh and blood endured more. Thus our miserie daily increasing, time passing, and our hope
of the Generall being very colde, our Captaine and Master were fully perswaded, that the Gene-
rall might perhaps goe directly for The Streights, and not come to this harborough: where vpon
they thought no course more conuenient then to goe presently for The Streights, and there to stay
his coming, for in that place hee could not passe, but of force wee must see him: whereunto the
companie most willingly consented, as also the Captaine and Master of the pinnelle; so that vpon
this determination wee made all possible speede to depart.

The sixt of August wee set saile, and went to Penguin-isle, and the next day wee salted twentie
hogheads of seales, which was as much as our salt could possibly doe, and so wee departed for
The Streights the poorest wretches that euer were created. The seventh of August towarde
night wee departed from Penguin-isle, shaping our course for The Streights, where wee had full
confidence to meete with our Generall. The ninth wee had a sore storme, so that wee were con-
strained to hull, for our sailes were not to indure any force. The 14 wee were driuen in among
certaine Isles neuer before discovered by any known relation, lying fiftie leagues or better from
the shoare East and Northerly from The Streights: in which place, vntill it had pleased God of
his wonderfull mercie to haue ceased the winde, wee must of necessitie haue perished. But the
winde shifting to the East, wee directed our course for The Streights, and the 18 of August wee
fell with the Cape in a very thicke fogge; and the same night we ankered ten leagues within the
Cape. The 19 day wee passed the first and the second Streights. The 21 wee doubled Cape
Froward. The 22 we ankered in Saluage cooue, so named, because wee found many Saluages
there: notwithstanding the extreme colde of this place, yet doe all these wilde people goe naked,
and lue in the woods like Satyrs, painted and disguised, and flee from you like wilde beere. They
are very strong, and throw stones at vs of thre or foure pound weight an incredible distance. The

24 in the morning wee departed from this cooue, and the same day we came into the North-west reach, which is the last reach of the Streights. The 25 we ankored in a good cooue, within foureene leagues of the South sea: in this place we purposed to stay for the General, for the streight in this place is scarce three miles broad, so that he could not passe but we must see him. After we had stayed here a fortnight in the deep of Winter, our victuals consuming, (for our Seals stunk most vily, and our men died pitifully through cold and famin, for the greatest part of them had no clothes to defend the extremitie of the winters cold) being in this heauie distresse, our captaine and Master thought it the best course to depart from the Streights into the South sea, and to go for the Isle of Santa Maria, which is to the Northward of Baldinia in 37 degrees & a quarter, where we might haue reliefe, and be in a temperate clime, and there stay for the Generall, for of necessity he must come by that Isle. So we departed the 13 of September, & came in sight of the South sea. The 14 we were forced backe againe, and recovered a cooue 3 leagues within the streights from the South sea. Againe we put forth, & being 8 or 10 leagues free of the land, the wind rising furiously at Westnorthwest, we were inforced againe into the streights only for want of sailes; for we neuer durst beare saile in any stresse of weather, they were so weake: so againe we recovered the cooue three leagues within the streights, where we indured most furious weather, so that one of our two cables brake, whereby we were hopeles of life. Yet it pleased God to calme the storme, and wee vntied our sheates, tackes, halliers, and other ropes, and moored our ship to the trees close by the rocks. We laboured to recover our ankore againe, but could not by any means, it lay so deepe in the water, and as we thinke cleane couered with oaze. Now had we but one ankore which had but one whole Flouke, a cable spliced in two places, and a piece of an olde cable. In the middelt of these our troubles it pleased God that the wind came faire the first of October; whereupon with all expedition wee loosed our moorings, and weighed our ankore, and so towed off into the chanel; for wee had mended our boate in Port Desire, and had fine oares of the pinnesse. When we had weighed our ankore, we found our cable broken, onely one strand helde: then wee prayed God; for we saw apparantly his mercies in preserving vs. Being in the chanel, we riued our ropes, & againe rigged our ship, no mans hand was idle, but all laboured euen for the last gaspe of life. Here our company was deuided; some desired to go againe for Port Desire, and there to be set on shore, where they might trauell for their liues, and some stood with the Captaine & Master to proceed. Whereupon the Captaine sayd to the Master: Master, you see the wonderfull extremitie of our estate, and the great doubts among our companie of the truth of your reports, as touching reliefe to be had in the South sea: some say in secret, as I am informed, that we undertake these desperate attempts through blind affection that we beare to the General. For mine owne part I plainly make knowne vnto you, that the loue which I beare to the Generall caused mee first to enter into this action, whereby I haue not onely heaped vpon my head this bitter calamity now present, but also haue in some sort procured the dislike of my best friends in England, as it is not vnknowne to some in this company. But now being thus intangled by the prouidence of God for my former offences (no doubt) I desire, that it may please his diuine Maiestie to shew vs such mercifull fauour, that we may rather proceed, then otherwise: or if it be his wil, that our mortall being shal now take an ende, I rather desire that it may bee in proceeding then in returning. And because I see in reason, that the limits of our time are now drawing to an end, I do in Christian charity intreat you all, first to forgive me in whatsoeuer I haue bin grieuous vnto you; secondly that you wil rather pray for our General, then vse hard speeches of him; and let vs be fully perswaded, that not for his cause & negligence, but for our owne offences against the diuine Maiestie we are presently punished; lastly, let vs forgive one another and be reconciled as children in loue & charity, and not think vpon the vanities of this life: so shall we in leauing this life liue with our glorious redeemer, or abiding in this life, find fauour with God. And now (good master) forasmuch as you haue bin in this voyage once before with your master the general, satisfie the company of such truths, as are to you best knowne; & you the rest of the generals men, which likewise haue bin with him in his first voyage, if you heare any thing contrary to the truth, spare not to reprove it, I pray you. And so I beseech the Lord to bestow his mercy vpon vs. Then the master began in these speeches: Captaine, your request is very reasonable, & I referre to your iudgment my best care, & great pains taken in the generals seruice, my loue towards him, & in what sort I haue discharged my duety, from the first day to this houre. I was commanded by the general to follow your directions, which hitherto I haue perfourmed. You all knowe, that when I was extremely sicke, the General was lost in my mates watch, as you haue well examined: sickness which time, in what anguish and grieve of minde I haue liued, God onely knoweth, and you are in some part a witnesse. And nowe if you thinke good to returne, I will not gaine say it;

sea.

but this I assure you, if life may be preserved by any meanes, it is in proceeding. For at the Isle of Santa Maria I doe assure you of wheate, porke, and rootes enough. Also I will bring you to an Isle, where Pelicans bee in great abundance, and at Santos wee shall have meale in great plenty, besides all our possibilitie of intercepting some shippes upon the coast of Chili and Peru. But if wee returne there is nothing but death to be hoped for: therefore doe as you like; I am ready, but my desire is to proceede. These his speeches being confirmed by others that were in the former voyage, there was a generall consent of proceeding; and so the second of October we put into the South sea, and were free of all land. This night the winde began to blowe very much at Westnorthwest, and still increased in fury, so that wee were in great doubt what course to take: to put into the Streights wee durst not for lacke of ground-tackle: to beare sayle wee doubted, the tempest was so furious, and our sayles so bad. The pinnele came roome with vs, and tolde vs that shee had receiued many grievous Seas, and that her ropes did euery houre sayle her, so as they could not tell what shift to make: wee being vnable in any sort to helpe them, stood vnder our coarles in view of the lee-choze, still expecting our ruinous end.

The fourth of October the storme growing beyond all reason furious, the pinnele being in the winde of vs, strake suddenly ahull, so that we thought shee had receiued some grievous sea, or sprung a leake, or that her sayles failed her, because she came not with vs: but we durst not hull in that vnnmercifull storme, but sometimes tried vnder our maine coarle, sometime with a had-dock of our sayle, for our ship was very leeward, and most labour some in the sea. This night wee lost the pinnele, and neuer saw her againe.

The fift, our foresayle was split, and all to torne: then our Master tooke the mizzen, and brought it to the foremast, to make our ship worke, and with our spritsaile we mended our foresayle, the storme continuing without all reason in fury, with haile, snowe, raine, and winde such and so mighty, as that in nature it could not possibly be more, the seas such and so lofty, with continuall breach, that many times we were doubtfull whether our ship did sinke or swimme.

The tenth of October being by the accompt of our Captaine and Master very nere the choze, the weather darke, the storme furious, and most of our men hauing giuen ouer to trauell, we peelded our selues to death, without further hope of succour. Our captaine sitting in the gallery very penitue, I came and brought him some Rosa solis to comfort him; for he was so cold, that hee was scarce able to moue a ioint. After he had drunke, and was comforted in heart, hee began for the ease of his conscience to make a large repetition of his forepassed time, and with many grievous sighs he concluded in these words: Oh most glorious God, with whose power the mightiest things among men are matters of no moment, I most humbly beseech thee, that the intollerable burthen of my sinnes may through the blood of Iesus Christ be taken from me: and end our daies with speede, or shew vs some mercifull signe of thy loue and our preservation. Hauing thus ended, he desired me not to make knownen to any of the company his intollerable grieve and anguish of minde, because they should not thereby be dismayed. And so suddenly, before I went from him, the Sunne shined cleere; so that he and the Master both obserued the true eleuation of the Pole, whereby they knew by what course to recouer the Streights. Therewithall our captaine and Master were so reuiued, & gaue such comfortable speeches to the company, that euery man reioyced, as though we had receiued a present deliuerance. The next day being the 11 of October, we saw Cabo Deseado being the cape on the South choze (the North choze is nothing but a company of dangerous rocks, Isles, & shoals.) This cape being within two leagues to leeward off vs, our master greatly doubted, that we could not double the same: wherupon the captain told him: You see there is no remedy, either we must double it, or before noon we must die: therefore loose your sails, and let vs put it to Gods mercy. The master being a man of good spirit resolutely made quicke dispatch & set saile. Our sailles had not bene halfe an houre aboord, but the footrope of our foresaile brake, so that nothing held but the oplet holes. The seas continually brake ouer the ships poope, and flew into the sailles with such violence, that we still expected the tearing of our sayles, or ouersetting of the ship, and withall to our vtter discomfort, wee perceiued that wee fell still more and more to leeward, so that wee could not double the cape: wee were now come within halfe a mile of the cape, and so nere the choze, that the counter-suffe of the sea would rebound against the shippes side, so that wee were much dismayed with the horroz of our present ende. Being thus at the very pinch of death, the winde and Seas raging beyond measure, our Master beared some of the maine sheate; and whether it was by that occasion, or by some current, or by the wonderfull power of God, as wee verily thinke it was, the ship quickened her way, and shot past that rocke, where wee thought shee would haue shored. Then betweene the cape and the poynt there was a little bay; so that wee were somewhat farther from the shoare:

and

and when we were come so farre as the cape, wee peelded to death: yet our good God the Father of all mercies deliuered vs, and wee doubled the cape about the length of our shippe, or very little more. Being shot past the cape, we presently tooke in our sayles, which onely God had preserved vnto vs; and when we were shot in betweene the high lands, the wind blowing trade, without any inch of sayle, we spooned before the sea, three men being not able to guide the helme, and in five houres wee were put five and twenty leagues within the Streights, where wee found a sea answerable to the Ocean.

The Cape De-
leado most dan-
gerously dou-
bled, after they
had been nine
dayes in the
South sea.

In this time we freed our ship from water, and after wee had rested a little, our men were not able to mooue; their sinewes were stiffe, and their flesh dead, and many of them (which is most lamentable to bee reported) were so eaten with lice, as that in their flesh did lie clusters of lice as big as peason, yea and some as big as beanes. Being in this miserie we were constrained to put into a cooue for the refreshing our men. Our Master knowing the shoze and euery cooue very perfectly, put in with the shoze, and moored to the trees, as beforetime we had done, laying our ankoze to the seaward. Here we continued vntill the twentieth of October; but not being able any longer to stay through extremite of famine, the one and twentieth we put off into the chanell, the weather being reasonable calme: but before night it blew most extremely at Westnorth-west. The storme growing outrageous, our men could scarcely stand by their labour; and the Streights being full of turning reaches we were constrained by discretion of the Captaine and Master in their accounts to guide the ship in the hell-darke night, when we could not see any shoze, the chanell being in some places scarce three miles broad. But our captaine, as wee first passed through the Streights drew such an exquisite plat of the same, as I am assured it cannot in any sort be bettered: which plat hee and the Master so often perused, and so carefully regarded, as that in memorie they had euery turning and creeke, and in the deepe darke night without any doubting they conueyed the ship through that crooked chanell: so that I conclude, the world hath not any so skillfull pilots for that place, as they are: for otherwise wee could neuer haue passed in such sort as we did.

An excellent
plat of the
Streights of
Magellan.

The 25th wee came to an Island in the Streights named Penguin-isle, whither wee sent our boate to seeke reliefe, for there were great abundance of birds, and the weather was very calme; so wee came to an ankoze by the Island in seuen sadomes. While our boate was at shoze, and we had great shoze of Penguins, there arose a sudden storme, so that our ship did driue ouer a breach and our boate ranke at the shoze. Captaine Cotton and the Lieutenant being on shoze leapt into the boate, and freed the same, and threw away all the birdes, and with great difficultie recovered the ship: my selfe also was in the boate the same time, where for my life I laboured to the best of my power. The ship all this while lying vpon the lee-shoze, when wee came aboard, we helped to set sayle, and weighed the ankoze; for before our coming they could scarce hoist by their pardes; yet with much adoe they set their fore-coarse. Thus in a mighty fret of weather the seuen and twentieth day of October wee were free of the Streights, and the thirtieth of October we came to Penguin-isle being three leagues from Port Desire, the place which wee purposed to seeke for our reliefe.

Penguin-isle
within three
leagues of Port
Desire.

When wee were come to this Isle wee sent our boate on shoze, which returned laden with birdes and egges; and our men sayd that the Penguins were so thicke vpon the Isle, that shippes might be laden with them; for they could not goe without treading vpon the birds, whereat we greatly reioiced. Then the captaine appointed Charles Parker and Edward Smith, with twenty others to go on shoze, and to stay vpon the Isle, for the killing and drying of those Penguins; and promised after the ship was in harborough to send the rest, not onely for expedition, but also to saue the small stoze of victuals in the shippe. But Parker, Smith, and the rest of their faction suspected, that this was a deuise of the Captaine to leaue his men on shoze, that by these meanes there might bee victuals for the rest to recouer their countrey: and when they remembered, that this was the place where they would haue slaine their Captaine and Master, surely (thought they) for reuenge hereof will they leaue vs on shoze. Which when our Captaine vnderstood, hee bled these speeches vnto them: I vnderstand that you are doubtfull of your security through the peruerlenesse of your owne guilty consciences: it is an extreme grieue vnto me, that you should iudge mee blood-thirstie, in whome you haue seene nothing but kinde conuersation: if you haue found otherwise, speake boldly, and accuse mee of the wrongs that I haue done: if not, why do you then measure me by your owne vncharitable consciences? All the company knoweth indeed, that in this place you practized to the utmost of your powers, to murder me and the master causeles, as God knoweth, which euil in this place we did remit you: & now I may conceiue without doing you wrong, that you againe purpose some euil in byring these matters to repetition:

ance of victu-
als.

but God hath so shortned your confederacie, as that I nothing doubt you: it is for your Masters sake that I haue so borne you in your vnchristian practizes: and here I protest before God, that for his sake alone I will yet indure this iniury, and you shall in no sort be preiudiced, or in any thing be by me commanded: but when we come into England (if God so fauour vs) your master shall knowe your honesties; in the meane space be voide of these suspicions, for God I call to witnes, reuenge is no part of my thought. They gaue him thanks, desiring to go into the harborough with the ship, which he granted. So there were ten left vpon the Isle, and the last of October we entered the harborough. Our Master at our last being here hauing taken carefull notice of euery creeke in the riuer, in a very conuenient place, vpon sandy oaze, ran the ship on ground, laying our ankors to seaward, and with our running ropes moored her to stakes vpon the shoze, which hee had fastened for that purpose; where the ship remained till our departure.

The third of Nouember our boat with water, wood, and as many as shee could cary, went for the Isle of Penguins: but being deepe, she durst not proceede, but returned againe the same night. Then Parker, Smith, Townesend, Purper, with five others, desired that they might goe by land, and that the boate might fetch them when they were against the Isle, it being scarce a mile from the shoze. The captaine bade them doe what they thought best, aduising them to take we apons with them: for (sayd hee) although we haue not at any time seene people in this place, yet in the countrey there may be Sauages. They answered, that here were great store of Deere, and Distiches; but if there were Saluages, they would deuoure them: notwithstanding the captaine caused them to cary weapons, calieuers, swordes, and targets: so the first of Nouember they departed by land, and the boate by sea; but from that day to this day wee neuer heard of our men. The 11 while most of our men were at the Isle, onely the Captaine and Master with five others being left in the ship, there came a great multitude of Saluages to the ship, throwing dust in the ayre, leaping and running like brute beasts, hauing vizards on their faces like dogs faces, or else their faces are dogs faces indeed. We greatly feared least they would set our ship on fire, for they would suddenly make fire, whereat we much maruelled: they came to windward of our ship, and set the bulkes on fire, so that we were in a very stinking smoke: but as soone as they came within our shot, we shot at them, & striking one of them in the thigh they all presently fled, so that we neuer heard nor saw moze of them. Whereby we iudged, that these Canibals had slaine our 9 men. When we considered what they were that thus were slaine, and found that they were the principall men that would haue murdered our Captaine & Master, with the rest of their friends, we saw the iust iudgement of God, and made supplication to his diuine Maiesty to be merciful vnto vs. While we were in this harborough, our Captaine and Master went with the boat to discouer how farre this riuer did run, that if neede should enforce vs to leaue our ship, we might know how farre we might go by water. So they found, that farther then 20 miles they could not go with the boat. At their returne they sent the boate to the Isle of Penguins; whereby wee understood that the Penguins dyed to our hearts content, and that the multitude of them was infinite. This Penguin hath the shape of a bird, but hath no wings, only two stumps in the place of wings, by which he swimmeth vnder water with as great swiftnes as any fish. They liue vpon smelts, whereof there is great abundance vpon this coast: in eating they be neither fish nor flesh: they lay great eggs, and the bird is of a reasonable bignes, very neere twise so big as a ducke. All the time that wee were in this place, we fared passing well with eggs, Penguins, pong Seales, pong Gullies, besides other birds, such as I know not; of all which we had great abundance. In this place we found an herbe called Scurupgrasse, which wee fried with eggs, vsing traine oyle in stead of butter. This herbe did so purge & blood, that it tooke away all kind of swellings, of which many died, & restored vs to perfecte health of body, so that we were in as good case as whē we came first out of England. We stayed in this harbour vntil the 22 of December, in which time we had dyed 20000 Penguins; & the Captaine, the Master, and my selfe had made some salt, by laying salt water vpon the rocks in holes, which in 6 daies would be kerner. Thus God did feed vs euē as it were with Manna fro heauen.

The 22 of December we departed with our ship for the Isle, where with great difficulcy, by the skilful industry of our Master we got 14000 of our birds, and had almost lost our captaine in labouring to bring the birds aboard: & had not our Master bene very expert in the set of those wicked tides, which run after many fashions, we had also lost our ship in the same place: but God of his goodnes hath in all our extremities bene our protector. So the 22 at night we departed with 14000 dyed Penguins, not being able to fetch the rest, and shaped our course for Brasil. Howe our captaine rated our victuals, and brought vs to such allowance, as that our victuals might last sixe moneths; for our hope was, that within sixe moneths we might recouer our countrey, though our sailes were very bad. So the allowance was two ounces & a halfe of meale for a man aday,

and

and to haue so twise a weeke, so that 5 ounces did serue for a weeke. Three daies a weeke we had
 oile, three spoonfulls for a man a day; and 2 dayes in a weeke peason, a pint betweene 4 men a day,
 and euery day 5 Penguins for 4 men, and 6 quartes of water for 4 men a day. This was our al-
 lowance; wherewith (we praise God) we liued, though weakly, and very feeble. The 30 of Ja-
 nuary we arriued at the Ile of Placencia in Brasill, the first place that outward bound we were at;
 and hauing made the shoale, our ship lying off at sea, the Captaine with 24 of the company went
 with the boat on shore, being a whole night before they could recouer it. The last of January at
 sun-rising they suddenly landed, hoping to take the Portugales in their houses, & by that meanes
 to recouer some Casau-meale, or other victuals for our reliefe; but when they came to the hou-
 ses, they were all razed, and burnt to the ground, so that we thought no man had remained on the
 Island. Then the captaine went to the gardens, & brought from thence fruits & roots for the com-
 pany, and came aboard the ship, and brought her into a fine creeke which he had found out, where
 we might moze her by the trees, and where there was water, and hoopes to trim our caske. Our
 case being very desperate, we presently laboured for dispatch away; some cut hoopes, which the
 coopers made, others laboured vpon the sailes and ship, euery man traouelling for his life, & still a
 guard was kept on shore to defend those that laboured, euery man hauing his weapon like wise by
 him. The 3 of February our men with 23 shot went againe to the gardens, being 3 miles from
 vs vpon the North shore, and fetched Cazani-roots out of the ground, to relieue our company in-
 stead of bread; for we spent not of our meale while we staid here. The 5 of February being moun-
 day, our captaine and master hasted the company to their labour; so some went with the Coopers
 to gather hoopes, and the rest laboured aboard. This night many of our men in the ship dreamed
 of murther & slaughter: In the morning they reported their dreames, one saying to another; this
 night I dreamt, that thou wert slaine; another answered, and I dreamed, that thou wert slaine;
 and this was general through the ship. The captaine hearing this, who like wise had dreamed ve-
 ry strangely himselfe, gaue very streight charge, that those which went on shore should take wea-
 pons with them, and saw them himselfe deliuered into the boat, & sent some of purpose to guard the
 labourers. All the forenoone they laboured in quietnesse, & when it was ten of the clocke, the heat
 being extreme, they came to a rocke neere the woods side (for al this countrey is nothing but thick
 woods) and there they hopped Cazani-roots, & dined: after dinner some slept, some washed them-
 selues in the sea, all being stripped to their shirts, & no man keeping watch, no match lighted, not a
 piece charged. Suddenly as they were thus sleeping & sporting, hauing gotten themselues into
 a corner out of sight of the ship, there came a multitude of Indians & Portugales vpon them, and
 slew them sleeping: onely two escaped, one very sore hurt, the other not touched, by whom we vn-
 derstood of this miserable massacre: with all speed we manned our boat, & landed to succour our
 men; but we found them slaine, & laied naked on a ranke one by another, with their faces upward,
 and a crosse set by them: and withall we saw two very great pinnelles come from the riuer of Je-
 nero very full of men; whom we mistrusted came from thence to take vs: because there came from
 Jenero souldiers to Santos, when the Generall had taken the towne and was strong in it. Of 76
 persons which departed in our ship out of England, we were now left but 27, hauing lost 13 in
 this place, with their chiefe furniture, as muskets, caliners, powder, & shot. Our caske was all in
 decay, so that we could not take in moze water then was in our ship, for want of caske, and that
 which we had was maruellous ill conditioned: and being there mozed by trees for want of cables
 and ankers, we still expected the cutting of our mozings, to be beaten from our decks with our
 owne furniture, & to be assailed by them of Jenero: what distresse we were now driuen into, I am
 not able to expresse. To depart with 8 tunnes of water in such bad caske was to sterue at sea, & in
 staying our case was ruinous. These were hard choises; but being thus perplexed, we made choise
 rather to fall into the hands of the Lord, then into the hands of men: for his exceeding mercies we
 had tasted, & of the others cruelty we were not ignorant. So concluding to depart, the 6 of Fe-
 bruary we were off in the chanell, with our ordinance & small shot in a readines, for any assault that
 should come, & hauing a small gale of winde, we recouered the sea in most deepe distresse. Then
 bemoning our estate one to another, and recounting ouer all our extremities, nothing grieved vs
 moze, then the losse of our men twise, first by the slaughter of the Canibals at Port Desire, and at
 this Ile of Placencia by the Indians and Portugals. And considering what they were that were
 lost, we found that al those that conspired the murthering of our captaine & master were now slain
 by saluages, the gunner only excepted. Being thus at sea, when we came to cape Frio, the winde
 was contrary; so that 3 weekes we were grievously bered with crosse windes, & our water consu-
 ming, our hope of life was very small. Some desired to go to Baya, & to submit themselues to the
 Portugales, rather then to die for thirst: but the captaine with faire perswasions altered their
 purpose

ted Penguins.

purpose of peelding to the Portugales. In this distresse it pleased God to send vs raine in such plenty, as that we were wel watered, & in good comfort to returne. But after we came neere vnto the sun, our dyed Penguins began to corrupt, & there bred in the a most lothsome & vgly worme of an inch long. This worme did so mightily increafe, and deuoure our victuals, that there was in reason no hope how we should auoide famine, but be deuoured of these wicked creatures: there was nothing that they did not deuoure, only yron excepted: our clothes, boots, shooes, hats, shirts, stockings: and for the ship they did so eat the timbers, as that we greatly feared they would vndoe vs, by gnawing through the ships side. Great was the care and diligence of our captaine, master, and company to consume these vermine, but the more we laboured to kill them, the more they increased; so that at the last we could not sleepe for them, but they would eate our flesh, and bite like Mosquitos. In this wofull case, after we had passed the Equinoctiall toward the North, our men began to fall sick of such a monstrous disease, as I thinke the like was neuer heard of: for in their ankles it began to swell; from thence in two daies it would be in their breasts, so that they could not draw their breath, and then fell into their cobs; and their cobs and pannes did swell most grievously, and most dreadfully to behold, so that they could neither stand, lie, nor goe. Whereupon our men grew mad with griefe. Our captaine with extreme anguish of his soule, was in such wofull case, that he desired only a speedie end, and though he were scarce able to speake for sorrow, yet he perswaded them to patience, and to giue God thanks, & like dutifull children to accept of his chastisement. For all this diuers grew raging mad, & some died in most lothsome & furious paine. It were incredible to write our misery as it was: there was no man in perfect health, but the captaine & one boy. The master being a man of good spirit with extreme labour boze out his griefe, so that it grew not vpon him. To be short, all our men died except 16, of which there were but 5 able to moue. The captaine was in good health, the master indifferent, captaine Cotton and myselfe swolne and short winded, yet better then the rest that were sicke, and one boy in health: vpon vs 5 only the labour of the ship did stand. The captaine and master, as occasion serued, would take in, and heaue out the top-sailes, the master onely attended on the sprit-saile, and all of vs at the capsten without sheats and tacks. In fine our miserie and weaknesse was so great, that we could not take in, nor heaue out a saile: so our top-saile & sprit-sailes were torne all in pieces by the weather. The master and captaine taking their turnes at the helme, were mightily distressed and monstrously grieved with the most wofull lamentation of our sick men. Thus as lost wanderers vpon the sea, the 11 of June 1593, it pleased God, that we arrived at Bear-hauen in Ireland, and there ran the ship on shore: where the Irish men helped vs to take in our sailes, and to moze our ship for floating: which slender paines of theirs cost the captaine some ten pounds before he could haue the ship in safetie. Thus without victuals, sailes, men, or any furniture God onely guided vs into Ireland, where the captaine left the master and three or foure of the company to keepe the ship: and within 5 dayes after he and certaine others had passage in an English fisher-boat to Padstow in Cornewall. In this maner our small remnant by Gods onely mercie were preserued, and restored to our countrey, to whom be all honour and glory world without end.

They arrive at
Bear-hauen in
Ireland the 11 of
June 1593.

The letters of the Queenes most excellent Maiestie sent in the yere 1596 vnto the great Emperor of China by M. Richard Allot and M. Thomas

Bromesfeld marchants of the citie of London, who were imbarqued in a fleet of 3 ships, to wit, *The Beare*, *The Beares whelpe*, and the *Beniamin*; set forth principally at the charges of the honourable knight Sir Robert Duddesley, and committed vnto the command and conduct of M. *Beniamin Wood*, a man of approoued skill in nauigation: who, together with his ships and company (because we haue heard no certaine newes of them since the moneth of February next after their departure) we do suppose, may be arrived vpon some part of the coast of China, and may there be stayed by the said Emperour; or perhaps may haue some treacherie wrought against them by the Portugales of *Macao*, or the Spaniards of the *Philippinas*.

ELizabetha Dei gracia Angliæ, Franciæ, & Hiberniæ Regina, veræ & christianæ fidei contra omnes falsò Christi nomen profitentes inuidiissima propugnatrix &c. Altissimo, Serenissimoq; Principi, potentissimo magni regni Chinæ dominatori, summo in illis Asiæ partibus Insulisq; adiacentibus imperatori, & magno in orientalibus mundi regionibus Monarchæ, salutem, multosq; cum omni optimarum rerû copia & affluentia latos & felices annos. Cum honesti & fideles subditi nostri, qui has literas nostras ad serenitatem vestram perferunt, *Richardus Allot* & *Thomas Bromesfeld*, ciuitatis nostræ Londini in dicto nostro regno Angliæ mercatores, impensè a nobis efflagitauerint, vt eorum studia ad imperij vestri regiones

regiones (commercij gracia) nauigandi commendaremus: Cumq; regni vestri fortiter prudentiq; administrati fama, per vniuersam terrarū orbem disseminata & diuulgata, subditos hos nostros inuitauerit, non solum vt dominationis vestræ regiones inuisant, sed vt regni vestri legibus & institutis, dum in illis mundi partibus cōmorati fuerint, regendos se & moderandos permittant, prout mercatores decet, qui mercimoniorū commutandorum causa ad tam longē distitas, nec adhuc nostro orbi satis cognitās regiones, penetrare cupiunt, illud vnum spectantes, vt mercimonia sua, mercimoniorūq; quorundam, quibus ditionis nostræ regiones abundant, exemplaria quzdam siue specimina, serenitatis vestræ subditorumq; vestrorū conspectui offerant, & diligenter cognoscere studeant, si quæ aliæ sint apud nos merces quæ vestro vsui inseruiant, quas honesto & vbique terrarum licito commercij ritu alijs mercibus (quarum in imperij vestri regionib⁹, tam artis quam naturæ beneficio magna copia est) commutare possint. Nos exquisitis honestorum hominum precibus acquiescentes, quia nihil ex iustissimo hoc mercaturæ vsu incommodi siue dispendij oriturum, sed plurimū potius emolumentum vtriusq; regni tum principibus tum subditis prouenturum existimamus, dum earū rerum quibus abundamus exportatione, & aliarum quibus egemus inuentione, æquissimis precijs iuuari vtrinq; & locupletari possimus; Serenissimam Maiestatem vestram rogamus, vt subditis his nostris, cum mercimoniorum vendendorum & permutandorum gratia, ad imperij vestri stationes, portus, loca, oppida, ciuitates accesserint, eundi, redeundi, & cum subditis vestris negotiandi, plena & libera fiat potestas: Illisq; huiusmodi libertates, immunitates, & priuilegia, quæ aliorum principum subditis, apud vos mercaturam exercentibus, concedi solent, serenitatis vestræ clementia inuiolata conferuentur; & nos vicissim, non tantum omnia amicæ principis officia serenitati vestræ deferemus, sed ad maiorem communis inter nos subditosq; nostros amicitia & cōmercij propagationem, subditis vestris omnibus & singulis, si serenissimæ Maiestati vestræ ita visum fuerit, plenam & integram in ditionis nostræ quascunq; regiones veniendi, commorandi, negotiandi, & reuertendi, potestatem per præsentes has literas nostras libentissimè concedimus. Quæ omnia & singula regij nostri sigilli appositione communiri fecimus. Deus opt. max. cœli & terræ conditor, regiam Maiestatem vestram diutissimè seruet incolumem. Datz in Palatio nostro Grenouici xj. mensis Iulij Anno Christi 1596. annoq; nostri regni xxxviii.

The same in English.

Elizabeth by the grace of God Queene of England, France, and Ireland, the most mightie defendresse of the true & christian faith against all that falsely professe the name of Christ &c. To the most high and soueraigne Prince the most puissant Gouvernour of the great kingdome of China, the chiefest Emperour in those parts of Asia and of the Islands adioyning, and the great monarke of the orientall regions of the world; wisheth health, and many ioyfull and happy yeeres, with all plenty and abundance of things most acceptable. Whereas our honest and faithfull subiects which bring these letters vnto your Highnesse, Richard Allot & Thomas Bromesfield, marchants of our citie of London in our foresaid kingdome of England, haue made most earnest suit vnto vs, that we would commend their desires and indeuours of sayling to the regions of your Empire for traffiques sake: whereas also the fame of your kingdome so strongly and prudently gouerned, being dispersed and published ouer the face of the whole earth, hath inuited these our subiects not onely to visite your Highnesse dominions, but also to permit themselves to be ruled and gouerned by the lawes and constitutions of your kingdome during the time of their aboad in those partes of the world, as it becommeth marchantes, who for exchange of marchandize are desirous to trauell vnto regions so farre distant and not hitherto sufficiently knowen vnto these nations of the world, hauing this regard onely, that they may present their wares and certaine examples of multers of diuers kinds of marchandizes, wherewith the regions of our dominions do abound, vnto the view of your Highnesse and of your subiects, & that they may indeuour to know, whether here be any other marchandize with vs fit for your vse, which (according to the honest & lawfull custome of traffique in all countreies) they may exchange for other commodities, whereof in the parts of your Empire there is great plentie both naturall and artificiall: We feeling vnto the most reasonable requests of these honest men, because we doe suppose that by this most iust intercourse of traffique, no inconuenience nor losse, but rather most exceeding benefite will rebound vnto the Princes and subiects of both kingdomes, while by the carrying forth of those commodities wherewith we abound, and the bringing home of others which we want, wee may on either side at most easie rates helpe and enrich one another; doe craue of your most soueraigne Maiestie, that these our subiects, when they shall come for traffiques sake vnto any the stations,

portes,

portes, places, townes or cities of your Empire, they may haue full and free libertie of egress and regress, and of dealing in trade of marchandize with your subiects; may by your Highnesse clemency most firmly enioy all such freedoms, immunities, and priuileges, as are vsually granted to the subiects of other Princes which exercise traffique in your dominions; and we on the other side will not onely performe all the offices of a well-willing Prince vnto your Highnesse, but also for the greater increase of mutuall loue and commerce between vs and our subiects, by these present letters of ours doe most willingly grant vnto all and euery your subiects (if it shall seeme good vnto your Highnesse) full and entire libertie vnto any of the partes of our dominions to resort, there to abide and traffique, and thence to returne. All and euery of which premisses we haue caused to be confirmed by annering hereunto our royall seale. God most mercifull and almighty, the Creator of heauen and earth, continually protect your kingly Maiestie. Given in our palace at Greenwich the 11 of the moneth of Iuly, in the yeere of Christ 1596, and the eight and thirtie yeere of our reigne.

THREE SEVERALL TESTIMONIES CONCERNING the mighty kingdom of *Coray*, tributary to the king of *China*, and borthering vpon his Northeast frontiers, called by the Portugales *Coria*, and by them esteemed at the first an Iland, but since found to adioyne with the maine not many dayes journey from *Paqui* the Metropolitan citie of *China*. The more perfect discouery whereof and of the coast of *Tartaria* Northward may in time bring great light (if not full certaintie) either of a Northwest or a Northeast passage from *Europe* to those rich countries. Collected out of the Portugale Iesuites yeerely Iaponian Epistles dated 1590, 1591, 1592, 1594, &c.

The first testimony containing a resolute determination of *Vabaccondono* the great Monarch of all *Iapan*, to inuade and conquere *China* by the way of *Coray*, being a country diuided from the Iles of *Iapan* onely by an arme of the sea about twentie leagues broad, and abounding with victuals and all other necessities for the maintenance of the warres. Out of the Epistles of father Frier *Lewis Frois*, dated 1590.

Vabaccondono hauing subdued all the petie kingdomes of *Iapan*, in the yeere of our Lord 1590 (as father Frier *Lewis Frois* writeth in his *Iaponian Epistles* of the foresaid yeere) grew so proud and insolent that he seemed another *Lucifer*; so farre forth, that he made a solemne vow and othe, that he would passe the sea in his owne person to conquere *China*: and for this purpose hee made great preparations, saying, that since hee is become Lord of all *Iapan*, he hath nothing now to doe but to conquere *China*, and that although he should end his life in that enterprize, he is not to giue ouer the same. For he hopeth to leaue behinde him hereby so great fame, glorie, and renowne, as none may be comparable thereunto. And though hee could not conquere the same, and should end his life in the action, yet should he alwayes remaine immortall with this glorie. And if God doth not cut him off, it is thought verily, that hee will thoroughly attempt the same. And for his more secure passage thither, he is determined to leaue behinde him two *Gouernours* (after his maner) in the parts of *Miacó* with the administration of *Finqua*; and of those of his *Donarchie* he saith that he will take with him all the great *Iaponish* Lords, or at the least all his principall subiects, and leaue in his dominions such guard and garrisons as shall seeme best vnto him. And so hauing passed the winter, he meaneth to come to these partes of *Ximo*, for from hence he is to set forth his armie, & to passe to the land of *Coray*, which the Portugales call *Coria*, being deuided from *Iapan* with an arme of the sea. And although the Portugales in times past thought, that it was an Ile or Peninsula, yet is it firme lande, which ioyneeth vnto the kingdom of *Paqui*. And he hath now stricken such a terror with his name in the countrey of *Coray*, that the king thereof hath sent his ambassadoys hither to peeide vnto him a kind of homage, as he required; which ambassadoys are now in the city of *Miacó*. And by this Peninsula of *Coray* he may passe with his army by land in fewe dayes iourney vnto the citie of *Paqui*, being the principall citie where the king of *China* hath his residence. And as the *Chinians* be weake, and the people of *Iapan* so valiant and feared of them, if God doth not cut him off in this expedition, it may fall out according to his expectation.

to *Paqui* the
chiefe citie of
China.

But

But whatsoeuer become of China, it is held for a certaintie, that his comming will cause great alterations in these partes of Ximo, especially in this kingdom of Figen, wherein are the principall domes of Arima and Omura, and all the force of our Christianity: and he told Don Protasio when he was with him once before, that he would make him a great man in China, and that he would remooue these lordes, and deliuer their governments vnto lordes that were Gentiles; which would be the ruine of all this Christianity; neither should we haue any place wherein to remaine. For, as it is the custome of Iapan in the alterations of estates and kingdoms (which they call Cuningaia) to remooue all the nobilitie and geniry, and to leaue onely the base people and labourers, committing them to the government of Ethnicks, wee shall hereby also leese our houses, and the Christians shall be disperfed with their lordes; whom sometimes he handleth in such sort, that he giueth them nothing to susteine themselves, and so they remaine with all their followers, as men banished, and vterly ruined.

The second Testimonie containing the huge leuies and preparations of Quabacondono; as also his warres and conquests, and the successe thereof in the kingdom of Coray. Together with a description of the same kingdom, and of their trafficke and maner of government: and also of the shipping of China, Iapan, and Coray, with mention of certaine isles thereunto adjacent, and other particulars very memorabile. Out of the Epistles of the aforesaid Father Fryer Luis Frois dated 1591, and 1592.

ABout this time Quabacondono determining to put his warre against China in execution, assembled sundry of his nobles and capitaines vnto whom he declared his intent: who, albeit they were all of a quite contrary opinion, yet all of them without any pretense of difficulty approued his determination. For he had giuen out that he would not abstaine from this warre, although his owne sonne should rise from death to life and request him; yea who soeuer would mooue any impediment or difficulty in that matter, hee would put him to death. Wherefore for certaine moneths there was nothing in all places to be seene, but prouision of ships, armour, munition, and other necessities for the warres. Quabacondono making a catalogue of all the lordes and nobles his subiects, willed euery one of them (not a man excepted) to accompany him in this expedition, inioynning and appointing to each one, what numbers they should bring. In all these kingdoms of Ximo he hath nominated 4 of his especiall fauourites; whom (to all mens admiration) he will haue to be heads ouer all these new kingdoms, notwithstanding that here are 4 others farre more mighty then they. Of whom (by Gods good prouidence) two are Christians, to wit, Augustine Eucunocaminondo gouernour of half the kingdom of Finga, & Cainocami the son of Quambioindono gouernour of the greater part of the kingdom of Bugen. The other two are Ethniques, namely Toranosuque gouernour of the halfe of the kingdom of Finga and Augustins mortall enemy; and Iconocami gouernour of the residue of the kingdom of Bugen, and an enemy both to Augustine and Cainocami. And Quabacondono hath commanded all the Christian lordes of Teximo to follow Christian gouernours. Whereupon the lord Protasius was there with 2000 souldiers; & Omurandono the lord of Ceuxima and Augustins sonne in law, which lately became a Christian, with a thousand. Also he appointed that the gouernours of Firando and Goto should follow Augustine, who albeit they were Gentiles, had many Christians to their subiects. Wherefore Augustine was to conduct 15000 souldiers, besides mariners, slaues, and other base people to cary the baggage of the army, all which being as great a number as the former, so soone as they arriued in the kingdom of Coray, were made souldiers, and bore armes. Vnto the said Augustine, Quabacondono, in token of singular fauour, granted the first assault or inuasion of the kingdom of Coray, to wit, that he onely with his forces might enter the same, the other lordes remaining in Ceuxima (which is 18 leagues distant from Coray) till they should bee aduertized from Augustine: which thing procured vnto Augustine great enuie and disbaite from them all; howbeit (as you shall forthwith vnderstand) it procured in the end most honourable vnto him. The other Christian gouernour Cainocami being but a yong man of 23 yeeres, he commanded the king of Bungo to follow with 6000 souldiers; so that with the 4000 which hee had before, his number amounted vnto 10000, besides mariners and others which caried burthens. This was muste to yf newes to vs, and to all the Christians. Of the Ethnick lordes Quabacondono appointed the gouernour of Riofogo together with Foranosuque to march with 8000: and likewise the king of Saceuma and Iconocami with as many. And amongst all he gaue the first and chiefe place vnto Augustine. All the other souldiers of Iapan hee caused to accompanie his owne person: the number of all together (as appeared out of a written catalogue) amounting to three hundred thousand persons; of whom two hundred thousand were souldiers.

The

A Description
of Coray.

The order prescribed in this whole armie was, that first they should make their entrance by the kingdom of Coray, which is almost an island, one ende whereof ioyneth vpon the maine lande of China; which though it be a seuerall kingdom of it selfe, yet is it subiect and tributarie vnto the king of China. And because this kingdom of Coray is diuided but by an arme of the sea frō Iapan, Quabacondono determined to subdue the same, for that it so aboundeth with victuals, that from thence he might the easier invade China. While all things were preparing, it was commanded, that at the chief port of Ximo called Nangoia, being twelue leagues distant from Firando, there should be erected a mightie great castle; where Quabacondono with all his fleet was minded to stay, till newes were brought of the successe of the aforesaid 4 gouernours or capitaines. Hee appointed also another castle to bee built in Fuchinoxima, which is another island situate betweene Nangoia and Ceuxima. And he built a third castle in Ceuxima, that his passage might be the more commodious. The charge of building these castles he imposed vpon the 4 aforesaid gouernours, and commanded the other lords of Ximo their associates to assist them; all which so applied that business, that in 6 moneths space it was wholly finished. The castle of Nangoia was enuironed with a double wall of square and beautifull stone, with broad and deepe ditches like vnto Miaco. The innermost wall being lesse then the other two was 100 fathom square, within the compasse whereof wer so many houses built both for the lordes, and their followers, and also for marchants shoppes, and victualers houses, distinguished with broad and direct streetes, that it seemed a faire towne. But (that which was much more admirable) all the way from Miaco to Nangoia, at the ende of euery dayes iourney, all the lords and gouernours, at the commandement of Quabacondono, built each one within his iurisdiction new and stately palaces from the ground, so that for 20 dayes together he lodged euery night with all his traine in one of those palaces. And because these things were done at the very same time when the expedition into the kingdom of Coray was in hand, all Iapan was so grievously oppressed (Quabacondono in the meane while being at no charges) as it was most intollerable. Yet is it incredible how ready euery one is to do him seruice: which appeareth by these magnificent stately buildings reared vp in so short a space, which in Europe would haue required a long time and huge expences. In the meane season it was commonly giuen out, that this enterprize of Quabacondono would haue most vnforsunate successe, as being a matter wrought by constraint, and that it would be an occasion of manifold dissensions in Iapan: for no man there was, but misliked of this warre: yea, all the lordes were in great hope, that some one man at length would step forth and restore their libertie; howbeit there is none as yet found, which dare put his had to that business. Wherefore they were all (though to their great griefe and lamentation) violently constrained to prosecute the enterprize. But Quabacondono being voyde of all anxiety, to the ende hee might encourage his followers, boasted that hee would make great alterations of kingdoms, and would bestow vpon them the kingdoms of Coray and China; and vnto the lord Proasius hee hath promised 3 kingdoms: but he with all the other lords giuing him great thanks, had much rather retaine a smal portion of their estate in Iapan, then to hunt after all those kingdoms which he promiseth.

And whereas Quabacondono had by proclamation published, that he would personally be present at Nangoia the 3 moone of this yeere; troups and armies of men began to resort from all the quarters of Iapan to these parts. Now were our afflictions renewed. For so long as Quabacondono remained at Miaco, we might stay in these parts of Ximo without any danger; but after he began to come this way, it seemed impossible for our state to continue whole and sound, and we were put into no small perplexitie. For the Christian lordes aduised vs, that sithence Quabacondono was come so nere, all our companie that liued in the Colledge, in the house of Probation, and in the Seminary, should depart to some other place. And the Christians from Miaco writ dayly vnto vs, that wee should pull downe our houses and Churches at Omura, Arima, and Canfaco, and that the fathers of Europe should return vnto Nangasacke in the secular habite of Portugals, but that the Iaponian Fryers should retire themselves vnto seuerall houses of Christians, that so they might al remaine safe and out of danger. But this remedy, as it was too grieuous and subiect to many difficulties, so did it afford vs but small comfort. In brief the Father visitor talking of this matter with Eucunocamindono, the lord Proasius, and Omurandono, before their expedition toward the kingdom of Coray, found them, as before, in the same fortitude of minde, being constant in their first opinion: neither would they giue any other counsel or direction, then that the fathers should keepe themselves secret, and should only forsake their houses at Arima, and Omura, wherein the Toni or great lordes would haue some of their kinsmen remaine. It was also thought convenient, that the number of the Seminary should bee diminished, and that of 90 there should onely remaine 50 in our scholes, namely such as studied the Latine tongue. With the Fa-
ther

ther Visicour there came vnto Nangasque certaine ffathers and ffriers, which were said to be of Fungo and Firando. For the sayde Father vnder the name of a Legate might retaine them with him moze openly.

About this time Quabacondono, that hee might with some pastime recreate his Nobles which accompanied him; and also might declare, with how great confidence and securitie of minde hee tooke vpon him this expedition for China; and likewise to obscure the most renowned fame of a certaine hunting and halwing performed of olde by that mightie Prince Ioritono, who was Emperour ouer all Iapan; hee determined to ordaine (as it were) another royall court of diuers kindes of fowle. Whereupon beeing accompanied with many great lordes and others, hee departed to the kingdome of Oiaren, where his game had so good successe, that hee caught aboue 30000. fowles of all sortes; amongst which were many falcons. Howbeit, for Quabacondono his greater recreation, and for the moze solemnitie of the game, there were also added many dead fowles, which the Iaponians with certaine poulders or compositions know how to preserve sweete in their feathers a long time. This game beeing ended, Quabacondono returned with great pompe vnto Miaco: before whom went great multitudes which carried those thousandes of fowles vpon gilded canes. Next after these followed many horsemen sumptuously attired, carrying a great number of Falcons and other birdes. After them were lead many horses by the reines, most richly trapped. Next of all were brought Colcis or Littiers very stately adorned: after which was carryed Quabacondono himselfe in a Littier of another fashion, like vnto those which in India are called Palanchins, which was made in China, with most curious and singular workmanship, and was presented vnto him by the Father Visicour, and seemed exceedingly to content him, for that in all actions of solemnitie hee vseth the same. Last of all followed a great troope of Princes and Nobles brauely mounted on horsebacke, and gorgeously attired, thereby the moze to delight Quabacondono, who in triumphant sort beeing welcomed by the way, with the shout and applause of infinite swarmes of people, entered the citie of Miaco.

It meane to keepe dead birds sweete in their feathers a long time.

Now when the time of sayling towardes China approached, Quabacondono determined first to proclayme his nephew Inangondono his successour, and gouernour of all Iapan, to the ende hee might supply his owne roome in the time of this warre. And therefore he commanded the Dairi to transerre vnto his sayd nephew the dignitie belonging to himselfe, calling him by the name of Taicusama, that is to say, Great lord. Which dignitie was in such sort translated, that albeit he assigned vnto his nephew large reuenues, together with that princely title, yet himselfe remained the very same that he was before. The day of the sayd translation being appointed, hee summoned all the Princes of Iapan to appeare, and to sweare obedience vnto this his nephew: Who with great pompe going vnto the Dairi to receiue that dignitie at his hande, had surrendered vnto him the Castle of Miaco, and the palaces of Quabacondono to dwell in.

Thus at the beginning of the third moone, he set forward on his iourney to Nangoia, hauing before giuen order, that Augustine should passe ouer into the kingdome of Coray, and that his other Captaines should remayne in Ceuxima. Wherefore, the twentieth day of the third Moone hee came vnto Nangoia, where the companies of the other lordes beeing numbered, were founde to bee 200000. persons, besides those that were conducted by the foure sayde gouernours. In the meane season Augustine with his forces, and with a Fleet of eight hundred Ships, arrived at Coray. In whose armie the lord Protasius excelled all others; for though hee had but the leading of 2000. souldiers, yet for the goodnesse of his armour, and the beautie of his ships, he was admired of all men. At their very first entrance they wonne 2. castles of the kingdome of Coray by maine force, wherein the Corayans reposed great confidence; for they were enuironed with mighty high walles, and defended with great multitudes of souldiers, and with a kinde of gunnes of 2. spannes and $\frac{1}{2}$. long, which in stead of bullets discharged with a terrible noise wooden arrowes headed with forked pointes of yron: but the sayd gunnes beeing able to hurt but a small distance off, and the Iaponians being furnished with brazen ordinance vnknewen vnto the Corayans, they presently braue them from their walles, and with ladders made for the same purpose of great canes, they forthwith scaled the same, and planted their ensignes thereon; the Corayans indeed for a short time making resistance, but after a while betaking themselves to dishonorable flight, 5000 men of their part being slaine, and of Augustines but 100. and 400. wounded. Augustine perceiuing that the Corayans could not endure any long assault, determined to take vpon himselfe, and his armie the whole burthen and honour of this warre, and not staying for the gouernours his associates, to march by into the heart of the kingdome, and to

A Fleet of 800. ships.

Short gunnes charged with forked arrowes.

CCCC

the wife of King Agoy

The significance
of Miaco.

the principall City; unto which determination all the lordes that were with him gaue their consent. This was (no doubt) a bolde, yea, and in some sort, a rash enterprize of Augustine: but yet it argueth a wise and valiant minde in him. But this long delay was so greivous to the Captaines which in Ceuxima expected the successe of the warre, that before they heard any newes at all concerning the surprize of the two Castles, they brought Augustine in suspicion among their friends, that hee ambitiously affected the honour of the whole warre. Which thing being knowne unto Quabacondono, he was so troubled in mind euen before he came to Nangoia, that suddenly hee commaunded the other Captaines to set sayle from Ceuxima. But when Quabacondono was come to Nangoia, and heard newes of the two Castles taken, and that Augustine pursuing the victorie proceeded on to wards the Miaco, that is to say, The kingly citie of Coray, and was determined to inuade the same also (all which Augustine himselfe wrote, and requested him to send the other captaines and commanders to assaile the kingdom on all sides, and to furnish the castles which he had taken and should take, with garisons of souldiers, because as yet he had not men enough to hold those fortresses which he had wonne) he was surprized with such unspeakable joy, as he affirmed openly, that in all Japan he had no subject comparable to Augustine: and that neither Nabunanga, nor himselfe euer knewe any man indued with so valiant and couragious a mind. I (saith he) knowing against whom and with what forces I waged warre, subdued by little and little all Japan unto me: but Augustine in so short a time and with so small forces, hath boldly set his foote in a forren region, and with most glorious victorie hath subdued the mightie kingdom of Coray. Wherefore (quoth he) I will reward him with many kingdoms, and will make him next unto my selfe the greatest Prince in all Japan. Hee added farther, that now his owne sonne seemed to be risen from the death; and that whosoever durst either disgrace or extenuate the deedes of Augustine, he would grievously punish him, not respecting whether hee did it vpon reason or malice. By this speech the name and report of Augustine grew so honourable amongst all men, that those which most enuied his estate, durst not speake one ill worde of him, but highly commended him before Quabacondono.

The length
and breadth of
Coray.

This kingdom of Coray extendeth in length about 100. and in breadth 60. leagues. And albeit the inhabitants in nation, language, and strength of body (which maketh the people of China to dread them) be different from the Chinians, yet because they pay tribute to the king of China, and exercise traffique with his subjects, they doe after a sort imitate the Lawes, apparell, customs, and gouernement of the Chinians. They border on one side vpon the Tartars, and other nations, with whom sometimes they haue peace, and sometimes warre: but with the Chinians they haue continuall peace. They are speciall good bow-men; but at other weapons, because they haue but few, and those bad, they are nothing so skilfull. Wherefore they are not comparable to the Iaponians, who by reason of their warres are continually exercised in armes, and are by nature more couragious and valiant, being furnished with pike-pieces, with lances, and with excellent swordes. Onely in shipping they are inferiour to the Corayans and Chinians, by reason of the hugeness of their Ships which they vse vpon the sea. Wherefore, if they were to toyne battels by sea, there is no doubt but that both the foresayde Nations would be too hard for them. But now because they knewe nothing of the coming of the Iaponian armie, or for that they doubted that their sea-forces were the stronger, or els because God was determined to punish them, he suffered them to be destitute of all the defence of their shipping, so that the Iaponians without any resistance landed vpon their dominions.

The people of
Coray and Chi-
na stronger in
shipping, then
they of Iapan.

Now the fame of Augustines victorie causing the armie notably to increase, and the Mariners, and many others which carped burthens (as they were trained by in warre from their childehood) bearing armes, while the Corayan captiues supplied their baser offices: so great a terrour possessed all the people of Coray where Augustine came, that all the castles and fortresses which hee passed by were forsaken by their garisons, and all men fled for refuge to the principall city. And while other commanders and Christians sent from Ceuxima and Nangoia shaped their course for Coray, Augustine had pitched his campe neere vnto the foresaid principall citie: of the which being come within 3. dayes iourney, he was encountered by 20000. men; whom at the very first assault, hauing slaine 3000. of them, hee put to flight. But appoaching very neere vnto the citie, and hauing passed a riuer, hee maintained a valiant conflict at a certaine narrow passage against 80000. Corayans, 8000. whereof were slaine, and a great number drowned in the riuer. Here while Augustine appointed all his troopes to remayne for two dayes, to the end they might somewhat refresh their wearie limmes, the king of Coray seeing himselfe besieged by his enemy, and that many other Iaponian lordes with strong armies inuaded his kingdom on all sides, determined to haue his citie strengthened with garisons, and to retire himselfe into the in-land of China.

The king of
Coray fleeth
out of his prin-
cipall citie.

China. Which by reason of the abundance of horses that he had, he was able right commodiously to performe. Whereupon the second or third day after, Augustine without any resistance entered the head-city, being presented with great store of victuals and gifts by them that remained therein. Thus Augustine, with other captaines his associates, became lord of the principall citie, and wonne all the honour of the victorie vnto himselfe: for albeit by this time the other captaines were come from Ceuxima, and many from Nangoia, yet they found all things performed to their hands.

Quabacondono being aduertised of this second victorie, yielded as much honour vnto Augustine as he could possibly deuise, speaking so highly to the commendation both of him, and of other Captaines his associates, as if but the tenth part of his faire promises come to effect, they shall be farre greater then they are, and Augustine (next vnto himselfe) shall be the principall person in all Iapan. And now he is become so famous in the Court, and throughout the whole kingdome of Iapan, that at all their meetings and assemblies there is no talke but onely of the valour and fortitude of Augustine, who in twentie dayes space hath subdued so mightie a kingdome to the Crowne of Iapan. And all the Nobles account him a most happy man, being astonished at the immortal renoume which he hath attained vnto by this exploit: yea, and Quabacondono sent forth with vnto him, as vnto the conquerour and vanquisher of the Corayans, in token of great honour, a two-edged sword and a horse, which among the Iaponians is a pledge of the most peerlesse honour that can possibly be done to a man: and this very gift did Nabunanga in times past send vnto Quabacondono, when hee had in any battell wonne any kingdome from Morindono. And by this great euent the power of the Christians God, and his prouidence towards his childe is knowne not onely to the Christians, but euen to the very Ethnicks themselves, for that in the heate of such extreme persecution it hath pleased his diuine Maiestie to lay the honour of all this warre vpon Christian lords. Wherefore we doubt not, but they will proue more mighty and famous then euer they were.

Hence it cometh to passe that the Portugals ship come from China, hath wintered in Iapan: by which occasion the presence of the father Visitor hath bene a great comfort not onely to vs, but to all the other Christians, who in regarde of the departure of so many men with Quabacondono and his captaines to the warres, thought they should haue bene left utterly forsaken and destitute, had not the father Visitor, in whom they reposed all their confidence, remayned here. But the singular prouidence and loue of God towards vs appeared in this, that hee would haue the sayd ship, contrary to their vsuall custome, to winter in Iapan. For when Quabacondono hauing obtained that victorie, was determined to returne vnto Ximo, they were all shrowded vnder the protection of the foresayd father; who hearing that hee was entered into Nangoia, caused Frier Iohn Rodoriguez and the gouernour of the Portugall ship to salute and welcome him. For the Christians of Miacó, which succeeded in their roomes that went for Coray, aduised him in their letters so to doe.

And it was very acceptable to Quabacondono to see the Portugals captaine General attended vpon by so many Portugals sumptuously attired, and comming with so many shippes in the company of Frier Iohn Rodoriguez: and hee asked the frier how the father Visitor did: And whether the presents to the Vice-roy liked him: As also, that hee tooke it in very good part that the father had wintered in Iapan, and that the frier should stay with him. Afterward writing an answer to the father, he declared therein the great fauour which he doze to the captaine of the ship. Whom, hauing familiarly entertained him for the space of 2. houres, hee dismissed with euident tokens of good will. After the Captaines returne, Frier Rodoriguez staying behinde about a moneth, attempted very often to speake with Quabacondono, of whom hee was alwayes most kindly vsed. Afterward by reason of sicknesse hee returned to Nangasacke; whereupon Quabacondono demanded why he was not cured at the same place where himselfe remained: Iacuinio answered, that heeing a stranger, hee was to bee cured with such diet and medicines, as were not there to bee had: with which answer hee was satisfied. Hence it is, that by often conferences which were made by reason of the ambassage, Quabacondono waxeth euery day more courteous and affable. And yet for all this, new occasions of troubles and afflictions are not cut off: for certaine it is, that Quabacondono hath giuen out, that if he haue good successe with his warre against China, he will make great alterations of estates, in assigning the kingdomes of Coray and China to the Christian princes, and placing in their roomes Ethnick lordes throughout Iapan: which thing might rebound to the ruine and destruction of all Christians heere, neither should the Christians finde in Iapan any place of refuge. And albeit Augustine had certainly informed the father Visitor of the sayde alteration of estates, and Iacuinio

had written unto Augustine, that Quabacondono had fully determined to alter the states or governments of Ximo, and so consequently the state of Augustine, and of the Christian princes of Arima and Omura; yea, and that the said two princes had notice thereof: yet almighty God with the eyes of his infinite mercy hath vouchsafed to regard the prayers of his faithful servants (who for this cause were most perplexed and sorrowfull) and to provide this remedie following.

The Corayans having intelligence, that their king and the forces which hee carried with him were in safety, went the greatest part of them, with as much victuals as they could get, and hidde themselves in the mountains and woods, remaining there with such hate and indignation against the Iaponians, that with promise of safe conduct they could by no meanes be drawn out of their starting holes. Wherefore albeit the Iaponians have all the castles and places of defence in their owne possession, yet because they want people to till the ground, and to doe them other necessary services, they cannot chuse but forgoe all that which they have woon. Moreover, the common high wayes are so pestered with thieves and murderers, that unless the Iaponians march in whole troopes all together, they are suddenly oppressed with swarms of Corayans issuing forth of the woods. Many of the Corayans also have retired themselves unto the neighbour islands, from whence with numbers of great ships, to the mighty losse of the Iaponians, they assaile their small and weake ones, and have already sunke many of them. Wherefore all the Iaponian lords which remaine in Coray have written unto Quabacondono, that his army must for a certaine time in no wise remoue from the place where it is, for auoyding of such imminent dangers as in proceeding further it may incurre. Upon these aduertisements Quabacondono being ready to take his journey to Coray, to diuide the whole kingdom, was hindered from his purpose, and sent most friendly letters to all his nobles, willing them to be of good cheere, for that he would not deale about altering of their estates, till 3. yeres were expired: whereupon they were eased of exceeding great care and griefe. For albeit there is no great trust to be giuen to his wordes, yet we hope that this yere he wil not meddle: what he wil doe afterward, God knoweth. In Coray at this present there are about 200000. Iaponian souldiers, who at the commandement of Quabacondono are diuided throughout the whole kingdom. Augustine lieth vpon the very extreame frontiers of China: but because the Chinians are separated from the kingdom of Coray with a mighty riuer of 3. leagues broad, and abound with great ships, and haue planted innumerable troopes of men vpon the shore, the successe of the warre remaineth most doubtfull and vncertaine. Neither doe wee know whether the Iaponians will proceede any farther this yere or no.

Islands neere
vnto Coray.

A mighty ri-
uer of 3. leagues
broad.

The third testimony of Coray, signifying (amongst other notable and politicall obseruations) the later successe of the warres of Iapan against Coray; and to what end Quabacondono still mainteineth garisons in that kingdom. Out of the Epistles of Father Organtino Brixiano, bearing date from Iapan Anno 1594.

The whole Empire of Iapan is now in the handes of this king Quabacondono: and (which hath not bene knowne since the first creation thereof) there is not the breadth of one foote throughout all the whole Island, which is not absolutely subiect vnto him. And hee reigneth in so great peace and tranquillitie, that if his successors follow the same course of government, there is no likelihood of future sedition or perturbation in any of the kingdoms. And doubtles the meanes which he vseth to establish continuall peace and concord among the Iaponians, are very great and effectuell.

One is, that after he hath passed his publique promise, he neuer putteth any of his aduersaries to death, which his predecessor Nabunanga performed not: for he hauing subdued any kingdom, would put all the lords and gouernours to the sword. But this king granteth vnto them not only life, but also yerely reuenues, whereby to maintaine themselves in an honest and meane estate: in which regarde they all rest contented, and willingly submit themselves.

Another is, in that he hath brought the husbandmen and peasants (by whose assistance & wealth all the petty-kingdoms were after a sort sustained) vnto such extreme pouerty, that they haue scarce wherewithall to keepe life and soule together: as likewise hee hath bereaued them of all kinde of weapons.

The third is, because hee hath most streighly forbidden all contentions, seditions, frapes, and skirmishes. If of whosoever be found culpable of this crime, they dye euery man of them on both parties. If any escape by flight, their kinsfolks are punished in their stead; and for lacke of them, their seruants; and for default of both, their next neighbours. If many were guilty, many are puni-

shed

shed and suffer death : but hence it cometh to passe, that many innocent persons are constrained to die. And this severitie is the cause, why there are at this present so seldome frapes and contentions in Iapan.

The fourth is, that in administering of iustice hee is most upright, without all respect either to his owne kinred, or to his ancient captaines, or the blood royall, or any of the Bonzj, hee they neuer so famous : and being once aduertized of a crime, hee pardoneth no man. And albeit himselfe is exceedingly addicted to women, yet will he permit none of his subiects to haue any concubines. For which cause not many dayes agoe, hee banished a Bonzio of great wealth, being in alliance and dignitie most neere unto himselfe. And being informed that all the Bonzj of Miaco kept concubines, hee would haue put them all to death, had not the gouernour of Miaco promised, that hee would undertake to keepe them from offending any more in that kinde. Wherefore hee caused all the Bonzj euery moneth to bee swoyne, that they should liue honestly vpon paine of death : as also hee hath swoyne the heads or superiours of all their religious houses vnder paine of death, to giue vp their names whom they most suspect of the foresayd crime. Hence it is, that all of them (if you regard their outward estate) liue in extreme feare.

The fift is, for that hee suffereth none of his souldiers, nor his great lordes to liue in idleness. If there be no warres for their employment, hee occupieth them in building of stately palaces, and in raising new fortresses, or in repairing and strengthening of olde, and also in performing other notable workes, to the ornament of Iapan, and to his owne lasting honour. So that at this present neere vnto Miaco there are thirtie thousand men employed about the building of one castle ; and in the citie of Bozacca about an hundred thousand : which employments afforde them neither place nor time to practise any rebellions.

The sixt is his altering of gouernments : for hee remooueth his gouernours from one extreme part of Iapan to another.

The seuenth, for that vnto his souldiers (besides the ordinarie pay continually allotted vnto them for their seruice) in time of warre hee alloweth victuals at his owne costes. Wherof it cometh to passe, that hee effecteth whatsoeuer hee thinkes good by their meanes. Neither hath hee hitherto waged any warre, wherein his enimie was not vanquished, according to his owne desire : this late warre of China onely excepted, which farre surmounted all his forces. Howbeit in the kingdome of Coray hee maintaineth as yet great garisons, as well to keepe his honour, as to constrain the Chintians to sue for peace.

The warre of
Iapan against
Coray and
China.

The eighth is, in that hee curbeth and restraineth persons of ambitious and aspiring mindes, who (as hee coniectureth) after his death might worke some inuouations in the common wealth, or disturbe the kingdomes.

The ninth is, because hee hath on no side within foure or fise dayes iourney of Miaco, any mightie or industrious captaine or gouernour.

The tenth and last is, for that hee hath brought his yeerely rcuenues to two millions of gold. By these courses and meanes, wee are in good hope that firme peace will bee established in all these kingdomes, and also that a fit way will be prepared, for the conuersion of all the great lordes vnto Christian religion.

A briefe note concerning an extreme Northerne prouince of Iapan called *Zuegara*, situate thirtie dayes iourney from *Miaco*, which argueth the Isle of Iapan to be of greater extension Northward, then it is ordinarily described in maps, or supposed to be : together with mention of a certaine nation of Tartars called *Iezi* inhabiting on the maine to the North of *China*, neuer heard of in these parts before : taken out of an Epistle written 1596 from Iapan by Fryer *Luis Frois* vnto *Claudius Aquapina*, &c. Printed in Latine at *Mentz* in *Germanie* 1599.

At many dayes ago was baptized a certaine honourable personage called Iohn Vongui the sonne of Taigarandono, who is gouernour of a certaine pryncedome situate on the borders of Iapan towarde the North, being distant from Miaco thirtie dayes iourney.

And after a fewe lines it followeth.

This Taigorandono being the most Northerly gouernour in all Iapan hath traffique with the *Iezi*, who are a nation of Tartars, which from the maine continent resort vnto the Isle of *Mateumai*, being about twelue or fiftene leagues distant from the foresayd Northerly pryncedome of *Zuegara* ; where they sell fishes, the skinnies of beasts, and certaine herbes of the

The Isle of
Mateumai.

of China using
cloth.

sea used by the Japonians for foode, with other such like commodities. On the other side the said Iezi Tartari buy of the Japonians, cloth to make them garments, with weapons and other instruments. These Tartars (they say) are a most barbarous kinde of people, of a browne colour, with long haire on their heads and beardes like the Moscouites: they liue by hunting and fishing, and neglect husbandry. This Northerly principedome of Zuegara (as the sayd gouernour reported to our Fathers) aboundeth with excellent grapes both black and white, which without the labour of man grow naturally in all places, and he promised the Fathers to bring some of these vines to Miaco, that they might be planted there.

Aduertisements touching the shippes that goe from Siuil to the Indies of Spaine: together with some notes of the Contractation house in Siuil.

The Pilot.

Our Pilot must be examined in the Contractation house, and allowed by such as be appointed for the examination of Pilots, that hee be a sufficient man to take the charge in hand, and that which belongeth thereunto, and to gouerne and lead the same ship directly by his onely commandement to such ports as are conuenient for the voyage that hee taketh in hand.

The Master.

You must haue a Master, that must giue in sureties to the value of 6000 dukats: and such as be his sureties must be landed men, and their lands worth to the value of that summe aforesayd, if the sayd ship be betweene three or foure hundred tunnes. And if hee be more or lesse of burthen, then he must giue sureties of a greater summe or lesse, according to the proportion of her burden.

He shall in all his voyage giue a iust and true account of all such goods, and marchandizes, as shall in all that voyage come into the ship: as also of such plate and money, as shall be registred in the Kings Register, appertaining to the King, or any other particuler marchant: and if any default be, hee or his sureties are to pay all such losses as thereof shall growe: as also to see the mariners payed well and truly, the third part of all such freightes, as the sayde shippe shall get going and coming.

The Purser.

The ship being freighted by her merchants, the Master shall take order that there be sufficient mariners aboard her to take in such lading from time to time, as the marchant shall send to her: And also the Purser must be a man sufficient of abilitie to take, & to giue account of all such goods, marchandize, silver and golde, as shall come in and out of the sayd shippe that present voyage, as also giue sureties of 1500 dukats at the least to come backe from the Indies in the said shippe, and not to tarrie there, if hee liue.

A Romager.

The Master must prouide a perfect mariner called a Romager, to raunge, and bestow all marchandize in such place as is conuenient: and that it be not put in place, where it may perish for lack that it be not fast, sure, and drie, according to the qualitie and forme of the sayd marchandize.

The Masters mate.

When it is all bestowed, and the shippe able to beare no more, then a mariner called the Counter-master, or Masters mate, hath charge to locke fast the hatches, that none of the marchants wines, or oyles, or any other kind of marchandize be robbed or spoiled by the mariners. And if it fortune that any be so spoiled, then the mariners are to pay for it out of the third part of all the whole freight of the shippe that doth appertaine to the sayd marchants.

The chiefe
Judges of the
Contractation
house.
Visitors being
skilfull maris-
ners.
The names
and markes of
men taken.

The shippe being laden, goeth to the port wherehence she saileth to goe towards the Indies called S. Lucar, and there one of the chiefe Judges of the Contractation house cometh downe to dispatch the shippes that goe together in that flecte. And that Judge goeth aboard euery ship, and with him hee doth carrie an expert mariner or two called Visitors of the shippes, to know whether the sayd shippe or ships be well tackled: whether they haue men sufficient: and in euery ship euery mans name is taken, and if he haue any marke in the face, or hand or arme, it is written by a Notarie (as well as his name) appertaining to the Contractation house, appointed for these causes. Also the Master is bound to bring backe euery mariner againe, and to leaue none behinde him there, vpon great paines, vntill he be a passenger appointed by the King at the court, and bringeth his licence from thence for the same purpose.

The Pragmatica
or orders of
the Contracta-
tion house.

The ship must be well appointed with ordinance of brasse, and yron, according to The orders of their house, of that there must want nothing, and euery ship is appointed according to her burthen in all kinde of artillerie, as peeces of brasse and yron, hand-guns, croshowes, pikes, swords, daggers, targets, and for all ordinance double shot, with powder, with new cables and ankers sufficient for the voyage. And moreouer it is ordeined, that the shippes haue double sailes, that is, that they be thorowly sayled, and moreouer all newe sayles of fore-sayle, and maine-sayle, of coarse, and

and bonnet netwe made, and kept in some dryefat or chest in the same ship; that if the weather take the one from them, the other may be in readines.

Euery ship must haue their master sworne before the sayd Judge of the Contratacion, that all this is in a readinesse in the shippe, as also so many netwe pipes of fresh water, so many buttes of good rackt wine, so many kintals of bread, so many iarrs of oyle, so many iarrs of Boijas of vineger, so much flesh, so much fish, and such quantitie of euery kinde of victuall, as the burthen of the shippe requireth, wherein euery shippe according to her greatnesse is appointed by The ordinances of the house: Also so many gunners, so many mariners, so many gromettes, so many pages, and so many souldiers. Then all these aforesaide matters being vnder Register by the notarie and all things prepared for the voyage, the Judge doeth command the masters to hoyle vp the yards acrosse vnto the howndes of the mastes; and many times, if they perceiue the shippe to be walty and ouerladen, as many couetous masters doe, then hee hangeth the boates in the fore and maine tackle, to see whether the sayd shippe will make any helde downewarde, in laying downe her side: if she doe helde, he commandeth bakes abourd, to discharge her of such lading, as is thought to be too much in her: and there can no ship depart before they cary the Register of the said Judges, howe that shee goeth by their order: and euery shippe carieth her owne Register, and in the Register the quantitie of al the goods that are laden in her, and if there be any more goods, they be forsayted in the Indies, both shippe and goods.

Proportion of victuals vpon oyle.

The Register of euery ship.

The masters are bound to keepe the course that the Admiral doeth leade, and euery shippe to follow her, and shee must goe alwayes in the Sea before all the rest of the flecte, and by night cary light that all may knowe where she goeth. The viceadmirall must come behinde all, and so euery shippe in the flecte before her: if any be ill of sayle, all are bounde to sit their sayles in such order, that they goe no faster then she doeth.

The two ships of waite to waite the flect in time of peace.

The Admiral and the viceadmirall goe neuer but halfe laden, but very well armed of men, and artillery, three times double and more then any of the other haue: because they may help to defend all the rest, if neede doe require: and the dead freight of these two shippes is alwayes boine vpon the whole goods that are laden in the flecte, as also at the least there be two hundred souldiers in euery of these two shippes besides the mariners, great gunners, gromettes, and other officers.

Note.

The voyages bee so appointed, that alwayes they goe and come in the best of Summer, and bee there all the winter in the ports to discharge their lading and recharge backe againe.

The ships that are Admirall and viceadmirall be neither the greatest nor the smallest shippes, but of 3 hundredeth or 4 hundredeth tonnes at the most: but they be very good saylers, and strong, chosen for the purpose, to sayle well and to beare good store of ordinance. In these two shippes are alwayes going and coming, two good knights men of warre, and Captaines and souldiers expert in the warres.

A Captaine in euery ship.

And in euery other ship is a Captaine, which ruleth in all causes of controuersie, or fights in the seas; the Pilot directeth onely in gouernment and leading the shippe to her port.

All the Captaines, Masters, Pilots, Maryners, and passengers, and all others bee obedient to the two shippes, so appoynted to passe: they doe, as in all other commandements what is by them appoynted, hauing power to hang, or doe any iustice vpon any man, as to them seemeth good at sea, and this is the last commandement vpon payne of death, if the General please.

Concerning the Contractation house, there are therein five Judges of the highest sort.

Five Judges.

There are visitours of shippes, as it is sayd before, to see whether the ships goe in order well, and sufficient in al things: and what manner of men the Masters of the ships and Pilots are, whether they be able to answere to all such articles, as the reader is able to obiecte vnto them, in matters of Nauigation: if they be not found sufficient, they are not admitted to take charge.

Four visitours. The reader of the arte of Nauigation.

The master must knowe whether the ship be sufficiently calked, tackled, and furnished in all things accordingly, as with mastes, sayles, cables, anklers, and all other necessary furniture: that at such time as any of the high iudges with their ordinary visitours appointed for such causes doe come, there be nothing found out of order or lacking, according to The booke of orders, which euery shippe proportionable to her burthen ought to haue, which is not vnknewen to any of the masters, being in writing common among them: and all the charge giuen to the Master and Pilot serueth onely to conduce the ship from port to port.

The booke of orders, called in Spanisly Pragmatica, common in writing among the masters.

The counter Master, or masters mate is obedient in all things whereunto hee shall bee commanded by the master and Pilote, and at his commandement are all the maryners of the ship.

The shippes commonly goe deeper laden from Spaine, then our shippes doe in any voyage.

The

The order of the *Carena* giuen to the ships that go out of *Spaine*, to the *Indies*.

The shippe of what burthen soeuer shee bee must giue a *Carena*, as they call it in the Spanish tongue, which is in English, shee must be thoroughly calked, and fortified, as well with carpenters to set knees into her, and any other timber & appertaining to the strengthening of a shippe, as with calking: which is to put occam into her sides; and that kinde of calking is not vsed, as ours is here in England: but first before they put in any threede of occam, they with certaine crooked yrons, with an hammer in one hande, and the crooked yron in the other, doe forcibly pull out all the olde threede that hath bene in the shippe the voyage before, and so driue in new.

Calking with
rhime plates
of lead.

If the seame of the shippe be worne to any bredth, as many olde shippes be, by reason of often raking them, vpon that seame there is clapt a piece of caste leade, nayled vpon the calking, and seame with spectall nayles, which leade is cast a handes bredth, and as thinne as may bee for the same purpose, and at every voyage it is taken off and renewed, and by that meanes their shippes are very stanch a yeere or two.

The Calker or
Carenero.

The *Carenero* or the Calker doeth giue in suerties, that if the shippe so cast ouer, as they doe commonly vse to cast them, in such sort as any man may goe drie vpon the keele, as I haue done, and without any butte, pipe, or any other kinde of timber vnder her sides, more then with counter-poyze of stones in her, made within certaine timber as though it were a chesse; and with the stones the *Carenero* doeth bring her as hee will, high and low, leaning, or rpling: and if shee miscarrie in her *Carena*, then is the *Carenero* bound, if it bee either by fire, water, or sinking, or any other misfortune, to pay for the valew of the ship.

The *Carena* of a shippe of one hundred tunnes being done so substantially as they vse to doe it, will cost two hundred Duckets, of two hundred tunnes, foure hundred Duckets, of three hundred tunnes, sixe hundred Duckets, and so according to the greatnesse of the shippe.

It would be done here in England for one third part of the money, by reason that the necessities that goe to it are better cheape here by much, and the calkers farre better cheape by two parts.

This *Carena* may not be giuen at any hand but in a riuer where no tempest can arise, as in this riuer of London in such a place, where at all times the sayd ship may ride as close as it may not be done in any dangerous harbour, where the winde may bring by the waues of the Sea, neither where the Sea may heaue and set.

The calking of Siuill is so substantially done, that in one day one calker doeth not thoroughly calke past one yarde and an halfe in one seame, or two pades at the most, and to that he doeth, the master calker is at hand to ouersee him, and this done, the *Carenero* doeth with his ballast set her upright, and so shee beginneth to lade.

Examen de los maestros y Pilotos, que nauegan en las flotas de *Espanna* para las *Indias* del mar oceano, escrito por *Pedro Dias Piloto*, natural de la Isla de la Palma. 1586.

Alonso de Chi-
nuez Piloto ma-
yor.

Rimeramente pide al Piloto mayor, que es al presente Alonso de Chinuez, que lo admita al examen, por quanto es natural y suficiente para ello.

Manda el Piloto mayor, que haga enformacion, de como es marinero, y platico de aquella parte, de que se quiere examinar. Luego presenta cinco o seis testigos de los Pilotos examinados, de como es buen marinero, y suficiente para ser Piloto, y como es natural de los Reynos De *Espanna*; y que no es de casta de Moro, ni Iudeo, ni Negro.

Rodrigo Zamora-
no Cathedra-
tico.

Y hecha la enformacion, presenta la al Piloto mayor. Y visto el Piloto maior la enformacion ser buena, manda que el Cathedratigo Rodrigo Zamorano lo admira a la Cathedra. Y alli se juntan a vezes quatorze o quinze que pretendē examinar, y acuden alli a vna casa, que El Cathedratigo tiene para aquello efeto, a las ocho de la manana, y estan dos oras, y otras dos a la tarde. El Cathedratigo tiene por costumbre de leer en la Cathedra vna ora, y otra ora ocupan en preguntarse los vnos a los otros muchas cosas conuenientes a la arte de nauegar en presencia del Cathedratigo. Y el que no responde a proposito, El Cathedratigo le emienda, y le dize de la manera que es cada cosa. Y este estudio dura dos meses, en los quales no ha de saltar de ir dos vezes al dia, como tengo dicho.

Y de-

Y despues de auer oido la Cathedra estos dos meses, van a la Sala del Examen, que es en la La Sala del examen. Contratacion. Y alli esta el Piloto mayor, y los de mas pilotos, qui son por lo menos veinte cinco: y alli estando todos assentados por su orden, manda el Piloto mayor, que lean las enformaciones; y despues de auer leidas las enformaciones o testimonios, pregunta el piloto maior al piloto y maestro, que se quiere examinar, de que parte de las Indias se quiere examinar? Y luego el piloto responde, que de Nueva Espanna, o de Nombre de Dios. Y otros, que no son platicos de estas tierras, dizen, que de Santo Domingo, y Puerto rico, y Cuba. Y luego demanda el Piloto maior, que tienda la carta en la mesa, y en presencia de los demas pilotos parta de la barra de San Lucar para las Islas de Canaria, y de alli para las Indias, hasta llegar a aquella parte de donde se examina, y buelue para Espanna, a tornar a la Barra de San Lucar, de donde partio.

Y el Piloto mayor le pregunta, Que si yendo nauegando por la mar le diese vn viento contrario, qué remedio haria para que su nao no trabajasse tanto en la mar? Y el le responde lo mejor que entiende. Luego le pregunta vno de los pilotos por las reglas del Sol, y de la Estrella del norte, y qué cuenta le hara en todo tiempo del anno? A lo qual ha de responder el piloto que se examina a todo aquello que le preguntaren. Y luego le pregunta otro por las fennas de las tierras que estuieren en el camino, hasta llegar al puerto de donde se examina. Y luego pregunta otro, que si con tormenta se le quebrasse los arboles, Que remedio haria? Y otros le preguntan, Que si la nao abriessse vn agua, a donde peligrassen las vidas, que remedio haria para tomarla con menos riesgo? Y otros le preguntan, que si le faltasse el timon, que remedio haria? Y otros le preguntan por la cuenta de la Luna, y de las mareas? Y otros le preguntan, Que si lo tomasse vn corsario, y lo dexasse sin carta y sin astrolabio, y otros instrumentos para tomar la altura del Sol y de la Estrella del norte, que orden tendria para hazer los? Otros le preguntan otras preguntas necessarias a vn marinero, que quiere ser piloto. A todo esto esta atento, respondiendo a todo. Y despues que todos le an preguntado todo lo necessario, le mandan, que salga fuera de la sala, para que a solas dé cada vno su boro debaxo de iuramento en vn libro, que prometen de dezir verdad. Y luego ponen dentro de vn vaso de plata, que alli esta para aquel efeto, tantas hauas, y tantos guaranços, como ai pilotos dentro de la sala: y va cada vno por su orden; y el que le parece que es suficiente, saca vna hua, y el que le parece, que no lo es, saca vn guaranço. Y despues que todos an sacado, mira el piloto mayor los botos que tiene; y si halla que tiene tantos botos en su fauor como en contrario, manda que haga otro viaje: y si tiene mas botos en su fauor, que en contrario, luego le dan vna carta del examen firmada del piloto mayor, y del Cathedratico, y del Escriuano, y sellada con el sello de la Contratacion. Y teniendo esta carta, luego da de presente al piloto mayor, y al Cathedratico, para guantes y gallinas, cóforme que cada vno puede, que es de ordinario dos o tres ducados. Y luego se puede concertar por piloto en qualquier nauio que quisiere, para aquella parte de donde se examina. Y si hallare en las Indias algun nauio que tenga piloto no examinado, lo puede botar fuera, y venir el piloto examinado en el nauio por el mismo concierto, que el otro piloto tenia hecho.

La manera de eleccion de los maestros, y pilotos.

Carta del examen.

Suelen llevar los pilotos de partido y concierto por vn viaje de yr y boluer, conforme que es el nauio. Si es de ciento tonelladas, dozientos ducados, y dozientos y cinquenta; y si es de quatrocientas o de quinientas, lleva de partido quinientos o quinientos, y cinquenta ducados: y si es mayor, lleva mas partido: y mas, todos los dias que estuuiere en tierra, quatro reales para su comida. Y las naos grandes siempre llevan los pilotos mas viejos, porque son mas experimentados y mejores pilotos que los mançebos, que comiençan a nauegar, y a ser pilotos.

Sueldo de los Pilotos.

El piloto no tiene mas trabajo ni mas cuidado que en la nauegacion: porque los maestros de los nauios tienen cuidado de fretar, y adereçar sus naos, y pagar a los marineros, y hazer todo lo que es menester para su nao: porque el piloto no viene a la nao, si no es quando los visitadores vienen a visitarla, si tiene todo lo necessario para el viaje.

Maestros, y sus officios.

Los visitadores son quatro hombres qui estan puestos por el rey, y estos son hombres muy entendidos, y vienen a visitar los nauios, antes que tomen carga, por ver si estan bien adereçados para hazer el viaje. Y despues que estan los nauios cargados, bueluen otra vez a visitarlos, por ver si tienen todas las cosas necessarias, conforme a la Prematica; y si tienen todos los marineros, y battimentos, y poluere, y artilleria, y balas, y todo lo de mas necessario para el viaje. Y si alguna cosa les falta, les mandan con graues penas que lo comprehen, antes que salgan del puerto.

Los quatro visitadores, y su officio.

Prematica.

Suelen llevar los nauios que van a las Indias vn escriuano que tiene cargo de tomar por memoria todas las mercaderias que se cargan en la nao, y tomar las marcas, para por ellas entregar

Escriuano, y su officio.

gar

gar la carga a sus duennos, despues de auer acabado su viaje: y sirue tambien, si vn hombre caesle enfermo, para hazer testamento y otros recaudos que se suelen hazer delante vn escriuano: y gana por su sueldo en vn viaje tanto como dos mariberos.

Primero nauio
de auiso.

Segundo nauio
de auiso.

Dos naos de
guerra.

Tiene el general de las flotas por costumbre, despues que llega a las Indias, de embiar vn nauio de auiso, para dar relacion al rey, de como ha llegado. Y despues que estan prestas para partir, despacha otro nauio de auiso, para hazer relacion, de como estan ya prestas para partir, con otras particularidades.

Van en las flotas dos naos grandes, la vna por Capitana, y la otra por Almiranta, cada vna de seiscientas y de setecientas tonelladas, que no lleuan mas que bastimentos y soldados para defensa de la demas flota: y lleva cada vna como docientos soldados: y estas se pagan de las mercaderias que vienen en la flota a vno por ciento, y algunas vezes a vno y medio por ciento.

Ay en la casa de la Contratacion de Seuilla vna tabla que sirue de Arancel, escrita con letras de oro; en que stan aualiadas todas las mercaderias que se embarcan para las Indias.

EN esta tabla se puede saber quantas botijas hazen vna tonellada de vino, y quantos quintales y quantos bariles, y quantos coffres sea vna tonellada.

Y todas mercaderias estan alli taxadas, para pagar los derechos al rey, y el flete al maestro.

Y alli esta puesto, que ningun maestro puede llevar a las Indias ningun passagero, ni frayle, ni clerigo, ni otras personas, ni estranieros de los reynos de Espanna, sin licencia del Rey.

Y mas, que no puede llevar mercaderias fuera de la Prematica, y todo lo que lleuaren, lo lleuen registrado, so pena de la vida.

Y mas, que ningun maestro ni piloto puede llevar instrumentos que no sean firmados por el piloto mayor Alonso de Chiaues, y el cosmografo Cathedratico Roderigo Zamorano: como son la carta, el astrolabio, la balestilla, y el regimiento.

Y mas, que yendo en la compannia de la flota, obedescan al General, y no hagan mas de lo que el mandare, so pena de la vida.

The same in English.

The examination of the Masters and Pilots which saile in the Fleets of Spaine to the West Indies: Written in the Spanish tongue by Pedro Dias a Spanish pilot taken by Sir Richard Grimme 1585.

IF they make suite vnto the Pilot maior (who at this present is called Alonso de Chiauez) that he would admit them to examination, because they are naturall Spaniards, and sufficient for the same.

Hereupon the Pilot maior commandeth the party to be examined, to giue information that he is a mariner, and well practized in those parts, about which he desireth to be examined. And then immediatly he bringeth five or six pilots before examined to giue testimonie that he is a good mariner, and sufficient to become a pilot, that he is a Spaniard borne, and that he is not of the race of the Moores, Jewes, or Negroes.

Having made this information, hee presenteth it vnto the Pilot maior. And the Pilot maior seeing the information to be good, willet the kings publique reader of nauigation (who is now Roderigo Zamorano) to admit him to his lectures. Whiche there doe resort foureteene or fiftene persons that desire to be examined: and they come to a certaine house which the kings reader hath appointed vnto him for the same purpose, at eight of the clocke in the morning: and then they stay two houres, and two houres likewise in the afternoone: in one of which houres Zamorano readeth vnto them, and in the other they ask one another many particulars concerning the art of nauigation in the presence of the said kings reader: and him that answereth not to the purpose the sayd reader instructeth more perfectly, and telleth him how euery thing is. And this exercise continueth two moneths, during which time the examinares must not faile to bee present twice in a day, as is aforesaid.

And hauing heard the kings reader those two moneths, they resort then vnto The hall of examination which is in the Contratacion house, where there are assembled the Pilot maior and diuers other pilots, to the number of 25 at the least; who all sitting there in order, the Pilot maior demandeth

The witness
of five or six
pilots.

The pilots admission to the lectures of the kings reader. They heare the kings readers lectures two houres a day for two moneths. Their disputations of the art of nauigation before the kings reader who is their moderator. The hall of examination.

demandereth of him that would be examined, of what part of the Indies he desireth to be examined: *¶* Heereto the examinee answereth, that he would bee examined concerning Nueva España, or of Nombre de Dios and Tierra firma. And others that are not experienced in those partes, craue to be examined of Santo Domingo, Puerto rico, and Cuba.

The manner of
the ponging
the pilots exami-
nation.

Then the Pilot maior commandeth the examinee to spread a sea-chart vpon the table, and in the presence of the other pilots to depart or shewe the course from the barre of Sant Lucar to the Canarie-Islands, and from thence to the Indies, till he come to that place whereof he is to bee examined, and then also to returne backe to the barre of Sant Lucar in Spaine, from whence he departed. Also the Pilot maior asketh him, if when he saileth vpon the sea, hee be taken with a contrary wind, what remedie he is to vse, that his ship be not too much turmoiled vpon the sea: And the examinee answereth him as well as he can.

Then one of the other pilotos opposeth him about the rules of the Sunne and of the Noctif-
starre, and how hee ought to vse the declination of the Sunne at all times of the yeere: whom the
examinee is bound to answer in euery thing that hee demandereth. Then another asketh him of
the signes and markes of those lands which lye in his way to that haue whereof he is examined.
And then another demandereth, that if his mastes should be broken by tempest, what remedie hee
would vse: Others aske him, if his ship should take a leake, to the hazarding of the liues of him-
selfe and his company, what remedie he would finde to stoppe the same with least danger: Others
aske him, what remedie, if his rudder should chance to faile: Others oppose him about the account
of the Moone and of the tides: Others aske him, if a Pirate should take him and leaue him de-
stitute of his Chart, his Astrolabe, and his other instruments seruing to take the height of the
Sunne and of the starre, what course hee would take in that extremitie: Others demand other
questions needfull for a mariner to know, which desireth to be a pilot. Unto all which the exa-
minee is very attentiu, and answereth to euery particular.

After they haue all asked him so much as they thinke expedient, they bid him depart out of the
hall, to the ende that euery one of them may seuerally bee sworn vpon a booke, that they will
speake the trueth. Then they put into a certaine vessell of siluer standing there for the same pur-
pose so many beanes, and so many peason as there are pilots within the hall: and euery one put-
ting his hand into the vessell in order, he that thinketh the partie examined to be sufficient, taketh
vp a beane, and he that thinketh him not sufficient, taketh vp a pease. And after that all haue ta-
ken out what they please, the Pilot maior looketh what voyces the examinee hath: and if he finde
him to haue as many voyces for him as against him, he commandeth him to make another voyage:
but if he hath more voyces for him then against him, then they giue him letters testimoniall of his
examination signed by the Pilot maior, by the kings reader, and the secretary, and sealed with the
seale of the Contractation house. And vpon the receipt of these letters testimoniall, the new pilot
giueth a present vnto the Pilot maior, and the kings reader, for their gloues and hennes, euery one
according to his abilitie, which is ordinarily some two or three ducats.

Letters testi-
moniall of en-
ty new pilots
examination
and approba-
tion, vnder the
hands of the
Pilot maior, the
kings reader,
and the secre-
tary, and seals
of the Con-
tractation
house.

And then he may take vpon him to be pilot in any ship whatsoeuer, vnto that place for which he
was examined: and if he finde in the Indies any ship vnder the charge of a pilot not before exami-
ned, he may put him out of his office, and may himselfe take charge of that ship for the same wages
that the other pilot agreed for.

The pilots wages for making a voyage outward and homeward is according to the burthen
of the ship. If the be of 100 tunnes, hee hath 200 or 250 ducats: and if the be of 400 or 500
tunnes, he taketh for his wages 500 or 550 ducates: and if the be bigger, he hath a greater allow-
ance: ouer and besides all which, he hath euery day while he remaineth on land, foure reals for his
diet. And the greater shippes are alwayes committed vnto the more ancient pilots, because they
are of greater experience and better skill, then the yonger sort which newly take vpon them to
be pilots.

The pilot undertaketh no farther trauell nor care, but in directing the course or navigation:
for the masters of the ships take charge of the freighting and preparing their ships, and to pay the
mariners, and to doe all things needfull for the ship. For the pilot commeth not vnto the shippe,
vntill the visitours come to visite the same, to see whether hee hath all things necessary for the
voyage.

The visitours are foure men which are appoynted by the king, and these are men of great un-
derstanding: and they come to visite the shippes before they take in their lading, to see whether
they be well prepared to make the voyage. And after the ships bee laden, they returne againe to
visite them the second time, to see whether they haue all things necessary, according to The orders
of the Contractation house: and whether they haue all their mariners, victuals, powder, shot, and
ordnance.

Four visit-
ours.

The orders
of the Con-
tractation
house.

ordinance, and all other things necessary for the voyage. And if they want any thing, they charge them upon grievous penalties, to provide the same before they set out of the haven.

The ships that goe to the Indies are wont eche of them to haue with them a Notarie, whose charge is to keepe a note of remembrance of all the marchandize which is laden in the ship, and to take the marks thereof, therby to deliuer the commodities in the ship to their particular owners, after they haue finished their voyage, and he serueth likewise to make willes, and other instruments, which are wont to be made by a Notarie, if any man chanceth to fall sicke. And his wages in the voyage is as much as the wages of two mariners.

The first barke
of Auiso.
The second
barke of Auiso.

The Generall of the fleetes vseth continually, after hee is arrived in the Indies, to send into Spaine a barke of Auiso, to aduertise the king of the state of his arriual: And after the fleetes be ready to come home, hee dispatcheth another pinnesse of Auiso to certifie them how the fleetes are now ready to set saile, with other particularities. There go with the fleetes two great ships, the one as Admirall, the other as Viceadmirall, of the burthen of 400 or 500 tunnes, which carry nothing but victuals and souldiers for the waiking of the rest of the fleet, and these are payd out of the marchandize, which come in the fleet, after the rate of one in the hundred, and sometime at one and an halfe in the hundred.

There is in the Contractation house of *Simil* a table which serueth for an *Arancel*, or table of rate or taxation, written in letters of gold, wherein the values of all kind of marchandize, which are imbarqued for the Indies, are set downe.

A table of
rates &c. set by
in the Con-
tractation
house.

By this table a man may know how many Botijas or iacres make a tunne of wine, or how many packes, or how many quintals, or how many barrels, or how many chests make a tunne.

And all marchandize haue their rates set downe, to pay the king his customes, and the Master his due freight.

And therein is set by in writing that no Master may carry any passenger to the Indies, without licence, especially no learned men, nor any fryer, or clergyman, nor any body else without licence of the king: nor any strangers not borne in the kingdomes of Spaine.

Moreouer, that they may not carry away any marchandize not comprized in the foresaid orders, vnder paine of death: and that all goods which they carry with them, they ought to carry the same registred; vnder paine of death.

Furthermore, that no Master nor Pilot may carry any Chart, nor Astrolabe, nor Crosse-staffe, nor regiment, without they bee signed and sealed by the Pilot maior Alonso de Chiauex, and the Cosmographer the kings reader Rodrigo Zamorano.

Moreouer, that going in company with the fleet, they doe and obey all such things, as their Generall shall command them, vnder paine of death.

Written by me *Pedro Dias* borne in the Ile of *Palma*
one of the *Canaries*, vpon the request and gratifica-
tion of *M. Richard Hakluyt*, in February 1586.
